II. *The Kinds.* There are four generick Kinds hereof, viz. i. * & *nov* *A* *V* * *JIV* *prafium*, vel *Marrubium Album*, White Horehound; 2. *Prajiūm Nigrurn*, Black Horehound. i. *Prasium Aquaticum*, Water-Horehound. 4. *Prajiūm Fvtdum*, *Prajiūm Silvejlre*, Wild Horehound, or *Stachys*.

III. *the Kinds of the White.* Of this there are five Species, viz. 1- *Marrubium Album Vulgare*, *Prasium Album Commune*, *Prajiūm Anguilara* *^* *Ou*, Common White Horehound. 2. *Marrubium Candidum altering Marrubium Candi dim Hifpanieum*, vel *Pannonicm Lobelij* & * *Clufij*, *Marrubium Candidum Gerardi*, *Marrubium Creticum Camerarij*, *Marrubium Album Latifolium Peregrinum Bauhini*, White Spanifh Horehound. 3. *Marrubium Creticum Angujliore Folio Lobelij*, *Marrubium Creticum Camera rij*, *Dodoncei*, *Lugduncnfis*, iff *aliorum*, *Marrubium Album Anguftifolium Peregrinum Bauhini*, Sweet Candy Horehound. There is another Species of this, which is unfavory, or without (fmell, called *Marrubium Creticum Anguftifoliis inodorum* by *Efytenfis*, which is *Marrubium Album Peregrinum brevibus iff obtufis Folijs Bauhini*. 4. *Marrubium Album Vilofum Bauhini* *^* thought to be *Prajiūm DioJcoridis* *^* White Hairy Horehound, called by *fom* French Horehound. \$ *Manubium Crijpum*, and *Marrubium Album Crijpum*, White Curled Horehound.

IV. *The Defcriptions.* *the firft*, or Common White Horehound, *has a Root which is blackifc hard and woody) with many Fibres or Strings thereat, which dies not every Winter, but abides many Years* \$ *from* this Root fpring up feveral fquare hoary-Stalks, half a Yard or two Feet high, fet at the Joints with two crumpled, or as it were rough Leaves, of a dull hoary, green color, and of an agreeable good fmell but of a very bitter tafte *^* the Flowers are imall white, and gaping, fet in rough, hard, prickly Husks, round-about the Joints with the Leaves, from the middle of the Stalk upwards, in which afterward is found finall, round, blackifh Seed.

t > *V* *J* *e* *i* *o* *n* *i* > *^* *W* *t* *t* *e* Spanifh Horehound, *h* * *Roots Me* the former Common Kind, which fend forth feveral fourfquare Stalks, more white and ho-

than it, # which Stalks are fet by couples Leaves fomewhat longer, thicker, whiter, and more woolly than it, and fomewhat dented about the edges, the flowers grow at the tops of the Stalks in rundles, at the feveral Joints with the Leaves, which are of a pale purplifh color, like the *Common fort*, and ftand in the like rough Husks; *Gerard* calls this *Snow white Horehound*.

VI. *The third*, or Sweet Candy Horehound. # *has a long flender Root, furnifhed with a great buft of Fibres*, from which fpring up feveral crooked, or not very ftraight Stalks, which are round, and not fquare, *^* and flenderer than the laft *^* on thefe Stalks grow fometimes broader, and at fome times and in fome places fmaller *^* longer, and narrower Leaves than thofe of the fecond Kind, (of which in my opinion this is a Species) thefe Leaves are fet by couples at the Joints, more dented about the edges, and more white or hoary than the former *Horehounds* as the Stalks alfo are, which branch forth into many flender Branches, having Flowers at the Joints like the former, but fmaller, and purplifh, and fet in fmaller and harper Husks, the Seed being alfo like it: The *Unfavory* or *fmell lefs Kind* has only thefe differences, that the Leaves are fhorter, narrower, and rounder pointed, and in a manner without any fmell.

VII. *The fourth* or White Hairy Horehound, called by fome trench *Horehound*. *It has a woody fibrous Reot, which fend forth Stalks, rifing up not above a foot high, round, and of a hard woody, fubftance, white and hoary, fpreading into divers Branches, on which grow thick Leaves, in the fame manner as the former, but fmaller and rounder, and a little dented at the edges, and fo white, fmooth, and woolly underneath, as no Cottonweeds more, but fomewhat blackifh and rugged on the upper fi* * the Flowers ftand at diftances at the tops of the Branches, of a pale purplifh color, and in the rough Husks*

VIII. *The fifth, or White Curled Horehound.* It has bard, round, white, woolly, or downy Stalks, the Leaves are smaller than the last, and a little crumpled and curled at the edges, and a little dented also they are of a greyish color on both sides, but not so woolly as the last; the Flowers stand in the same manner as the rest, in prickly Husks,* but whiter than any of the former.

IX. *The Places.* The first, being the *Common Kind*, grows plentifully in all places of *England*, in dry Grounds, and wattle Greens, also near unto old Walls, Banks, Ditch sides, High Ways, and beaten Paths, in untilled places it grows in all other Countries also, where it alters something, according to the situation and nature of the Countries, for commonly that which grows in *Candia* and *Ungaria* is much whiter, and of a sweeter smell, and the Leaves oftentimes narrower and lesser than that which grows in *England*, and other Northern Countries, the second grows naturally in *Spain*, the third in *Candia*, the fourth about *Paris* in *France*, the fifth in *Germany*, all which four latter grow with us only in Gardens, being first raised of Seed brought from those places.

X. *The Times.* They all Flower in *July* and *August*, (and that in the second Year after the fourth of them) and their Seed is ripe not long after.

XL *The Qualities.* *White Horehound* is hot in the second degree, and dry in the third, bitter in taste, Aperitive, Digestive, Absterfitive, Pectoral, Hepatick, Splenetick, Hystrick, Sudorifick, Emmenagogick, Alexipharmick, and Analeptick.

XII. *The Specification.* It is good against Coughs and shortness of Breath, cures ulcers of the Lungs, eases pains of Liver and Spleen, expels Poyson, and heals old fifth Ulcers.

XIII. *The Preparations.* You may have therefrom, 1. A *Liquid Juice*. 2. An *Effence*. 3. A *Prafrimel*. 4. A *Decotion*. 5. A *Syrup*. 6. A *Wine*. 7. A *Vinegar*. 8. A *Poultice*. 9. An *Ointment or Half am*. 10. A *Cataplasm*. 11. An *Acid Tincture*. 12. A *Spirituos Tincture*. 13. An *Oily Tincture*. 14. A *Saline Tincture*. 15. A *Decoction Compound*.

The Virtues.

XIV. *The Liquid Juice.* Being given to two or three Spoonfuls, and repeated twice a day, in a Glass of White Port Wine, to Women whose Courses are obstructed, it brings them down, being dropt into the Ears it eases their pain, and taken in a Glass of Wine it helps Stitches and Pains in the Sides, snuff up the Nostrils it is a good Errhine to purge the Head and Brain of mucous Humors and filthiness obstructing that Ventricle, it opens obstructions of Liver and Spleen, as *Galen* says; *Matthiolus* says it is available for such as have bad Livers, and have an itching or running Tettars upon them.

XV. *The Prafrimel.* It has all the Virtues of the Liquid Juice, besides which it is good for such as are purfied and wheaze, or are short winded, for such as are weakened by long Sickness,* and are waited and fallen into a Confutation, it brings forth both Birth and Afterbirth, aid is good to facilitate the Birth of such who have long and hard Labor, it expels Poyson of any Vegetable, and cures such as are bitten by serpents, or other venomous Beasts, it kills Worms in Children, and prevails against the Yellow Jaundice. Dose two, or three Spoonfuls Morning and Night in a Glass of Wine.

XVI. *The Prafrimel* or Honey of Horehound. # & made by mixing a quart of the Juice with a Pint of Honey, and clarifying it with the White of Eggs. It is good for Coughs, Colds, Confutations, or Ul-

cers of the Lungs, Hoarseness, Wheezing, shortness of Breath, it expectorates tough Flegm out of the Thorax, but all this it does more effectually if it is mixed with a proportionable quantity of the Powder of *Florentine Orrice Root* if old, tumbled, and running Ulcers be dressed with it, it cleanses and heals them, dropt into the Eyes it mightily clears the Eyesight, and dropt into the Ears kills Worms, and heals Ulcers therein, snuff tip the Nostrils it purges the Head admirably, taken ordinarily Morning, Noon, and Night, it is excellent good for Old Men, and others, whose Lungs are afflicted with thin, fait, cold Rheum, causing it to be expectorated, for which reason it is singularly good against Asthma's.

XVII. *The Decction.* It has all the Virtues of the Liquid Juice, Essence and Prafrimel, but nothing near so powerful, for which reason it may be given in double or treble quantity, Morning; Noon, and Night, it is an excellent Lotion to wash old Sores withal, and to make an Injection of to cleanse the Womb.

XVIII. *The Syrup.* It is an extraordinary Pectoral, very good for old Coughs, and to ripen tough Flegm, it is also good for such as are Rheumatick, or short Winded, and breath difficultly, it has all the Virtues of the Prafrimel, and nearly as good as it to all those Intentions. Dose one or two Spoonfuls Morning and Night, to be given alone by itself.

XIX. *The Wine.* It has the Virtues of all the former Preparations, but not so powerful as the Essence, it is good against the Plague or Pestilence as also for old People, and cold Constitutions.

XX. *The Vinegar.* It is good against the Plague, given a Spoonful or two at a time in any proper Vehicle, and prevails against any Vegetable or Animal Poyson outwardly used it clears the Skin of Morpew, Scurf, Pimples, Redness, Tettars, Ringworms, Herpes, and other like fait eruptions.

XXI. *The Powder.* Given to a Dram in the Morning fasting, and last at Night going to Bed, it kills Worms in Children, strengthens the Stomach, and provokes Sweat in elder People, refills Poyson, provokes the Terms, and educeth the Birth, used 3 or 4 in Errhine it purges the Head and Brain of cold moist, viscid and pituitous Humors, if it is strewn thick upon old, rotten, putrid, and filthy Ulcers, it cleanses them, dries up the humidity, and induces their healing.

XXII. *The Ointment or half am.* It is singularly Vulnerary, curing green Wounds in a short time, it is good also for running Sores, old Ulcers, and the like, for if need be it digests, cleanses, incarnates, dries, and heals; it is good against Puffes; Pimples, Boils, Scabs, and other like breakings out, being applied.

XXIII. *The Cataplasm.* The Leaves being made into a Cataplasm with Honey do cleanse foul Ulcers, and put a Hop to running and spreading Sores, which are eating and rebellious, if the Cataplasm is made of the green Leaves boiled with Hogs Lard, and applied to the bitings of mad Dogs presently, it draws forth the Venom or Ayfon, it diffuses the swellings of Womps Breasts, eases pains, and draws forth thorns, or any other thing out of the Flesh, it heals also any sort of Scab, whether dry or moist.

XXIV. *The Acid Tincture.* It is a singular Antidote against the Plague or Pestilence, and all sorts of pestilential and malign Diseases, it opens all sorts of Obstructions of the Viscera, chiefly of the Lungs, strengthens and fortifies the Stomach, causes a good appetite and a strong Digestion, and possibly it may be one of the best things against the Rickets in Children in the World, let it be given in all that the Patient drinks, for many drops at a time, to make the Vehicle pleasantly sharp.

XXV. *The Spirituous Tinllure.* It is Cordial and Hyfterick, it provokes the Terms, refills Poyfon, warms and comforts the Stomach, itops Flukes, and gives eaie in the Colick, and gripings of the Guts-, as it expels Wind, fo it refills Vapors-, and being ivvetned well with Honey, is an extraordinary reilorative in Coniumpions. Poſe half a Spoonful Morning, Noon, and Nighty "in any convenient Vehicle.

XXVI. *The Oily Tinffure.* It provokes the Terms as powerfully as any of the former Preparations, gives eaie to pains in the Back, and opens obſtru&ions of the Reins and Bladder •, it is good againſt pain and ficknefs of Stomach, and any external pain of the Nerves in any part of the Body -, it is a fingular thing againſt the Palli^pbeing inwardly taken, and outwardly applied to the parts affe&ed, being alfo bathed along down the Back Bone Mornings and fveningS} anointed upon hurts or punftures of the Nerves, it eafes the pain and cures them ^ it gives eafe alio'in Hitches and pains of the Side, and in the Colick, as alfo in pains of the Gout, proceeding from what cmfe foever. Dofe from ten drops to twenty, or more, dropping them firſt into Sugar, and then mixing the Sugar with a Glaſs of White Port Wine, and ib drinking it Morning and Night as long as need requires.

XXVII. *The Saline Tinffure.* It is good againſt the Itclr, and^ all forts of itching of the Body, prevails againſt Ringworms, Tettars, Herpes, Scurf, Morpew, Pimples, Scabs, and all other breakings out of the Body \$ it is alfo faid to clear the Skin of Yellowneiſ, Rednefs, Tanning, Sunburning, Freckles, Lentils, and the like, in what place foever they happen in, by waſhing the parts affected therewith Morning and Evening, and letting it dry in.

XXVIII. *The Deco&tion Compound.* Take freſh Horehound two Ounces, Roots of Agrimony, of Buglofs, and of Elecampane, of each half an Ounce, Lignum Aloes, Rhubarb, of each three Drams, *choice Write Port Wine three Pints, or two Quarts, boil covered till half be con fumed, then firain out, and dulcify it whh White Sugar. It is an excellent Medicine to open obſtru&ions of the Jaungs, Liver, Spleen Gall, and Womb. Dofe two Ounces every Horning falling, as much at Two after Noon, and the like at Bed time, for fourteen or tv\enty days together, for the Cure of the Yellow Jaundice.

CHAP - CCCLXXV.

0 / HOREHOUND Black.

I. *The Names.* It is called in *Greek nsfaiw t-l Ji ** > *Plinij Lib. 27. Cap. 8. in Latine Prafi-um, vel Marrubium Nigrum, and in Engliſh Black Horehound.*

II. *The Kinds.* It is the fecond of the Generick Kinds, and comprehends thefe following Species, viz. 1. *Marrubium Nigrum Latifolium Baubini, Marrubium Hiſpanic um Tabernamontani Qf Gerard, Marrubium Nigrum Ilij panic urn Parkinſoni, Mar-ruhiuni Hiſpanic urn odore Stachadis Lobe Hi Ocima-Jlrum Valentmum C/uJi* (becauſe fo called at *Valentia* in *Spain*) Black Horehound, and Spaniſh Horehound. 2. *Marruh'iMni Kigrwn Longifolium Baubini, Sidentis Mon/peWenfium, & Varietaria Monſpe-herijum Cordi E? Lugdunenjis, tierba Venti & £,.. agetii ahorum, Long Leav'd Black Horehound, and BVxk French Horehound. This Lobel queitions*

whether it be not the *Oihonna Diofcoridis,rd\^* than the *Flos Africanus*, which wears that Title:

III. *The Defcriptions.* It has a Root which is ſmall, and without any long Fibres or Strings^ and fends up ſquare hairy Stalks, about a foot high •, the Leaves grow on the Stalks by pairs or couples at the Joints, which are fomewhat long, and round, pointed, thinner, and fuller of Veins than the Black Horehound, like unto the middle fort of *Black Horehound*, like unto the middle fort of *Black Horehound*, as *Cluſius* ſays,* but longer, and of no ſcent at all, as *Cluſius* lays, but *Lobel* ſays it has the ſmell of *Strachas*, or *CaJJidony* -, the Flowers grow at the top of the Stalks in prickly Huſks, in Wharls or Runds of a white color, as *Cluſius* ſays#, but of a prickly color according to *Lobel*; after which comes a Seed, like the other Kinds, and growing in lik prickly Huſks.

IV. *Tloefecond, or Long Leav'd Black Horehound, It has a thick Root, vchich ſpreads it ſelf with many blackiſh Strings, by which it take* hold and fixes it ſelf in the Earth, and keeps it ſelf alive from Tear to Tear, ſhooting out freſh Stalks every Spring;* theſe Stalks are ſquare, and rough, riling up a Foot and half, or two Feet, and ſpreading themſelves into divers Branches, fet with* two long and fomewhat broad Leaves at ever^ Joint, longer and broader than *Sage* Leaves, and longer pointed, dented about the edges, and of a ſad overworn green color, which in the Winter time remaining withered on the Branches,, without falling off, «e to be ſeen full of holes,, as if they had been eaten with Worms, all the KibJ and Veins abiding as they grew, till Froſt comes and, cauſes their Stalks to fall away, the Flowers, are of a purplilh color, greater than any of the *Horehounds*, and more gaping, after which, (being paſt away ^ comes the Seed in hard prickly Huſks, like *urn* Horehound*: This Plant has no ſmell, good or baa? to be found in it, but is as it were ſmeil-lefs.

V. *Nota.* Theſe two Plants ſome Authors have to be no *Horehounds*, but yet for their fake they are referred by others to this Stock,

can I tell to what other Family they can be fo wel joined, for as much as they have the very fame Vir- tues with the former *White Horebunds*,

VI. *The Vlases.* The first of them is a native of *Spain*, the second of *France*, and grows about *Mom- pelier* in fat Grounds, and sometimes in *Wheat Fields*; with us they grow in *Gardens*, being produced from Seed brought to us from thence.

VII. *The Times.* They both flower in July and August and their Seed is ripe within a Month after.

VIII. *The Qualities, Specification, Preparations and Virtues,* are the same with those of the *White Horehound*, declared; in the former Chapter for that no more need be said of them in this place.

IX. *vv4 Cataplasm.* *Dioscorides* says, that the Leaves being stamped with Salt and applied, it cures the biting of a mad Dog, against which it is of great efficacy; a Cataplasm being made also of the Leaves roasted in hot Embers, and applied; does waite or confirmed away hard lumps or knots (*Ficus*) in the Fundament; it also cleanses foul and filthy Ulcers, as the same Author affirms.

Of H O R E - H O U N D Water..

THE Names: It is called in *Greek* *fi* & *ov* *w*- X *£* & *v*, in *Latine* *Prasmm Aquaticum* *Marru- Jbium* *Aquatile* in *EngliJh* *-Water Horehound* and *Marjh Horebound*.

A The Kinds. There are several sorts hereof, viz. *I. Marrubium Aquaticum Vulgare Lobelij, Lug- uunenjis* *Dodotij* *Tragi* *T L* *J* *n* *w*.

put it also for *Sideritis secunda Dioscoridis*, *Guilara*, *Gefner*, *Camerarius*, *Lacuna*, *Lugdunififis* *Thalius*, and *Mattbiohts*, puts it for *Sideritis prima Dioscoridis*; it is also *Lance a Chrifii Gefneri*, *Marrubium Palustre glahrum Eaubini*, *Marrubium Palu- fire aliorum*, Our Common or Ordinary Water Hore- bound. 2. *Bj&Mitt* *Ballore*, *Marrubium 7sigrum Vaetidum Baubini*, *n* *op* *j* *&iiff*, *Black Water -Horehound*, or *Stinking Water Horehound*, also *Marrubium Nigrum* *>><&\$* *mpft* Authors call it *•*, but some call it *M&rrubafnm* *df&* *Lohel* *MdWubium Spurim*. *Mirrubi* *m Aquatic* *HfflHffutUm* *&au*. *Marrubium Aquaticum* *6* *Hairy* *or* *Water* *i* *W* *ehound*. *Marjubium* *Ni- grum*, *Marrubium Nig Mm* *Creticum Alpriti* *Candy* *Black Horehound*.

III. *Tufe* *Oefcriptibns*. *be* *firfl* *or* *Common* *Water Horehound*, has a *Wl* which *conjiyoj* *abuj* *of blackijh fibres or String*, -Which sends forth *Stalks* which are *lpmething great and high*; square and ilrong, having two somewhat large and long *Leaves* fet at every *Joint*, deeply *dent*ed or *cut* in about the *edges*, not *hairy* or *rough* at all, but *fi* *Trooth* and *at* the *Joints* with the *Leaved*, towards the *tops*, grow *fmali whitifh Flowers* in *tough green Husks*, encompassing the *Stalk* about which being *paliaway* the *Seed* follows; which is *round*, and of a *blackifh* color, four usually fet together in the *Husk*.

IV. *The second, or Black Water Horehound*, has a *black thready Root*, from whence rise *up* *several square, blackijh, hairy green Stalks*, on which grow upon long *fbottalks* somewhat *roundifh* *dark green* *Leaves*, full of *veins*, a little *hairy*, and *indented* about the *edges*, two always at a *Joint*, and of a *frong* *fmelU* *the* *Flowers* *gaping*, and of a *pur-*

pliih color, fomewhat like the Red Archangel, or J>W Nettle, growing in greenifh Husks.> and encompaiing the Stalk, as the others do, the Seed ab fo is black and round, four fet together, as in the other: This Plant Parkin/en, fays he has found fometimes with white Flowers.

V. The third, or Hairy Marfh or Water Horehound. // hiisquare hoary Stalks, a little hairy and rough, on which groin Leaves by pairs or couples, as in the formeri which are jkry, hard, and hoary; much more cut in on the e?^K than the firftat Se£t! 3. above, cut in fo deep, as to reach fometimes even! to the middle Rib, making them feem like the Leaves of the Great Mountain Scabious, the ends; being pointed and (harp 5 Ae Flowers are fmall and whitifh, ftanding in rough green Husks, encompaf-i ling the Stalk about, which being paf away the Seed! follows, which is blackifh and round at the bottom of the Husk.

VL The fourth, or Candy Black Horehound, has a fibrous or Jiringy Root, ufiich fend forth its firft Leaves fomewhat like to thofe of a Primrofe, being many, larger and longer than thofe of the White Horehound, dented about the edges, and (harp pointed, as large as thofe of Bawm, and of fo black a color, as it may feem to be fo colored or dyed by An_n from among thefe Leaves fprings up a fquare Stalk, or Stalks, upon which, as it were at Joints, grow many fuch like Leaves together, but leffer, up to the tops, where the Flowers ftand encompaffing them, being in form like to thofe of Horehound, but blackifh alib, the Plant being wholly without fmell or tafte*

VII. The Places. They all grow in moift and wet Grounds, the two firft in feveral places of England, the fecond has been found in the way to Rocheftir, about half a Mile from Grave/end, the third grows in Aullria, the fourth in Candy; but the two laft not with us, unlefs planted in Gardens.

VIII The Times. They all Flower in the Summer Months, as 'm the latter end of June, in July, and AugufL, and give their Seed foon after.

IX. The Qualities, Specification, Preparations and Virtues of the three laft are the fame with thofe of White Horehound in Chap. 374. aforegoing, and the fecond of thefe are laid to have the Virtues of the Black Horehounds in Chap. 375. Set?. 9. being ufed and applied in the fame manner.

X. As to the Qualities and Virtues of the firft of thefe in this Chapter Authors have (aid nothing, but this I have found^ experience, that it is. an excellent Vulnerary, whether inwardly taken in Juice Effence, Decoction, Wine, or Tin£hire> or outwardly applied in Oil, Ballam, Ointment, Cerate, or Cataplafm, £5V.

CHAP. CCCLXXVII

Of HOREHOUND Wild,

OR STACHYS.

* TP^H E Names. It is called in Greek ^r*xd, in !<ll><< alfo Stachys, and in £»£ll/& W^i Horehound, Bafe Horehound, and Sf**)*. ; the £''«k' Authors make about feven Kinds, but by reafon the moft of them are not to be had <<<

England, we fhall only treat of the three following, viz. 1. Stachys Gerardi, Dodonai, hugdunenfis, Tabernamontani, Matthioli, Stachys minor Camerarij, Stachys floribus gravioris odor is Gefneri, Stachys Lychnitis, Stachys Spuria Handrorum Lobelij, Stachys Italic a minor Bauhini, Sa/via Sylvefiris, tertiã Cafalpini, Wild Horehound, Bafe Horehound, Lefler Horehound, and Italian Horehound. 2. Stachys i'uep-Jij; • Stachys Qermanica Gefneri, Stachys Germanic a major Camerarij, ffeudofiachyTMatthioli, & Lugdunenfis, Stachys minor Germanica Bauhini, Marrubium Montanum Album Thalij, Siderit'is Heraclea Gh lumn<z, E^ll, Salvia Sylvefiris C<efalpini, Great Wild Horehound, or Great Bafe Horehound. 3. Stachys Palafiris Gefneri & Camerarij, Marrubium Aquaticum dcutum Gerardi, Betonica foctida Gefneri, in Collatione Stirpium, Sideritis prima gravisodoris Dalechamplj iff Thalij, Cly?nenum minus hugdunenfis^ Terziola C&falpini, (becaufe it cures Tertian Agues) Lyfimachia Galericulata Afulterina Befieri in h^{ts}. Hortus Eyfietenfis, Marfh Wild Horehound, or Bafe Horehound,

III The Defcriptions. The firft, or Wild Horehound, which is thought to be the Stachys vera Dioscoridis, has a Root which is woody and durable, made of divers blackifh Strings, which perijhes not after it has given Seed; from this Root rife up feveral foft, woolly, green Leaves, lying upon the Ground, and abiding all the Winter, fomewhat broad and long, of about two Inched in breadth, and three in length, fsmooth, and not dented at all, or very little about the edges; from the middle of thefe Leaves arifes fometimes but one Stalk, and fometimes divers Stalks, bearing divers fuch like Leaves thereon, but lefler, and fet by pairs or couples one oppofite to another at the Joints, fomewhat hard, and a little longer and whiter than thofe tkComrnnon Horehound, (to which the whole Plant is very like) the Stalks alfo are high and jointed, and fet with foft hairs * from the middle of the Stalks, and fo upwards, come forth feveral Flowers,«of a yellow color, zLobel, Camerarius, and Gerard fay, but of a purplifh color as Varkinfw fays, (he having never leen,

feen any of the *Tellow*) thefe Flowers ttand in fofter Husks than thofe of the former, or *Common Horehounds*, and with a narrower Wharle encompafs the Stalk, after which come blackifh round Seed^h, the tops are fmall and long, and end as it were in a Spike, being of a fweet fmell, as *Gerard* fays, but *arhnyfon* fays the fmell is fmall with us, and not fo pl^aiant as others fay it is, for any thing that ever he could obferve.

IV. *The fecond, or Great Wild Horehound, (which is the Great Dutch Bafe Horehound.) It has a Root which is hard, and fomewhat yellow*-, the Stalks hereof are thick, fourfquare, and hoary, fometimes two or three Feet high[^] the Leaves are broad, long, hoary, nicked in the edges, and hairy, as alfo are the Stalks-, thefe Leaves are indeed ibmewhat like unto great *Sage* Leaves for the color on both fides, but laiger, and much broader than thofe of the *Common Horehound*, and a little dented about the edges; the joints of the Stalks are fet with fuch like Leaves, but fomewhat leffer than thofe below, two at each Joint, encompaffing the Stalk-, the Flowers grow at the Joints alfo in Wharls, which encompafs the Stalk likewife about with Flowers of a purplift color towards the tops of the Stalks, which are greater than thofe of the *Common Horehounds*, as indeed all the reft of the Plant is, and which has a much ftronger •ft^U tliaraeoAers have[^] the Flowers being paff awaf* trefSeed^h rtoflows at the bottoms of the Husks, which is round, and of a blackifh color.

V. *The third, or Marfti Wild Horehound. It has a Root which is fomewhat long and thick, jointed at Jbyeral/paces, with fibres*A them, which fends up fflaire, round, and hairy Stalk or Stalks, about two >jeet high, with two fomewhat long and narrow dark green Leaves, but grey underneath, and pointed at the ends, denied about the edges with round dents, like to Betony, fet at every Joint, and having fomewhat a ftrong unfavory fmell; at the upper Joints with the Leaves come forth feveral pale reddifh Flowers, fet in ranks, like unto Betony -, after* which comes fmall, roundifh, blackifh, or brown Seed.*

VI. *The Places.* The firft grows plentifully in *Italy*, in the Fields about *Rome*, as *Matthiolus* and *Caftor Dur* antes fay, and alfo in *Germany*, as others affirm, with us it grows only in Gardens[^] the fecond is a native of *Germany*, as *Camerarius*, *Lonicerus*, *Thalius* and *Gefner* fet down -, it is alfo a native of *England*, and has been found growing wild in *Oxfordshire*, in the Field adjoining to *Whitney Park*, about a Mile from the Town: the third grows in plafhy places in low Grounds in feveral Countries, and in divers places in *England*.

VII. *The Times.* They all of them flower in the Month of *July*, from the beginning to the end, and the Seed is ripe in *Auguft*, or not many Weeks after the flowering.

* V¹ ILL^T Fe^c pities. The two firft are hot and dry m the third degree, a little bitter, opening, digefting, and cleaning, Pefloral, Hepatick, Splenetick, Hyftick, Auarifick, Emmenagogick, Alexipharmick, and Aukp².

IX. *The Specification, Preparations, and Virtues,* are the fame with thofe of the *White Horehound* in *Qiap. 374- Seff. 12. ad 28.* aforegoing, fo that no more need be faid thereof.

X. *Nota.* But thefe things in particular has been obferved of thefe *Wild Kinds*, that their Juice, Effence, Decoftion, Wine or Tiafture, have been powerful in provoking Womens Courfes, and to expel both Birth and Afterbirth, for which reafon they are dangerous to be given to Wom&i with Child, becaufe they are apt to caufe Abortion, or Mifcarriage-, they alfo provoke Urine being flopped, given inwardly,

and the parts alib being fomented with the Deco&fon in Water, and the Patient fitting over the warm fumes of the fame.

XI. *The third, or Marfli Wild Horehound*, is a fingular good Wound Herb, ferving both to heal green Wounds, running Sores, and old filthy Ulcers, the Juice, Effence, Deco&fon, or Wine thereof being given inwardly, and dHKL, Ointment, Balfam, Cataplafin, or Poqdef^Bieof being alfo outwardly applied.

C H A P. CCCLXXVIII.

Of H (f P v S E F O O T ,

OR,

C O L T S F O O T Strange.

I. *THE Names.* It is called in *Greek* K^A ■, X MonvKn Diofcoridls, KAV&OV Galeni, in *Latine* *Cacalia*, and *Cacanium*, (not *Cmcanum*, as fome write it) in *Englifh* *Uorfefooi*, and *Strange Coltsfoot*.

II. *The Kinds.* Authprs make three Species, hereof, viz. I. *Cacalia incana Folio rot undo*, Hoary Horfefoot. 2. *Cacalia volio glabro acuminata*, *Tuffi- iago Alpina vel Montana Dalechampij*, Smooth Leav'd Harp pointed Horfefoot. ^ *Cacalia Americana, vel Virginiana*, Horfefoot of Virginia.

III. *The Defcriptions.* • *The firft, or Hoary Horfe* foot, ha* a long white Root, divided into many heads] with 7nany long Strings and fhrfts thereat, of a glu* tinous or clammy taft, like unto Gum Tragacanth[^] encreajing thereby very much; from thefe Heads fhoof up ftriped reddilh Stalks, with large round Leaves on them, larger and thicker than *Coltsfoot*, and more woolly alfo on the upper fide, yet with a greennefs to be feen in them, but very woolly and white underneath, with fome Ribs and Veins in them, of a little bitterifhunpleafant taite[^] from aniohg thefe Leaves rife up ftriped, woolly, and reddifh Stalks, two or three Feet high, paving feveral leffer LeaveS on them, and all of them dented[^]out the edges, branching forth at the top into feMal fmall Sprigs of pale purplift Flowers, made of fout fmall Leaves apiece, with fome Threads in the middle, which after they have been a while blown do turn into Down, which is carried away> with the Wind: *Dalcchampi- m* fays, that in the middle of the Flowers are found hanging down fmall white Grains like Pearls, to make it anfwer *Pliny's* Defcription.

IV. *The fecond, or Smooth Horfefoot, ha* a Root like the former, andhu Leaves as large, but thicker, harder, fmoot her, arid*greener, not ho.try or woolly at all, but dented or waved about the edges, and pointed alfo with the roundnefs, but not open at the Stalks, as the other is-, the Stalks are in like manner ftriped, but fmooth, bearing the like Flowers at the tops, but fomewhat paler.*

V. *The third, ^Horfefoot of Virginia, has a Root onfifting of a bujh of blackifh) librcs or Threads, which abides the extremity of Winter, the Stalks and Leaves both perifhing yearly, but growing brownifh towards the end-, it riles up with many round Stalks, about a yard high, and two fomewhat round, but pointed Leaves, a little dented about the edges, at each joint of them, the upper Leaves being fmall, and little or nothing dented -, at the tops of the Stalks come forth feveral Branches, with pure y'Aitt*

tertium Plinij (from the many joints it has) of *Mat-thwylus, Gefner*, and others, *Polygduyn Ftimina Scimine Vidua Lobelij, Sanguinalis Fcemina Coriſ*, Barren Marfh Horfetail, Marfh Horfetail with fhorter Leaves. ? *Equifetum minus tenuifolium*, which is the fmalleſt and fineſt Leav'd Horfetaii, and is very Iſcke to *Equifetum tenuiffimis* iff *longijjimis Folijs Bauwmi*. 6. *Equifetum Fcetidurn*, Stinking Horfetail.

IV* The Defcriptions: *The firſt, or Greater Marfh Horfetail. It has a pretty thick Root, which creeps under Ground, -having* Join ft at feverai places, and fibre* Springing therefrom ** at its firſt ſpringing up it has Heads, ſomething like to thoſe of *Aſparagus*, which afterwards grow to be hard, rough, hollow Stalks, jointed at feverai places up to the top, growing to be a foot high, fo made as if the lower part were put into the upper, at which grow on each ſide a buſh of (mail, long, hard, Ruff-like Leaves, each part reſembling a Horſe Tail, (from which it came to be fo called, (as is above hinted) at the tops of the Stalks come forth final! Catkins > like^ to thoſe of Trees. . . *

V. *The ſecond, or Broad Leav'd Marfh Horfetail, has a Root which it creeping, and jointed, like the former •, the Stalks are about a Foot and half ſeigh. How^ a Mjgy^m^ in the ſame manner, fet with Le^o aweHnelame faſhion, but that they are breeder than thoſe of Toad-flax, green, rough, long, ap^eaſie to bj^ak •, what Julie or Catkin irbears has ijbt been obſerved.*

VI *The third, or Leſſer Marfh Horfetail. It has * very long Root, according to the depth of the Water, grofs, thick, and jointed, with ſome few Fibres or Threads adjoining thereto-, from the heads of this Root riſe up great, thick, jointed Stalks, on which grow long, rough, Ruffy Leaves, Pyramid or Steeple faſhion, the whole Plant is alſo rough, tard,*

and fit to rub, fhawe or finooth wooden things, as ſome of the others ^ it differs not much in the manner of growing from the former, the chiefelt difference is, in that it is fmaller, and the Leaves or Brittlés, (as ſome call them) which are fet at the Joints, are fewer and* fhorter.' f

VII. *The fourth, . <?/; Barren Marfh Horfetail. It has a long Root, like mfc of Couch, or Quitch-Grafs, from which, as from a land of Joints, come forth mdr ny^ Fibres or Threads • and from which Roc^t at certain diſtances riſe up feverai hollow Stalks, which at feverai ſpaces are fet with fmali Leaves in randies, like to thoſe of Woodroof, altogether barren of Flowers and Seed, for which reaſon Libel called it *Polygonum Fvmina Scimine Vidua*; but *John/on* fryſ, that it is ſometimes found with ten or more Seeds at each joint, for which reaſon *Bauhine* called it *Equifetum Palujfre brevioribus Fohjs Polyſper won-*, this differs little from the laſt, laſing that it is often found to bear no Seed, as the others do.*

VIII. *The fifth, or Smalleſt and fineſt Leav'd Horfetail. It has a kind of jointed and fibrous Root^ from whence riſes up one pretty thick Stalk, and very full of Joints, ſpreading it ſelf out into many long Branches, and making of the whole a kind of Buſh, every of which Branches are iepleat with very final I and fine Leaves, and growing much after the ſame manner as the others do.' -*

IX. *The ſixth, or Stinking Horfetail. It has a long jointed Root, fet zwith Fibres, and the Stalk grows to be many times about aſfird long, growing ſometimes wholly under Water, and ſometimes both in and out of the Water h the Stalks are replenifhed with feverai Branches, but frriped athwarr, and fet with fhorc Leaves at every joint, as in the other *Horfetails*, but they are ſomewhat jagged or divided towards the tops, and at the joints under Water come forth feverai ſmall Fibres or Threads-, the Plant is green whilſt it is in the Water, but taken forth and dried it becomes grey and brittle, eaſily to be rubbed into pouder v^th ones Fingers, and falling alſo into pouder of its ſelf by lyings it ſmells ſomewhat like to *Brimſtone*, whence came the Epithet *jeetidum*.*

X. *The Places.* They all grow in wet and moid places, and ſome of them in Hanging Waters, in many parts of this Kingdom-, the ſecond in moiit or wet Grounds, the third and fourth in ſtanding Waters, the fifth in low wet (feunds in Woods, as near *Highgate*, not far from *Loiuten*, &c. the ſixth Gerard ſays may be found towards the latter end of the Year in feverai Ditches on the back ſide <fi South* wark, near *St. George's* Fields, covered over with Water, as alſo in the Hanging Waters of *St. James's* Park-, and this is that which is taken to be *Bauhinus* \ *Eq'tifetum fviidnmfub Aqua re pens*.

XI *The Times.* They ſpring up tvirh their blackiſh Heac's in *April*, their blooming Catkins appear in *July*, and their Seeding, time is for the molt part in *Auguſt*, after which they periſh and fall xa the Earth, ſpringing up afrelh again the next Spring*

XII. *The Qualities.* It is temperate in reſpecl to heat or coldneſs, and dry in the third degree, it has ſome bitterneſs^ and mightily dries without hiring-, it Is Afttingent, Diurerick\ and Trauiaatitk, Ne* phritick, Arthritick, and Pe&oraf.

XIII *The Specification.* It flops all fortsff Fluxes, and fluxes of Blood, whether inward or outward, heats Ulcetf^ and Excoriations, and cures Catarrhs., Coughs, and Colds, and prevails againſt the Stran-

XIV. *The Preparations.* You rrm prepare therefrom } T. A Liquid Juice. ? Au Ei^enee. # % A D: . . .

*Decoftion in Water** 4. *A Dec oil ton in Wine.* §. *A Fonder.* 6. *A Dijlil/ed Water.* 7. *A Sallet.*

The Virtues.

XV. *Tie Liquid juice.* It is of a binding quality, and dries without iharpnefs, and is very powerful to Hop bleeding in any part, inward or outward, being drank from one Ounce to two, or three, or outwardly applied, if the bleeding is external.

XVI. *The Effence.* It has all the former Virtues, befides which it flops all fluxes of the Bowels whatfoever, fluxes of Seed in Man or Woman/ and alfo ffitting, vomiting, or piffing of Bloody it heals alfo not only the inward Excoriations and Ulcers of the £uts, Reios, Ureters, and Bladder, OV. but all other kinds of inveterate, moift, running, and foul Ulcers, whether internal or external-, it is alfo an extraordinary good Vulnerary, for it quickly and eafily conglutinates the lips of firnple green Wounds, hot iifferring them to come to digefti^h-, it is an excellent thing to cure Ruptures in Children, for by infinuating it felf into the Mafs of Blood and other Juices, it difpofes them for conglutination, and by circulation the edges of the *Peritoneum* become confolidated^ it is faid to cure Ruptures in elder Perfons, being ufed with a long *continuando*, according as the Habit of the Patient maybe, the Difeafe being recent * being drunk to one, two, or three Ounces, mixed in a Glafs of White Port Wine, it gives ealc in the Strangury, Stone, and Gravel, opens the obitruftions of the Urinary parts, provoking the Urine, and expelling the tartarous Mucilagej it ought in this Cafe to be given Morning, Noon, and Night •, it gives eafe in the Colick, and mixed with Honey into a Lohoch, it is effe&ual againft Coughs, Colds, and Catarrhs; being externally ufed warm to hot Pultules, red Wheals, inflammations of the Skin, and other like Eruptions, it eafes the pain, difcuffes the tumor, and allavs the inflammation.

XVII. *The Deception in Water.* Outwardly ufed in Baths it abates the heat-of inflammations, 4hd being fomented upon excoriations in the privy parts of Man or Woman, or ufed as an Injection in a Gonorrhoea, it cleanfes, dries, and heals the fame.

XVIII. *The Decoftion in Wine.* It has all the Virtues of the Liquid Juice and Effence., but ought to be ufed in a larger Dole, as from two Ounces to four, or fix-, it ftrengthenes the Stomach wonderfully, and is goodgagainft Vomiting, forenefs of the Ventricle, and other difaffeQaons of the fame.

XIX. • *The Ponder.* Given inwardly 10 one Dram in any proper Vehicle, it has all the Virtues of the juice and Effence, but operates not altogether fo effre&ually, nor ib fpeedily -, outwardly applied to any Haemorrhage, it prefently flops it, it cleanfes, dries up the humidity, and heals old Ulcers, and caufes the lips of green Wounds to confolidate, ©V.

XX. *The Dijhlled Water.* It has tjie fame Virtues with the Juice, Effence, and Deco&ions, but is much inferior to them, yet it is very good to wafh ibui Ulcers with to cleanfe them, and to be ufed as a Vehicle for the other Preparations, as alfo to make an Eye Water with, and Inje&ions for the Yard, Womb, Fiitula's, &c.

XXI. *The Sallet.* It is made of the young buds or heads a while after they are fprung out of the Ground, you are to boil them as *Asparagus*, and to drefstlMpi up jn like manner, or being firrt boiled, they may then be ttrewed with Flower, then ftyed₃ and fo eaten.

XXII. *Nota.* Many Country Women make ufe of the rough forts of *Horftail* for to rub and feeder their Pewter and wooden Veffels, and fometimes to poiffie and fmoother things which are rough and une-

ven-, but the Leaved and fmoother Kinds are rather to be chofen for Medicinal ufes, and are moil commonly ujed in Phyfick.

CHAP. CCCLXXX.

Of HORSETAIL Meadow,

Meadow SHAVEGRASS.

THE Names. It is called in *Greek* W « f *«*»\$*+ in *Ratine Equifetum Pratenfe*, and in *Englift*) *Meadow TdQrfetail*^ or *Meadow Shavegrafs*.
•II. *The Kinds.* It is twofold, viz. 1. *Equifetum Praten/e majus, Equifetum alterum Matthio/i, Lugdunenjis, aliorumque*^ *Hippuris alter a Tragi, Hipp**:*
tris fontatis Lobehj^ *Equifetum Pratenfe Jett's lofigif fimis Bauhini*, The Greater Meadow Horftail. ^
Equifetum Pratenfe minus^ The Lefter Meadow Horftail.

III. The Defcriptions., *The firji, or Great Meadow Horftail, Us a fmall Root, and jingle, wrb fome few fibres & firing's adjoining to it*, from which rifes up a roegb chamfered Stalk, jointed at certain fpaces., having- at each joint two bullies of rough briftly Leaves., fet one againlt another^ in the foim and manner of growing it differs but little from fome of the former, five that it grows greater, and buftly, with more ftore and longer Leaves than any at the joints, each Leaf for the molt part being jointed alfo with little, but fcarcely dileernable joints.

IV. *Thefecond, or Lefter Meadow Horftail, hrs a Root not much unlike to the Greater Marih Horkrai*^ with feveral fibres or Strings adjoining to it, creeping under Ground, tuith joints, as it wem, fuffl which Root tii\$ fpxing up italf heads, like uJfE.

of *Broom Rape*, or rather *Affragus* heads, which afterwards grow up to be hollow, rough, jointed Stalks, eight or ten Indies high, these Stalks are jointed up to the top, and at those joints come forth as it were a bush of fmail, long, hard Leaves, much longer and more in number than those of the *Greater Marfr Horfetail* aforementioned, with Catkins not much differing therefrom.

Lugdunenfts, Sanguinahs jcemma Jimilis Lörd?, five. *Equifetum Folijs "Nudum non ramofum, five Junceum Baubini, Equifetum Nuduw^ Naked Horfetail* 2. *Equifetum Junceum ramojum^ Equifetum Matthiofi & Liugdunenfts, hippuris w^ nor Lobelij & Dodoridi, Branched Horfetail, and Branched Naked Horlerail*. 3. *Luufetum Nucium minus, variegatm Bauhim^* Small Naked Horleuil variegated or parry colored.

V. *The Places*- They both grow in Meadows, near Hedges, and Groves, and by Wood sides in moid Grounds, in many places of this Land ^ they are also oftentimes to be found in dry Lands, and by the borders of Land Ground where it adjoins to Fen-ny Ground. *

VI. *The Tims*. Their Heads spring up early in the Spring, and grow up in the Summer Months, the Catkins blooming in July, and Seeding for the most part in August.

VII. *The Qualities, Specification ^ Preparations, and Virtues*, are the same with those in Chap. 379, last foregoing^* that we shall say no more of them in this place. ^m

lit. The Descriptions. *Thejvfl, or Naked Horfe* tail, ha* a Root which is jointed, and creeps^ like the others^ from whence rise up many pught naked Stalks, jointed^ but without any Leaves at the joints* * sometimes the Stalks are single, and sometimes with one or two other like Stalks springing out of their sides, which are likewise jointed, naked, and growing straight upright ^ their Stalks are of a rough and *Rufh* like substance, growing to be a Foot or more high^ sometimes to two or three Feet high, according to the goodness of the Ground ^ by its nakedness of Leaves it is known from all the other Kinds of *Horfetail^* and is more used by several Workmen to smoothe and polish their Works of Wood, Bone, Var* ni(h, and Japan, than any of the others.

IV. *The second^ or Branched Rufh Horfetail, bar Roots like the former*, and differs only from it in its growing with many Stalks from the top of one that first rises out of the Ground, and that many of those Stalks do branch themselves forth into others, all of them full of joints, and without Leaves, so that the whole seems to be a kind of *Bafli*.

V. *The thirds or Small Naked Horfetail variegated. It has a final^ blackish, creeping Root, from which spring up several if?nal^ hollow, pale green Stalks, of a Foot high, and sometimes not. So wuch, and full of joints*, the lower joints of which are blackish, and the upper whitish, without Leaves, (which is probable to be the same which *John/on* on *Gerard* says Ije found with small Leaves, and called *Horfetail Coralline*, tho' this may sometimes seem to differ both from His and that *oi^Gefurr*) at

Terms, causes a speedy delivery to Women in Labor; drives forth the Afterbirth, helps the Strangury; and expels Stones, Sand, Gravel, and Xartarous Matter out of the Reins and Bladder, and opens all obstructions of the Viscera.

IX. *The Preparations.* You may have therefrom, 1. A *Liquid Juice*. 2. An *Effence*. 3. A *Decolli-* b? *in Wine*. 4. A *Pouder of Leaves or Roots*. <> m℥. & ad *TinSure*. 6. A *Spirituos Tinture*. 7. **Afbily TinSure**

^Ebe Virtues.

X. *The Liquid Juice.* It is tñe of the most powerful things against Hyfterick Fits, or the fustocation of the Womb; and other Difeaf's of that Bowel, it suppreffes Vapors, repreflès the Fits, and giv^sfudden eafe- *it provokes Urine, opens the obftraftions of the Reins, Ureters, and Bladders, gives eafe in the Strangury, provokes the Terms, facilitates the delivery of Women, in Labor, and forces away the Afterbirth. Dofe two or three Spoonfulls at a time in a Glafe of Wine, or other fit Vehicle, in the Morning falling, and laft at Night going to Bed 5 as alfo at the time of aParoxifm, or when the Patient is-hK extremity.

XL. *The Ejjfñce.* It has all the former Virtues of the Liquid Juice, and is very good to expel the S* n.% Cgavel^and^r Tartarous Mucilage, out of the '(^t℥I^PM^BSng given* tyvo or three Spoonfulls fita time in any proper Vehicle for feveral days top&her •, it is faid alfo to be good for fuch as have a Rupture, for which Difeafe it is thought that there is no better Remedy, for that by the continuance of its use it will knit and heal the part, provided alfo that the Patient be accommodated with a convenient Trufs for a good while after as well as during the ^&ole time of the Cure.

XII. *The Decottion in Wine.* It has all the Virtues of the Juice and Effence, but much lefs powerful in its operation or effects, for which reason it is the oftner to be given; and that from four to fix Ounces at a time y it is good, for fuch as have an imperfeQion in their Speech, it not being natural, or from the conformation of the parts-, it is profitable alfo against Sores and Ulcers in the Mouth and Throat, and fo ftrengthens the Uvula, as to confirm and fix V in its natural ftate, drying up the humidities,, which many times relax it, and hurt its Tone. •

XIII. *The Pouder of the Leaves or Roots.* It has all the Virtues of the Liquid Juice, Effence, and Deco&ioh, and may be given from a Dram to two Drams, repeating a Dram at a time till three or four Drams^g given V if need fo require, being given to a Wojfen in Labor^ it may be given in Canary, Malaga, or Tent, or any other proper Wine or Vehicle, as the Phyfician (hall thiihc most fit, &c. It cures old and filthy Ulcers in any part of the Body.

XIV. *The Acid Tinfure:* It opens obftru&ions powerfully, suppreffes Vapors, cures Fits of the Mother, and is one of the best things in the World to cure the Rickets in ChiUreh, kill Worms in their Stomach and Bowels, catfe in them a good Appetite, and reftore them in Confumptions. Dofe fo many drops (in any Ale, Beer, of Wine) as to make it pleafantly and gratefully (harp.

XV. *The Spirituous TmSnrc.* It has the Virtues of the Juice, ffence, and Pouder, but is much more Cordial and refrelling 5 it is good against Convulfions, Palfies, Minting and Swooning Fits, ftrengthens the Stomach, eafes pains and gripings in the Bowels, as alfo after pains of Women in Childbed, and is a good thing to be given with a *continuando* to Childbed Women, to caufe a compleat cleaning,

and to reftore the Tone of the Womb. Dofe From one Dram to two, or three, Morning and Night in any proper Vehicle; it may alfo be given ac any other time upon a^ exigency, or in any extremity of pain, or fainting.

XVI. *The Oily TinSure.* This is a powerful thing against the Colick, or any oppreffion of Wind in any of the Bowels, it opens powerfully the Urinary paffages, and gives eafe in the Strangury, Storfie, or fuppreffion of urine by realon of Gravel, or any Tartarous Matter lodged in any of the Urinary parts ^ it is an excellent thing alfo against the Patlie, being inwardly giveiT, and alfo outwardly anointed along upon the *Spin* Dorft*, and the parts affected with the fame-, outwardly anointed with in any Adi or Pain, in what part of the Body foever, as alfo upon parts affected with the Gout from a cold caufe, it gives eafe and relief. E)ofe ffortii ten drops to thirty drops, *fiiR* dropt into Sugar, and then mixt with any fit Vehicle for the purpofeyou intend it^ it may be given Morning and Night fo long as neei requires.

II. *The Kinds.* Authors make many Kinds of this Herb, but we (hall in this Discourse take notice of no more than the fix following Kinds, viz. 1. *Cynoglossum, Cynoglossum vulgare*; *Cynoglossum majm vulgare*; *Cynoglossa vulgare*, Our Common Houndstongue, and Common Great Houndstongue. 2. *Cynoglossum maximum Lobelij*, The Greateit Honndstongue. 3. *Cynoglossum maximum Montanum, Cynoglossa maxima M^o Lana Regionum jrigidarum Fab^o Columns, Cynoglossum Sylvaticum Cattle rubente Bauhim*, which he thinks to be the same with the *Cynoglossum Sylvaticum Hircynicum Tbalij*, and the *Cynoglossum Montanum Cafalpini*, The Great Mountain Houndstongue. 4. *Cynoglossum semper virens Bauhini, Cynoglossa media l'olio virente Columns*, Ever green Houndstongue. 5. *Cynoglossum minus, five pufillum, Cynoglossum pufillum tiarboneuse Lobelij*, Small Houndstongue. 6. *Cynoglossum minus Wore cwruleo, Cynoglossa minor Cordi, Cynoglossum hahcum Cimerarij, Cynoglossum pufillum Narboneuse Lugdunensis iff Eyjietenfis*^ Small Houndstongue with biew Flowers.

III. *The Descriptions.* *The Jirff, for Comxnon Houndstongue.* It ha* a black, thick, and long Root^ i: hich is tough, or difficult to break, and full of a viscois. or clammy juke, fmellwgof astrong Ulfccnt, much like to Dogs Pifs, as the Leaves nijq(dp_A tibich fane callafoponferous'fmeU\ iföititfiisJ^oot fpring up maoy; long and something narrow, fexft, ai/d. as it were hairy, darkth greft Leaves, lying on the Ground, fomewhat like upto the Leay^ of Bughs, but not altogether fe^hath iniëelin^ro^ftoi^artiong which, rises up a rough-hairy - Stalk, ai^uf t_w p % et high, with fbmeffooler Leases Tthereoh than thbfe which grow be^.' rhetop&tqfe. veral mris, with a ^, ^, L ^I di, eye foot of every Branch whicli is ^<At^g' Jon& willftnany fibw^ ers fee along thofe Wch^which 3re crooked, or

turn inwards, before it flowers., and gradually opens as the Flowers blow, which Flowers confit of four imall, purplish, red Leaves, something of a fad or dead color, fcafcely riling or (hawing themfelves out of the rough green Husks in which they stand, with some Threads in their middle^ this Plant has sometimes been found with a white Flower^ after the Flowers are past, flat rough Seed come in theirpl^ ces, which has a Imall Thread or Pointel itr^iiQ middle, and by reason of its roughness eafily cleaves to any Garment which it torches, not being xeady pulled off again.

IV. *Tbejem?* or Greateit Honndstongue. ^{nm} differs not either in its Root, Stalky Branches^ jucnes^ flowers, Seed, fmell, or manner of growng, from the first Common Kind but now clefcribed, but ontyip its magnitude, this being twice as larg%, which is indeed the only difference.

V. *Tbether* or Great Mountain Houndstongue. The Rtot is bhickljh on the outside, anlwhiujhimthin, being something hke the former; it has also fpringing from the Root many large, but hairy and soft Leaves, lying on the Ground, above a Foot long, and an Hand breadth broad, of a whitish greest color, having in every one of them the middle Ki^ reddish, with many green Veins running thro' t b, ^ and reddilh irootltalks to fultain them> thofe which are in the middle of them standing more upright> from among which rises up a thick, hollow, creftfol, reddifti, woolly, or hairy Stalk tw> i'eft. ^{or 110re} high, replenilhed on all fides with i^{110re} but, offer and letTer up to the top, ^ it ielt out into four or five branche* or r^ itanding all on one fide, yet forming at tirll; a^ Head, very pleafant to behold for the variety of^ or, lors therein, the hairy ftaiks of the Flowers being green, and ending in five points, the Flowery being; also hollow and long, and confifting of five purpl<<<

red Leaves, iomewhat fweet, ftanding above the Husks and green Leaves which grow among them, with red Ribs (n them, which in the fhadow, where it delights to grow, is the mere confpicubus and beautiful -, after which in the laid Husks come longer Seed than in the *Cow won Kind*, lour ufually together, which on the upper fide are flat, and circled ^{with} Out with a few fhort prickles, whereby it com- niddnTjTcleaves fait to Peoples Garments if it touche them.

VI. *'the fourth, or Ever green Houndftongue.* It has a Root which is thick, and blackijh on the outside, like the others going before •, nor does it much differ from the *Common* or *Ordinary* fort of *Houndstongue* first described, but that the Leaves are always fiesh and green, fomewhat long and narrow, with a great whitiflugreen Rib in the middle, fsmooth of the upper fide, and more hoary underneath, the Stalk at first js but low, with many narrow Leaves comparing it about, but more thinly than in iome other Kinds, the Flowers are red, but fomewhat larger than the *Ordinary*, Handing in like man- f i U Pon fmall Branches, which are writhed or turned ^{the Hellotr} optum, ortfiefirttKind* the Seed which follows Hands all on the one fide, and is final- f t f s roug ^ but the Stalk will then be grown much higher, this has no manner of hoariness, nor has it 10 frong or rank a fmell as the former have, it does alio lpnng forth with fresh Leaves, before the old Stalk with its Seed is quite dry and withered away.

VII. *The fifth, or Small Houndftongue.* & has *fsmall black Root^ not much differing from Out Common Kind, but it is every ways jmailer in all its particular^ having fuch like Leaves, but fmaller and fhorter, yet greener, and more Ihining, the Flowers being fmail, are alfo of a pale red color, the whole Plant has not fo frong or rank a fmell as have fome of the former, but this fmallness tmay be thought by

fome to be from the barrenness of the Soil in which it grows, which is not fo, because it is oftentimes found in the fame Ground where the greater growsj and besides, being either tranfplanred, pr the Seed fown in Gardens, it will continue much fmaller than the other. ^

VIII. *The fixiti, or Small Houndftongue* with blew Flowers, h has a fmall long Root, but annual, which fends forth one round, fmall, hairy Stalk, fometimes but a loot, and/ometimes ivoo Feet high, brownijh below, and green above, on which are let on both fides without order feveral final!, and fomething long, but narrow Leaves, of a blewifh green color, covered with a long hairy down, which is tough and flicking, the middle Rib is fomewhat great and eminent, and the whole Plant of a hot bitter tafter, from the bottom of thefe Leaves, efpeciilly upwards, come forth fometimes other fmaller Leaves in \$ Tuft together, and is parted into divers Branches, the tops of which are bended, as in feveral other forts, bringing forth very fmail Flowers, of a fair blew color, with a yellow Star in the bottom, ftanding in fuch like Husks, in which after they are pafst is contained very fmall roundilh Seed, without any prick in the middle, as fome others have, but very rough or prickly, and ready to ftick upon Garments or Cloaths, as the others will.

IX. *An Obfervation.* There has been a great Controverfie amongft Botanifts whether the *Cynoglojsum* here first described, which is our *Ordinary* and *Common*, and is the most common in all Countries, be the *Cynoglojsum verum Diofcoridis*, because he fays it bears neither Stalk nor Flowers, which this does, which Plant, wanting Stalks and Flowers, *Matthio-Ius* fays he found in fome fandy Grounds in *Rome*, behind or beyond *Mount Adrianits*, but both *Vena* and *Lobel* tax him with ^{want} of knowledge, for fay they it will in the fam^nd other places bear both Stalk and Flowers, altho' in divers Years and places it does not bear, yet will after fome refpite of time in any place, as not only they, but feveral other good Authors have acknowledged, as well in this ^s in other Plants •, I confefs I my felf have oftentimes found the first described Plants viz. *Our Common Houndftongue*, in feveral parts of *England* without either Flowers or Stalk, and that at the fame time, and near the fame places, where other Plants of the fame Species have had both, and therefore without all doubt *Our Common Kind* is the true Plant which *Diofcoridps* has described under that Name fo defectively.

X. *it?e Places.* The first grows in most places of *England*^ in wafte and unfilled Grounds, alfo by high Ways, Lanes, and Hedge fides * the fecond grows in the Low Countries, but chiefly in their and our Gardens-, the third grows on Mountains near *Naples* 2 with us only as it is manured in Gardens \$ the fourth in (hadowy Woods in *Germany*, &c. the fifth grows in many places of *England*, as alfo in *Germany*, difcourfed of by *Cor dm* upon *Diofcorides*, and poffibly is that fame Kind, which in the *Adverfaria* is laid to grow about *Mompelier*, and called *Puffillum Narbonenje*^ the sixth grows in *Aufria*, as *Cluff* fays, and in other parts of *Germany*, as *Tragm* fays* and at *Naples*, as *Cotumna* lays, alfo very plentifully in *England*, by high Way (%s, as you go from *London* towards *Colchefer*, between *Eprford* and *Wittam* in *EJlex*, as *Gerard* fays.

XI. *The Times.* They all Flower about *May* and *June*> and fome in *ply*, if the Seafon and place be cold, and the Seed is ripe not long after.

XII. *The Qualities.* *Houndftongue*^ is temperate n reffept to heat and cold\ and dry in the first^de-

gree, Astringent, Anodyne, Emphra&ive or Obtrufive, (and yet some Authors will have it to have an Emollient property) Trauma tick or Vulnerary, Arthritic, Hysterick, and Alexipharmick.

XIII. *The Specification.* It is prevalent against Catarrhs, Coughs, Asthma's, green Wounds, old Ulcers, and Sores arising from the French Pox.

XIV. *The preparations.* You may have therefrom, 1. *The green Leaves.* 2. *The Root.* 3. *Juke.* 4. *An Effence.* 5. *A Decoction in Water or Wine.* 6. *A Pouder.* 7. *Pills.* 8. *A Balsam.* 9. *An Ointment.* 10. *A Cataplasm.* 11. *A Lotion.* 12. *A Distilled Water.*

The Virtues.

XV. *The green Leaves.* Bruised and applied they cure the falling away of the Hair, which comes of hot and (harsh) Humors, they are good also to be applied to any place scalded, or burnt with Fire, and laid to any green Wound they heal it quickly and the same is profitable also against Anthemes Fire, and other Inflammations.*

XVI. *The Root.* Being roasted under Embers wrapped up either in Palt, or double wet Papers, and then a Supporkory made thereof, and applied to, or put up the Fundament, it is effectually good against the Haemorrhoids, or Piles, and applied as a Cataplasm to the Gout it eases the same.

XVII. *The Juice of Roots or Leaves.* Made into a Syrup with Honey it is good against vehement Catarrhs, old Coughs, Colds, Asthma's, and all sharp and thin deflations of Rheum which fall upon the Eyes, Nose, Ears, Stomach, or Lungs, causing wheezing, shortness of Breath, &c. Dole on, or two Spoonfuls, (according to Age, &c.) Morning and Night.

XVIII. *The Effence.* It has all the Virtues of the Juice, and more powerful; and may be given in the same Dose in a Glass of generous Wine it is good also (inwardly taken and outwardly applied) against the bitings of mad Dogs.

XIX. *The Ponder of Roots or Leaves.* It has all the Virtues of the Juice and Effence, and may be given from a Scruple to a Dram, or Dram and half, in any convenient Vehicle, outwardly applied to green Wounds it quickly heals them, and spread very thick upon old moist Sores and running Ulcers, it admirably cleanses them, dries up the flux of humors, and disposes them to healing.

XX. *The Decoction in Wine or Water.* It has all the Virtues of the Juice, Effence, and Pouder, but must be given in larger quantities, as from an Ounce to two, three, or four, as the Patient is in Age and Condition, it cleanses, dries, and heals Wounds and Ulcers, if the Patient is of a hot Constitution, the Decoction ought to be made in Water, after which (if you think fit) a little Wine may be added.

XXI. *Pills of Houndstongue.* Take the dried Bark of Houndstongue Roots, White Henbane Seed, Opium prepared (i. e. extra Sed voith fair Water and reduced to powder) of each one Ounce Myrrh an Ounce and half Olibanum ten Drams, Saffron, Gift or cum, Storax Calamita, of each three Drams, let the Roots of Houndstongue and Henbane Seeds be powdered together, the Myrrh, Olibanum, and Saffron, each by themselves, then mix altogether and with Syrup of Stychas, (or any other proper Syrup) make a Mass for Pills. They were designed to stop Catarrhs, or defluxions of Rheum upon the Lungs, Stomach, or other parts, to alleviate Coughs, cure Asthma's and Pleurifies, which they perform by Motomedicines, they stop Loosnesses, all forms of Fluxes in the Bowels and fluxes of Blood, or Rumors in what part of the Body soever the

ure the overflowing of the Terms in Women, as all fluxes of the Whites, and a Gonorrhoea in Men, (Universals being premised) they give ease in and cure pains and fitches of the Side, Pleurifies, the Colic, and all manner of internal pains, ease and cure the Toothach, and are one of the most absolute things against the Gout in the World. Dose from six Grains to fifteen Grains, every Night.

XXII. *The Balsam.* The green Leaves and Roots, Juice, made into a Balsam with Beef Suet and Turpentine, applied, is good against an Alopecia, draws out the fire in any place which is burnt, and applied to the biting of a mad Dog, draws out the poison, and healthens it digests and cleanses old Ulcers, and is probably applied to Venereal Sores, as also the Gout in Hands or Feet.

XXIII. *The Ointment.* It has the Virtues of a Balsam, but does not draw nor cleanse so powerfully, it is excellent for such Ulcers as are old, and deep, or spread much in the Legs, or other parts of the Body, and takes away the inflammation, which always by accident happen to them.

XXIV. *The Cataplasm.* Applied to the Pite whether broken or not, it gives ease to the pain, and in a short time diffuses the Tumor, it eases also the Gout arising from a hot cause, and allays inflammations in what part of the Body soever

line Tincture, and is of excellent use against Scurf, Morpew, Dandriff, Pimples, or other blemishes out in the Head and other parts of the Body, it also takes away Tanning, Sunburning, Yellow, black and blew spots, and other discolorings of the Skin.

XXVI. *The Distilled Water of Herb and Roots.* It is good for all the purposes aforesaid, may be used as well inwardly to drink, as outwardly to wash any sore place, for it heals all manner of Wounds and Punfures, also foul Ulcers arising from the French Pox.

C H A P. CCCLXXXIV.

O / H O U S L E E K ,

S E N G R E E N .

I. *HE Names.* It is called in Arabic Bejahd, X hlem, and Hajalhalez, in Greek 'A, in Latine Sedum, Sempervivum, and as Pliny says, Bupthallon, Zoophthalmum, Steigethron, and ty-pogefon, some call it Oculus, and Digitalis, and Apuleius calls it Vitality and Jovk Barba, but Sedufi and Sempervivum are the usual Latine Names, in English Houfleeck, and Sengreen, or Evergreen.

II. *The Kinds.* It is divided into three principal sorts, viz. 1. *Aizoon magnum,* or *najus, Sedum majus,* The Great or Greater Houfleeck, 2. *Sedum minimum,* The Smallest Houfleeck, 3. *Aizoon vel Sedum minus* The Smaller Houfleeck, which is *Prickmadam* and *Stoncrop* of which we shall Treat (God willing) hereafter in their proper places.

III. *The Kinds of the Greater Houfleeck.* There are three sorts hereof, viz. 1. *Sedum majus vulgare*, 2. *Sempervivum theophrasti*, 3. *Aizoon magnum*, as Dioscorides, as Quifius has it, *Sempervivum*

rn<ij//s, Ey m<vin* vulgare, Umbilici Venëris Species dltera Avgüi/ar-e, Our Common or Vulgar Houfleeck. 2. *Sedum majits legit inum Clujij, Aizoon magnum vcm Diofcorldls, Sempervivum via Jus, Scmpervi-)um Arborefcens Matthiol'u Sedum Arborefcens, Ai- :oon Arborefcens, The True Great Houfleeck, or Tree Houfleeck. 3. Sedum. majus Marinum Angli- •:i&rj* Sedum Portlandicum Lobelij\ Great Englifh Sea Houfleeck. This Label makes to be a fort or kind of the il-cond abovenamed, or Tree Hnu fleck.*

IV. The Defcriptions. *The firft, or Our Common Houfleeck, bos a fmall fibrous Root, creeping all about, and from fndll firings multiplies into many heads of Leaves, round the original Root, takktjkip thereby a large compafs of Earth; and as thi^jpdT fend forth on all fides feveral heads of pale, green, thick, fat, broad Leaves, pointed at the ends, lying circlewife one unto, and as it were upon another, and upon the Ground, from the middle of each head of Leaves rifes up a ffraight Stalk, two Feet high, all covered with fmaller and longer green, thick, fat Leaves, (than thofe below) which often dry and fall away before the top thereof has perfeQ ed its Flowers, which grow on long Ranches, bending their ends or tops downwards, with a fingle Leaf at the foot of every one of them, which confift of many Leaves, Star fafhion, of a dark reddifh color, after which come Heads, with fmall blackifli Seed in them.*

vV. *Thejsecond, or True Great Houfleeck. It ha* a -ftoot conJtUng of firings, like the former, which divides it felf into feveral offsprings -*, this Herb grows great, to the form of a Shrub, or woody Plant, of two or three Feet, or more high, in its native places, which are warm, and its Stem or Trunk below is of the bignefs of four Fingers, and the other Branches are the thicknefs of ones Thumb, of a greyifh color on the out fide, and fpotted^ it were round about, but they are the marks of the old Leaves which are fallen, the like of which may be feen in *Wood Spurge*, and foine other Plants- it fpreads it felf out into feveral litflber fmaller Branches on all fides, and Leaves at the ends of them, ftanding in %

compafs, like" the Heads of the former *Common Houfleeck*, but nothing fo clofe, every Leaf being formed fomewhatlike a Tongue, fmall at the bottom, and broader towards the end, where it is broadeft, roundifh at each fide of the end, and a little dented in about the middle of the faid end, not much un? like the form of a Heart, they are alib finely dented about the edges, and as it were a little hollow, like a Spoon, and full of juice, and of d pale green color \ from the tops of fome of thdMnehes thrufts forth a long Stalk, divided into many lefter Branches or ^wigs, with fome few fmall Leaves on them, and ^{the e a s} of them feveral Star like Flowers, con- lift mg oP many fmall JLeaves, of a pale yellowilh color, with fundry fmall Threads in their middles. v flie greater ftalk becomes dry and fsmooth, as the Heads, which have fmall black Seed in them, which being ripe they utterly pferifh after Seed time, but the other Heads of green Leaves abide frefh all the Year, which fend forth Flowers the next Year after, and may be taken before hand from the main Stock to be planted, and will take root being put into the " Ground *, in the warmer Climates it fpreads it felf much more into Branches than in thefe our colder Countries.

VI. *Gerard* deferibes it thus. It rifes up with a talk a Foot and half, and fometimes three Feet high, wfiich is thick, hard, woody, and fo tough, that it can hardly be'broken, parted into divers Branches, and covered with a thick grofsBark, which in the lower part refembles certain prints, or imprefs'd marks of the Leaves which are fallen away j he Leaves are fat, well bodied, full of juice, an Inch long, and fbmewhat more, almoft like little Torques, very curioufWminced or nipt on the edges, ftanding upon the Tops of the Branches, having in them the fhape of an Eye', the Flowers grow out of the Branches, which are divided into many Sprigs, which Flowers, are flender, yellow, and fpread like i Star, which being paf away, there comes up in heir places very fine Seed, the Sprigs withering away -, the Root is parted into many oft-fprings, and the Plant is always green, nor in its native Soil is it hurt by the cold of Winter, for which reafon k obtained the Name of *Sempervivum*.

VIL *The third, or Great Englifh Sea Houfleeck. It bait a long flender RoOt, or Roots, with fome few wvres adjoining, from whence fpring up one or two, * more Heads, which at length become Leaves and Stalks; the Leaves imitate Laureola, growing among the Tithymals, but thicker, fhorter, more fat, and tender \$ the Stalk is of a woody fubftance, like Laureola, participating of the Kinds of Sempervivum, Craffula, and Tithymal, of which laft fome Authors have thought it to be a Kind -, others have thought it to be a Shrub, degenerating from all thofe Plants: Pena and Lobe I, who firft difcovered it and fet it forth, knew not what to think of it} others fince them have been as uncertain ^ however, its fomething like to our fecond Kind, or *Tree Houfleeck*, above' defcribed, its Stem is woody, but it grows neither fo high, nor with fo many Branches, the Leaves alfo, although fomething like to them, yet are not fo thick or fappy * in its other parts it differs not much from the laid *Tree Houfleeck*.*

VIII. *The Places.* The firft grows naturally both in *England* and *Germany*, as alib in the Low Countries, *France*, &c. it grows upon Stones or Moun- tains, upon old Walls and ancient Buildings, as fo upon the tops of Houfes, and more efppecially being planted in Clay, or in Clay Ground; ks%rm does fometimes differ, according to the nature of the Soil, for in fome places thd' Leaves are narrower and lefTer, but more in number, and have one on- ly circle-, in fome places they are fewer, thicker, and

and broader, they are green, and of a deeper green in some places than in others, in some places of a lighter green, &c. the second grows in Greece, Italy, Portugal, Spain, Yrance, Illyria, Slavonia, Sicily, Sardinia, Corfica, England, &c. in divers places of Italy, Spain, and Portugal, it is kept in Pots, as *illitius* says, and carefully preserved in Winter-, and in Lisbon grows on the tops of Houfes, as our Common Kind does with us, but it does not very well endure the cold of the Northern Countries of Europe, with all the care that can be, unless kept in a Room with a Stove in it -, yet *Lobel* says he found it growing in the Wand of *Holmes*, near *Briñol**, it grows in the 1 Hands of the *Mediterranean* as aforementioned, as also in *Zant*, *Rhodes*, *Candia*, and in many Provinces of the East, and of Greece, &c. the third grows by the Sea side in many places of England, and in the Illand of *Holmes*, not far from *Briñol*; it grows also in the Isle of *Portland*, for which reason it has obtained the Name of *Sedum Portlandicum*.

IX. *The Times*. The first Flower? in the Summer Solstice, which is in June, about the eleventh day, and generally Flowers from that time thro' all June and July, and now and then in the Month of August, it spreads itself into Heads from several Sprigs of the Root in April, which Sprigs or Strings of the Root are the Ground Work of the great Circle, and of other Circles, by which it multiplies itself, and by which, being at length full grown, it spreads itself into many other Circles the second Flowers, as *Clutius* says, in the warmer Climes, as Spain, Portugal, &c. in November and December, but scarcely ever with us the third, *Ol Sedum Portlandicum*, which grows by the Sea side, Flowers in July and August whilst the weather is warm.

X. *The Vitalities*: *Houfleeck* is cold in the third degree, and drying in the first, it is Anodyn, Afrin- genr, Repercuflive, and Arthritick.

XL *The Specification*. It cures an Eryfipelas, or *Anthonies*: Fire, so called, and allays the heat of all Incarnations, Burnings, Scaldings, &c.

XII. *The Preparations*. You may have them from, 1. *The green Leaves*. 2. A Juice. 3. A Posjet. 4. An Oil. 5. A Cataplasm. 6. A Distilled Water.

The Virtues.

XIII. *The green Leaves*. Applied twice a day upon Corns and Warts in the Hands and Feet, it dissolves or consumes them, and takes them away -, the Leaves bruised and laid upon the Crown or fore part of the Head, stops the bleeding at Nose very quickly and being applied to the Temples and Forehead it eases the Headach, and allays the heat and distemper of the Brain thro' Fevers, Frenzies, or want of Sleep.

XIV. *The Liquid Juice*. It is good against all heats and inflammations, as well inward as outward, dropped into the Ears or Eyes, stops all hot defluxions of (sharp) Rheum into those parts, and being taken inwardly it is good to stop all fluxes of humors upon the Viscera, and the immoderate flux of the Old, and is profitable against the biting of the *Phalangium* being often bathed upon Warts and Corns, it is said to take them away, the more especially if the green Leaves be applied also over the same* outwardly it abates and allays all sorts of inflammations in any part of the Body, as in an Eryfipelas, or *Anthonies* Fire, and all other Eruptions of the Fleat and skin, Shingles, Pimples, Ringworms, Tettars, Putties, Cankers, fretting Ulcers, Burning, Scalding, Morpew, Scurf, and other the like defecations OK the Hefh and Skin* and bathed upon the part

warm it eases the pain, and is very profitable against the Gout.

XV. *The Poffet*. It is made with the Juice, and has all the Virtues of the Juice, being inwardly given it is also singularly good against the hot Fits of Agues, for it cools and attemperates the Blood and Spirits, quenches thirst, and stops Catarrhs, it may be given in a fourfold quantity to the Juice, as the Juice may be given from a Spoonful to two Spoonfuls in a Glass of Wine, or other fit Vehicle, for the Poffet may be given from four Spoonfuls to eight, a little sweetened with Sugar, for all the aforementioned Intentions.

XVI. *The Oil*. It is thus made. Take juice of *Houfleeck*, choice thick Cream, of each a quart, boil them over a gentle Fire till a separation is made, and the Oil swims on the top, of a yellow or greenish color, which when cold take off, and keep it for use. external Cafes, (excepting an Eryfipelas) it has the Virtues of the Juice, and is good to anoint Pimples, Shingles, Tettars, Ringworms, Scurf, Morpew, &c. with, as also places pained with the Gout given inwardly from half an Ounce to an Ounce in any convenient Vehicle it gives ease in the Strangury, Stone, Gravel, heat and (adding of Urine, and cleanses the Urinary passages from tartarous mucilage,

XVII. *The Cataplasm*. Being kneaded with Honey and Barley Flower it is good against the Difeases the Liquid Juice is used against, except in Eryfipelas, because experience has taught us that a greasy or oily bodies rather exasperate than abate; that Difease applied in the Gout it gives sudden ease and cure.

XVIII. *The Distilled Water*. It is profitable for all the purposes aforementioned, being in outward Distempers bathed upon the parts affected, and inward Difeases given from two to four Ounces, sweetened with Syrup of Clove or williflowers if it is bathed upon any place stung with Nettles or Bees it presently takes away the pain, for also the Juice, being used in like manner, as also the green Leaves, being rubbed upon the parts wounded or affected.

If the Cataplasm of the Leaves is made with Vinegar and Barley Flower (instead of Honey) it may profitably be applied to an *Anthonies* Fire.

CHAR CCCLXXXV.

0/HOUSLEEK Small.

THE Names. It has no Greek Name that we know of, but it is called by *Quifms* in Latine *Sedum Alpinum ajugae folio*, and in his *Hist. of Plants* *Sedum decimum tertium*, also *Sedum Idewiatii Folijs*, in EngHJh *Jagged Houfleeck*, *Houfleeck* with jagged Leaves, and *small Mountain Houfleeck* with jagged Leaves.

II. *The Kinds*. Authors make two Kinds hereof, viz. *Sedum Alpinum laciniatis ajuga folijs*, Small Mountain Houfleeck with jagged Leaves, of which in this Chapter. 2. *Sedum Montpelienfe to Pyre-naum laaniatum* French jagged Mountain Houfleeck, the which not growing in England we shall say nothing of it in this Work.

HI. *The Description* *h faj a small blackish fa** which spreads much*, from which Root it (hoots forth

on all fides with many finall heads of Leaves from fmaliftrings, as is ufual with the *Houfleeks*, each Leaf whereof is long and narrow, cut in deeply in to three divifions, one on each fide, and the end longeft, fomething like to the Leaves of the *Sweet Groundpine*, but fmaller and greener, not having any hoarinefs on them, afringent and drying alfo in tafte, as much as any of the others-, the Stalks are reidih, very flender, and not above two Inches high, as *Clufius* fays, but they grow three Inches or more high with us, which is fspread out at top into fome few Branches, bearing every one of them one finall Flower, (but with us it is large, with refoeft to the bignefs of the Plant) which confifts of five Leaves apiece, of a pale green color, fays *Clufius*, but with us as on that Plant which came from one Mr. *Hesket* out of *Lancashire*, of a pale whitifh color, with fome yellow threads encompaffing a middle round Head.

IV. *The Places.* *Clufius* fays it grows on the Mountains called *Sneberg* or *Snowfall* among the Stones, with us it grows on Mountains in *Lancashire* as the aforementioned *Hesket* reported.

V. *The Times.* *Quifius* fays that it Flowers in thofe Months which are prefently after the Snow is diflblved, but with us towards the latter end of *Aprils* or in *May* but yet fomewhat later on thofe Moities.

VI. *The Qualities, Specification & Preparations.* they are much the fame with thofe *Common Houfleek* in the former Chapter, fo that no more need be faid of them in this place.

HYACINTH Englijh, See Hares-Bells, Ch. 375.

C H A P - CCCLXXXVI.

Of HYSSOP Common.

I. *The Names.* It is called in *Arabick* *Cyfe*, *JL Javes*, *Jufa*, in *Greek* *Trw*, in *Ratine* *Hyfopus*, in *Englijh* *Hyfop*.

II. *The Kinds.* There are two principal Kinds hereof, viz. 1. *Hyfopus Vulgar* or *Our Common Hyfop*. 2. *Hyfopus infrequens* or *Hyfopus incebrvt* vel *infolius*, *Hyflop* Strange, and not *Vulgar* or *Common*, of which in the next Chapter.

III. *The Kinds.. Of Our Common Garden Hyfop.* there are only two Kinds, viz. 1. *Hyfopus Vulgar* & *Hyfopus Arabum* Our *Vulgar* or *Ordinary Hyfop*. This *Hyfop* is not the *Hyfop* of *Diofcorides* and other *Greek* Authors, as all our modern Botanifts do acknowledge, except *Matthiolus*, who earnestly contends that *Our Garden Hyfop* is it againft all reafon do any of our Herbarifts know (as far as I can find; what the true *Hyfop* of the *Greeks* was. As for *Our Common Garden Hyfop*, it is certainly the true *Hyfop* of the *Arabians*, and fo we take it 2. *Hyfopus Arabum Floribus rubris vel albis*, *White* or *Red Flowered Hyflop*.

IV. *The Defcriptions.* the *Hyfop* or *Our Vulgar Hyflop*, has a *Root* which is fome what thick with many thready frings thereat, it is a bushy Plant, which rifes up with many woody but tender Branches, fomething more than a Foot high, on the Stalks and Branches whereof are fet at certain diftances feveral fmall, narrow, and long green Leaves, not dented at all on the edges &

the tops of the Stalks and Branches grow blewifh purple gaping Flowers in fpiked Heads, one row above another, after which follows the Seed, which is fmall and blackifh * the whole Plant is of a vigorous or frong, fw6et, pleafant fmell *

V. *The second* or *White* or *Red Flowered Hyflop*; They have a *Root* like the former, but are fcarcely to be diftinguifhed in their form and manner of growing from the *Common Garden Kind*, (of which this is a fort) the chief difference is, that they do both ufually bear white or red Flowers, all on one fide of the Spike, yet continue not conftant in that form, but change into the form of the former *Common Kind*, and fo become (as it were) the fame Plant, and after that change not to be difcerned therefrom.

VI. *The Places.* They grow with us only in Gardens, and that thro³ the whole Kingdoms of *England* and *Ireland*, but they grow wild in *Arabia*, and other hot Countries, as alfo on the Hills of *Romania* about *Verona*, and near unto *Mount Baldus*.

VII. *The Times.* They Flower in the Summer Months, viz. in *June* and *July*, and their Seed is ripe in the beginning or middle of *Auguft*.

VIII. *The Qualities.* It is hot and dry in the third degree, *Aperitive*, *Abfterfive*, *Afringent*, *Anodyn*, *Carminative*, *Digeftive*, *Diuretick*, it incides, rarifies, and makes thin, it is *Stomackick*, *PeSoral*, *Cordial*, *Splenetick*, *Nephritick*, and *Ariritick*, *Emmenagogick*, *Alexipharmick*, and *Analepcick*.

IX. *The Specification.* It is peculiar againft *Afthma's*, *Coughs*, *Colds*, *Catarrhs*, *Wheezing*, *Hoarfenefs*, *ihortnefs* of *Breath*, *difficulty* of *breathing*, *cures* *Confutations*, *Strangury*, *Falling-Sicknefs*, and *green Wounds*.

X. *The Preparations.* You may prepare therefrom, 1. *A Liquid Juices* 2. *An Effence*. 3. *A Decoction in Wine or Water* 4. *A Lobocfy or Syrup*. 5. *A Powder*. 6. *Pills*. 7. *A Lotion or Gargle*. 8. *An Oil by Decoftion*. 9. *A Half am or Ointment*. 10. *A Cataplafm*. 11. *A Diftilled Water*. 12. *A Spirituous Tincture*. 13. *An Acid Tincture*. 14. *An Oily Tirittire*. 15. *A Saline Tincture*. 16. *A Spirit*

Spirit. 17. *An Oil Distilled.* V. Powers. 19. *An Elixir,* 20. *A fixed and volatile Salt.* 21. *A Wine.*

The Virtues.

XL *The Liquid Juice.* Mixed with Honey and taken it kills Worms in the Beily, and helps Asthma's, Coughs, Colds, Wheezing, Shortness of Breath, and other Disorders of the Lungs* caused by a plenitude of Humors. Dose from one Spoonful to three, Morning and Night.

XII. *The Effence.* It has all the Virtues of the Juice, besides which it is excellent against the Falling-Sickness, Agues, Catarrhs, of distillations of Rheum upon the Lungs, and other parts -/it amends and cherishes the native heat, and color of the Body, &c and is a powerful Remedy against the Colick, Strangury, obstruction of the Terms in Women, Poyson, the bitings of mad Dogs, Serpents, and other venomous Creatures; it cuts tough Flegm, and causes expectoration. Dose two or three Spoonfuls in the Distilled Water, or some other proper Vehicle.

XIII. *The Decottion in Wine or Water.* It has all the Virtues of the Juice and Effence, but nothing near so powerful, and therefore may be given Morning, Noon, and Night to fix or eight Ounces, sweetened with new Honey if Rue and Honey is boiled with it, and so drunk, it stops Catarrhs upon the Lungs, and has the other Virtues of the Juice and Effence - if the Decottion, Jirke, or Effence, is mixed with *Oxymel* it purges gross Humors by Stool, and kills Worms in Children* if any of these three Preparations are mixed with pulp of Figs and *Sal Nitre* it loosens the Belly, and works downwards also if either of them are mixed with juice of *Garden Creeps* and *Blew flower deluce* Roots, or powder of the laid *Flower deluce* Roots, in a fit proportion, this mixture will purge the Bowels yet more forcibly, carry off the causes of the Colick, cure the Yellow Jaundice, Dropfie, obstructions of Liver, Spleen, and Womb, and restore the true color of the Skin, this more especially if it is taken twice per thrice a Week, as the Body can bear it.

XIV. *The Lohoch or Syrup.* Take of the clarified Juice two Pounds, of choice Honey four Pounds, mix, and boil to the confidence of a Rob or Qiiddony. It has the Virtues of the Juice, Effence, and Decotion, and may be taken three, four, five, or six times a day, or more, as the nature and reason of the Disease requires, it causes an admirable expectoration of the morbid matter out of the *Bronchia* of the Lungs, take a little of it at a time with a small little Spoon, and let it distill down the Throat gradually.

XV. *The Ponder.* It is made of the Leaves, Heads, and Flowers, brewed upon green Wounds it presently heals them, upon old running Ulcers it cleanses, dries, and heals them also applied with powder of *Cumin Seed*, Salt, and Honey, it is good against the bitings of Vipers, Rattle-Snakes, mad Dogs, and other venomous Creatures, given inwardly to one Dram, or Dram and half, it gives ease in the Colick, provokes the Terms, and opens the obstructions of the Urinary parts; it causes to break Wind, and prevails against the cold fits of Agues.

XVI. *The Pills.* Take Hyjop in powder Male Peony Roots in powder, of each two Drams, *Cassia* in powder one Dram, *Horehound* in powder, *Affratica*, of each half (i Dram, Cryjals of Luna in powder a Scruple, with Rob of Hyjop (made per se without Honey) Q. L. s. mix, and make a mass of Pills for fevnpofes, to be given every Night at Bed time; This is said to be a specifick and effectual Remedy against the Falling-Sickness, to be repeated every

New and Full Moon fo-long till the Cure is completed: These Pills cure also a vehement Headach, tho' of very long (landing, and are prevalent against a Vertigo.

XVII. *The Lotion or Gargarism.* Take Hyjop four good handfuls, White or Red Port Wine three Pints, *Sal Nitre* an Ounce, mix, and boil for a quarter of an hour, then strain off the clear. It is a fifth good thing against the Quinsie, or any sore of the Throat or Mouth, it abates the inflammation of the Throat, and dissolves the swelling thereof, being often gargled therewith; it takes away inflammations in other parts of the Body, as also black and bley spots and marks, which are occasioned by rains, Blows, or Bruises* if Wine Vinegar is used to make the Lotion with instead of the Wine, it will ease the Toothach, and the fumes thereof being received into a Funnel into the Ears eases their pains, and abates an inflammation if any is present, and also takes away their fingering noise.

XVIII. *The Oil by Decotion or Infoktion.* Being anointed upon the Head it is said to kill Lice and Nits therein, and take away the itching taken inwardly to one or two Ounces mixed with Honey* opens obstructions of Stomach and Lungs, and causes the pituitous matter to pass off thro' the Gut anointed upon any part swollen and pained thro' cold, it eases the pain and dissolves the swelling.

XIX. *The Balsam or Quintygg.* Being applied they quickly heal any fimple greivous Wound in the Hand, or other parts of the Body, applied also to old running Sores and foul Ulcers they cleanse, and heal them quickly, more especially if the Powder of the Herb afore named be also brewed upon the same the Balsam applied upon any part pained with the Gout gives ease in the pain and by continuing the application in a short time cures it.

XX. *The Cataplastm.* Made of the green Herb by bruising, adding also thereto Sugar and Salt, with a few Crumbs of White Bread, and applied, it is admirable to dissolve any recent fimple Conrusion, or heal any fimple green Wound in what part of the Body soever.

XXI. *The Dijillei Water.* It has the Virtues, of the Juice, Effence, and Decotion, sweetened with Sugar or Honey, and so taken from two Ounces to four Ounces, but it is mostly used as a Vehicle to convey the other Preparations down in used sweetened with Honey it is of good use to cure sore and running Eyes.

XXII. *The Spirituous Tinture.* It is Cephalic Neurotick, Stomack, and Pectoral, it is good against Wind in the Stomach, gives ease in the Colick and gripings of the Guts, and sweetened with Honey it eases the vehemency of the Cough, and causes expectoration, it is good against Vapors from the Womb, Fits of the Mother, and the Falling-Sickness. Dose one Spoonful in the Morning fasting, another an Hour before Dinner, and the like at Night going to Bed, in the Milled Water.

XXIII. *The Acid Tinture.* It is good against the Plague, all sorts of malign and pestilential Diseases, it refits Poyson, and is efficacious against the bitings of mad Dogs, Vipers, and all other kinds of venomous Creatures, it cleanses the Stomach, it gives ease in it, and causes a good Appetite and Digestion* suppresses Vapors, and refits Hyfterick Fits, it powerfully opens obstructions and attenuates thick and gross Humors which clog and iluff the Viscera, causing the same to be carried off by Stool and Urine. Dose for many drops as to make the Vehicle pleasantly sharp.

XXIV. *The Oily Tinture.* it opens the obstructions of the Urinary parts, as also of the Uterus, provokes Urine and the Terms, expels the

er fully, and gives ease in the Colick, gripings of the Guts, Stone, Gravel, Strangury, &c. Dose from ten to twenty drops in any proper Vehicle Morning and Night; it gives ease in the vehement pains of the Back, and outwardly used is good against Convulsions, Cramps in any particular part of the Body, as also the Palfie and Gout, &c.

-XXV. *The Saline Tinffure.* Inwardly taken in a Glafs of White Port Wine from half a Dram to a Dram, or Dram and half, it is prevalent against the Strangury, and causes a Piffing freely * outwardly used it is good against Scabs, Pimples, breakings out, Tetters, Ringworms, Scurf, Porphew, Tanning of the Skin, Sunburning, Yellowness, and other deformities thereof, the Skin (after being first washed clean with warm Water) being well bathed therewith Morning, Noon, and Night.

XXVI. *The Spirit.* Being dulcified with double refined Sugar it is a most excellent Stomack and Cordial, it expels Wind, gives ease in the Colick and gripings of the Guts, it prevails against fainting and swooning Fits, sickness at Heart, and other Distempers of the Stomach and *Præcordia*. Dose from half to one Spoonful in Canary, or some other Wine or proper Vehicle.

XXVII. *The Bifilled OU.* It is a Specifick against an old inveterate Cough, Catarrh, and Asthma, it cures the Quack to a Miracle, expels Wind powerfully, against Convulsions, Lethargies, Vertigo, and the Palfie after a singular manner, it admirably strengthens the Nerves and Brain, and is good against all cold and moist Diseases affecting those parts, let them come from what cause soever, it eases the Headach coming by reason of cold, and is a singular Antidote against the Gout, being both inwardly taken and outwardly applied, it is powerful against Agues, as also against the Headach, Megrims, Vertigo, Carus, Lethargy, and other Diseases proceeding from cold and moisture, but more especially it is said to be a peculiar Remedy for the Falling-Sickness, tho' in Persons past their Minority, and who are advancing towards their middle Age, in the Palfie the Back Bone is to be anointed therewith Morning and Night, rubbing it well in, and inwardly it is to be given from four drops to ten, fifteen, or twenty, according as the Patient is in Age and Strength, and the Dose to be repeated Morning and Evening so long as need requires, let it be dropped into White Sugar, with which it is to be well mixed, then add to it the Vehicle you design to give it in, and so let the Patient drink it.

XXVIII. *The Foteftates or Powers.* They have all the Virtues of the Distilled Oil, and are much more thin and penetrating, sinking into the Flesh as fast as they are put on, they are to be outwardly used in the same manner as the Oil, and to the same parts in the same cases, and likewise to be inwardly given Morning, Noon, and Night, from thirty to eighty, or an hundred drops, in a Glaf of Wine, or other proper Vehicle.

XXIX. *The Elixir.* The Virtues hereof are just the same with the Distilled Oil and Powers, and to be used so outwardly and inwardly in the same manner, laving that the Dose of the Elixir is only from twenty drops to sixty in Wine or some fit Vehicle* given in Sherry or Madera Wine to sixty drops or more in a Pleurisy it gives present ease, and in a little time after a perfect cure in particular also it is a very excellent thing to kill Worms in Children.

XXX. *The Salt Fixed and Volatile.* They are both Alcalies, and so absorb Acids, infallibly cure the pain of the Stomach, tho' inveterate and never so vehement, they have been given with good success in all sorts of Colick they open

of all the Viscera, but more particularly of the Spleen, Reins, and Womb; they suppress Vapors, prevail against Hyfterick Fits, conquer Hypochondriack Melancholy, deobstrueth the Urinary passages* and give present ease in the Strangury, causing the Patient to piss plentifully and easily, and being continued for some convenient time cure the Yellow Jaundice. Dose from ten to twenty grains, or more, in a Glafs of generous White Port Wine Morning and Night, or oftner, in the day time, if need so require.

XXXI. *The Wine.* Take Uyffop chopped small a handful, choice ripe Figs slit three Ounces, White Sugar candy an Ounce and half Muscadine a Stuart, boil all together till half a Pint is consumed, then let it rain out and keep it for use. Dose three Spoonfuls Morning and Evening against an old Cough, it causes the tough Fleem to be the more easily expectorated, gives ease in the Strangury, by opening the passages of the Urine when they are flopped, it is also Carminative, helps to break Wind, and provokes the Terms in Women when preternatural (topped).

C H A P. CCCLXXXVII

O / H Y S s d l Rare or Strange.

THE Names. It is called in *Qreek* *<n>* *ffTiviofi* *VGCWTT* in *Latine* *Hyffopus In-* *frequens, Hyffopus Incelebris, vel Infolita, in Eng-* *lish* *Strang**, *Qi Rare*, or *Uncommon Uyffop*.

II. *The Kinds.* There are no less than Thirteen Kinds of this *Strange Hyffop*, viz. 1. *Hyffopus Folijs Niveis*, White Leav'd *Hyffop*. 2. *hyffopm Yolijs Aureis*^ Yellow *Hyffop*. 3. *Hyffopm Folijs Cinerijs*^ *Ruffet* Leav'd *Hyffop*. 4. *Hyffopm Surculk Denfis*^ Double *Hyffop*. 5. *Hyffopm Latifolia*, Broad Leav'd *Hyffop*. 6. *Hyffopus Folijs Crenatis*, Jagged or Dented *Hyffop*. 7. *Hyffopus Mofchata*^ *vel de Clif-fa*^ Musk'd *Hyffop*. & *Hyffopus Coronata, vel Comofa Clufij*^ Tufted *Hyffop*. 9. *Hyffopus Folijs Crip-pis*^ Curled *Hyffop*. 10. *Hyffopus Angujifolia Spi-cata*^ Narrow Leav'd Spiked *Hyffop*. 11. *Hyffopus Folijs Origani*, Round Leav'd *Hyffop*. 12. *Hyffopus minor, five Hispanica*, Dwarf Spaniffi *Hyffop*. 13^ *Hyffopus Montana*^ Mountain Wild *Hyffop*.

III. *The Defcriptions.* The first, or White Leav'd *Hyffop*, seems to me to be one of the sorts of the first Common Kind in the former Chapter^ and to differ only in the party coloring of the Leaves, this having several Leaves parted white and green in the midft, and some or all for the most part White, and some wholly green, or with some strips in the

IV. *The second, or Yellow Hyffop, is without doubt one of the sorts also of the first Kind in the former Chapter*, it has several Leaves parted yellow and green in the midft, and come all or most part yellow, the uppermost Leaves are usually wholly yellow in the Summer time, parted with green, but the lower Leaves often abide without coloring.

V. *The third, or Ruffet Leav'd Hyffop. This also differs from the former scarcely in any thing else but in the color of the Leaves, which are of a greyish or Ash color, called by some Ruffet, and this seems to be that very sort which Bauhinus says Was sent him from England, it growing very stedy in fine ota Gol<<*

VI. *The fourth, or Double Hyffop.* J[^]Hyffop grows lower and thicker than the former Kinds, being thicker fet with (lender and not ib woody Branches, bending their Heads fomewhat downwards, and much more thick fet with Leaves of a dark green color, in the Flower and other particulars it differs not from the first Kind described in the former Chapter.

VII. *The fifth, or Broad Leav'd Hyflbp.* This differs very little from the first Common Hyffop in the former Chapter, neither in Root, Stalk, Leaves, nor Flowers, laving that in this the green Leaves are larger and broader, and the Stalks are more woody than it, keeping the fame form and substance.

VIII. *The sixth, or Jagged or Dented Hyffop.* In its tops and top Branches it differs not much from Our Common Garden Hyffop, but otherwise the Stalks are fomewhat bigger and higher, and the Leaves a pretty deal larger and longer, and regularly cut in or dented on the edges, which makes it another of differing Species of the fame Plant.

IX. *The seventh, or Musked Hyffop.* This differs scarcely any thing from Our Common Garden Hyffop, as Gefner in HoTis Germanise has declared, but in the smell, which is fo fragrant, grateful and pleafant, that it comes very near to the smell of Musk.

X. *The eighth, or Tufted HyfTop.* It is in Roots, Stalks, Leaves, lowers, and manner of growing, fomewhat like unto the GaJRi Kind first described in the former Chapter, but a little smaller and lower, the Leaves being of a paler green color, and the top Branches spreading a little broader, having shorter Spikes of Leaves and Flowers, growing as it were in Tufts, which has caused the Name, and is indeed the principal difference.

XI. *The ninth, or Curled Hyffop.* In its Roots, Stalks, Branches, and manner of growing, it differs not much from the Common Garden Kind, having also much the fame smell; but herein consists the chief difference, that the Leaves thereof are curled or crumpled at or about the e^ees, and that each Leaf seems to be composed of many.

XII. *The tenth, or Narrow Leav'd Spiked Hyffop.* Its Root is like that of the Common Hyffop, it is, a fine fort, and has many slender hard Stalks, on which are let at distances, (as in the Common hyffop) many small green Leaves, but longer and narrower than they, and ending in a longer point, the Flowers likewise grow at several distances, as it were in Roundies, almost from the middle of the Stalks up to the tops, of a blewish purple color, like the Common Kind, but much smaller, and fo is the Seed also. The Branches hereof will take root and grow being laid into the Ground, the Root spreading much in the Earth.

XIII. *The eleventh, or Round Leav'd Hyffop.* It has a hamffwoody, and fibrous Root, also hard woody Stalks, on which grow several small and almost round Leaves, ofte against another, but pointed at the ends, the Heads or Spikes of Flowers are like unto Our Ordinary Garden Sort in the former Chapter, and the Flowers themselves are of a blewish purple color, the smell is also much the same with the Common Kind.

XIV. *The twelfth, or Dwarf Spanish Hyffop, which Lobel calls Hyffopus Parva Anguftis Folijs.* This has a small, woody, fibrous Root, which sends forth Stalks smaller and lower than the Common Kind, nor do its Branches rise fo high as the Vulgar garden Sort, but bend a little downwards, the Leaves also being smaller and thicker, and of a faded color, and the Heads or Spikes smaller. The Sorter, like the Garden Kind.

XV. *The thirteenth, or Mountain Wild Hyffop.*

Its Root is small, woody, and v^bith many fibres or firings-, in its manner of growing it is very like unto the Common Garden Sort, but the Leaves are not fo many, at a joint, and are fomewhat harder and rougher, and a little hairy, and something narrower withal, which, as Matthiolus says, being brought into Gardens, and there nurfed up, will in length or time put off that roughness, and become smooth and soft, the taste of this is much more bitter, and nothing fo hot or sweet as the Common Kind-, the Flowers and Seed are like to the Garden Sort both for form and color.

XVI. *The Places.* They are all of them nurfed up with us only in the Gardens of the Curious, and grow as well as the Common Kind, but the Dutch or Spanish Hyffop, as also the Mountain & yⁱ grow naturally on the Hills in many places of Spain and Germany, and on the Hill Salvatina in the Country of Goritia.

XVII. *The Times.* They all Flower in the Summer Months, viz. thro' June and July, and beginⁿing of August, and their Seed is ripe in the beginning or middle of August.

XVIII. *The Qualities, Specification, Vreparation, and Virtues,* are fully and exactly the same with those of the Garden Kind declared at large in the former Chapter, fo that no^th^ereof is to be said thereof in this place.

C H A P. CCCLXXXVIII

Of HYSSOP Hedge True,

OR,

HYSSOP Marfk

I. *The Names.* It was unknown to the Ancient Greeks, the Arabians call the Seed thereof *Gelbech*; the Latines call the Plant *Gratiola*, fo it is named by Dodonaeus, Gefner, Lobel, Litgenfis, Matthiolus, and others, by some it is called *Gratia Dei*, and some call it *Gratia Dei altera*, because there is another Herb among the Gerania & called *Cordus* calls it *Limnium*, or *Centauroides*, because many for the bitterness thereof did think it a Species of *Centaurium minus*, Gefner calls it *Gratiola*, five *Centaurium Aquaticum*, also *Sefamoides* Columna says that it is usually called *Gratiola*, yet says it is thought of some more truly to be taken for a Common Hyffop, Bauhinus in his *Yinax* calls it *Gratiola Centauroides*, and we in English call it *Hedge Hyffop*, for distinction sake, not that it grows by any Hedge side, but usually in moist and watery places, for which reason it might more properly be called *Marfk Hyffop*.

II. *The Kinds.* It is twofold, viz. *Gratiola Vera*, The True Hedge Hyffop, which is a singular Plant, and of which we treat in this Chapter. *Gratiola Notha*, Bastard Hedge Hyflbp, of which we shall treat in the next Chapter following.

III. *The Description.* It has a Root which foot^s forth to and fro under Ground very much, with many joints and small fibres at them, thereby increasing quickly spreading very far about, especially if it stands in any moist place, because it will endure long in any dry Ground, it is but a small Plant, seldom growing above a Foot high.

Branches are slender, bending, and four-square, having several small Leaves thereon, very like to those of the Ordinary Garden Hyssop, but a little shorter and broader, and of a pale green color, of a very bitter unpleasiant taste from about the middle of these Branches, at the joints of the Leaves, up to the tops of them, come forth the Flowers every where at the place, standing upon very short stalks, which are somewhat long and hollow, ending in four Leaves, two of the lowest hanging out, as it were Lips, and the other two above, shorter by the half of a whitish yellow color, tending to a black blew, and sometimes more blewish or purple, after which come small round Heads, in which is contained final Seed.

IV. *Nora*. *Camerarius* says that (not far from *Geneva*) he has found another Kind of this Plant, viz. *Gratiola Flore luteo*, Hedge Hyssop with a yellow Flower, but not differing from the former in any other particular.

V. *The Places*. It delights to grow in moist, watery, and Marsh Grounds, if you would have it to live and flourish, it grows naturally in many places of *Italy*, and near *Padua* plentifully, but with

VI. *ibc Times*. It Flowers in June and July; and its seed is ripe not long after, but it seldom gives ripe Seed in England.

VII. *Pities*. It is hot and dry probably in the third degree, Incisive, Attractive, Absteriive, Aperitive, Traumatick, Hepatick, Splenetick, Arthritic, and Cathartic.

VIII. *The Specification*. It is a good Antifebricitick, and peculiar for the curing of the Dropfie, Scurvy, and Gout, kill Worms, and heal all simple green Wounds, running Sores, and putrid Ulcers.

IX. *The Preparations*. You may have therefrom, 1. A Liquid Juice of the Herb. 2. An Effence. 3. A Decoffion in Water or Wine. 4. A fonder. 5. An Extra. 6. A Balsam or Ointment.

The Virtues.

X. *The Liquid Juice*. It works very strongly and churlishly both upwards and downwards, expelling much viscus and gross Flegm, also Choler, and watery Humors, for which reason it is profitable for such as are troubled with a Sarcites or Dropfie Anifurca as also the A/cites or Tympanites in beginning, and for such as are affected with the Gout or Sciatica it cures both Tertian and Quartan Agues, and kills Worms in the Belly, whether in Old or Young, but by reason of its churlishness it ought to be corrected with Anifeeds, Caraways, Cloves, Cinnamon, &c. Dose half a Spoonfull, increasing it according to Age and Strength gradually to two, three, or four Spoonfuls it may be given mixed with Pot-Tet-drink, Sack-Whey, or Mutton Broth, &c.

XI. *The Effence*. It has all the Virtues of the former, but nothing near so churlish, but ought to be corrected with Powers of Angelica, Pennyroyal, Anifeeds, Caraways, &c. it cures Quotidian and Tertian Agues, opens obstructions of Liver and Spleen, refills putrifaction, kills Worms, and evacuates peccant Humors the Dose is the same with the Liquid Juice, and to be given in the same manner.

XII. *The Decoction or Infusion in Water or Wine*. It has all the Virtues of the Juice and Effence, but is to be given in a greater quantity, it cleanses the Stomach and other Viscera, opening the obstructions, it also induces old running Sores and filthy Ulcers to a speedy healing, it works both upwards and downwards, but much more gently than either Juice or Effence.

XIII. *The Ponder*. It has all the Virtues of Liquid Juice, Effence, or Decoction, but operates not so speedily, it kills Worms effectually in Old or Young, and prevails wonderfully against the Scurvy and Jaundice, as also obstructions of the Womb, but it ought to be corrected with Camphir, Powder of Anifeeds, &c. Dose from a Scruple to a Dram, or more, according to the Age of the Patient, Strength, and other Circumstances, outwardly strewed upon old running Sores, or putrid Ulcers, it cleanses and dries them, and induces their speedy healing, it also admirably consolidates green Wounds, &c.

XIV. *the Extralt* It may be made into Pills with Powders of Anifeed, or Cinnamon, *Camerarius* commends it not only to be available against the Dropfie, but against all sorts of Agues, and so much the more if a little of the Infusate Juice of Calamint be added, it has all the Virtues of Juice, Effence, Decoction, and Powder, but works with much more safety and gentleness. Dose from a Scruple to a Dram in any fit Vehicle.

XV. *The half an or Ointment*. It is excellent good against the Gout or Sciatica being applied to the parts affected, it also dries green Wounds, or malign Ulcers, cleanses, dries, and heals them in a very short time, but this more especially if the powder of Tobacco, be mixed with the same.

CHAP. CCCLXXXIX.

O/HYSSOP Hedge Bastard.

THE Names. This can have no Greek Name, any more than the former in Latin? it is

tailed *Gratwla Not ha*, and in *EngHJh BafiardMedge Hyffop*.

II. *The Kinds*. There are three forts hereof, viz. I. *Gratiola Angufii foil a*, and *Anguftifolia minor*, *Gratiola minor Gefnerti*, alfo *Hyffopoides* by *Carrierarinn*, *Hyjjopi folia Cordi & Baubini*, Small Hedge Hyflbp, alib Small Narrow Leav'd Hedge Hyflbp. 2^d *Gratiola Carulea*, *Gratia Yjci Cefalpini*, *Tertianaria Tahernamontani*, *Herb a Judaic a ali era Dodon<zi*, *Sidenk Carulea Thalij*, *Vyfimdchia flore Cfruleo Camerarij*, *Lyfymachia Galericulata Lobelij*, *Gratiola Latifolia*, and *Latifolia major*, The Greater Broad Leav'd, or Blew t lowered Hedge Hyflbp. 3. *Gratwla Latifolia -minor* and *Latifolia nofiru minor Par/dnfonj*, The Lefler Broad Leavd Hedge Hyflbp.

III: The JDefcriptions. *The fir ft, or Small Narrow Leav'd Hedge Hyflbp*. It tyax a Root which 2\$ white, and fhoots forth many Fibres, whereby it takes good rooting and hold in the Earth-, from this Root ihoot forth fometimes many, and fometimes but one or two round reddifh Stalks, half a Yard high, which are branched towards the tops, on which are fet ong a nye another, and fometimes one againft another, fivers fmall and fomewhat long Leaves, ibmgthin, imailer thaii thjife in the former Cliapter, and nearly refembling *Hyjftip* Leaves^ of a pale greeii color, and joining clofe to the Stalks and Branches, without any Footftalk at all, at the Joints with the Leav« come forth Flovi^rs, every one by it felf, Handing in a long Husk, and confifting of four Leaves, of an excellent blew color, after which comes in their places fmall brown Seed, contained in long round Pods-, the Herb and every part thereof is' without any the lead fmell, and almoft without any tafte, tho' fome will have it to be of a little nitrous, others of a little fwetifh tafte, fometimes in the moifter Grounds this is found with larger Leaves, an<i growing higher, and fometimes in dry Grounds with fmaller and longer Leaves, fcarce-ly growing a Sp^ high.

0 If 13. *ecof d>> ** Greater Broad Leav'd Hedge Hyflbp*. It ihdia RoBt which freads mltch, and

square Stalks varioufly branched from the bottom to the top, having thereon' feveral Joints, and two fmall Leaves at every one, which ftand upon more Footftalks, being broad at the bottom, and, Imagj^ towards the end, a little dented about the cage^ and full -of Veins, of a fadder green color than the former, longer alfo, and broader-, the Howp are gaping, fomething like unto thofe of *Dead A?* of a fairblewith purple color, with fome spots in them, every one ftanding at the top of the Leaves, up to the tops, after which come two fmall Seed Veffels, formed fomething like unto the top of the Thigh Bone of a Man or Beaft., in which the fmall Nut or Huckle Borie is placed^ thp.up part of which does fir It open when the Seal is and falls away when it is touched, thereby goodnefs of the Soil -, this Herb is Referred to *Gratiola*, not only from its place and manner of growing, but efppecially for its bitternefs, fit which it is fo like to it.

V. *The third, of Lefler Broad Leav'd Hedge Hyffop*. It has a Root which is Inftall, long, and white fprending it felf under Ground feveral ways, which perifhes not in Winter, nor rims like the laft, but fpreads forth net@ Branches every ICcar^, from this Root fprings up one or more fmail Stalks, about half a Foot high, round, but crefteH as Jt'ivere^U the length, which fpread forth othej: finallef Branches, on which do grow, many fmall Leay's, fet by couples one againft another, being fomething lproaa, but very ihort withal, feeming almott' round, ana ending in a ft\vaTp*po\vt^ a Ytte» dented ^ o u ^ edges-, at the Joints with the Leaves come Flowers, every one by it felf, on a fmail Flower, buttiortier, of apabreddifh color, in the middle of the lower Leaf with many white fpots y after the Flowers are fallen into their places Seed Veffets, in fliape fometh^g unto the Nut of a Crefs-Bow; in which is content^ fmall yellowifh Seed-, the tafte of this Plant extremely bitter-as the laft-, this Herb is alfo ed to the *Gratwla Latifolia*, as well for the balance of the Flower *> the laft before defcribed, as for the bitternefs thereof.

VI. *The Places*. The firft has been found growing naturally in feveral places of England in moift, a wet Grounds, as at *Dorchefter* in *Oxfordfhire*, at the back fide of the enclcted Grounds, on the Lex Hand of the Town, as you go from thence to *Oxford*, in the Graffie places* of the *Champion Cor* fields**, the fecond grows likewise in feveral of this Land, in wet iow Grounds, and by fides-, the third is not known to grow in any Country# but in *England*, fo far as we can yet hear or learn-, and it was firft found out by *Gerard*, * called it fimply *Gratiola* in wet l Grounds among the Grafs ; I found it (fays he) growing 'on the Bóg or Marfh Groynd at the farther of *Hampstead HeStb*, and upon the fame Heath. 10'' wards *London*, near unto the Head of the Spn. that were digged Anno 1590. for Water to be conveyed to that City.

VII. *The Times*. The two firft Flowci m and July, the third in //// and *Auguft*, their ripening in a fhort time after their Flowers are VII. As to their Qualities, Specifications, Rations, and Virtues, Authors have laid

the firfl* of thefe has never yet been applied to any Medicinal life by any Authoꝛ that I could ever yet fee, nor yet the fecond or third Kinds, but their bitternefs coming to near to that of the *Gratiola Vera*, or *True Hedge Hyjlop*, induces me to think that they muſt have ſome of the virtues of the *True Hedge Hyjlop*, and if they be not full out fo effe&ual to Purge, yet by their bitternefs they may be Aperitive, and have a virtue to open the obſtru&ions of the Viſcera, and cleanſe them from, their pituitous and viſcous Excrements, they may alſo by the fame bitternefs be Aaaleptick, and fo ſtrengthen the Stomach, and other Bowels, reſtoring their depraved Tone, &c.

Gar lick in its Name, yet not ill Name only, but in its ſmell, for any part of it being tyuifed imelfe of *Garlick*, bit more pleaſantly, and taſtes ſomeching hot, ſharp, and biting, almoſtlike unto *Rocket*, for which reaſon it becomes an admirable Sawce, to FA as love that taſte.

C H A P. CCCXC.

O/J ACK-by-HEDGE,

O K,

SA WCE-ALONE.

I. Names. This ſeems to be a Novel Plant, A not known to the *Greeks*, and therefore has no *Greek* Name, the *Lathes* call it *Alliaria*, *Gefi* in *Hortz's Alliaſtrum*, and *Ericiits Cordus Rtm* in *Marina*, which ſe the *Rma Marina Anguilar*, and *Uorolophus Flini*, as *Dalech'ampius* and *Lobe I* thought ſome take it to be *Tblaſpidium Crateva*, as alſo *Tblaſpidium Cornutum Tragi*, becauſe they anſwer to itꝛTefcription * we in *Engliſh* call it *Jack-by-Hedge*, and *Sawce-alone*, becauſe it ferves of it ielf for Sawce, inſtead of many others.

II. The Kinds. Some would have itite be *Scordium*, but that it is hot, others *Scordij Species*, a Kind of *Scordium*, or *Water Germander*, but indeed it has no relation to any of thole Plants*, that, being a real miſtake of former Authoꝛs ^ it is a ſingular Plant ofitsJKind, which *Gerard lays* is Named of fca *Pes Afininus*, Afles Foot, and may be called (lays he) in *L&tine Allium non bulbofum*, a Kind of *Garlicky* fo eſteemed from its ſmell, it ſeems to be, 1. *Alliaria Communk*, w/ *minor*, The Common *Tack-by-Hedge*. 2. *Alliaria jnajor*, The Greater Tfind.

III. The Deſcriptions. *The fitf*, or Common Tactby-Hedge. If *bas a long /ender Root*, which is *fibrous* or *ifringy*, and *thready*, *periling every Tear after it ha* given Seed** from this Root rife up feveral flender Stalks, about a Foot and half high, the Leaves are broad, of a light green color, nicked round about, and (harp pointed* the lower Leaves are rounder than thoſe which? grow upward towards the tops of the Stalks, and are fet Vmgly one at a J T V f T Sifh J O Und the ^^ th^ gOW and alſo pointed at the ends; and dented about the edges, tho ſomewhat lefi. dented than thoſe growing below, they ſomewhat reſemble *Nettle* Leaves for the form, but are of a ſweſher green color, and not rough or pricking. upon the |rancheS of the Stalks near the tops grow very fman white Flowers, one above another, like *Rocket*, which being paſt pome ſmall, flender, and round long Pods not very much unlike to thoſe oi *Flixweed*, ſaving that theſe are rougher, and grow ſomewhat cloſer to the Stalk, In the ePods are contained ſmall, round, and ſomewhat blackiſt Seed, this Plant raifes it ſelf every Year again of its own fowing, and it has affinity to

IV. The fecond, or Gftater Kind of Jack-by-Hedge^ has like Roots, Stalks, Leaves, Branches, Flowers, and Seed, and the fame manner of growing, and differs only in this, that the Leaves grow larger and rounder.

V. The Vlaces. It grows of it ſelf by Garden Hedges, by old Walls, by high-Way fides, and ſometimes in the borders of Fields, in moſt places of this Kingdom.

VI. The Times. It Flowers chiefly in *June* and *July*, and the Seed grows ripe in the mean ſeaſon, or not long after the Flowers are gone, the Leaves are uſed for Sawce in *March* and *April*.

VII. The Qualities. It is hot and dry in the third degree, and is repleat with much Salt, Sulphur, and Mercury, it is Inciſive, Aperitive, Attra&ive, Abſterſive, Carminative, Digeltive, Diſcuſſive, and Diuretick, Neurotick, Stomatick, Peſtoral, Nephritick, and Hyſterick, Ptarmick, Emmenſpgi*, and Alexipharmick. ^ m *

VIII. The Specification. In ſ peculiar againſt the Scurvy, Coughs, Colds, Wheezing, flortnels of Breath, Stone, Strangury, Colick, and Fits of the Mother.*

IX. The Preparations. You may have therefrom, 1. A Juice of the Leaves and Roots. 1. An Eſſence of the ſame. 3. An Iqfufwn or Decoſion in Water or Wine, 4. A Syrup. < 5- The Root. 6. The Seed Wuifed, or infuſed in Wine. 7. A Cataplaſm. 8. An Acid Tinfure. 9. A Spirituous Tinſure. 10. An Oily Tinfure. n. A Saline Tmſure. 12. A Spirit* 13* A Sawce.

The Virtues.

X. The Liquid Juice, Taken from a Spoonful to two or three Spoonfuls in a Glaſs of White Fort, Madera.,

"Madera, or Canary Wines, it provokes Urine, helps the Strangury., expels Gravely Sand, Tartarous Mucilage, eases the Colic, and fippreffes Vapors and Fits of the Mother. ■

XI. *The Effence.* It has all the former Virtues, besides which it potently refills the Scurvy, Dropfie, Jaundice, and Gout, refills Vomiting, ftrenghens the Stomach, caufes a good Appetite and a itrong Digeftion" it admirably corrects Crudities, warms the Stomach, and retores the Tone thereof being hurt or wkakned. Dofe one, two, or three Spoonfuls Morning and Night, (and fometimes at Noon) ill a Glafs of generous Wine.

XII. *The Infufion or Decoffion.* It has all the Virtues of the juice and Effence, but much weaker, and therefore may be given to fix or eight Ounces Morning and Night * but the Infufion is better than the Decoffion, becaufe confiding moftly of volatile parts, thofe by boiling will evaporate away in a great meafure, whereas by a dole infufion they may be ail preferred.

XIII. *The Syrup.* It ought to be made with clarified Honey, and then it will be as good as *Eryfi-* or *Hedge* to warm the Stomach, and ease Coughs, help Wheezings, fhortnefs of Breath, and difficulty of breathing, as alfo to help Catarrhs, and to caufe expe&oration of thick tough Flegm and putrid Humors out of the Breaft and Lungs.

XIV. *The Ra u* It taftes fharp, like unto *Radifh* Roots, and therefore may be ufed in the fame manner and to the fame purpofes, if it is fcraped thin, and the fcrapings are put into Wins Vinegar, with a little Salt* it makes a very good Sauce for Meat; The Juice of the Root in White Wine is excellent againft the Colic, Strangury, Stone, &c. it gives ease alfo in all thofe Cafes if exhibited in a Clyfter, &c.

XV. *The Seed bruifed, omftified in Wine.* It is a prefont Remedy for a vehement pain in the Stomach, as alfo for the Colic, Strangury, Stone, Gravel, or any Tartarous Matter obfru&ing the Urinary paffages* it fuppreffes Vapors, abates Melancholy, and cures Hyfterick Fits. Dofe of the Seed from half a Dram to a Dram and half, either in fubftance (mixed with Honey) or in infufion in Wine.

XVI. *The Cataplafm.* Made of the green Leaves, or of Leaves and Root, and applied to old running Sores and foul Ulcers, whether in the Legs, Arms, or other parts, it abates the pain (if any) cleanses the Sore or Ulcer, dries them, and induces a speedy healing.

XVII. *The Acid Tintfure.* It is poffibly one of the greateft Medicines in the World againft the Scurvy, it retores the Tone of the Stomach, ftrenghens it, caufes a good Appetite and Digeftion, fuppreffes Vapor, and has all the Virtues of the Liquid Juice and Eifence above declare^ it is alfo Antifebrick, and Alexipharmick, It cures ail fons of hot, burning, and putrid Fevers, and all fuch as are peftilential, and is powerful even againft the Plague it felf it refits Poyfon internally taken, or otherwife given by the bitings of mad Dogs, Vipers, or other Serpents, or other venomous Creatures, being inwardly taken, and outwardly applied to the parts wounded by bathing. Dofe fo many drops as may make a Glafs of generous Wine, or otter proper Vehicle, pleafantly acid or fharp, and to be repeated three or four times a day, or as oft as need requires.

XVIII. *The Spirituous Tintturc.* It rs Cephalick, Neurotick, Stomatick, Cardiack, and Hyfterick, it warms and comforts the Head, Brain, Nerves and Stomach, cheers the Heart, revives the Spirits' and is powerful againft fainting and swooning Fits/Con- vifions, Palfies, Vertigo, Lethargy, Cams, Coma,

Epilepfie, Hyfte:ick Paffion, and other Difeafes of like kind afte&ing any of thofe parts, it camera good Appetite and Digeftion, gives prefont ease in the Colic, and alleviates pains of the Stomach and gripings of the Guts arifing from cold, crude, and undigefted Humors. Dole from half a Spoonful to a Spoonful, or more, two or three times a day, in a Glafs of generous Wine.

XIX. *The Oily Tinfure.* It has all the Virtues * of the Juke, Effence, Infufion, and Tinfures, and may be given from eight drops to twenty drops, or more, being firft dropped into and mixed with White Sugar, and then mixed with a Glafs of Wine, or other proper Vehicle^ it is a potent thing againft the Stone, Gravel, Sand* or Tartarous Matter obfru&ing the Reins or Urinary paffages, it gives ease the Colick and Strangury, and is a prefont Remedy againft the Pleurifie, Stitches in the Side* and other like pains of the Thorax and Stomach* it cures Cramps by anointing therewith, and is of excellent use againft Convulfion Fits in Elder Perfons, as an^ againft Vapors, and obfruitions of the Womb; provokes the Terms, and facilitates the Birth of Women in Labor, bringing away the Afterbirth or dead Child-, it gives prefont ease in after pains anoints* upon the lower parts of the Belly, and taken inwardly in a Glafs of Canary ^ it prevails againft the Pal- fie taken daily in Wine, bathing the Back Bone therewith, together with the parts afte&ed, and continuing the use thereof for fome confiderable uine* it alfo gives ease in the Gout.

XX. *The Saline Tintfure.* It feems to be a S cifick againft Arthritick ^ins, proceeding from a jot or cold caufe^ it is good againft S Marks, Tanning, Sunburning, black and blewnefs, and other difcolorings of the Skin, it removes yei- lownefs of the Scarf Skin, Freckles, I^ptils, Scurf, Morpheus, and other like deformities of the Out- but it mift be made pretty ftiong, and applied two or three times a day, and fuffered to dry on, for that means the fuliginous matter will be drawn forth, and the Skin will peel off in manner of Scuff leaving a fine, young, tender, pure, clear Skin underneath.

XXI. *The Spirit.* It is truly Cordial, Neuro* Cephalick, and Hyfterick, it revives the ^W/ cheers the Heart, and refrefhes the whole U-ntf* Man -, it is good againft Convulfions in Children a* Elder Pople, prevails againft Palfies, Apop Lethargies Epile, it is ftiongly Aperitive, and ftrenghens the Lungs, Liver, Spleen, Reins, and womb, preventing the congelation of Humors caufing the Dole from one Dram to two or three .vtam* Wine, or any other fit Vehicle.

XXII. *The Sawce.* It is made of the Leaves ft small, or of the Root ftaped^ or of their Juke P*(Jed, adding a proportional quantity of White S# g*) Wine Vinegar^ and Salt. Being thus compound ed it is eaten in the Spring Time with Meat, Mutton, Lamb, Beef, Veal, Vc. either boiled or roasted, it corrects Crudities, expels Wind, ftrenghens the Stomach, creates a good Appetite, and caufes a good Digeftion.

C H A P . CCCXCI.

Of JACINTH American.

THE Names. This Plant its general Name is X called in Greek *V«>Ktv%©~> in Latine *Hyacinth?* in English *Jacinth*, and *Hyacinth*, the Spaniards, call it *Maïos Flores*.

II. *The Kinds*. There are various Species of this Plant, and several forts of each geneçk Kind, viz. I. *Hyadnthus Anglicus*, English *Hyacinth*, of which there are four Species, viz. 1. *Hyadnthus Anglicus Caruleus*, Blew English *Jacinth*. 2. *Hyadnthus Anglitus A/Bus*, White English *Jacinth*. 3. *Hyadnthus Anglicus Incarnato Flore*, Carnation English *Jacinth*. 4. *Hyadnthus Anglicus vel Hispanicus major Flore Campanula infiar*, Greater English or Spanish *Jacinth* 5 all these growing in *England* are commonly called *Haresbells*, and of which we have already treated in the foregoing part of this Book, viz. in Chap. 335- and therefore shall now overpafs them In this fuccint Difcourfe of *Jacinths*. 2. *Hyadnthus Americanus*, American or West Indian *Jacinth*, of which there are two Kinds, which are the peculiar Subject of this present Chapter. 3. *Hyadnthus Botroides*, Grape Flowered *Jacinth*, of which there are six Species, Treated of in Chap. 392. 4. *Hyadnthus Kiptbus Botroides Mulcatus*, Musked Grape Flowered *Jacinth*, of which there are four Species, which are Treated of in Chap. 393. 5. *Hyadnthus Comofus*, The Haired *Jacinth*, of which there are five Species, which are Treated of in Chap. 394. 6. *Hyadnthus JIrientalis*, The Oriental *Jacinth*, of which there are eight Species, which are Treated of in Chap. 395. 7. *Hyadnthus Orient a/Is Flore duplici*, Double Oriental *Jacinth*, of which there are three Species, and are Treated of in Chap. 396. 8. *Hyacnibus Mftivus*, The Summer *Jacinth*, of which there are five Species, and are Treated of in Chap. 397. 9. *Hyadnthus Fucus*, The Brown or Dun Colored *Jacinth*, of which there are three Species, and are Treated of in Chap. 398. 10. *Hyacinthus Stellatus Peruanus*, West Indian Starry *Jacinth*, of which are four Species, and are Treated of in Chap. 399. 11. *Hyacinthus Stellatus Vulgaris*^ The Common Starry *Jacinth*, of which there are seven Kinds, and are Treated of in Chap. 400. 12. *Hyacinthus Stellatus Byzantinus*, The Turky Starry *Jacinth*, of which are four Species, and are Treated of in Chap. 401. 13. *Hyacinthus Stellatus Autumnalis*. The Autumn *Jacinth*, of which there are three Species, and are Treated of in Chap. 402. 14. *Hyacinthus Stellatus Ulifolius*, The Lilly Leav'd Starry *Jacinth*, of which there are three Species, and are Treated of in Chap. 403. I know some Authors account the *Sguil* or *Sea Onion* in the Claffis of *Jacinths*, making it a *Marfli* or *Sea Kind* but I am of a contrary Opinion, and therefore shall not rank it with thole aforegoing, but Treat of it hereafter in its proper place of the Alphabet.

III. *The Kinds of the American Jacinth* There are only two Species of this, viz. 1. *Hyadnthus Indicus vel Amencanus major Radice Tubero*^ The Greater American Tuberofe Rooted or Knobbed *Jacinth*. 2. *Hyacinthus Indicus vel Americanus minor Radice Tubero*^ The Lesser American Tuberofe Rooted or Knobbed *Jacinth*. -*Qujms* leaves out the Word "minor" in the Name of the fecond becaufe, as it is thought, he never knew or heard of the firft* fome would have thefe *Hyacinths* to be *Hyacinthi Indici*, The Indian Woolly *Jacinth*, be-

caufe when they are broken they have much Wooll in them, which I think to be a miftake; and fome think that thefe two Plants are not two feverals, as greater and lefler, but that die greatnefs of the one is caufed by the goodnefs or richnefs of the Soil where it grows, but whofo fhall confider the particular Defcription of each, and compare them, will foon become of another Mind.

IV. *The Defcriptions*. *The fir ft, or Greater American Tuberofe Rooted Jacinth*. It has a thick knobbed Root, (yet formed into feveral Heads, fome what like unto bulbous Roots) with trxyiny thick Fibres at the bottoms of them, from the divers Heads of which Root rife up feveral ftrong and very tall Stalks, befet with divers fair, long, and broad Leaves, joined at the bottom dofe, unto the Stalk, where they are greateft, and grow (mailer to the very end, and thofe which grow higher to the top being fmaller and fmaller, which being broken many fine Threads appear like Wooll in them, the tops of the Stalks are beautified with many lair, large, white Howers, each of which does confift of fix Leaves, lying ipread open, as the Flowers of the *White Daffodil*, with fome hort Threads in the middle, and of a very fweet fmell, fo fweet as fome account it ftrong and heady ^ this is the greateft and tailed* of all the *Jacinths*, and the Flowers are fomewhat near in refem^bblance unto thofe of the *Daffodil*, but its Root is tuberofe, as aforefaid, and riot bulbous, as all the v-& are.

V. *The fecond, or Leffer American Tuberofe Rooted Jacinth*. *The Root of this Jacinth is knobbed, like the Root of Arum, or W*^, or like the Root of the Carolina Eddo, whence many fibres Spring forth*, from this root come forth many Xeaves," lying upon the Ground, and encompassing one another at bottom, being long and narrow, and hollow guttered to the ends, which are fmall and pointed, and no lefs woolly and full of Threads than the former ^ from the middle* of thefe Leaves rifes up a Stalk, which is very long and (lender, three or four Feet in height, which, unlefs it is propped up, will bend down, and lie upon the Ground, on which are fet at certain diftances many (hort Leaves, being broad at the bottom, where they do almoft encompass the Stalk, and are fmaller towards the end, where it is lharp pointed ^ at the top of the Stalk ftand many Flowers, with a finali piece of a green Leaf at the bottom of every footftalk, which feem to be ib many *White Oriental jacinths*, being compofed of fix Leaves, which are much thicker than the former, with fix Chives or Threads in the middle, tipped with pale yellow Pendants. *

VI. *The Places*. They both grow naturally in the *TVeJi Indies*, from whence they were firft brought into *Spain*, and from thence have been brought into us, and into feveral other part of *gurope*.

VII. *The Times*. They Flower not in *England* and other like cold Countries till the middle of *Auguft*, and fometimes not at all, unlefs they be carefully preferred from the injuries of our cold Winters," and then if the precedent Summer has been hot they may Flower a Month fooner.

VIII. *The Qualities*. They are cold and drving in the firft degree, or beginning of the fecond, Allringent and Diuretick.

IX. *The Specification*. They (top fluxes of the Bowels, give eafe and relief in the Strangury, and are profitable againft the Jaundice and Kings-Evil 5 the Roots are only of ufe in Medicine, but being often ufed ate thought to caufe Barennefs- but 'tis certain, that being taken inwardly by Young Perfons it keeps them from growing ripe too foon.

X. *The*

X. *The Preparations.* There are but few Preparations from these Plants, viz. about five, i. A *Liquid Juice.* 2. An *Effmce.* 1- A *Decoflion or Infufion.* 4. A *Ponder,* 5. An *Ointment,*

% *The Virtues.*

XL *The Liquid Juice.* It cools and abates Fevers, and given in Red *Florence* or *Port Wine* flops fluxes of the Bowels, given in *White Port Wine,* or *Parfly* or *Arfmar* *SNdXt* it cleanses all the Urinary passages, provokes Urine, and cures the *Strangury*, given in *Milk of Hempseed* made with *Parfly Water* it prevails against the *Jaundice,* and daily taken in *Mutton Broth,* or a gentle *Infufion of Sena* it eradicates the *Kings-Evil.* Dose from one Spoonful to two, or more, increasing the Dose gradually, as you find the Patients Body does agree with it.

XII. *The EJfence.* It has all the Virtues of the Juice, and is something more prevalent than it, for which reason it is to be given in a lesser Dose, but in the same manner, and in the same Vehicles, and may be given twice a day, as you see need requires, or the Constitution of Body will bear it.

XIII. *The Decoction or Infufion.* It may be made in *Arfmar Water,* or *Parfly Water,* in which a Scruple or half a Dram of Salt of Tartar is dissolved, or in *White or Red Port Wine,* (according to the Intention) or in a mixture of the former Waters with those Wines, as the Physician in Prudence (hall direct* they have all the Virtues of the Juice and Effence, but must be given in a much larger Dose, viz. from three Ounces to eight Ounces, according to Age, &c.

XIV. *The Ponder.* It may be given for all the Purposes that any of the foregoing Preparations are given for. Dose from half a Dram to a Dram, or a Dram and half, once or twice a day in any proper Vehicle, it does not so speedily pass off as those liquid things do, but commonly lies longer in the Stomach, and if the Stomach is weak, or foul, will be apt sometimes to make it sick, outwardly applied to old running Sores, or putrid Ulcers, also Ulcers of the Kings-Evil, it cleanses them and dries up their humidities, and induces them to a speedy healing.

XV. *The Ointment.* It is good to heal old Sores and Ulcers, but is chiefly good against Tumors and Ulcers of the Kings-Evil, for by anointing them first therewith Morning and Evening, chafing the Ointment well in, it insensibly consumes those Kernels or Swellings, and in time perfectly dissolves them, and if you mix therewith Pouders of Scammony and Tobacco, *ana,* and apply it to frumous Ulcers, it cleanses, *takes away dead or proud Flefh, dries them up, and quickly heals them.

XVI. *Not a.* What we have said of the Qualities, Specification, Preparations and Virtues of these *Tuber of e Jacinths,* the same is to be understood of all the *Bulbous Jacinths* hereafter following, (excepting only the *Musk Grape flowered Jacinth* in Qiap. 393. which is said to be the *Bulbus Vomitorita Dioscoridis,* and the *Lilly Leav'd Starry Jacinth* in Chap. 403.) and this I thought good to give notice of here once for all, that in the following Chapters of this Plant we might not often repeat the same in vain.

C H A R CCCXCII.

Of J A C I N T H Grape Flowered

#E Names. It is called in *Greek* *X CoTsudfK,* in *Latins Hyacinth* its *Botroides* and in *English Grape Flowered Jacinth.*

II. *The Kinds.* The *Grape Floored Jacinth* has two-principal or generick Kinds, viz. 1. *Hyacinth Botroides vel Racematus non Mofchatus,* [The *Grape Flowered Jacinth* not Musked, of which in this Chapter. 2. *Hyacinthus Botroides vel Racematus Mofchatus,* The *Mussed Grape Flowered Jacinth*, of which in the Chapter following.

III. *The Kinds of the Grape. Flowered Jacinth not Musked.* Of this there are these six varieties, 1. *Hyacinthus Botroides vel Racematus minor Caruleus* The Lesser dark Blew Colored Grape Flowered Jacinth. 2. *Hyacinthus Racematus fflajor Orii* The Greater dark Blew Colored Grape Flowered Jacinth. 3. *Hyacinthus Botroides Caruleus A** The Pleasant Sky Colored Grape Flowered Jacinth. 4. *Hyacinthus Botroides Ramofus,* TW Branched Grape Flowered Jacinth. 5. *Hyacinthus Botroides flore albo* The White Grape Flowered Jacinth. 6. *Hyacinthus Botroides Flore albo* The Bluff Grape Flowered Jacinth,

IV. The Descriptions. The first or Lesser dark Blew Colored Grape Flowered Jacinth. It has a Root which is round and blackish without, being compared with a number of other Roots or Off-sets, round about it, so that it will quickly choak a Ground if it is suffered long in it for which cause map* cast it out into some by corner, if they intend to sever it, or else cast it out of the Garden quietly. It has many small and fat weak Leaves, lying upon Ground, which are somewhat brownish at their w

coming up, and of a fad green afterwards, hollow on the upper side and round underneath, from among which rife up round, smooth, weak Stalks, bearing at the top many small; heavy, Bottlelike Flowers, in ihape like to the *Mufcari* (in the following Chapter) but very thick thru together, smaller, and of a very dark Or blackish blew color, of a very strong smell, like unto *Starch* when it is new made and hot.

V. *The fecond, or Greater dark Blew Colored Grape Flowered Jacinth.* This Plant in its Root, Leaves, Stalk, Flowers, Color, and manner of growing, is in all respects like unto the *Leijfer* before described, and differs nothing from it but in the magnitude, this in its Stalk, leaves, and Flowers, being greater than them.

VI. *The third, or Sky Colored Grape Flowered Jacinth.* The Root of this is whiter than the former, but does not increase so much as it, yet produces plenty enough of Plants, it springs up with fewer Leaves than the first, and not reddish, but green at its first appearing, the Leases when they are full grown are long and hollow, like the first, but greener, shorter, and broader, standing upright, and not lying along upon the Ground as they do, the Flowers grow at the top of the, Stalk, more sparingly set thereon, and not so thick together, but like a thin bunch of Grapes, and Bottlelike, as the former, of a fair & Blew, or pinky Color, every Flower having some white spots about their brims, this has a very sweet smell, yet nothing like the foregoing.

VII. *The fourth, or Branched Grape Flowered Jacinth.* This is a true Species of the former Kinds, and is found to grow with many Branches of Flowers, breaking out from the sides of the greater Stalks or Branches, the Leaves, as is all the rest of this Plant, are greater than the former.

VIII. *The fifth, or White Grape Flowered Jacinth.* It hat a bulbous Root, as the others, its Leaves are green, but a little whiter than the Blew or Sky Colored Jacinth, its Flowers are purely white, and

alike sparingly set on the Stalks, but a little lower and smaller than it; in all other things there is no difference.

IX. *The sixth, or Biush Grape Flowered Jacinth.* The bulbous Root of this Grape Flower is greater than either of the Roots of the Sky Colored or White foregoing, and has seldom any small Roots or Offsets as the others have, its Leaves also are larger, and somewhat broader, the Flowers are of a pale, or bleak bluish Color out of a white, and are a little larger, and grow a little higher, and fuller of Flowers than the White.

X. *The Places.* They are Natives of many places of Germany, and Hungary, and grow also in Spain, and on Mount Baldus in Italy, and near Norbone in France, about the borders of Fields, with us they grow only in Gardens.

XI. *The Times.* They Flower from the beginning of March, and sometimes sooner if the Weather is mild, and continue flowering till the beginning of May.

C H A P . CCCXCII

Of J A C I N T H Grape Flower Musked,

L *Names.* It is called in Arabick *Zir*, in the Turkeish *Langilge Dipcadi*, and *Mofchomomi*, by which Names they were lent to us from Turkey in Greek *ῥοζοῦλα* - *Corallorhiza* in Latine *Hyacinthus Botroides Mofchatus*, and in English *The Musked Grape Flowered Jacinth*.

II. *The Kinds.* There are four federal sorts of this Musked Plant, viz. 1. *Baccata Bulbus Smeticus, Hyacinthus Botroides Mofchatus major, Hyacinthus Mofchatus Bauhini, Mufcari, and Mufcari Floreflavus.* The Greater Yellow Musked Grape Flowered Jacinth, or Yellow Mufcari. 2. *Hyacinthus Botroides Mofchatus major feu Mufcari Flore Cineritio,* The Great Ash Colored Musked Grape Flowered Jacinth. 3. *Hyacinthus Botroides Mofchatus major, five Mufcari flore rubro* The Great Red Musked Grape Flowered Jacinth. 4. *Hyacinthus Botroides Mofchatus major, five Mufcari Flore albo,* The Great White Musked Grape Flowered Jacinth.

III. *The Descriptions.* The first, or Create* Yellow Musked Grape Flowered Jacinth. It has a Root which is long, round, and very thick, and white on the outside, with a little woolliness thereon when broken, and full of a slimy juice, to which are adjoined thick, fat, and long Fibres, which perish not as in most of the other Jacinths, and therefore need not to be often removed, as some of the other sorts are: This Musked Jacinth, or Grape Flower, has five or six Leaves spread upon the Ground in two or three Heads, which at the first budding or shooting forth out of the Ground are of a reddish purple color, and afterwards become long, thick, hollow, or guttered on the upper side, of a whitish green color, and round, and dark colored underneath in the middle of these Heads of Leaves rise up one or two hollow, weak, brownish Stalks, sometimes lying on the Ground with the weight of the Flowers, (but especially of the Seed) yet for the most part landing upright when they are laden with joints of Bottleneck Flowers, which at their first appearing, and until the Flowers begin to blow open, are of a brown red color, and when they are blown of a fair

fair yellow, towering'irill below, and fo upwards by degrees ^ every one of theft Flowers is made like unto a little Pitcher ov Bottle, being big in the belly and iinall at the mouthy which is round, and a little turned up, very iweet in flhell, like unto Musk, from whence it took the Name *Mufcari*; after the Flowers are pafst there come threefquare thick Heads, puffed up, like as it were Bladders, made of a spongy lubftance, vñ which are here and there placed black round Seed.

IV. *The feconl, or Great A(h Colo&d^Musked Grape Flowered Jacinth.* It has a Root like the former, but yields more encreajfc, and will better endure our cold Climate, althd it does more*J}llom give ripe Seed: This *Mufcari* differs .not in Roots oribrm'of Leayes,or Flowers from the former^ excepting in thele following particulars, the Leaves do not appear fo red at firft budding out of the Ground, nor are fo dark when they are fully grown,* the Stalk alfo has commonly more (tore of Flowers thereon, the color oi' which at their firft budding is a little dusky, and when they are full blown are of a bleak, yet bright A(h color, with a little ihew of purple in them, and by long itanding change a little more grey, beingTull asfweet, or fweeter, as fome think, than the former.

V. *The third, or Great Red Masked Grape Flowered Jacinth^ This Plant in its Root, Leaves, Stalk, Howcst^SeeJ, and manner of growing, is absolutely like to the fir ft, excepting only in the color of the Flowers, for that this when its Flowers are blown are of a red color, tending to a yellow.*

VI. *The fourth, or Great White Musked- Grape Flowered Jacinth.* The Root of this (as well as the Root of the third aforegoing) does not ufually grow fo iarge as the Root of either of the firft two, in all other refpetts it is like to them-, the Leaves are like unto the fecond kind, but they are of a little whiter.ereen, the Flowers alfo are like in form and manner of growing, but of a* pale color, tending to a while.

VII. *The Places.* The Roots of the two firft have often been brought from *Conftantinople* to us, and poffibly may come thither from beyond the *Bofphorus* in *Affia*, but w^i us they are nurfed up only in Gardens-, the latter pwo forts are thought to be degenerates from the firft two Kinds, to wit, from their Seed coming to ripenefs in our Country%and ib town here.

VIII. *The Times.* They Flower in *March* and *April*, according to the warmth or temperature of *the Seafon, but the firft of them fprings firft out of the Ground.

IX. *The Qualities and Virtues.* *Galen Lib. 8. Simp. Med.* fays its temperature is hotter than that of the *Bulbus Efculentus*, or *Ornithogalum luteum*, and *Diofcorides* fays that the Root eaten, or the Deco&ion thereof drunk, cures Difeafes of the Bladder; bpt that it caufes Vomiting, without-doubt it oughi to be applied by a Wife and Prudent Hand ^ out, ivardly, made into an Ointment, it is good againft the Kings-Evil, for by daily anointing therewith it, diicuffes and confumes thofe fcrophulous Tumors, Kernels, or Swellings.

CHAP. CCCXCIV.

of JACINTH Haired.

I. *YHE Names. It is called in *Greek* "rl, in

II. *The Kinds.* There are five feveral forts oi the Haired Kind, viz. 1. *Hyacinthus Comofus a/bus.* The White Haired Jacinth. 2. *Hyacinthus Comofuf Byzantinu^* The Turkey Fair Haired Jacinth, y *Hyac^thus Comofus major purpureus*, of fome its called only *Hyacinthus major*, and of others *Hyacinthus Comofus major*, but we in *Englijh* call it *The Purple*, or *Great Purple Fair Haired Jacinth*, becaufe of its Tufts or Taffels of purple Threads like Hairs at the top. 4. *Hyacinthus Comofus Ramafus purpifreus*, fome call it only *Hyacinthus Comofus Ramcus*, others *Hyacinthus Calamiftratus*, others *hyacinthus Comofus ParnaJJI*, The Fair Hairea Branched Jacinth. \$. *Hyacinthus Comofus Elegant}*-or, *Hyacinthus Comofus Ramofus Elegantiior*, ityWjJ *thus Pennatus*, and *Hyacinthus Comofus P* Fair Curred Haired Jacinth, fome will have it,° be called alfo *Hyacinthus Calamfiratus*, others^think *Cicinnati* more fit and proper, for that e H^ c u ^ Threads which feem like Hairs are better, expr- by the Word *Cicinnus*, which fignifies the curled bufh of Hair it felf, than by the Word *Calamiftru** which fignifies only the Crifping-Pin or Infrument, wherewith of 'Old they ufed to ffizze or curl the Hair.

III. *The Defcriptions.* The firft, or White Haired Jacirith. It has a bulbous blackifb Root, a little long and round, from whence rife up three or fo»r Leaves, fsmooth and whitijh, long, narrow, and hollow, like a Trough or Gutter on the upper fide •, from among which fprings up the Stalk, about a Foot or more high, bearing at the top feveral Flowers, final, and fomewhat like to the *Grape flower*, but not io thick let together, being a little longer and larger, and wider at the mouth, and as it were divided into fix edges, of a dark whitifh color, with fotje blacker fspots about the brims on the infide -, <ie Heads or Seed Veffels are threefquare, and fotnewhat larger than the Heads of any of the former UJ^ Grape Flowers in Chap. ?92..in which are contained round black Seed-, this *Jacinth* does more nearly <f

Jacinths juft above
ffied than the *Hair flowered Jcintbt* which follow;
hkh Name it beats for that it has no Hairs 01
Threads at the top of the Sralk, 01 fides, as they
: Authors have given ir this Name
ought not tit to change it, and therefore have
put it into the Clafis of *Kiirsd Jacinths*, as imbe
othets have clone.

Jacinth Haired Fair White, or Turkey

IV. *Thefecettd, or Turkey Fair Haired Jacinth.* V
• *bulbous Rear, like the former*, but it is bigger,*
/Mi /jr^r rf^o i« ^J *Leaf aid Flswr,* and Uars
greater (lore of FIowers on the head of the Stalk;
the lotver Flowers, altho' they have (lorE Stalks at
rheir firft rlowering, fet aftenvards the Stalks grow
longer, and thole which are lowex Ifand out farther
than thole which JTC higbefi, whofe fboritalks are
ihort, and ;i to the Stein, and of a more
perfett Purple than any below, which are of a dusky,
gpenifh, Purple Color; the whole Stalk of Flow-
ers does fomerimes feem like a *Fyramts*, broad be-
low and frmll above, yet neither of thefe *Jacinths*
have any i l the tops of the Stalks, as the
QdK • his *Jicinth* carrie from Con-
•meriting like to that before de-
ing that it is every way bigger.

V. *The third, or Great Purple Fair Haired Jacinth.*
abas a great.bulbed white Root, with feme reinefs on
the ajtfdet, it is a fair Haired *Jacinth*, whofe
Leaves are (biter, longer, broader, an* lefs hollow
than the former, lying fo tie moft part upon tte:
Ground; theStaiferifes up fromamidft theXeaves,
being ftronger, higher, and bearing a greater and
longer Head of Flowers alfo than they; the Flowers
of this Hand not upon fuch very long Footfta&s, but
are fhortet below, and clofc almost to the Stalk a-
bove, having many bright, ptapiifrt, blew Threads,
growing higheit above the rlowers, as it were in a
buffli together, every one of the& Threads having a
little Head at its end, fomewliat like unto one of
the Howers, but much fmaller; the reft of the Flow-
ers Mow this Buffh aie of a fadder or deader Purpljt
and not of fo bright a Color, and the loweft ^{w o t} £
of all, rather inclining to a green, like un» ^{115 c} 1^{a n}

fends forth green Lewes, (which are in all respets like to the Ordinary Oriental Jacinths, but famething narrower) before Winter, and fometimes is in its Flower also in the middle or begining of Winter, and is in form and color a plain White Oriental Jacinth, but fomewhat letter, differing in no other particulars, but in the time of its Flowering, which is always certain to be long before the-other Kinds.

IV. *The fecond, or Purple Winter Oriental Jacinth.* In its Root, Stalk, Leaf, and Flotvf, #^{ts} like to, andfkevs it felf to be of the Stock or fyndrcd O/Oriental Jacinths; the difference of color in this Flower makes it to be diftingujhed chiefly, and^r is, as the-ibrnef) more early than the reft which follow i this.feems to be the very felf lame Kind with the former, faving that this has fine blewifli pui^{ple} Flowers, whereas that has white.

V. *The third, or Greateft Oriental Jacinth.* The Rqot of this Jacinth is ufually greater than any other of its Kind, and moftcommonly white on the outfit from which rife up one or two great round Stalks, ipotted from within the Ground, with the lower part of the Leaves also upward" to the middle of the Stalks, or rather higher, like unto the Stalks of *Dragons*, but darker, being fet among a number of broad, long, and fomewhat hollow green Leaves, al-

JKmnc J^S «hf, L^ves of:the white Lilly; at the tops of the Stalks ftand more ftore of Flowers than in any other of this Kind.ever^ Flower being f great as the greateft fort of *Oriental Jacinths*. ending \uM Leaves, which turn at the points, of a fair blewifh purple color, and all ftanding many times oju, one fide of the Stalks, and many times on both fidSr . VI. *The fourth, or Ordinary Oriental Jacinth.* V" has a Root which is great; and white on the outfit, and oftentimes purplifh also, flat at the bottom and Jmall at the bead-, it has many green Leaves, long, lomewhat broad, and hollow, fronTjftnong which nfes up a long, green, round Stalk, befet from *e middle thereof almoft with feverai Flowers, ftanding on both fides of the Stalks one above another unto the top, each of which next unto the Footstalk is long, hollow, round, and clofe, ending in ^x-fmall Leaves, laid open, and a little turning at the points, of a very fweet finell; the Colors of * « e Flowers are divers, for fome are pure white, without a (hew of any other color in them, arlothers almoft white, havingaihewofblewnes, efpecialy at the brims and bottoms of the Flowers others are W T^ y im bluffl, tendinS tow^ a whgei- oTMr 3 S / eep a purple as » Vi<>kt. others of a purple; tending to rednes, and foml fo pale a blew, as it were more white than blew, after the Rowers ate pafst threefquare Heads appear bearing round black Seed, great a iKllhiningiSiS the Cmnm Oriental Jacinth, becaufe it I nowfo plentifully to be found In all Gardens, that iHs not

;-re de foz

VIL *TteMK ^Purple Violet Oriental Jacinth* It is very much hke thv founh^{Kvdb} but it Flowers are of a deep purple Violet color, having whit^ lines down the back of every Saf of £1 Bower, which turn themfelves a little backwards- at the points.

VIII. *Thefixth, ^Oriental Jacinth* whoseFlowers open al one way. This in its Root, J>talk, ad Leaves is like the ffourthSpeciesaffinegoing, but in this it differs, via. that its Flowers ftand and open all-one way, and not on all fides, as feverai other Jacinths do- and are therefore herein like to the Great Zumbul hdi before defcribed.

IX- *ipffwenb, or Late Flowering Oriental Jacinth, ibis*, which feems to be a Species also of the fourth Kind, Flowers later than all the reft of them, and

III. The Description of the Root of the White Oriental Jacinth. It has a hollow Root, round,

Flowers are smaller, and stand more upright, and they are either white or blew, or mixed with red purple

X. *The eighth*, iv Bushy or Leafy Stalked Oriental Jacinth. *This grange Jacinth has its KeoU, i.e. rjM, and Fwwrjr, like unto the former Oriental Jacinths, but the chief difference is in this*, that its Stalk is not bare or naked, but has very narrow long leaves growing upon it differently and without order, with the flowers thereof which are blew, and having for the most part one UA. and sometimes two at the foot, or letting on of every Flower, yet sometimes chances for Flowers to be without any Leaf at the bottom, as it please Nature, Which in this Plant is very variable. the Heads and Seed are black and round, like to those of the other

XI. *The Vix**- All these Plants have been brought to us out of Tarky, and from Conflantino-ple, but the place of their true original is scarcely known, with us they grow only in Gardens.

XI. *The Timer*. The two first Flower the earliest, sometimes before Christmas, but more usually in January, and thro' the whole Month of January, and later (sometimes, they abide a great while in Flower, and in great beauty, more especially if the Weather is mild, when few or iraciously any other Flowers are abroad. the third Kind Flowers also circulate through the year of those which follow; the other Ordinary Flower come from the middle to the end of March, form; in March, and some in April.

C H A P . CCCXCVL

O / J A C I N T H Oriental Double.

I-r H ii Nones*. It is called in Greek

L. rtxnjr.lt lrr>i(, iii Luitnc Hyaemhus Qricntdti's duplex^ hyteinthus-Qricntjlk vlcre diiflici^ in Englif Thf Dabble Oriental Jacinth.

It. *The \nh*. This Double Kind is in viz. i - *Hyicintkm Onentlh Yhre 3uplici*, The Once Double Blew Oriental Jacinth. i. *Hyacintha Orient alii Nore plena Ciculco vet ?urpitro Vio/acco*, The Fair Double Blew or Purple Oriental Jacinth. ? *Jcinxhui Qnemalis fbre bleno can£i\$Jjimm*, The White Double Oriental Jacinth.

III. *The Deiaip'dons*. *The fu-ji% or Once Double Oriental Jacinth, has a bulbous "Root, liketbefor-mer Single Kinds, it has federal long Leaves, like unto the other Oriental Jacinth almost, Handing upright, among which rises up a Stalk, brownish at first, but growing green afterwards, bearing many Flowers at the top, inade like the Flowers of the former J-fl^t&r, apl ending in fix Leaves, green at the fiat, W o h Eiewifh white when they are open, yet retaining some few of graennefs in them, the brims of the Leaves being white- from the midft of each Flower Bands fordi another' fualL Flower, con-tilting of Uiree Leaves, of the ia_{me} color with the other Flower, but with a green line on the back of each of these inner Leaves, in the middle of this little Ylower some Threads stand, which are tipical B widi black; die Giicll of this Flower js not io lweet as those of the former Single Kinds, but the H"ids and Seed are very like to them.*

IV. *The Jfectni*, or Fair Double Blew or Purple Oriental Jacindi. *The Leaves of these Jacinths are*

smaller than the Leaves of maji of the other Oriental Sorts, whether Single or Double, the Stalks are shorter and final but three or four Flowers on the Heads of them for the most part, which are not composed like the Lily, but are in full, and double of Leaves, where they show their usual IxauriL, and of a fair blew color in some, and purple in other, but seldom beat out their Flowers fair, and be- J^ ! which will hesU Uicr fingle or very little double lame Salk.*

V. *The tbirj^ or Pur*; White Double Oriental Jacinth. *'Hi* Double Whli r Plant his its Leaver like unto the Sing] \ Jacinth in the fonder Chapter^ its Stalk is likewise long, slender, and grt. Flowers ar moll, very doubly and lull O] pure white color, without any other mixture .l, hanging down tk\ little, andora-reasonable fiveet Imdl.*

VL *The Plices*. They came hither from *On-flant inople*, but which is ill. Iiceofgr&wth is uncertain, with us they are only nursed up in Gardens.

VII. *The Times*. Some in *a.March* and some in *April*, and some sooner, like as some of the latter *Single Kinds &c.*

Hi. *The Defcriptions*. *Tfvjfr/?*, or Little Summer Oriental Jacinth. *It has a buibout Root, which is [mall and. white, from which rises up four or five long, narrow, green Leaves, lyir^ upon the Ground among which rises up a Uendei smooth Stalk, about a Span high. or more, bearing at the top many slender bleak blew Flowers, with hire ihipes and edges to be seen in mottofbrem, fashioned ve-ij-) like unto the Flowers' of the Oriental Incintb, but much fmalkri die Flo no fmall at all, aid the Seed is like the Sct&.afibc'ExgliJh Jacinth, or Htresbelh.*

IV. *The feconi*. or Small Yvnce bumper Oriental Jacinri. *Kindaith [fpankain betngF'i F mi mower of growings ••• no-thing therefrom but in the m\pt of the Flower, which is purely white.*

V. *The*

V. The third, or Small reddish Colored Oriental Jacinth. It is another of the fame Kind, whose flowers are of a fine delayed color, with some deeper colored Veins running along the three outward Leaves of the Flower, and differing in no other particulars from the first of these Summer Jacinths.

VI. The fourth, or Greater Summer Starry Jacinth, It has a Root which is round and white, having some long thick Roots under it, besides the fibres, as is usual in many other Jacinths; from this Root rises up several narrow green Leaves, lying upon the Ground, somewhat like the Leaves of the English Jacinth, or Haresbells, but stiffer and stronger among which rises up a round stiff Stalk, bearing many Flowers at the top thereof, and at every foot of the Flowers a small Leaf, of a purplish color the Flowers are Star-like, of a fine deep purple color, tending to a pale Blew, or Ash Color, striped on the back of every Leaf, and having a pointed Umbone in the middle, with some whitish purple Threads about it tipped with blew, the seed is black, round, and shining, like unto the Seed of the English Jacinth, or Haresbells, but not so lull out so big.

VII. The fifth, or Lesser Summer Starry Jacinth. It has a small bulbous Root, and white, covered with a brown Coat, and having some fitch thick Roots among the Fibres as are among the others; this Lesser Jacinth has several very long, narrow, and shining Sreer Leaves, spread upon the Ground round, about the Root, from among which rises a very short round Stalk, not above two or three Inches high, bearing six or seven small Flowers thereon on each side of the Stalk, like both in form and color unto the Greater Summer Jacinth before described, but smaller by far, the Seed is black, and contained in three cornered Heads or Husks.

VIII. The Places. The first three have been gathered on the Pyrenean Mountains, on those sides next to Spain, from whence they have been brought into our Gardens; the fourth and fifth grow naturally in Portugal.

IX. The Time. The first three Flower very late in the year, the Early flowering Jacinths viz. May or June for the most part, the two others Howet also in May, towards the latter end of the year, and sometimes also in June, and their Seed is ripe in the latter end of the year.

is reasonable great, and white on the outside, with many strong white fibres at it, which perish not Tearly as the Fibres of many other Jacinths do, it springs late out of the Ground, bearing four or five short, hollow, and soft, whitish green Leaves, with a white line in the middle of every one of them, from among which rise up one or more Stalks, bearing several Flowers at their tops, all looking on one way, or standing on one side, hanging down their heads, consisting of six Leaves, three of which, being the outwardmost, lay open their Leaves and turn back their ends a little, the other three Leaves, which are innermost, do as it were close together in the middle of the Flower, without laying themselves open at all, being a little whitish on the edges, the whole Flower is of a purplish yellow color, with some white and green as it were mixed amongst it, of no smell at all, after the Flowers are past great three cornered and bunched out Heads or Husks come in their places, which contain black and flat Seed, this Plant as it springs up late, so it keeps its green Leaves almost until Winter.

IV. The second, or Barbary Brown Colored Jacinth. This Plant in its Root, Leaves, Stalks, flowers, Seed, and manner of its growing, and in all other respects (except its magnitude) is very like the former, nor does it differ at all from it, but that this is every way much greater.

V. The third, or Ethiopian Dun or Dusky Colored Jacinth. Its Root is bulbous, and like the former its Leaves are stronger and greener than it, and the Stalk also thicker, bearing divers Flowers, confusedly standing upon longer footstalks, yet made after the same fashion, but that the three inner Leaves are whitish, and dented about the edges, otherwise the Flowers are greenish on the inside.

VI. The Places. The native County of the first of these is Spain, the second is a native of Barbary growing about Fez and Morocco, the third is a native of Ethiopia, and was brought hither from the Cape of Goodhope with us they are only nursed up in Gardens.

VII. The Times. The first Flowers not until June because it springs late out of the Ground, as aforesaid, holding its green Leaves all September, the Seed ripening in the mean season and much about the same times the other two Flower and Seed.

G/JACINTH Starry Common.

I. THE Names. It is called in Greek, drefa* in Laiine Hyacinth* Stellatm, acci in English The Starry Jacinth.

II. The Kinds. There are six generick Species of the Starry Jacinths, viz. 1. Hyacinthus Stellatus Americanus, The Starry Jacinth, of which in Chap. 400. 2. Hyacinthus Stellatus Communit, i Common Starry Jacinth, of which in this Chapter. 3. Hyacinthus Stellatus Americanus, The Starry Jacinth, of which in Chap. 400. 4. Hyacinthus Stellatus Byzantinus, The Turkey Starry Jacinth, of which in Chap. 401. 5. Hyacinthus Stellatus Autumnal, The Autumn Starry Jacinth, or Winter Starry Jacinth, of which in Chap. 402. 6. Hyacinthus Stellatus Wintif, The Lillyleaved Starry Jacinth, of which in Chap. 403. following.

III. *The Kinds of the Common Starry Jacinth.* Of this there are seven Species or Sorts, viz. 1. *T-ICIF. 60- ir&us JW&f w. Hyacinthus Stellatus Communis vel Vulgaris, five Bifolius Fuchfij. Hyacinthus Stellatus Fuchfij, Hyacinthus Stellatus Germanicus, *The Common Blew Starry Jacinth.* 2. *Hyacinthus Stellatus Flore albo, The White Flowered Starry Jacinth.* 3. *Hyacinthus Stellatus Wore rubente, The Bluff Colored Starry Jacinth.* 4. *Hyacinthus Stellatus Martins, five Prxcox Cruleus, The Early Blew Starry Jacinth.* 5. *Hyacinthus Stellatus praxox Wore albo, The White Early Starry Japinth.* 6. *Hyacinthus Stellatus flore Nivco, vel albiffimo, The Purely White Starry Jacinth.* 7. *Hyacinthus Stellatus praxox flore Juave rubente, The Early Bluff Starry Jacinth.*

IV- *The Defections. The firfl or Common Blew Starry Jacinth. Its Root is bulbous, fomewhat long, and covered with ayellowifh Coat-, it rifes out of the Ground commonly with but two brown Leaves, yet fometines with three, inclofing within them the Stalk of Flowers, the Buds appearing of a dark whitifftcolor as foon as the Leaves open themselves, which Leaves being grown are long and hollow, of a whitifh green on the upper fide, and brown on the underfide, and half round, the brown Stalk rifing up high, tearing five or fix fmall Star like Flowers, confifting of fix Leaves, of a fair deep blew, tending to a purple-, the Seed is yellowifh and round, contained in round pointed Heads or Husks, which by reason of their heavinefs and the weaknefs of the Stalk lie upon the Ground, and often perifh with Wet and Froft, this Starry Jacinth has been longeft known, and is the molt common.*

V. *The fecond, or White Flowered Starry Jacinth. This White Kind has its Leaves like the former, but greeit and frefh, not brown, and a/Jo a little narrower the Buds for the Flowers appear at firft a little bluff, but when they are blown they are white, but yet retain in them a fmall (hew of that bluff color.*

VI. *The third, or Bliroh Colored Starry Jacinth. This in its Root, Leaves, and Stalk, is exally like the former, and differs nothing therefrom but in the Flowers, which are of a fair bluff color, much more emineft than in the others, in all other particulars it is exa&ly alike.*

VII. *The fourth, or Early Blew Starry Jacinth. Its Root is bulbous, and a little whiter than the others on the out fide its Leaves are alfo a little broader, of a freffer green, and not brown at all, as the firft Blew Jacinth aforegoing is, the Buds of the Flowers while they are inclofed within the Leaves, and after when the Stalk is grown up, do remain more blew than the Buds of the former, the Flpwrs when they are blown open are like the former, buif fomewhat larger, and of a more lively blew color r> thjs Kind of Jacinth does more feldom bear Seed than the others aforegoing.*

VIII. *The fifth, or White Early Starry Jacinth, this is alfo one ether of the fourth Kind, the green Leaves whereof are a little narrower than the former, and its Flowers are purely white, in any other refpect there is no difference from it at all.*

IX. *The fixth, or Purely White Starry Jacinth. This fees to be a Species of the Jecond Kind aforegoing, its Leaves are of a pale frefli green, and a little narrower than thofe, and its Flowers are fmaller than them, and of a pure Snow white color.*

X. *The feventh, or Early Bluff Colored Starry Jacinth. The Root is bulbous, and like to the other Starry Jacinths the Leaves differ-not from the fifth Kind, or White Early Starry Jacinth, and its Rowefs are bluff colored, and as large as thofe of the fifth Kind, and fomewhat larger than the Flowers of the fourth Kind -, this Bluff Colored Jacinth is very rare, but it is very pleafant.*

XI. *The Places.* All thefe Jacinths have been found in the Woods and Mountains of *Auftria, Bohemia, Germany, &c.* as *Fuchfius* and *Gcfner* affirm, and in *Italy*, near *Naples*, as *Imperatus* and others fay, but with us they are all of them nurfed up in Gardens, more efpecially the *White* and *Bluff Kinds*, for that they are more tender, and therefore require the more care to keep them from perifting.

XII. *The Times.* The firft, fecond, and fixth Kinds Flower much about the middle of *February*, if the Weather is mild and gentle, the other Kinds about fourteen or twenty days after, viz. in *March*, but many times as early as the firft three.

phorus, or *Laniferus*, or *Woolly Jacinth*, to be a Species of the first Kind in this Chapter, for which reason we have put it in this place among the *Peruvian* Kinds, it being a *Jacinth* both in its Root, Leaf and Flower.

VIII. *The Times*. The first, three Flower in *May*, and the Seed is ripe in *July*-, the fourth Flowers not often, and is rare to be seen Flowering with us, but when it does Flower it Flowers also in the Month of *May*, as the others do.

CHAP, cecei.

J/JACINTH Starry Turkey;

I. *Trifolium E Names*. It is called in *Greek* *~~Ἰακίνθος~~

X & *** E&MW*, in *Latine Hyacinthus Stellatus Byzantinus*, and in *Englsh The Turkey Starry Jacinth, The Starry Jacinth of Constantinople*.

II. *The Kinds*. There are four Species of this Plant, viz. 1. *Hyacinthus Stellatus Byzantinus Radice nigra*, The Turkey Starry Jacinth with a black Root. 2. *Hyacinthus Stellatus Byzantinus major* The Greater Starry Jacinth of Constantinople. 3. *Hyacinthus Stellatus Byzantinus alter, Hyacinthus Flore Boraginis*, The other Turkey Starry Jacinth or Starry Jacinth oi; Constantinople. 4. *Hyacinthus Stellatus Constantinopolitanus flore Cinereo, Hyacinthus Stellaris Someri*, The Turkey Ash Colored Starry Jacinth or Somer's Starry Jacinth*

III. *The Descriptions*. The first, or Turkey Starry Jacinth with a black Root. It has a Root which for the most part does run downwards, something descending into the Ground, from which rise up several fresh green, thin, and long Leaves, of the bigness of the *Englsh Jacinth*, but not so long, between which rises up a slender low Stalk, bearing five or six Flowers, dispersedly set thereon, spreading open like a Star, of a pale or bleak blew color- the Leaves of the Flowers are somewhat long, and stand as it were somewhat loosely, one off from another, and not so compactly together as the Flowers of other Kinds* it seldom bears with us ripe Seed, because the Heads

are so heavy, that lying upon the Ground- they rot with the Wet, or are bitten with the Frosts, or both, so that they seldom come to good -, the Root is small in some, reasonably big in others, round and long, white within, but covered with deep reddish or purplish peelings next unto it, and darkey and blacker purple on the outside, with some long and thick white Fibres like Fingers hanging at the bottom of them, as is to be seen in many other *Jacinth*.

IV. *The third, or Greater Starry Jacinth of Constantinople*... The Root of this is like the former, saving that it is not black on the outside, HIS the other, but three times bigger*, this Jacinth may truly be referred to the *foxixix+Jafiptb. of Constantinople*, and called the *Greater*, it is so very like thereunto, that if any one truly knows that cannot but know or think that this is another of that sort, but greater* as it is in all its parts, bearing larger-Leaves by-much, and more store, lying upon the Ground round about the Root } it bears many low Stalks of Flowers, as bleak and standing as loosely as the former. 7

V. *The third, or Other Turkey Starry Jacinth, or Starry Jacinth of Constantinople*. Its Root is of a dark whitish color on the outside, and sometimes a little reddish within-, it has for the most part only four Leaves* broader and greener than the first, but not so large or so long as the second; the Stalk has five or six Flowers upon it, bigger and rounder set, like other *Starry Jacinths*, of a more perfect or deeper blew than either of the former, having a whitish green Umbone or Head in the middle, beset with six blew Chives or Threads tipped with black, so closely encompassing the Umbone or Head, that the Threads seem to be so many pricks stuck into a Club or Head, some have therefore liken'd it to a *Borage* Flower, and have called it; after the Flowers are past come up round white Heads, in which is contained round and white Seed.

VI. *The fourth, or Turkey Ash Colored Starry Jacinth, or Somer's Starry Jacinth*. Its Root is like to that of the *Englsh Jacinth*, or *Haresbells*, being great, round, and white, so like that it is hard to know the one from the other-, its Leaves are also very like to the Leaves of the *Englsh Jacinth*, and spread themselves upon the Ground in the same manner from among which rise, up one or two Stalks, replenished at top with a number of small Star like Flowers, pushing out more below than above, of a very pale or white Blew, tending to an Ash Color* and very sweet in smell^ the Seed is black and round, like unto the Seed of the *Englsh Jacinth*, or *Haresbells*.

VII. *The Places*, the Titles of the three first shew you their native places, the third of them, as *Lobel* says, was brought to *England* from *Constantinople* by the Lord *Zoutby* the fourth *Somers* brought, from *Constantinople*, Out of *Italy*, as *Label* says, into the *Low Countries*, from whence it has been brought to us, but they all flourish admirably well in our Gardens.

VIII. *The Times*. The first of these Flower earlier than the other three, and presently after the *Early Starry Jacinth*, the three last Flower all of them in *April*.

C H A P . CCCCII.

O / J A C I N T H Starry Autumn.

I. THE Names. It is called in Greek *Hyacinthus* in Latine *Hyacinthus Stellatus Autumnalis*, and in English *The Autumn Starry Jacinth*.

II. The Kinds. There are three Species of this Plant, viz. 1. *Hyacinthus Stellatus Autumnalis major*, The Greater Autumn Starry Jacinth. 2. *Hyacinthus Stellatus Autumnalis minor*, The Lesser Autumn Starry Jacinth. 3. *Hyacinthus Stellatus Autumnalis Flore albo minor*, The Lesser Autumn Starry Jacinth with white Flowers.

III. An Observation. *Dalechampsius* with many Words would have us to believe that these Plants can be no *Jacintus*, because their Flowers appear before their Leaves in Autumn, contrary to the true *Jacinth*, as he says, and therefore will have it to be the *Bulbus of Theophrastus Lib. I. Cap. 12.* which he calls his *Tiphyum* (there mentioned) as also *Bulbus Jektivus Dalechampsij*, this may carry some probability with it, yet the likeness of both Roots, Leaves and Flowers, have persuaded very Learned Botanists to believe them to be true *Jacintus*, and so we take them in this place.

IV. The Descriptions. The first, or Greater Autumn Starry Jacinth, It has a Root which is great, bulbous, and white on the out side, from this Root spring up five or six or more very long and narrow Leaves, lying upon the Ground the Stalks are furnished at top with many Star like Flowers, Pale colored Threads tipped with blew Hanging about the

Head in the middle, which in time growing rip contain therein small, black, and roundish Seed.

V. The second, or Lesser Autumn Starry Jacinth. This Lesser Jacinth has a bulbous Root like others, which sends forth such like long and final Leaves as the former, but narrower, the Stalk is not so high, but bears as many Flowers on it as the other, which are of a pale or bleak purple color, very like to it also, as is the Seed too, but that it is finally both these for the moll part bear their Flowers and Seed before the green Leaves rise up much above the Ground.

VI. The third, or Lesser Autumn Starry Jacinth with white Flowers. This in its Root, Stalk, Flowers, and Seed, as also in its manner of growing, differs nothing from the former Lesser Purple Jacinth excepting in the color of the flowers, in this Plant are always white.

VII. The Places. The native places of these and third are as yet unknown to us, where possibly they may grow wild, here they are only nursed up in Gardens, the second grows wild in many places of England, as on the foot of a high Bank by the Thames side at the hither end of Chelsea, before you come at the Barge-House, and other places, whence Plants have been taken for Gardens.

VIII. The Times. The first or greatest Flowers in the end of July, and in August, the other two in August and September, you shall rarely see any of these Plants with Flowers and green Leaves together at one time.

C H A P . CCCCIII.

O / J A C I N T H Starry Lilly Leaved.

I. THE Names. It is called in Greek *Hyacinthus* in Latine *Hyacinthus Lilifolius*, and in English *Lilly Leaved Starry Jacinth*.

II. The Kinds. There are three several Species of this Plant, viz. 1. *Hyacinthus Stellatus Ulifolius Flore Citeruleo*, *Hyacinthus Stellatus Querculeus Lilifolius Ho & Radice*, The Blew Flowered Lilly Leaved and Lilly Rooted Starry Jacinth, (its Root being as like to a Lilly Root as its Leaves to Lilly Leaves.) 2. *Hyacinthus Stellatus Lilifolius albus, vel Lilifolius Flore albo*, The White Flowered Lilly Leaved Starry Jacinth. 3. *Hyacinthus Stellatus Lilifolius flore Cameo*, The Bluish Colored Lilly Leaved Starry Jacinth. Now because the Roots of these Plants as well as the Leaves are so very like to a Lilly, they have been called *Hyacinthus Stellatus Lilifolius & Radice*, but for brevity sake *Hyacinthus Stellatus Lilifolius*, The Lilly Leaved Starry Jacinth. As the People who dwell near its native place of growth call it *Sarahug*.

III. The Descriptions. The first, or Blew Flowered Lilly Leaved Starry Jacinth. If the bulbous Root is big below and small above, like unto the small Root of a Lilly, and composed of yellow Scales, as a Lilly, but the Scabs are green and fewer in number, from this Root rise up several broad green Leaves, somewhat like unto Lilly Leaves, (from whence it took part of its name as well as from the Root) spread upon the

"halj a Drain, boil to the confumption of three quarters of a Piſit, ft rain out, and keep the Decolion for a Gargld) which you may dulcifie, or not, as the occafwn requires* It is an excellent Remedy for the cure of a Quinfie, being ufed as hot as can be endured, as alfo for any other Tumor of the Almonds, or parts adjacent, and cures^s all ibrts of Sores and Ulcers of the Mourh, Jaws, Gums, Throat, or Almonds of the Ears; it jō itrengthens the *Uvula*, or Palate of the Mouth, that when it is down it retiores it to its proper tone and fte[^] it alfo takes away vehement inhumations of thole parts, they being often gargled therewith.

XL *The Cutaplafnh h k male by cutting the Auricular ^t u n g i into very fmall bits, and then boiling them in Wine, or in Vinegar, adding a little Barley Flower, to bring it to a confistency.* Applied outwardly to the Throat as hot as can be endured in a Qumiie, (whilit the Decoaiions are ufed inwardly as a Gargarifm) it much contributes to the abating of the Infiamation and difcuffing of the Tumor; app^u ^{to my other recent} Infiamation or; Tumor vyhilit in begining, in what part of the Body Ibever, [^] inflammation, alleviates the pain, and dilcuffes the iwelling.

HYPERICON.

Xatnes. It is called in Greek 'rmetKiv, ^{in Lrtne Ilypericori, in Englifh Hypericon} and JohnsKort; the Arabians call it Reafncon, ^{if / > ^ ^ njerucn, A'elifricon,}

Kinds.. There are two generick Kinds of ^{W*TM" i2 i- Hypericon vu/ga-}

Hower. ^{the firft is called Chamapym, because of the resinous fmell of the Seed but there are the proper Names of the} ^{Chaptel: i s t 4 T?} ^{Great Johns-} ^{of the Flowers and} ^{of the Heads and Seed, do declare,} ^{Notes thereof: 2. Hyper-} ^{TheLeflerHypericon, or Johnswort, of} ^{which, n Chap, ^s. following.}

III. *The Defcription.* Common Great Johnswort, or ^{om} Hypericon, hat a Root tohich is hard and Jwoody, with divers Strings and Fibres at it, and ^J ^{ibromf} color, which abides in the Ground ma[?] ^{fl} ^{ooin} i forth afrefb every Spring; from tnis Koot (hoots forth brownilh, hard, upright, round, Stalks, about two Feet high, fpreading many branches from the fides up to their tops, having two ftmii Leaves let one againft another at every place, which are of a deep green color, fomething ^{te up} the Leaves of the *Laffer Centory*, but narrow; ^{final holes in every Leaf, which can} ^{Perceived as when they are held up} ^{the tops of the Stalks and Branch} ^{in the middle, which} ^{a reddifh Juice, like Blood,}

after which do come fmall round Heads, in which is contained fmall blackifh Seed, fmelling like Rofin.

IV. *The Places.* It grows in Woods, Groves, and Copfes, as well in fhady places as in fuch as are open to the Sun, in many parts of this Kingdom.

V. *The Times.* It Flowers about the latter end of June, as alfo in July, and the Seed is ripe towards the end of the fame Month, or the begining of Augufi.

VI. *The Qualities.* It is hot and dry in the firⁿ degree, thin, and of fubtil parts, Anodyn, Digeftive, Aperitive, Abfterfive, Diuretick, Difcnflive, Tra^u matick or Vulnerary, Neurotick, Stomatick, Ne^e phrittck, Hyfterick, Arthritick, and AlexipharmiCR.

VII. *The Specification.* It is peculiar for curing Wounds and Ulcers, Spitting, Vomiting, and Pi^E fing Blood, Bitings of Venomous Creatures, Stone and Gravel in the Reins, Strangury, and heat of Urine, ftoppage of the Terms in Women, Tertian and Quartan Agues, the Sciatica, Palfie, Epilepfie, and other Difeafes of like kind.

^{VII} ^u ^{IHN} ^{arcV?u} You "wy have there- from thefe following Medicaments, viz. 1. A Juice of Leaves and Flowers. 2. An Effence. 3. An Infufwn or Deeffion in Wine of Herb, Flowers, and Seed. 4. A Fffuder of Herb or Flowers. 5. A Pouter of the Seed. 6. An Oil Simple. 7. An OU Compound. 8. An OJP Magifiral. 9. A Drilled W^{*} ter. 10. An Acid SinUure. ^u A Spirituous ^{l'mtlure.} 12. An Oily Twtfure.

The Virtues.

IX. *The Juice.* It is a good Vulnerary, whether inwardly taken or outwardly applied, and given to two, three, or four Spoonfuls at a time mixtti with a Glafs of Wine it heals inward Wounds, Hvirw, of BruifeSi It is of fubtil parts, opens obfru^{Sion}PI the *Vijcera*, diffolves Tumtors, confolidarts the lip^{*}

or

of Wounds, ftrengthening the parts which are weak and feeble.

X. *The Effence.* This is yet more effectual to all the aforefaid Intentions* befides which it is good againit all manner of Spitting and Vomiting Blood, occafioned by the rupture of any Vein, or by Bruifes, Falls, or any other means whatfoever-, it is an Antidote againit Poyfon, and prevails againit the flinging or biting of any Venomous Creature-, it has been found effectual by experience to give eafe in the Strangury, to expel Sand, Gravel, and fmall Stones out of the Reins and Bladder, and to provoke the Terms in Women, taken to three or four Spoonfuls, (according to • Age) warm, rw^{xed} wth a Glafs of Wine, before the Fits of Agues, for fome days, it hell* them and alters the Fits, whether they be *Terms* or *Quartans*^ and by continuing the ufe of it a few time ngfeaiy cures them.

XI. *The Infyn or Decaffion in Wine of Herb and Flowers, as alfo of the Seed.* They have the Virtues of the Juice and Effence, but muft be given two or three times a day, and in a much larger Dofe, viz. from four Ounces to eight Ounces, according to Age and Neceffity -, they open obftructions of Reins and Womb, and kill Worms in the Belly or Stomach.

XII. *The Pouder of Herb and Flowers.* It is an effectual thing for Wounds and Sores, to cleanfe dry, conglutinate, and heal them, being ftrewed thick upon the fame, and drefled therewith Morning and Evening.

XIII. *The Pouder of the Seed.* It has the Virtues of Juice; Effence, and Decoftion, but not altogether fo effe&uaU if it is taken to a Dram in Juice or Effence of *Knotgrafs* it cures Spitting, Vomiting, and Piffing of Blood, as alfo Bloody Fluxes, and confolidates fhis Vein which is inwardly broken •, if it is taken to the quantity of two Drams in fome Broth k does gently purge Choler, cleanfes the Veffels of the Mefentery, and expels congealed Blood out of the Stomach; it is alfo much commended, being drank for forty days together, for the Cure of the Epilepfie, Palfie, Gout, and Sciatica, as alfo to remove and eafe Rheumatick Pains in any part of the Body.

XIV. *The Simple Oil.* Take Expreffed Oil of the Seeds of *Hypericon*, or for want thereof Expreffed Oil of *Ben*, or choice Oil of *Olive*, a Gallon, Red Port or Lisbon Wine a Pint and half, Flowers of *Hypericon* thirty two Ounces, infolate, or digeft in an equivalent Sand heat for fourteen days, then boil in Balneo to the consumption of the Wine, ftrain out by Expreffion, and repeat the Infufion with like quantity of Flowers, Boiling and Expreffion, a* aforefaid adding alfo more frejh Wine, repeating the fame Work the third time with frejh Flowers, then ftraining out, keep it for ufe, fome add to the aforefaid Oil Venice, Strasburgh, or rather Scio Turpentine^ one Pound, diffolving it therein, and Jo keep it for ufe. Or thus. Take Oil of *Olive* eight Pounds, Leaves, Flowers, and Seeds of *Hypericon* bruifed, of each four Ounces, infolate, or digeft in an equivalent Sand heat fourteen dayss boil a little in Balneo, and ftrain out, which Work repeat the fecond and third times with frejh Herbs, Flowers, &c. IIII the Oil becomes of a Blood red color. Gerard makes it thus. Take Oil of *Olive* fix Pounds, fine Turpentine, White Wine, of each three Pounds, Leaves, Flowers, and Seeds of *Hypericon* bruifed, of each twenty four Ounces, infolate, or digeft in a Sand heat ten days, boil in Balneo, and ftrain out, and with frejh Herbs, flowers, &c repeat this work the fecond and third times. wind>ct left being hot ftrain out, and keep it for ufe. This Oil being ufed hot cures PunQures of the Nerves, and Comufions of the fame, as alfo Burnings, Scald-

ings, all Wounds and Ulcers, tho' made with poyfoned Weapons, Gout, Sciatica, and Rheumatick Pains} it is faid to heal green and deep Wounds which run into the Body, it ftrengthens and reliefs the Joints, comforts the Nerves and Tendons, helps Tremblings, Cramps, Convulfions, and Palfies, is Emollient, Digeftive, and Difcuffive ^ I have found (t by Experience to be an excellent thing to diffolve Strumous Tumors, and to digeft, cleanfe, dry up, and heal Kings-Evil Sores and Ulcers,

XV. *The Compound Oil.* Take White, or rather Red Yon, or Lisbon Wine, three Pints, frejh Flowers of *Hypericon*, with the Seeds or Heads, four handfuls, beat or bruife them, and digeft in a Glafs Vejfel clofe flopped for two days, boil them in Balneo, and prefs them out ftrongly h to thit ftraining put new* Flowers and Tops of *toe Herb*, as before, and repeat it the third time, and then ftrongly prefs out by ftraining •, to every found hereof add of pure Florence Oil four Founds, of choice Venice or Scio Turpentine fix Ounces, Oil of Wormwood three Ounces, Dittany, Gentian, Carduus, Tormentil, Calamus Aromaticus, Car line, or Carduus Maria, all of them in powder^ of each two Drams, Earth Worms flit and often wajhed in White Wine two Ounces, jet them to infolate for jive or fix Weeks, or efje* digeft as long in a moderate Sand heat, anti keep the Oil for ufe. Or thus. Take of either of the Simple Oils in the former Etition four Pounds, Oil of juniper Berries reSified half a Pound, Chymical Oil of Nutmegs a quarter of a Pound, half am Copaybe two Ounces and half, Camphir one Ounce, mix, dijfolye, and keep it for ufe. This has all the Virtues of the Simple Oil with advantage, being more comfortable to the Nerves, drawing and cleanfing than it, is a molt excellent Vulnerary, difcuffes Tumors, eafes Pain, heals Contufions, Puaflures, or other Hurts and Wounds of the Nerves and Tendons, and is admirable for old Aches, Rheumatifms, Bruifes, Strains, Palfies, Numbnefs, Cramps, Convulfions, Headachy Megrim, Lethargy, Burnings, Scaldings, &c.

XVI. *The Magiftral Oil.* Take of the Simple Oil of *Hypericon* made with Oil of *Ben* at Self. 14* afore* going four Pounds, Balfam of Peru a Pound and half, Balfam of Tolu, Storax Calamita drained, Tinfure of Saffron and Cochenele abftrafted to the thicknefs of new Honey, of each half a Pound, Chymical Oils of Angelica, Lavender, Limons, Mint, Nutmegs, Oranges, and Saffidfrax, of each three Ounces, mix, digeft in a warm Balneo or Sand heat for a Week, jhaking altogether once a day, and keep it for ufe. This has all the Virtues of the Simple and Compound OUs aforegoing, but for any extream or inveterate Pairi in any part of the Body, or for any Contufion, Pun-cture, or any other Wound or Hurt of the Nerves or Tendons, there is nothing fuperior to it in the World; efteem it as a Jewel.

XVII. *The Diftilled Water.* Take the Flowers, Leaves, and Top of *Hypericon* twelve good handfuls, White Port Wine three ^juirts, mix, digeft two days in a warm Balneo, then in Balneo draw off the Water to drynefs. It may ferve as a Vehicle to convey the Juice or Effence in, being good for all the fame purpofes j if it is dulcified with White Sugar and drank, it is thought to be as effectual as the Infufion or Decoction; befides it is laid to kill Worms in the Stomach and Belly.

XVIII. *The Acid TinSure.* It is good againit Poyfon inwardly, or outwardly received, being given from twenty to fixty drops at a time in any proper Vehicle, as diftilled Water, &c. it is Aperitive, Abfterfive, and Stomachical* comforts and fortifies the Ventricle, and ^ftpres its Tone being hurt. oi depraved ^, it caufes a good Appetite and itortg Di-gotion, and allays the fermentation of the Humors

or Jukes in the Body •, it prevails alib againft the Plygue or Peftilence, and all forts of malign and peltilential Difeafes.

XIX. *The Spirituous TinBure.* It warms and comforts the Stomach, is good againft Crudities, and expels Wind •, a green Wound waffed with it it cleanses it, comforts it, retores its heat, and prently confolidates or heals it, and is profitable for fuch as are affeted with a *Vertigo*, Lethargy, Epilepfie, Palfie, Convulfions, or other like Difeafes of the Head, Brain, and Nerves. Dofe from one to two Drams in any fit Vehicle.

XX. *The Oily Twlture.* It opens obftru&ions of the Reins, Ureters, and Bladder, expels Sand, Gravel, fmall Stones, or other Tartarous Mucilage out of thofe parts, and gives prefent eafe in the Strangury; it gives initant relief in the Colick, and gripings of the Guts, alleviates the pain in the Back, tho' never fo extream, and reftores and ftrengthens the Tone of any or all the *Vifcera*, tho' very much hurt and depraved-, outwardly it eafes Aches and Pains in the Limbs, proceeding from a cold Caufe, and gives prefent help to Contufions and Pun&ures of the Nerves and Tendons, tho' the extremity is fo great as to caufe Convulfions, performing the Cure in a fhort time after. Dofe of this Oily Tintture is from eight to twenty drops, according to Age and Strength, firft dropped into Sugar, and then mixed with the Vehicle you intend to give it, in.

Johnswort, properly fo called, of which we difcourfe in the former and this prefent Chapter. . . 2. *Aa-w^zof, Afcyrum, and Afcyroides* *Hypericon magnum, Peterswort.* 3. *tof & * * * A * ** *drofemum, Hypericum maximum, Tutfan, or rari-* Leaves, of both which we (hall fpeak (God willing; in their proper places of the Alphabet or Book. 4. *Kleif, Koris* and *Com*, Heath Groundpine, of which we have already fpoken Chap. 332. aforegoing. It is true that the fecond, or *Peterswort*, may very well be admitted to be a great or large Kind ** * * / * ** *pericon*, becaufe not only the Flowers, but the whole form of the Plant befpeak it, but how far *Tutfoan* *ParA/eaves* will admit of being a Kind we inau leave to the Readers Judgment, I confefs one or the *Species thereof, viz. Androfamitm Msttholi,* *ve* much refembles *Hypericon* in its manner of growl * * *, Leaves, and Flowers, but that it is very much *wi* ger, and fo may be accounted the *greateft* *13Lma* *Johnsvoot*; but the chief thing w » li enforces t« Argument of *Tutfan* to be a Species of *fy* *eri* *J-ft* the form of the Flowers, and their yielding a bfcovy *Juice: As to Corps, or Heath Groundpine, I can* fee how it has any relation to *Johnswort*, tam *rn* than what the form and color of its Flowers may induce.

O/JOHNSWORT *Smal*,

O K,

Leffer **HYPERICON.**

TITLES: *Names.* It is called in *Greek* *ἵππεύς* *Latine Hypericum minus, and in* *Johnwort, or Leffer Hypericon.* - II. *V* Kinds.* We (hall take notice but of five Species of this Plant, being aU that are yet known to grow in our Countries, *viz. i. Hypericum minus creOum Bauhni, Hypericum pulchrum Tragi, (as it is thought) Hypericum minus Tbalij, Hypericum Synacum Lcbeli;*; Small Upright Hypericon, or Johnswort. 2. *Hypericum minus Supinum, vel Supinum glabrum Bauhtni, Hypericum Exiguum Tragi, Hypericum minus Dodonai & Gefneri, Hypericum minimum Supinum Septentrionale Lobelii, Hypericum Supinum tertmm minimum Cluffij, Small Creeping Hypericon, or Johnswort.* 3. *Hypericum Humulana lolw, Hypericum tertmm Tragi, Hypericum minm Jecundi Baubini, Round Leav'd Hypericon, or Johnswort.* 4. *Hypericum minus Supinum Tomentofum Baubini, Hypericum alter urn Tomentofum Lobelii, Hypericum minus Supinum Monfpeliacum, •A. ad* *mum album Dalecbampij, The Small Creeping Woolly Hypericon, or Johnswort.* 5. *Hypericum Amencanum, Hypericum t'rutefeens Amencanum Flore a bo, American Hypericon, or Johnswort, White Flowered American Johnswort.*

III. *An Obfervation.* Altho' what I have to fa- S^VSh t to have been put in the former Chapter, hōMI¹⁵ *have* a place out of its order than *cernine* *t* *e* *4* *r* *^* *^* *o* *p* *inion* of fome Authors com- are *ibit* *it* *erick* *TM*s of *Hyp***TM*" * « they are iourfoLd, *viz. 1. Hypericon vulgare, Hypericon*

IV. The Defections. *The firft, or Small W.* right Hypericon, or Johnswort. *It has a fmall Vj^d long Root, and fibrous withal, enduring alltheWin- ter in the Ground;* this Plant is very rare to *TM* *with, but it is very like that in the former Chap^{es}» faving that it is fmaller, yet the Leaves do not: iij* lyanfwer the form of the other, but are a lttf broader, and not fo fharp pointed j the btajks» reddifh, and the^lowers Ufef, "<* *fu* *ll* *;/?* *^ K* nor do they give full out fo bloody a Color whg, they arc bruifed between thefingets aid forftjuf^ they ftand in Circles at the joints of the StaiKs *ff* well as at the tops* the *Stei* is alfo xefiaou* *ff* the former *M* *^* *v.**

V. *The second, or Small Creeping Hypericon, or Johnswort. Its Root is very like the former, nor docs the whole Plant differ much from it*, its Stalks are reddifh, and not jnuch above an Hand breadth high, yet stand not fully upright, but leaning downwards the Leaves are small, narrow, and smooth, and the small Flowers are yellow.

VI. *The third, or Round Leav'd Hypericon, or Johnswort. The Root is small and long, and fibrous, <as the others aforegoing-, this Plant is as small as the last, and its small, reddifh, square Stalks or Branches rise no higher than it, having two Leaves, fet one against another at every Joint up to the tops, and are almost round, like unto Moneywort, or Herb Twopence, of a dark or fad green on the upper side, and whitifh underneath, spotted sometimes with red spots, and frakes the Flowers are of a paler yellow color than the former, but somewhat large in comparifon # the smallness of the Plant, with several yellow Threads in the middle.*

VII. *The fourth, or Small Creeping Woolly Hypericon, or Johnswort. It has a small, slender, long, tooody, and fibrous Root, from which spring up several hairy, whitifh, small, woolly Branches, lying upon the Ground and ihooking forth Fibres, fet with woolly Leaves, but not very close together, much like to those of the Common hypericon in the former Chapter, but hoary and white, and a little rounder, at the joints towards the tops stand the Flowers, which are smaller than those of the Common Hypericon, and of a paler yellow -, the Seed Veffels are like unto the other Kinds, as is also the Seed it self*

VIII. *The fifth, or White Flowered American Hypericon, or Johnswort. It has a long, slender, woody, fibrous Root, which abides all the Winter, from this Root arise Yearly several woody Stalks, almost to a Mans height, covered with a whitifh Bark, from whence are thrust forth on all sides various Branches fet with thick green Leaves, narrow below broad about the middle, and round at ends, ibetimes two or three at a place, from which Joints also arise divers white Flowers, confifing of four Reaves apiece, the Leaves fall away every Year, and appear again in the Spring.*

IX. *The Places.* The three first Kinds grow in Woods and Copses as well in those which are shady as those which are open to the Sun the fourth grows in Moorish and Wet Fields, as also on dry barren Ground the last grows with us, but is nourished up in Gardens, being brought hither from the North West parts of America.

X. *The Times.* They all Flower about the middle, or latter end of June, and in July, and the Seed is ripe in the end of July, or in the beginning of August.

Specification, Preparations, and Virtues of the first four are the same with those of the Common Hypericon in the former Chapter, but S A O L T R O t alt S ethe fb4>owerful and effectual*

*Intentions: The Qualities and Virtues are not yet well known > or but on **

C H A R C C C C V I L

O / I R O N W O R T \

O R,

S O L D I E R S H E R B .

T Names. It is called in *Arahick Sidrachh*, in *Greek Sile/Ww j £ 2T<££77<7>K, Diofcoridis Lib. 4. Cap. 102. in Latine Sideritis, five lerum matrix, fie ditto a Ferro, quod VuQeribus Ferro juff is fuit Medela*, for that it did cure Wounds made by the Sword, or with Iron -, it was also called *Stratiotes*, as *Diofcorides* and *Pliny* lay, and *Miftaris*, because *Milites*, Soldiers, had usually great need of the fame in *Englilh Ironwort*, and *Soldiers Herb*.

II. *The Kinds.* Authors make many Species of this Plant, viz. 1. *Sideritis vulgaris Clusifj, Sideritis prima Clusifj* this is without doubt *Sideritis fecunda Matthioli*, others that of *Diofcoridis*, which some Authors, as *Anguillara, Columna, Tragus, and Parkinson*, will have to be *Bur net*, tho' it is plainly manifest by the Descriptions of each Plant and by their Heads of Flowers that they are differing Plants, Vulgar or Common Ironwort. 2. *Sideritis Arvenfis rubra, Tetrahit Angujiifolvm, Sideritis Arvenfis Flore rubro Camerarij & Thalij, Sideritis alia in Vineii Cafalpini, Alyffum Galeni Flore pur pur eo, Sideritis Arvenfis Latifolia glabra Bauhini*, Meadow Ironwort with red Flowers. 3. *Sideritis prima vel Herculea, Herba Judaica, Tetrahit, Tetrahit, Sideritis procumbens Ramofa Gerardi*, Creeping Branched Ironwort, called also *Jews Ironwort*, because the *Jews* which Practifed Phyfick in *Italy* made much use of it. 4. *Sideritis parva procumbens, Sideritis quart a Clusifj, Sideritis procumbens non Ramofa*, Small Creeping Ironwort not Branched, or *Small Jews Ironwort*. 5. *Sideritis alt era paj'va, vel Sideritis quint a Clusifj*, Another Small Jews Ironwort. 6. *Sideritis Montana parvo flore nigro purpureo Columnis, Sideritis Abntana Apula verficolor*, Mountain Ironwort with a small black purple Flower, or *Mountain Ironwort of Naples*. 7. *Sideritis Folijs Alfinis Tnffaginis Bauhini*, Ironwort with German *Chickweed* Leaves. 8. *Sideritis Germanica parva, Sideritis sexta Clusifj*, Small Germany Ironwort, this says *Clufius* is common at *Vienna* in *Aujiria*. 9. *Sideritis Uederu Folio, Sideritis Anglica*, Englifh Ironwort, or Ironwort with *Alehoof* leaves. 10. *Sideritis Folio fplendente oblongo glabra*, Ironwort with smooth long Leaves. 11. *Sideritis Arvenfis Latifolia glabra Bauhini, Sideritis Hercclea ahera Cafalpini, Sideritis Arvenfis Flore palido Camerarij, Sideritis Arvenfis Species alt era Thalij, Alyffum Germanicum aliorum*, Broad Leav'd Meadow Ironwort, this *Bauhinus* would have to be *Sideritifecunda Matthioli*, which it is not, and *Lobe* would have it to be a Species of *Cannabis Spuria*, others that it is *Marrubium Pannonicum Clusifj*, all which are much to be doubted. To the former Eleven Kinds may be added the two following, viz. 12. *Sideritis Anglica Radice frumofa, Yanax Colom Gerardi, Sideritis primi Thalij, Betonica feetida Gefneri*, *Clowns Woundwort*, or Englifh Ironwort with frumous Roots, of which we have Treated at large in *Chap. 9.* aforegoing. 13. *Sideritis Arvenfis gratis odoris, Pimpinelia Sanguiforba*, Ironwort having a pleafant smell, or Our Common *Burnet*, whether greater or leffer-, and this we have here added to the

number, because several Authors will have it to be
i Species or thit *Sideritides* or *Iroxwris*, of which
• c have treated alto at large in dap. lot. afore-
TM of this Work.

from the bottom upwards, which in a ipanner ly upon the Ground, with two fuch like Leaves at the Joints as in the laft, but little or nothing dented at all, the Mowers are white, without fpots, but gaping in like manner.

IX. *The fixth, or Mountain Ironwort* with a fmall black purple Flower. *It has a Root which is Small, hard, and yellowifh, from which rifes up a reddijh, hoary, hard, hairy, Square Stalk, about halj alard high, divided into two Branches, about 4ht middle thereof, on which are fet at the joints two fmall and long pale green Leaves one againft another, covered with an hoary Down, and having three dents or notches on each fide at the ends a them, which at the lower end of the Stalk next the lahd ftand upon long footstalks, but up higher towards the top are without any, the Flowers ftand in fharp pointed fasks, and are gaping, or hooded, as the reft are, Bit very fmall, whole head and jaws are of a dark purplifh color, the middle of the Flower is yellow, and the long neck of the Flower which rifes out of the Husk is whitifh} after the Flowers are pafte there come four blackifh Afh Colored Seed, fomewhat cornered, which are contained ia the hairy or hoary Husks.*

X. *The feventh or Ironwort* with Germander Chickweed Leaves. *It has a Root which is Small and thready, which fiends forth a Stalk a Foot long, fpread out into Branches from the bottom, and thofe again Siding forth other frailer ones, all of them inclining to the Ground, like the Germander Chickweed, but much greater, on which ftand a few hairy Leaves by. pairs or couples, in form like unto that Chickweed, but larger, and dented about the edges, the Flowers grow at the joints with the Leaves towards the tops, and like unto the others in fafhion, but fomewhat longer, and of a blewifh color, ftanding in fharp and rough Husks, in which is contained fmall round Seed.*

XI. *The eighth, or Small Germany Ironwort* The Root is white and woody, and perijhes every Tear it is a fmall Plant, and has low fquare Stalks, of about a Foot high, Branched out almoft from the very Ground, being foft and Joary, as the Leaves all are, which ftand at the joints by couples, being long, and fomewhat narroxv, without any dents at all about the edges, yet larger at or near the bottom of the Stalks and Branches than towards their tops; the Branches have Flowers growing about them upwards as foon almoft as they fhoot out, in fhape as the other forts are, but they are fo fmall that they Scarcely appear out of the Husks, of a dusky color, the jaws and lower parts on the infide being whitifh, after which follows blackifh Seed, fmaller than in the others.

XII. *The ninth, or Englifh Ironwort, or Ironwort* with Alehoof Leaves, *It has a Root which is Small and thready, perijhing every Tear, but abundantly nning it Self from its own fopning* in any Garden where ithatohce taken pojfeffion, it is a fmall Herb, not much above an Hand breadth, or four or five Inches high. having fmall, broad, and roundifh green Leaves, with round dents about the edges, like to Alehoof, or rather like to Archangel Leaves; the Flowers are, hooded, fmall, and purplifh, and the Seed fmall and blackifh.*

XIII. *The tenth, or Ironwort* with fsmooth long Leaves. *Its Root is whitifh, fibrous^ woody, and perijhing every Tear, from whence rife up fquare and jointed Stalks, Smooth below, but with Some fmall kind of hairinefs at their tops -, the Leaves are fsmooth and thin, fet by couples, the lowermoft three Inches long, and one broad, not dented at all about the edges; the Flowers are hooded, like the Common Squirt, but white, larger than they, and longer alfo,*

ftanding in rough Husks about the Stalks, even from the bottom almoft, after which come fmall, blackifh, uneven Seed, in Heads like thofe of *Plant am* but fhorter.

XIV. *The eleventh, or Broad Leaved Meadow Ironwort. The Root of this is like the fecond Kind aforegoing, and it has larger Smooth green Leaves below th'an above, a little dented about the edges* the Stalks are fquare, about a Foot and half in height, and Branched out -, the Fiowers grow in Roundles at the tops of the Branches, being hooded, and of a pale yellow color, and in fome purplifh, rending to white, without any fmell at all.

XV. *The Places.* Some of thefe grow wild in England, in Meadows, and on Mountains, in many places, being moft of them natural to our Country in the fecond of thefe Gerard fays grows frequently in the Corn Fields in Kent, and by Purfiet in Effe the feventh Gerard alfo found in Flower and Seed among Corn in a Field joining to a Wood ffar not far from Greenhive in Kent; the ninth Parkinfon fays he found growing wild in the Fields, from whence he tranfplanted it into his Garden, where it continued to increafe and flourifh.

XVI. *The Times.* They all Flower in June and July, and their Seed is ripe foon after.

XVII. *The Qualities.* Ironwort is temperate in refpect to heat or cold, and dry in the firft degree, or beginning of the fecond * it is Anodyn, Afringent, Incarnative, and Vulneftry.

XVIII. *The Specification.* It is very powerful to ftop all fluxes of Blood, Catarrhs, the Reds and Whites in Women, and ifpeedily to heal all fimple green Wounds, and that, (as Authors fay) without fuppuration it dries up alfb fluxes of Humors in old fretting Ulcers, cleanfes the Ulcer, incarnates, and quickly heals it.

XIX. *The Preparations.* You may prepare therefrom, 1. A Liquid Juice. 2. An Effence. 3. A Syrup. 4. A Deception. 5. A Ptuder of the Herb. 6. A Baljam or Ointment. 7. A Cataplafm.

The Virtues.

XX. *The Liquid Juice.* Given inwardly two* three, four, or five Spoonfuls at a time, either alone by it felf, or mixed with rough Red Wine, it is prevalent againft all internal fluxes of Blood, as Spitting or Vomiting Blood, Pitting Blood, the Bloody or Hepatick Flux, and the overflowing of the Terms in Women.

XXI. *The Effence.* It has all the Virtues of the Liquid Juice, befides which it is powerful againft Catarrhs, or fluxes of Rheum falling down the Throat upon the Lungs; it prevails againft four and Cholerick Belchings of the Stomach, is faid to cure Ruptures or Burttenefs, and the Whites in Women, as alfo a fimple Gonorrhoea in Men, being taken inwardly, and outwardly inje&ed into thofe parts with a Syringe, for being very drying and binding, and ftrengthening withal, it not only reftores thofe parts, but preferves their Tone intire it is admirably good alfo to wafh all green Wounds and old running Sores or Ulcers, healing the firft, (if fimple) without fuppuration, and cleanfing, ftopping the detluxion of Humors, and drying the other, in order to its fpeedy healing; and if there be any Inflammation, or beginning of a Gangreen about the parts, it prevents it, and foon fecures it againft any dangerous Accident. Dole two, three, or four Spoonfuls in any convenient Vehicle Morning and Night.

XXII. *The Syrup.* It helps Coughs, Colds, Catarrhs, and Afthma's, prevails againft obfturQians

of the fungus, thickens the pituitous matter, and causes expectoration* mixed with Gargarisms it heals Sores and Ulcers of the Mouth and Throat.

XXIII. The Decoction in Wine, or Wine and Water. It has all the Virtues of the Liquid Juice and Effluence, but ought to be given in a greater quantity, and that Morning, Noon, and Night: Qerard says it is no less available in the Hopping a flux of Blood, or flux of Humors, than the Herb or Juice.

XXIV. The fonder of the Herb. Given inwardly to a Dram, or more, it flops inward fluxes of Blood, whether by the Mouth, Anas, or Bladder y it cures fluxes of the Bowels, and is good against Catarrhs-, outwardly applied to any green or freih simple Wound it presently conglutinates the lips thereof, and heals it, and applied to any inveterate running Sore, or old Ulcer, it (in some little time) Hops the fluxion, cleanses it from Ixsjordes, incarnates where Fleth is wanting, dries, and in a little time heals it.

XXV. The Balsam or Ointment. If to every Pound of the Ointment or Balsam three or four Ounces of the Pouder of Tobacco be added, they will become most admirable Medicaments or Topicks for the curing of old running Sores, inveterate and putrid Ulcers, and malign Fistula's, being first wash'd by injection or otherwise with the Juice, EflBce, or Decoction, and then (twice a day) dress'd up with one of these Preparations •, they are also profitable against the Gout, or other Aches and Pains in any part of the Body.

XXVI. The Cataplasim. It may be made of the Herb alone, or of the Juice mixed with the Pouder of the Herb, or with Barley Flower, &c. applied to fluxes of Blood in Wounds it flops the bleeding, it strengthens parts weakened by any Difeafe, as the Joints by the Gout, the Nerves by Palfies, &c. and hinders the afflux of any Humor to the weakened P*csV PPlid also to a simple recent Contusion it dilcusses the Tunor, and restores the part hurt.

CHAP. CCCCVIII.

Of IVY Tree or Wall

1 T?E Jmes, It is called in Arabic* Cuffus, • J-r m TM* Kwt, \$ KiMu in Utine Cijfus, and Cm us, and fl«fe,7i., the first of these Names lome have thought to b» derived from Kw*k P*» x** y** L^:j / w ^ , quia ut ilk Aquam, it a hoc Lignum textura porosa, V jpiraculis innumeris per-yihit. an Jmity h unde Catoni ® Varroni Cif-TM £r* -Zm, Hedera «TM est. There are five several sorts 0 Hedera Scandens, Hedera Orthoc^ Hedera retia, Heden Common Ivy, Tree Ivy, or Wall Ivy. Tree-Ivy, called also Hedera, because k bears bla* Berries. HederaCorymbia, White Hedera Helix, HederaScriba, which is thought to be the Hedera of Theophrastii & Jm which

they make to be the third Species of their Liitoten Kinds, yet it is feldom seen to climb up in the manner of the former, but lyes for the most part on the Ground -, but Johannes Thalius in his Harcyma byto* lays he found it climbing as well upon Trees as creeping upon old Walls and Stones ^ this some lay £ barren, as not bringing forth any Fruit, yet pne* y this is rather for want of Age, for that in tin. it would bear, and change into the other iort. a> Theophrastius and Pliny say: this is that we ca U. ^ f w /uv. 4. Hedera Virgimana, Hedera -VVA- Virgimenfis, Three Leav'd Virginian-Ivy. 5- ^ ra quinquefolia Virginian*, vel Virgtmenflh leav'd Virginian Ivy.

III. Hederula Tragi, Bauhwus makes to V ering fort from Hedera-Helix, w/ Steril brt, or Barren Ivy above mentioned, Hedera Humi repens, which yet^fragu: ftinguihes not, but says, that that Ivy, which it is young brings forth no Fruit, when in s 8 older does, and that there is no difference in ft> Kinds of Hedera and Hederula but in the Age, &7r<7 iC/W, says Parkinon, which creeps upon Ground, vrili'yet with its clapping Branches hold of whatever is next unto it.

IV. The Defectibns. The first, or mon Ivy, Tree Ivy, or Wall Ivy. The &*, crji* Woody and fibrous, running under the *fl* of the iarth; from this Root it grows thick woody Trunk or Body, wh > f ^ rarely) found as big as S on all sides many wU sometimes alone by it felf m» bel lays he saw in our Co»M up upon Trees or Walls, and sends forth several fmaU Roots Branches of the Tree upon which by it climbs up almost into all part, of the if it clambers Spon a Wall it climbs up ftf in the Clruis or Joints of the faid W » ^

ther Brick or Stone, on which Trees it runs up fo
 strongly, fattiring its Claws or Roots therein, that it
 draws the nourishment out of the Tree, and thereby
 in time kills it, by continuing the life and moifure
 thereof and by choaking it with the abundance of
 fhadow and humidity of its Leaves and Branches,
 which are ever green, (and ferves as an Ornament
 thereto when it is Leaftefs, but in the end is its de-
 fru&tion and utter ruin) thefe Branches having thus
 lafted themfeives by their Claws or Roots in a Tree
 or Wall will live thereby upwards, tho' the Trunk
 or Body of the Shrub is cut off from the Root be-
 low, and it will live as well as if it was not cut
 away from its faid Root at all; only by the fattning
 of its little Ckws or RadicuU into the faid Tree or
 Wall, and there growing great they will oftentimes
 crack it, that it will in time utterly ruin it, as is
 faid before -, while the Plant is young the Leaves of
 molt of it. will p comered, but when it grows older
 it has no comers on the fides, but grows only round,
 or fomewhat long, and pointed at the end, the young
 Leaves which fpring forth from the Branche keep-
 ing oftentimes the fame order, and are of a dark
 fhining green color above, and fomewhat of a yellow-
 iffli green underneath, ftriped with white, Y
 fometimes with red fpots, abiding frefli and green
 Winter and Summer ^ from the joints of the Stalks
 and tops of the Branches grow forth upon fhort
 Stalks fmall moffie yellow Flowers, ftanding in an
 Umbel, or clofe round Tuft* after the Flowers are
 paffimaff round Berries come in their places, which
 are green until they grow ripe, and then turn black,
 with a fmall point at the end of each Berry, in each
 of which are ufually contained four Seeds, three-
 fquare in a manner, but round on the one fide ^ this
 Shrub or Bufh yields either voluntarily or by being
 bruifed in hot Countries a kind of reddifh hard Gum,
 called *KlaS* jupfH, Heder&Gummi*. The Gum of Ivy,
 which is faid by Authors to be dangerous being in-
 wardly ufed in Phyfick, becaufe fay they it has a
 cauftick or burning faculty.

V. *The feconi^ or White Berry bearing Ivy. This in its Koots^Stalks^ B^anches^ Claws, or Radicute.*

Leaves, I lowers, Berries, and maner of growings differs very little from the former, and is chiefly diftinguifhed in thefe things, viz. tha^Wie^Eaves are thinner and finer, and of a lighter green color, and that the Berries are of a whitifh or greyifh color when they are ripe, and not black, as the Berries of the Commvn Sort are.

VI. *The thirds or Barren Ivy. From a woddy fringy Root, <u the former, it fend forth feveral flender and woody Branches, trailing upon the (ground, and for the weft part lying thereon, but fometimes it is found to wind it felf and climb up the Trees, Bu/hes and Hedges under which it grows-, with the fmall Tendrels or Claws it (hoots forth at the feveral joints of the Branches, where the Leaves come forth, being fomewhat leffer than the firft Common Kind, and of a dark fhining green color, ufually formed into three corners, and fometimes into five ^ at the Joints with the Leaves there thrufts forth underneath fmall white Fibres, Claws, or RadicuU, by which it takes hold as it creeps ^ this very rarely has been feen to bear either Seed or Flowers.*

VII. *The fourth, or Three Leav'd Virginian Ivy. The Roots of this Plant do jhoot tender Ground, and fend forth young woody Stalks, fome whereof will ftand upright, others lye down, and take root again as they fpread, as alfo on any Wall they ftand nigh unto, l&e unto our former Barren Ivy^ the Leaves are broā and large, three always fet together upon along footftalk^ at the Joints with the Leaves come forth pale Flowers in a loofe Tuft or Clufter, which turn into pale yellow Berries, with fmall, hard, round, Afh Colored Seed in the dry wrinkled Skins or Husks, without any moifure at all in them \$ this Plant yields a white Mrlk, without anytafte in it, bging broken in any part thereof, which Milk after it has lain a whik will change to be as black as Ink, and therefore is thought to be a good Material to color Hair or any other thing Black.*

VIII. *The fifth, or Five Leav'd. Virginian Ivy. This Slender,* but Tall Climbing Virginian Ivy, has a Root which fpreads here and there under the Ground, but not very deep, from whence rife up feveral Stems or Stalks, none much bigger than a Mans Thumb, many lefs, from whence Ihoot forth feveral and many long weak Branches, not able to ftand upright unlefs they be fuffained, yet being planted near unto a Wall or Pale, or Houfe fide, the Branches at feveral diftances of the Leaves will (hoot forth fmall ftort Tendrels or Claws, not twining themfeives about any thing, but ending in four, five, or fix, or more, fhort and fomewhat broad Claws, which will faften like a Hand with Fingers fo clofe thereunto, that it will bring part Of the Wall, Mortar, Board, Glafs, Brick, or Stone, away with it if it is pulled from it ^ and by thefe Claws it ftays it felf, and climbs up to the top of the higheft Tree, Wall, Houfe, or Chimney, being planted by them: the Leaves are Crumpled, or rather folded together, at their firft coming forth, and very red, which afterwards growing forth are very fair, large, and green, divided into four, five,, fix, *or feveir Leaves, (not regular to a certain number) ftanding or growing together upon a fmall footftalk, and fet without order on the Branches, at the ends whereof a« alfo at other places fometimes, come forth feveral fhort Tufts of Buds for Flowers, which here in England never come to that perfection, as to open themfeives and (hew-what kind of form they would be of, much lefs what Berri^ or Seed would follow-, the ufe of this is chiefly to furni(h# Garden, and to be an Ornament to the place it is planted in,*

IX. Or thus, according to Gerard. *There is kept for Novelties fake in divers Gardens a Virginian Vine, but which is indeed an Ivy •, the Stalks hereof*
 E e e e 2 . grow

grow to a great height if they be planted nigh any thing whijunay fustain them, or bear them up, and they take^hift hoid by certain Jmall Tendrels, (or Claws) upon what Body foever they grōw neaq^r whether Trees, Wood, Brick, Stone, or Glafs, and that Co & nly, that oftentimes when you pluck them off frdmthe fame they will bring pieces of the matter they cling to off with their Claws, (or Radiculac) // puts forth its Leaves in April, which are large[^] and confijflng off four, five, or more particular Leaves, each of them being long, and deeply cut[^] fotthat they fomewhat refemble the Leaves of the Cheitnut Tree -, the Stalks with the Rudiments of Flowers are to be feen in Auguft, which Flowers grow clufclerng tge^{er} after the manner of hy, but never with us Jhew them/elves open, Jo. that we can fay little or nothing of their Color or Fruit*which fuceeds them.

X. The Vlases. The firft is known almoft to every Child to grow and climb up upon Trees, Hedges, Buflies, Brick or Stone Walls, Houfes, Churches, &V. in moll parft of this Kingdom •, the fecond. has been brought to us out of Turkey, Italy, an&'France; the third grows almoft as comftion as the firft, in woody, fhady, and moift places, under Hedges, and in corners ofwafte Grounds, Lanes, and the like[^] the fourth and fifth are Natives of Florida, and North Weft parts of America, where our Englifh Colonies are planted, as in New England, Maryland, PenJilvaniayNew York, Virginia, and Carolina, but being tranfplanted grow very well with us in England,

XL The Times. Oh Ivy Flowers not till July, and the Berries are not ripe tiH about the latter end of Dece??iber, after they have felt the Winter Frofts, and the American forts Flower very late with *us, if at all.

XII. The Qualities. Ivy is hot and dry ir*the end of the fecond degree, Afringent, Biting, Colmetick, Vulnerary, andPtarmick, as the juicfe of the Leaves, & c*. The Berries are alfo hot and dry in the fecond degree, Afringent, Diuretitk, and Alexipharmick. , i¹ I¹ T¹ A¹ Specification. It ftops Fluxes, and i¹ B¹ ood¹ y Fluxes, Jaundice, provokes the Terms, rehlt Poyfon, and the Bitings of Venomous Creatures, cures the Plague; an \$ heals running Sores and old Ulcers, in Wnt part of the Body, and of whac Kind!

You may have there^r Wwing things, j. the Leaves. 2. loe¹ Wood: 3. A Gum. 4. A Liquid Juice of Koots, Leaves, and Berries. 5. An Effence of tba fame. 6. The Virtues.

XV. The Zff&si'-ftht fietti'Leayes are commonly uled to be laid upbn ITues whefoever, in Arms, Legs, &c. to keef) them open, and to draw forth thp Humors which fail upon the fame parts.

XVI. The Wood lz is of ufe to make little round Balls of, about the bignefs of high Swan Shot or f¹ TM¹ c-9*^A grey-Peafe, which are ufed for Iffues in- t'cad6f Peafe, ' » - forth the Humor eafier and keeping^he So: . . . a open, and this they*do by reaian of their fponginefs or porofity, being much X t W S ? ? n P A r c t ^ fo P more apt to be filled with thefaoBties of theffue, if the Wood is made into a Cup, and Ate, Beer, or Wine be put into it,

fo as to ftand in it for fome time, and then drank off, and this continually done for fome days, It is faid to help fuch as are troubled with the Sj¹ and to give eafe in the pains thereof Cato :T: that the Deceits of Vintners may be found out by one of thefe Cups, if they mix any Water with¹ Wine, for the faid mix'd Wine being put into of thefe Cups of Ivy Wood, the Wine will thro⁰ the Wood and leave the Water behind -, Cato and Varro both fay it is the nature of ky W not to hold any Wine, fo great an Antipathy there is between them.

XVII. The Gum.. That which is gathered[^] hot Countries from the Body and Branches of (either by a voluntary iffiiing therefrom, or fing thereof) is exceeding iharp and hot, and exulcerating the Skin, yet is ufed, being ved, to take away fuperfluous Hair in any place, 2 to deftroj Nits and Lice, alfo Crfl-Lice, in parts foever-, being diiTolved in Vinegar and I to a hollow aking Tooth eafeS the pain, and ofteitufed will caufe it to*fall out* fome ul Gum with other things as a Bait to kill Fift- more hereof in my Seplajium, or Dr&ift/Gty 9- Cap. 29. where you may find the, farther thereof, and alib the Signs how to k» w it, ana diftinguift the true from the falfe, that fold in «» Druggifts Shops being for the molt part counterfeit? having neither the form or appearance, nor the v¹ tues of the true Gum, the falfe being fit the flIOJ part full-of flicks, diofs, and filth, brittle, and W an infipid tafte, whereas the true is of a yellow» red color, clean, of a ftrong fmell, and of a fharp, biting, and exulcerating tafte.

XVIII. The Liquid Juice of Roots, Laves, Berries. If it is much taken inwardly it is caufe Barennefs in Man or Woman, it alfo « vveaknefs and trouble in the Brain or Underfta¹ ing, and affe&s the other Senfes, for which reafon Authors fay ufed much inwardly it is an Enemy¹ the Nerves, but much ftrengthens them being outwardly applied; the juice of the Root is faid too good againft the biting of the fhalangm, or poy- ibnous Spider; the juice of the Leaves or Berries, w ken inwardly provoke the Terms in Women, taci- rate the Birth, and bring away the Afterbirth j m juice of Leaves or BerHes ufed as an Errhine, of muffling it up the Nofe, purges the Head and m¹ of thin Rheum, which caufes Catarrhs or Denu¹ ons into the Glandules of the Throat, Jaw[^] tyt-s Nofe, or other parts adjacent, and cures IhnkuigJ Ulcers in the fame, dropped alfo jmo the Ears it cures old and running Sores and Ulcers in them. Dofe one or two. Spoonfuls inwardly in a Calais OJ Wine or other fit Vetide.

XIX. The EQeme of Roots, Leaves, or Berries. It has all the Virtues of the Liquid Juice, but i* more powerful as being depurated, and fo is tope riven in leffer quantity, as from three quarters ol ^ spoonful foa SpOoafurand halt , increasing the IX>£ as the Age and Strength of the Patient will A is very good againft the Yellow Jaundice, Urine, and is faid to be good to break the and expel Sand, Gravel, and finall Stones from Urinary parts; taken alfo Morning, Noon, Night in a Glafs of Wine it is a good preferya againft the Plague, or any other infeftious and is of fingular ufe to cune.the farje alter

XX. The Detection of Leaves or Berries It has all the Virtues of the Juice and Effence, bi¹ nothing near fo powerful, and therefore may be given :^ three to fix Spoonfuls fweetned with White Sug[^] a Decoation in Vinegar mixed with DamasK Water and Oil of Rofes, lind applied to the

head and Temples gives ease in the Headach, tho' it be of long continuance, and applied warm to the Sides of litch as are troubled with the Spleen, Aches, or Stitches in the Side, resolves the *Coagulum* if any be, and gives present ease, the Decoction of Leaves or Berries in Wine is of excellent use to cure old running Sores and filthy Ulcers, which are difficult to be healed, it admirably cleanses, dries, and heals them, and it is also effectual for the speedy cure of green simple Wounds, by uniting the Fleth and conbildating their lips, the same is good to heal Scaldings with Water and Burnings with Fire, and the Exulcerations which happen thereby, occasioned by the faltnefs, heat, or sharpnefs of Humors flowing thereto.

XXI. *The Voider of the Bowers.* A Dram of the Flowers (being dried carefully and reduced to pckider) being drai twice a day in Red Wine cures a Diarrhoea, or Eoofenefs, yea a Bloody Flux, as *D/cjcorides* faith.

XXII. *The Yonder of the Berries.* It is good againft the Jaundice, kills Worms in Old or tounge, and prevails againft the biting of the *halangium*, it is a singular Remedy both to prevent the Plague or Pestilence be^{re} infection, and to cure the same after it has feiml the Patient, by drinking the Pouder from half anDram to a Dram, (according to Age and Strength) in any fit Prophyla&ick Vehicle, Or proper Antidotal Liquor, Morning, Noon, and Night, for two, three, or four days together and being taken in White Port Wine for ibme certain time it opens the obftru&ions of the Reins, Ureters, and Bladder, gives ease in the Strangury, provokes Urine, and breaks the Stone, expelling Sand, Gravel, and Tartarous Mucilage from the Urinary parts and pat fages: *Tragus* says that it provokes the Terms in Women, and is fo powerful in its operation on those parts, in driving forth the dead Child and Afterbirth, that it ought to be Autioufly used, and not but upon necessity.

XXIII. *The Bath of the Leaves and Berries.* It is a strong Decoction of them made in Water, if a Woman which has a dead Child fit therein as hot as (he can conveniently bear it, it forces away the Child and Afterbirth, and being once or twice repeated caufes a due cleaning, if a Woman whose Courfes are stopp'd fit therein, and repeat it for ibme few times, it effe&ually brings them down, but a Woman with Child ought cautiously to forbear the use thereof because it will endanger Abortion.

XXIV. *A Pejfyary of Leaves and Berries.* It has all the Virtues and Operations of the Bath in the former-ipaion, but not altogether fo powerful, yet it veqr^{uch} prevails to bring down the Terms when stopp'd, and being often repeated forces away the dead Child, ©V. as is before expreffed.

XXV. *The Yume made of the Branches being burnt.* It expels pestifential and infeftious Vapors, correas a putrid Air, which caufes malignity and piitri-fa&ion, and drives away Bats, Gnats, and other troublesome Infects of that kind.

XXVI. *The Acid Tincture of the Berries.* It operis all obltrutions of the Urinary parts, breaks and expels the Stone, refists Vomiting, strengthens the Stomach, and is a good Prophylactive and Curative of the Plague or Pestilence, it deltroys the malignity and putrifac&ive heat of all Fevers, cools, and allays Thirft. Dofe fo many drops as to give the *Vehiculum* a pleasing acidity, which may be repeated two, three, pr four times a day or more, as need requires.

XXVII. *The Spirituous Tincture of the Berries.* It has the Virtues of the Juice, Effence, Decoction, and Pouder, but a much more pleasing Medicament,

because finer, purer, confifting of more fubtil parts, and given in a much fmaller Dole, and^{Jr} reafon of its preparation with Spirit of Wine is also more Cordial and Stomack. Dofe fifty or fixty drops Morning and Night in a Glafs of Wine, bu^k is not long to be continued left it induces Barr^{efs} outwardly bathed upon Nervous and Tendonous parts it comforts and strengthens them, and alleviates aches and pains coming from a cold and moist caufe. - XXVIII. *The Oily Tincture.* Inwardly given it prevail againft the Palfie and Lethargy, gives ease in the Strangury, provokes Lrifie, breaks and expels the Stone and Gravel in Reins or Bladder, and alleviates the pains of the Colick, outwardly applied in the Gout, (a little Camphir being diffblvd therein) it gives ease in pains and fitches of the Side and Spleen, difcuffes cold Tumors, and gives relief in a Gout proceeding from a cold caufe. Dole inwardly from ten to twenty, or twenty five drops, dropp'd first into Sugar, and then the Sugar mixed with the *Vehiculum* you design to give it in.

Of IV Y Watet,

O R

Ivy Leav d C R O W F O O T .

I. *The Names.* I l^w not of any Greek Name

X it has, but it is called in *Latine Uederula Kquatica* by *Gerard* and *Lobel*, also *Ranunculus Hederaceus Dalechanipij* & *Lugdunenfis*, *Lenticula Aquatica trifulca Baubini*, *Ranunculus Hederaceus Aquatic us* ^{vi} *Engliffh Water Ivy*, or *Ivy Leavd Crowfoot*.

II. *The Kinds.* It is certain it is no Species of %, properly fo called, but a singular Plant of its Kind, obtaining the Name *Hederula* meerly from the form of its Leaf, and seems from the nature and qualities of the Herb to be more allied to the Stock of the *Crowfeet* than any other Plant.

III. The Description. *This Hederula Aquatica, or Water Ivy, bos small thready Strings injiead of*

• Roots

Roots or Stalks, which sprcad themfelves very much under the Watery from this jiringy Root grow' forth feveral flender trailing Stalks, rifing from the bottom of the Water to the top-, thefe Stalks fhoot forth at thrower Joints and with the Leaves under the Watw&feveral other /mall fibres, which ferve as Roots alfo with the former: from the Stalks likewise at the Joints come fordr divers triangular Leaves, in form of an Ivy Leaf, which Leaves*, thofe which grow near the tops of the Stalks, float upon the top of the Water, and are many, each of their three parts, formed alfo in a triangular or three cornered manner, like tho% of Barren Ivy, or Noble Liverwort, and are fometmes marked with a black ipot-, and with thele Leaves from the Joints come forth fmall knots of yellow Flowers, Handing upon indifferen long footftalks, but Gerard fays it is barren of Flowers or Seed.

IV. The Places. Gerard fays it is very rare to find, and that he found it once in a Ditch by hermondfev Houfe, near London, and never elfewhere -, but Parkinson'fays At is found plentifully enough in divers places of this Land •, I have found it in Ditches, Pools of Handing Water, and other like wet and plafhy Grounds in feveral places of Cambridghire*, but it always grows in Water.

V. The Times. It Flowers in May and June, and gives its Seed in fome fmall time alter*

VI. The Qualities, Specification, Preparations and Virtues ar^xa&ly the fame with thofe of Common Crowfoot, and therefore I refer you thither, where they are handled at large in Chap. 176. Sett. 24. ad 34. fo that no more need be fa id thereof in this place.

0/K A T H E R I N E - F L O W E R ,

O R

Roman N I G E L L A .

I. Names. It is called in Arabick Xanim, Sunk, Sunici, feu Sunizi^ in Greek MSA A 0'v, and Mte\ff7nfv, in Latinè Melanthium, and A7-gella, in Englifh Katherine-Ylower,, Ycnnel-ihvoer* and Roman Nigella.

II. The Kinds. There are feveral forts of Nigella, Gith\ or lennel-llower, viz. 1. Melanthiu?n, five Nigella Romana, Roman Nigella*, or Katherine-Flower, properly fo called, of which in this Chapter. 2. Nigella Cretica, Gith, Fennel-Flower, or Nigella of Candia. 3. Nigella lijpanica & £V wafcena Here fimplici Of^multiplici, Spanifh Gith, Fennel-Flower, or Nigella Single and Double, of which we Treat under the Title of Nigella in fome of the following Chapters of this Book,

III. The Kinds of Roman Nigella, or Katherine-Flower, this the^e are th^ three following forts

I. Nigella Romany five Sativa, Roman Kigella
II. Nigella Romana Sibefrijt inodora,
III. Nigella Romana Sibefrijt inodora,

Wild fennel-Flower, or Katherine-flower. ?
gella Romana Arvcnfis, Field Fennel-Flower or Field Katherine-Plower.

IV. The Defcriptions. ThPfwft, or Roman fweet finding Nigella, or Katherin^Flower, has a Root which is fmall, thready, yellow, and perfhing every Tear-, this fweet Plant grows up to be two Feet high, more J or lefs, with feveral flender Branches, and many finely cut and divided Leaves on them, nearly as fine or fmall as fennel, (whence one of the Names) and very like unto thofe of the Larkshecls*, at the top of every Branch itands one Flower, made of five blew Leaves, laid abroad like a Star, without any green Leaves under the Flower, as in fome Single, and another Double blew fort, with a green Head in the^ middle, compaffed with fome few Threads, which Head grows to be the Seed Veflel, being a little long and round, with five fm^ll fhort Tops, like Horns, Handing at the tops of the Heads, in wlych lye in feveral Cells fmall, black, and very fharp, fweet, (trong Hhelling Seed.

V. The fecond, or Wild Fennel-Flower, or Katherine-Flower. This grows very like the former for its green Leaves, but a little fmailer and flwrter • the Flowers are blew, and like the former, but the Head with its Seed is larger, and the Horns longer ^ the Seed within is ufually black, fometmes a little whitilh, and fometmes yellowifh, without any fhed at all: there is another likewife of this fort, differing in nothing from this, bfit only that its fingle Flowers are white, and its black Seed without fcent.

VI. The third, or Field Fennel-Flower, or Katherine-Flower. This Field Sort is very like the laft, but it grows thinner of Branches and Leaves, and they alfo fhorter, the Heads are finaller and linger, as the Flowers alfo are, but of a pale blew color, the Seed being black likewife, and without fcent: there is another of this fort, differing little from that now defcribed, but in the Flowers, which being fing^ and blew like it, have green Leaves under them, and the Seed being black is fomewhat fweet.

VII. *The Places.* The first is usually Sown in Gardens, even in *Italy*, and other Countries, the others grow wild, and in Co^si Fields of *Italy*, and other Southern Countries, with us they ail grow in Gardens only.

VIII. *The Times.* They are all Annually to be Sown in the Spring, if they do not Sow themselves, and they Flower in *June* and *July*, giving their ripe Seed in *July* and *Augvft*.

IX. *the Vitalities.* The Seed, (which is chiefly used) is hot and dry in the third degree, it is Appetitive, Absterfive, Carminative, Digestive, Diuretick, Pe[&]oral, Nephritick, Aiexipharmick, and of thin and fubtii parts-, where note, the first Kind is only used in Physick.

X. *The Specification.* It wonderfully prevails against thin and fait Catarrhs, expels Wind, kills Worms, helps shortness of Breath, provokes, the Terms, eases* the Strangury, expels Stone and travel, and is an Antidote against Poyfon.

XI. *The Preparations.* You may have therefrom 1. A *Liquid Juice of the Herb.* 2. An *Effence of the fame.* 3. An *Infusion of Herb or Seed in Wine.* 4. *The Seed whole.* 5. A *Pouder of the Seed.* 6. An *Oil of the Seed by Expreffion.* 7. An *Acid Tincture of iMves or Seed.* 8. A *Spirituos Tincture.* 9. An *Oily Tincture.* 10. A *Decoction of the Seed in Vinegar.* 11. A *Fume of Herb or Seed.* 12. A *Spirit from Herb or Seed.*

The Virtues.

XII. *The Liquid Juice.* It opens obstru^sions of the *Vifcera*, chiefly of the Lungs, Reins, and Womb[^] mix'd with equal parts of Honey, and fo taken, it helps against Asthma's, causes free breathing, removes Hoarieness and Wheezing, provokes urine, eases the Strangury, expels Sand, Gravel, and Tartarous Matter out of the Urinary parts, gives ease in the Colick, and forces down the Terms in Women, kills Worms, and dries up Catarrhs. Dose one Spoonful to two Morning and Night for some considerable time[^] it may also be mix'd with White Port Wine, and fo taken.

XIII. *The Effence of the Herb.* It has*al! the Virtues of the Liquid Juice, is something more pleasant to Be taken, and more powerful in its operation, and therefore ought to be given in somewhat a lesser quantity[^] taken with Honey it is a Remedy against Poyfon, the Stinging of Scorpions; and the Biting of the Spider *Phalangium*[^] given mixed with a simple distilled Water of *Angelica*, *Aniseeds*, or *iernel*, it is said^o to increase Milk in Nurfes Breasts.

XIV. *The Infusion of Herb or Seed in Wine.* It has all the Virtues of the Juice and Effence, but must be given in larger quantities, viz. from four to six, or eight Ounces[^] it helps shortness of Breath, provokes Urine, and is good against the Bitings of Venomous Creatures, ©V.

XV. *The whole Seed,* it is said that Jews eaten familiarly in former Times, being ftrewed upon their Bread, or rather put into their Bread in[#]making, and fo put in as *Poppy Seed* was[^] tied in a Cloth and smelled to, being of hot, dry, and thin parts, it helps to dry up Rheums and Distillations from the Head, as *Galen* says, and being put into a Cap among other things for that purpose it does much good, being often smelled to it is said to restore the sense of Smelling to those who have lost it* it serves well to put into odoriferous Pouders and sweet Bags^{am} other sweet things!

XVI. *The Pouder of the Seed.* Being taken from half a Dram to a Dram in Wine it is a Remedy against (hartness of Breath, and difficulty of breathing, diffuses and; expels Wind, provokes Urine and

the Terms in Women, increases Milk in the Breasts of Nurfes, not being too much taken* it kills and drives forth Worms in the Stomach and Belly, whether taken in Wine or Water, and this it; does the more effectually if it is applied Plafterwiil, or in a Cataplasm, to Stomach and Navel⁵ it is an excellent Remedy (as *Galen* says) where there is need of heating, cleansing, an* drying.

XVII. *The Oil of the Seed by Expreffion.* It has all the self fame Virtues of the Seed, expressed in the former Section, and may be given from twenty to forty drops, first mixed with Honey, or Syrup of Clovegilliflowers, or other proper Syrup, and then taken in a Glafs of Wine, Sack-Whey, Barley-Broth, or other proper Vehicle, Morning, Noon, and Night.

XVIII. *The Acid Tincture** It is good against burning and malign Fevers, the Plague or Pestilence, and other contagious Diseases, it refits Poyfon, is good against the Stinging of Scorpions, the Biting of Mad Dogs, and other Venomous Creatures, and has all the Virtues of the Juice, Effence, Decoction, or Infusion and Pouder of the Seed foregoing. Dose fo many drops as to give the Vehicle a pleasing acidity, several times a day.

XIX. *The Spirituom Tincture.* It cheers the Heart, revives the Spirits, refits Fainting and Swooning Fits, prevails against palpitation of the Heart, dries up Catarrhs and Rheums, diffuses and expels Wind, strengthens the Stomach, causes a good Digestion, provokes Urine, and is profitable against Gravel and Stone⁵ given to a Woman in Labor from one to three Drams in a proper Vehicle*it facilitates the Delivery, and brings away the Afterbirth.

XX. *The Oily Tincture.* It is good against the Colick and inward Convulsions of the Bowels, opens obstructions of the Womb/ Reins, Ureters, and Bladder, gives ease in the Strangury, and expels Sand, Gravel, Stones, and other Calculous or Tartarous Mucilage out of the Urinary parts. Dose from ten to twenty, or thirty drops, first dropped into White Sugar, and well mixed therewith, and then given in a Glafs of White Port Wine[^] it gives ease in the Gout outwardly applied, is excellent against the Wounds or Pun[&]ures of Nerves- and Tendons, and hastens the Birth of Women in Labor.

XXI. *The Decoction of the Seed in Vinegar.* If it is held in the Mouth of such as are troubled with the Toothach it eases the pain, bathed upon hard Swellings it softens and diffuses them, it cleanses the Eyes of filth, and being daily applied to the deformities of the Skin, as Tettars, Ringworms, Scurf, Morpew, Yellowness, Spots, Freckles, &c it is said to cure them.

XXII. *The Fume from the Herb or Seed being burnt.* It drives away Flies, Gnats, Musketoes, &c. out of the Room in which it is used in Summer time.

XXIII. *The Spirit from Herb or Seed.* It is Cordial, expels Wind, eases the Colick, prevails against Convulsions in Children or Elder People, and cures Fainting and Swooning Fits.

CHAP. CCCCXI

Of KALIj or GLASSWORT,

Called also SALTWORT.

THE Names. It is called in *Arabick* *Kali*, it knows no *Greek* Name, but in *Latine* it is called

called *Kali* alfo, and *Salicornia*, *Salficornia*, and *Sal-JoU* genus, in *English Kali*, *Glafswort*^ and *Saltwort*. The *Alhes* hereof are called *Soda*, and *Rocbetta*, and the *Salt Alkali*, or *Sal Alkali*, the Salt of Kali, or *Glafswort* } *Kal* is an *Arabick Word*, and in that Language signifies Salt.

II. *The Kinds*. There are four Kinds of *Kali*, or *Glafswort*, viz. I. *Kⁿ/G&niculatum*, *Salicornia*, *SalfoU genm aliud C<efalpini*, *Salficornia*, Jointed *Glafswort*, or *Saltwort*. 2. *Kali ma jut Cocbleatim*, *Kali magnum Sedi medij Folijs Semine Cocbleato Lobelij*, *Kali Cocbleatum majus Qamerarij^ Antbyllk Sal/a Tjiajoris*, *Kali majus Cocbleato Semipe*, *SalfoU genm Cafalpini*, Great *Glafswort*^ or *Kali* with *Snail like Seed*. 3. *Kali minus album*, *Kali minus villofum Baubini*, *Antbylloides Thalij*, ^piall *White Glafswort*. 4. *Kali Mgyptiacum Folijs valde longis hirfat is Baubini*, *Kali Mgyptium Alpini*, iEgyptian *Kali*, *Glafswort*, or *Saltwort*.

III. *The Defcriptions*. *The firft*, or *Jointed Kali*, *Glafswort*, or *Saltwort*, has a *Root which is small, long, and thready**, it rifes up ufually with but one *Stalk*, upright, round, thick, and almoft tranfparent, a *Foot*, or *Foot and half high*, thick fet, and full of *Joints*, or *Knots*, without any *Leaves* at all on them; but (hooting forth *Joints* one out of another, or one at the end of another, with *fhort Cods* at the heads of them, and alfo fuch like fmaller *Branches* on all fides, and they are alfo divided into other fmaller ones^ this is thought to bear neither *Flower* no qtfeed: there are fome other *Kinds* hereof, as *KaliTjeniculatum breve*, differing a little in the form df the *Joints* one from another, and *Kali Geniculatum rubrum*, one which is wholly reddilli, not differing in any thing elfe from any of the other *Jointed ones*.

^ IV. *Jhefecond*, or *Great Glafswort*, or *Kali* with *Snail like Seed*. It has a *Root which is fomewhat long, with many fibres adjoining to it, and pcnjlics every Tear jor the moft part after it has given Seed-*, it rifes up with a big, round, reddifh* fiefhy *Stalk*, very like unto *Purfain*, about two *Feet high*, divided into many *Branches*, on which do grow many thick* long, round, tlelhy *Leaves*, pointed at the #ends, growing without order, fometime but one or two, and of centimes more (hnding at a place-, here and there difperfed upon the *Branches* come forth alfo fmall yellowifh *Flowers*, and after them fmall browniish *Heads*, turned round like *Snails*, in which lye fmall round *Seed-*, this *Plant* has an ill tafte, but laltifh. *

V. *The third*, or *Small White Glafswort*, or *Kali*. It has a *Root likewife which is fmall and^ woody, which penfhes after it has given Seed-*, it fprings up from the *Root* with feveral whitifh green *Stalks*, or *Branches*, nothing fo high as the former, and bending or leaning down to the *Ground*, fpreading it felt into other fmaller *Branches* full of *Joints*, whereon grow more ftore of fmaller and fhorter, round and pointed *Leaves*, nothing fo flefliy as the former, and of the fame pale green color with the *Stalks-*, the *Flowers* are white, and *Hand fingly* on the tops of the *Branches*, after which come fmall *Husks*, in which lies the *Seed*, which is fmall, black, and fhining, like unto *Sorrel Seed*.

VI. *The fourth*, on iEgyptian *Kali*, *Glafswort*, or *Saltwort*. It his a *Root like the others*, and grows up with one /ender *Stalk*, bending it Jelf downwards, and branching forth at the *Joints* into other fmaller ones, which jor the mojl part J; and more upright, and at every of the joints two very long and fomewhat Hairy *Leaves*, bowing themfelves downwards becaufe oi their length., the fmaller *Branches* are bare, without
 S. A f A f ends of them, Whole & TM
 . d. long Leaves, hairy, like to the for-

mer, but nothing fo long, from among which grow fmall, whitifh, purple *Flowers*, with many fmall *Threads* in their mid*e-, of this fort there are fome with fhorter *Leaves*, differing in little elfe.

VII. *The Places*. The firft as well as the fourth grows in *Mgypt*, and it generally grows among other *Sea Plants* on the *Sea Coafts* in all *Countries*; I found it growing plentifully in the *Salt Marfhes* in *South Carolina*, as up *Wadmalaw River*, and # on the *Sands* and *Marfhes* of *Wanio River*, not far from the *Sea fide*, and in other *Salt Marfhes* of the fame *Country* •, it grows alfo on our *Coaits* of *England*, *OV*, in many places, in *Saxony*, and other parts oi *Germany*, where there are *Lakes* of *Salt Water* -, the fecond grows by the *Sea fides* in feveral places of *Syria*, *Africa*, *Italy*, and *Spain*, as alfo in *Provence* zn&Aquitane, where they Sow large *Fields* thereof; fbrthe Profit they make of the S^jit of *Afhes* of the *Plant* in making *Glaf*s and *Soap-*, the third grows not only in the aforenamed places, but in other colder *Climates* likewife, not by the *Sea* only, but by the *Salt Pits* in *Saxony*, as *Camerarius* fays, and is found alfo on the *Sea Coafts* of *England* and *Ireland**, the fourth, as *Alpinus* fays, is more peculiar to *JEgypt*, but *Columna* fays it is frequent on the *Western Neapolitan Shoan* ^

VIII. *The Times*. They all flourifh in the *Siifi* mer, and they which perfifh give their *Seed* in *Auguj*, or fomeching later \$ the firft of them abides all the *Winter*.

IX. *An Observation*. Out of t^is Herb is made the *Alkali* of the *Arabians*, *Levant*, *JEgypt*^ &E. or *Pot Afhes*, as we in *England* call them, called alfo by other Names, as *Polverine*, *Pulverine*, *Rocbetta*, and *Soda*, which are all the fame tifng, made of the lame *Matter*, but do each differ in goodnefs, according to the place the *Matter* comes from, and the *Method* or *Order* of making of its the *Matter* is the Herb *Kali*, (alfo *Alga*, or *Kelp*, which is *Sea-Girdles*, *Sea-Weed*, *Sea-Thongs*, or *Sea-Laces*) the goodnefs of the Herb is taken from the places of its growth, that which grows on the *Coaits* and *Banks* of *Syria*, *JEgypt*, the *Levant*, &c. is the beft, that which grows on the *Coaits* of *Spain*, *Italy*, and *Venice*, is the next beft, that which grows on the *Coaits* of "trance is worfe, but that which grows on the mouth of the *Thames*, and other *Maritime* places of *England*, is the worft of all, as making *Afhes*, which yield the leaf *Salt*^ or *Sal Alkali*^ of any of

X^The Qualities. The Herb is hot and dry in the end of the firft degree, the *Afhes* or *Salt* is hot and dry in the fourth degree, *Aperitive*, *Abfterfive*, *Digeftive*, *Diuretick*, *Pyrotick*, or *Cauftick*, *Nephritick*, *Hyfterick*, *Arthritick*, *Emmenagogick*, *Sudorifick*, and *Alexipharmick*.

XL *TjK Specification*. Kali purges pituitous, watery, and melancholy *Humors*, provokes *Urine*, is good againft^ the *Dropfie*, opens obftructions of *Liver* and *Spleen*, brings down the *Terms*, and expels the dead *Child*.

XII. *The Preparations*. You may have therefrom I. A *Liquid Juice*. 2. A *Powder of the Herb*. ?. *The Afhes*, called *Pot Ajhes*. 4. A *Salt* called *Sal Alkali*. \$.*Coap*. 6. *Sandiver*.

The Virtues.

XIII *The Liquid Juice*. Taken in *Drink* or *Wine* from one *Spoonful* to two, or more, it purges downwards fuperfluous *Humors*, and therefore is often ufed for the *Dropfie*, to provoke *Urine* and the *Terms*, facilitate the *Birth*, and to expel a dead *Child*;

Child *, it opens obfructions of the Liver and Spleen, and difcuffes the hardnefs thereof* it gives eafe in the Strangury, and expels Sand, Gravel, Stones, &c.

XIV. *The Voider of the He*b.* > It has all the former Virtues of the Juice, but not full out fo effectual as it, and may be given from half a Drafn to a Dram and half in White Port Wine, or other proper Vehicle, it is fometimes mixed with thofe things which are ufed as Corrofives, to confume fuperfluous, proud, or fpongy Flefh, which grows in foul and virulent Ulcers, if it is taken in too great a quantity it is mifchievous and deadly, as *Gerard*

XV. *Pot Albes.* They have all the Virtues of the Juice and Pouder, and are equivalent in operation to the Arties of Tartar-, they are powerfully aperient, provoke Urine in the laft degree, and carry off a Dropfie by Urine, being made injo a Lixivium with Water, and given in Wine, they are yetty (harp and biting, like a Caultick, and the Lye which is made thereof is fo ftrong, that it will fetch off the Skin from the Hands, or any other parts of the Body it is applied to, and therefore if any ufe it to cleafe the Skin from Spots, Freckles, Lentils, Yellownefs, Sunburning, Tanning, Scurf, or Morphew, or other like Defilements, they ought to be cautious in ufing of it, and apply it very iparingly, or ufe it not made too ftrong, and ib it may do much good/ Kow thele Allies are made lee in our *Sepiafum*, or *Druggijs Shop.*, Lib. 2. Cap. 4. *Self*. il and 12. where, and in the other Sections of the lame Chapter, you may find abundant fatisfaction, and you may alib fee to what Mechanick Ufes they are to be applied, as alfo in *Sett.* 21. of the fame the rqt of their Medical Ufes; fo alfo our *Polygramphice Lib.* 10. Cap. 1. of the Eighth Edition.

XVI. *The Salt, or Sal Alkali.* This Salt is made out of the Pot Afhes, and has all the Virtues of Salt * of Tartar, and almoft in the fame decree of goodnefs: how this Salt is made in perfection fee in our *Tolygraphice Lib.* 10. Cap. 1. *Sett.* 12, if, 14, ij, 16. Thofe Afhes which come from *Spain* and the *Levant* are good, where, by reafon of the heat of the Climate, *Kali* grows in great quantities, and is green all the Winter * but thofe Afhes which come from *Mgypt*, where there is never any Rain, are the ftrongeft, and make the ftrongeft and fharpft Salt. The Allies coming from the *Levant* are called *PuUverine*, becaufe they are in Pouder, and have no fuch Preparation as *Soda* and *Rochetta* have, for the Herb is only burn'd on Iron Grates, and afterwards when cold the Allies are gathered up and kept in proper Veffels for ufe *, thefe Alhes have indeed lefs Salt than *Rochetta* and *Soda*, but for the quantity it is nothing inferior in virtue and goodnefs. Our *Dutch* Pot Alhes, which are purely white, and in great hard lumps, are the beft in the World, yield molt and pureft Salt, and of the ftrongeft kind, and therefore of excellent ufe In making Soap, Glafs, &V. This Salt prevails againft the Jaundice, Dropfie, Scurvy, and Gout., Dofe a Scruple or half a Dram in a Glafs of White Port Wine.

XVII. *The Soap.* If it is fpread upon a piece of courfe thick brown Paper and applied to the Soles of the Feet of thofe who are taken Speechlefs, it brings them to their Speech again in a little time, if there be any hopes of reftoration *, anointed over the Face of one who has Lentils or Freckles thereon it obliterates or takes them away, but it is by a gentle taking away of the Skin, after the manner of a *Scarf*, after it were > f read upon Leather and applied to me Hips in a Sciatica it cures it, being renewed as need requires* the fame it does being applied to places pained with the Gout, and repeated accord-

XVIII. *The Sandiver, or Ghifs-Salt.* Ic is ufed often being made into Pouder to be blown into the Eyes thro' a Quill, or being diftblved in Water and fquirted into them, to take away the Skin which grows over the Sight; it takes away alib Scabs and Manginefs, *if the parts aft&ed be often bathed therewith, and ferves to dry up running Soreß and Scabs, helps againft the Itch, and kill Tettars, Ring-worms, and the like, being often wafhed therewith, and fuffered to dry on-, it ferves to make Metals run, and a little thereof put into Antimony and Nitre for making *Crocus Aletalorum*, inceafes the quantity of the *Crocus*, and it will therewith the better feperate from the *Scoria*. Glafs being made with Pot Afhes and other Materials, as Sand, Cryftal, &c. this *Sandiver* is that Salt which is fcummed off from the rtop of the Glafs in the making thereof* fee more of it in my *'Sepiafum*, or *Drug* gifts Shop*, Lib. i. Cap. 15. where you may have further fatisfaction.

XIX. *To find out the quantity of Alkali which is contained in any quantity of Pot Afhes.* Take a Pound of Pot Afhes, diffolve them, by boiling in eight or ten Pounds of jair Water', more or lefs, then being well fettled decant off the clear Lixivium from the Faeces, the Faxes dry either in the Sun or before a fire, or in an Oven, or over a Sand heat, and then weigh them, for fo much as they want of a Pound, fo much Salt*is contained in each Pound of A/Joës, and fo many Ounces of Salt you have in your Lixivium. In fome of your Oriental Pot Alhes coming from *Syria*, *Mgypt*, &c you may have aboiii§en Ounces in a Pound, and in fome again not above nine, or eight Ounces, and fome of the worfer forts of Allies do not contain above feven or fix Ounces in a Pound, fo great a difference is therein the goodnefs of the Allies, but out of a Pound of the belt, fstrongeft, and whiteft *Dutch* Pot Afhes we have obtained feveral times thirteen and fourteen Ounces of pure Salt, very iprely ib litflp, as twelve Ounces *, the fstrongeft and beft Allies are thofe which are in greateft lumps, very hard, and white, as it were of a blewifli white, (which color arifes from the well burning) and fuch contain the greateft plenty of Salt.

CHAP. CCCCXII.

Of KELP, SEA-LACES,

SEA-THONGS.

*L. mT*HE Nantes.* ; It is called in'G/Vft5Q/IK& 8U- ' X AdWor, and' *%*© fa*d<rmv% in *Latine* *Alga*, and *Alga Marina*, alfo *Alga Mark*, and *Phycos*, or *Phycm*, or *lucusMarinr/s*, *Marim/s* being added thereto to diftinguifh it from *Yucus Herba*, which is *Anchufa*, in *Engliflr Kelp*, and *Seaweed*.

Hi, *The Kinds.* Of *Seaweeds* there are feveral Kinds, viz. I. *Alga Marina*, *lucus Marinus*, *Kelp*, *Sea-Laces*, *Sea-Thongs*, or *Sea-Girdles*, of which in this Chapter. II. *Mufcus Marinus*, *Lichen Marinus*, *Sea Liverwort*, and this is twofold, viz. 1. *Lattuca Marina*, *Lichen Marinus*, *Oifter green*. 2. *Opuntia Marina*, *Lichen Marinus roindijolius*, *Round Leaved Oifter green*, or *Round Leaved Sea Liverwort*. III- *Alga tcrctnj*, *hucus ^uercinus*, *Sea-Wrack*, and this is fixfold, viz. 1. *Kerens Marina major*, *The Greater Sea-Oak*, & Sea-Wrack.

2. *Kerens Mannia minor*, The Lesser Sea-Oak, or Sea-Wrack. 3. *Quercus Marina Tertia*, The Third Kind of Sea-Oak, or Sea-Wrack. 4. *Quercus Marina quarta*, Jagged Sea-Wrack. 5. *Yucus*, "five *Alga membranacea*, Sea Curled Endive. 6. *Yucus Juncifolius nodosus*, Sea Ragwort. These two last generick Species ice in their proper places under the Titles *Oijier green*, and *Sea-Wrack*'.

III. *The Kinds of the firjl of the three aforegoing Heads.* *Alga Marina*, *Yucus Marinus*, or *Kelp*, called also *Sea-Girdles*, *Sea-Laces*, and *Sea-Thongs*, is sevenfold, viz. 1. *Alga Marina*, (properly so called) *Yucus Mannus*, *Alga Marina Gramme a Lugdunenfis*, *Yucus Marinus alter Dodonxi*, *Alga Angustifolia Vitrariorum Bauhini*, the broader fort of which is called *Imperatus*, *Yucus Giganteus*, and *Palmifolium Giganteum*, *Kelp*, peculiarly so called, *Sea-Girdles*, *Sea-Laces*, *Sea-Thongs*." 2. *Yucus Martini* *crasus Latifolius*, Thick Broad Leaved *Alga*, *Kelp*, or *Sea-Girdles*. 3. *Yucus Marinus Latifolius Tenuifolius*, Broad and Thin Leaved *Alga*, *Kelp*, or *Sea-Thongs*. 4. *Yucus Alata*, five *Pkofganoides*, Winged *Alga*, *Kelp*, or *Sea-Girdles*. 5. *Alga*, few *Yucus maximus Volyfchides*, Great *Alga*, or *Kelp*, or *Sea-Girdles* with many Labels, or *Sea-Girdles* with Hangers. 6. *Yucus Marinus fecundus Dodonxi*, *Yucus longo*, *angusto*, & *crasfo Yolio*, Long, Narrow, and Thick *Alga*, *Kelp*, or *Sea-Girdles*. 7. *Yucus Membranaceus Ceranoides*, *Alga Marina Membranacea*, *Kelp*, or *Seaweed* with skinny Horns.

iv. *The Defcriptions.* *The firfi*, or *Kelp* peculiarly so called, *Sea-Girdles*, *Sea-Laces*, or *Sea-Thongs*. It has roundish Roots, which are hairy and blackish on the outside, from whence rise up small, round, long, white, hairy Heads, breaking out at the sides as it were into Branches, on the tops whereof stand or grow three or four very long and narrow soft green Leaves, some being an Ell or more long, and about, an Inch broad, this has neither Seed nor Stalk, but lies on the Ground, until the Tide raise it to float on the Water, which being broken by the force of the Waves is carried to the Shoar, where it is gathered and kept for many uses.

v. *The fecond*, or Thick Broad Leaved *Alga*, *Kelp*, or *Sea-Girdles*. It differs from the former, in that the Root is wholly fibrous, the Stalk rising from thence thick and round, two or thrde Inches high, and the Leaf, which is sometimes but one, and feldom two, of \$ very; great length, even divers Feet, of rather Ydrds or Ells long, and above four Inches broad, equal from a little above the letting on to the end, but fomewhat waved and crumpled on the edges, being thick, and of a deep green color, so soft and moist wult it Is fresh, that it is like unto moist Glew or Gelly, and will hardly dry, unless it lies long in the Sup, and will not be fit to be kept without rotting until after it has been many days dried.

VI. *The third*, or Broad and Thin Leaved "Alga, *Kelp*, or *Sea-Thongs*. This is in all respeth like *YntQ* the *lafi*, bin that the Leaves are thinner, broader, and shorter, yet crumpled on the edges, and of a paler green color, And. like unto thin Parchment.

VII. *The fourth*, or Winged *Alga*, *Kelp*, or *Sea-Girdle*. This grows fast upon Stones, and Shells of Ytjhes, both in the deeper and (hollower places of the Sea, having a round, dark, reddish Stalk, of the bignels of a Goose Quill, which being grown to the full length is very weak, lying on the Ground, unless the Water raise it, and about four Feet long, on each side of which grows a Wing all the whole length of the *Stalk*, or *Feathr* of an Arrow, is small below and broader above, equally to the top,

of two or three Inches breadth; the Leaves which grow next the Ground are many, (and some grow also on the Stalk) of a yellower greenish color, and of an Hand breadth, being four, six, or eight Inches long, tough and pliable, or of a skinny fubtance, like unto the other *Girdles*-, the Stalk does very well resemble a two edged Sword: this Kind *Alga* *O1 Kelp* is used to be dressed and eaten by the Inhabitants of the Sea Coasts where it grows, after it is cleared from the skinny Wings, and has a little sweet taste with its saltness, which makes it the more acceptable to the Palate.

VIII. *The fifth*, or Great *Alga*, or *Kelp*, or *Sea-Girdles* with Labels or Hangers on. The manner of growing of this with its use is like the *lafi*, but this is the greatest of all these Seaweeds, having a *Stilk* as thick as that of *Angelica*, of a brown Cheitnut Color on the outside, and jo are the round Leaves likewise, which are sometimes four, five, or six Yeet long, not being so thick as ones little Yinger, and ending in several broad and flwrty skinny Isabels, in like manner as the lower part of the *Sword Hangers*, which are of a yellowish color,

IX. *These fourth and fifth Kinds* Johnibn upon Gerard has thus described. This Seaweed has a various Face, for sometimes from a fibrous Root, which commonly grows to a Pibble Stone, or is fastned to a Rock, it sends forth a round Stalk, feldom so thick as ones little Finger, and about half a Foot in length, at the top of which grows out a fingle Leaf, sometimes an Eli long, and then it is about the breadth of ones Hand, ending in a sharp point, so that it very well resembles a two edged Sword-, sometimes from the same Root come forth two such fashioned

Leaves, but then commonly they are less than sometimes at the top of the Stalk it divides it self into eight, nine, ten, or twelve parts, more or less, and that just at the top of the Stalk, which lesser divisions never come to that length which the *Stalk* Leaves do-, this I judge to be the *Yucus Volyfchid Bauhini*: now that these two Varieties are not several Kinds I am certain-, at Margate in Kent, where they grow, they call them *Sea-Girdles*, which Name well befits the fingle one, and the divided they call *Sea-Hangers*, for if you hang the tops of the *Sword Hangers*, thus much for their Shape: no for their Color, which is not the same, they are more green, and these can scarcely be dried, they are whitish, and they do quite differ from each other both in Color and Substance are *view* that such as know them not would at first take them to be nothing else; the substance, and of a little saltish taste to be good Meat being boiled tender, and is eaten with Butter, Vinegar, and pepper.

The *Stalk* is flat, from whence sprw thick Leaves, about aytbot and half long, Ufevehl flat thick Thongs, like Leather, some lonft, and some shorter, and they again divided into smaller ones, with no fwohn Knots or Bladders thereof but there is another fort of this, which has and narrower Leaves, the Stalks ending all in sharp points. Johnfon upon Gerard has a better Definition hereof, viz. This grows to the height of six Feet, is smooth and half a Foot breadth, and to wej Miwuiuciu, or Leather cut out any fwohn Knots or Bladders, but, Ins. long and ten Stalks are taken out of the water, and are used to be made into

these two Kinds are the *Fucus Marinus fecundus* & *tertius Dodon/i.*

XI. *The seventh, or Kelp, or Seaweed with skinny Horns.* It has a Stalk a little above an hand breadth long, an Inch and half broad, divided into several branches, some broader, and others narrower, varying wonderfully each of which ends in short parts, like unto small Horns-, of this there are divers sorts, differing somewhat, thd not much one from another: these are said to cure the longing of Women with Child.

XII. *The eighth, or Dying Red Sea Alga, Kelp, or Mofs.* It grows unto some Rock or Stone, without any appearance of a Root, itnclfs it is a flat Jund of Skin, from whence rise up sever al Stalks, which are soft, and not above four or Jive Inches high, from each Stalk of which (hoot forth several Branches on both sides, and some of them again divided into lesser, all of them stored with fine small Leaves, as small as Camomil Leaves, or rather like unto Fennel Leaves, of a substance much like to that of the Stalks, soft in handling at first, easie to be bended, and almost transparent, if they be interposed to the Light, of a reddish or purplish Color, but with some whitenefs mixed together-, this is not so brittle as Coralline when it is dried, but grows more tough thereby, and being put into Water and steeped a while therein it grows soft again, it is used by several Mechanicks to strike a deep Crimfon, or reddish Purple Color, which will last long^ and out of this a Red L#ke may be made, as well as out of Kermes Berries, Brajil, Madder, Com Poppies, Red Rajes, Carnations, Sun-Flower, Saffron, Broom-Flowers, and othen things of like kind.

XIII* *The Places.* These are all of them found on many of our English, Scottish, and Irish Shoars, in the Coasts of Holland and France, as also on the Shoars of warmer Countries-, the fourth and fifth were found at Margate.

XIV. *The Times.* They flourish in the Summer, and end of Summer, those being the chief times of their beauty and use.

XV. *Their Qualities, Specification, Preparations and Virtues* are much the same with those of Kali in the foregoing Chapter, and out of these as good Pot Arties are made as out of any of the Kali's, x>x Glajsworts.

Small Yellow AS-PHODIL-

*• T T H E Names. It has no known Greek Name, jr the Latines call it *Aphodilus luteum minor*, *afid' fmmh & c% *c% * & Dodon* *afid' fmmh & c% *c% * & Dodon*
II, or Small Yellow Aphodil
A rch * > ? ! * * * It is the fcmrth's Species of the Aphodil Treated of in Chap. 35. Se& 2. aforego-w& and a singular Plant of the Species.

III. The Description. // has Roots proceeding from one Head, which are many, long and slender, finer than, those of the other Yellow fort, and by its long slender Strings spreading^ in the Ground it does much increase: This Small Tellow Aphodil, or Kings-Spear, has many long, narrow, edged Leaves, which are chamfered, or furrowed, which makes them seem threelquare, of a blewish or whitish green color; the Stalk is round, and rises up to be sometimes two or three Feet high, beset with Iriall long Leaves up unto the very Flowers-, the Flowers which grow thereon from the middle to the top are very many, in shape like to the Flowers of the other Kinds, they grow thick together, and Spike fashion, one above another, for a great length, and wholly yellow, laid open like a Star, somewhat smaller than the Great White Aphodil, and somewhat greater than the LeJJer Aphodil, which when they are past small round Heads or Seed Vessels come in their places, in which is contained small, black, cornered Seed, almost threelquare.

IV. The Cut which we have exhibited in the third place in Chap. 35. Sect. 6. foregoing is that which Gerard, has given us for Kings-Spear, and the Cut for Gerard's fourth Kind of Aphodil is that which Yarkinon has exhibited for Kings-Spear in his *Theatrum Botanicum* Yzg. 1218. but that which Matthiolum fet forth in his *Compendium* Pag. 342. is much more like the true Plant, excepting in its Head of Flowers, which is the true form of the Head before it (hoots up into its long Spike, for afterwards when it grows up and dilates it self it differs not much from the spikednefs of the other Aphodils; and this Figure of Matthiolus is that which we have given you in this place-

V. *The Places.* It grows naturally in Italy, Spain, Southern parts of France, and other hot Countries, from whence it has been brought to us, and is only nurfed up in our Gardens.

VI. *The Times.* It Flowers in the latter part of Summer, as in July, and August, and the Seed is ripe about a Month after.

VII As to the Qualities, Specification preparations and Virtues hereof, they are much the same with those of the Common Afphodil m U) ;, ad i%- foregoing.

IV. The Defcriptions. The &.,?, or OnrCc mon Knapweed, ban a Rcat tobich k white, bard, end weedy, \r annexe-d thereto, which p'erijhes not^ but abides with Leaves thereon all the Winter, and 1 freft again every Spring; from this Root rfe up many long and some- what~ broad dark green Leaves, ibmething deeply dented about the edg« netimes a little rent or torn as it were <>n both fides in two or three peaces, and a little hairy withal, from among which rifes upaftrong round Stalk, four or fve Feet high, divided into many fmall Branches, atths tops where- of ftand great fcaly green Heads, from whofe middle there is thrult forth a great number of dark, purplifli, red Thrums or Threads, (and ibmetirne^ mo but rarely, whit*;) in vrfiich after they are Wi- thered and paf away leveral black S: lying in a great deal of Down, fornewhat like 1 i'foyr^Seed, but fmaller.

Knapweed • d black common.

Knapweed, or Great

fat or eighteen Kinds or Varieties

like the former, blackish, and hard, with many Fibres \ this Other Wild Knapweed grows with us among Corn very much, a* well cut in Meadows, and it grows with greater and taller Stalks than the former ^ the Leaves both below and above upon them are much divided on both sides > even to the middle Rib, almost like the Great Scabious of Matthwius, but of a dark green color, and as rough, or rougher than the former, or first Common Kind, the icaly Heads on the tops of the Branches are greater, and the Flowers larger, and of a deeper red color ^ the Seed is allb like to the first foregoing.

VI. *The third, or White Jagged Knapweed.* It has long creeping Roots, which are fibrous, or thready and spread themselves somewhat under Ground*, from this Root rife up several Stalks, furnished with pretty large whitish green Leaves, very much jagged, divided or cut in on each side to the middle Rib •, these Stalks rife up to be sometimes about two Feet high, replenished with like Leaves from the bottom almost to their tops, and they likewise branch out almost from the Ground on all sides with lesser Branches, which are also beset with like Leaves, but lesser and less jagged as they approach near the Jpps, at the tops of the Stalks and Branches grow such like fealy Heads as 0% the former, and with the like pleasant Flowers, made of fine threads, as the others are, rising out of them, fUg that these are purely of a white color.

VII. *The fourth, or Narrow Leaved Knapweed.* Its Root is long, hard, and blackish, and repleat with many small Fibres -, from thi* rifes up a round, rough green Stalk, about a Foot and half high, on each side of which are Jet narrow, rough, short, * and somewhat hoary, green Leaves, compassing it at the bottom, and divided into some other Branches above, on the top of each of which stands a fealy, whitish, green Head, out of the middle of which rife many small long Threads, like unto the former, but smaller, and of a pale reddish color, after which feciSiimali black-

Seed, like the other -, of this fort also there is on whose Stalk and Leaves are longer, and smooth, all over hairy, soft, and woolly.

VIII. *The fifth, or French Mountain Knapweed,* has a Root which is long, slender, with some Fibres adjoining to it, and of a bitter taste, from which Root spring forth several long winged Leaves, very much divided on both sides into other small, long, and narrower ones, but they little or nothing again divided, of a light green color on the upper side, and hoary white underneath, and a little rough of hard Withal, somewhat like unto the Tellow Knapweed with prickly Heads-, from among these Leaves rises up a round Stalk, something rough also, and about a Foot high, without many Branches, but bearing three or four fealy Heads at the tops, with each of them a long, narrow, divided Leaf at the foot, and thrusting forth for a Flower many purple Threads in the middle, smelling sweet, after which comes the Seed, not unlike the other Knapweeds, but lesser.

IX. *The sixth, or Hoary White Mountain Knapweed,* It has a thick woody Root, which sends forth divers winged Leaves, lying upon the Ground round about it, very much jagged, rent or torn on both sides into many small Leaves, which are each of them deeply dented on the edges, somewhat like unto the Leave* of the false Stoebe in the next Chapter, all covered over with a hoary white Cotton or Wooll, or as it were sprinkled with fine Wheat Flower, or Meal, from among which rises up a crested, white, hoary Stalk, a Foot, or Foot and half high, scarcely having any Leaves thereon to the top, where it bears only two or three fealy Heads of Flowers, like the others, with purple Threads rising out of their middle, which being past away leave Seed like the rest.

X. *The Places.* The first grows with us in moist Fields and Meadows, and about their borders, and near Hedge sides, and in many waste Grounds, almost every where ^ the second grows in many places of this Land, also among Corn, as well as in other Fields, and grows in an especial manner about Coventry; the third is also found growing wild in several places of England, Johnson says he found it growing wild in a Field near Martin Abby in Surry, as also in the Isle of Tenet-, the fourth grows about Padua in Italy, and Mompelier in France, and other like warm Countries ^ the fifth upon the Hills of Castrum novum, near Mompelier •, the sixth about Capua in Italy, but with us these three last grow only in Gardens,

XI. *The Times.* They all Flower in June and July, and their Seed is ripe in July, or August, or September, according as their Flowering is, either early or late.

XII. *The Qualities.* Knapweed is temperate in respect of heat, and dry in the beginning of the second degree, Afringent, Absterfiv, Traumatick, or Vulnerary, Antiemmenagogick, and Analeptick,

XIII. *The Specification.* It is a peculiar Cure for all fluxes of Blood, whether internal or external, whether in the Stomach or other Bowels, whether by ruptures of any Blood Vessel or opening of their Mouths-, it is good also to stop the flux of Humors to any Wound, Sore, Ulcer, or Fistula, to dry up the moisture, and gently to heal the fame, without any sharpness or biting.

XIV. *The Preparations.* You may have therefrom 1. A Liquid Juice. 2. An Efence. 3. A DecoBion or Infuston in Wine or Water of Herb and Roots. 4. A Pouder of Herb and Roots. 5. A Garagarism. 6. A Balsam. 7. A Gtaplasm.

The Virtues.

XV. The Liquid Juice. It is a v&rjrgood afringent, and helps to ftay fluxes both of Blood and Matter, as fputting or vomiting Blood, bleeding at Nofe, and other outward parts, pifling of Blood, alfo the violent overflowing of the Courfes in Women ^ it heals inward Wounds, alfo thole Veins tvhich are inwardly broken, and cures fluxes of the Bowels, as Diarrhoea's, Lienteria's, and Dyfenteria's, or Bloody Fluxes. Dofe three, or four, or more Spoonfuls in Red Port Wine two or three times a day, or as oft as need requires.

XVI. The Ejence. It has all the Virtues of the Juice, but is much more powerful for Fluxes of the Belly •, it ftrenghens the Stomach, and ftops Vomiting, it prevails againft Catarrhs, or diffillations of thin and (harp Humors falling upon the Lungs, and Is good for fuch as are bruifed by Falls, Blows, or other Accidents. Dofe two or three Spoonfuls in a Glafsof Wine Morning, Noon, and Night.

XVII. The Decoffion of Herb and Roots in Wine or Water. It has ail the Virtues of Juice and Efence, but much lefs powerful ^ it is good to wa(h green Wounds, old running Sores, putrid Ulcers, Fiftula's, and the like, for it wafhes off, and cleanses them of their putrid matter and fanies, dries and heals tfiem, without any fharpnefs or biting ^ it does the like in running Sores and Scabs of the Head and other parts. Dofe inwardly is five, fix, or eight Ounces, fweetened with a little Sugar.

XVIII. The Pouder of Herb and Roots. It is admirably drying and afringent, for being ftrewed thick upon any bleeding part it prefently ftops the afflux of Blood, and conglutinates the lips of a fimple green Wound; ftrewed thick upon old and putrid running Sores and Ulcers it cleanses them, drips up the Humors flowing, and difpofes them to healing-, a Dram of the Pouder given inwardly in Red Port Wine Morning and Evening ftops all inward fluxes of the Bowels.

XIX. The Gargarifm. Take of the Ejence two Ounces, of the Decoffion four Ounces, Alum two Drams, Honey an Ounce, mix and diffolve. It heals Jorenefs of Mouth, Gums, and Throat, and affwa-

CHAP. CCCCXV.

Of KNAPWEED Silver,

O R

Falfe STOEBEo

L'Tpi/J? Names. This Plant was doublefsun- X known to the Ancient Cheeks, as alfo to the Ancient Latines, but the Moderns call it *Stcebe*, which is not the true *Stcebe* of *Diofcorides* and *Theophrastus*, that being the *Yimpinella Spinofv*, or *Thorney Burnet*, whereas this *Falfe Stcebe* feems truly to be of the Stock of the *Knapweeds*, and therefore may more properly be called in *Latine Stde Notha vel Spuria*, and in *Englilh Baftard* or *falfe Stcebe*, or *Silver Knapweed*.

II. The Kinds. Authors have made many forts of this *Silver Knapweed*, but the chief which we ftiall take notice of are thefe following, vis. i. *Stcebe Salamantica prima Clufij*, *Aphyllanthes prima Vodonti*, *Stcebe major Folijs CichoraceU mollibus languid tiofis Bauhini*, Clufius his firft Spanifh Silver Knapweed. 2. *Stcebe Salamantica fecunda Clufij*, alfo *Stabes Salamantica primce altera Species ejufdott Authoris^*, *Stcebe Argentea incana Lobelij\Aphyllanthes tertiq Dodonti*, *Stcebe major Folijs Eruca molli" b?/s languinofis Bauhini*, Clufius his fecond Spanifh Silver Knapweed. 3. *St&be Salamantica Argente& Lobelij*, alfo *Stcebe Salamantica Argentea minor*, *Stcebe Salamantica tertia Clufij*, *Aphyllanthes quartd Dodonti*, *Sicebe Calyculis Argenteis Bauhirii*, Lobel's Silver Headed Knapweed. 4. *Stcebe Jjifiriaca eU-tior Clufij*, *St#be^ Gallica*, *Stcebe Calyculis Argenteis^ major Bauhini*, The Greater Silver Knapweed 01 Auftria. 5. *Stcebe Auftriaca bumlior r bwnilis Clufij*, *Centaurij major is Species minor Gefneri* in *Colletione Stirpium*, *Stcebe i?tcana Cyano jimitiis tenuifolia Bauhini*, Silver Knapweed of Auftria the Letter. 6. *Stcebe Argentea Flore albo minor*, *Stcebe Calyculis Argent eis minor Bauhini*, *Jacea Floff albo Gerardi & Tabernamontani*, The Letter Silver Knapweed with a white Flower. 7. *Stcebe Plant aginis Folio Alpini fin Lib. de Plantis exoticis* JNar-row Leaved Silver Knapweed of Candy.

III. The Defcriptions. The > / , or C fuf 2/ firft Spanifh Silver Knapweed. / bat a T' is white, long, and woody, when it *1^0Z two Tears old, and then oftentimes ferijhes in we Winter, otherwife it abides well, and mil Wmy flower and Seed two Winters, if they be not, too, extremely cold, or do not fiand too much in the weather h from this Root rife up feveral large winged Leaves, lying on the Ground, very much cut in qn both fides into large pigces, but each of them jet clofer together than the next, of a fad, green Color on the uppe^Me, and fomewhat whitifn underneath, very hairy aWver, as alfo the Itrait frong Stalks, which rife up to be three or four Feet high, or more, with feveral fuch like divided Leaves on them as grow below, but much lefler, and every one inarp at the points, divided in the top into divers f rancn es, bearing upon long, bare, or naked b^A*TM fomewhat long, fmall, fcmooth, round, green Heads, but feeming more nftly contrived together than any of the Heads of the former -A^W from the fmall tops whereof rife many^xne orCrimfon Threads or Thrums, or of a Color: De-tween both^tanding round together, and Ipmetwis

whiter at the bottoms of them, which fo ftand in the Flower near a Month before they fade, in the mean feafon the Seed ripens in the Heads, which is imall, not much bigger than the *Cyanus*, but not fo great as the *Ordinary Knapweed*.

IV. *The fecond, or Clufius his fecond Silver Knapweed. It bets a Root which is white and long, not enduring after Seed time* •, it has many divided hairy and fomewhat hoary Leaves, lying on the Ground, divided into feveral parts on both fides, but more Separate one from another than the former \$ the Stalks are fomewhat hairy or hoap alfo, but ftand not fo upright as the former, rather leaning downwards, by reafon of their weaknefs^ thefe Stalks are divided into many Branches, bearing at their *tops fealy Heads, a little larger, from whence (hoot forthlarger Flowers alfo than the former, whofe outward Leaves are made like thofe of the *Cyanus*, or *Cornflower*, of a fair purplift red Color, with fuch like colored Threads or Thrums in their middleſ as are in that juft aforegoing, with whitifli and yellowifh bottoms; the Seed ripens in the time of Flowering, and is like the former.

V. *The third, or Lobeſs Silver Headed Knapweed, which is the third Kind of Clufius. The Root is fomething thick and long, and abides fometimes after Seed time, it bos many Leaves rifwg from the Root, but they are much more divided, and into Jmaller parts than eüher of the aforegoing, being more hoary, or of a whiter green Color than they, the Stalks are in the fame manner hoary, and rifeſ up as high as the firſt, with thin, cut; or divided Leaves upon them, ftiarp at the points, but fmaller and fmaller up to the tops, where they are much divided into Branches, and bearing at their ends fealy green Heads, but more whi^ edged Leaves, feeming as if they were Silvered, out of which come forth fmali purple Flowers, like the reſt, but fmaller, the Seed hereof *tying in the Downy Heads, as the others do, but are imething blacker than they, each having an hairy top on them,*

VI. *The fourth, or Greater Silver Knapweed of Auftria. This does not much differ from the laſt neither in its ?nanner^ of growing, nor in its form of the Leaves, nor in its height, nor in its Stalk, but only in its fealy Heads, ivbicb are not of fuch a fhining white Silver like Color, and in this confiſts the whole difference.*

"VII. *The fifth, or Silver Knapweed of Auftria the leſſer. There is Ukewiſe but very little difference in any particulars between this and the loſt, its chief variation is in the lowneſs of its growing and flendernēſ of the Stalk, by which it is made a diminutive flam of the kind.* *

VIII. *The fixth, or Leffer Silver Knapweed with a white Flower. Nor is there much difference or variety between this and the laſt, but only in the Flower^ which confiſts wholly of white • Threads or Ibrums, without having any other Color joined or mixed with it.*

IX. *The feventh, or Narrow Leav'd Silver Knapweed of Candy. It has a white Root, and of a fingers thickenſ in magnitude, it is but a ſmall Plant, and has divers long, foft, fat, and narrow Leaves, lying next the Ground, a little dented on the edges, but thofe which grow up up^{on} flender Stalks, of about a handfull long, are not dented at all, but reſemble Ribwort Plantane Leaves, and are ^of a yellowifh green Color, the tops of the Stalks are replenifhed ^{with} frtall long hms or Heads, out of which grow yellow Flowers, and after them [mail long Seed, like unto that 0/Scabious/*

X. *Nota. Clufius ſays that the Spaniards call the firſt by the Name oiCabefuela^ id eft Capitulum,*

a little Head, and they uſually make Brooms or Befoms thereof to ſweep their Houſes, and that the Learned Phyſicians there do uſe the third Kind inſtead of *Scabious* for all the Purpoſes thereof.

XI. *The Places.* The firſt three Kinds do grow in feveral places of *Spain*, eſpecially about *Salamanca*, as *Clufius* ſays-, the fourth, fifth andfijth grow in *Auftria*, and the feventh, "(as its Title teſtifies) in *Candy*, but by trajitplantation they are nurſed up in feveral Gardens of the Curious here in *England*.

XII. *The Times.* The firſt fix do all Flower in the Summer Months of *June* and *July*, that of *Candy* Flowers ſomething later, viz. in *Auguſt*, if any early Froſt takes them they immediately wither, altho⁵ in their own natural places, which are the warm Countries, and where they continue many Years.

XIII. *The Qualities, Specification, Preparations and Virtues* are the fame with thofe of the *Vulgar* or *Common Knapweeds* in the former Chapter, and to that I refer you; Authors ſay that all the forts of *Knapweed* come fomewhat nigh unto the Qualities of *Scabious*, to which for their full Virtues you ought to be dire&ed, and know that what Remedies may be had from and what Difeaſes *Scabious* may be applied to, the fame the *Knapweeds* are produ^{ct}ive of and equally efficacious in.

C H A P . CCCCXVL

Of K N A W E L,

OR,

German KNOTGRASS.

I. *HP HE Names.* It has neither *Greek* nor *Latin* Names that I know of, our Moderns call it *Polygonum Germanicum*, and we in *Engliſh* *Knawel*, or *German Knotgrafs*.

II. *The Kinds.* We have two Kinds hereof viz* u *Polygonum Germanicum*, **Knawel Germanorum*, *Polygoni Species Tragi*, *Poly carpon*, (from the abundance of Seed) and *Polycnemon*, (from its many Virtues) *Polycarpon Lugdunenſis*, *Polygonum exiguum Dodontſi*, in his *Pemptades*, *Polygonum Selinoides Gerardi*, but this is an improper Name, for it has no Leaves like *Selinum*, or *Parjly*, *Common Knawel*, or *German Knotgrafs* -, I know ſome would have this Plant to be *Saxifraga Anglicana Lobelij*, but I think it may be a Species thereof the form and ſtrong ſweet ſmell which *Tragus* ſays it has inducing me to think ſo, (this being the *Knawel Tragi*) but the ſmall green Flowers and Seed in them are much differing from th^ *Pink*-like white Flowers in that. 2* *Polygonum Germanicum alterum*, *Polygon inn Lit ore** *urn minus Floſculus ſpadiceo albicantibus*, The ſecond *Knawel*, or other *German Knotgrafs*-, *Bauhinus* ſays that there is feveral Varieties of this *German Knawel*, of which this fecond Kind is one of them, *and the two following are alfo thought to be Species of the fame Plant, viz. 3. *Polygonum Montanum Niveum Lobelij*, *Polygonum Montanum minutum Niveum iff Sericeum*, *Polygoni Hiſpanici genus Clufij*, *Paronycbid Uifpanjca Clujij*, *Polygonum Montanum Tabernamontam & Gerardi*, *Polygonum minus candicans Bauhini*, *White Mountain Knotgrafs*, or *Knawel*. 4. *Polygonum Vakntinum*, *Polygonum Montanum*, *Anthyllidis Species*, *Anthyllis Valentwa Clujij*, *Spaniſh Mountain Knotgrafs*, or *Knawel*,

the?

tho' this may be accounted a Kind of *Anthyllis*, (*Baubinus* accounting it among his *Anthyllides*) yet it cannot be the *Anthyllis quint a Diofcoridis*, becaufe that has upright Stalks, which this has not.

III. The *Defcnpuons*. *The firft, or Common Knawel, or German Knotgrafs*. It bus a Root which is small, (tender, and fibrous or thready, jrkd whence come forth feveral small Branches-, not futj^g lying down on the Ground, half a Yoof long, or more, and full of Joints, thickly fet together, at every one of which ftand many very small and long pointed Leaves, of a greyilh green, or Afh Color, which are of an unequal length, two for the moft part longer than the other-, at thefe Joints with the Leaves come forth divers small, Herby, or green Star-like Flowers, thick let together, which being fallen away there appears in very small Husks, no bigger than *Millet* Seed, a great foreof very small Seed, like D#, of the Seed of *Herp/aria*, or *Rupturewort*, which are of a quick hot fmell, and fomewhat fwet.

IV. The fecond *Knawel, or other German Knotgrafs*. It has a Root which is small, long, and white, the whole Plant very, much refembling the former, both in its manner of growing and in its flender trailing Branches, which have small, long, hoary or grayilh green Leaves, many fet together at a Joint, but that they are longer than they, fome of thefe being two Inches long, efpecially of thofe next the Root*-the Flowers hereof ftand or grow not at the Joints with the Leaves, "but at the tops of the Stalks and Branches, many cluttering together, which are very imall, and white on the infide, but of a brown-ll red Color, on the outfide, which afterwards turn into a plentiful Crop of very small Seed.

V. *The thirds or White Mountain Knotgrafs, or Knawel*. It has a Root which is small, long, and white, not pen(hing in Winter, in its native Clime or place of* growth, no not fo much a* its Branches or Leaves, but it will not endure our cold Nights and piercing Blujh, and therefore dies with-, its, unlefs freftve'd with great Care and Circumfpettion. This Herb is a fine, white, and Silver like Plant, efpecially growing in the hotter Climates, and when k is grown old, fo that it gives much flight to the beholders* it fpreads many weak trailing Branches upon the Ground, in fome places not paf&a Hands breadth, in others a Foot long, as full or fuller of joints than any of the Kinds oi Knotgrafs in Chap. 418. following, which are thick fet alfo with fmaller Branches, on which are placed very small long Leaves, lying almoft like Scales upon the whicfh hard Stalks * thefe Leaves are green at the firft, and tender, but when they are grown old, they will be of a fhining Silver Color, and hard, like Skins or Parchment* the tops of the Stalks and Branches are thick fet with small, white, Silver like Leavevand at the Joints come forth very small white Flowers "??? be difcerned, which being paf away, are followed by exceeding small Seed.

VI. *The fourth, or Spaniffo Mountain. Knotgrafs or Knawel*. Its Root is fmall, long, and blackifh on the out fide, it is a fmall Plant, and by fome referred to the *Anthyllides*, but by others accounted a fmall-kind O/Knotgrafs, or *Knawel*, it fhoots forth many fmall, weak, reddifh Branches, lying upon the Ground, and not able to ifond upright, about a Foot long, parted into many other fmaller Branches, on which grow at feveral joints and fpaces many finall Leaves together, like unto thofe of *Time Spurge*, on which, as well fs on the Stalk, there appears a fhew of mealing, as many Sea Plants have^ with the Leaves come forth fmall, purplifh, white Flowers, confifting of four Leaves apiece.

Vf Places. The two firft grow in places of England, the firft of them about *Cbipnc* in the Weft Country, and the fecond in dry, Sandy, and Rocky places^ the third grows in Spain, and the Southern parts of Prance, and the fourth about the Caftle of *Valentin* in Spain, and other places, with us they are only nurfed up in Gardens.

VIII. *The Times*. They all flourifh and are fiefli and green in the Summer Months, and continue their verdure till cgl'd Weather comes in, which caufes them to wither and dry, in the mean feafon they Flower and perfeft their Seed.

IX. *The Qualities*. They are Aperitive, Abfterfive, Vulnerary, Diuretick, Nephritick and LithoiH triptick.

X. *The Specification*. They are powerful to break * the Stone, and give eafe in the Strangury, efpecially the firft and feco\$ Kinds.

XL *The Preparations*. You may have therefrom, 1. A Liquid Juice. 2, An Effence. 4. A Decofo* on in Wine. 4. A Pouder. 5. 4 Mix'rmsf.

The Virtues.

XII. *The Liquid Juice*. *Tragvstays* that *K/ta*®* el has the fame Properties which *Knotgrafs* has, and may ferve to all Intentions inftead thereof, as well for inward as outward Remedies^ it opens obitruitions of the Reins, Ureters, and Bladder, gives eafe in the Strangury, and is faid to be very powerful to break the Stone. Dofe three, four, or five Spoonfuls, mix'd with any proper Wine, or other Vehicle.

XIII. *The Effence*. It has all the Virtues of the Juice, but much more powerful to the Intentions* Hofe three or foifr Spoonfuls in feme fit Vehicle in the Morning falling, and at Night outwardly ufed to Wounds and Ulcers it cleanfes, dries, and heals them admirably, by only wafhing therewith, and applying Stuph* dipt therein, it cclnglutinates the lips of green Wounds in a very (hort time.

XIV. *The Deco\$ion in Wine*. It has the Virtues of the Juice and Effence, but not altogether fo powerful, it cleanfes the Reins, Bladder, and Womb very forcibly, ani is a good Lotion for the cleanfing and drying of foul and running Ulcers.

XV. *The Pouder*. It provokes Urine, expels Sand, Gravel, and Tartarous Matter from the Urinary parts, and frewed upon fimple Wounds it conglutinates and heals them, it flops a flux of Blood in green Wounds, and a flux of Humors in Ulcers, being itrewed thick thereon. Dofe inwardly a Dram at a time, Morning and Night, in a Glafs of White Port Wine.

XVI. *The Mixture*. By wafhing a fimple green Wound herewith it conglutinate\$ the lips thereof upon the spot, it cleanfes Ulcers* repreOes fluxions of Humors upon the fame, the part and parts adjacent being fomented warm therewith, it dries up their humidities, and difpofes them to a fpeedy healing. This Mixture is /Wrf&>?mxi?> i' Ti

quid Juice or Eifence three parts, with choice Brandy one p&rt, and. digefting them ^together twenty four Hours.

C H A P . C C C G X V I I

O / K N E E H O L M ,

O R

B U T C H E R S - B R O O M .

L*Tp HE Names. It is called in Greek *Myrtus*.
 X *Oxymyrfine*, i. e. *Myrtm acuta*, *Myrtus Sylvestris*, *Q*'t there is another *Myrtus Sylvestris* among the Ancients, which is like the Tame or Manured Kind, which *Pliny Lib. 15. Cap. 7.* confounds together) *Myrtacantha*, *Myrtus Spinosa*, *Myrtus Murina Spina*, and by *Thcophrastus Kewrewpplyy Centromyrrhine*, in *Latine Rufcum*, and of some, as *MarcellusJzys*, *ScopaRegia*, *Pliny* fays it is called *Qhammyrfine*, and *Acaron*, or rather *Arceon*, which is one of their bastârd Naines, in *Eng-Jh Kneeholm*, and *Butchers-Brabm*.

II. *The Kinds.* Authors taye not yet found out more than one finguar SpeciePof this Plant,

III || The Defcriptior# It has a Root which is thick, greene, and beate& bad from which springe several thick, long, and tough white firings, which sprout from the Root are thick, whitish, and fhort, fomewhat like unto those of *Afparagus*, but greater, which in some places are the same manner as we eat *Afparagus*; these rising up to be a Foot and half high are spread into divers Branches, green^nd fomewhat crested

with the roundness, which are teugh, pliant^ and flexible, on which are feemewhat broad and aU most round hard Leaves, sharp and prickly pointed at their ends, of a dark green Color, and ionic what like unto *Myrtle* Leav^ two* for the moir pAt fc: at a place, very cloieipl near together-, about the middle of the Leaf^ on the back or lower side, irorii the middle Rib, comes forth a finap. whitiih %reen Flower, confisting of feir fmall round pointed-Leaves, standing upon a very fhort or no.footstalk,"* in fr'hoit-place, (beifig pali away) comes a fmall round Berry, green at the firit, but when it is ripe red; much like to an *Afparagus* Bejjry, but greater, in which are coitained two or three white, hard, round Seetf.

IV. *The Places.* It grows generally in most places throughout *England*, in *Copiës*, and upon *Heaths*^ and on rough, barren, and waite Grounds, and oft times under or near *Holly Budies*; it grows upon *Hampsted Heath*, not far from *London*, and in many places in *Kent*^ *Effex*, and *Barkjh'irc*, almost in every *CoA* and low Wood.

V. *The TimeW* It fhoots forth its young Buds in the begining of the Spring, which are eaten in some places (as *afajpfaid*) as our young *Afparagus*, the Berries are ripe in *Auguft* and *September*, the Branches and Leaves abiding green all the Winter.

VI. *The Qualities.* The whole Plant, Roots, Leases, and Berries are powerfully Apeitive, Abfterfive, Dturetick/and %Vulnerary, Pe&oral, Nephritic^ Hyfterick, and Archtritick.

f. I. *The Specification.* It is a peculiar thing at the Dropfie, especially that called an *Afcites*, opens Obstruitions of the Urinary passage% and consolidates broken Bones.

VIII. *The Preparations.* The Root is chiefly made use of to all the Intentions for which the Want is used, and the fame is accounted one of the five opening Roots; therefrom you may, make, 1. *Ji Juice or Ejjcnce*. 2. *A Deccoftion in Wine*. * 5. *Of the young Sprouts a Sal let*. 4. *Of the Branches, Brooms or Befoms*. y, *A Decoction of Ltuives and Berries*.

The Virtues.

IX. *The Juice or Eifence.* It powerfully opens Obltru&ior/S- of Liver, Spleen, Gall Bladder, Reins, Ureters, and Bladder, provoke Urine, and amends the ill fmell thereof; it helps to expel Gravel and the Stonf, gives ease in the Strangury, and provokes Womens Monthly Courfes, it helps the Yellow Jaundice, and the Headach, and made into a LohdMi with Honey it expectorates* Flegm, and cleanses the Thorax, or Lungs, and Stomach of Flegm and clammy Humors gathered together therein. Dole from one Sgponful to two, three, or four, in a Glafs of White Fort Wine twice a day.

X. *The Decoction in Wine.* It has all the former Virtues, tho^ not altogether ib powerful, and may be given Morning and Evening from four to eight Ounces, or ten in Dofe, besides which it is effectual in knitting and consolidating of broken Bones, and strengthing parts out of joint, and oth^f weak Limbs, for which it is not much inferior to *Comfrey*, or *Solomon's-Seal*, drinking this Deco&ion, and applying the laid Roots Pulvic-wife unto the parts affected. *Biverius* in his Observations lays, that a Beggar Man was affected with the Dropfie three Months whf eby his Belly grew exceeding big, and because his Poverty would not afford him the choicer Medicamen^ he used, by the Advice of a Country Woman, a Decoction of the <Rc&pts of *Krieehohti* ox *Butchers-Broom*, and was purged twice or thrice with an Infusion of *Sena*, and with these Remedies.

of the was perfectly cured, a feongDecoction or Infuionalfo of it in Water having been plentifully used Morning and Night by it self, also boiled in Wine or Broth, and eaten as Food with the Wine or Broth for a Month or fiv^Weeks. fpace, has been found by Experience to curUn *A/cites*, and it cured this kind of Dropfie in two Young Maidens, the one of which lived-in good Health many Years after *k_n*, ...nother Woman was cured of a Dropfie of the Womb, as was fuppofed, with this Medicament, from whom it brought away with a kind of *impetus* or violence about ten Gallons of Water-, a Deco&ion of this *L* Root, Roots of the *Blue Flowerdeluce*, and *Ferñeüoois* in Water or Wine being used for fome time has been found of admirable use for the cure of thele kind of Dropfies of the Belly, and *Bodonxus* is not fparing in its Praifes for this ptirpofe.

XI* *The Sat let made of the young Sprouts*. It is prepared as are thofe of *Ajparagus*, and eaten in the lapie manner, and fo eaten the said Sprouts open Obftr&ions of Liver, Spleen, Reins, Uretdk, and Bladder, cleaning thofe parts of Foeculenci&but they are nothing near fo effe&tual% are the Juice, Effence* or Decoction of the Roots in Se&. 9. and 10. aforegoing.

XII. *Brooms or Befoms*. Formerly Hufwives made use of this Plant to make Befoms of to fiveep the Houfe, from whence came the N^me *Scop a Repa*, as being used also in Kings Chambers, but now thro' the Revolution of Times tlfey at& changed to Brushe^ for cleaning Butchers Stalls, from whence <#me the Name of *Butchers-Broom*, #

XIII. *The Decoffh/i of Leaves and Berries in Wine*, liiis, according to *Dioscorides*, has, all the fame#F.ffects with the Deco&ion of the Roots, but in *mv* Opinion the Preparation of the Roots is much iheshore powerful.

CHAP. CCCCXVIII.

OF KNOTGRASS,

OR,

SWTNESSGRASS:

UK Names.- It Is called in Greek *κνυβισ* quod with is *genubus crtfcit*, in Arabick *Bafia Trahagi*, in Latine *Polygonum Sanguinaria*, *Sanju'malk*, *SeminaHs*, *Proferpinaca*, in English *Knotgrass*, *Swihesgrajs*, and *Birdstongue*.

II. *The Kinds*, Authors make feven several forts of this Plant, viz. 1. *Uoniyinv *\$w*, *Polygonum Mas^ Polygdnum vulgare majvs*, *Polygonum Mafcuhhh*, Our Greater or Common Knotgrafs. 2. *Polygonum vulgare minus*, The Lesser Common Knotgrafs. 3. *Polygonum minus brvviore Folio*, Small fhort Leaved Knotgrafs, ti^s *Bauhinus* in his *Pinax* takes to be *Polygonum Mafculum Fruticolum Thalij* in his *Harcynia Sylva*, also the *Sedum minbhtm Arborefcens Vermiculatjim Lobelij*. 4. *Polygonum Saxatile Bauhi/ii*, Stone or Rock Knotgrafs. 5. *Polygonum iliferinum mi jus & maximum Lobelij*, *Polygonum Marinum pnmum Lugdunenfis & Dalechampij*, Poly^dkum *Mannitm Lanfolium Bauhini*, The Greater or Broad Sf *knol s^is*. 6. *Polygonum Marinum Marimum alterum Dalechampij*, *M^fm Bauhini*, The Leaved Sea Kribtgrafs, 7. P.

fonum Germanicum Bauhini, Knawel, of which we have already difcourfed in Chap. 416. aforegoing.

III. The Defcriptions. *The jirft, or # Common Knotgrafs*. It has a Root %bwhich is reddifh, finally fhort^ and round, abiding all Winter^ and putting forth anew every Tear-, it coipes up with many ilender Benches, full of Joints, lying upon the Groupd, with many long and narrow Leaves fet thereon, |pe fbr the molt part at a Joint, on which Branches, especially from the middle upwards, come forth Flowers, which are fo finall, that for the moil- part they are not *iken* or difcerned, but in fome they are white, in others of a whitiflj P^t^ pie Color, which afterwards tufn i&to very final! fquare Seed^ like unto *Sorrel* Seed, where flt>te, that the Joints have commonly^ finall white Skin, which d^efs them.

IV. *The fecond, or Lesser Common Knotgrafs*. This in its Roofs, Stales, Joints, Uapes, Flowers, and Seed, grows like the former^ fav'wg that they are lefs, chiefly the Leaves, being neither fo broad nor Jo long, and the Flowers hereof are always white.

V. *The third, ifr Small fhort Leaved Knotgrafs*, // has d Root like to the for me K, from zvhencen/e^ many fender jointed Branched, but more woody than the ðther, fprcad alfo into fome other fmalter ones on witch grow Jmall fhort Leaves, leffer than tbojc of the Small Jolmswat, the Flowers are Jmall and white, like the other.

VI. *The fourth, or Stone or Roqk Knotgrafs*, // has Jm^l, white, fibrous Roots, from whence fpring up many weak trailing Branches, lying upo^th the Ground round about it, on which grow Leaves u-hidare fmewhat round, being an Inch in *Tcngt\ and c^wout half an Inch inbreadtLbm" growing j matter ic the Stalkward, green on^ mapper M^ MWef a whitifl) mealy Color undernem^ at the Joints come forth Jmall, p^ reddiifh Flowers, like unto the 0-ther, and after them, followtfuch like (mall Seed.

VII. *The fifth, or Greater broad Leaved Sea Knot grafs*. // has^ a Root which is fomewhat great, tbcA black, long, and Jomething woody, it runs, out into 7nany and much larger Branches ihan the Jirfty fatty Joints, and hinp on the Ground, the Joints jet very

dce together, with Leaves thereon, fomething like to the Common Kind, but thicker, a little shorter, and broader, and of a dark green color above, and winter underneath*, the hlowers ftand at the Joints in the fame manner, having fmall white Skins, which cover the Joints, which in forne are alfo of a white, in others of a purplifh color, after which come fmall Seed, inclofed in whitifh fhimng Skins-, the tajie of the Plant, and of every part thereof, t\$ aftringent, but fontevochat fait withal.*

VIII. *Thefixth, or Laffer or Narrow Leaved Sea Knotgrafs. It has a Root which is long, black, and woody, with a few fibres adjoining thereto: mThis leffer Kind has longer Stalks than the la/Land covered with a reddifh Bark, alfo more dwwmi into fmailer Branches, having jewer Joints oW^greater Stalks, but the Branches are thick, audfet with jmailer Leaves than the former, which arefomtbing fat, and thick, long, and narrow, like the Jirfi' Common Kind*, the flowers are fmall and whitifl), and the Seed is much like that of the fifth Kind.*

IX. *Nota.* Whereas the firft great fort is called before in this Chapter *Mas*, or the *Male Kind*, that feems to befpeak a *ihmale Kind* alfo, but there is indeed no Female Species of *Knotgrafs*., for that which fome Authors call *Polygonum hcemina*, or *ilrminauM*, is one of the Kinds of *Equifeta*, or *Horfe-tails*, as being likeft unto them, although not rough, but differing totally in form from *Polygonum*, of *Knotgrafs*, for which reafon we take no farther notice of it in this Chapter.

X. *The Places.* The firft, or great Kind, as alfo the fecond, or leffer, grow almoft every where, and in every County in *England*, as well by the Foot Ways in Fields as on the fides of High Ways which are g^sen, by the fides of old Walls, and on KttSborders of Fields., where in fome places it even overfpreads them*, the third and fourth grow xn higher Grounds, on Gravelly, Stony, and Rocky places, upon Hills' and Mountains^ the two laft grow in Salt Marfhly Grounds, and by the Sea fide in many places.

XI. *The Times.* They come forth late in the Spring, and continue all the Summer, Flowering and Seeding in the meaf feafon, and fo endure till Winter, in which Seafon all their Branches perifh.

XII. *The Qualities.* They are cold in the firft degree, and dry in the fecond, Aftringent, Abfliffive, Diuretick, Traumatick, Nephritick, and Alexipharmick.

XIII. *The Specification.* *Knotgrafs* is a peculiar thing againft ipitting of Blood, and all fluxes of Blood in any part, Bloody Flux, and other Fluxes pf the Bowels, the Gonorrhoea in Men and Whites in Women, (Univerfals being premifed) heat and *harpnefs of Urine, alfo the Strangury, or ftoppage of Urine, cools Inflammations, cures Wounds, and cleanfes and heals old and filthy Ulcers, &c.

XIV. *The Preparations.* *You may have therefrom 1. A Liquid Juice. 2. An Effence. ?. A KDecofoari in Wing or Water. 4. A Ponder of the Herb. 5. A DiJWled Water. 6. A Balfam.

The Virtues.

XV. *The Liquid fake.* It is cooling, drying, ?na Trinding, and is v# effectual to ftay any bleed-J?8_? Mouth or Nôté being drank in Steeled or ^ed Port Wine, and being applied to the Forehead or temples, as alfo quirted up the Noftrils with a ?n?S^* it is no kfs effectual to cool and temper the heat of Blood, or of the Stomach, and to flop any flux of Blood or Humors, either of the Belly,

as Lasks, or Bloody Fluxes, fluxes of choferick and (harp Humors, or of the Womb, as the overflowing of the Terms in Women, and the Whites, 4r oV of the Spermatick parts, as the running of the Reins, iff. Dofe four Spoonfuls *, it cures running Ulcers of the Ears.

XVI. *The Effence.* ^ has all the Virtues of cæ Liquid Juice, befides vraich, if it is given before the Fit of an Ague comes, whether Tertian or Quartan, it is laid to determine it^ and cure the fame-, it is alfo fingular good to provoke Urine when it is (topped, as alfo when it pafles away by drops and with pain, which is called the Strangury, it takes away the heat' and fharpnefs thereof and is fâid powerfully to expel the Stone, Gravel, Sand, Urine, and other Tartarous Matter from the Reins, Ureters, and Bfadder*, it is a Sovereign Remedy to cool all manner of Inflammations, to ftop theprogrefs of *Anthonics'Fire*, or any other breakings forth oi heat, and gives eafe in all hot Swellings and Apoltems, and prevents the future burning, fretting and eating of darjgerous, old^ running and gangrenous Sores and^Tcers, yea, tho^ in the Privy parts of Men or WdSfen, refilling the Humors for falling into them, cooling them, and drying up the hot, fharp, and moift matter which caufes them to be inflamed. Dolè two or three Spoonfuls in Ibme proper Vehi-cle Morning and Night.

XVII. *The Decottion in Water or Wine.* It has the Virtues of the juice and Effence, but not altogether fo frong or effe&ual, and therefore is to be given in larger Dolès, af from a quarter of a Pint to half a Pint, or more. The Vinous DecoSion is goSI for thofe who are ftung or bitten by Scorpions, Serpents, or other Venomous Creatures^ and the fame is very effectual to ftop all defluxions of Rheum falling upon the Stomach or Lungs*, it kills alfo Worms in Stomach or Belly, and eafes all inward pains of the Bowels arifing from heat, (harpnefs, and corruption of Humors, as the Colick, &c.

XVIII. *The Ponder of the Herb or Seed.* It is good againft the Stone, Gravel, Sand, and Tartarous Matter in the Urinary parts, being drank to a Dram ©r more Morning and Night in Wine for many days together5 applied- outwardly to bleeding Wounds, or other fluxes of Bloçjd, it prefently ftops it, and if it is a fimple Wound conduces to/its fpee-dy healing.

XIX. *The Diftilled Water.* It has the Virtues of the Juice, EUeuce, and ^Deco&ion, but nothing near fo powerful as either of them* being taken by it felf to four or five Ounces it is eft&ual to all the Purpofes aforefaid, and is a very-excellent thing to cool all forts of Inflammations, proceeding from whac caufe or in what part of the Body foever.

XX. *The Balfam.* It fpeedily cures all fimple green Wounds, by refitting the flux of Blood, and confolidating their lips-, it ftrengthen* weak Joints, comforts the Nerves and Tendons, and is prevalent againft the Gout, b<ing duly and rightly applied Morning and Evening.

XXI. *Nota.* It has been, obferved that the Sea Kinds of *Knotgrafs* have riot been fo cooling and operative in the above enumerated Difcafes as ^he Common Kinds, by reafon of their abundant faliffe fubftance, yet effe&ual in feveral Cafes where there is need of greater penetration, and therefore a Cata-plafm made thereof and applied has been found much more effectual againft the Gout,

C H A P . CCCXIX.

Of LADIES-BEDSTRAW,

OR,

CHEESE-RENNET.

I/T^u Names. It is called in Greek *Ἰσχυρία*, *JL* and *TaW*, and, as *Dioscorides*, offom *Ἰσχυρία*, and *ἰσχυρία* and was so called from *ἰσχυρία* Milk, from the effect, which was to make Milk turn into a Curd when they set it to make Cheefe, for which it ferves very well; in *Latine Gallium*, and in *Engliff Ladies-Bedfraw*, *Cheefe-Rennet*, and *Maidshair*.

II. *The Kinds*. Authors make fix or feven Kinds of this Plant, or more, but becaufe feveral of them are not to be met withal in *England* or our Plantations abroad, we (hall only describe the five following, viz. 1. *Gallium*, & *Gallium luteum*, Our Common Ladies-Beditraw. 2. *Gallium album garnerari* & *Pent*, *Mollugo*, *Mollugo vulgati* *Lobclij*, *Gallitan tertium Tragi*, *Mollugo prima Dodon* & *Lugdunensis*, (*Jf TUBERNAMONTANI*, Our Common white Flowered Ladies-Beditraw. 3. *Mollugo Montanica* *Dodonai*, *Clufij*, *Lobelij*, *Lugdunensis*, *Thalij*, & *Tabernamontani*, *Rubia Sylvatica alt era Gefneri*. White Flowered Mountain Ladies-Bedfraw. 4. *Gallium Flore rubro*, *Gallium Flore nigro purpureum Montanum tenuifolium Clufij* & *Column*, Red Flowered Ladies-Bedfraw. 5. *Gallium Montanum Oriticum*, *Gallium Americanum vel Floridianum*, *Candia* or *American Ladies-Bedfraw*.

III. *The Descriptions*. *The first*, or Our Common Ladies-Bedfraw. It has a Root which is reddish having many small fibres or Threads fastned to it, which take strong hold of the Ground, and creep a little off from the Earth up several

small, brown, square, upright Stalks, three feet or more high, sometimes branched forth into divers parts, full of Joints, and with several very fine small Leaves at every one of them, little or nothing rough at all; at the tops of the Branches grow many long Tufts of yellow Flowers, very thick set together, one above another, from the several Joints, which consist of four small Leaves apiece, and small somewhat firong or refinom, but not unpleasent the Seed is small and black, like Poppy Seed, two for the part joined together some of the Branches leaning down to the Ground take root at their Joints, whereby it much increaseth.

IV. *Gerard* describes it. It has a small and thready Root, from which come forth small, round even Stalks, weak and tender, creeping hither and thither upon the Ground, on which do grow very fine Leaves, cut into small parts, finer than those of Dill, set at certain spaces, as those of Woodrooff, among which come forth Flowers of a yellow color in clusters or bunches, thick thru together, of a strong sweet smell, but not unpleasent.

V. *The second*, or Our Common white Flowered Ladies-Bedfraw. It has a Root which is fibrous or thready, and abiding all Winter, and the whole Plant is in all things like to that next to be described, saving, that the Branches are so weak, that unless they be fastned by Trees, Bushes, Hedges, or other things near which it grows, it will lie down upon the Ground, and the Leaves are smaller and narrower, yet not so small as the first with yellow Flowers, the lower are also small and white, but not plentifully abounding: Some Authors make a smaller sort hereof, which is not a proper Species, for upon transplanting it will grow as great as the other.

VI. *Gerard* describes this second sort thus. Ladies-Bedfraw with white Flowers is like unto Cleavers or Goosegrasses in Leaves, Stalks, - and manner of growing, yet nothing at all rough, but smooth and soft; the Flowers are white, the Seed round, the Roots tender, creeping within the Ground, the whole Plant climbs upon Bushes, Shrubs, and all other like things which are near unto it, otherwise it grows not upright but falls to the Ground.

VII. *The third*, or White Flowered Mountain Ladies-Bedfraw. It has a Root which is black, very fibrous or thready, from whence shoot forth a number of slender and weak Stalks, which yet stand upright of themselves, directly branching forth into many parts, so that it seems to be a pretty wellspread Bush, having many shorter and broader smooth green Leaves set at the Joints than any of the former, or the next which follows, the Flowers are very small and white, standing at the tops of the Branches, more thick or plentifully set than the following with red Flowers, which being past away turn into small, black, round Seed.

VIII. *This Gerard* says that it is called *Mollugo*, and has Stalks which need not be propped up, but of themselves stand upright, and is like unto our second Species, or Common White Flowered Ladies-Bedfraw, but that it has a smoother Leaf.

IX. *The fourth*, or Red Flowered Ladies-Bedfraw. Its Root is of a reddish color, but greater than the first Common Kind, creeps not, abiding many Tears and not perishing: The Plant is small, and has slenderer and lower Stalks than the first Kind, set divided into many Branches, at whole Joints tend four, five, or six long Leaves, and not of so dark a green Color as the first, the Flowers are of red color, not so thick clustering or set together as those of the first Kind, and consist of four small pointed Leaves, with a yellow Pointe in the middle, but five or six or more growing-together at the tops of the Branches, which afterwards turn into

finall black Seed, like the firft. *Columna* will have *Gallium nigra purpureum Montaman*, &c. to be a differing Species from this now defcribed, but they seem to me to be all one Kind, the Flower being in fome places only a little darker, but in all other particulars alike;

X. *Gerard*, fays this fourth or Red Flowered Ladies-Bedfraw ha* been taken for a Kind of Wild Madder, but it is truly a Kind or Species of Ladies-Bedfraw, or Cheefe-Rennet, as appears both by its Qualities of turning Milk into Curds, as alfo by its form, being in each refpeQ: like unto the *Gallium lucum*, or Our Common Ladies-Bedfraw, and differs in the color of the Flowers, whichpre of a dark red color, with a yellow Pointel in the middle confitting of four finali Leaves.

XL *The fifth* ^ Candy or American Ladies-Bedfraw. It grows like thefirji, or Common, or Yellow Ladies-Bedfraw, but much leffer, yet with greater Roots and Branches. It is a more effectual Rennet than any of the former, hot and aftningent, flopping Fluxes of Blood.

XII. *The P^ces*. The firft and fecond grow frequently in many places in this Land, in Meadows and Pastures both wet and dry, as alfo by Hedge fides; the firft grows alfo upon Sunnie Banks near the borders of Fields, in fruitful Soils almoft every where 5 the fecond grows in Marfli Grounds, and other moit places •, the third grows on Hills and Mountains and in Hedges among Biifhes in moft places •, the fourth grows on Mountainous and Hilly places in *Germany*, and was lent to us from *Strasburgh*, fince which it is nurfed up with us in Gardens ^ the fifth grows in *Candy*, and in feveral P^arts of *America* upon the *Floridian* Continent, in feveral places of which I have often found it.

XIII. *Jba Times*. They all Flower early, viz. * i O % , except the *Red Flowered*, which Flowers in *June*, and the Se^s are ripe in *June*, *July*, and *Augtjft*, h but *Gerard* fays they Flower moft of the Summer Months.

XIV. *The Qualities*. They are hot and dry in the firft degree, Aftringent, Abfterfive, and Traumatick or Vulnerary •, they are alfo Nephritick, Lithontrip-tick, and Arthritick.

XV. *The Specification*. Ladies-Bedfraw is a peculiar thing to ltop bleeding inwardly, or at Nofe, to heal inward or outward Wounds, to help burning with Fire and fcaiding with Water, to ltrengthen the Nerves, Tendons, and Joints, give eafe in the Gout, to help the Strangury, and to fret and break the Stohe.

XVI *The Preparations*. You may have therefrom, 1. A liquid Juice. 2. A Decottion. 3. A Ponder of the Root. 4. A Nafale of Herb and Flozvers. 5. An Ointment. 6. Cheefe Rennet.

The Virtues.

XVII. *The liquid Juice*. It is powerful to provoke Urine, to help the Strangury, to break the ^stone, and to expel Gravel, Sand and Tartarous Matter from the Reins, Ureters and Bladder, being taken two or three Ounces at a time, two or three times a Day, in a Glaſs of pure White Port Wine. The fame drank helps to ftop*inward Bleeding and the overflowing of the Terms in Women as alfo to heal inward Wounds, by its heating and drying Qualities.

j XVIII. *The Decottion of Herb and Flowers in Wine or Water*. It has all the Virtues of the liquid Juice, but is much weaker. It is good to bathe the ~~Flowers~~ S^l ^{ve}llers in, who are wearied and tired with Travel, and whoſe Feet are fwoln, or bruifed,

or galled thereby -, and for fuch whoſe much and long Running caufes not only Wearineft, but Stiff*nefs in the Nerves and Joints •, for all which things this Decottion ufed as hot as it can be well endured, is very available. It is alfo good againft ScurFF, Morphew, Dandriff, dry Scabs, Itchings, and other like Defcedations of the Skin, chiefly in Infants.

XIX. *The Pouder of the Root*. It may be taken to one Dram in choice Canary,- Madera, or other like generous Wines; and as *Diofcorides* writes, it provokes Venery or Bodily Luft, as do alfo the Pouder of the Flowers, taken in the fame Dolé and Manner Morning and Night, or two or three times a Day.

XX. *The Nafale of the H\$rb and Flowers*. They being bruifed, and put up the Noftrils, are faid to itop a vehement Haemorrhage in tholé Parts, and it may be fo much the better, if fome of their Juice be firft fnuft up., or fy ringed in.

XXI. *The Ointment*. It is wade by boiling the bruifed Herb and Flowers in Oil Olive to Crifpnefs -, and draining out, and fo 7ep eat ing this Work three or four times, then adding a little Bees-wax to bring it to a ConJJiency: But imbe advife it to be made with Hogs-Lard. Or you may make an Oil thus: Put the bruifed Herb and flowers into pure OH Olive, and infolate till the Oil becomes white: prefs all out, and repeat this Work three or four times; and (train out for life: but it isfooner done by foiling the bruifed Herbs and Flowers in the Oil to Crifpnefs, jtraining out by preifing, and repeating the Work three times more 3 then Jrraining out the cl\$ar Oil, keep it for U/e. It is good againft Burnings with Fire, and Scalding with Water, and is good to be anointed upon Limbs and Joints, which are weak, and become fliff with Walking, for it ftrengthenes the Nerves, Tendons and Joints. It prevails alfo againft ScurFF, Morphew, Mange, dry Scabs, and the Itchings and Callings of Children, and other Deformities of the Skin. Applied alfo to the Parts affe&ed, it gives eafe in the Gout, and other like Pains -, and by Continuation of the Application, cures the fame.

XXII. *The Cheefe-Rennet*. It is made of the bruifed Herb, by fqueezing out its Juice, being firft moiftened with a little choice Canary or Sherry, to which a quarter part of Spirit of Wine is firft added. Or thus: Take the expreffed Juice, defecate it by fettling, or clarify it with Whites of Eggs: to a quart of this prepared Juice, put Sherry Wine four ounces, firft mixt with Spirit of Wine two ounces: mix them, digeft fome -Days, then decant the clear^ and keep it for Hie. But many Country People make pfe of the fimple Juice only. *Matthiolus* fays, That the People of *Tufcany* do ufe to Turn their Milk with it, that the Cheefe which they make of Sheep and Goats Milk, may be the fweeter, and the more pleafant in Taſte, and alfo more wholefome, as to break the Stone, &c. And the *Chcfnre* Women, eſpecially thoſe abput *Nantimch*, where the bell Cheefe is made, do ufe it in their *Rennet*, (viz. by putting the bruifed Herb into their *Rennet-bags*;) much more eſteeming of that Cheefe which is made with it, than of that which is made without it.

XXIII. *Nota*. The Ancients thought the *Gallium album*, or White-flowered Ladies Bed-fraw, to have no Virtues, or to be of no Uſe. But *Cluſius* fays, That in *Aujiria*, *Hungaria*, and other places of *Germany*, the People have found it by Experience to be good to ftrengthen the Arteries, Nerves, Tendons and Joints, thoſe Parts being bathed either with the Juice, Deco&ion or Rennet made thereof ^ and that it takes away Wearinefs and Weaknefs after Travelling, and eafes Pains caufe by Cold, Over-walking^

great, and yields both more store of Branches from the Ground, and mote spreading above : also that the Flower in this is very thick and double, consisting of a number of smaller Leaves, set close together, in order in the middle, the four outermost Leaves which encompass them, being much broader and larger than any of the inward, but all of a dull or faded bluish purple Color -, the Points or Ends of the Leaves seeming a little darker than the middle of them. This bears no Seed, so far as has yet been seen or heard of from any Person of Credit, notwithstanding the Affirmations of some false and ignorant hardeners, which affirm the contrary

VII. *The fifth, or Creeping fiery Sea Climber.* It spreads abroad many creeping, pliant, jointed and crested Branches, about two Feet long, covered with a very dark green Bark, from whence shoot forth many winged Leaves, a little dented about the edges, very like unto the *Flammula Jovis eretta* in Sett. p. following, consisting of five Leaves, but most commonly of three upon a Stalk, being narrower, harder and longer pointed : at the ends whereof comes forth a imajl clasping Tendrel, which grow up higher upon the Stalks, and nearer unto the tops, where the Flowers do stand, are much smaller and narrower. The Flowers come forth many together, as in the other, set upon long Footstalks, which are white and with many hairy Threads in their middle. After they are passed away, many round, flat, reddish Seed are produced* smaller than in some other, three or four upon a Stalk together, plumed with a white Feather at the Head of each of them. The whole Plant is hot and harp, like unto the others.

*II. *The sixth, or The Virginian Ladies-Bower or Climber.* Its Root is composed of a number of exceeding long, round, yellowish brown Strings, extending far abroad under the Ground, sometimes as long as any Roots of Sarsaparilla, and a great deal digger, which to be conveniently and cleverly laid in the Ground, should be coiled up like arable : and these Roots, by shooting up in several places, a good distance one from another, make a great Increase of the Species. This noble and much desired plant rises out of the Ground very late in the Year, about the beginning of May, if it is a Plant which has sprung up from the Seed of its own Sowing, but if it is an old one, such as has been brought to us from Virginia, not till the end of May. It springs up with a round Stalk, not above a Yard and half high, or thereabouts with it, but in hotter Countries, as some Authors say, much higher, bearing one Leaf at every Joint, which from the Ground to the middle thereof, has jointed Claspers, but from thence upwards, has at the same Joint with the Leaf, both a small twining Clasper, like unto a Vine, and a blower also. Every Leaf is broad at the Stalk thereof, and divided about the middle on both sides, making it somewhat resemble a Fan-Leaf, ending in three Points, of which the middlemost is longest. The Bud of the Flower, before it does open, is very like unto the Head or Seed-Vessel of the ordinary *Jingle Nigella*, having at the Head or Top five small crooked Horns, which when this Bud opens, are the ends or Points of five Leaves, which are white on the inside; and lay themselves out, like unto an *Anemone or Windflower*, and make a little hollow, like unto the end, with five other smaller Leaves, which are smaller than they, lying between them, which are the innermost in the Bud before it opened* so that this being full blown open, consists of ten white Leaves, which are round by another: from the bottom of these Leaves on the inside rise up several twined Threads, which spread and cover them all over these white Leaves, reaching beyond

the Points, of them a little, and of a reddish Peach Color : towards the bottoms, likewise of these, white Leaves, there are two red Circles, about the Breadth of an *Queen Straw*, one something distant from another, which add a great Grace to the Flower. (but in some Flowers there is but one of these Circles seen.) By their means the white Leaves (hew their Color through the Peach-colored Threads, and these red Circles or Rings upon them being conspicuous, make a tripartite Shew of Colors very delightful. The middle part of this Flower is hollow, and yellowish, in the bottom of which rises up an Umbone, or round Stile, somewhat big, of a whitish green Color, spotted with reddish Spots, like the Stalk of *Dragons*, with five round Threads or Quives, spotted in like manner, and tipped at the ends with yellow Pendants, Hanging about the middle part of the said Umbone or Stile, and from thence rising higher, ends in three long crooked Horns most usually, (and sometimes, in four, as *Aladinus* in his *Parnefian Garden* observed at Rome) spotted like the rest, having three round Buttons at their ends. These Flowers are of a comfortable, pleasant, sweet Smell, and very acceptable, but perfish without yielding Fruit with us, because of the late Flowering : but in the natural place, and in hot Countries, it bears a small round whitish Fruity with a Crown at the top thereof, in which is contained (whilst it is fresh, or not over-dried) a sweet Liquor, but when it is dry, the Seed within it is small, flat, black, and somewhat rough, and will make a rattling Noise*

IX. *The seventh, or Upright Ladies-Bower, or Virgins-Bower.* Its Root spreads in the Ground from a thick Head, into many long Strings, and fastens it self strongly in the Earth. From this Head of Roots spring more upright Stalks than in any of the former, which grow to be sometimes four or five Feet higher more, yet leaning or bending a little, so that it has some need of support, which are covered with a brownish Bark, from whence come forth

forth on all sides, divers winged Leaves, confiding of five or seven Leaves, fet on both sides of a middle Rib, of which the odd one is always at the end. The-tops of the Stalks are divide* into many Branches, bearing many white, fweet-smelling Flowers. on them, like in Fashion td'the *White Virgins-Bower*: after which come such like Feather-topt Seed, which remain and shew themselves, being iiat like th^o-ther, when the Plumes or Down is blown abroad. The Stalks die away, every Year, and spring 3gain afreth in the beginning of the next.

X. *The Vlases*. Xfiese Plants delight to grow in the Sun, and propeT better in a fruitful Soil than in a barren. The first four grow in Our Eng&sh Gardens, where they flourish much. The fifth *Bauhine* £*y\$, grows in many places of the *Adriatick* Sea Shore, and in islands thereabouts belonging to the *Venetians*. The sixth grows not wild in England^ but flourishes v^d in our Gardens. The seventh, which is the flourishng Delight of all Flowers, came to us from *Virginia*, and now is become a free Denizen of England^ by being planted in our Nurseries or Gardens. ...

XL *The Times*. They all-flower in the end of June *oi July, and sometimes in August, and perieffc their Seed in September. The *Virginian Climber* (lowers viAugust, yet sometimes, fti^o not often in July, but perfects no Seed here.

• XII. *The Vitalities*. They are all hot and d^h in the fourth Degree i Caustick and Burning, of Sliffling the Skin.

XIII. *The Specification*. Authors lay they are peculiar againft Scurf, Morphew, Scabs, Leprosy, and other Defcations of the Skin, but are not safe to be taken inwardly, unless to purge Water in Dropies.

XIV. *The Preparations*. Altho' these Plants are never or very seldom tried in Phisick, unless in outward Application, yet these following Preparations

Seed ^ m f e o f them > viz: * A ?ouJer of the
the fir^t or Burning Ladies-Bowt, and of
or W^g h t Ladies-Bower. I An Oil
or hoing of the-fame Wants. 3/A

distilled Water of the fame. 4. The Liquor of the *Virginian Climber*. 5. A *Cataplasm* of the *Climbers**

The Virtues. •

XV. *The Ponder of the Seed*. Given to a Scru* pie or half a Djflm, more or less, in fair Water or in Mead, it is said to purge Choler, Flegm, and watery Humors. +

XVI. *The Oil by Infolation or Boiling*. It cures Aches and Cramps, Sciatica's, and other Pains coming of Cold: it is also good against the Stone, and provokes Urine, some small quantity of it being taken inwardly in any proper Vehicle. It also takes away Scurf, Morphew, Scabs, Leprosy, and other Deformities of the Skin, by anointing therewith.

XVII. *The distilled Water of the Upright Ladies-Bower*. It clears the Skin of Defcations, and is este&ual against any cold 6nefs in any part of the Body.

XVIII. *The Liquor of the Virginian Climber*. This Liquor within the Fruit, is v*y pleafint to the Tasse, as if Musk or Ambergrife were mixed with it: and having a little Acidity with it, it does not cloy the Stomach, tho' it be taken in large quantity, nor gives any bad Symptom, but is laid rather to move the Belly downwards, and make it foluble. *Aldinm* gives us many Virtues of it, which seem to me to be spok*n Hyperbolically, for by Experience nothing has yet been observed thereof. But he says, that the Leaves of the Plant have a fonniferous Property, and smell like to *Nightshade*^hwng (?^ he thinks) some deleterious or deadly Qualit)> i^ them, because it kills Flies which rest thereon.

XIX. *The Cataplasm of the Leaves of the other Burning Climbers*. Being applied to ite Sciatica or Gout, or any Pain in other Parts proceeding from Cold, it cures them, being cautiously used ^ for it quickly Blifters.

XX. *Not a Matthiolum* Est s, that the *Powder of the Leaves of the Upright Ladies-Bower^* being prepared and given, helps against a Quartan Ague. However, all the other *Climbers* may serve very well to make Arbors in Gardens and Orchard's, or other like places for Pleasue, for to those Purposes they are moll fit, if any please to Plant* them.

Called dlfc Great S A N I C L E.

U^T^HE Names. It does not appear that this X was known to the ancient *Greeks*: b^ hrumfelfws says it is *Aiom^Joy*, *Leontopodiu^Lio^*: Foot: yet others say it is net that which *Diofeeri*^

des fpeaks of. It is called in *Ldtine*, *Alchimi'lla*, by moft Writers ; *Stellaria Matthioli*, *Lugdunenfis*, *OV. Vcs Leonls*, and *Pata Leonls* \$ *Drofera*, and *Drofi-um Cord?* *, *Sanicula major*, (as much refembling *Sanicle*:) and in *Englijh*, *Ladies-Mantle*, *Lions-hoot*, and *Great Sanicle*.

U. *The Kinds*. Authors make two forts hereof, viz. 1. *Akhimilla major vulgaris*, *Stellaria*, *Sanicula major*, Common Ladies-Mantle. 2. *Alchimih: minor*, vel *Alpina quinquefolia*, Fiveleaved Ladies-Mantle, or Ladies-Mantle cinkrbil-leaved.

III. *The Defcriptions*. *TVfir ft*, or Common Ladies-Mantle, *ha* a Root which is fomewhat long and black, with many Fibres, and Strings thereat*. It is fomething like to our *Common Sanicle*, having many Leaves rifing* from the Root, ftanding upon lpngTiairy Foot-ttalks, being almoft round, but a little cut in on the edges into eight or ten parts, *nore or lefs, making it feem like a Star, (whence the Name *Stellaria*) with fo many Corners and Points, and dented round about, of a light green Color, fomething hard in handling, and as if it was folded or plaited at firft, and then crumpled in divers places, and a little hairy, as the Stalk is alfo, which rifes up among them, which grows to the height of two or three Feet, with a few fuch leaves thereon, but fmaller, and being weak* is not able to Hand upright, but bends fometimes down to the Ground, divided at the top into two or three Itaall Branches, with fmall yellowifh green Heads, and Flowers of a whiitfh green#olor breaking out yellowifh Seed, like unto *Poppy Seed*.
it I. *he fecon or Five-leaved Ladies-Mantle. uppi a fmall black fibrous Root, from which fpring a few Jmaller and fmoothen green Leaves fet upon onglot-ftalks, but divided at the edges into five j Vf *ers or Points, and fomething more deeply denta about the Brims than the former : from among j Tnich come forth two or three fmali weak bending*

Stalks, about fix or feven Inches high. The Flow-ers which grow at tops, are fmaller, but like to the other, according to the Bignefs of the Plant, and of the fame Herby or green Color.

V. *The Places*. The firft grows naturally in frany Paftures and Wood-fides, both in *Hartfordfhire* and *Wiltjhire*-, as alfo in *Kent*, as in *Kingwood near leverfham*, in the Paftures nigh *Tidnam* and *Cbeplow*, and in other places of this Land. *Gerard* fays it grows of it felf Wild in divers places, in the Paftures at *Andover*, and in other parts of *Hampjlrire* and *Barkjhire*, in their Clofes and Copfes, or low Woods •, as alfo upon the Bank of a Moat which enclofes a Houfe in *Bufhy*, called *Bourn-Hall*, fourteen Miles from *London* 5 and in the Highway from thence to *Watford*, a linnall Mile diltant from it. The fecond grows on *Bernards-Hill* in *Switzerland*, but is to be foond with us only in Gardens.

VI. *The Times*. The firft flowers in *May* and *June*. The fecond not till *Auguft* : but they both abide after Seed-time, and flourilh and keep green all Winter after, as well as in Summer.

VII. *The Qualities*. It is hot, and dry in the fecond Degree ^ Abfterfive, Afringent, Strengthning and Vulnerary.

VIII. *The Specification*. It is peculiar to flop Bleeding, whether inward or outward, all Fluxes of the Bowels in Man or Woman; and the Whites, or Weakneis of the Womb, It cures Wounds after a moft fingular manner, being one of the moft noble Wound-Herbs, being extolled by *th&Germans* with exceeding great Praifè, who never cure any Wound, whether inward or outward, but they give of the Decoftion hereof to drink.

^oIX. *The Preparations*. You may make hereof^a i. A *liquid Juice*. 2. *An Effence*. 3. A *Decoftion* or *Infufwn*. 4. A *Pouder of the Leaves*. 5. A *Balfam* or *Ointment*. 6. A *Catapla/m*. 7. A *diftilled Water*. 8. A *Spirituos Tinture*. 9. An *Acid Tintfure*. 10. An *OilTintture*.

The Virtues.

X. *The liquid Juice*. It is not fo hot as that of *Sanicle*, and therefore more fit for thofe Wounds, which are accompanied with Inflammation, and fo is more drying, atringent, or binding and cleaning. It is eftetual againft all forts of Bleedings both inward and outward, flops the Over-flowing of the Terms in Women, and cures the Bloody-flux, as alfo all other Fluxes of the Bowels. Dofe from two to four or fix Spoonfuls Morning and Night in j Glafs of the diftilled Water, or in Ale or Wine.

XL *The Effence*. It has all the Virtues of the former ^ befides which, it cures Bruifes by Falls or otherwife, whether inwards or outwards : it heals Ruptures of the *Peritoneum*, as alfo Ruptures of the Blood-Veffels, which caufe Spitting or Pifling of Blood •, and is a peculiar thing to flop the Whites in Women, being eftemed more powerful for this Purpofe than moft other things * for which Intention it is not only to be given inwardly by the Mouth, but is alfo outwardly to be applied as an Injeaion up the Womb, with a Womb-Syringe. Dofe three or four Spoonfuls in Red Port Wine, or fome other proper Vehicle, two or three times a Day. Inwardly alfo taken, and outwardly applied to Womens Breafts, which are great and over-much flag, it caufes them to grow lefler and hard. This Effence being taken for twenty or thirty Days together, by fuch Women as are Baren, or have a Slipperineis of the Womb, it is laid to caufe them to Conceive, and to retain the Birth after Conception * for that it dries up the too great Humidity, and ftops

the Flux of Humors to the Matrix, and fo Irtrengthens the Womb, as to prevent Abortion, reducing it to a perfect Scare of Health : but the Patient ought as well as to take it inwardly by the Mouth* to 'fie in a Irtong Decoction thereof Bathwife.

XII *TheDeco'ctwnox Infufwn.* This has all the Virtues of the Liquid Juice andEflence, but weaker in its Effecls: however, it may ferve as a Vehicle to convey other Preparations of this Herb in, and may be given from four Ounces to eight Ounces or half a Pint. It makes a good Injection for holtlow Wounds and Ulcers, cleanfes them, makes them breed Hefh, and brings thereto a fpeedy Healing.

XIII. *The Pouder of the Leaves or Root.* ^ It is an excellent Styptick, and ftops Bleeding in any Part it is applied to. Inwardly given from half a Dram to a Dram and half, in the Deco&ion, Infufion, or diftilled Water, or in Red Port Wine, it has all the Virtues of the liquid Juice, Effence, &c- provided it is given Morning and Night for fome confiderable time. Tents may be dipt into the Juice or Infufion, arid then rouled in this Pouder, and fo put into any follow Sore or Ulcer *, by which means, it wonderfully 'drys up all Humidities of the Ulcer, incarnates it, and induces a fpeedy Healing, yea, altho' it be fitulouf, with a Flux of Humors appending-, and abates alfo Inflammations, if any be prefent.

XIV. *The half tun or Ointment.* It is one of the belt of Vullieraries, for it digelts if need be, abfterges or cleanfes, incartiates^ drys and heals, almoft to a Miracle : and in fimple green Wounds or Cuts, it has liich an exquisite Faculty of fpeedy Healing, that it cures it at the firft Intention, confolidating the Lips thereof, without the breeding Matter, or any linger of breaking out again, by liftering-^ny Corru>tion to remain behind. Outwardly applied to^ the Gout, Sciatica, ot other like Pains of the Joints, proceeding from Blows, Over-ftraining, or the like, it gives Eafe, and fpeedily cures them, adding alfo Strength to the Part.

XV. *The Cataplafm.* It is an excellent thing to be prefently applied to a fimple green Wound -, for K, ftops the Afflux of Blood, and conf^lidates the Lips thereof by the firft Intention of Curing. It alio allays Inflammations coming upon the Joints in the Gout, and gives Eafe in the Pain. Applied to a recent fimple Contufion, it prevents the Afflux of Humors ^ difcuffes thole which are prefent, if any be, and fafely retiores the Part.

XVI. *The difilled Water.* Authors fay, that if it is taken continually for twenty Days together, that it cures Barrenneis in Womeo, viz, fiich as cannot Conceive, or fuch as cannot retain the Conception. But doubtlefs the liquid Juice or Effence is much better than this, and therefore either of them may be given in this as a Vehicle, for which it is very proper, and may be given Morning and ^{from four to eight} Ounces/

XVII. *The Spirituous Tmtfure.* Inwardly taken, it warms and comforts the Bowels, ftrengthens the inward Parts, expels Wind, and is an excellent Trautmick, is drying and altringent, and therefore good againit all Fluxes of the Bowels, Over-flowing of the Terms, and other Weakneffes of the Generative Parts. It is good to be ufed Dietetically in the Cure of Wounds, old Sores, running Ulcers, and Fifhla's accompanied with Fluxion of Humors : it has all the Virtues of the Juice and Effence and may be given Morning and Night, from two Ithim\$ ^{or four} in the difilled Water > of R

XVIII. *The Tincture.* It has all the Virtues of the Juice, but is MoreTiaamatick more Stomack, whereby it t*

feftually ftops Vomiting, ftrengthens the Stomach, and caufes a good Appetite and a Irtong Digeftion: but it ftops not Fluxes of the Bowels lo well as fome of the former Preparations ^ but it therefore opens the more, and removes Obftructions of Stomach, Liver, Spleen, and other Bowels. It is a moft excellent thing againft a virulent Gonorrhoea in Men> being taken every Day in all that the Patient drinks, whether Ale, Beer, Wine or Water, *ib* much at a time as to give the Vehicle a pleafing Acidity 9, and it ought to be fo often taken in a Day that the wKble quantity taken may amount to at 'leaf four or five Spoonfuls.

XIX. *The Qify TinUure.* It is a famous thing againft a cold^Gout, and all Pains or Aches proceeding from a cold Caufe in any Part of the Body, being twice a Day anointed upon the Part for fome time. It is an excellent thing alfo againft Bruifes, Cuts or Punctures of the Nerves and Tendons \ for it fuddenly eafes the Pain, and alleviates the Inflammation, and thereby induc^ the Cure, a Plaifter of the Balfam being alfo laid thereon. Inwardly given, it gives Eafe in the Colick, expels Wind * and opens Obftructions of the Reins, Ureters and Bladder, expelling Gravel, Stones and Sand from *thofe* Parts, and cleanfing them from any Tartarous Mucilage lodged therein.

Of LARKS-SPUR,

O R,

LARKS-HEEL.

Called alfo, K N I G H T S-S P U R-

THE Names. It is called in ^j^ ^ nium, but whether it be the Delphi ofemik, is W doubtful: it is alfo called -llo

Sylvefire nterum Matthioli, ^ » £ tirum Diofcoridn, Calcam Flos, ^ nfohdarGal^ Sykefr* Confolida Regalk teregrinarooflore Baulk cm Enghfh, Larh-Spurs ^ f r f l Knights-Spurs % and Monks-Hood. It has no Greek

X Authors make fa Kinds of to Plant, viz. 1. Delphinium ?M)^ five vMgate ^ dinary or Common Larks Heels or Spur*. 2. phiSumvulgareflore ^ ^ ^ Spur. 3. penmu ^ ^ ^ Division of the Leaves, or from the P ^ ^ - S n u r . I Del- three together) S j ^ i f t ^ ^ ^ phnium elan* flare-P ^ ^ of many Colors.

rum, ^ Double upright Larks Spur of many ^ lors, HI 17-

III. The Deferiptions. *The first, or Ordinary or Common Larks Heel or Spur, has a -Rook which PS hard after /£ k run up to Seed', fspreadirt* both abroa end deep', yet penfhes every Tear, raifur^g it felf u- Jually from its own Sowing, as # well as from Jhe SeedJown in the Spring time.* From this Root rife many Branpiies, which fspread much more Qround #ten the others, rather feaning^r bending down to the Ground, than ftandiil£ upright; on which are >> many long green Leaves, finely cut, almoit like >> Fennel Leaves. The Branches end in a long Spike of hollow Flowers, with a long Spur or Heel behind them, (whence the Name)*ery like unto the Flowers of *Hollow-Root*, (before defcribed) and are. of feverai and various Colours, as of a blediff purple Color, or white, or Afh-color, or red, paler or deeper, as alfo party-colored, of two Colors in a Flower. After th^Flowers are paff, (which ii. this Kind abide longer than in the other) long round Cods come forth, containing verf black

IV. *The fecond, or Double Common Larks-JSpur. Of this Common Kind, there is jovte Difference in the flower' althf in nothing else. The Flowers grow TOly upon a Stalk, like the former, but every one of them are^s like three or four fmall Flowers were J^ied toger, with everyone his Spur behind, the ^epelt Flower being outermoft, and as it were containing the reft, which are of a pale rejfor deep Wulh Color. Another of jphe Kind will bear its Flowers with three or four Rows of Leaves in the middle^jnaking a double Flower, with one Spur only behind; and of this Kind there s^with purple, blew, blyfh and white Flowers, as alfo party-colored. And thefe all bear Seed like the Single, where- by they are increafed every ear.*

V. *The third, or Wild Larks-Spur. Its- Root is TM«ch like the former^ whence rife up fmailer and lower Brandos, with /mailer and Shorter Leaves. *nd n^esperfeily or thinly growing upon them, than of the former.* The f W r s likewise are fo large as any of the foregoing, nor ic y growing together: the Cods fike*tfé have imauer beed, and is harder to grow in Gardens

than any of the'Sthers. The molt ufuai Color here- of is a pale reddifh ojblyfh Gblor, yet fometimes they are found both white and'blew, and- fometimes mixt.of blew and blyfh, variably difpofed,-as'Nature fotnetiqps pleafes ^ but thefe are .much more rare.

VI. *The fourth, Spanifh Wild Larks-Spur. It has 9 Root which is Jmall aftd thready, fuddenly pe- rching with the first Cold which overtakes the Plant. It has feverai long anjl 'broad Leaves next the Ground, £ut in on both fides, fomething like t\$ a Scabious leaf, but it is fmooth on the edges, and not indebted beides the Cuts •, it is of £ whitifh green Color, and fomething fmooth and foft in handling. From aniqpg the. Leaves rifes uf a whitifli green Stalk, having, many fmall Leaves upon it, which gro& below, ^nd not divided* branching out into many fmall Stalks or Arms, bearing Flowers like unto the Wild Larks-Spur, but fmall, and "of a bleak blewifh Color 5 which beiffg patf, there comes forth two or three fhjall Cods, joined together, in which is black Seed, and fmall and rounder than any of the former.*

VII. *The "fifth, or Single upright bearing Larks- Spur ofrlany Colors. The Differencr betxoeein this and the third, or Wild Larks-Spur aforegoing, is, that the Leaves of this are not fully fo green, *nor fo large: the Stalks grow upright to the-Height of a /Han, and fometimes higher, having fome Branches thereon, but fewer tWan the former, and fari&wg Bkewife upright, and not leaningJown ds the others^ The tops of the Stalks are better ftored with Flow- ers than the other, being fometimes two Feet long, and above, of the fame F#hion, but not altogether fo large, and of feverai and more various Colors, js white, pile, blufli, red, deeper aftd paler, a(h- colored, purple or violet, and of an'over-w^rri blewifli purpie, or Iron Color. For all thefe we have fimple without any Mttxuce or "Spot. We have alfo other Jfrts among the fimple Colors, which rife from the fame Seed, and will have*

Flowers whhch will) e half white, and half bluff. or purple ., or onp Leaf whjift, and another bluff or purpfe, or elfe variably rfiixt and spotted. The Seed and Seed-VefTels are like thofe of the three firft Kijyls., but larger and harder.

VIII. The fixth, or Double upright La-rks-Spur of many Colors. Thefe Double Larks-Spurs cannot be known fromt & Single 9f the fame K'utd juil ajo're defcried^ until they come'towards, i'low'ering ., fyx there appear many Flowers upon the Stalks, in the fame manner, and of as many Colors alrfrcil as the Single, except the party-colored, which iiland like little Double Rojas, laid or fpread opbn, as the Reft Columbine, without any S p ^ or Heels behind them very delightf. ro behold, Jonfifting of many final Leaves growing together, wjiich alter they are fallen, three or four Small Cods fee together come ur w, their places, wherein is contained here- and- there (tor all are not full of Seed as the Single Kinds black beed, . like unto all the reft, but fmaller, whic being town., wjU bring Plants, which will Bear both angle and double Flowers again. 'And it often happens, that it variably alters in Colors from its owi bowing, for none of them hpld Coftantly i* OWL Color, (io tar as has yet been obf erved) but change into others as Nature, plea fes.

Oh, permil on. This laft Plafit Mr. Rea., in his Leres Chap. io. fays is only worth the prefer- yig i and he defcribes it thus. Double upright Laiks-Heel, from a Root which perfies in Winter J ends forth fmall jagged Leaves^ tall upright 'Stalks, branched at lop, and bearing many fine double l'loiv- ees, in Form like to the RoTe Columbine, in feveral plants, of as many feveral entill Colors, as BhSp, purple, Afh, White, pale Bluff, Rofe-color, thefe are the moft ufual Colors, yet fometimes fome ttootsy wH bring Flowers which are ftriped, and va- Tiege wiji blew and white, and often ivittrfome Reaves, blew, and othfts purple; after the Flowers J? W come-forth fmall horned Pods, which con- ram beed black and round, and which being lowed, S f i s s with Cl p # #

of Great eft. Wild Kinds, grow among Corn in many Coun Sea but tor B... in feveral Fields of our The Sp'm'(h Kind was brought to us... you Qie and Single have been common for many jears in all Counties of England -, but the tall Upright fhgle Kinds have b'en made Natives but of late Years : and of them all, the Double Kinds are the moft rare.

XL The Times. The Spanifk Kind flowers very late, To that many times in England th§ Winter takes it before it can give ripe Seed. The other Kinds flower in the Summer Months only. The "Double Kinds, as well the Upright, as the Wild or Common^ are very choice and tender, many times not yielding good Seed. The fixth Kind Mowers according to the time of lowing it, fogger or later, in July or Augufi ^ ajid many times Plants come up of them- felves from the S^ds fallen out of the Pods before Winte^ which have continued and born fair double Flowers in June following, which have brought a- gain much good Seed, ^e ufual time to Sovr thefe Seeds in, is the beginning of April%: but to set good Seed^ (& which is a chief Consideration Plants) you ought to fow them as foo^as they l... and o... Ufft* %s, That the Flowers help the Rednefs & the Eyes* Heat of the Body, Coughs, Strangury, Stoppage of Utine by Gravel and Sand, ^nd give tafte in the Sciatica.

Summers thofe of the Sprig will feed reafonably well.

Yil Tellow Larks-Heels^ calleil Delphinium he* teum, which is Najlurtiu?OIndicum, Mr. Rea^ in his Ceres, puts into the Claffis of Larks-Spurs, and defcribes them in the following Words. The Root, which perfies in Winter, fends, forth many fpreading long trailing hraiches, four or five Feet long, ivfrieb unlefs Juppoted, lye on the Ground, and. take up much Room, ^he Leaves are fsmooth and round -, the Flowers of a fair yellow^ Color, in Falhion-lbmething like to a Single Larks-Heel, but the Leaves itand plainer, and fomc of them are [freaked with red. The Flower is fo well known, that it i\$ needlefs to be over-curious in defcribing V for few fljirdens of any Note lfe without it. The feeds are rough and uneven, falling of them- felves, which are gathered off the Groilnd and pre- served.

XIII. Vlacc and Time. They were fir ft brought jy Mon<irdt# from the Weft Indies ^ now they grow n almoft all oui (3ardens ikroughout England. It ilowers in July, and the flant optinues flowering cill it is check't by Frofts. The Seed is fown in A- pril," jnd if ic is ripe and good, will be apt enough co come up : and the trailing Branches, as they grow^ may be laid upon a Pack-thread faftned upon Sticks, into v\hat Forni you pleafe. 5 ox they may be bound-untq Rods Ituck in the E^rth, that they may not lye upon the Ground. But we (hall lay no more of this Indian Plant, Hecaule-we have already difcourfed of it in a Chapter by it felf, viz. Chap. 1 #4. foregoing.

XIV. Tftthdie Mr. Rea, in the place cited, adds another iMrks-Spur, which is Balfamina fcemina^ and defcribes it ia thefe Words. It has a Root which dies at ihéjirft approach of Winter. The Stalks arc. thick* ani reddifh, tike Purflane, bunched, and Jrt with Leaves, like thofe of the Peach-Tree. About the Stalk, from tlg? mjkle upwards, come the Flowers on ihort Foot-ftalks, which are of tw... three Shadows of Purples, with Spurs behind, Single Larks-Heels, but bending downwards. Flowers are ficceeded by round rough Heads, poin- AA IV the end, in which are contained fmall round... forth in July Seed in Eng- luh. The flant is tender, and muft be fowea in a hot Bed, and femoved int^ good Ground, ana carefully attended with Watering in the Heat ot Summer, elfe, i, will quickly peritv -Of this we have alfo wrote before, in a Chapter by i ^ ^ Chap. 22. Se3\, where there is a Difcourfe, oi, at large, fo that we (hall fay no more of it m w place.

XV. As to the Qualities, Sfeci/kati M. Pr^ twns, and Virtues of Larks-Spur, thofe & c firft rianj^ which are properly fo called, Authors Tiave ^ n o - thing. Hpt Gerard fays, they are temperate and warm # Nature : and he fays, that the beed oi Larks-Spur drank, (I foppofe he means it to be in Pouder) is good againft the Stinging of Scorpions: and that forfe make it to be one of the ^inds of Confounds or Cc^fftes.

XVI. It is alfo to be noted, That tho' ftf e given to Larks-Spur die Name of Mo^ yet it is not rltft poyfolous Monks- Hood ^ * > W, of which we fully difcourfed in its place, in Chap. 353- foregoing.

XVII flowers of Larh-opur. That three or more of the Pibers f teri a good againft Pains and Stitches of the Side. Ad - Ufft* %s, That the Flowers help the Rednefs & the Eyes* Heat of the Body, Coughs, Strangury, Stoppage of Utine by Gravel and Sand, ^nd give tafte in the Sciatica.

rally in in YruJTe •

Kingdom of *Gran ado* : but with us they ail of them gro^op-nly in our Gardens -, of which, the first • is by much the more common.

• IX. *The Times.* They all flower in *England* about the end of *June*, or beginning of *July* : but *Clufius* says, that he found the fifth about *Malam Spain* to flower in *February* •, and about *Murcia* to flower in *March*, yet in these our colder Climates, it flowers not until *June* at the soonest; or in the Month of *July*.

X. *The Qualities.* *Lavender* is hot and dry in the third Degree: it is Absterfive, ^peririve, Arfringent, Diuicflive, Diuretick and Incifive. It is Cephalick, Neujptick, Sto'matick, Cordial, Nephritick, and flyterick.- It is Alexipharmick, Analeptick, and Antiparalitick, being of very subtil and thff parts.

XI. *The Specification.* It is a peculiar thing for the Cure of Convulsions, Epilepsies, Palfies, Tremblings, Vertigo's, Lethargies, Swoonings, Hyfterick Fits, and other like Diseases of the Head, Brain, Nerves and Womb.

XII. *The Preparations.* You may have herefrom, 1. A liquid Juice. 2. An Ejjence. 3. An Infusion. 4. A Pouder. 5. A Water distilled. 6. A Spirit uoits Tin fture. 7. A Tincture. 8. An Oily Tincture. 9. A Spirit. 10. An Oil distilled. 11. Powers. 12. An Emir.

The Virtues.

• XIII. *The liquid Juice.* It is of good Use against Pains of the Head, and other Diseases of that Part, as also of the Brain and Nerves^ proceeding from Cold and Moisture, or the Afflux of cold Humors, as the Apoplexy, Convulsions, Cramps, Cephalaca, Epilepsy, tainting, Lethargy, Pally, Tremblings, Vertigo, and other like Disturbances. It is good against Swooning, it strengthens the Stomach, opens Obstructions of the Spleen, provokes the Terms, facilitates the Birth, and expels the dead Child and After-birth. Dose one, two or three Spoonfuls in a Glass of Wine.

• XIV. *The Ejjence.* It has all the Virtues of the liquid Juice •, besides which, gargled in the Mouth, it eases the Tooth-ach proceeding from a cold Cause, provokes Urine, and gives Ease in the Colick : it prevails against Palpitation, and Passions of the Heart, Strangling, Vapors and Suffocation of the Mother. Dose one or two Spoonfuls in a Glass of Wine, or of the distilled Water.

XV. *The Infusion in Wine.* It has all the Virtues of the liquid Juice and Effence^ helps the Strangury, and Scalding of Urine, expels Wind, and eases the Gripping of the Guts, being given inwardly from two to six Ounces, according to Age and Extremity of the Disease. But it is to be noted, that tho' this Infusion* may be made of the green Leaves, yet it is much more powerful being made of the spikes of Flowers, which is most usual.

XVI. *The Pouder.* It strengthens the Stomach, expels Wind, and is good against the Colick. Outwardly applied to old running Sores and Ulcers, it dries up the Humidity, repels the Virulency and Putridity, and disposes them to healing : where note, That it ought to be made of the spiked Heads of Flowers. Mixed with Pouder of *Euphorbium* it is good to scald fowl and corrupted Bones. Given to one Dram in White Port Wine to Women in Travel, it facilitates the Birth, and expels the Secundine.

XVII. *The distilled Water.* This may be made of Leaves and Flowers together. It has the Virtues of the Juice, Effence and Infusion, but in a much lower degree, so that it is to be used in a greater quantity, as from three to six Ounces, a little dul-

ced with double quantity of Water; * but; it is commonly used as a Vehicle to convey into the Stomach the other Parts of this Herb. Two Spoonfuls thereof do help such as have lost their Speech or Voice by Convulsions, Lethargies, or other Aife, restoring it them again. It helps also the Tremblings and Passions of the Heart, fainting and swooning Fit^ not only drunk; but ever applied to the Temples, or to the Nostrils to melt unto. That which is made of the Flowers alone, is much the best.

XVIII. *The Spirituous Tincture.* It is made of the spiked Leaves of Flowers, as are also all the following Preparations > and is a noble Cephalick, Neurotick, and Stomachic. It very much strengthens the Head, Brain and Nerves, and rids all Diseases thereof proceeding from Cold and Moisture of those Parts. It gives Ease in an inveterate old Head-ach, called *Cephalgia* •, and in a half Head-ach, called the *Megrin* : it strengthens the Stomach to a Miracle, is good, against Coldness, and Wateriness thereof Wind and Over-turnings of the Stomach, fainting and swooning Fits, Sickness of the Heart and indeed all those Diseases for which the Juice, Infusion, and distilled Water are prescribed. Dose from one Dram to three or more alone, if dulcified : or otherwise mixed with some generous Wine, or with a fit quantity of the distilled Water.

XIX. *The Acid Tincture.* This is a great Stomachic, and very fit for a hot Stomach, because by reason of the Acidity it allays the Heat thereof, acuates it, strengthens it, and causes a singular good Appetite and Digestion 5 suppresses Vapors as also a Wat us, or Hypochondriack Melancholly, and Fits of the Mother. It prevails against the Scurvy in a cold and moist Habit of Body, and all the Symptoms of that pernicious Disease •, carrying off the Morbick Matter or Galle by Urine, which it causes a plentiful Evacuation of • and therefore is good against Stones, Gravel, Sand and Tartarous Matter or Slime in the Reins, Ureters or Bladder. It is to be taken daily, in all that the Patient drinks, whether Ale, Beer or Wine, so much at a time as to give it a pleasing Acidity. • Outwardly bathed upon places affected with the Gout, it gives Ease in the Pain, and in a short time cures it.

XX. *The Oily Tincture.* It is powerful against Palfies, being anointed upon the *Spm dorji* according to Conjugations of Nerves relieving the Parts affected, as also upon the Paralytick Part itself: it prevails against Convulsions, a Catalepsis, Cramps, Lethargies, Falling-sickness, Trembling, Vertigo, and other Disturbances of the Nerves, being anointed upon the grieved places, and also taken inwardly from ten to thirty Drops in any proper Vehicle ; and so given Morning and Night, it is good against the Stone, Gravel, Sand, and any lararous Mucilage in the Urinary Parts: it powerfully provokes Urine, gives Ease in the Strangury, and takes away the Pain, Heat and Scalding thereof: outwardly, it is used to cure Hurts and Punctures of the Nerves and Tendons, to disperse Flatulencies, and ease Pains of the Joints and other Parts, proceeding from Cold and Moisture.

XXI. *The Spirit.* It is one of the greatest of Vegetable Cephalicks and Cordials: it comforts the Head/Brain, Nerves and Womb, suppresses Vapors, and relieves Hyfterick fits. It powerfully prevails against Palpitation of the Heart, Sickness of the Heart, Fainting and Swooning, and all other Distempers of that Part, It revives the Spirits, cheers the Heart, and strengthens all the Faculties of the Body : it is prevalent against a fevere Cold, and cures a Lethargy in a short time.- It may be taken two or three times

times a Day, or in a Paroxyfm, either alone, if allayed, and dulcified with fine white Sugar, or mixt with any prope Vehicle. The Patient troubled with any of the aforefaid Difeafes, fhall not take it in vain, efppecially fuch as are Paralytick. Dofe from one Dram to two or three Dams or more, according as the Age of the Patient will admit, and Extremity of the Difeafe may require.

XXIII. *The drilled Oil.* It has all the Virtues of the Juice, Effence, Infufion, Tinctures and Spirit, and almolt an hundred times more powerful than them all, fo that the Virtues hereof need not now be again repeated in vain : but this in particular, it is one of the greateft Antiparaly ticks, Antepileptick and Anttffparmaticks in the World, and, befides, Being given ro Women in Travel, it facilitates ttre Birth, and expels the After-birth, and gives Eafe in After-pains, beyond any other Medicine I know in the World. The Dofe is from four Drops to twelve, sixteen or twenty, (in Extremity) put it into the Wine, diftilled Water, or other fit Vehiculum, and fo give it the Patient to drink, repeating the Dofe as oft as you fee convenient.

XXIV. *The Powers.* This Preparation has all the Virtues of the Oil aforegoing, and may be given in the iame Vehicle : but as it is a more diluted Subtance, it may be given in a much larger quantity, viz. from half a Dram to two Drams or more, as the Exigency may require. It is very fubtil and penetrative, and pierces more than the Oil does. Outwardly applied, it is admirable againft the Sciatica, as alfo againft the Gout from a cold Caufe : and is good againft a Lethargy, being bathed upon the Forehead and Temples, fnuuffed up the Noltrils, and taken alfo inwardly, as is before dire&ed.

XXV. *The Elixir.* This is the Powers elixirated, has all the Virtues of the Powers exalted, and fo operates in a lefs Dofe, vizt- from a Scruple to a Dram, or from twenty Drops to fixty Drops, which may be given Morning, Noon and Night in fuch proper Vehicle as the Phyfician fhall affign. It is peculiarly commended againft Palfies, and Difeafes of the Womb, as Suffocation, as alfo the Epilepfy in younger Perfons. It gives Eafe in and cures the Strangury, inwardly Sken, and prevails againft the Colick even by bathing the outward Parts therewith. An Ounce of the Elixir being mixed with fix Ounces of the dittilled Water, makes an excellent Lotion for the Head in Pains thereof, as aifo in Lethargies, and to ftrengthen the fame.

CHAP. CCCCXXIV.

Of LAVENDER-COTTON,

OR,

SANTOLINE.

I. *Abrotonon Theleia* : in Latin *Chamacypariffus*, it is *tompna?mina*, and *Santolina*, and in English *Lavender-Cotton*, and *Santoline*. The Authors make nine or ten Kinds of this Plant, we fhall be contented with li* of them, of our Plantations beyond Sea, viz. *Abrotonum*

femina vulgare, *Santolina communi** *Anguillara* ^ *Crefpolina C&falpini* >, *Qian&cypariffus Herba Fljijij* ^ Our Common Garden Lavender-Cotton. ^ 2. *Abrotonum femina magnum* v *Abrotonum femina j'ecundum Clujij* * *Abrotonum fpnina foliis magis viridibits Camefarij* -, *Folium aliuid Columi* * -, Great Lavender-Cotton. ., * 3. *Abrotonum fminna narbonenfe magno-jloYe* -, *Sdntonicum niajm Qrdi*; *Abfintbium marium primum Tabernamontani* \ *Scripbium verum Diofcoridis* ^ according to *Pena* and *Lobel* ^ who fays it has the Form of *Abrotonum femina* \ > *Santolimi prima Dodonxi* -, *Abrotonum femina tertium Qufij Narbonenfe* * ^ - *Polij alt era Species major Cohiinn* * ^ *Abrotonum f&wina fiore major* * *Baubini* -, French Lavender-Cotton. 4. *Abrotonum femind Erica foliis Baubini* \$ *Santolina tertia Dodon&i*; *Unguentaria hutetianorum* ^ *Cham&cyp&rijus Dalech&mpy* \ (as *Baubine* thinks) Heath-leaved Lavender-Cotton, Fine leaved Lavender-Cotton. 5. *Abrotonum femina foliis Rofemariini majm* 9 * *minus Baubini* -, *ii-brotonum femina quartum Clufij*, (which is his firft Spanifh Kind) *Abrotonum femina Rofemariini foliis minus Baubini* ^ (which is the leffer Species) and is the *Second Spanifh Abrotonum femina Clufij*. *Rofemary-leaved Lavender-Cotton*, both Greater and Leffer. 6. *Abrotonum femina viridk minor Baubini* ^ (fo called in refpect to the fecond green Kind above-named) and is the *third Spanifh of Qufws*, called, *Abrotonum femina SaLimantencifis* ^ Small green Lavender-Cotton.

III. The Defcriptions. *Tb\$ firfc or Our Common Garden Lavender-Cotton. It has a Root which is woody, andfpreads it felf under Ground with feveral hard fibres.* From this Root rife up feveral woody, brittle, hoary Branches, on which grow many long, four-fquare, hoary, or whitifh Leaves, dented about the edges. At the tops of the Branches grow up naked Stalks, bearing every one a large yellow Head or Flower, like unto *Tanfy* or *Maudlin* ^ but greater, of a Gold-yellow Color ^ abiding a long time upon the Stalks, if kept but very dry ; after which comes fmal dark-colored Seed. The whole Plant is of a very ftrong fweet Smell, but not unpleafant, nor much unlike *Southernwood*.

IV. *The fecond, or Great Lavender-Cotton. It ha* a Root which fpreads it felf in the Ground, with hard woody Branches, like the other, and endures the Extremity of Winter, a* well of the other doth.* This is very like to the former *Ordinary Garden Kind*, but >-not bufhing out fo thick with Stalks, growing to have a great height, and a thick Stem or Stalk, not fet with fo many Branches thereon^ but fomewhat bigger than the other, on which grow fourfquare dented Leaves, like thereunto, but fomewhat larger, thicker and greener-, the Flowers ftand in the fame manner, every one upon its long Stalk, being as yellow and large as the former, and which being paff away give the like Seed. The fmell of the whole Plant and every part thereof is ftrong, but not fo pleafant to a great many as the other* this will be propagated by flipping as well as the former.

V. *The third, or French Lavender-Cotton. It bat a Root which is as great and a* woody as either of the aforegoing, and fpreads as much in the Ground** This Plant grows not to be fo high as % firft or *Common Garden Kind*, Bbt has many woody, fhort, little Branches, not above half a Yard high, varioufly fpread into many other fmall ones, on which are Leaves like the others, but fomewhat fmaller, and more fperfedly or thinly fet on the Branches, of a greenifh white Color, neither fo green as the laft or lecond, nor fully fo white as the firft or *Common Kind*, of a ftrong Smell, fomewhat like to our firft.

The

The Flowers stand upon the tops of the smaller Sprigs or Stems, each bearing one alone by itself, upon a bare or naked Stalk, void of Leaves for a good space, which are of a paler yellow Color than the others, and much larger, and giving Seed of somewhat a darker Color.

VI. *The fourth, or Heath-leaved Lavender-Cotton.* It has a Root much like for Form and Substance to the others: but the Plant itself grows not so great or high as the *trench Kind*, does, but has many short woody Branches, on which do perfectly grow smaller, shorter and finer whitish green Leaves, very like to the Leaves of our *Common Heath*. The Flowers are yellow standing in like manner as all the former do. And the whole Herb has a very pleasing (but not strong) Smell to commend it, somewhat refinous and not very faintish or weak.

VII. *The fifth, or Kofemary-leaved Lavender-Cotton* both Greater and Lesser. The Greater Kind has a woody spreading Root, like to the others foregoing; and it shoots forth from this Root many slender hoary Stalks, something above a Foot long, about which grow many very narrow, small and flat leaves, like unto the Leaves of *Rojevairy*, which while they are young, are of a more hoary white, and have but a small Shew of denting about the edges, but when they are grown old, they are more green, and the denting about the edges is more apparent, of a sweet Smell and bitter Taste. From these Stalks come forth several short Stems, with very few Leaves on them, on the tops of which stand several yellow Flowers, like to *Common Lavender-Cotton*, but much larger, which die away to the main Walks every Year, after perfecting the seed as the others do. The *Lesser Rosemary-leaved* differs not from the *Greater* in its Leaves and Mowers, but in their Smallness, -this being lower and smaller in every part, which is as of a place, its being more and more like to the *Lesser* than the *Greater* but it has been found in the same place with the former

or *Greater Kind*, and the Seed being found in the same places, that it still retains the Form and Magnitude it had, as growing in its natural place.

VIII. *The fixth, or Small green" Lavender-Cotton.* The Root is woody like the former, and replenished with small Fibres. This Plant is very like to the *last Small Kind*, but that it grows somewhat greater and higher, having green, and not hoary Stalks at all as the Leaves also are, being a little longer, and as bitter in Taste as the others; but not of so sweet a Smell, having rather an Oily Scent. The Flowers grow in the same manner upon slender Stalks, and of the same Fashion, but of a paler yellow Color.

IX. *The Places.* The first grows naturally in *Germany*. The second in the *Low-Countries*. The third about *Narbone in France*. The fourth and fifth *Clufius* found growing about *Salamanca in Spain** The sixth is unknown, as in what place it is a Native: but they all grow well with us, being nursed up in Gardens.

X. *The Times.* They all of them flower in *July* and *August*, and the Seed is ripe in some little time after.

XI. *The Vitalities.* *Lavender-Cotton*, but more especially the Flowers and Seed, are hot and dry in the third Degree. It is Astringent, Dificuffive, Neurotick, Hyfterick, and Alexipharmick.

* XII. *The Specification.* It stops the Whites, refills the Poybn of Serpents and other Venomous Creatures, kills Worms in Children, and cures Itch and Scabs of all Parts in whomsoever. *Dioscorides* and so all other Writers generally after him, say, that the Virtues of *Lavender-Cotton*, and of *Southernwood*, are the same, and of like Effects, and that the Medicines made from this Plant are applied, all the Diseases to which *Southernwood* is appropriate.

XIII. *The Preparations.* You may make all the same Preparations hereof as we teach you to make from *Southernwood*, which see hereafter in its proper Chapter. But these following Preparations are more particular and special, viz. 1. A Powder of the dried Leaves. 2. An Infusion of the Leaves. 3. A Powder of the Seed. 4. A Spirituous Tincture of the dried Leaves or Seed.

The Virtues.

XIV. *The Powder of the Seed.* It kills Worms, (as will also the green Seed, being bruised and drank.) It is thought to be equal, if not superior to our *Usual or Common Wormfeed*, and has the same Virtues against Worms, avoiding them with greater Force. Dose from half a Dram to a Dram in the Morning fasting, and at Night going to Bed, in any proper Vehicle. It is good also against the Bittings of Serpents, Mad Dogs, or any other Venomous Creatures, being outwardly given as afore said, and applied Plutice-wise to the Part wounded.

XV. *The Powder of the Leaves.* *Matthiolus* says, that being given to half a Dram (it may be given to a Dram) in *Featherfew* Water, every Morning fasting, for ten Days at least together, and afterwards every other Day, for some time. It is a very profitable Medicine to stop the Whites in Women, and to cure them. *Pliny* says it is also good against the Poyson of all Venomous Serpents and Scorpions, being taken in Wine. It kills Worms also, and has all the Virtues of the Seed, but not altogether so powerful, and therefore may very well be used, when the Seed cannot be gotten, but in somewhat a greater Dose.

XVI. *The*

XVI. *The Infufwn of the Leaves in Wine.* It has all the Virtues of the Pouder of Seeds and Leaves, but not full out fo effe&uai as the Pouder in Subftance, and may be given from three Ounces to fix, every Night going to Bed, and every Morning tailing/ *Clufius* lays,* thal|in *Spain* ufe the Inf ifion or Decoffion thereof to cure all forts of Itch and Scabs in whomfoever, but he advifes, that there fhould be Caution ufed in giving it. N This is certain, that ir* all the Difeafes afore-named, for which thefe Plants may be proper, it will be yet more effectual, that the Pouder of Leaves or Seed be given in the Infufion now fpoken of.

XVII. *The Spirituous Tinlure of the dried Leaves or Seed.* This Preparation has all the Virtues of the former, and is much better to be given than they, becaufe it is given in a fmaller Dofe, and in fome other proper Vehiote more pleafent, as in *Angelica*, or *Penny-Royal*, or *Mint-Waters*, or in *Rclt Port Wine*, or Tome other proper Afringent Wine. It itrengthens the Womb, and all thole Parts belonging to Gen&atidn, powerfully refills Vapors, and if prudently given, cures Hylick Fits, tho' vehement and of long Handing. But in many Cafes, in the Exhibition of Medicaments, the Judgment of a Learned and Experienced Phyfician ought to be taken along with them : for fuch a one, by his difcreet and prudent Adminiftratton, fhali do Wonders with that Medicament, with which an unlearned and unskilful Man can do nothing at all. Theit is a great Matter in the true Dofe of a Medicine, according to Age, Strength, Temperature, Sex, and Stubbornnefs of the Difeafe. There is fomething in thg Choice of the Preparation to the intended Purpbe. There is more yet to be obferved as to the right time of Adminiftring \$ and a great deal as to the Continuance of it, or Alteration of the fame, a\$'the Stomach, or Nature, and State of 4*e Difeafe is found to change or alter, OV.

LEAD-WORT, fee Scar-Wort, Chap.
LAVENDER^SEA, fee Limonade, Chap.

C H A P. CCCCXXV.

Of L A U R E L Dwarf or Ground.

I T U I Names. It is called in *Greek*, X^AM-X <AL?w: in *Latine*, *Chanucdaphn^ Chamtdaphne vera Diofcorid^ Laureola, Laurus Alexandrina alt era Matth'wli; Laurus Alexandrina Colutti**> Lugdunegfis, Tabern^nantani, Clufij, & Bauh^jni s Rufco affink alt era Klafalpini : . in Englifli, wound or Dwarf Laurel.*

II. *The Kinds.* It is a fingular Plant of the Kind, tho' fome would make it to be a fecond Ibrt of Laurel of^o *Alexandria*, which I can no ways believe it to be.

III. *The Defcription.* \ has hard Root, and yfibrqw -, from whence rif^{es up} one Stem or Stalk, fometimes two or more, which feem to be covered with a f^{oft} hereol* oTM above another, on the^{leno^} the l^{her} hein^S larger than the^{aves} are lng and narrow, qlfo Harp o a y^{mmon} Ba^y L^{TMf} hav^{»e} Color on the upper, e, and paler underneath, full of Ribs or Veins not much unlike to *Uorfe-tongue*, faving that;

they are without an^fecond fmall Leaf or Tongue., fuch as *Uorfe-tQngue^*, but as hard in handling. This has Flowers, and red Berries in' the middle, of the Leaf, (and upon fo floriort a Stalk, that it feetra to have none) growing out of the middle Rib-, but thefe grow, on the under fide for the moft part, which may make it to be thought a 'Species of the *Laurus Alexandrina*, tut indeed is not. '

IV. *The Places.* It grows naturally on feveral Hills in *Italy*, which for its Rarity was brought into thejr Gardens -, and by the means O\$ *John Trade^cant*, it w^{as} brought into our Country and Climate where it touriflies very well.

V. *The Times.* It |pwers in *June*, and the Berries are ripe in *September*, in its native Country * but here in *England* its Fruit comes not to Perfe' ftion.

VI. *The Vitalities.* It is hot and dry in the end of the fecond Degree \$ Aperitive, Vulnerary, and Dfuretick.

VII. *The Specification.* It eafes gthe Belly-ach, powerfully provokes Urine and the Courfes, and is good againft Heart-burnings.

VIII. *The Preparations.* You may have there** from. 1. A Decoclion or Infufidn of Herb and Roots in Wine. 2. A Pouder of the Herb and RootSi 3^ A Bath or Fumigation.

The Virtues.

IX. *The Infufwn or Decoffion of Qcrh or Roots irt Wine.* It powerfully provokes Urine and the Terms in Women, cleanfes the Womb of Feculencies, and the Reins and Bladder of Sand or Gravel, Mucilaginous or Tartarous Matter, and gives Eafe in the Strangury. *Diofcorides* fays it haitens and facilitates the Birth of Women in Labor: and it is of fingular Ufe to dry up the Moifture of old running Sores and Ulcers, rho' rebellious and inveterate, it cleanfes them, and induces a fpeedy Healing, and this by wafhing tfe Sores or Ulcers herewith twic6 a Day. Dofe from three Ounces to fix twice a Day, viz. Morning and Evening. The Head being alfo bathed herewith, it is iaid tQ eafc the Pain thereof.

and' Pepper. It is a very grateful thing to the Stomach and Bowels. We find in Scripture, in ancient Times, as in the time of the Children of *IfræPs* being in *Egypt*, and probably a long time before, 'thole *Eafiern* Nations fed much upon *Leeks*, and *Omens*, and *Garljk*, which poffibly they might either eat alone, or baked, or roasted, or boiled, in Water or in Broth with Ftefh *, and this lame manneF of Feeding; on them, i'eems» be in all Nations alike : in *Mujcovia* and *Ruffia* they are commonly eaten, and the *Türks* (as *Bellonius*.fays) have them ferved up in their Diihes at Table, yea, to their Greatel' Lords or Baffa's: They are eaten alfo much in *Spain*, and thro*¹ all the *Wefl Indies*, in all *ihz.Spanift*). *Trench*, *Dutch* and *Engliffh* Plantations. We ii: *Englad* likewife univerfially eat them, and they are a great and general Feeding 'in' *Wales*, even among the Gentry there ^ and in *Lenç-time* we almoft every where*make Pottage of them, andtt is a profitable Food for poor People in hard Times.

XVIII. *The diftilled Water*. It is a fingular Diu-retick, good againft Gravel, Sand, Mucilaginous and Tartarous Matter in the Reins, Ureters and Bladder. It has the Virtues -of the Juice, Htence and 'Intuffion -, but being much weaker, is to be given in * greater quantity, and may ferve as a general "Vehicle to give other Preparations of *Leeks* in. Dole from four to eight Odices. •

XIX. *The Spirit*. It is good to" free the *Thorax oi*, Stomach, Lungs, • *EV*. from putrid or rotten Ftegm, and prevails againft Coughs, Colds, Catarrhs, or Diiiillations of Kheum, by which many have been brought into a Confumption. It invigorates the Infruments of Generation, warms and comforts the Womb, provokes Urine and the Terms, and is profitable againft Barrennefs in both Sexes. Dofe two or three Drams, two or three times a D^y. •

XX. *The Spirituous Tintturc*. It has all the Virtues of the Spirit, but much more powerful to all the Intentions, being given from one Dram to three in any convenient Vehicle, two, three or four times a Day, but chiefly every Morning fafting, and every Night going to Be*

XXI. *The Acid Tintture*. It attenuates, cuts and incides tough Flegm which sticks faft in the *Bronchia* of the Lungs, and frees them and the Parts } adjacent from putrid or rotten Humors lodged there- } in, which is otherwife difficult & be avoided. It } reftores tfeir Voice w-iich has been lolVthrey lloari- } nef 5 and after an admirable manner llrengthens the Stomach and Bowels : and cures iuch as have been } oyfoned, or forfeited by eating of Mufhromes. } ofe fo many Drops as to make the Wine or other Vehicle pleaiandy acid.

XXII. *The Oily Tincture*. It is good againft Lamenefs and Weaknefs of the Nerves, Joints and Limbs, and therefore is of fingular life againft the Palfy, and Gout from a cold Caqfe, being anointed upon the Parts affe&ed. Inwardly taken from eight to twenty Drops, being firft dropt into White Sugar, and mixed well with it, and fo given in White Port Wine, or in the diftilled Water, or fottie other proper Vehicle, it gives prefent Eafe in the Strangury, opens Obftru&ions of the Urinary Parts, and expels Gravel, Sand, Mucilage or Tartarous and Slimy Matter afterfting thofe Parts. Given to a Woman in Labor, it facilitates the Birth, brings away the After-birth, and caufes a due Cleanfing.

XXIII. The Pouders of the Seed. *Take Leek-Seed threeDrams, Mir tie-Berries twoDrams, make each into a Jine louder, and mix them*. This Mixture given from one Dram to two in Red Port, or r * » » » » » * W^e, or other proper Vehicle, will ftop any Spitting of Blood, thoMthas been of W Continuance. It is fiid, dfit if thefe Ingrediënt!

be put into Wine, they will keep it from Sorweing and if it be already Sower; it will amend the fame- Thisfouder will cut grofs and tough Humors, and cure Fluxes of the Bowels, yea, the Bloody-flux it felf.

XXtV. *The Cat'aplafm*. The Roots and Blades being boiled fofrin Water, or Milk, or Wine, and fo mad| into a Pultice, and applied to fwoln *Ha-worrhoids* or Piles', it 'difcuffes the Tumor, gives Eafe in the Pain, and in a fhort time after cures them- If the Cataplafm is made of the raw Roots, by beating them in a Mortar, adding a few-Crumbs of White Bread, as you fee occafion, aiad be applied id any place bitten by a Mad Dog, Viper, Rattle-Snake, or other Venomous Creature, it infallibly »-ittra&s to, and draws out all the Poyfon 5 and' this it does by reafon of its vehement attractive Force, by which means it per^Sly frees the Patient from all manner of Danger.

C H# A P. CCCCXXVIL

Of L E N T I L S

I. qp *H E Names*. This Plant is called in *Arabic^* X *Hades* : in *Greek*, **&ic and *a^9 *Hhacos* and *Pbace* : in *Latine^* *Lens* and *Lenticula* : i" *Efighj*, *Lentil* and *Lentils*.

II. *The Kinds*. There are three Kinds hereof, viz. 1. *Lens major*, The greater Lentil. 2. *Lens minor*, The lefter Lentil 3. *Lens maculata*, The fpottec Lentil.

III. The Defections. *The firft, or Greater Lentil*, has a Root which is fibrous^ and perijhes every ?£<> From this Root rife up feveral#weak Branches, fomewhat hard, about two Feet long, from w^ n^ C^

ftioot forth at feveral fikces long Stalks of finall winged Leaves, that is, Hiving many fmaller Leave's on each fide of a middle Rib, without any odd one at the end ^ for the middle Rib of each Stalk' oi Leaves, ends in a final Clafper. The Flowers are fmall, and rife up from between the Leaves and the Stalks, two for the raoft part at the end of a long Foot-ftalk, of a fad purplifti Color, fomewhat like to tholè of *Vetches* -, after which come finall jh<5rr; and fomewhat flat Cods, within which are contained two or three flat, round, fsmooth Seed, of a pale yellowifh Affi-color.

IV. *The fecond, or Leflèr Lentil.* It has a [mall flenier fibrous Root, perfifing every Tegr : from whence 'proceed fmall, tender and pliant Branches*; a Foit and half high, on which do... grow winged Leaves, like the former, divided or confilting oi' other fmaller Leaves, growing ailope from both fide' of the Rib or middle Stalk, narrow, and irony in number, like to thofe of *Tares*, or thofe of the *Wil Vetch*, faving that they are narrower and lefler, a' ending at the middle Rib with fome clalping Teidrel, wherewith it takes hold of fuch things as'are near to i^ Fjpm among thefe come foj rh "finai frownifh Flowers, mixed with Whire, which tun Into finall flat Cods, containing little fiat brow Seed, and fometimes white. *Parkinfon* lays, that this is lefler in Stalks, Leav* and Seed ; the Flowers are more pale, and the Seed in the Cods is whiter, in which confifts the whole Difference.

V. *The third, or*Spotted Lentil* This differs Tittle or nothing from the lajjjk but in the Seed, which in this flam >K blackijh, and spotted, with blacker Spots.

VI. *The Places.* The twofirft, even beyond Sea, are only iown in Fields,, as other manured Pulfes are, and Co a#è they in fome Counties of England, elp'mally the fecond or fmaller fort, which is every where the more pleafant and acceptable -, but the greater does* with very great Difficulty come to Maturity *vith us, if the Seafbn of Weather is nor kindly a'id^dry, Gerard, fays, that it had been told him by Perlons of good Credit, rhat Husband-jnen about *Watford* in *Middlefex*^ and other place?^ih England, do fow them for their Cattel, even as Others do *Tares*. Tm jhird grows wild in *Portugal* h with us only in Gardens.

* VII. *The Times.* They all flower, and their Seed grows ripe in *July* and *Augufi*^ and fomejimes later.

VIII. *The Qualities.* The lentil is temperate in reffeft to Heat or Cold, and dry in theiecond Degree : Aitrmgent, Stornatick, Hyfterick and Vulneisary..

IX. *The Specification.* The Fruit or Grain flops *luxes, and the Terms in Women, cleanfes and heals old Sores^ Kibes, Ulcers, OV. /

X. *The Preparations.* You may have therefrom, * A Deco&ion of the Grains, or of the whole Cods end Grains, in Wine or Wattr. 2. A Compound Vecotfion of the fame. 3. A Meal or Flower. 4. E. 5. * A Mixture with Honey. 6. A Cajaplafm with Vinegar. 7. A compounded Cataphfm. 8. A Lataplafm made with Sea-water.

The Virtues.

XI. *The Decottion of the Cods or Grains in Wine* S ^ ^ade with ;he Coqs and Grains, it is lent or Binding^ it fte^s the Terms, Fluxes and^ftrengthens the Bowels. If it he grains^ a l o ^ h is f i w to loofen binds the

XII *The compound DecoZlion.* It is made by

joining a half quantity of *Catechu*, of *Red Beet Roots*, *Pomgranate Peels*, *Myrtle BSrries*, *Service Berries*^ *Unripe Pears*, *Quinces*, *Galls*, *Sumach Berried*, *Medlars Unripe*, *Red Rofe Leaves*, and *fyantanc** *Leaves*, and boiling them all in rough *Red Wine*. It has all the Virtues of the former, and much more powerful, good agaiift the Overflowing of the Terms in Women, and the Bloody-flux, alfo Spitting and Piffing Blood, an#aoy other Flux of Blood, whether inward or outward. It allays Inflammations, and dries up great and deep Ulcers.

*XIII. *The Meal or Floiber.* • It ftrengthens the Stomach, being taken from half a Dram to a Dram, in any convenient Vehicle. Strewed very thick upon old moil or running Sores or Ulcers, it dries dp the putrid Humidity, and difgofes them to Heal-

XIV. *The PoHage.* *It nourifhes, but is faid to breed a thick and heavy Juice, which paffes flowly -hro' the Veffels •, and therefore is a very bad Food for fuch as have the Leprofy, or are fubjeèl to the Scab, tankers, Tettars, Ring-worms, Scirrhus, Meancholy, ' &c. /alfo for fuch as have dry and withered Bodies, are confumptive, or are fallen into a ?ining, or have a Dimnel's of Sight. ' But for fuch as have a Droply, or are in danger of a Dropfy, or abound with waterifh Humors, it is very good to teed upon.

XV. *The Mixture of the Meal made with Honey.* It cleanfes corrupt and rotten Sores and old Ulcerst# filling them up with Flefh again *, and is a moft gnlar thing to be put into the ccmrnon Digeftives vvhich are ufed for gfcen -Wounds*: and applied to Apoftems, it maturates and breaks them.

XVI. *The Cataplafm with Vinegar or four Wine.* It (being applied) eafes the Pains of the Gout, foften's Wornens Breafts wliich are made hard with curdled Mijk ^ waftes away Wens and other hard and fcrophulous Tumors of the Throat.

XVII. The compounded Cataplafm. It is made of the Meal, with Pulp of raw Quinces, adding a little Juice of Melilote and Oil of cofes. Applied, it helps the Hemorrhoids or Piles, giving prefent Eafe : all Inflammations of the Fundament, as alfo Inflammations of the Eyes. Note, That it will be Ib much the ftronger, if Ponder of Pomgranate Peels, and of Red Rofes, be added, with a little Honev. *

XVIII. The Cataplafm made with Sea Water. Made by boiling the flower in Sea Water, and afterwards* adding a little Vinegar to it tihen it is ufed: it is good againft Wheals, Puffies, watery, or running Sores, Tectars, Ring-worms, Kibes, Anthonies-Fire, Womens preafts fwelled hard with curdled Milk, the Gout, £V.

C H A P. CCCCXXXVIII

Of L E N T I L Sea.

I. *THE Names.* It has no Greek Name, be^ caufe, I iuppofe, unknown to the Greeks : but it is called in *Latine*, *Lenticuh Marina*^ *Uva Marina* : in *Englifh*, *Sea Lentil*.

II. *The Kinds.* Authors make two Kinds thereof, viz. 1. *Lenticula Marina vulgar is*, *Lenticula Marina*^ *Anguftijolia*, Common Sea Lentil, or Narrow-leaved Sea Lentil. And this Lobe I calls *Lenticula Marina Serapionis* •, and alfo do *Tabern<z. montanus* and *Lagdunenfi*: : and this is the t'ueus folliculaceut

*jollicüldceus Uinariⁿ folio Bauhini **, and the *Acinaria Marine alt era Species Imperati*. 2. *Lenticula Marina Serrata is foliis, Fucus foliaceus Serrat O folio Bauhini, Acinaria Marina tertia Species Imperati*^ The Jagged or Saw-leaved Sea-Lentil This Broad-leaved or Saw-leaved Sea Lentil, *Clufius* in his *Scholia* on the lait Chapter of *Acojia*, his Book of Simples, puts it to the Quettion, whether this with the *dented Leaves* be not that Herb which is called *Sarguazo* or *Sargazb* ? but *Baubinus*, in his *Pinax*, determines it as certain.

III. The Defcriptions. > *The firfl, or Common narrow-leaved Sea Lentil. It has many winding Stalks, on which grow fhort Branches, Jet thick with nafrow Leaves. Hike thofe O/Belvidere or Befomiiax,* and among thefe grow many 'skinny, hollow, empty, round Berries, of the Bignefs and Shape of *Lentils*, from whence it takes its Name : they are fometimes of a pale *Amber-color, and fomptimes that Color is fpeckt with Red.

IV. *The fcond* or Jagged or Saw-leaved Sea Lentil. This Defcription you fhali have from Aco-^a. In that famous and no lefs tu' be feared Navigation del Sergazo, (for Jo they that Jail into the Indies call that Space of the Ocean from the iZtb to the i^tb Degree of Nonh>Latitude) -kjeen a deep and fpacious Sea, covered with an Herb called Ser-guazo, being a Span long, wrapped with the tender Branches, as it were info Balls, having narrow and tender Leaves, abotlt half an Inch long, orfomewhat longer, a little broody and fnipt about the edges, of Color reddlfh, of Tafte infipfi, or without any fenfible Biti?tg, but what is rather drawn from the Salt Water, than naturally inherent to the Plant. At the letting on of each Leaf grows a Seed, round,* *It a f Corn, of a whitifh Color, and fme- f n d Ked mlxt; k is W tender* when it is firft drawn forth of the Water, yet hard when it is dried, but by reafon of its Thinnefs,

very fragil and full of fult Water. There is :-- Root to be obferved in *Afeis* Plant, but only the Marks of the Breakings off appear. And it is likely it grows in the deep and fandy Bottom, of the Sea, and there may have imall Roots. Yet fonx are of Opinon, That this Herb is-plucked up and carried away by the rapid Courfe. of the Waters which fall out of many Iflands into the Ocean-Now, the Maiter of the Ship in which I was, did ftiffly maintain this Opinon : and in failing her we were becalmed *, but as far as ever we could fee, we law the Sea wholly covered with this Plan? And lending down forae young Sailors., to drive the Weeds' tiom the Ship, and clear the Water>iw plainly fa^r round heaps thereof to rife up from the bottom of the Sea, where, by founding, we *I&ul&* find no bottom.

V. *The Places and Times.* The firft is found in many places of the *Mediterranean* and *Adriatick Seas*, as alfo in other *Southern Seas*. The fecond is found in many places of the *Atlantkk Ocean* toward the *South*, in the Latitude and place aforementioned, as alfo in feveral other parts of that Sea. They are to be* found, by Report of Sailors., all the Year fong, their Growth and Cauie of Appearance being the fame.

The Virtues.

VI. They are as yet unknown : but *Acofia* fays, That if this Hint is pickled with Salt and Vinegar, it will have the fame Tacté as *Sampire has*, and may be ufed inftead thereof; and is alfo eaten by fuch as fail initead <f *Capers*. *Acofia* caufed it to be given, when it was frefh taken forth of the Sea, to Goats which they carried in the Ship, and they fed upon it greedily : He confeffeshimfelfignorani of its Qualities: but one of the Sailors, troubl^a with a Difficulty of making-Water, by:reafon

Gravel or "Sand and grofs Humors, eat thereof by chance, both raw and boiled, only for that the Taltte thereof pleafed him w after a few Days he told me, that iie found great Good by the eating thereof-, and he took fome of it with him, that ib he might ufe it when he came afhore. ..

Stem of five round pointed Leaves, with a final greenifh Head in the middle, which when the Flower is fallen, grow\« to be a fmall Head, confiding of many fmail Seeds fet together, like unto the Heads of feveral forts of *Ranunculi* or *Crowfeet*.

C H A P . CCCCXXXIX.

O / L E O P A R D S -- B A N E ,

O R ,

R o u n d - l e a v e d W O L F S - B A N E

i/Tpifæ Names., It is called in *Greek*, Άξωνίχ
X ἀσωνική; by *Diofcorides*, becaufe the
Herb uied to kill Leopards, Wolves* and other like
Creatures very fpeedily. It is alfo called, *S#S, i.e.
Corruptio, Venenum, Mors; and QHMIOVOV (quod
tali i*gen i tali bus famei feixits animalium, eodem
die injerat mortem) as *Tbeophrastus*, lib. 9. cap. 9.
has named and defcribed it: in *Ldtime* it is called,*
T bora, and *Aconitum Pardalianches*, alfo *Tbclypbon*
Tbeophrastus. Gefner and others take it to be
the *Limeum Plinij* in lib. 17. cap. 10. which*he fays
is an Herb fo called by the *Gauls*, wherewith they
do make a Medicine, to dip their Arrow-heads in
when they Hunt Wild Beafts, -and which they alfo
call *Cervaria*. Gefner lays, that Ibme called it
Lunaria, becaufe the Leaves were round, like to a
full Moon •, but he himfclf called it *Thofa Venena* -
*Spad *Toxicum Valdenfium*. *Lobel* calls it *Pbtbo*
ra Valdenfium; and *Clufius* makes it to be *Ranuncu*
culus grumofa radice tertius: in *Englifh*, *Leopards*
ban?, or *Round-leaved Wolfs-bane*.

II. The Kinds. Authors make two of three
Kinds hereof -dk. 1. *Aconitum Pardalianch*
T bora ?minor; The leffer Leopards-bane. 2. *A*
turn Pardalianches, five Tbo\$ major*, The
Leopards-bane. 5. *Aconitum Pardalianches com*
ventitium Matthioli, Matthiolus his fained Leu
pards-bane.

III. The Defections. *The firft, or Small Leo*
pards-bane, has a Root which is compofed of feven,
eight or ten fmall, long, round, very white, fhining
Roots, fome what uneven^ as it were branched out
(ike Knots or Joints in feveral places, plainly to be
dijeerned in fome,, but in others not, being plain and
Jneoth ending in a fmall long Fibre, and all of them
fained at the Head thereof, like unto Aphodil Roots,
Of the moft poxfonous Quality, which has been foinea
**n any other Vegetable. It is a fmall Low Herb, ri*
2mg up with a fmall, flendgr, round Stalk, little
more, thairhalf a Foot high, bearing about the mid
dle thereof but one fmall itiffor hard Leaf, for the
molt part, but fometimes two or three; one above
another, and fometimes two together, which are
round, and fomethng like the Leaf of Afarum, but
leffer, fmooth, and of a blewifh; green Color, and
full of Veins, fomethng unevenly dented about
its edges, not compaffng the Stalk but Hanging
upon it, upon fhoit Foot-ftalks. The top
of the Stalk is oftentimes divided into two or three
branches, each with a fmall narrow Leaf at the Joint,
at the top of each of thefe is a fmall yellow
Flower, like to thofe of Onkfail, or five
(grafs, confifting in many of four, and in

IV. *the fecond, or Greater Leopards-bane. Its*
Root is much like the former v and it is in all things
like unto the Leffer before defcribed, but that it is*
greater, and rifes tip higher, having larger Leaves^
and finely dented about the edges, and two or three
ftanding together about the middle of the «6 talk,
fome fmaller than others, and fbm^times one above
another, and fome fraall long and narrow ones at
the Joints, branched forth into rtwo or three parts
or mote, bearing every one of them its fmall yellow
Flower, like to the former, with like Seed contain
ed therein. Thefe two forts differ chiefly in the
Magnitude of the Plants, and thafthris latter bears
more Leaves than the former ^ which Parkinson
thinks may rather be attributed to the Fertility or
Sterility of the Soil wherein they grow? than to a
ny differing Species, they being fo very like one
another.

V. *The third, or Matthiolius his fained Leopards*
bane. It has a Root tvbictoonfifts of many Knots
and Joints, like unto a Scorpion's Tail, in the fame
manner as Matthiolius has fet forth in his Figure.
It rifes up parly in the Year, if the Spring be mild,
with its Dalk before any of the lower Leaves ap
pear, as the Coltsfoot and Butter-bur do, having
four fmall, round, hairy Leaves upon the Stalk, fet
by couples at diitances. The Flowers are man^r,
growing in a Tuft or round Head together at the
top thereof, of a pale yellow Color, with many
yellowih Threads in the fiiddle. When the Flow
ers are pad, then come up the Leaves, which are
four iht the moft part, ardfafe almoft round, hairy,
and green on the upper fide, and of a hoary White
underneath, full of Veins tuongng thro' them, and
full of fmall Spots m

But however, after all that we have said of the Virtues of these deleterious or poisonous Plants, it is in my Opinion, much better to let them wholly alone, than to run any Hazard in making use of them, by reason of their dangerous Qualities, besides, many times the Folly and Ignorance of such as may adventure the making of such dubious Tryals, forasmuch as there are other Herbs and Plants enough, proper for all such Purposes and Intents, and possibly more effectual for the Cure of the same Diseases, which are free from any ill Effects, of what kind soever, and by reason of their innocent Properties, may be safely adventured upon by such as but very indifferently understand Physick.

Crumpled Lettice. 4. *Laliuca Romana* *Pe'tri Cre-Je/2ti* Roman Lettice. 5. *Ldffa* *Eelgica*, Flinders Lettice. 6. *LaQuca* *Cypria Columell*, Red Lettice. 7. *Laliuca Hyemalis*, Our Winter Lettice: 8. *Laliuca Virginiana*, Virginia Lettice. 9. *Laliuca Sabaudica*, Savoy's, or Savoy Lettice. 10. *Lacluca Venetice* Venice Lettice.

CHAP. CCCCXXX

Of LETTICE Garden.

I. *HB Names.* It is called of the Arabians, *Chas*, and *Cherbas*: in Greek, *ῥῆμα*, *Tbridax* *Ewov* *Pythagoriorum*: in Latine, *Laffuca*, *a LaSis copia*; and in English, *Lettice*.

II. *The Kinds.* There are two principal Kinds, viz. 1. *QelJkZ* *iAi* *Latfuca hortensis*, vel *Sativa*, Garden Lettice. 2. *eiJk* *ye.i* *Laliuca Jylvestris*, Wild Lettice, of which in the Chapter following.

Common Lettice, which does not Cabbage.

III. *The Garden Kinds.* Authors make many of this Lettice, but we shall content our selves with the chief of them, which are the following, 1. *Laffuca commurii* Our common Lettice, which does not Cabbage or Head. 2. *hahue* *a Capitata LaSuca seffilis*, called by *Pliny*, *hafaUcon* *Cabbagetettice* *dsucaCri/pa* *Latluca Cecilliana ColnmlU*, Curled or

IV. *The Descriptions.* *The Jirfr* or Common Lettice, which does not Cabbage. *It has a Root which is soft newbit long and white, with white Fibres adjoining, which pierces immediately after Seed-time.* It rises up with several Leaves, full of a milky Juice, of a light green Color, smooth, and little or nothing dented on the edges, broad, and somewhat long withal, and ending in a sharp Point, almost round in some of them. From among the middle of these Leaves comes forth a round Stalk, (in some greater, in others lesser, according to the Kind, and also the Goodness of the Ground) full of Leaves, like unto the lower, but much less, narrower also, and sharper pointed. This Stalk towards the top, branches itself forth into several parts, on which grow several small stalk-like Flowers, of a pale yellowish Color, after which comes Seed, either whitish or blackish, according as the Plant yields 5 at which hangs some small matter of a Cottony Down, with which the whole Head is stored, and which is carried away with the Wind, if not gathered in time.

V. *The second, or Cabbage Lettice.* *This has a Root like the former and rises up in like manner, with plain smooth Leaves, which after a time closes itself, and becomes a kind of Cabbage Head, and hard after which, from the middle thereof, springs up a Stalk, which for substance, branching out, Flowering and Seeding, is like the former, but bears black Seed.*

XII. The ninth/or Savoy's, it ha wry i&ft teaves* mfp,

upon the Ground; at the first coming up, broad, cut or gaft about the edges, crifping or curling lightly this or that way, like in fome taeafure to the Leaves of *Garden Endive*, with Stalks, Flowers and Seeds, like the former, as well in form as yielding that milky Juice, with which they do all abound. Of these *Lettices* fome are open, with very curled Leaves, of a green Color? and fome of a yellow or yellowifli green Color. Others are Headed or Cabbaged, and fometime grow fo large, even to refembie a fmall *Cabbage*, of a yellow or yellowifli green Color. This *Lettice* is feldom eaten raw, but is for the moft part boiled like a *Cabbage*, and makes indeed the belt boiled Sallet.

XIII. The tenth, or Venice Lettice. It is an excellent *Cabbage Lettice*, and is beft to be fown at the latter end of June, or beginning of July it grows fometime 40 he as large as the Crown of a Man's Hat: it rifes to a moderate Height, and the Seed is white. There is another fort which does a little *Cabbage*, and the Seed is white: and another fort which does not *Cabbage*, but is loofe, this has many great Leaves fpread upon the Ground, like unto thole of *Garden Endive*, but leffer it rifes up to be about three Feet high, its Flowers are yellowifh, which turning into Down, fly away with the Wind, and its Seed is white as Snow. Thefe two iaft fome call *Lumbard Lettices*.

XIV. How to gather the Seed that it may begopd. Mark out thofe Plants which you intend fhall run up for Seed, which let be the belt and moft flourifhing, and after they have begun to fhoot forth Stalks, (trip away the lower Leaves for two or three Hands breadth above the Ground; for thereby, in taking away the loweft Leaves, the Stalk fhall not rot, nor the Seed be hindered from ripening.

XV. The Way and Manner of Whitening Lettice, to make it at the more tender. It is done two ways. The one is by railing up Earth like Mole-Hills round about the Plants, while they are growing, which will make them grow white. The other is, by tying up ail the loole Leaves round together while it grows, for fo the clofe-growing thereof will make it white, and be thereby the more tender and pleafant.

XVI. The Places. The feveral Names tell you whence they came to us; but here are now nurfed up in many of our Gardens. *Palladius* fays, that *Lettice* delights to grow in manured, fat, moift and dunged Ground, and in places where there is plenty of Water: and *Columella* fays it profpers belt, if it is fown very thin.

XVII. The Times. *Palladius* fays, that it is certain that *Lettice* may be fown at any time of the Year, but efppecially at Spring time, and afterwards till Summer is nigh fpent, and after that again as foon as Winter is done: however, it ought to be fown in fair Weather.

XVIII. The Qualities. *Lettice* is cold and moift in the fecond Degree: -Anodyne, Digeftive, Emollient, Relaxive, and Galeftogenetick.

XIX. The Specification. It allays Inflammations, gives Eafe in the Strangu, induces Sleep, and reffes Bodily Luft.

XX. The Preparations. You may have therefrom, 1. A Juice. 2. An Effence. 3. An Oil or Ointment. 4. A Cataplafm. 5. A d'killed Water. 6. A Sallet. 7. The-Seed.

The Virtues.

XXI. The liquid Juice. Inwardly taken from one pountal to two or more, (according to Age and other Accidents) it breeds Milk in Nurfes,

quenches Thirft, cools the inward Heat of Fevers, abates Inflammations of the Lungs, cools thg Heat of Urine, and reffes Bodily LUK. Mixed with a little *Camphir* diffolved in Oil of *Ben*, and a little Vinegar being alfo added, and applied by anointing or bathing to the Cods, it sales Pairi, and abates an Inflammation in thofe Parts, abates putt and reffes Venereal Dreams, which caufe NoSbrnul Poillutioos.

XXII. The Effence. It has all the Virtues of the Juice, and is rather to be chofen to be adminiftered to cold Confutations: it alfo induces Sleep and Reft, being taken at Bed-time in any convenient Vehicle. The Effence, as alfo the former Mixture of the liquid Juice, being anointed or bathed upon the Reins, cools any burning Heat there, and eafes the Pain of the Back.

XXIII. The Oil or Ointment. It is made either of the Juice or green Herb, by boiling them in Oil of *Olive*, *Hogs Lard*, or *Mutton Suet*, mixed with Oil Anointed on the Forehead and Temple, it eafes the Head-ach proceeding from an hot Caufe, and procures Sleep and Reft. Anointed alfo on other Parts which are Inflamed, or are full of Pain, it cools the Part and gives Eafe.

XXIV. The Cataplafm. Applied to the Gout, it eafes the Pain, and mixt with *Camphir*, and applied to the Region of the Heart, Liver, or Reins, it reffes their Heat and Inflammation, comforts and ftrengthens thofe Parts, and allays the Heat of Urine. Applied to the Head in a vehement Head-ach, it eafes the Pain, and gives great Relief, caufing the Patient to reft and fleep.

XXV. The dijhled Water. It allays great Inflammations, increafes Milk in Nurfes, quenches Thirft, abates the burning Heat of Fevers, reffes Luft, takes away NoSturnal Pollutions, and has all the other Virtues of the Juice and Effence, but muft be taken in a much larger quantity, as from two Ounces to four or fix, a little dulcified with double-refined Sugar.

XXVI. The Sallet. The beft is that whid is made of the *Cabbage Lettice*, and is generally eaten raw, with Vinegar, Salt, Onions, or Pepper, and good Oil. *Galen* advifes Old Men to ufe it with Spices, and where Spices are wanting, to add *Mint*, *Rocket*, *Creffes*, *Tarragon*, and fuch like hot Herbs, as Correctives thereof. It is very grateful to the Stomach, comforts and ftrengthens it, and caufes a good Appetite. Some make a Sallet of *Lettices* by boiling them: fo eaten, they are agreeable enough, are cooling and grateful to the Stomach, help Digeftion, cleanfe the Stomach, and loofen the Belly; and this *Galen* fays he found by Experience; for by moiftening the Belly, it becomes the more flippery. This boiled Sallet is laid to befooner digefted, and to nourifh more. It eafes all the griping Pains of the Stomach or Belly which come from Choller.

XXVII. T^{See}Z It is faid to have all the Virtues of the Herb, being given in Pouder from a Dram to a Dram and half, in any proper Vehicle, Morning and Night.

CHAP. CCCCXXXI.

Of LETTICE Wild.

I. HPHE Names. It is called in Greek, *κάρδαμο*, X *Thridacine*, and *κάρδαμο* by *Dwfcorides*: in *Latine*, *LaSuca agrejlis*, *hrfuca Sylvcftns*, *κάρδαμο* *nufan*

vuchion Vlinij, lib. 19. cap. 8. and it is called, *Laliu- ui, d Laffeofucco* : in *Englijh, Wild Lett ice*.

II. *The Kinds*. It is the fecond generick Specks of *Lettice*, and has the three following Varieties, vis. 1. *Laſſuaj fylvefiris, Endiv'u'foliis odore virofo -*, *Latfua fylvefiris major odore Opij Gerard* -, *Endivid major Tragi*, which he alib calls, *fcatiuca fylvefiris alt era -*, *Laffuca fylvefiris fcariola hortensis folio*, *La&itca fore Opif odore vehementi Soporijero & Virofo* ; *Lugduncnfis* fees it down-for *La-Hue a fylvefiris vera Dalechampij*, and in the 14th Chapter of the lame Book calls it *Thejion Dalechantpij*, of which *Pliny*, out of *Theophrastus*, makes mention. *LaUuca fylvefiris Anglic a odore Opij*, Broad-leaved Wild Lett ice. 2. *Latfua fylvefiris laciniata* • *J jib'uca fylvefiris JWatthioli, Vuchjij, Dodon.fi, C Lilpini, Fhalij £? aliorum, Endivia Vtdgaris Tlvji* . Becaufe that generally in all the German Apothecaries-Shops it was fo accounted and uied) *Scris domtjica laltucina Diofcoridis ; ScarrioLi hri-cij Cordi* ^ Jagged-leaved Wild Lettice. 3. *Lutiuca fylvefims jlorc purpurco Gejneri in hortis -*, alib *Sonbus arborefcens punicco jlon* \ *ES* \ *ES* \ *Tbalij 5 Sonbus Jfontanus purpureus* ^ *TnTe* ^ - *sA-m* ^ *v Cq- Imna \ Sonchus icrtius Taberncemontdni, Laffuca Montan* ^ *purpuro c&rulea major hauhini* ^ (his *minor* being the *Lamp/ana Aitfiriaca* of *Farkinfon*) Wild Lettice with purple Flowers.

III. *The firji, or Broad-leaved Wild Lettice.* // has a Root which is white, long, and woody, when it bears Seed, and perijhes prcfently after. It rife up with four of five ibmewhat long and large Leaves, fmaller at the bottom, and broadergfcthe ends, being round-pointed, unevenly dentecHrjout the edges, but not cut in or torn at all, of a pale or whitifh green Color, and very, like unto the *Garden Lettice*, or *Garden Endive* Leaves, fo that it will' foon deceive one that never iaw it before, which do fo abide the firft Winter after the Sowing, whether in the Spring or Autumn, of the filed Seed : but in *May* following it begins to rife up to a Stalk, and then thofe lower Leaves will have the middle Rib on the backfide grovfli full of finall (harp Prickles. The Stalk has rife to be fomtimes feven or eight >ect-high at leaf, and as big as the Thumb of any Maj's Hand at the lower Joint 5 fomthing brown on whitHiding U ? l f i n t 0 feveral ver 7 lon S Brandies ^ ar 7 ieaves ^ like the others ^ more c umfft

the Stalk, let with Pxickles in the manner of the bottom Leaves, but lefler and higher, and fomthing jaggèd or divided on the edges, all; and every part yielding plenty of a Milk Juice and Clammy, being broken, which Imelis frong, -and very like unto *Opium*, being of a bittej Taſte. The Flowers are very fmall and fingle, fomthing like unto *Let* tice*, but fmaller, and pf a paler yellow, fearcely opening themſelves, and hardly abiding half a Day open, but turn into Down, with fmall black Seed, very like unto *Black Lettice* Seed, and is carried away with the Wind.

IV. *The fecond, or Jagged-leaved Wild Lettice.* // has a Root which abides after the Seeding-ti?l? > when as the other does not. This Wild Lettice grows like the laft, but not fo high or great : the firft Leaves are of a greyer green Color, fmaller and narrower than the other, which fo abide, and afterwards has Prickles growing on its backfide, as the other has. Thofe which follow, are much more jagged than the others, and fet with fharp Prickles alfo, and being broken, yields Milk as plentifully as the forme*, and as bitter as it h, and Imells alfo as frongly of *Poppy* or *Opium*. The Flowers and Seed are like it too, and fty likewie away with the Wind.

V. *The third, or Wfid Lettice with purple Flowers.* It has a Root which is thick fet with Nodes in feveral places, not growing downwards, but fpreading forwards, and havin long Fibres Jhooting front it, which perfli) not. It is a great Plant, and rife up fomtimes (in moift Ground) to be fix, feven or eight Feet high, but ufually three, four or five Feet with a frong great Stalk, fet on each fide with Leaves, finallt at the bottQm., and larger as they tilè up higher, being largeft about the middle of the Stalk, and then grow fmaller again up to the top-, all of them unevenly waved about the edges, and encompaffing the Stalk at the bottom h of a dark, blewifh green Color, on the upper fide, and greyifh underneath, yielding a Milky Juice when jt.

is broken. The Flowers stand upon small long Stalks, coming forth from the Joints, with the Leaves, from the middle upwards, with many Flowers on them; confiding of four dark purple-colored Leaves, with divers Threads in the middle, tipped with a yellow Dull, and a three-forked Stile in the midst, which stands in long purplish green Husks, hanging down their Heads, and turn into Down, with fine greyish Seed among it, which flies away with the Wind.

VI. *The Places.* The two first grow in several places of *England*, as well as beyond Sea: the first in the Borders of Fields, and by Hedges and Lane tides in *Buckinghamshire* and *Cambridgeshire*. The second in the Bank-side by the Foot-way going from *Grays-Inn-Lane* to *Bradford-Bridge* or *Pantridge-Church*, and in many other places. The third is found upon Mountains and Hills in divers parts of *Germany*, as *Gefner*, *Tbalius*, and others say, also about *Naples*, as *Columna*: I have also been told by an *Engliff* Gentleman, and a good Herbarist, who has been a great Traveller in many parts of *England*, that he had found it growing upon several Mountains and Hills in *Wales*, and in some other parts of the Kingdom.

VII. *The Times.* They come up in the *Spring*, and sometimes sooner, and they all flower about *July* and *August*, and their Seed ripens in the mean Season, and is blown away whilst it is in Flower, and has young Buds of Flowers upon it.

VIII. *The Qualities.* *Wild Lettice* is cold in the end of the second Degree, and moist in the end of the first. It has nearly the same Properties of Cooling which the *Garden Kind* has: but the Bitterness of this makes it the more Aperitive, and yet it is more fomentiferous than the manured sorts, and comes up, as it is thought by some, almost to the Degree of *Opium*: but this Opinion I can never assent to, my Experience having proved the contrary.

IX. *The Specification.* Some Authors are of Opinion also, that it may be used, instead of the *Garden*, for any of the Intentions or Purposes for which that is used. However, it is said to be a peculiar thing against Dropsies, to provoke the Terms, and to resist the Poyson of the Spider, *Phalangium*, *Scorpion*, &c.

X. *The Preparations.* You may make all the same Preparations from this as from the *Manured*: but these are particularly taken notice of, viz. 1. *A liquid Juice.* 2. *A Milky Juice inspissated.* 3. *A Decoffion.* 4. *A distilled Water.* 5. *A Pouder of the Seed.* 6. *A Cataplasm.*

The Virtues.

XI. *The liquid Juice.* Given inwardly to one Spoonful, more or less, according to Age and other Accidents, in Syrup of *Violets*, *Clove-gilliflowers*, Wine, or other proper Vehicle, at Bed-time, it causes Rested Sleep, eases Internal Pains of the Bowels, opens Obstructions of Liver, Spleen, Reins, Bowels and Womb, provokes the Terms, expels watery Humors out of the Body, prevails against the Dropsy, and resists Poyson, chiefly the Stinging of Scorpions, the Biting of the *Phalangium*, of Mad Dogs, and of other Venomous Creatures. *Out-SS* *^{med} ^{of} ⁱⁿ ^{the} ^{Part} ^{griev} ^{ed} ^{with} ^{Inflammation} ^{and} ^{It} ^{stre} ^{ngthens} ^{the} ^{Part} ^{griev} ^{ed}

XII. *The Juice inspissated.* It may be inspissated in the Sun or in a Sand Furnace. If it be taken in the Day, to two or more, according to the Judgment of the Physician, dissolved in

distilled Vinegar, it is said to evacuate Water in Dropsies, to provoke *Worriens Courfes*, and refill Poyson, and has indeed all the Virtues of the liquid Juice aforegoing. This Juice, dissolved in White Port Wine, or White *Lisbon*, and a little Honey mixt therewith, being dropt into the Eyes, it does wonderfully strengthen the Sight, and clears them from Mists, Clouds, Films or Skins growing Over them, and removes any thing which obstructs the Sight.

XIII. *The Decoction.* It may be made in Wine or Water. It has the Virtues of the liquid and inspissated Juice, but as it is much weaker, the Dose must be much larger, as from three Ounces to four, five or six, and it is also the oftenest to be repeated, as Morning and Night at least.

XIV. *The distilled Water of the whole Herb.* It is singular to quench Thirst in any Burning or Peffilential, Fever: and this it will do more effectually, if a few Drops of Oil, of Sulphur, or Vitriol, or Spirit of Salt, is dropt into it, and very well mixt therewith. This Water may be given from four Ounces to eight Ounces: if you please, you may sweeten it with a little double-refined Sugar.

XV. *The Pouder of the Seed.* It has the Virtues of the Juice and Decoction; but it cools not so powerfully. It is very grateful to a hot Stomach, troubled with Heart-burnings and Vapors ascending from the Womb. If it is given at Night from half a Dram to a Dram in the distilled Water, or in any other Vehicle, it causes Rest, and induces Sleep, and therefore is profitable for such as are subject to much Watching.

XVI. *The Cataplasm.* It is made of the green Herb beat in a Mortar, and brought to a Consistence either with barley-flower, or Crumbs of Barley or Wheat in Buad. Applied to Inflammations in their beginning, it abates their Heat, and diffuses them. Applied immediately upon a simple Contusion, where the Skin is not broken, it hinders the Aggregation of Humors, abates the Swelling, and cures it: being applied to the Head in a Megrism, or other Head-ach, it presently gives Ease of the Pain, more especially if it proceeds from a hot Cause. Applied to Parts pained with the Gout, whether Hands, Arms, Knees or Feet, it presently gives Ease to the Pain, and diffuses the Tumor, and being continued for some time, does cure it, provided Universals and other proper Internals be used in the mean time. Applied to the Forehead and Temples in a Frenzy, it abates the Symptoms, and restores in a great measure the Patient to his Senses again.

C H A R A C T E R I S T I C S

O f L I G U S T I C K ,

OR,

Bastard L O V A G E ,

Names. It is called in *Greek* by *-Diof-X corides*, *Atyvstwtv*, by *Galen*, *MCvrtKw*, taking its Name from *Liguria*, the Country where the belt of it, and the most store of it grow, and there they call it, *Sier Montano*: in *Latine*, it is called, *Ligujiicum*, and *Libusticum*, as *Matthiolvs*, *Lugdunenfs*, *Cajtor Durantes*, and others have it: *Siler Montanum*, as *Tragvs*, *Lobel*, *Idodonxus* and

Clufius have it: formerly in Shops, *Sefelios*, but faileiy \$ tor the true *SeJ'eli* or *Hart wort* is another Plant, as we have declared *Chap: 343.* aforegoing, tot it is like none of the *Scfeli'es*: *Ser Monianum*, and *Ser Peloponenfe*^ as *Cefaipinus* has it: *Pliny* fays, that *Cratievat* called it *Cunila bubula* •, and fome called it *Panaces*: we in *Englijh* call it *LJ-guftick*, *Libujiick*, *Si'er Mountain*, and *BaJJard Lovage*.

¶ *The Kinds*, there are two forts of this Plant, i>J.z. i. *Ligujicum verum*; *LinujUcum latifolium*; *Ligujicum commune* \$ *Si'ler montanum vul-& SiJl-tws*, *Ligujr, cum ligunenfe* h. The true *Liguihek*, or *Battard Lovage*. 2. *Ligujicum Auftnacum* • 6fcr *Ahntanum Auftriacum*, *Sikr Montanum Anguftijohum* -, *Ligultick*, <v> *Baftard Lovage* of *Auftna*.

¶ *HL*. T;K firfa or True Ligultick, ^r Baftard Lo> va ge. J/ ^ ^ Ri>ot wiyich is long, great, and whijtiff on the out fide of a hot (harp Smell and Tape, TMj abiding long in the Earth. This True Ligupck <>J' Liguna riles up with a round jointed Stalk, two or three Feet high, bearing both at the bottom and at the Joints, large, ipread, winged Leaves, divided into many fmall Leaves, whose fmall iquotalks beat uually two Leaves, and fomerimes tour, let one againit another, and three always at the end, each being much broader and fhorter than *Sots ten-el* Leaves, almott equal to thofe of *Mehlot*, for which Keafon it is called *aMbLatifolium*, or Broad-leaved, refpect *HK** had to the Breadth of the Reaves of the neTt following. Thefe Leaves, if ^ ^ w a littk rubbed, have a fweet Smell. The P^M. t-pread-T^S^ at t0 P^in to a few Branches, bearing very large Umbels of white Flowers, and after V l ^ iull> brownifh, yellow Seed, Cumw *Seed, tw0 always joined

yellow fliining Wings at the edges, and of a quick, fharp, hot Smell and Taite.

IV. -*Tbefecond*, or *Aultrian Ligultick*, or *Baftard Lovage*. This differs not much from the former, but that it is much leffer, and cemes not up to half the Height thereof being not above a toot and halj high s whose Stalk is alfo divided towards the top into Branches, which bear fmall Umbels of white Flowers. It bears winged Leaves, (being but few) which are compofed of many other Stalks of Leaves, growing not much unlike to the other, or like *SAO fennel*, two Leaves, and fometimes four or more, fet one againft another, and three generally at the end. Thefe Leaves are much fhorter than thofe Ql the former, and alfo narrower, for which Reaftu it is called by fome Authors *Angujlifolium*, or *yar-row-leaved*, refpect being had to the Breadth of the Leaves of that juft aforegoing. Thefe Leaves, as they grow nearer the top, are yet more finely cur, being narrower and leffer.

V. *The Places*. The firft is found growing Wild upon the *Appenine Mountains* or *Hills* in *Liguria*, within the Dominions of *Genoua*. The fecond grows upon the *Hills* in *Aufiria* -, but with us they both grow in *Gardens*, but do not often bear ripe Seed, unlefs the *Seafon* be very kindly and warm.

VI. *The Times*. They flower from *June* to iht end of *Auguji* h and the Seed is found to ripen i> the mean *Seafon*.

VII. *The Qualities*. The Herb, Root and Seed are hot and dry in the third Degree. It is *Aperitive*, *Afringent*, *Abfterfive*, *Carminative*, *Digeitiye*, *Diuretick*, *Cephalick*, *Neurotick*, *Stomack*, *Iephritick*, *Hyfterick*, *Emmenagogick*, *Sudorifick* aind *Alexipharmick*.

VIII: *The Specification*. It expels *Wind*, eafes the *Colick*, provokes *Urine* and the *Terms*, is gooJ againft *Poyfon* and the *Birings* of *Venomous Beasts*.

IX. *The Preparations*. You may prepare therefrom, 1. *A liquid Juke*. 2. *An Effence*. %*.*

1. *Infufwn or Decoftion.* 4. *A Pouder of Leaves or Seel* 5. *An infolatei Oil.* 6. *A diji tiled Water.* 7. *A Spirituous Tintfure.* 8. *An Acid. Tintfure.* 9. *An Oily Tintfure.* 10. *A Spirit, w. An Oil diftilled.* 12. *An Elixir.* 13. *A Cataplafm.*

The Virtues,

X. *The liquid Juice.* Taken in any proper Vehi-
cle, it gives Eafe in the Colick, expels Wind, pro-
vokes Urine and the Terms, and helps the Suffoca-
tion of the Womb. Dofe two or three Spoonfuls or
more in the diftilled Water, or in Wine, or any O-
ther fit Vehicle.

* XL *The Effence.* It has all the Virtues of the
liquid Juice, but more powerful to all thofe Inten-
tions: it is of a warming and digefting Quality,
gives Eafe in the Gripings of the Guts, Pains of the
Stomach, and Swellings proceeding from Wind.
It prevails againft the Bitings of Mad Dogs, Vipers,
Rattle-Snakes, and other Venomous Creatures, and
fuppreffes Vapors and Hyfterick Fits in Women-
kind. Dofe two Spoonfuls or more.

XII. *The Infufion or Decoction of Herb, or Seed,*
or both. It has all the Properties, Qualities and
Virtues of the Juice and Effence, and may be given
from two Ounces to four, Morning, Noon and Night,
as occafion may require.

XIII. *The Ponder of the Seed.* If it is taken
from half a Dram to a Dram and half, (according
to Age) in a Glafs of *Wormwood-Win* Morning
and Evening, for fome few Days before the expe-
cted time, it produces the Terms in Women in great
abundance: it precipitates Vapors, and cures Hy-
fterick Fits, caufing the Womb to fettle in its right
place again. So drunk, it provokes Urine power-
fully, and eafes the Colick and Gripings of the
Guts proceeding from Groffnefs and Crudity of Hu-
mor: it ftrengthens the Stomach, and caufes a
good Appetite and Digefion: it expels Wind, and
difcufles the Swelling of the Stomach.

XIV. *The infolated Oil.* It is made of the *brui-*
fed Seed, by Infolation, or Cotfion, or Digefion in a
Sand Heat 5 one Pound of the bruijed Seed being*
mixed with two Pounds of Oil of Ben, or choice Oil
Olive. It is Anodyne, and eafes Pains and Aches
proceeding from a cold Caufe. It eafes the Gout,
and ftrengthens the Nerves, Tendons, and Parts af-
flicted.

XV. *The diftilled Water.* It may be made either
from the whole Plants being green, or from the Seed,
according to the ufual manner. It has the fame
Virtues with the Juice, Effence, Decoction and Seed,
but in a much lower Degree of Strength; and
therefore is to be given in a much greater quantity:
however, it may well ferve as a Vehicle for to con-
vey down into the Stomach fome of the other Pre-
parations.

^ XVI. *The Spirituom Tintfure of the Seed.* It
gives Eafe in Colick Pains, ftrengthens the Stomach
and other Bowels, expels Wind, and has all the
Virefts of the Juice, Effence, Decoction, and
beed afore expreffed, but this warms and ftrengthens
more, and therefore is more profitable for cold Stom-
achs, and fuch as have a cold Conftitution or Hab-
bit of Body. Dofe two or three Drams in the
Morning fasting, in a Glafs of generous Wine.

XVII. *The Acid Tintfure of the Seed.* It is good
againft the Bitings of Mad Dogs, Vipers, Rattle-
Snakes, and other Venomous Creatures, being beat-
en raw in a Mortar, and applied warm to the Part
hurt: if it is made with equal parts of *Gar lick*, it
will be fo much the more effe&ual.

XVIII. *The Spirituous Tintfure of the Seed.* It eafes
the btrangury after an admirable manner, provokes

Urine, and opens all Obitruftions of the Urinary
Parts, has all the Virtues of the Juice, Effence, Pon-
der, Spirituous and Acid Tin&ures, brings away the
Arter-birth, and gives Eafe in the After-pains, tho'
never fo vehement. Dole from ten to twenty
Drops in any proper Vehicle, Morning and Nighr,
or at any time of fextremity.

XIX. *The Spirit of the Seed or Root.* It is Cor-
dial, good againft fainting and fwooning Fits, Con-
vulfions, Sickneis at Heart, Coldnefs of the Sto-
mach, want of Appetite, Wind in the Bowels, Co-
lick, Pleurify, Pally, Lethargy, and the like cold
and moilt Dittempers of the Head, Brain, Nerves
and Bowels. Dole two or three Drams in a Morn-
ing fasting, alfo half an Hour before Dinner, or at
time of any Paroxyfm, either alone, (being dulci-
fied) or mixt in a Glafs of fome Stomachick or
Cordial Wine.

XX. *The OU of the Seed by Di filiation.* It has
all the Virtues of Juice, Effence, Tintfures, Spirit,
and is very powerful againft the Pally, fo that there
is fcarcely a better Vegetable Medicament in the
World; it is to be taken inwardly from eight
Drops to fixteen Morning, Noon and Night-, firft
drop it into white Sugar, and mix it well with that,
and then mix it with a Draught of choice White
Lisbon or other Stomatick Wine, and fo let the
Patient drink it. Outwardly you muft alfo anoint
it along the Back-bone, chiefly upon thofe *Vertebra*,
from whence thofe Conjugations of Neives proceed,
which replenifh the Parts affli&ed: if all the Limbs
are affe&ed, then it will be neceffary to anoint the
whole Back-bone, from the very Nape of the Neck,
almoft to the *Anus*, which is to be done twice a
Day, and to be very well rubbed in, for almoft a
quarter of an Hour at a time -, and befides the *Spina*
dorji, the Parts or Limbs affli&ed are alfo to be a-
nointed therewith in like manner. This Oil is very
hot, and therefore fome tender Conftitutions may
not be able to bear it, being uied alone: in this
Cafe, it will be neceffary to mix it with fome other
Chymical Oil lefs hot, which may be alfo penetra-
ting and efficacious to the fame Intention, as Oils
oiTurpentine, cfAnife, of Fennel, or Sajfafras.ficc.

XXI. *The Elixir of the Seed.* It is efficacious
to all the Purpofes afore-mentioned, but is nor fo
ftrong as the diftilled Oil-, but in Lethargies, Pal-
fies, Convulfions, Faintings, Swoonings, Sickneis at
Heart, Colicks, Gripings of the Guts, Pleurifies,
Stitches, Hyftericks, Hypochondriacks, Strangury,
Vomiting, Weaksefs of the Stomach, want of Ap-
petite and Digefion, you may give it Morning and
Night, or in time of the Paroxyfm, from twenty to
fifty Drops, in a Gias of Wine, or other fit Ve-
hicle.

XXII. *The Cataplafm of the Root.* It is excellent
againft the Bitings of Mad Dogs, Vipers, Rattle-
Snakes, and other Venomous Creatures, being beat-
en raw in a Mortar, and applied warm to the Part
hurt: if it is made with equal parts of *Gar lick*, it
will be fo much the more effe&ual.

C H A P . CCCCXXXIIL

Of the Lilly White.

THE Names. Of the Lilly there are manjr
X Species or Kinds: the Names of ail which
in general, are, in *Arabick, Sufen*: in *Greeks*
KeW: in *Latipe* *Uhum*; and in *Englifk, Lilly*.
N.The

II. *The Kinds.* There are several generick Species of Lillies, viz. 1. *KjW xwx.lv, Lilium album, The White Lilly.* 2. *Kelyov *A^V, £ i^ce^V, L;7///w //** *rubrum, The Yellow and Red Lilly:* of which in Chap. 434. 3. *Keiw oel^, Lilium IMontanum Martagon, The Mountain Lilly, ^rMartagon :* of which in Chap. 435. 4. *Kejivw Gv&vTivov^LiliumTurcicu^vel Byzantinum, The Turkey Lilly :* of which in Chap. 436. 5. *K&vov 7n\$vnCQV^ Lriiion Perficum, The Perfian Lilly :* of which in Chap. 457. 6. *KeW TT^N^O^ Lilium Prdcox, vel Pomponium^* The Pomponian or Early Lilly : of which in Chap. 438. 7. *Kelvov £*. CIAIKO^ Lilium Imperiale^ Corona Imperialism* The Imperial Lilly, or Crown Imperial : of which in Chap. 439. 8. *Lilium Amencanum vel Floridiannu??i^* The American or Floridian Lilly : of which in Chap. 440. 9. *H^^^A/V^ Lilium nonbulbofum, Liliafrum, Liluifphodelus, The Baftard or Day Lilly :* of which in Chap. 441. 10. *Kdvw iw&v KWY.QV^ Lilium aquaticum album, The White Water Lilly :* of which in Chap. 442. 11. *^exm hvf&v x-^e.^ Lilium aquaticum luteum^* The Yellow Water Lilly : of which in Chap. 443. 12. *Keiw TK* yw&y*ms ^ rav ywLywSv^ Lilium Convallium, Lilly of the Vallies :* of which in Chap. 444. following.

III. *The Kinds of the Write Lilly.* Authors have taken notice of three several sorts of this Plant, viz. 1. *Lilium album vulgare, Rofa Junonis, The Common White Lilly.* 2. *Lilium album flore plena, 1 he Double White Lilly* ?• Lilium album Byzantinum, The Conftantinople White Lilly.*

ff:the firft, or Ammon White Lilly. J, /-T Scaly Root, 1JFger and yellower than any LiUies. The- Stalk is of a blackilh green tali, and rifes as highasmoft of the LiUies, fair., broad, and long green Leaves- thereon, and longer beneath, and fmaller up, on the Stalk, upwards.: the Flowers ate nwny or

few, according to the Age of the Plant, Fertility of the Soil, and Time of itanding where it grows - they ftand upon long^ green Footftalks, of a^iair white Color, with a long Pointel in the middle, and white Chives, tipt with yellow Pendants afoots it. The Smell is very pleafant and iweet.

V. *The fecond, or Double White Lilly. // is *in all things like the before defcribed White Lilly/ the ilowers only excepted^ which in this are ujunity fe^ 9r fix on one Stalk, and. all of them conjhntly cloubh\ confifting of many fmall, long, white Leaves, which grow on their Foot-ftalks, one above another, forming 2 double Flower : their Leaves are long, green before they open, and afterwards turn white * but unlefs the Seafon is very fair, they never open at all. This is efteemed for the Rarity of the doubk Flowers, more than for any Beauty which^is in them.*

VI. *The third, or Conftantinople White Lilly* This other White Lilly differs bu^ little from the firft of thefe^ cither in Root, Leaf or Slower ^laving; only that this grows with a greater number of flowers than ever was ihen in the Common White Lilly : the Stalk of this Lilly many times turns fiat, of the Breadth of an Hand, bearing lomecimes near two hundred Flowers upon^ an Head, but molt commonly it bears not above a dozen or twenty Flowers, which are fmaller than the ordinary, as the gi^ Leaves allo are.*

VII. *The Places.* They all grow in Gardens with us : but the third was lent hither firft from *Con^ flantinople*, and they iourifh here as well as in the places of their natural Growth.

VIII. *The Times.* They flower in *June* and *July* - but (hoot forth green Leaves in *Autiupn*, whi^ abide green all the Winter, the Stalk fpringing up between the lower Leaves in the *Snrine*.

IX. *The Qualities.* 'Tis the *Ro^S* of *&H^* which are chiefly ufed ^ but both Roots and-Flowers are hot and moift in the firft Degree, Emollic^{ir*} Suppurative, and Alexipharmick.

X. *The Specification.* It is of great life to ri^ b- and digeft Tumors and break Apoftems, refills the Plague or Peitilence, and prevails againft ^ Dropl^.

XL *The Preparations.* You may have thieie- from, i. *A liquid Juice of the Root.* 2. *Bread wade zQith the Juice.* 3. *A Cataplafm of the Roots Honey.* 4. *A Cataplafm of the Roots with Led* 5. *A Cataplafm of the Roots with Mowers by Isolation.* 6. *A Cataplafm of the Roots with Mowers by Isolation.* 7. *A Cataplafm of the Roots with Mowers by Isolation.* 8. *An piJoffice* 9. *A drilled Hater of the flowers.*

The Virtues.

*

XII. *Tk liquid Juice of the Root.* If it is ftamped and ftrained out with Wine, (for i^, is of too ilimy a Subftance of it ielf) and given to drink for fom^ few Days together, it expels the Paf&n and Malignity of the Plague or Peftilence, and caules-it, to break forth into Blifters on the outward parts or the Skin, as has been found by Experience.

XIII. *The Bread made with the Juice. Barfy-Wmer, dUmtb^ Juce of White L*^ make it into Pajie or Lough, of which and bake them. The Bread ordinarily ^ fays) for fix Weeks or fome Mo with Meat, (abftainmg feom aU mean while) does curt the had.cured many of that Difeaie.*

XIV. *The Cataplafm of the Roots mth The Roots feir/beiten in a Mortar with*

and applied to fimple green Wounds, or Sinews cut afunder, is faid to conglutinatethem, or join them together again. It cleanfes thofe Ulcers of the Head called *Achores*^ or Scald-head^ and the M#nginefs or Scabbinefs of the Beard and Face, called *Mcntagra*.

XV; *The Cataplafm of the Roots with Henbane-Leaves*. It is made by ftampiig the Roots with *Henbane Leaves* an3 *Barley Flower** Being applied, it cures Tumors and Apofitem of the privy Parts : it brings Hair again upon bald places, and places which have been burned or fcalded, being mixt with Bears Oil or Greafe, and fo applied to the place.

XVI. *The Cataplafm of the Roots roasted, baked, or boiled*. The Roots fo prepared, are to be beaten into a Cataplafm with Crums of R^Bread, or Hogs-Urd, or Oil of L/V^Roots. Being applied to any Pefilential Bubo or Sore, it ripens and breaks it: it alfo ripens and breaks other Tumors or Apofitem in the Groin, or in other Parts, proceeding from the Venereal Oifeafe, or any other Caufe.

XVIj, *The DecoSion of the Leaves*. -It is made by boiling them in Red Wine. If old running Soies, or putrid Ulcers, be often wafhed herewith, it cleanfes and dries them, and induces a fpeedy Cure.

XVIII. *The CataPlafm of the Leaves*. It is made of the former Leaves, boiled in Red Wine, as aforefaid. Applied to rotten putrid Ulcers, or to Ulcers, or Wounds undigefted, it caufes Digeltion, cleanfes them from their Filth, and caufes them fuddenly to heal.

XIX. *The Oil of the Flowers by Infolation or Boiling*. It is made with Oil Olive, or rather Oil of Ben, which wUl not grow rank, by Infufion in the Sun, or in a boiling *Balneo*^ or in a Sand Heat, repeating the Infufion or Digeltion two, or three, or more times. It is emollient, and foftens the Hardnefs of the Nerves, and extends Sinews fhrunk : it iUb fqtens *ths* Hafdnfs of the Womb. You may tnike an Oil alfo of the Roots, after the fame manner, and for the lame Purpofes : it is good to bring to Digeltion and Suppuration, Tumors and Apofitem, and to foften hard Swellifgs.

XX. *The dialled Water of the Movers*. According to *Julim Alexandrinus*, being drank from four Ounces to eight, it caufes a fpeedy and eafy Delivery to Womep in Labor, and expels the Secundine and After-birth with much Facility, as *Matthiolus* and *Carrierius* report, it is ufed alfo outwardly as a Cofmetick to cleanfe the Face and Skin, and make them frefh, white and clear.

5. *LiliuM minus bulbiferum*^ The Dwarf or lefler bulbed Red Lilly. 6. *Liiiwi cruentum bidbiferum, Martagon bulbiferum Clufij*. The Fiery^ed bulbed Lilly. 7. *Lilium cruentum Jlore flend*^Zhz Fiery-red double Lilly not bulbed. •

III. *The fir ft-, or Golden, or Orange-tawney, Yellow or Red Lilly*. *It has a Root which is white and fcaly i) it grows much higher thfin the next following^ and nearly as high as the Common White Lilly, or any other Lilly*. The Leaves are foipewhat longer, and very much narrower, of a dark or fad green Color : the Flowers are many and large, ftandfng upright, as "alt thefe^fets of Red Li ties do, of a paler red^olor, tending to an Orange on the infide, with mafly black Spots and Lines on them, as in the following, and more yellow on the outside* The Seed-Veffels are like unto the roundifh Heads of other Lillies^ and fo are the Seeds in therf like* wife.

IV. *The fecond, or Dwarf or low Red Lilly** *This has a fcaly Root_ like unto other Lillies, _W i white^ and not yellow at all •, and the Cloves or Scalē* thicker^ fhorter, and fewer in number than in, moji other Lillies".* The Stalk is feldom above half a Yard high, unlefs it grows in extraordinary Ground futed to the Nature of the Plant •, it is round and green, fet confufedly with many fair and fhort green Leaves, on the top of which do Hand fometimes but a few Flowers, and fometimes many, of a fair purplifh red Color, and a little paler in the middle, every Flower Handing upright, and not hanging down : on the Leaves whereof* here and there, are fome black Spots, Lines or Markfe anc1 A^1A^ middle of the Flower, a long Pointetpwich fome Chives about it, as is in the reit of theft Lillies.

V. *The third, or Double-flowered Red Lilly, Thii Kind is fometimes found to yield double Flowers^ as if all the Jingle blowers JJwuld grow into one^ and fo make it to confuit of ntany Leaves, which not**

C H A P. CCCCXXXIV.

Of L I h L Y -Yellow or Red.

It is cailed in *Greek*, ^{K < *ov} X KA^&y> § i*Btp : i_n Ratine. *Lilium Luteuw, vel Ruorjūm*, and in *Englijh*, *The Tellow^ or Red, or Orange-tavoney Lilly*.

IL *The Kinds*. The following Sorts offer themfelves to our View. i. *Lilium Aurmm* The Golden, or Orange-tawney, Yellow or Red Lilly : This L t T r r V « TM ontani, *Hemerocalis* *Mathwli*, *Martagon* *Chymiflarum* *Lobehj*, *Mycinthus* and *Cof S*^7v+ of the YoetS. ^hfompurnilumcruen- { : : ^njurpureum minus, The Dwarf Red 7^7, J* Mimm rubrum fiore multivlici The double-flowered Red L%. 4. *LiCf^s but-*

wthftanding its fo continuing for feveral Years, will yet upon Tranfplanting redire ad ingenium, viz. quickly come or return to its old Form again.

VI. Toe fourth, or Greater bulbed Red Lilly. It rifes up with a ftro/\$ high Stalk, and is the moji common Kind of the Lillies bearing Bulbs. ^ It has many Leaves about the Stalk, but not of fo fad a green Color as the following, or fome others. The Flowers are of as pale reddith yellow Color as any of the following, and come neareit to the Color of the fitit, or Golden or Orange-tav&riey Lilly. This is more plentiful in Bulbs among the uppermoft Leaves, than any of the others ; as alfo in fhooting forth Hbres or Strings, to encreale the Roots under Ground.

VII. The ffth, or Dwarf or Lettér bulbed Lilly. It has a white bulbed fcaly Root^ like other Lillies, and bears Bulbs on its Stalk, which rifes up fmall and ro*nl, not much higher than the Jecond, or Dwarf billy' afore-defcribed, jeewlng to be edged, and having many Leaves thereon, of a Jad green Color, fet about it, thruft clofe together. The green Heads for Flowers-have a kind of Woolnel's on them, before the flowers begin to open, and between thefe Heads of Flowers, as alfo under them, and among the uppermoit Leaves, appear fmall Bulbs or Heads, which being ripe, if put into the Ground, or if they fall of themfelves, will floot forth Leaves, and bear flowers, within two or three Years, like the Maternal or Mother Plant ; and fo will the Bulbs of that juft befpre-defcribed, and of thefe other which immediately follow. The Flowers of this Lilly are of a fair Gold-yellow Color, fhadowed over wkh a fhew of Purple, but not fo red as the firft, or the next to-be defcribed. This Lilly (hoots Strings under Ground, like as the laft Red Lilly will do -lib, at which will grow white bulbed Roots, like the Roots of the Maternal or Mother Plant, and ib thereby, in a fhort time, enereafes it felt.

VIII. The/ixth, or Fiery-red bulbed Lilly. This third Bulbed Lilly rifes up with its Stalk as high as any of thefe Lillies, carrying many long and narrow dark green Leaves sbout it, and at the top many fair red Howers, as large or larger than any of the iormer, and of a deeper red Color, with Spots on them hkewife/having greater Bulbs growing about the top of the Sulk, and among the Flowers, than any elie. . 4* *

u f?S Wh Rea defc W^s it thus : The Fiery-red bulbed T ^ T , ? ' .m. F i e r y double Lilly not bulbed. Itm Lilly H without Bulbs -, and the chief ib compofed of many Leaves, as if many Flowers went to make one, when it thus beareth hWhich is 1 Ur .CCidenral > as the tormer double Lilly is, laid to be M'be Original.

XL Mr. Rea thus defcribes it: Thk Double Red UUy is like unto the former in Root, Stalk and Lfinesykrtmifat Bulbs, not fo big, nor of fo dark green Color. It commonly Jear., many Uiegg. with m. of many were united in one, which altW it be but

accidental, yet it happens in this Kind more frequently than in any other Red Lilly •, for ijyouUve many Roots of this fort, you will always have fome double Flowers, and many more in fome Tears .than in others'

XII. The "Places. The Native places, pf the Growth of thefe Lillies, 'are on the Mountains, and in the Vallies near them in Italy, as Mattholuf fays, and in many Countries of Germany, as Aw Jlrta, Bohemia, Hungaria, Stiria, as Clufius and others report -, and with us they grow almoft in all Gardens, wheje they admirably thrive.

XIII. The Times. Thefe Red or Tellom Liffes flower a little before the White Lillies, and fometimes together with them •, but they flower for the molt part in June ; but the Tecond of than, ot Dwarf Red Lilly, is the earlieft of all the: reft. .

XIV. The Qualities. The Flowers of the m Lilly are hot in the firft Degree, and temperate, in refpeft to Drynefe or Moifture, of a thin and iuhu Subitance.. The Roots and Leaves are hot and off in the firft Degree, Difcuffive, Digeitive, and hor, terfive, Vulnerary, and Alexiphaimick; and mdeca thefe Plants have almoft all the iame Qualities ana Virtues of the White Lilly^ but not all out fo emacacious or powerful.

XV. The Specification. The Red Lilly is a, peculiar thing for the Cure of Burnings, Scaldings, g j e n Wounds, and Wounds made by Venomous Bean*

^ XVI. The Preparations. You may make there; from all the fame Preparations which you from White Lillies ; but thefe following are viz. 1. A Cataplafm of the Leaves. 2. J, the Cataplafm of the Leaves. 3. A Cataplafm of the Root with Oil of Rofes. 4. A Cataplafm of 1 with Honey. 5. A Cataplafm of the Root teith gar and henbane-Leu Ves. 6. A Cataplafm^ J Roots boiled in Wine. 7. A Deco^ of the in Wine or Honied-Water. 8. A Juice of we in Mead or Honied-Water.

The Virtues.

XVII. The Cataplafm of the Leaves. It is, to by bruifing them raw in a Mortar. Appieo, to places bitten by Serpents or Mad Dogs, it is to draw out the Venom and heal them

XVIII. The boiled Cataplafm of the Leaves* is made by boiling them in Vinegar. It is good gainft Burnings and Scaldings, and to heal green Wounds i alfo to cleanf, dry, and heal old Ulcers.

XIX. The Cataplafm of the Root with Oil of Rofes. It is made by roaiting it in the Embers, and beating it up with Oil ot Holes. AppVied, it cuies Burnings and Scaldings, and foftens a Scirrbsvs, OI Hardnefs of the Womb.

XX. The Cataplafm of the Root with Honey. It is made by beating up the Root, beaten up with honey, and laid to the place, it cures the Deformities of the Skin.

XXI. The Cataplafm with Vinegar, it is made by beating up the Root with Vinegar; it cures the Deformities of the Skin.

XXII. The TV... Days time, renewing the Appl Night till the Cure is eft wed-

XXIII. *The Decoction of the Roots in Wine or Honied-Water.* Being drunk to fix, eight or ten Ounces, according to Age and other Circumstances, it is faid to help the Bloody-flux, and expel clotted Blood Oit of the Bowels.

XXIV. *The Juice of the Root extra ffei with Mead or Honied-Water.* It purges gently, eases the Colick, and cleanses the Bowels of fharp, acrid[^] and putrid Humors, and carries off the Morbifick Caule of a Bloody-flux.

C H A P. CCCCXXXV,

Of the LILLY Mountain,

O R,

MARTAGON.

» I. T^p HE Names. It is called in *Greek*, *Keivw oëivoy*; X in *Latine*, *Lilium Montanum*, and *Marta[^]gon*: in *EngUJh*, *The Mountain Lilly*, and *Martagon*, alfo *Martagon Lilly*.

II. *The Kinds.* There are many forts of thefe *Martagons* or *Mountain Lillies*, viz. 1. *Martagon Jlorc albo ?na}us*, *Lilium Montanum majus flore albo*, of fonfe *Martagon Imperiale flore albo*, The great 'white *Martagon*, or Great white *Mountain Lilly*. 2. *Martagon fiore albo macriato*, The white IpOted *Martagon*, or *Mountain Itfly*. 3. *Martagon flore Carneo*, T[^]Biu^h or *Flefh-colored Märtagon*, or *MouhSin Lilly*. 4. *Lilium Montanum minus*, *Lihum Jy he [ire minus*, *Hemerocallh Dodonai*, The left^r *Mountain Lilly*. 5. *Martagon luteum pun-Saturn[^]* The yellow spotted *Martagon*. 6. *Martagon luteum non maculatum*, The yellow spotted *Martagon*. 7* *Märtagon luteum ferotinwn*, The late-flowering yellow *Martagon*. 8. *Lilium Montanum non 7naculatum*, The finall *Mountain Lilly* not spotted.

The Defcriptions*

III. *The firfi*, or Great white *Martagon*, or Great white *Mountain Eilly*. *The Root of this*, at alfo of the two next which follow, are of a J?ure yellow Color, the Cloves or Scales of them being brittle, and not clofely compaB, yet Jo as if two, andfometimes three Scales or Cloves grew one upon the Head or ^Uepc part of another [^] which Difference is appecial [^]3Sfote to know thefe three Kinds, from any other Mnd of *Mountain Lilly*, as in all old *Roots* are to be; fee n, as dffo in thofe whicp are reafonably well .eroiv[^]jMfl U2 young *Roots* is nS' yet jo evident. f his [^]its Staic and green Leaf greater than thofe of the *Martagon Imperial* in Chap. 439. following -, the Sta& is a little higher, but not bearing fo thick a I lead of Flowers, altho' much-more plentiful ^{tb}Λⁿ in the *Lejfer Mountain Lilly* at SeS'fe. following 5 being altogether of a fine white Color, without any spots, or but vfty few, and thofe but fometimes allo. The Pendants in the Aiddle of this flower are not ted, as the *Martagon Imperial*, bift yellow-

IV. *She fecond*, or White spotted *Martagon*, or *Mountain Lilly*, "its Root is Lriouflydofed, like thejormer, asaforefaid, and tfo'Plant it /elf'is like unto it in all things, excepting in this, that the flowers hereof are not altogether fo white, and be-aws-it has many reddifli Spots, on the infide of the

Leave? of the Flower: the Stalk likewlfe is net ib green, but browjiffh.

V. *The third*, or Bluff or Flefh-colored *Man. gon*, or *Mountain Lilly*. *The Root of this*, as u faid, is like the fir(1, and in all its other pdrts it is like to that, faving, that the Flowers of this are wholly of a decayed or pale Flefh Color, with many Spots upon them, ^nd in this it only or chiefly differs from the former.

VI. *The fourth*, or Lefler *Mountain Lilly*. ' *This Lilly isfo like in Root to the Martagon Imperial, Of Greater Mountain Lilly*, in Chap. 439. following, that it is difficult to diftinguijh them ajünder -, but when this is fprung up out of the Earth, which is a[^] Trout a Month after the faid *Imperial*. It alfo bears its Leaves in Runc[^]es about the Stalk, altho' not altogether fo great and fo many. The Flowers are more thickly fet on the Stalks, one above another, with more diftance between each Flower, than the former, and are of a little deeper Flefh or Purple Color, fpotted in the fame manner. The Buds or Heads of Flowers in fome of thefe, before they are blown, are hoary, white or hairy, whereas in others there is no Hoarinefs at all ^ but the Buds are fpooth and purpliff -, in other Particulars this differs not from the former.

VII. *The eighth*, or Small *Mountain Lilly* not spotted. *This differs not from the lafi*, neither in *Roots, Stalks, Leaves, flowers, or manner of Growing* -)fwing, that the Color of the Flower in this is paler, and that it has no Spots upon it# or if it has any- they are but very few.

VIII. *The fifth*, or Yellow spotted *Martagon*. *It has a great fc&ly or cloved Root, and yellow, like unto all thefe forts of turning Lillies*, from whence fprings up a round, green, itrong Stajik, three Feet high at leaf, confuledly let with long, narrow, green Leaves, white on the edges, up to the very top thereof almoft, having feverai Flowers on the Head, turning up again, as other *Ma? ugons*. do, of a faint yellowiff, or greeniff yellow Color, with many black Spots or Strakes about the middle of the Leaf of every Flower, and a forked Pointel, with fix Chives about it, tipt with reddifli Pendants, ofaltrongfweetSmell, very pleafant to fome, tho³ not to others, who love not the belt Smells, if they be itrong arid pungent. It bears a great plenty of Seed, in great Heads, Tike unto other *Lillies*, but a* little paler.

IX. *The fixth*, or Yellow spotted *Martagon*. *This Plant, in its Root, Stalk, Leaves, flowers, Seed, and manner of its Growing, differs not from the Lilly lafi defenbed*, excepting only that the Flowers of this have no Spots at all upon any of thdr Leaves *, in all things elfe it is exa^Uy alike.

X. *The feventh*, or Late-fka[^]enng yellow *Martagon*. *This is the third Yellow J#rtagon, zvhich is a Species of the fifth Kind at SeEl*. 8. above ^ but there is not other Difference betwixt this and that, faving only in its time of Flowering, which is no: until /////, and that its Color is of a deeper Yellow,

XI. *The Places.* Thefirft, fecond, third, fourth, and eighth Sorts have been found in feverai Countries of *Germany*, as *Eufiria, Hungary, Stiria*, &c: but are all made Denizons of our Gardens near *London*, where they are now become *Natives*, and flouriff as well here as in the places of their natural GrowL The fifth, fixth, and feventh, have been found to grow on the *Pyren&an Mountains*, as alfo on Mountains in the Kingdom of *Naples*, from whence they have been brought horfe to us, with whom they thrive alfo very well.

XII. *Jpff Times.* The firft, fecond, third, fourth*

and eight, flower about the latter end of *Jifne*, tor the moit part, and flower fooner than the *Martagon Imperial* in *Chap. 439.* following, tho² that fprings out of the Ground a Month before thefe at the lealt, it being the more early up, yet never the nearer. The fifth and fixth *Tellow Martagons* flower fomething more early than the *Red Martagons*, and fometimes at the fame ting with them. The feventh, or *hate-flowering yellow Martagon*, flowers a Month later or more, and is in Flower when the *Red Martagon* of *Conftantinople* flowers, which is in *July*.

XIII. As to the *Qualities, Specification, Preparations and Virtues* of thefe, as alfo of thofe in the five following Chapters, Authors have laid nothing at all, fo that we have not much to write concerning them, as having had no Experience of them, but if one may be allowed to judge of them, by the tifaui Criterions, then we muft allow them to be much of the Nature and Quality of *th&White* and *Orange Lillies* before-defcrib'd, whofe Virtues in their refpe&ive Chapters aforegoing are at large laid down.

C H A P . CCCCXXXVI.

Of the L I L L Y Turkey,

OR,

Byzantine MARTAGOR

THE Names. It is called in *Greek*, *Καλλιμαχίς* *TitQV*: in *Latine*, *Lilium Turcicum*, *Lilium Byzantinum*, *Lilium vel Martagon Conftantinopolitanum* : in *Englifh*, *The Turkey Lilly*.

II. *The Kinds*. There are no great Varieties of this Plant, yet as few as there are, Authors deliver them confufedly, thefe following are the chief or moft obferved, viz. 1. *Lilium rubrum Byzantinum*, *Hemerocallis Chalcedonica*, *Martagon Conftantinopolitanum*, *UtanBm rubrum*, The Red Turkey Lilly, or Red Martagon of Conftantinople. 2. *Lilium rubrum Byzantinum maculatum*, *Martagon rubrum Conftantinopolitanum maculatum*, The Red spotted Turkey Lilly, or Red spotted Martagon of Conftantinople.* 3. *Lilium Byzantinum flore purpureo fanguineo*, The purplifh fanguine colored Turkey Lilly. 4. *Lilium Byzantinum flow dilute rubente*, The light Red Turkey or Byzantine Lilly. 5. *Lilium Byzantinum miniaium Polyafthos*, The Vermilion many-flowered Turkey or Byzantine Lilly. The Turks call thefe Lillies, *ZuffiMareotZuffinare*. 6. *Martagon flore fpadiceo Pannonicum*, The bright, Red tyartagon of Hungary.

The Defcriptions.

III. *The firft*, or Red Turkey Lilly, or Red Martagon of Conftantinople. *It has a great, thick, yellow, fealy Root, which fends out early in the Spring, before many othef Lillies, a round brovonijh Stalk, befet with many fair green Leaves confufedly yegeon, but not fo broad as the Common White Lilly* upon the top of which ftands one, twof, or three or more Flowers, which hang down their fealy Leaves again, # of an e* color, and fometimes paler, in the middle, compaffed fix whitifh Chives, tipt with loofe yellow

Pendants, of a pretty good Smell, but fomethng faint. After the Flowers, come Heads or Cods of Seed, like to other Lillies, but greater. It is a fair beautiful Flower, and was at firft very much efteemed with us, and yet notwithstanding its Increafe and Plenty, deferves its Commendations, for its being fo common every where, and fo well known, does not at all diminifh from its Excellency.

IV. *The fecond*, or Red-spotted Turkey Lilly, or Red-spotted Martagbn of Conftantinople. *This is another of the former Kind, and grows fomethng greater and higher, with a larger Flower, and of a deeper Color*, spotted with feveral black Spots or Strakes and Lines, as are to be feen in the *Mountain Lillies*, and in fome other Kinds, which is not*) in the former but jift now defcrib'd, that having no fhew of Spots at all This whole Plant is rare, and of much more Beauty than the former.

V. *The third*, or Purplifh Sanguine-colored Turkey Lilly. *It has a large Lilly like Root, from which arifes a Stalk a Foot and half or two Feet high, fet confufedly with Leaves, like the firft above : the Flowers alfo referable thofe before defcrib'd in Self. 3. but are ufually more in Number, and of a purplifh Sanguine Color.*

VI. *The fourth*, or Light Red Turkey or Byzantine Lilly. *This is very like the laft in Root, Stalk, Leaves, Flowers, and Seed, faving, that in the Color of the Flowers,* thefe are of a lighter Red than thofe firft defcrib'd in Self. 3. aforegoing : the Leaves and Stalks alfo, as Clufius obferves, are of a lighter green Color.*

VII. *The fifth*, or Vermilion many-flowered Turkey or Byzantine Lilly. *This is alfo a Variety of the firft, but according^ Clufius, the Difference is in thefe things, that the Flowers grow equally from the top of the Stalk, and the middle Flo*£* rifts higher than any of the reft, and fometimes confifts of twelve Leaves, as it were a Twin, whichnhofo who obferve it, will find.*

VIII. *The fixth*, or Bright Red Martagon of Hungary. *This feems to be a Species of the firft * (tho* it may grow in Hungary) by reafon of the Lik^ nefs both of Leaf and Flower thereunto. Its-R9^{0t} is very like the lame, but the Leaves are fomethng larger, and more fperfedly fet upon the Stalks, ell(3) not much unlike. The Flowers bend down, and turn up their Leaves again, but fomewhat larger, and of a bright Red, tending to an Orange Color, viz, fomewhat yellowifh, and not Crimfon, like the other.*

IX. *The Places*. The firft, fecond, third, fourth, and fifth, grow naturally in Turkey, at or near *Conftantinople*, formerly called *Byzantinum* : the laft on the Mountains or Hills of *Hungary*^ but now they are made free Denizons in our *Knghfh Gardens*.

X. *The Times*. They generally flower in *June*, when other Lillies clo, fome earlier, others later, and continue Havering till the beginn^{ai}^/ ^.

XI. *Their Qualities, Specification, Preparations, and Virtues*, have not been obferved in any/Author, yet they all feem to be of the Nature and Properties of the *Common White* and *Red Lilly*.

t H A P , CCCCXXXVII

Of the L I L L Y Perfian.

I. *qp HE Names*. It is called by the *Verfiatis*, ot *X Turfo*, or ibme coming

naco, or Pennacio, or Pennachio Pprfiano : in Greek, KeW 775⁷ly : in Latine, *Lilium Perficum*, *Lilium Sufianum*, \ as coming from the City *Sufi*, or the Province *Sufianx*, in *Perfia* :) in *Englifk*, - T/ff Pff⁷- j⁷ttf L/7y.

II. *Tfo Kinds*. It is a fingular Plant of its Kind, but the fifth of the generick Species of *Lillies*. *Clufius* fays it was fent into the **Low Countries* under the Name of *Sufam Guil*, for which Reafon he thought it might come from *Sufi*, the chief City of *Sufiana*, in *Perfia*.

The Defcription.

III. *Its Root is very like unto the Root of the Crown Imperial defcribed in Chap. 177. aforegoing, and loofing its Fibres in like manner every Tear, having a Hole therein likewife, where the old Stalk grew, but whiter, rounder, a little longer, fmaller, & wd not ft inking at all like it.* From whence fprings up a round, whitifh green Stalk, not much lower than the *Crown Imperial*, but much fmaller, befet from the bottom to the middle thereof, with many long and narrow Leaves, of a whiti(h or blewifh green Color, almoft like to the Leaf of a *Tulip*. From the middle upwards, to the top of the Stalk, grow many Flowers, ^one above another, round about it, with Leaves* at the foot of every one of them, each whereof is pendulous, or hanging down the Head, like unto, the *Crown Imperial*, not turning up any of the Flowers again, but fmaller than in any other Kind of *Lilly*, not altogether fo large as the Flower of a *Fritillaria*, confifting of fix Leaves a piece, of ^ dead or over-worn purplilh Color, having in the midft a fmall long Pointel, with feveral Chives, having yellow Plhdents adjoined to them. After the powers .are paf, (« which abide open for a foriff time, and for the molt part flower by degrees, the loweft firft, and fo upwards) if the Weather is feafonable and temperate, come forth Heads of Seed-Veflels, fiX'fquare, yet feemjgg to be but three-fquare, by reafon of the Wings, very like to the Heads of the *Crown Imp*Wial in *Chap. 177. aforegoing*, but fmaller, and (horter ^ in which are contained fuch like flat Seed, byt. fmaller alfo, and of a darker Color.

IV. *Not a Gerard* has this fhort Defcription hereof. *The Perfian Lilly* ;4»(fays he)for its Root, a great white Bulb, differing in Shape from the other Lillies, having one great Bulb, firm or folid, and full of Juice, which commonly each Tear fets off or increafes one other Bulb, and fometimes more, which the next Tear after is taken from the Mother-Root, ami fo brings forth fuch flowers as the old Plant did. From this Root riles up a fat, thick, and ftrait Stem, of two Cubits or three Feet high, whereon is placed long narrow Leaves, of a green Color, declining to Blewnefs, as do thofeof *Wood*. The Flowurs grow along the naked part of the Stalk, \ iittjg Bells, of an over-worn purple Color, their Heads, dferly one having his root-ftalk, v?hich is about two Inches long, Clapper from the middle part of the Flower : which, being paf and withered, the* is not found any Seed at all 'as in other Plate, but it is increased W its Root.

V. *the F/acfs*. It is faid to be firft brought from *ConjUnimopl*, and from thence fent to *ConjUnimopl*, and from thence fent to *ConjUnimopl*, by feveral T*/£y Merchants, or their fons, which Dwelt and Traded there • but now become a Native a f £ ^ an? flourifhes as in the *Englifk* Gardens, as in the *Englifk* where it firft

rJrl T(CA T'f? li P'ring's out of the Ground nearly a Month before the *Crown Imperial*, but does

not flower till the latter end of *April*, or beginning of *May*. The Sced (when it comes to Perfection, which it does not often) is not perfectly ripe till

VII. *As to its Qualities, Nature or Virtues, &c of this Perfian Lilly*, efteemed for its R&enefs and fine Figure it makes, there is not any thing written by any Author, only it is' thought to participate of the-Qualities, CSV. of the other *Lillies*,

C H A P. CCCCXXXVIII!

Of the L I L L Y Early,

O R,

L I L L Y Pompony.

I. *THE Names*. It is called in *Greeks* KeW K2coi(j.ov ; in *Latine*, *Lilium rubrum Pr&cox*, *Lilium Pomponeum*, *Lilium rubrum Macedonicum*, *Martagon rubrum Pracox*, *Martagon Pomponeum*, *Martagon rubrum Macedonicum* : in *Englifh*, *The Early Red Lilly* -, *Early Red Martagon* * *Martagon Pompony*, and *Early Red Macedonian MSrtagon*.

II. *The Kinds*. Authors make four Kinds hereof, viz. 1. *Lilium rubrum Pr&cox anguftiore folio Clufij*, *Martagon Pomponeum vel Macedonicum rubrum anguftifolio*, The narrow-leaved early Red Lilly, Narrow-leaved Red Pompony or Macedonian Martagon, 2. *Lilium rubrum Pr<ecox anguftifolio aliud*, Another narrow-leaved Early Red Lilly, or Red Martagon Pompony. 3. *Lilium rubrum Pracox latiore folio Clufij i Martagon Pomponaum vel Macedonicum rubrum latifolio*, The broad-leaved Early Red Lilly, or Broad-leaved Red Pomponean or Macedonian Martagon. 4. *Lilium rubrum Pr<ecox flore Phceniceo*, *Martagon flore Phceniceo* ^ The Lilly or Martagon of Macedonia, with Golden-red Flowers,

The DefcriptionSo

III. *The firft, or Narrow-leaved Early Red Lilly, or Narrow-leaved Red Pompony or Macedonian Martagon. This rare Martagon has a fealy Root, clofely compaU, with broader and thinner Scales than others, growing in time very great, and of a more deep yellow Color than in the former Martagon's ^ from whence fprings up a round green Stalk infome Plants, and flat in others, growing to be two or three feet high, bearing a number of fmall, long, narrow, green Leaves, very like unto the Leaves of Pinks, but greener, fet very thick together, arid without Order^ about the Stalk, up almoft unto the top, and leffer by degrees upwards, where ft and many Flowers, according to the Age of the Plant, and its thriving in the place where it grows : in thole which are young, but a few, and more fparsedly 5 and in others, which are old, many more, and thicker fet -, threecore Flowers, yea, fourcore and more have been counted, growing thick together upon one Plapt, and an hundred Flowers upon another. Thefe Flowers are of a palef>r yellowifh red Color, not of fo deep a Red as the *Red Martagon of Conftantinople* in *Cap. 43E. SeO. 3. and 4.* nor fully fo large, yet of the fame fafhion, viz. every Flower hanging down, and turning up his Leaves again. This is not *ib* plentiful in bearing of Seed, as the other *Lillies* j but when it does, it differs not, but in being le&*

IV. Mr. Rea, in his *Flora*, Cap. 6. thus describes the former Plant. *The Martagon of Pompony has a great yellowifl), brown, scaly Root, from whence Springs iip a green Stalk, two or three Feet high, promiscuoufly thick fet, with many fmall, long, gmn Leaves, almojl to the top, where ftand many Flow-ers, in number according to the Age of the Plant: for in fome which have flood long unremoved, I have had fburfcore or an hundred Flowers upon one Stalk, which are of a yellowifh Orange Color, with fmall black Specks on the infide thereof, in f aft ion like to the Red Martagon of Conftantinople, but fmaller.* ***

V. *The fecond, or Other narrow-leaved Early Red Lilly, or Red-Martagon Pompony. This differs from the j or me r only in two things, viz. 1. That the narrow Leaves are not fo thick fet upon the Stalk. 2. That when it flowers, it is a Fortnight later. In other Particulars it differs not.*

VI. *The third, or Broad-leaved Early Red Lilly, or Broad-leaved Red? Pomponian or Macedonian Martagon. This is fo like to the former in Root, Stalk, Flower, Seed, and manner of Growing^ that the Difference is fcarcely to be difcerned, but it confifts chiefly in thefe two things: 1. That the Leaves of this are a little broader, and fhorter than the former. 2. That it bears its Fkwers a Fort-night, earlier than the firft. In the Color or Poife of the Flower, there is no Difference to be difcerned, nor yet in any other thing elfe.*

VII. *The fourth, or Lilly or Martagon of Macedonia, with Golden-red Flowers. This has come to our Knowledge later than the former Kinds: its Leaves are broader and fhorter than the laft, and the Flowers of a paler red, tending to yellow of ibme called a Golden-lid Color.* *

^ V III. *The ?laces. The Knowledge of thefe Ear, y, Mwtagons came firft to us from Itdly, jfrom waence they were fent into the Low-Countries, and into mgUmd, but it feems by their Name, that their original or native place fhould be upon the Mountains in Macedonia; with us they grow only*

I . . . X. *The Times.* All thefe *Lillies* do fpring ve-ry late out of the Ground, even as the *fellow Alar-lagon's* do; but are iboner in Flower than any other. They flower in the end of *May*, or beginning of *June*, and that is a Month at feaft before thole of *Turky* or *Conftantinople*, in *Cap. 436. Sell. 3.* and *J. aforegoing.*

X. *Of the Qualities, Katures and Virtues* of thefe, Authors have alfo faid nothing; but doubtlefs they are much of the Properties of our *Common Lillies.*

C H A P. QCCCXXXIX.,,

Of / H I L L Y Imperial

I. **T**he Names. It is called in *Grec/c\ Kg/w X G&vtxuL>v; jn Latine, Li Hum Imperiale*: in *Englijh, The Imperial Lilly.*

II. *The Kinds.* There are feveral Species of this Plant, as, 1. *Corona Imperially* called alfo *Li Hum Byzantinum*, the *Turks* call it *Caualelalc*, and *Tx-fai, Toujai, Tuyschiachi, Turfani, and Turfanda?* and *Clujim* judges it to be the *Hemerocallis Diafcoridis*, The *Crown Imperial*: of which we have difcourfed at large in *Chap. 177. aforegoing*, but in this Chapter we ihall give you another Defcription thereof from *Gerard.* 2. *Corona Imperialis flore multiplici*, The *double Crown Imperial.* 5. *Corona Imperialis flore luteo*, The *yellow Crown Imperial.* 4. *Corona Imperialis angulifolia flore rubente*, The *narrow-leaved Crown Imperial*, with a reddifh Flower. 5; *Li Hum Imperiale, jilartagop, Imperiale, Lilium Montanum majt/s*, (becaufe it is the gfeateit *Mountain Lilly*) and by fome, *Lilium Sarajenicum*, but not very fitly, The *Imperial Martagon.* 6. *Lilium Imperiale non Maculatum, Martagon Imperiale flore non puntlato*, * The *Imperial Martagon* not spotted.

'the-Defcripùons.

III. *The firft, or Single Crown Imperial, has for its Root a thick, Jirm+ind 'folid Bulb, covered with a yellowifl) Film or Skin -, from the which rifes up a great, thick, fat Stalk, two Cubits high, in the bare and naked part, of a dark, over-worn, dusky purple Color.* The Leaves grow confufedly about the Stalk, encompassing it round, in form of an *Imperial Crown*, (from whence it took its Name) hanging their Heads downwards, as it were *Bells*: in Color, it is yellowiish, or to give you the true Color, which by Words cannot otherwise be expreffed, if you lay 5^Berrics in iteep in fair Water, for the fpace of two Hours, and mix a little *Saffron* in that Infufion, and lay it upon Paper, it (he W be jiprefect Color -to Limn' or Illuminatç the Kfjiv^iwithal: The back fide of the faid Flower is itreakedV^* purplifh Lines, which do greatly let forth the §eauty thereof. In the bottom of each of thefe *Jells*, there is placed fix Drops of moft clear, ihirring, fweet Water, in Tafte like Sugar, refemblng in (hew, clear Orient PJrIs, which Drops, if you take, away, there do immediately appear the like Drops, again. Notwithftanding, if they may be fuffered to Itand ftill in the Flower, according to their, own Pofition, they will never fall away^ no, if you ftril^e the Plant till it is broken. Among thefe Drops there ftands forth a *Peftel*, as alfo fundry final Chives, tipt with fmall Pendants, like thofe of the *Lilly*. Above the whole Rundle of Flowers

Howers, there grows ^ Tuft of green Leaves, like thole upon the Stalk, but fmalleh After the Flow- ers are faded, there follow Cods or Seed-Veffels, fix-fonne, wherein is contained flat Seeds, tough and Itmbjr, of the Color of Mace." The whole Plant, as well Roots as Flowers, do fmell very li- a Fox. As the Plant grows old, fo does it wax rich, bringing forth a Crown of Flowers among the uppermoft green Leaves, which fome make a fecond Kind, altho' in Truth they are but one aud the fell fame, which in time is thought to grow to a triple Crown, which comes to pafs from the Age of the Root, and Fertility of the Soil. The Figure we have thought good to fubjoin here.

IV. Mr. Rea, in his *Flora*, Cap. 7, gives this following fhort Defcription thereof. *It has a great round Fox-fcented Root, from whence-fprings up a tall andftrong Stalky garnifhedfrom the Ground unto the middle thereof, zcith many long, finning green Leaves, from whence it is naked upwards, bearing at the top a Tuft of fmallgreen Leaves,* and under them eight or ten Flowers, according to the Age of the Plant, hanging down round about the^talk, in Fafhion likdunto a Lilly, confifting of fix Leaves of ^n.Oz.f^^.g:olor, with many" Veins of a deeper Color on>the^M fi^s of the Flowers. Next the Stalk&evety Leaf thereof has a Bunch or Eminence of a filder Orange Color than the ref of the Flowers, and on the infide thofe Bunches are filled with fweq^afted clear Drops of Water, like unto Pearls • each Flower having in the middle a Stile, compaf- &d with fix white Chives, tint with yellow pen- dents.

V. *The fecond, or Double Crown Imperial. Thl* is of a late Difcovery, and in much more Efteem Man the. former, and it is indeed a gallant Plant, and deferving Efteem, ztfbich in fome meafure m*kes the other to be the lefs regarded.* It chiefly differs

from.it in the Flowers, which in this are cofittantly double, each Flower containing fifteen or fixteen Leaves, whereas thofe of the other *Common Kind* have but fix. The Leaves of thofe double Flowers are narrower, with a Drop or Pearl at the Head of each of them, of the fame Color with thofe of the *Common Kind*, and as many Flowers on qne Stalk. The Plant at firft coming up, is redder, and continues longer fo than the *Ordinary**; the green Leaves are of a darker Color, and the Tuft on the top a- bove the Flowers, bigger, and confifting commonly of more Leaves.

VI. *The third, or Yellow Crown Imperial. It w its Root, Stalk, Leaves, I lowers, Seed, and man- ner of Growing, differs not from the fir ft Common Kind, but only in this, that the Flowers are ojLifair yellow Color.* This is more rare than that with the double Flowers.

VII. *The fourth, or Narrow-leaved Crown Im- perial with a reddifh Flower. This likewife in its Root, Stalk, and manner of Growing, differs not from the other Single Kinds ^ but in this the Leaves are much narrower, and the Flowers of a light Red, or of a pale Roze Color.*

VIII. *The fifth, or Imperial Martagori. This imperial Lilly has afcaly Root, like unto all the ref of the Lillies, but of a paler yellow Color, clofely compaS or fet together, being ftwrt and fmall often- in refpelf of the Greatnefs of the Stem grow- from it. This Moot is very apt id increafe or fa^off, as it is called, whereby the Plant feldom comes^ofo great a head of Flowers, but nfes up with many Stalks, and fo then bears the fewer liovoers* The Stalk is brownifh, and round at the bottom and fometimes flat from the middle up- wards, three Feet high or more, befet at certain dittances with Rundles or Circles of many Upoad Leaves larger and broader fbr the molt part than any otther of this Kirtid, and of a dark green Color : it has two or th*ee, and fometimes four, of thefe Rundles or Circles of Leaves, and bare, without a- ny Leaf between : " but above, twards the tops of he Stalks, it has here and there fome Leaves upon

ir, dthaller than any of the other Leaves- At the tip of the Stalk come forth many Flowers, sometimes three or four score, thick thrust, or confusedly fet together, and not thin or sparsely one above another, as in the leffer of this Kind of Mountain Lilly, in Cap. 43\$. Set. 6. It has been sometimes also observed in this Kind, that it has born many Flowers at three several places of the Stalk, one above another, which has made an excellent Shew, each Flower whereof is pendulous, or hanging down, and each Leaf of the Flower turning up again, being thick or fleshy, of a fine, delayed purple Color, spotted with many blackish or brownish Spots, of a very pleafant sweet Smell, which makes it the more acceptable. In the middle of the Flower, hangs down a Stile or Pointel, knobbed at the end with six yellow Chives, tipped with loose Pendants, of an Orient Red or Vermilion Color, which will easily stick like Duft upon any thing that touches them. The Heads or See:l-Veifels are small and round, with small Edges about them, wherein is contained fiat brown Seed, like as in other Lillies, but letter.

IX. The Lilly, or Imperial Martagon not spotted. Tills is a Species of the laji Kind, which is found in some Gardens. It is in its Root, Stalk, Leaves, Flowers, Seed, and Form of Growing, very like that, but its Flower are without any Spots: the Leaves thereof and Stalk likewise, are of a paler Color, but otherwise not differing.

X. The Places. The first four were brought to us without doubt Out of Turkey, and places near about Conjlantinople; but some think them, especially the first, to be Natives of Perjia. The two last come from several Countries of Germany, as Aufiria, Hungary Stiria, Tirol, &c. but now are free Denizons of England, and Natives in our Gardens.

XI. The Times. The first four spring out of the Ground about the end of February or beginning of March, and the Heads with the Seed are ripe in the end of May or beginning of June. The two last flower about the latter end of June for the most part, and yet they spring out of the Ground before the other Martagon's or Mountain Lillies in Chap. 435. foregoing.

XII. As to their Qualities, Natures, and Properties, Authors have laid nothing, but by their Tafies and other Criteria, they seem to have the Virtues of Our Common While and Orange-tawny Lillies.

C H A P. CCCCXL.

Of the LILLY American or Floridian.

I. The Names. This Plant being but of late Invention or Discovery, can have no Greek Name: but modern Authors call it in Latine, Lilium Americanum, Li Hum Indicum, and Li Hum yiondianum, and in English it is called. The American or Floridian Lilly.

II. The Kinds. Mr. Rea, in his Flora, Cap. 7. gives us two several sorts of the American Lilly] viz. 1. Martagon Canadense maculatum, Lilium tanadense fup Qatum, Lilium Floridianum maculatum. The spotted Lilly, or Martagon of Canada. Martagon Americans, and Lilium Virgiamm,

The Virginian Lilly or Martagon, The American Lilly or Martagon.

The Descriptions.

III. The Lilly, or Spotted Lilly or Martagon of Canada. It has a small scaly Root, with many long small fibres thereat, from whence rises up a reasonable great Stalk almost, as high as any of the former Kinds, bearing at three or four Distances many long and narrow green Leaves, but not so many nor so broad as some others, having divers Ribs in them from among the uppermost Rundle of Leaves, break forth four or five flowers together, each one standing on a long slender Foot-stalk, being almost as large as a Red Lilly, but a little bending downwards, of a fair yellow Color, spotted on the inside with several blackish purple Spots or Strakes, having a middle Pointel and six Chives, with Pendants on them.

IV. Mr. Rea, in his Flora, describes it thus: The Root of this Stranger is smaller, and the Stalk lower than any of the former Martagon's: the green Leaves grow on the Stalk in Rundles. and the Stalk bears four or five Flowers on long Foot-stalks, in Form like a Red Lilly, hanging down their Heads, of a fair yellow Color, with many black Spots on the inside, a Pointel, and six Chives tipped with red Pendants.

V. The second, or Virginian Lilly or Martagon has a close compacted, round, scaly pale yellow Root, from the sides whereof more frequently than the top, come forth the Stalks, about three Feet high set with small, sharp-pointed, whitish green Leaves in Rundles, bearing at the Head four, or more, something large Flowers, which look like that of Conjlantinople, of a Gold-yellow Color, with many brown Spots about the bottom of the Flowers, with the Points or Ends of the Leaves that turn up, of a Scarlet or Red Color, and without Spots. It is a tender Plant, and must be defended from frost in Winter. There is another of this Kind, which bears more Flowers on a Stalk, and differs from the former, in that these are of pale Colors, but spotted as the others are.

VI. The Places. The first was brought from France from Canada, and from thence to us. The second was brought by some of our Merchants and Captains of Ships from some of our Plantations in Virginia.

VII. The Times. They flower about the end of June, and the Cods of Seed come to Ripeness towards the end of July, or in August.

VIII. The qualities, Specification, Natures, Properties and Virtues, are unknown as to crus; but that no more can be said of them.

C H A P. CCCCXLV. Of the LILLY Baftard/j OR, DAY-LILLY.

THE Names. It is called in French, Lilium, and in English, Day-lily. It is called in Latin, Lilium, and in English, Day-lily. It is called in French, Lilium, and in English, Day-lily. It is called in Latin, Lilium, and in English, Day-lily.

£? in horiis fcrebant ad Coronamenta, vide Plin. lib. 21*. Cap. 10. in Latine it is called, Uemerocallk, and it is doubtles the true Plant which ought to be called by that Name, alfo LUium non bulbofium, Liliafphodelus, Liliage, and Liliajirum ; in Exglifh, The Baftard Lilly, or Day Lilly.

II. The Kinds. Authors make mention but of four forts of this Lilly, viz. 1. Liliago Phosnicea, Liliajirum PJwniceum, LUiafphodelus Phcniceus, LUium non bulbofium punileiwi, Uemerocallis, .db. *e*dies, V? &* * &, pulchritude, kfiori* fugacitate. <{uia nno tantum dk pulchritudinem fuam, tuetur ^? * e. flos, utro die vigens h The Gold-red Baftard Lilly, or Gold-red Day Lilly: 2. Liliafrum lute- ^m, LUiwn non bulbofium lute Urn, Liliafphgdelnsl luteusi The Yellow Baltard Lilly, ^Yellow Day Lilly." 3. LUiafphodelus florC dbo, The Lilly Al- pho^il with a white Flower. 4. LUiafphodelw fiore Earnea, The Lilly Aphodil with a Bluff-colored Flower.

The Descriptions.

III. The M_s -or Goldried Baftard Liily, or Gold- ted Day Lilly* It ha* for its Root many thick and long kndbbed Strings, Tike unto the Small yellow Afph6dil-jR00t/s, but fomewhat greater, running under Ground in like fort, and fhooting out young Heads round about. From this Root ipting up divers broad and long fresh green Leaves, folded at the first, as it wer6^?uble, which after open and remain a little hollow in the middle -, among which tifes up a naked Stalk, three Feet high, bearing at the top many Flowers, one not much distant from another, and flowering one after another, n6t ha- ^ing commojly above one Flower blown open in a Day, and thui but for a Day, not lasting longer, ty*t dof: ?£2t Kight, and not opening again, where- upon it obtained the Englifh Name of Day Lilly, or Lilly for a Day. Theje Flowers are almolt as large as the F洛夫ers of the White Lilly, and made after the fame fashion, but of a fair Gold-red or Orange- tawny Color. Seed is very feldom feen to follow thge Flowers, for they feem the next Day after they haVe flowered, (except the Seafbn is vtry fair and dry) to be fo rotten, as if, they had been laid in Wet to rot them.

IV. Nota. Gerard fays, That this Plant brings forth its Bud in the Morning, which at Noon is lbli blown or fpread abroad, and the fame Day in the Jeering it ihuts it felf *, and in a fhort time after jpecomes as rotten and {linking, as, if it had been Sodden in a Dunghil a Month together, in foul and jamy Weather h, which is the Caffle that the Seed ^ldom follows, as in the other Kind, fcarcely, ever Ringing forth any at all.

V. The fecond, or Yellow Baftard Litly, or Yei- low Day Lilly. It ha* d Root confifling of many or tuberojx Burtchings out, proceeding from the middle of the Root, and growing up in a fhort time after the Common White Lilly in Shape and Proporti- and of a fhining yellowt Color ^ which being I^e_c <>rnered Cods or Husks fucced full of m. anil S Seed, like thofe of Peony.

in his Flora, Cap. 14. f. 258. ^ j)at or Lilly Alphodil rifes up Leaves, out of the 'middle of up a naked Stalk, bearing at the top of four er five fmall L;///-like yellow Flowers,

blowing one after another, 4ike the first Gold-red Day Lilly, but continuing many Days before they fade. The Leases die to the Ground before Winter, and the Roots are many, long, yellow Strings, very mucfi-increasing.

VII. The third, or Lilly Afphodil with white Flowers. This Lilly is in all the parts thereof a* Roots, Leaves, Stalk, Cods, Seed, and in its manner of Growjng, rikei ke-jormerifaying^aft the Leaves are of a fresher green Color, and the Flowers of \$ SJJOW white, like unto the Savoy Spidenwrt, but that the Stalk is higher, and the Flowers larger.

VIII. The fourth, or E1 ^ AfpRodil with Sa Bluffi or Flefli colored Flower. " This is very like to the White in every oj* its parts, and in the mfaner of its Growing rjhe greateft Difference is in the Flow- ers, . which in this ^re of a fine byfg&t -Bluffj JQX Fleth

IX. lire -Places. They are all oi mem of Ger- map Productions and are found in many Gardens in Germany *, from whence they Have been brojght in- to our Gardens in England, where they thrive very well, if the Earth or Soil is moift:

X. The Times: They all of them flower about the latter end of May, and almolt throughout all June, as the Seafbn proves.

XI. The Qualities, Specificdiicn, Preparations and Virtues of the Lilly Afphodil or Day Lilly, are laid to be the fame with Our Common Afphodil, illi cit you may fee at large in Cap. 35. Sett. 9. ad 21. of the fame Chapter foregoing. Some make a Cataplaim of them; and apply in the Cafes following:

XII. The Cataplaim. The Roots and Leaves beaten in a Mortar to a Pultice, and applied to hot Swellings in Womens Breasts; in their Lying-in, cools, difcufles and eases the Pain : applied alio to Inflammations of the Eyes, it cools and takes them away. Applied to Burnings and Scaldifgs, it draws forth the Fire, and heals them. If it is made into a Peflary with a* little Honey and Wooll; and put up the Womb, it provokes the Terms, bringing forth both Water and Blood.

C M A P. CCCCXLII

0/ LILLY Water White.'

I. The Names. This Plant is called in Greek: Νύμφη: in Latine, Nymph*a, quod loca a* uofo amet, as Diofcorides iaith -, it is alfo called by Apideius^ Mater Herculana, Alga paluftris, Pa- paver patufire, Claws Veneris, Digit us Veneris • and MarcOw, an old Writer, fait^ that it was called Clava Herculis : in the Shops, Nenuphar; The A- rabians call it, Nilafur, and Niufar i and we in Englifh, Water Lilly.

II. The Kinds., There are titfo prindpatl Kinds hereof, viz. 1. NUM^* * &*, Nymphaa alba^ The White Water Lilly. 2. Ni^ai* g^f M ^ »x&, Nym- phda lutea, The Yellow Water Lilly : of which i* e (hall fpeak in the next Chapter.

III. The Kinds of the White Wctft Lilly; Of this there are two forts* viz* 1. Nymphaa alba ma- jor, The greater White Water Lilly. 2. Nphbda albaminor^ The lefler White Water Lilly/ %* Td thefe we may add a third, which is to Exotic^ fid not to be found in our Country^ but I haVe^ b^fen told by a Gentleman well skilled ixi Betdy, thai hfi

had met with it in feveral Marfhy places in Florida. It is *Nymphaea alba major JEgyptia*, five Lot its JEgyptia, The great White Water Lilly of JEgypt. Some add a fourth Kind, viz. *Kympha alba minima*, which is, *Morfr/s Ran**, or *I'roghit* : of which we have already difcoufled in Chap. 302. foregoing.

*Greater White Water Lilly**

IV. *The firji^ or Greater White Water Lilly, has a great, thick, round, long, tuberous Root, fpongy or loofe, and imtb many Knobs thereon, like Eyes, and whitiff) within : from whence proceed very large and very round, thick, dark, green Leaves, lying upon the Water, (like utito tboje O/Taba JEgyptia, as Dtolcorides jftyx, and that very truly) fujiained by long and thick bbot-ftalks : from the middle alfb, and O-ther places of this Root, rile' other the like thick and great Stalks, fultaining one large and white Flower thereon •, green on the outfide, but exceeding white on the infide, white as pure Snow, confifting of feveral Rows of long, and fomewhat thick and narrow Leayes, fmaller and thinner, the more inward they grow, encompassing a Head within, with many yellow Threads or Thrums in the middle j where after they are paf, ftand round Poppy like Heads, full of broad, oily, bitter, blackifh and glittering Seed.*

V. *Thefecond, or Lefler White Water Lilly. // has a Jingle Root, with fome jew Fibres adjoined thereto • from whence rife up many long round Foot* jldlks of Leaves, which Leaves float alfo upon the water, as the other does*, being fair, of a light green to lot, broad, fynooth, jfft, round, and buckler-like in form; and from the fame Root rife up alfo feveral (bm Snd \ f m o o / h, foft > "B^to g*en Stalks Hnd \ t h n n thofe of the Greater Xilly) of bearing at their tops fine fmall white*

Flowers, ftanding upon £>ot-ftalks, feme longer, fome ftoner, each Flower conlifting of fyfe finali Leaves apiece, having a little yellow in the middle thereof

VI. *Parkinfon&ys, That this Lefler Water y% differs not from the former, or Greater, but in «1 Smallne/s both of Root ajid Leaf, and in the Sing" nefs of the llovr, which confifts but of fiveyoqx pointed Leaves, fpread open and laid abroad, C. j you wy fee by one of the Figures) wirh^gy^*

ly. *This differs not much from that laft defer ibed : the Root in this abounds with long Strings, which are frongly fafined in the Mud. The Leaves are imaller than the former, and grow with a harper Point, and the Flowers are alfo much lefs than thofe; for which Reafon, and for Diltin&ion lake, it is called by fome, Nymphaa lutea minor jlore parvo.*

VI. *The Places.* They do all of them grow in Pools and (landing Waters, well watered broad Ditches, drowned fenny Grounds, fides of (hallow Rivers, and in Rivolets haying a fbit or almoft no Stream, and in fuch other like places in molt parrs of this Kingdom -, and indeed in molt places where the *White Water Lilly* grows.

VII. *The Times.* They all flower commonly in the two laft Weeks of *May*, or beginning of *June*, and in fome places hold on to the end of *June* •, and their Seed is ripe towards the latter end of *July*, or beginning of *Auguft*, according as the Seasons may prove.

VIII. *The Vitalities, Specification, Preparations andvirties,* are the fame with thofe of the *White Water Lilly*, declared in the laft Chapter, which having refpeft: to, no more need be faid of them in this place.

pen Mouths, nickt or cut into five or Ik Notches, running all downwards one way, or on one fide of the Stalk, of a very ftrong fweet Smell, and comfortable to the Memory and Senfes 5 which being palt away, turn into fmall Berries, of a red Color, fomething like unto *Afparagits*, in which, is ^on^ tained white hard Seed.

C H A P . CCCCXLIV.

Of LILLY Convally,

O R,

MAY-LILLY.

I. ¹ *The Names.* This is an Herb not known to the *Greeks*, but may well enough be called by this *Greek Name*, Κεϊω t&v yway/n^v : in *Latine*, *Lilium Convallium* : fome will have it to be *Lilium Vcrnum Theophrasti* -, others *Oenanthe Thieophrasti*, *Callionymus Gefneri*, *Cacalia Lonicery*, and *Ephemerum non Lethale Fuchfij* •, but they all of them, for the molt part, are miftaken in thofe Names. In *Englijh* we call it, *Lilly Convaliy*, *Lilly of the Valley*, *2nd May-Lilly*.

II. *The Kinds.* Authors have given us two fpecial Kinds hereof, *vie.* 1. *Lilium Convallium flore aUbo*, The *White Conval Lilly*, or *Lilly of the Valley*, with* white Flowers. 2. *Lilium Convallium flore mentente*, The *Red Lilly Convaliy*, V *Lilly of the Valley*, with red Flowers.

The Descriptions.

III. *The firft, or Whit? Conval Lilly*, or *Lilly of the Valley*, with white Flowers. *It has a fmall flendgr, ^ i y ^ t , which runs far abroad under the ground, creeping every way, with many fmall fibres fringing up again in divers places.*

J From this Root rife up together three or four, one inclofed within another, each of which it is open, is long and broad, of a greyifh green Color, fomething refembling the Leaves of *Small Ellebonne*^ or *Small Wild White Hellebor*. at the fides whereof, and fometimes from the mid-^{SMU}le, rife up a fmall, fhort, naked : Foot-^{SMU}ftem an Hand breadth high, or fomewhat more, bearing at its top, one above another, many fmall white Flowers, like Mttle hollow Bottles, with o-

IV. *The fecond, or Red Lilly Convaliy, or Lilly of the Valley*, with red Flowers. *This in its Root, Leaves, Stalk, flowers, Seed and manner of Groining, is exaSly like the other*, and differs -from that only in the Color of the Flower •, for whereas thofe are of a white Color, thefe arc of a fine pale red Color, of a fweet Smell, but not altogether fo fweet as the former.

V. *The Places.* The firft grows' abundantly Wild in many places of *England*. *Gerard* fays it grows on *Hampfthead-Heath*, not far from *London*, in great plenty : alfo near to *Lee* in *Ejjex*, and upon *Bufhy-Heath*, about thirteen Miles hom *London* ^ and in many other places. The fecond is a Stranger in *England* as to its Original 5 but both of them (for their excellent Virtues) are nurfed up in our *Englijh Gardens*.

VI. *The Times.* They both flower in *May*, and their Berries are ripe in *Auguft* and *September*.

VII. *Nota.* Thefe Plants increafe wonderfully, even too faft for the Bignefts of fome Gardens: they flouriif beft in the Shade, and in a Soil which is not too fat, or in a mean between rich and poor : if the Earth is too rich, they many times rot and die, and fo come to nothing : in a meaner Ground they do better.

Vlir! *The Qualities.* This *Lilly* is hot and dry in the beginning of the fecond Degree •, (trongly Aperitive and Abfterfive ; Cephalick, Neurotick, Stomatick, Antepileptick, Antapoplectick, Aritiparalitick and Alexipharroick.

IX. *The Specification.* It is a peculiar: thing a^

C · H · A · P · CCCCXLV.
Of LIMON ADE,
O R,
Sea Marjh BUGLOSS.

t^T^HE Names. It is called by the Greeks *A<<^>* JL *) *Niv&aJis Diofcoridis*, becaufe it grows *^v Kti^uet^ in prat is riguis, vel palujiribrs* : in *Latine*, *Limonium*^ I fuppofe from the Greek Name, tho' fome will have it to be from *Malus Limonia*, the *Limon-Tree*^ becaufe the Leaf of this Plant is fomething like to the Leaf of the *Limon-Tree*. In *Englijh*, *Limonade*^ and *Sea Marjh Buglofs*. *Gerard* calls it *Sea Lavender* ^ which is an improper Name, for that it has no Refemblance to *Lavender* of what*Kind foever.

II. *The Kinds.* Mr. *Ray* makes eleven Species of this Plant, *farkinfon* feven, *Gerard* but four \$ yet in our late Times, a greater Number has been found out, as appears from Mr. *Ray's Hiftoria Want arum*. But many of them grow neither upon our *Brittish* Shores, or in our *Brittish* Marjhcs, nor yet in any of our Plantations in the *Wed Indies* •, an&ibme of them feem to differ in their Effects from the more common and ufual, fb that no Virtues have been affigned them : of all thefe we have nothing to fay in this Work •, thofe which w^ ih-fend, aref 1. *Limonium ml^jus vulgatius*, *Valerians* TM^4&!&x^*h\$*ii Our Common Limonade, or bea#larih Buglofs, (which fome Apothecaries former^ miltook for *Ben* or *Behen rubrutn-*, whereas it itf no fuch thing.) 2. *Limonium Medium Anglicufc* Colchefter Limonade, or Marjh Buglofs. 3. *Umomo congener Clufij*^ The hollow-leaved Plant of *Quifus*,-^" Limonade of *Virginia* : of which three Kinds we have already treated at latge in *Chap. 97.* aforegoing •, but fome few following, which we omitted in that Chapter, we fhall treat of here, £ ^ 4. *Limonium parvum*, Small Limonade, or *Jipal*^ Rock Buglofs. 5- *Umoniffm folio finuato*, *Limonium Peregrinam Rauwolfc* Limonade with indented Leaves, or *SpaniiTi* Sea Marjli Buglofs.

III. *The jirfi, or Common Limonade, or Sea Marjh Buglofs.* We have already largely defertbed this Plant in *Chap. 97.* but fome few Obfcrvations more offer them]elves to Confideration^ and therewith a more elegant Cut of the Plant. The Root then is thick and long^ fohewhat like unto a Small Red Beet Root, or Small Dock Root. From this fpring upfeveral fair, long, thick, flat, green Leaves, like to thofe of the, *Limon* or *Orange Tree*, but of a darker green, and fometimes a little crumpled, or not much unlike to thofe of the *Small Beet*. From among thefe Leaves fpring up feveral naked,, hard, brittle Stalks, of a Foot or Foot and half high, divided towards #the top into fundry other fmall Branches, which Branches grow for the molt part upon one fide of the Stalk, and are replenifhed with many fmall blewifh purple Flowers, fomewhat like unto *Buglofs* Flowers, but that they are lefs, or as fome Authors lay, in fhew like to *Lavender* Flowers •, which Flowers grow alfo, all of them for the mOt part,, on one fide of the faid Branches, which being paffed aWay, long red Seed follows, contained in the Husks which the Flowers flood in before. See the Figure annexed.

IV. *The fourth, or Small Limonade, or Small Rock Buglofs.* This differs but little from the fir ft, favin^ that it grows much lower : It has a final long reddifti Root, parted at the top into feveral Points h, from whence come forth in a kind of Tuft a number of fmail, thick, fat, fmoother, and fomewhat roundifli Leaves next the Ground, in form and manner of a fi«ll *Houfe-Leek*^ fome of the Leaves being not pointed at all. It grows not above fix Inches high, the Stalks being lbme higher, and fome lower than others, tferc, and without Leaves to the tops, where they fpread into feveral fmall Branches, bending a little backwards, bearing

iiag a number of small Flower?, of a reddifft or faint reddiff. blew Color.

V. *The fifth, or Limonade with indented Leaves, or Spanish Sea Marlh Buglofs. It-hai a long slender Root, with feme few fibres adjoining.* From the Head of which Root spring forth long green Leaves, lying spread upon the Ground, being also deeply finuated or indented on both sides, and somewhat rough. From among these Leaves grow up the Stalks, welted with slender indented Skins; towards their tops they are divided into several Branches, after the manner of the *Ordinary Kind*; but these Branches are also winged; and at the tops they carry Flowers, some four, five, six, or more cluttering together, confitting of one thin, crisp, or crumpled Leaf, of a light blew Color, (which continues long, if you-gather them in their perfect Vigor, and lo'dry them) and in the midit of this blew, comes up little white Flowers, confuting of five, little round Leaves, with some white Threads in the middle.

VI. Or thus, as *Varkinfondeferibes & This Limonade of Rauwolfius, has a Root which, is small and long, and bldekick on the outside, pcrijning at the first approach of Winter. Yrom this Root spring forth many long, narrow, and somewhat rough Leaves, lying upon the Ground, waved or. cut in on both sides like an Indenture, fomthing like the Leaves of Ceterach or Spleen-wort: * among which rise up two or three Stalks, ibmewhat rough, lib, and with thin Skins like Wings, indented on both sides thereof also, like the Leaves, having three final 1, long, rough, and three-square Leaves at every Joint, where it branches forth ^ at the tops whereof stand many Flowers, upon their Foot-ftalks, in such a manner as is not seen in any other Plant: for alrh^ that some of the small winged Foot-ftalks, are shorter and some longer. Hanging as it were fiat-wife, or all on one side, and not round like an Umbel, yet are they even at the top, and not one higher than another: each of which small Foot-ftalks do bear four or five greeniffl Heads or Husks, joined together, out of each of which do arise other pale or bleak blew stiff Husks, as if they were Flowers, made-as it were of Parchment, which hold their Color after they are dry, a long time. And out of these Husks likewise do come (at several times one after another, and not all at one time, or together) white Flowers, confuting of five small round Leaves, with some white Threads in the middle. After these Flowers are past, there come in their places small long Seed, epcloded in many Husks, many of those Heads being unfruitful, or not yielding any good Seed, but Chaff, especially in our Country, for want of a sufficient Heat of the Sun.*

VII. *The Places.* The first grows in several Marshes and moist places in *Kent*, as is related in *Cap. 97. Sett. 8.* aforegoing. The tout th grows upon the Chalky Cliff going from the Town of *Margate* in *Kent*, down to the Sea side, on the left Hand. The fifth was first observed by *Rauwolfius* at *Joppa* in *Syria*; it grows also on the Coasts of *Barb<iry>* and *Cadiz* in *Spain*, from whence it has been brought to us, and is now nurfed up in our Gardens.

VIII. *Times.* They, most usually flower in *June* and *July*, and yield their ripe Seed the next Month after.

* *L'uities, Speujua Lion, Preparations, firit Kr, h Ve have declared at*

o.m 17. aforegoing.

CHAP. CCCCXLVI.

Of LIONS-FOOT,

0 1,

LION,^; Q.U.D W E E D,

Oiled also,

Mountain COTTON-WEE D

I. *THE Names.* It is called in *Greek*, *te*vrn-X Jw*; $\text{\pounds}k^{\wedge}\text{\textcircled{C}}$; in *Latine*, *Leontopodium*, and *Cemos* or *Cantos*, and in *English* *Lions-foot*, *hiont Cudweed*, and *Mountain Cotton-weed* or *Cudweed*. Some affirm, That the Title of *Leontepodium* is not found in some Copies of *Diofeorides*; but Oily *Cemos* or *Camo's* ^ but by that it may appear, that *Leontopodium* and *Cemos* are one and the same thing --> which latter Name*you may also find in *Pliny*, ^h 27..cap* 8. where he speaks of *Catenana* which was only used about Love Matters. ^

II. *The Kinds.* This Plant is certainly a Species of the *Cudweeds* or *Cottvs-zueeds* t, tho' various Authors speak variously of the Plant to which the Name *Leontopodium* properly belongs, or which should be the right, some accounting one Plant, and some another, and some none, to which it has been yet applied. *Lonicerm* has his *Leontopodium*, which is the *Echiumscorpioidespalufire Banning* or the *Myofotis scorpioides Lobclij*. *Apulcius*, *JEtii* & *Oribafius* ^ will have it to be *Leontofetalon*, or *Lion-leaf*; but that it is not, however spfcs^iW* ftion lake, we will describe that Plant in the third place of this Chapter. *Clufius* (from *Jofephus de Cafabona*) applied it to some of the *Hohftturns* or *Sea Plantanes* ^ by the Name of *Leontopodium Crcticum* ^ which is also far from the true thing. *Bauhinus* fixes no Herb for the true *Leontopodium Diojcorides*, but with *Lugdunenfis* ^ thinks *Pliny* his *Leontopodium* to be much differing from that of *Diofcorides* ^ and that those of *Matthiolzs*, *Lobel*, and others, are only Kinds of *Gnaphalium* or *Cudweed*, as we here determine them, *brunfelsius* makes out *Alcymilla* or *Ladies-Mantle* to be it; as is hinted in *Cap. 421.* aforegoing, but that is not the *Leontopodium Diofcoridis*, nor any ways agrees with his Description of the Plant.

III. *The Kinds of this our Lions-foot.* There are two sorts which Authors have taken notice of viz. 1. *Leontopodium majus* ^ *Pes Leoninus major* ^ The greater Lions-foot, or Mountain Cotton-weed. 2. *Leontopodium minus*, *Pes Leoninus minor*, *Pes Leoninis minor*, The lesser Lions-foot, or Mountain Cudweed. 3. To these we add, (tho' not on the Stock of *Kiedal*; for the Name *Lion-foot* is also used for the *Lion-foot* of *Matthiolzs*, *Lobel*, and others, which is not the same as the *Lion-foot* of *Pliny* and *Diofcorides*) *JEtius* calls *Leontopodium*, but how truly, ma& be seen, if compared with the Description of the best Kind of that Name. It is also called in *Latwh Rapeium*, *Papaverculum*, *hruttitaria*, *Semen Leoninum*, *Pes Leoninus*, and *Pat a Leonis*, but very improperly these three latter, the last have one, belonging to the first and second aforegoing, and the last of all, to the Plant called *Alcymilla*, or *Our Ladies-Mantle*.

The Descriptions.

IV. *The first, ^ Greater Lions-foot, ^ Mountain Cotton-weed* It has a Root which is small and long,

aadfamething woody, with jcvtral Siri-
 'idjai/mg it > it. Ficm this Root Spring forth :
 linall and foir irrow Leaves, lying up

• The Virtues,

XVII. *The liquid Juice or Effence of the Root.* ffaken from three to iix Spoonfuls in a Glais of generous Wine,, it refills and expels Poyfon, and is prevalent againlt the Brings of Vipers and other Serpents, CSV. it presently proiigates the Poyfon, and eases the Pain. It 'is also good to wash old Sores and Ulcers, to cleanfe, dry, and induce their Healing.

XVIII. *The Deco&ion in Wine.* It has all the Virtues of the liquid Juice or Effence, but lefs efficacious, and therefore may be given from four to eight Ounces, *pro re nata*, Morning and Evening. It is singularly good againft Obftru&ions of the Lungs.

XIX. *The Pouder of the Root, Rauwolfius*, in his *loedoporico* or *Journal*^ fays, that the Inhabitants in and about *Aleppo*, do use the Pouder #f the older and greater Roots, to take away Spots out of their Gamencs, by rubbing them therewith : by this it appears, that it is *OT* a very abiterfive N# ture.

XX. *The Cfyfter.* It is made by mixing the Juice with Mutton-Broth, in equal quantities. It k exhibited to give Eaie in the Sciatica : it moves the Bowels, and cleanfes them of putrid Excrements.

XXI. *The CatapLifm of the Root.* Applied to indigelted Wounds, SoreS, and Ulcers, it caufes Digeltion, then cleanfes qnd drys them, and fo induces their Healing.

Of LIONS-TAIL,

O K,

KILI>-HERB7

O R,

H E R B -- B A N E.

I. *HP If E Names.* It is called in *Greek*, ' , X and by *Dioscorides* 'Oo&yx* : in *Latine*, *Htmodoron*, *Limodoron*, *Orobancha*, and *Qauda Laotit* : in *Englifb*, *Lions-Tail*, *Kill-Herb.*, and *Herb-Bane*.

II. *The Kinds.* There are three forts of this Plant, viz. i. *H&modoron vet Limodoron inajm*, *Cauda Leonk major*, Great Lions-Tail of Mompeliecr. 2. *Hxmodoron vel Li ?n odor on majus, vel Cauda Leonis fiore majore purpurafcente*, Great purple Lions-Tail. 5. *Hmodoron vel Cauda Leonis, vel Qrobancha ramofa*, Branched Lions-Tail,

The Descriptions.

III. *The firft^ or Great Lions-Tail of Mompeliecr, has a long and round J^m dill Root, without Scales, and with Some Fibres under it.* The St^ik is great and thick, with very fhoc: Leaves tferoon, ifrom the bottom unto the middle thereof; where the Flowers begin to grow •, and with every one of them a larger and longer Leaf. The Flowers are long, and of a brownifh Color.

T/1^V\T/5 *fnondy* or Great purple Lions-Tail, i bis barfucb a like ROOL with Fibres thereat as the former, which fend forth fveral Stalks, with ma-

ny thick and (hort Leaves on them, fliarp at the ends, having fometimes Branches rifting therefrom and fometimes two or three Stalks from the Root; which at the tops are let with longer Flowers than thofe of *Broom%*, *Rape*, and on' longer Foot-ftalks. eachftanding in a Husk, with along Thread-as it were growing out of the Flower, which turns up a* gain. The whole Stalk, Leaves, and Flov^rs, are of a blewifh purple Color.

V. *The third, or Branched Lions-Tail* It has & stringy fibrous Root, like the former ^ from whence Springs up a Stalk, which is branched forth feveral ways, (and yet many of thefe Herbs are found with fingle and unbranched Stalks, thofe with branched Stalks being or growing for the moft part lower than the others, which are unbranched:) they are of differing Colors, fome whitifh, fome more yellow, fome brownifh yellow, and fome blewifh or purplifh, for fb they are found in feveral places* *Bow hinus* takes notice of a fmall fort hereof, which grows lower, under H;-Trees, P^/-Trees, ana P/c>Trees, differing in nothing elfe but in being OI a darker Color, and the Flowers whiter.

VI. *Not a.* Thefe Kinds of Plants are Excrefcencies of the Earth, of which the Ancients knew but one or two forts, viz. *Uypocifitis* from *Cifius*, and *Orobancha* or *Broom-Rape* from *Broom* : but latter Times have difcovered more, tof which thefe three above-defcribed are chief: fome (becaufe they ate Excrefcencies of the Earth) would have them to be *Mufhromes* •, but fuch they are not: fome a Species of *Orchides*, becaufe their Flowers and Seed &° more near refemble fome of the Kinds ^ but fton* thefe they alfo inanifefly differ : for which R#* fons' I judge them to be Plants of their own JCinds-

VII. *The Places.* They grow many times from the Roots of feveral Herbs, and by their Juicinefi, draw forth their Nourifhment, Aacv-y-fpoi l ^ them: they are fometimes found in Corn-Fields, alfo among *Pulfe*, *He?np*, &c. and fometimes alfo among Grafs and Herbs by the fides of Hedges, and un&J the Shadow of Trees, and many times alfo io P^laccJ which are not fhadowed, where the Earth has a natural kind of Moifture in it.

VIII. *The times.* They flourifh in" M?y ff June; but fome have been found to flower in 7^> and Auguft.

IX. *The Qualities, Specification, Preparation and Virtues*, are the lame with thofe of *Broom-R<|P%* in Chap. 86. *Seff. 6. ad 14.* to which you are refer* red. *Galen* fays this Plant is cold and dry in the firft Degree. And *Dioscorides* fays, that in his time it was ufed to be eaten as other Herbs are, either raw or boiled with *Pulfe*, which would help their Digeltion.

ter. It comforts and warms a cold Stomach, causes a good Appetite and Digestion, and is one of the best things in the World against a vehement Cough, an inveterate Catarrh, prevails against Wheezing, Hoarseness, and Shortness of Breath, and a singular Remedy against Consumptions and Ulcers of the Lungs. I commend it to all Consumptive People, and fuchasare troubled with Catarrhs, Coughs, and Shortness of Breath, as a Jewel.

XVIII. *The Pouder.* It may be given to a Dram or more: it has all the Virtues of the liquid and inspissate Juices, Decoction and Tincture. The fine Pouder blown thro' a Quill into the Eyes which have a Pin and Web, as they call it, or are troubled with a Distillation or Rheum, does cleanse, clear, and heal them.

XIX. *The Spirituoi & TinUure.* It has all the Virtues of the liquid and inspissate Juices, but it is said to be a Specifick for curing Ulcers of the Stomach, Lungs, Bowels, Reins, Uterus and Bladder. Dose Morning, Noon and Night, from one Ounce to two. It is made of the Extract of the Spanijh Juice, made with Water and inspissated again to the Thickness of new Honey, by digesting it in a gentle Sand Heat, mixt with very good Brandy.

XX. *The Acid. Tincture.* It is more Stomatick than the former, and more Absterfive or Cleansing and if the Tincture is made very strong, so as the Body of the Menstruum is full of it, it will be of an extraordinary Force to heal internal Ulcers, more especially if as much pure or clarified Honey is mixed with it, till it becomes thick like a Balm. This being often licked off does Wonders in curing Ulcers of the Lungs, as also Ulcers of the Reins and Bladder. A Wise Physician well knows what extraordinary Uses this Medicament will serve for.

33 & - *Nqfa.* The two last *Wit Kinds*, tho' they may possibly have the same Virtues with the *True Liquorice* of which we have hitherto spoken yet they have not been used in Physick. In Husbandry, as they increase much, so they make Ground rich, and may be made very profitable to the Husbandman, because they become an admirable sort of Food for Cattel of all sorts.

C H A P . CCCCXLIX.

Of LIVER-WORT Common or Great.

Called also

Ground L I V E R - W O R T .

If is called in Arabick, Azer *T. i. & wja bcl:* in Greeks *At r:* in Latine *Luhē Lutwn* of some, *Hepatica*, and *Jecoraria*: in Englijh *Liver-wort*.

Uthe Kinds. There are two principal sorts thereof, w. * * * * & , *ft* Hepatica vulgar**, *hepatica major*, The Greater or Common Liver-wort, Great or Common Ground Liver-wort: of which in this Chapter. 2. *Lichen five Hepatica* * * * * , *SmaU Liver-wort*: of which in the following Chapter.

The Descriptions.

IIC *The Common or Great Ground Liver-wort*, *at Roots when are very fine and small, tiktrey it

lives, and with which k tiraws its fourjment. It grows dose, and spreads much upon the Ground in shady and shadowy places, with many lad. green Leaves, lying, or rather as it were flicking flat one upon another, very unevenly cut in on the edges, and crumpled from among which rise up small slender Stalks, an Inch or two high at the most bearing small Star like Flowers at the tops.

IV. *The Places.* It is often found in moist and shadowy places upon the Surface of the Ground, and in moist places near Highways, and other common Paths, where the Beams of the Sun seldom come, and in places not often frequented by Travellers, as also on shadowy and moist places on Rocks and Rocky Grounds, &c.

V. *The Tunes.* It brings forth its blazing Stars and Leaves oftentimes in June and July.

VI. *The Vitalities.* It is cold and dry in the first Degree, and somewhat Astringent or Binding.

VII. *The Specification.* It is a peculiar thing against the Rickets in Children, to allay Inflammations, cure the Yellow Jaundice, to help the Gonorrhoea in Men, and the Whites in Women.

VIII. *The Preparations.* You may have there from, 1. A liquid Juice or Efficence. 2. A Decoction 3. A Syrup 4. An Ointment. 5. A Cataplasm.

The Virtues.

IX. *The Juice or Efficence.* It is singular good against the Inflammation or Heat of the Liver, being taken from two Spoonfuls to four in clarified Whey or Barley Broth: it cures the flarp Fits of Agues, and Tertians which proceed of Cholera. I have known several Children which have been troubled with the Rickets, (which the Vulgar call Liver-grown) to be cured by the constant taking thereof for some time. It cools the Inflammation, of the Tongue, as also the Yellow jaundice, which proceeds from an Inflammation of the Liver. It cools also the Heat of the Reins and Bladder, and cures a Gonorrhoea in Men, and the Whites in Women:

and bathed ofttn upon Termrs and Ringworms, and other running Sores and ipreading Scabs, it is foid to dry and heal them.

X. *The Decofion.* It may be made in Water or Wine, according to the Nature of the Difeafe. It has all the Virtues of the Juice or Effence, but much weaker, and therefore is to be given in a greater quantity, as from a quarter of a Pint to half a Pint, and that Morning and Evening.

XL *The Syrup.* It is made of the Juice with Honey or Sugar. It has all the Virtues of the Juice, but is chiefly made for Children which have the Rickets, by reabn it is pleafantef to take, and then they generally add to it *Maiden-hair*^ *Raifons of the Sunjioned*^ and *figs flit*, and fo give it to the Child, a Spoonful at a time, five or fix times a Day.

XII. *The Ointment.* It is made of the Juice, or rather of the green Herb boiled in Hogs Lard, or in Beef Suet mixt with Oil Olive, of each equal parts, till the Herb is cripp -, then (trained out, and repeated three times in like manner. It is good againlt Scabs, running Sores, old Ulcers, Tettars, the Ringworm, called in *Greek*, A * ^, *Lichen*^ (whence the Name of the Plant for curing this Difeafe) and other like Deformities of this kind.

XIII. *The Cataplajm.* It cools and allays Inflammations, ai#1 is prevalent againft an *Eryfipelat* or *Anthonies Fire*, and has all the Virtues of the Ointment, and may be ufed when that cannot be had. It is made by bearing the green Plant-in a TvWitar^ and applying it. *Diofcorides* fays, that being applied to an *Hemorrhage*^ or Flux of Blood, (I fuppose he means in a Wound) that it will flop the Bleeding : but *Galen* doubts of this, tho^s fo great a Man as *Diofcorides* reports it.

C H A P . CCCCXL.

Of LIVE R~ W O R T Small.

THE Names. It is called in *Greeks* *K& ; \n J^atine*^ *Lichen Jive Uepatica minor*. *Jecornria minor* - and in *Englijh*, *The fmalU* or *fmalU* *Liver-wort*?

II. *The Kinds.* Of this *Small Kind* there are federal^{10rts} > as, 1. *Lichen five Uepatica minor Urnbellatm*^ *Small Ground Liver-wort* with round U^ 1V- 2. *Lichen- foe Hepatica minor Stellaris*, *Small Ground Liver-wort Starry-flowered.* 3. *L-cucnjeu Hepatica Petrita*, *Stone Liver-wort.* 4. *Lichen maninus pileatm*^ *Lichen petrous pileatus*^ *Uver-wort* with a hooded Head. . 5. *Lichen marinus alter minor folio calceato*, *Small Liver-wort* with skinny Heels. 6. *Lichen petrous minimus a-caujis*, *The finallleft Liver-wort* without Stalks. 7. *Lichen petraus piirpurcus Derbienjis*, *Purple Liver-wort, called Cork or Archal.*

The Defcriptionsl

III. *The jirft, or Small Ground Liver-wort* with round Heads. *This differs not from the Great Kind in the former Chapter, but in Its Stature^ this being altogether lefs, and more fmooth or even* : the Flowers on the tops of the flendfr Stems, are not fo much laid open like a Scar •, but the efpecial Difference confiltS in this one chief thing, viz. that this Kind being planted in a Pot, and fet in a Garden above the Ground, yet will it fpread it felf roundabout, and increafes in great plenty, whier never any did grow before.

Small Ground Liver-wort 

IV. *The Second, or Small Ground Liver-wort* Starry-flowered. *This Small Liver-wort growf like manner as theformedand fend forth fuch h& Starry llovers as the Gre3t Kind in the forme Chapter^ but is fmaller for the moft part in aU places where it grows ^ for fo as it grows in J^ Shadow, it wi% live in Pots, as well as on the Ground, if the place is not firred ov rRfcep up-* The Difference between this and the former is; that that has little tender Stalks about an Inch long, with round Heads at their fveral tojs j whereas this *Small Kind* has like Stalks, of an Inch Length, with a Star-fafhioned Flower or H at top.

Stone Livtr-rvoYU

V. *The third, or Stone Liver-wort.* *It grows fa* upon the Stones^ and creeps not far abroad? as the Ground*

Ground Liver-wort *does*: it only refts it felf in Spots and Tufts, fet here and there, of a dufty ruffet Color ab<#e, and blackifh underneath : among the crumpled Leaves rife up feveral fmall Stems or Stalks, on which do grow little Star like Flowers, of the Color of the Leaves. The Leaves are lefter than the former, of a lighter green Color, and little hairy : the Stalks are (lender, naked ^ and about two Inches high.

VI. *The fourth, or* Liver-wort with a hooded Head. *It has a Root confifting of fmall Fibres, fine and white.* Its Leaves lie one upon another, of a yellowifh green Color, daft over with an Afh-color, and fotted a little in their middle. The Stalk grows to be about three or four Inches high, being fmoother, clear or tranfparent, and of the thicknefs of a *Rufh*, on which grows a fmall Head, fomewhat like unto an Hat, divided underneath into five parts, of a fpongy Subftance, green at the firft, then yellow, and laftly reddifh ; under which are growing the Fruit, which are of a dark purple Color, and juicy white they are frefh •, but being dry, have a fmoaky Pouder within them, inftead of Seed.

VII. *The fifth, or* Liver-wort with skinny Heels. *Its Root is compofed of fibres as fmall as Silk.* Its Leaves are fmoother and tranfparent, more tender and fmall than any of the former, growing in time to be of a blackifh purple Color, and, not lying or flicking one to another, as the others do ; from the back whereof grows forth a Skin or Sheath, fhaped like a Shoe, whofe brims or edges are a little crumpled, and raifed higher than the reft * from whence rife up about four little, dark, green, fhining Heads, of the Bignefs of the fmalleft *Peafe*, which afterwards open into yellow Flowers, having four Leaves apiece, ftanding on yellowifh Stalks four Inches high* with divers impalpable Threads in the middle.

VIII. *The fixth, or* Smalleft Liver-wort without Stalks, *Its Root confifts of very fine fhort white Fibres, which cleave to the Leaves, by which the Plant is nourifhed and lives.* This is the fmalleft of all the *Liver-worts*, and its Leaves are no larger than the Nails of ones Finger, green and rough, with white Spots. It has alfo certain fad purplifh Skins, fet on both fides of the lower part of the Leaf, before any Flower appears ^ but when the Leaf grows greater, it becomes of a fad purplifh Color, like the Skins, and fwells at the end, fending forth a fmall Fruit, as big as a fmall *Pea*, being of the fame Color with the Leaf, fappy, or full of a whitifh watery Juice, which afterwards, as the Fruit grows ripe, changes yellow, and being broken, has then 13 yellow Pouder, which will color the Fingers Which touch it.

IX. *The feventh, or* Purple Liver-wort, called *Cork or Archal.* *It is a kind of Herb or Plant much refembling Liver-wort, of a fad purplifh Color,* which the poor People in *Derby/hire* gather, and grinding it make it hito a moift Mafs, which they keep in barrels, and therewith they make a kind of Murry or purplifh Dye, which, tho' it will not hold Color lon§ in Cloth, but will ftarve and change, yet grvfS poor People for their Wearing very well.

X. *(The Places.* The firft and fecond grow in moift fhadowy places in Gardens, and other like Grounds, and fometime they are planted in Pots, which fet in fhady moift places, thrive very well. The third grows upon Stones by Wells and Springs, and is found upon Rocks and Stony places, as well near unto the Sea, as farther on the Land, and it is often found at the bottoms of high Trees, growing upon high Mountains, efpecially in fhadowy places. The fourth, fifth and fixth grow alfo in the like

moift Stony and Rocky places. The feventh grows in *Derby fcire*, on the Mountains there, and is tbound in great plenty.

XI. *The Times.* They bring forth their Flowers for the molt part in *June* and *July*, and are in u flourifhing Condition all the Summer Months.

XII. *The Qualities, Specification, Preparations and Virtues,* are the fame with rhoe of the *Great Liver-wort* in the former Chapter, fothat nomore need be aid thereof in this flace.

CHAP. CCCCLL

Of LIVER-WORT Noble,

O R,

Golden TREFOIL.

I. *Tripl£ Names.* It does not appear that this

X Plant was ever known to the *Greeks*, and therefore has no *Greek Name* ; bat it is called in *Latine*, *Hepatica*, *Hepatica nobilis*, *Hepatica aurea* ^ *Hepatica trifolia*, *Hepaticinn trifolium*, *Hepatica Trifitatis*, alfo *Herba Trinitatis* ; (but there is a* nother Plant, which is the proper or true *Herb TW* * nity, viz. *Hearts-eafe*, of which we have already treated in *Chap. 346* and *347* aforegoing.) It is alia called *Trifolia aurea*, *Trifolium aureu?n*, *Trifolium nobile*, *Trifolia nobilis*, and *Trinity* : in *Englifh* ^ *Noble Liver-wort*, *Golden Liver-wort*, *Noble Trefoil*, and *Golden Trefoil*, and *Hepatica*.

II. *The Kinds.* There are various forts of this Plant, viz. 1. *Hepatica fiore caruleo fimplici major* ^ *Hepaticum Trifolium*, The* great fingle blew *Hepatica*, or *Noble Liver-wort*. 1. *Hepatic a minor fure palido caruleo*, The fmall blew *Noble Liver-wort* or *Hepatica*. 3. *Hepatica fiore purpurto*, furple Noble-Liver-wort. 4. *Hepatica fiore albo minor*, The lefter *White Hepatica*. 5. *Hepatica alba magnojiore*, The great *White Hepatica*. 6. *Hepaticd albida five argentea*, Afh-colored *Noble Liver-wort*, oi that of a *Wild Tanfy-color*. 7. *Hepatica alba fra* minibus rubris*, *White Hepatica* or *Noble Liver-wort* with red Threads. 8. *Hepatica flye rubro*, *Hepatica trifolia rubra*, *Red Noble Liver-wort* or *Hepatica*. 9. *Hepatica Americana, vel Virginiana*, The *American* or *Virginian Noble Liver-wort* or *Hepatica*. 10. *Hepatica fiore purpureo multiplici five pleno*, *Hepatica ?nultiflora Lobelij*, *Double-flowered purple Hepatica*, or *Noble Liverwort* * 11. *Hepatica fiore ctrulec pleno*, *Double-flowered blew Noble Liver-wort*.

The Defcriptotis.

III. *The firft, or* Great fingle blew *Hepatica*, or *Noble Liver-wort* * *The Roots are compofed of a Bufh of blackifh Strings or Fibres : from the feveral Buttons or Heads whtreof the Flowers fpring up^ Wow open, and fometime fhed and fall away, before any Leaves appear or fspread open^ Thefe Flowers fland every one upon their own Foot-italks, of the fame Height with the Leaves for the molt parr, which is much about four Inches high, and fometime a little more-, which ufually confift of fix Leaves, (but fometime they have feven or eight) of a fair blew Color, with many, white Chives or Threads in the middle, ftanding about a middle green Umbona or Head, which after the Flowers*

are fallen[^] grows greater, and fhews many fmall Grains or Seeds let dolē together, (with three fmall green Leaves compaffing them underneath, as they did the Flower at the bottom) very like to the Heads of Seed of many of the *Crowfeet*. After the Flowers are rifen and blown, ipring up many frefh Leaves, of a green Color, each federally ftanding upon its ovyi proper Foot-Italk, tolded together, and ibmewhat brown and hairy ar their firft coming forth, which afterwards are broad, and divided at the edges into three parts, as is fully.demonfrated by the Figure.

IV. *The fecond, or Small blew Noble Liver-wort,* or Hepatica. *The Roots or fibrous Storings of this, ire like the former : the heavens of it We alfo like ta hofe, but j mailer by half, and grow more 'abundantly or buOriftg thick together.* The Flowers are of a pale or bleak blew Color, and not fo large as the aforegoing. It very feldom bears Flowers, for *Yarkwjon* fays he had the Plant half a fcore Years in his Garden, and yet never faw it bear Flowers above twice in all that time.

V. *The third, or Purple Noble Liver-wort. This Plant in its fibrous Roots, Stalks, Flowers, Seed, Leaves, and manner of Growing, is wholly like unto the firft defcribed -, fo that there is no need to reiterate the former Defcription at Sef. 3. above : but the only Difference in this is, that the Flowers an of a deeper blew, tending to a Violet purple Color.*

VI. *The fourth, or Leflér White Hepatica, or Noble Liverwort. The Flowers of thk Noble Trefoil, are wholly white, of the Largnefs of the Red or Purple-colored •, and the leaves of the Plant are fomewhat fmall, and of a little whiter or paler green Color •, in all things elfe it is wholly agreeing with the firii*

VII. *The fifth, or Great White Hepatica, or Noble Liver-wort. There is no Difference between this and the laft defcribed, neither in its Root, Stalks, Leaves, Flowars nor Seed, faving that the Flovcers of this being full as white as the former, are as large as thofe which we (hall defcribe in the next Se&iort.*

VIII. *The fixth, or Afh-colored Noble liver-wort, or that "of a Wild Tanfy Color. Both the Leaves and the Flowers of this Hepatica, are laf&er than any of the former, except the laft : the Flower* hereof; at firft opening, feem to be of a blufh Aft' color : which fo abide for three or fouj D ^ s, decaying full, until they turn almoft white •, having yet Itill a (hew of that felufh Afh-color in them, till the very lalt.*

IX. *The feventh, or White Hepatica, or Liver-wort with red Threads. There is very li Difference between this Noble Liver-wort, and tht firft White pne at Sefi. 6. aforegoing, faving that the Threads in the middle of the Flower are purely white, as in the lalt the/ are tipt at the ends of^a pale reddifh Color, which adds a great Beauty¹⁰ the Flower.*

X. *The eighth, or Red Noble Liver-wort, or Hepatica. The Leaves of this Trefoil are of a little browner red Color, both at their firft coming up, and afterwards, efpe daily in the middle of the Leaf wore than any of the former : the Flowers are in j Form like unto the ref, but of a bright blufh or pald red Color, very pleafant to behold, with white Threads or Olives in the middle of them.*

XI. *The ninth, or American or Virginian Noble Liver-wort or Hepatica. This differs fomewhat from the other forts already defcribed : it bears verjT dark green Leaves, much of the Form v of the otb** Kinds. ' The Flower is fmall and white, with whit? Threads in the middle : in other Refpe&s the Difference is very fmall.*

XII. *The tenth, or Double-flowered Hepatica, or Noble Liver-wort. This Double Hepatica is*in all things like unto the Single purple Kind, J'ng, only, that the Leaves are larger, and j iand upon longet Foouftalks; and that the Flowers are fmall Buttons, but very thick of Leaves and as double as a Flow^ can be, like unto the Double White Crowfoot, but not fo big, of a deep ble* or purple Color, wick out any Threads or Head in the middle, which ta* away without giving any Seed.*

XIII. *The eleventh/cr Doubk-flowvercd^*

*Noble Liver-wort. 17; is differs but very little from the laft : the whole Plant is a little lefs •, the Flower is not full out fo large, but altogether as double or manifold in the Leaves.

XIV. *The Places.* The ninth is a Native of Virginia, and was brought from thence by John Tradefcant. Molt of the reft grow naturally in the Woods in Germany, and fome of them in Italy, as thofe with the blew Flowers, and the double-Howered, as Clufws fays, but with us they only grow in Gardens, nurfed up for the Flowers fake, which are beautiful in their Kind, more efppecially being confidered as to their early Appearance.

XV. *The Times.* Thefe Plants do flower very early, and are fome of the firft Flowers which appear after the hard Frofts in January or February : fo that next unto the Winter Woolfs-bane thefe ihew themfelves towards the latter end of Winter, which becaufe they are fo early in the Year, are fo much the more to be valued. The double Kinds flower not altogether fo early, fometimes in March and April, yet they continue when the others are paft. The Seeding Kinds perfeq; their Seed in April and May.

The Qualities. All thefe Kinds of Noble Liver-wort, are cold and dry in the firft Degree, Afringent, Traumatick or Vulnerary, Stomatick, Hepatick and Analectick.

XVII. *The Preparations.* You may have, 1. A Juice or Effence of the vsbolc Plant. 2. A Decoction of the whole Plant. 3. A Ponder of the Root.

The Virtues.

XVIII. *The liquid Juice or Effence.* Either of thefe Preprations admirably comforts and ftrengthens the Liver, refrigerates it, and takes away any preternatural Heat of the Bowels: being given in Red Port Wine, it cleanfes and ftrengthens the Ventricle, cures Fluxes and Bloody-fluxes, helps Piffing Blood, and the Over-flowing of the Courfes in Women, and is of very good Ufe in Spitting Blood, reftoring fuch as are in Confumptions. Being taken as a Diet, they are of excellent Effes in curing of Wounds; old Sores, Ulcers, and the like : and outwardly ufed as a Wafli in thofe Cafes, they difpofe the fame to a fpeedy Healing. Dofe two, three or four Spoonfuls at a time Morning and Evening, in any fit Vehic.

XIX. *The Decoction.* It has alit the Virtues of the liquid Juice and Effence ^ and may be made in Wine or Water, according as the Occafion may require. It may be given Morning, Noon and Night, from three Ounces to fix or eight; and outwardly it may alfo be ufed as a Lotion for Sores and Ulcers, which are of difficult or hard Ctire. It is an excellent thing for the Hepatick Flux.

XX. *The Pouder of the RoVs.* The Pouder h&ftly the Virtues of the Juice and Effence. Bapnjia Sardus commends it, and writes, that if a fpoonful thereof is given at a time in Wine, for feveral Days together, or in Broth, it is very beneficial againtt the Difeafe called Enteroccele or Burtennes.

C H A P . CCCCLII

O/L. O O S E - S T R I F F Yellow or Common.

O R,

Yellow W I L L O W - H E R B .

Names. It is called in Greek, & V < TIUL X ^ C - t % Avffsn * x Qv; in Latine, Lyfimachia, and Lyfimachion, (fo called from Lyfinigchus, King of Illyria, (as I fuppofe) who was the firft Finder of it out,) it is alfo called *S all can a, aut quod inter Sal ices ontur, aut quod Salicis folio habet, viz. Willow-herb*, either becaufe it grows among Willows, or that it has Willow like Leaves. In *JEnglijh, Loofe-Strife*, or *Willow-Herb*.

II. *The Kinds.* We make four principal Kinds of this Plant, viz. 1. *Avrtaue#0 % * & ; p m e y, Ki KOIVOU^ Lyfimachia lulea, major & f communiis, The Yellow*, & Greater, ^ Common Loofe-frife : *of which in this Chapter. 2. *Lyfimachia fpicata, Spiked Loofe-frife*, or that with fpiked Heads of Flowers : of which in Chap. 453. 3. *Lyfimachia non fpicata, Loofe-frife not fpiked* : of which in Chap. 4J4. 4. *Lyfimachia filiquofa, Codded Loofe-frife* ; - of v^hich in Chap. 45 5. following.

III. *The Kinds of the Common or Tel loim Loofe* fir ife.* We have, 1. *Lyfimachia lutea iff vera, Lyfimachia verum iff Legitimum Cordi apud Diofcondarf, Lyfimachia lutea major, qua eft Diofcoridis Bduhini, Salicaria Tragi iff Gefneri \$ Corneola heorticeri*, The Common Yellow Loofe-frife, or Willow-Herb. 2* *Lyfimachia lutea alt era Clufij, Lyfimachia luted in dñis foliorum jlorems Ctiefalpini, Lyfimachia lutea minor foliis nigris puntfis not at is Bauhini*, The leffer Yellow Loofe-frife, or Willow-Herb. To thefe

Authors add a third, viz. 3. *Lyjmachia lute a tert'ia Clufij*, *Lyfimachia lute a alt era Lobelij*, *Lyfintachia aquiatile Dodon'i*, "*Lyjmachia lutea flore glohofa*, Yellow Loolè-frifè round headed.

The Descriptions*

IV. *The firft*, or Common Yellow Loofe-frife, or Willow-Herb. It has a Root which creeps under Ground much like to Quitch-Grafs <?/*£)ogs-Grafs, but greater, which /boots up every Spring zwith brownij Heads, that afterwards grow up into Stalks. Iiis is the molt common Kind, which grows in tank moift Ground,- to be four or five Feet high or more, with great round Stalks, a little crafted, and diverfly br^pched from the middle of them to the tops into great and long Branches \$ on all which, at the Joints, there grow long and narrow Leaves, but greater and broader below, moft commonly two at a Joint, yet fometimes three or four, fomething like unto Willow JLeaves, without Nicks or Dents on the edges, and of a f^int green Color * from the upper Joints of the Branches, and at the tops of them alfo, ftand many yellow Flowers of five Leaves apiece, with feveral yellow Threads in the middle, which turn Into fmall round Heads, in which are contained fmall comered Seed.

V. *The fecond*, or LefTer Yellow Loofe-frife, or Willow-Herb. It has a Root which creeps under Ground, and jboots up again in the fame manner as th* former. This Plant rifes not up fo high as the firft, with its round jointed Stalks, which are foræwhat woolly or hairy, the Leaves being alfo woolly, and fomething like them, are narrower and fhorter than they, four for the moft part, and Ibmetimes but three, fet together at a Joint, ipotted with blackifh Spots on their under fides, not compaffing it at the bottom, but every one ftanding upon a (hort Foot-ftalk, and not at all dented about tje edges.* From the middle of the Stalk almoft, upwards at every joirit come forth the Branches, which are fhort, nothing fo long as the former, and ftanding clofer together, on which grow a few Leaves, lefTer than thofe below. At the tops of the Branches, and at fome of jhe upper Joints affo, grow a few Flowers, Jteffer than thofe in the before-defcribed, which are of a yellow Color, and confiding of five Leaves as they do^ with many yellow Threads in them, of ji-ltrong fweet Smell, which fo join together, at the bottom, that the whole Flower falls away together, and not any Leaf apart. The former Plant has no SmelUxJf^te;> bit only^ Styptick, or Afringent #^ £>ryijlg ^whereas, this Smaller now defcribed/irifc ^ little Acrimony it it, which will caufe one to fpit, "after chewing it a while in the Mquth.

VI. *The third*, #v Yellow Loofe-frife round headed. Its Roots a^clon^, creeping tinder Ground with many^ Joint?4l&rèm, and fhCoftng forth fibres at everytr-fikpf th^ 3tie Stalks of this Plant rife aot up to be above 3 Foot in Height, bearing only two Leaves, and no nio^j at a joints which are (horter and narrowfpr, yet very like to thofe of the 'Common fort, and of a *pale green- Color. At the Joints of the Stalks, which are crefted and hollow, with the^X eaves come^ toxtth long Stalks of Flowers, without any Leaves on them, which are cloli fet together, almoit round, os rather of an ovaUormJ but yet (hewing the lmail yellow FioWers, confilling of fiv^L^ves apiece.

The firft grows in i...
...
... go from ...
...
...

grows alfo near fill Rivers and Water-fides, and i\$ Valleys and moift Fields, it is a Native of the Hill^ in Auflna, and of the moift Fields on the Alpy The third LobeL found in the Ditches near Gaunt iti Flanders, and among Reeds near Amflerdam in Holland *, and Clufws Tays, that it was alfo found in places neax the Alps. VWith us the two laft are only nurfed up in Gardens.

VIII. *The Times*. All thefe Plants flower, ir June and July to Auguft, and the Seed is perfe&ed fome time after.

IX. *The Qualities*. Loofe-jlnfe is cold and dry in the end of the firft Degree ^ Afringent, Traumatick, and Cofmetick.

X. *The Specification*. It is an excellent thfig &t curing Wounds in any Part, to flop Bleeding inward or outward, as alfo to cure fore Throats, and help Dii-eafes bf the Eyes.

XI. *The Preparations*. The Plant moft ufcd in Phyfick, is the firft or Common great yellow Kind, from which you may have, 1. A liquid Juice or EJJence. 2* A Decoftion. % AClyJler. 4. A A?*" migration. % An Ointment. 6. A Cataplafmcf the green Herb bruifed. 7. A dijfilled Water. 8. An Acid TinSure.

The Virtues.

XII. *The liquid Juice or EJJence*. It is of an exceeding binding Quality, and therefore Diofcorides fays it is good to ftay all manner of Bleedings at Mouth or Nofe, or of Wounds, or any other Bleeding whatfoever : it flops all Fluxes of the Belly, even the Bloody-flux it felf, given either to drink, or taken as a Clyfter •, it ilops alfo the Over-flowing of the Terms in Women. It is of good Ufe for gjeen Wounds, to flop their Hemorrhage, and to cpnglufinate their Lips, being applied ftihesa U is often ufed as a Gargle for fore Mouths, and to cure Sores and Ulcers in the fecret Parts.* It is beneficial for the Eye-fight, and of good Ufe to clear t&e Eyes of any tiling gotten into them. t^>° & twp, three, or four Spoonfuls.

XIII. *The Decollion in Wine or Water*. It has ail the Virtues of the Juice or Effence, but m^cuj weaker, and may be given in any of the Cate^5 *A^1.7 mentioned, from three Onoces to eight M^y^" ing and Night. It makes an excellent Garg^ for fore Moyths and Throats, qs alfo old Sores and running Ulcers in other Parts of the Body.

XIV. *The Clyfter*. It is made of tlj liquid Juice or EJJence two parts, Chicken-Broth one part : <mix~* them for a Clyjier, It is good againft a Diarrha^aj Dyfenteria and Liepteria, and other Weaknefes m the Bowels. W

XV. *The Fumigation*. It is found by ExperienceJ that the Smoak of Loofe-Jirije being burned, drives away Flies slid Giiats, and other fuch like troublefome Infefts, which abound near Fenns, Marthes, Water-fides and Pools, which axe troublefome By biting and fucking* the Blood in the. Night Sea^ leaving Marks and Spots upon the Skin. It is laid alfo to drive^ away Serpents and other Venotn^US Creatures, being made where they ufy haunc*

XVI. The Ointment; TdAt Bees-Wax *• Sfg^*% Oil Olive, Beef-Sue^ of each cm Ounce-, Juice 0) hoofe-firife jour Ounce! : mix and boil all togetvc^ in Balneo to the Confifte?ue of an Ointment. - I kn^sv fome, inftead of Oil and Suet, v&May Butter, b^ that I avoid, becaufe the Butter will quickly m^ the Ointment grow rank. It is an excellent tiling againft Wounds and Pun&ure^ of u^e M^cle^j Nerves and Tendons ; let Tents be dipt in.it, 2^n^ put into the Wouod, and tha place covered *£?"" Linnen* Cloth doubled; and ipwad with the Ujn^

ment. This was experimented on a Captain, who was Shot in two places with Bullets, the one thro' his Brest, the other thro' his Thigh, who was perfectly cured of both Wounds without any Scar, only by applying them as aforefaid, after he could not be cured by other Medicines. It also cleanses and heals all foul Ulcers and Sores wherefoever, and abates their Inflammations, they being also washed with the distilled Water.

XVII. *The Cataplasm.* It is made of the green Herb, being beaten in a Mortar- It is good to stop the Bleeding in green Wounds, and to conglutinate the Lips of limple Wounds and heal them, being applied. Used to the Inflammations of Wounds or Ulcers; it abates the Inflammation, and eases the Pain.

XVIII. *The distilled Water.* It is a present Remedy for Hurts and Blows on the Eyes, as also for Blindness, provided the Crystalline Humor is not let out, or the Sight it self perished. This Experiment was found true upon a Boy, whose Eye by Chance was prickt, who was restored to his Sight thereby. Sphere was also another who was hurt in the Eye by a Dart, and was cured by applying this Water only to the same- This Cure has been performed by this Water upon several Persons, by one who kept it as a Secret for a long time. It is of good use to clear the Eyes from Duft, external things fallen into them, as also from Mills, Clouds, Inflammations, Blood-hot, and other Distempers which obscure the Sight. It abates Inflammations in any Part, being bathed therewith, laying over the same a green Leaf or two. This Water used as a Gargle very warm, and also sometimes drunk, cures the Quinsy in the Throat, and is helpful against Tumors and Ulcers of the Kings-Evil. The said Water applied warm, is said to take away all Spots and Marks, Discolorings -Mi-stays in the Skin, caused by the Small-Pox, Measles, or the like.

XIX. *The Acid Tincture.* Given constantly in some proper Vehicle, so much at a time as to make it gratefully (harp, it will abate and exterminate the Humors which cause the Kings-Evil: it is profitable against the Scurvy in all its Appearances: it prevails against all sorts of hot, burning, malign and peffilential Fevers, yea, and cures the Plague or pestilence it self. It powerfully quenches Thirst, opens Obstructions of the Viscera, strengthens the Stomach, and causes a good Appetite and Digestion.

Solidagini Sarafenica alia species Trag*.* Purple I spiked Loofe-frife. 2. *Lyfimachia fpicata carulea,* • *lyfimachia flore ctruleo CluJij* \ *Lyfimachia carulea hortenfis Lobelij* -5 *Pfeudolyimachium C<eruleu?n De<donnei & Ludgunenfts*^ Blew spiked Loofe-frife.

III. *The fir ft, or Purple spiked Loofe-frife, hi** a Root which creeps tunder Ground like unto the Yellow, but is greater than >, and fo are the Heads of Leaves^ when they first appear out of the Ground and are more brown than those of the Yellow. It grows up with mass woody square Stalks, full of Joints, about three Feet high or more ^ at every one whereof stand two long Leaves, not altogether so great and large as those of the Common Yellow; but shorter, narrower, and of a deeper green Color, and some brownish: the Stalks are spread out into many long Branches or Stems of spiked Flowers, half a Foot long or longer, growing in R undies one above another, out of small Husks, very like unto the spiked Heads of Lavender 5 each of which Flowers have five round pointed Leaves, of a Purple Violet Color, or somewhat inclining to Redness: in which Husks stand small round Heads, after the Flowers are fallen, in which is contained small Seed.

IV. *The second^ or Blew spiked Loofe-frife. Its Root creeps not as the first does, but shoots forth many Sprouts round about it, by which it does much encrease.* This Plant grows somewhat lower than the former, with some Branches in like manner at the tops, of the square Stalks, and with dark green and narrower Leaves, set by Couples at the Joints towards the tops, but with three or four at a Joint lower, somewhat more deeply snipt or dented about the edges. The Flowers grow in the same manner as the former do, in long spiked Heads, set round about with blew Flowers, of four Leaves apiece, which turn into small Hat Heads, with brownish Seed therein. O o o 2 V. *Tbf*

CHAP. CCCCLIII.

0/ LOOSE-STRIFE Spiked,

OR,

WILLOW-HERB with spiked Heads of Flowers.

The Names. It is called in Greek, *ῥοῦβις* and in English, *Loofe-frife* or *Willow-Herb*, or *Loofe-frife with spiked Heads of flowers*.

11. *There are two sorts of this* viz. i. *Lyfimachia fpicata purpurea, hyfimacha altera Matthioli, Lyfimachia liniana Lybe- rti* 5 *Lyfimachia purpurea Commnii major CluJij; KJeudo/yimacium purpureum alterum Dcdoxais*

V. *The Places.* The first grows usually by Rivers and Ditch-fides in wet Grounds, as upon *Lambeth* fide, about the Ditches there in many places *, as also under the Bishop's Houfe-Wall at *Lambeth*, by the *Thames* fide. It grows in places of great Moisture, yea, almost in running Streams, as well as in standing Waters' hard by them, and in moist Ditches in most places of *England*. The second grows in *Austria* and other places of *Germany* plentifully. *Gerard* says, that it grows Wild in many places of this Kingdom j but it is usually nurfed up with us in Gardens.

VI. *The Times.* They both flower in the Months of *June* and *July*^ and sometimes longer *, and the Seed is ripe not long after.

VII. *The Qualities^ Specification, Preparations and Virtues* of these, are the same with those of the first *Tellovo Kind* in the foregoing Chapter j and the first of these is not inferior to that *, but in the Opinion of some Physicians, superior thereto : and therefore to the former Chapter you are referred.

C H A P . CCCCLIV-

O/LOOSE-STRIFE not spiked,

OR,

WILLOW-HERB with dispersed Flowers.

I *^p *HE Kames.* It is called in *Greek.*, Av<rW#<X «* r&wfc : in *Latine*, *Lyfimachia nonspicata* h and in *Englilh*, *Loofe-frife not spiked*^ or *Willow-Herb with dispersed Flowers*.

II. *The Kinds.* There are two sorts of this Plant also, *j>. i. *Lyfwiachia purpurea non spicata, vel rubra minor*^ *Lyfimachia purpurea secunda five minor Clufij*, *Lynmachia rubra mon filiquofa Bauhini*^ The finall purple-flowered Loofe-frife not spiked, or Letter purple Willow-Herb. 2. *Lyfimachia purpurea non spicata minima, five rubra minima, Lyfimachia rubra minima Clujl*^ *WLyfimachia linifolia purpurea cxruka Bauhini*, The least purple-flowered Loofe-frife not spiked, or Leaf purple Willow-Herb,

the Descriptions.

III. *The first* ^ or Small purple-flowered Loofe-frife not spiked, or Lesser purple Willow-Herb. *its Root creeps not as the others do^ but is hard and somevohat woody, with many small fibres springing from the fides thereof.* This small Herb is much lower than that of the *Purple spiked Head*^ or first Kind described in the former Chapter, being but about a Foot and half high, with smooth and square Stalks, whose tops are parted into many Branches ; on the lower part thereof stand long Leaves, smaller and narrower than the other purple spiked Head In the last Chapter * two always set together at a Joint, one against another * but those which grow towards the tops of the Stalks, are smaller than the lowermost, and keep not that Order, but stand confusedly thereon, one above another ^ near unto the Joints with the Leaves, come forth in small Flowers, but not Spike-fashion, usually in small S at the ends ^ whose tops are not so pointed, as the *Species* in the other v but being more forth their Flowers out of them, which

confist of six small reddish purple Leaves^ with some Threads in the middle.

IV. *The second, or Leaf purple-flowered Loofe-frife not spiked, or Leaf purple Willow-Herb.* *U has a small, long and brown Root^ from whence it rises up (being the leaf Kind) to be about a foot high.* The Stalks branch forth themselves from the very bottom, and are set thick with small, long and narrow Leaves, almost like those of *line* or *J?lax*, but shorter-, with whom, at the Joints, come forth the Flowers, sometimes two at a place, but more usually one, standing in green Husks, like unto the last, composed of five small blewifh purple Leaves, enclining to red : in which Husks, after the Flowers are fallen, stand small skinny Heads, wherein is contained small whitifh Seed.

V. *The ?laces.* The first grows in moist Meadows and Grounds near unto Water-Courfes, as also in wet places about Ditches and moist Woods. The second grows in the like wet places also. The first is a Native of *Hungary*, as we gather from *tlujix** The second grows in *Italy* and *Germany* : but with us they are only nurfted up in Gardens.

VI. *The Times.* They both flower in *June* and *July*, as the former do, and perfect their Seed in some small time after.

VII. *The Qualities^ Specification, Preparations and Virtues* of these, are said to be the same with those in the two former Chapters : and it is not to be doubted, they being so like in Face and outward Form unto them, as also in Smell and Taste, and other Properties, and as being a Specie of the same-, and therefore we refer you to *Chap. 45*^ where they are handled at large.

C H A P . CCCCLV.

O/LOOSE-STRIFE Codded,

OR,

Codded WILLOW-HERB

THE Names. It is called in *Greek*, hvtiid-JL x& AeWJto, in *Latine*, *lyfimachia filiquofa* -, and in *Englilh*, *Codded Loofe-frife*, or *Codded Willow-Herb*.

II. *The Kinds.* Of this Plant Authors have recounted the following Species* vis. i. *Lyfimachia filiquofa angustifolia*^ *Cbamanerium Gefneri diu-* (but this latter Name more properly belongs to the seventh Species following; and *Gefner* himself rather calls this first Kind, *£««*, *Epilobium*, 3 Word made of three, : e. *Iti*, MR, *ilr*, qv vj Jy id est flos super filiqua nasctur, of which he accounts six several sorts, at the end of *Cordus* his History of Plants.) Trfe narrow-leaved Codded Loofe-frife. 2. *Lyfimachia Qbamxnerwm diila A?** *pina*^ The Mountain Codded Loofe-frife. 3. *J*" *fwtachia filiquofa major, Onagrx gemts alterum O Jalpini*, The greater Codded Loofe-frife. 4. *hyf machia filiquofa minor vulgaris fylvefris*, The Lesser Codded Loofe-frife. 5. *Lyfimachia filitunfo fylvefris bifuta*, The hairy Wild Codded Loofe-frife. 6. *Lyfimachia filiquofa Virginiana*, The Virginian Codded Loofe-frife, or Tree Primrose* *Virginia*. 7. *Onagra Cfalpini, PfeudotyfimcbiMf purpureum minus Dodonai, Qbamsnerium Gefnerh Cbantenerium flore Delpbinij, Delpbinim Buccinm Lobeli*^ as it is thought, which yet *Yarkwfen* wy

hardly allow of a Willow-Flower, or Lesser purple Baftard Lot[>]fe-frife. 8. *Lyfimachia c&rulea galericulata*, Hooded Loofe-frife. This is taken to be a Kind of *Gratiola*, and which we have already defer ibed in Chap. 389. Se8. 4. foregoing -, and it seems that it is rather a Kind of *Hedge-Hyffop*, than any of the forts of *Loofe-frife*, because of its extreme Bitterness, and that it has hooded Flowers * both which are proper to the *Gratiola*, and not to the *Lyfimachia* : and some have properly enough called it *Gratiola wrulea*, Blew Hedge-Hyflbp, with other Names, as you may see in *Sett. 2.* of the aforefaid Chapter ; However, in this Chapter we shall give you the proper Cut or Figure of the said Plant, which was omitted there.

The Descriptions.

III. *The first* or* Narrow-leaved Codded Loofe-frife. *It has a Root which creeps after the same manner which the Yellow and Blew do. It rises up zoitf) hard Stalks, sometimes two, and some times three feet high, with many very narrow long green Leaves thereon, something like unto Rosemary Leaves, set very thick, two at a Joint ; those below being shorter than those higher up.* At the tops of the Stalks come forth many Flowers, made of four final round pointed Leaves, of a fine reddish Color, and some Threads in the middle, every one Handing on the top of a small, long, almost square Cod, whitish on the outside, and fluffed with fine Cotton or Down -, within which does lie bright red Seeds. These Cods with Seeds therein appear before the Flowers break forth at end of them, upon which some have called it *Filius ante Patrem*. This *Codded hoofe-frife* we have put in the first place, for its Rarity and Beauty, as well as for its special Qualities and Virtues. *Gefner, Clustus and Thalius* say, that [^]thgss is another of this Species, *flore albo*, with white Flowers, not differing in any thing else from that even now described.

IV. *The second, or* Mountain Codded Loofe-frife. *It has a Root which creeps not, but is torn-pofed of many Fibres, which whether it be Annual or Perennial has not yet been observed.* It has very short Stalks, seldom exceeding a Foot in Height, on which grow very narrow Leaves, like unto the former, yet some longer than others, and set without Order *, for the smaller come sometimes from the middle of the longer, and sometimes stand at the Joints. At the tops of the Stalks stand the Flowers, upon slender long purplish Stalks, and sometimes whitish, of a purplish or reddish blew Color, and in some of a whitish blew Color, consisting of four pretty large Leaves, even as great as the former, which the Smallness of the Plant does Scarcely admit of, with some Threads in the middle, every one of them Handing in a small Husk, composed of four short green Leaves, in which, after the Flowers are fallen, grow up small long Pods or Cods, with small Seed in them, enclosed in Down like the other.

7 Y[^] *The first* w Greater Codded Loofe-frife. *It has a Root which is somewhat great and white, creeping every way under the Earth, and quickly possesseing a good quantity of Ground, which (M the Stalks die away every Tear) abides all the Winter.* This *Greater Loofe-frife* shoots forth several round green Stalks, a Yard high at the least bearing thereon at the several Joints, two Leaves apiece, which [^] are somewhat like to the *Common yellow Loofe-frife* [^] out smaller and smoother, green on the upper side, and of a yellowish green underneath, and dented about the edges. The Stalks bend out from the middle upwards, many Branches [^] at the tops whereof come forth many final long Pods or Cods, of a

whitish green purple Color, whereSi the reddish Seed lying in its Down, is contained. And at their ends, after they have appeared a good while, come forth the Flowers, consisting of four round pointed Leaves apiece, with some Threads in the middle, of a faint reddish or purplish Color. Of this Kind there is another fort found, *flore albo*, with white Flowers, but it is very rare.

Greater Codded Loofe-frife.

VI. *The fourth, or Wild letter Codded Loofe-frife. Its Root is but small and fibrous, dying a-ijoay every Tear.* This leffer fort grows Wild in many places, and rifes up nearly two Feet high, but in some places not above a Foot high, with smaller Stalks and narrower Leaves, not fo green, but rather of a greyifh dufty green Color, fpread out into feveral Branches, bearing its Flowers, of four Leaves apiece, at the ends of long Pods or Cods, of a deeper fed Color, as the former does, and has like Seed involved in Down, but fmaller.

VII. *The fifth, or Hairy Wild Codded Loofe-frife. This in its Leaves, Cods and Flowers, manne^ of Growing, Height, and yearly Dying away, is like unto the la)} deferibed-, the only Difference between them, is, that the Leaves are more hairy, and as it were woolly, and the Flowers alfo small and paler.*

VIII. *The fixth^ or Virginian Codded Loofe-frife. Its Root is longifh, white, and about the thicknefs of ones Thumb^ fro^n whence grows up a tall Stalk, divided into many Branches, of an over-worn Color, end a little hairy. The Leaves are like thoj of the Globe-headed yellow Kind, but fomewhat finuated along the edges, and having their middle Vein of a whitifh Color,* Towards the tops of the Branches, among the Leaves, come forth very pretty thick Cods, which growing fmaller on their tops, fustain very fine large Flowers, confiding of four Leaves apiece, with a Peftle in the middle* upon which ftand four yellowiwh Thrumbs in fefhion of a Crofs. And there are alfo eight Threads, with their Pointels in the middle of them. Thefe Flowers have Ibmeting of the Smell ofzFrimrofe, whence Parkinon gave it the Name of *Tree Primrofe of Virginia.* After the Flowers are fallen, the Cods grow to be about two Inches long, being thicker below, and (harper on the top or end, and fomewhat twined, which at length open themfelyes into four parts, to fcatter their Seed, wht^js^ black and fmall: this being Town, grows not the firft Year into a Stalk, but fends up many large Leaves, lying handfomely one upon another, S^f f h i . .

IX. *The feventh, or Willow-Flower, or Lefler purple Baftard Loofe-frife, called alf by Gerard, Role-bay WUlow-Herb. Its Roots are like the Roots of Lyfimachia, or Common yellow Loofe-frife: but greater, running and fpreading tender Ground, and jhooting up in many places, whereby it, quickly fills a Ground which it is pleaft to grow in : the Root is perennial, but the Stalks die away every Tear, Jpringing up afrefh in many places far afunder.* This Root fends up many ftrong, woody round, brownilh great Stalks, three or tour Feet high, befet here and there without Order, with OIK broad and long whitifh green Leaf at each Joint, fomewhat like unto *Loqfe-jlrife* or *Willow-Herb*, alfo unto a *Peach* Leaf, but larger and longer. At the tops of the Branches ftand many Flowers, on above another, of a pale, redd if h, purple Color: confifting of five Leaves, fpread open, with an Heel or Spur behind them, and many yellow Threads in the middle, much larger than any *Larks/pur* Flower, and fmelling fomewhat fweet withal. It bears a (few of long Pods or Cods with Seed, but the Seed has never been oblervable.

X. *The eighth, or Hooded Loofe-frife. It h& a Root which is small and fibrous, difpering it felf under the Earth far abroad, by which it much increafes.* It has many fmall tender Stalks trailing upon the Ground, befet with divers Leaves, fomewhat about the edes, of a deep green Color. The Leaves of *Scordium* or *Water Germander* are placed feveral fmall *Beli-Flowers*, like a little Hood, in fhape refembling

hofe of *Ale-hoof* Thus Gerard. But esteeming this Plant to be rather a Kind of *Oratiola* than a *Lyfimachia*, we have given a more ample Defcription* thereof in Chap. 389. Seff. 4. aibregoin, to which you are referred-, but whereas the figure is wanting in that place, we have caufed it to be put in here.

*XT. *The Uces.* The fifth grows more often in moift Grounds, than in dry, but Gefner and others fay, that it grows in fuch places as are open to Sun all Day, yet it will fearcely live in our Gardens, unlefs it be put in fome fhady place. The fecond is a Native of the Alps, with us it is nuried in Gardens. The third grows in feveral moift P^ces, and in the Shade. The fourth, fifth and fixth grow Wild in dry Grounds, as by the Way-fides, and, in Lanes and Borders of Fields. But the *Virginian* grows with us only in Gardens. The feventh grows in *torkfbire* in a place called the *Hook*, near to a Clofe called the *Cotv-Pafture*, from whence it has been tranfplanted into Gardens, it being a very goodly Plant to behold for Ornament fake, and it generally grows in the out Corners of Gardens, to augment the Number of pleafant Flowers. The eighth grows by Ponds and Water fides, alfo in *St. James's Park*, and in *Tuthil-fields*, and many other places, in wet low Grounds, and by Water-fides. The fifth is alfo found growing in moift Meadows, efpecially in the Grounds as you go from *Lambeth* to *Batterfey*, and in many other places throughout the Kingdom. The third grows near Water, and in Watery places, and fometim in the Water it felf for the moft part. The fourth grows near the *Thames* fide, near *Redriffe*, and upon the Bank of the *Thames*, among the Plants which hold up the fame Bank. The eighth grows near to the Banks of Rivers and Water-Courles and it has been found growing in a watery Lane leading from *Theobalds* to the backfide of foimney the Lord Treafurer's Houfe. The feventh is counted a Baftard Kind of *Lcofe-pife** but it is not

goodly and ftately Plant of ail the rett, *having heaves like the Greateft or Largeft Willow \ the Branches come out of the Ground in great Numbers, growing to the height of about fix Feet, adorned with brave Flowers, of great Beauty, confifting of four Leaves apiece (a* aforefaid) of an Orient purple Color, having fome Threads in the middle, of a yellow Color 5 after which are Cods, long and full of Pown, 'which when opened* flies avert with the Wind.*

XII. *The Tunis.* Moll of thefe Herbs flower thro' all *June* and *July*, and fometimes till *Auguft* -, but the feventh, or *Willow-llover*, flowers in *May*, and contiques a long time in flowering.

XIII. *The Qualities, Specification, Preparations, *nd Virtues* of thefe *Codded Loofe-firifes*, are the fame with thofe of the *Common yellow Loofe-firife* in *Chap. 452.* aforegoing : but the *Virtues, 6^{c.}* of the *Hooded Loofe-firife*, being the fame with *Gra-tiola* or *Hedge-Hyffop*, you may fee them in *Chap. 3 88.* and *389.* aforegoing of this Work,

C H A P . CCCCLVL

Of L O V A G E Common and German.

I. *Tp *HE Names.* This is a Plant which was un-X" kilcwn to the *Greeks*, and therefore can have no *Greik* Name ; but it is called in *Latine, Levijicum, Libyficum Cf Smyrnum Fuchfij, Laferpitium tertium *Dodonaei, Hippofelinum Digfcoridis* according to *Lugdunenfis*, but this I believe is a Miftake, for I cannot find that thole Ancients knew any thing of it •, it is alfo by *Bauhinus* accounted among the *Libanotides*, and is thought to be the *Libanotisfertilis Theophrasti*: in *Engliff, Lovage.*

II. *The Kinds.* We have only two Species of this Plant, viz. 1. *Levijicum vulgare, Levificum hortenfefe vefativum*, Our Common Garden Lovage. 2. *Levijicum Germanicum, Levijicum vulgare Germanicum*, German Lovage.

The Defcriptiofts.

^mT F*# Tⁿc^fft- > or Our Common Garden Lovage. it has a Root which grows great and deep, fpreading much, and enduring long, of a brownifh Color on the outside^ and whitijh within. It has many long and great Stalks*of winged Leave?, divided into many part, Jomewhat like //^Smallage, but much larger and greater, every Leaf being cut about the edges, broaden at or towards the end, and fmallefi at the h^lalk, of a fad green Color, fmoother and fhinng. From among which rife upiWkal ftrong and hoilow green Stalks,- five or fix Feet high arid fometimes feven or ei^it Feet high, acc^ing to the Wdnefs of the Soil, fell of Joints and fuch like, out leffer Leaves fet at them than thofe which grow [K]low. And with the Leaves come forth towards the tops, long Branches, bearing at their tops large Umbels of yellow Flowers, like unto thofe of the *Wild Farfnep* < and after them flat brownMh Seed, gigw by much than. Di//, but lsObthan that x^f* of *nipt*, and thicker alfo.

IV. *The feconi, or German Lovage.* // differ*, not much from the aforegoing, but chiefly in the following things. JWhereat the Roots of the former are great and thick, and not*at alljibrou\$, in this they are fmall and very full of fibres Strings : and the Flowers of the former are yellowifh*, but in this they are white, as I)o&otiXN\$ftys, ^{an} & @ of the fame Magnitude

nitue and Form. The whole Plant, and every part thereof, both in the former and in this, have a fomewhat frong and aromatick Smell, as alfo a hot and fhai-p biting Tafte. The Figure of this latter we have given you from *Camerar'im* his Epitome of *Matthiolus*.

V. *The Places.* They grow no where Wild in *Europe*, but are only planted in Gardens, where they generally proffer very well, and will grow large and great, if iuffered. #

VI. *The Times.* They flower for the moft part in *July* and *Augufl*, and the Seed is ripe in *Augufl* or *September*, or in fome fhort time after their Flowering.

VII. *The Qualities.* *Lovoge* is hot and dry in the third Degree, of fubtil and thin parrs, Aperi- tive, Digeftive, Abfterfive, Carminative, Diuretick, Cephalick, Neurotick, Stomatick, Nephritick, Hy- fterick, and Alexipharmick.

VIII. *The Specification.* It powerfully provokes Urine and the Couries, as much as any of the Kinds of *Parley* •, powerfully refits Poyfon, gives Eafe in the Colick, and prevails againft Agues, Qyinfies, Pleurifies, bfc!

IX. *The Preparations.* You may have there- from, 1. A Juice of the Root. 2. An Effence of the Root. 3. A Re coition or Infufwn of Herb, or Root, or Seed, or of all of them. 4- A Ponder of the, Root. 5. A Pouder of the Seed. 6. A Preferve *of the Root. 7. A Pickle of the Root. WA CatapUfm of the Herb. 9. A dijii/led Water of Herb, Root, or Seed, or of all of them. 10. A Spirit of the Seed. 11. An Oil of the Seed. 12. An Elixir of the Seed. 13. A Spirituous Tinfure of the Seed. 14. An Acid Tinture of the Seed. J 5. An Oily Tinfure of the Seed.

The Virtues.

X. The Juice of the Root. // is made by beating it in a Mortar, and vcafhing it out with Water or Wine, &c.' It digefts and cut* crude and tough Humors, caufes Expectoration, wonderfquly provokes Urine and the Terms, confutes fup^iluous Moif- ture, and therefore is good againft thFDropfy, eafes Gripings of #the Bowels and the Colick, and re- liifts Poyfon, and the Infe&ion of the Plague. Dofe two, three or lour Spoonfuls at a time, as the Phy- fician (hall think fit.

XI. *The Effence of the Root.* It has all the Vir- tues of the Juice; befides "which, it admirably quenches Thirrit, whether in a Fever, or out of a Fever, or from what Caufe foever. It is prevalent againit all forts of Agues Quotidian, Tertian or Quartan, fimple or compound, expels Wind,, and cafes all Pains of the Vifcera proceeding from 3 cold Caufe. Dofe from two Spoonfuls to four.

XII. *The Recotion or Infufwn o'Herb, Root, or Seed.* They have all the Virtues of the Juice and Effence, but rauff be giveo in much larger quanti- ties, as from a quarter of a Pint to half a Pint-, it quenches Thirrit much, is good againft Poyfon, and " refits the Force of malignant Fevers: and ufed as a Gargle, it is good ag^nit a fore Mouth and Throat: and drunk down, it is profitable againit the Pleurify, Pains and Stitchas in the fide.

XIII. *The Pvuotr of the Root.* • It may be given irom half a Dram to a Dram in Wine, to warm and comfort the Stomach, expel Wind, eafe the ^olick, provoke the Appetite, and help Dige-

XIV. *The Juice of the Root.* If it is taken in a Glafs of Wine or 10 good againit the Pleurify and

Colick, provokes Urine and the Terms powerfully, and prevails againit Sand, Gravel, Stone or Tartarous Matter in the Reins, Ureters and Bladder, and has indeed all the Virtues of the Juice, Effence, DecoUon and Pouder of the Root •, but as it is in the grbis Body, fo it is longer before it comes into A& and therefore Allowances muft be given for the time of its Operation.

XV. *The Preferve of the Root.* It is cordial and fomatickf, expels Wind, comforts the Vifcera, warms the Stomach, and caufes Digeftion; it may be eaten as other fweet Meats are.

XVL *The Pickle of the Root.* It is an admirable thing to provoke Appetite^ warm a cold Sto- mach, and caufe a good Digeftion.

XVII. *The Cataplafm of the Herb.* The Leaves being brufed, are Fried in a Frying-pan, or dthet proper Veffel, With HogS Lard, and foinade into a Poultice. Applied hot to any Botch or Boil, it quickly brings, it to Suppuration, and breaks it.

XVIII. *The diftilled Water of the Herb, Root, or Seed, or of all of them.* It is laid by Authors to te good againit the Quinfey in the Throat, by gargling the Mouth and Throat therewith. It is laid alfo to help the Pleurify, if it is drunk three or four times or oftner. The faid Water dropt alfo into the Eyes, takes away their Rednefs and Dimnefs. And ufed as a Lotion to the Face or Skin, it takes away Spots and Pimples in the Face, and other Dif colorings, as Yellownefs, Tawniriefs, 0V. of the Skin.

XIX- *The Spirit of the Seed.* Mixt with fome few Drops of Spirit of Harts-horn, or Volatile Spi* rit of Man's Blood, or of other Blood, it eafes the Pain of the Stomach, gives prefent Relief in a Pleurify arid Quinfey, and cures the Colick. Dofe from one Dram to two, three or ibur, according to the Age of the Patient and Force of the&feafe,

XX. *The Oil of the Seed.* It has all the Virtues of the Juice, Effence, Decoction, Pouder, Water and Spirit, and may be given In all the Cafes for which thofe things are given, from three Drops to ten or twelve Drops: firft drop it into, fine Sug^ mixing them well together -, then mix them with a Glafs of Wine, or other Vehicle, and fo let the ra- tient drink it up. It gives prefent Eafe in the <sup>lick. * kv

XXI. *The Elixir of the Seed.* It has all the V ir- tues of the Oil, but is much more fubtil and p^f trating: it may be given from a Dram ctwo Drams or more, in choice generous Wine, or in a- ny other proper Vehicle. It is a moft excellent thing againft the Spotted Fever, and* all other ma- lign and peftilential Fevers, as alfo againit thd Plague it felt

XXII. *The Spirituous Tinfure of the Seed.* N provokes Urine and the Terms in Women, facile tates the Birth, and brings away the After-birth, prevails againft the Colick, Strangury, Stone, Sand, Gravel, or Tartarojis^Matter in the Urinary Parts, and eafes the After-pains of Women in Child-bed. Dofe one Spoonful at a time, in a Glafs of Wine.

XXIII. *The Acid Tinfure of the Seel* It ntif, be given to a grateful Acidity againit all forts 0* burning, malign and pftilential Fevers, -again* which it cannot be given without Succett^ and de- ftroys even the Poyfon and Effence of the Plague it felt. It flops Vomiting, admirably ftrenghens the Stomach, and caufes a good Appetite.

XXIV. *The Oily TinUure.* It cures the Colicfc upon the fpot, gives Eafe in the Strangury, p^* vqkes Urine and the Terms, facilitates the Birth, and brings away the dead Child^giving Eafe.m. aW After-pains oft Women in Child-bed. It is good a- gainft Sand, Gravel and Stone, or TARTAROUS M^

ter in the Reins, Urcers and Bladder •, and an excellent thing againit the Palfy in Old or Young, taken inwardly in fome proper Vehicle from eight to twenty Drops, and outwardly anointed upon the Back-bone and other Parts affcted, Morning and Night, for many Days together.

Of LUNG - WORT Golden.

L^THE Names. It has no *Greek* Name that we know of, but is called in *Latine*, *Pulmonaria*, *Pulmonaria aurea*, *Pulmonaria Gallorum*, *Corchorus Daleehampij*: in *Engliffh*, *Lung-wort Golden*, and *French Lung-wort*.

II. The Kinds. There are two Kinds hereof, *viz.*
 I. *Pulmonaria Gallorum*, *Pulmonaria Gallica*, *Pulmonaria aurea latifolia*, *Pulmonaria Gallorum thieracij facie*, *Pulmonaria vera Tragi*, (as the *French* take it to be) *Hieracium flore aureo*, *Pilofella major*, *Pilofella vel Auricula Muris major flore aureo*, *Chondrilla flore aureo*, *Corchorus Daleehampij*, *Golden Lung-wort*, or *Golden Moufe-Ear broad leaved*.
 2. *Pulmonaria Gallorum angustifolia Lobelij*, *Pulmonaria Gallica Angustifolia*, *Hieracium Murorum Bauhini*, *Pulmonaria aurea angustifolia*, *Pulmonaria Gallorum flore Hieracij*, *Golden Lung-wort*, or *Golden Moufe-Ear*, or *French Lung-wort narrow-leaved*.

Golden Lung-wort.

The Defcriptions.

III. The firft, or Golden Lung-wort or *Gdden Moufe-Ear broad-leaved.* It has a *Root* which is *fibrous and firifgy*, which *fpreads under Ground* and *flwots up in divers other places*, by which it *much increajes*, *wore efppecially if it grozvs ih any moift orfhady place.* From this *iioot rife up many longifh broad green Leaves*, *fpread upon the Ground*, *fpotted with pale Spots*, yet more *confpicuous* at one time than at another, *fomewhat hairy*, both on the upper and under fide, *foft and unequally divided*, and commonly cut in the *deepeft* the nearer the *Stalk*. • *Thefe Leaves* are of a *d^grgreen Color*, *fometimes broader and fhorter*, and *lometimes narrower and longer*, (whence *Tabern&montanm* makes three *forts* of this, which yet are nothing but different *Appearances* of the fame *Species*.) From the *midft* of thefe *Leaves* rife up one, two or more *blackifh hairy Stalks*, about a *Foot and half* or, two *Feet high*, bare or *naked up to the top*, or having at *moft* no more than one *Leaf apiece*, and that about the *middle* of the *Stalk*. *Thefe Stalks* are divided at their *tops* into *feveral Branches*, which bear *double yellow Flowers* of ail indifferent *Bignefs*, in *Form* or *Fafhion* almoft of the *Hawkweeds* or *Common Moufe-Eaⁿofa* deep *Gold* or *Orange Tawney Color*, with *forle Threads* in the *middle*, and of *little* or no *Smell* at all. After the *Flowers* are faded, the *Heads* turn into *Down*, which contain *fmall fhort black Seed*, which are commonly carried away with the *Wind* when fully ripe. The whole *Plant* is *milky*, as the *Hawkweeds* are.

IV. Thafcond, or Golden Lung-wort, or Moufe-Ear narrow-leaved. Its *Root* is *fmall and fibrous*. *The Leaves* are *fmal*, of the *B^gnefs*, and *fometimes of the Shape* (but yet *withal a little indented or finuated*) of *Daily Leaves* whitifh, and *hairy* or *hoary*. The *Stalk* is about an *handful high*, *crested*, *hoary*, and fet with many *longifh narrow Leaves*, and at the top one *fhort Foot-ftalk* ^ it bears *four* or *five Flowers*, of a *bright yellow Color*, and *pretty large*, confidering the *Smallnefs* of the *Plant*. The *Flowers*, like as others of this *Kind*, fly away in *Down* and carry their *Seed* with them.

a. Lohd fa^gs the firft *g^{row}** ^ the *lhady Woods* of *France* near *Lions* and *Mmpelter*, but with us it is only *nurfed up* in *Gardens*, in *ftuady* rather than in *funny places*. Yet *Mr. John Goodyer* found it in *May 1632*, in a *Copfe* in *Godlyman* in *Surry*, adjoining to the *Orchard* of an *Inn-keepet* there, whofe *Sign* was the *Ant Hope*. The *fecond* was found growing in *England* by one *William Coor* ^ on a *Hill* in the then *Lady Bridget KingfmiPs* *Ground* at *Sidmonton* ^ net far from *Aewbury*, in an old *Roman Camp*, clofe by the *Decuman Port* ^ towards the *Weft* ^ *South JVeJJ*, upon the *Skirts* of the *Hill*.

VI. The Times. The firft *Flowefs* in *Summed* and *fometimes* again in *September*, *Mr. Goodyef* found it *flowering* in *May 1631*, in the place, I fuppofe, afore-mentioned, and is laid to *flower* from *May* to *Auguji* and *lojjgr*. The fecond *floweers* in *June*, *July* and *Au\$ft*, about the latter part of which *Monch*, they both ripen their *Seed*,

VII Not a. It is to be taken notice of ^ That there is another *Plant* which is called *Pulmonaria* ^ or *Lung-wort* ^ as well as this, which *Name* I think not to be fo proper to that, as to this. That is, the *Spotted Cowflip*, which fome call *Sage of JerufaUm*, the *Defcriptions* of the chief *Kinds* of which you may fee in *Chap. 15* & aforegoing, which *Names* are more fit for it than this of *Lung-wort*, which

truly belongs to the Plants described in this Chapter : in that, *Chap. i*?8. you have three of these Plants described. The Cut or Figure there inserted, belongs to the second of them, viz. the *Bugloss-leaved Jerujalem Cow/lip* *, but the Figure of the first or *Common Kind*, was there overlit by the Printer, which that it might not be wholly lost or forgotten, (since in this Chapter we treat of "*Lung-wort*") we have caused to be placed here.

Spotted Lung-wort, or Jerusalem Cowflip.

VIII. *The Qualities.* These Plants are temperate in respect to Heat or Cold, and probably dry in the first Degree. They are Absterfive* Astringent, Vulnerary, Analeptick, and Pe&oral.

IX. *The Specification.* They are peculiar for healing of green Wounds, as also of Ulcers, and other Diftempers of the Lungs.

X. *The Preparations.* You may have therefrom, 1. A Juice or Effence. 2. A Decoftion. 3. A Syrup. 4. A Powder. 5. A Conserve. 6. A Cataplasm. * 7. An Ointment or Balsam* 8. A distilled Water.

The Virtues.

XL *The Juice or Effence.* Given inwardly to two or three Spoonfuls, it is profitable against a *Vithifis* or Ulceration of the Lungs : being also inwardly taken, and outwardly applied, it conduces to the cleansing and healing of green Wounds. If it is dropt also into the Eys, it takes away any Noife, and eases any prickin&pr (hooting Pain With Which they may be troubled. *

XII. *The Decoftion in Witle** It has the former Virtues, but must be given in a larger Dose. It is an extraordinary Vulnerary, and good to be given to wounded Patients inwardly (as the Physician (hall use it) as well as outwardly to be applied. It is good against Coughs, Colds, Hoarseness, Wheezing, Ulcers of the like Diseases of those Parts.

XIV. *The Powder.* It has the Virtues of the Syrup and Juice, and is peculiarly good against an Excoriation of the Stomach. Dole from half a Dram to a Dram, mixt with a little Honey, and swallowed. Outwardly applied to Ulcers and running Sores, it cleanses, dries, and induces their healing.

XV. *The Conserve.* It is peculiar for the curing of ulcerated Lungs and deep Consumptions, but where it is not come to the degree of a *Marafmos*, it ought to be taken four or five times a Day, drinking after it half a PiPt of warm Milk or more, and to be continued for some considerable time.

XVI. *The Cataplasm.* It is made of the Herb by Soiling in Wine. It is good against foul and running Sores and Ulcers, being applied to the Parts affected : it stops the Afflux of Humors, strengthens the Part, and induces the healing.

XVII. *The Ointment or half am.* It is a fingular Digettive, cleanses, dries, heals: but if it is immediately applied to a simple green Wound, it commonly conglutinates it, and heals it at one Intention. It is an admirable thing for curing of Whit* loes.

XVIII. *The distilled Water.* It has the Virtues of the Juice, Effence and Decoation, and may be taken for Diftempers of the Lungs, sweetned with fine Honey, or double-refined Sugar. Simple of itself, it is good against internal Inflammations, and hot Diftempers of the Stomach, Heart, Liver and Lungs.

C H A P . CCCCLVHL

Of LUNG - WORT Tree,

This Plant was unknown to the Greeks, but is called in Latine, *Lich* arborum, Pulmonaria^ and Pulmonaria foij* Mufcm Pulmonarius, Lichenis genus : in Tree Lung-wort^ and by some Tree* It is called *Pulmonaria* or *Lung-wort*, from which Likeness it has to Lungs or LigHi -, and by some called *Oak Lungs*.

II. *The Kinds.* It is a fingular Plant of the Kind ^ but by some Authors is taken to be a Species of the *Mojfes*, and therefore is by them called *Mufcus* : by others it is taken to be a Species of the *Mujhroorts*, and therefore to the Name *Pulmonary Lobel* has added the Epithite *lingofa*, which I thinke is proper enough.

The Descriptions.

III. *The Letves hereof are pretty large, and very folded, one in another^ not fojmooth a* Liver^ but more wrinkled^ rough and thick^ altoost like to a Fell or Hide, and tough withal, On the upper side it is whitish, and on the neather side blackish or dufty, so that it seems after a fort to resemble Lungs or Lights.*

IV. *Parkinson/^ j it grows with brodd Ajh-colored Leaves, or of a greyish Color and tough± vanouf) folded, crumpled and gajhed in on the edges *, and spotted also in some places, with many small Spots on the upper side. It is only a ioliofa, for it was never seen to bear any Stalk or Flower at any time**

V. *The Places.* It grows upon the Bodies of oW Oaks, Beeches, and other Forrest Trees in d * * ^

thick Woods ; and it is fometime found alfo growing upon Rocks, and in other fhady places. That which grows upon *Oak* is moft valuable, and mod in Ufe, and is by many called for that Reafon, *Oak-Lungs*, as is before hinted.

VI. *The Times.* It is laid to be in its flourifhing Condition thro' all the Summer Months.

VII. *The Qualities.* It is temperate in refpeft to Heat or Cold, and dry in the firft Degree; It is Abfterfive, Aftringent, Traumatick or Vulnerary, Pe&oral and Analeptick.

VIII. *The Specification.* It is peculiar for curing of Confumptions, more efpecially thofe which proceed from an Ulceration of the Lungs.

IX. *The Preparations.* You may have therefrom, 1. *A Pouder.* 2. *A Decoſion in Wine.* 3. *A Syrup.*

The Virtues.

X. *The Vouſer.* Givep from half a Dram to a Dram Morning and Evening, mixt with Honey, or in fome proper Syrup, it cleanfes, dries and heals Ulcers of the Lungs, and thereby reftores fuch as are in Confumptions. It is good againft Inflammations of the Lungs, being drunk in Water, Shepherds and Farriers give it mixt with Sait[^] to their Sheep and other Cattel with good Succefs, which are troubled with jhe Cough, or are (hort or broken Winded. Applied to bloody and green Wounds, as alfo Ulcers in the fecret Parts, it heals them : iand helps Women who are troubled with the Overflowing of the Terms. It is alfo a very excellent thing againft the Bloody-flux, and all other Fluxes of the Bowels, given for fome little time in generous Wine, or given Clyfterwife. Given in Red Wine, it is alfo profitable againft Vomiting.

XL *The Decotiion in Wine.* It has all the Virtues of the Popder, and may be given Morning, Noon and Nigfit with fome of the Syrup of the fame. Ufed as a Gargarifm for a fore Mouth and Throat, it quickly cures it. And is a good Lotion for Ulcers in any part*

XII. *The Syrup.* It is a thing of excellent Ufe for fuch as are in Confumptions, or have an Ulcer of the Lungs, cleanfing the fame, drying and inducing the Healing. It is good againft the Rickets in Children, as alfo Goughs, Colds, Wheezing, Hoarfnefs, Shottnefs of Breath, Difficulty of Breathing, vehement Catarrhs, Spitting of Blood, OV*

The fmalleft Blew Lupine. Where note, That the Grains of the firft or *Garden Lupine*, are generally called *Lupini* : and *Plautus* calls them *Aurum Comicum*, becaufe they were ufed in Comedies inft[^]ad of Money, when in any Scene thereof there was a ny flew of Payment.

White Garden Lupine.

III. *The firft[^] or White Garden Lupine;* *It hat a Root which n not very great[^] but woody, and full offmallFibres, by which it faft ens it feljifrongly in the Ground, yet perijhes every Tear, <u all the reft oftheſe Kinds do.* It rifeſ up with a great round Stalk, hollow, and fomewhat woolly, with feveral Branches, on which grow, on long Foot-ftalks, many Leaves, confifting of five, fix or ſeven diſtinct parts, or other fmailer Leaves, equally {landing round about as it were in a Circle, much like thofe of the *Chafi-Trec*, of a whitifh green Color on the upper fide, and white and downy on the under fide* which in the Evening, about the fetting of the Sun, hang a little flagging downwards* as if they were a going to wither. Among theſe, at feveral Joints, come forth Tufts of Flowers, Handing many togc* ther, like unto *Beans*, of a white Color in fome places, and in others of a very bleak Blew, tending to white> and in others a pale or light blufli Color* (as *Gerard* has it.) After the Flowers are paft, there come in their places great, long, broad, flat and rough Cods, in which [^]re contained round and flat Seed, like a Cake, covered with a tough white Skin> but yellowifh pn the infide, and of a very bitter Taſte -, where they cleave unto the Cods in that part, they have a certain Dent, like a little Navel.

IV. *Theſecohd, or Spotted White Lupine.* *Thk in its Root, Stalks[^] Branches, Leaves, Flowers, Seed, and manner of Growing, is altogether like to the former, ſave in the Magnitude[^] thf fyant being lefs than that^h and in the Flower, this being spotted with Blew on the Heads of the injermolt Leaves, and in the Hollows of the uppermoft,*

Names. It is called in *Arabick*, *Tar-mus* and *Tormus* ; in *Greeks* ειψ*©-: in *Raine*, *Lupinus* > and in *Engliſh*, *Lupine* and *Flat-Bean*.

The Kinds. There are feveral Kinds of this *Lupine*, viz. 1. *OW* W < ^ Lup'musfativvs.Lup'h* *ativv!* *albus*, The White Garden Lupine. 2. *Lup'ini** *alter a/bus*, The fpotted White Lupine. 3. *Lupinus. tuteif[^]* *Lupinus flore luteo*; The Yellow Lupine. 4. *Lupinus ctruleus* *mior* *...* The ſpotted Blue Lupine. 5. *Lupinus carolynenſis*, The ſpotted Red Lupine. 6. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 7. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 8. *Lupinus carolynenſis*, The ſpotted Green Lupine. 9. *Lupinus carolynenſis*, The ſpotted Black Lupine. 10. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 11. *Lupinus carolynenſis*, The ſpotted White Lupine. 12. *Lupinus carolynenſis*, The ſpotted Red Lupine. 13. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 14. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 15. *Lupinus carolynenſis*, The ſpotted Green Lupine. 16. *Lupinus carolynenſis*, The ſpotted Black Lupine. 17. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 18. *Lupinus carolynenſis*, The ſpotted White Lupine. 19. *Lupinus carolynenſis*, The ſpotted Red Lupine. 20. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 21. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 22. *Lupinus carolynenſis*, The ſpotted Green Lupine. 23. *Lupinus carolynenſis*, The ſpotted Black Lupine. 24. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 25. *Lupinus carolynenſis*, The ſpotted White Lupine. 26. *Lupinus carolynenſis*, The ſpotted Red Lupine. 27. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 28. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 29. *Lupinus carolynenſis*, The ſpotted Green Lupine. 30. *Lupinus carolynenſis*, The ſpotted Black Lupine. 31. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 32. *Lupinus carolynenſis*, The ſpotted White Lupine. 33. *Lupinus carolynenſis*, The ſpotted Red Lupine. 34. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 35. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 36. *Lupinus carolynenſis*, The ſpotted Green Lupine. 37. *Lupinus carolynenſis*, The ſpotted Black Lupine. 38. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 39. *Lupinus carolynenſis*, The ſpotted White Lupine. 40. *Lupinus carolynenſis*, The ſpotted Red Lupine. 41. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 42. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 43. *Lupinus carolynenſis*, The ſpotted Green Lupine. 44. *Lupinus carolynenſis*, The ſpotted Black Lupine. 45. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 46. *Lupinus carolynenſis*, The ſpotted White Lupine. 47. *Lupinus carolynenſis*, The ſpotted Red Lupine. 48. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 49. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 50. *Lupinus carolynenſis*, The ſpotted Green Lupine. 51. *Lupinus carolynenſis*, The ſpotted Black Lupine. 52. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 53. *Lupinus carolynenſis*, The ſpotted White Lupine. 54. *Lupinus carolynenſis*, The ſpotted Red Lupine. 55. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 56. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 57. *Lupinus carolynenſis*, The ſpotted Green Lupine. 58. *Lupinus carolynenſis*, The ſpotted Black Lupine. 59. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 60. *Lupinus carolynenſis*, The ſpotted White Lupine. 61. *Lupinus carolynenſis*, The ſpotted Red Lupine. 62. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 63. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 64. *Lupinus carolynenſis*, The ſpotted Green Lupine. 65. *Lupinus carolynenſis*, The ſpotted Black Lupine. 66. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 67. *Lupinus carolynenſis*, The ſpotted White Lupine. 68. *Lupinus carolynenſis*, The ſpotted Red Lupine. 69. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 70. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 71. *Lupinus carolynenſis*, The ſpotted Green Lupine. 72. *Lupinus carolynenſis*, The ſpotted Black Lupine. 73. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 74. *Lupinus carolynenſis*, The ſpotted White Lupine. 75. *Lupinus carolynenſis*, The ſpotted Red Lupine. 76. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 77. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 78. *Lupinus carolynenſis*, The ſpotted Green Lupine. 79. *Lupinus carolynenſis*, The ſpotted Black Lupine. 80. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 81. *Lupinus carolynenſis*, The ſpotted White Lupine. 82. *Lupinus carolynenſis*, The ſpotted Red Lupine. 83. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 84. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 85. *Lupinus carolynenſis*, The ſpotted Green Lupine. 86. *Lupinus carolynenſis*, The ſpotted Black Lupine. 87. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 88. *Lupinus carolynenſis*, The ſpotted White Lupine. 89. *Lupinus carolynenſis*, The ſpotted Red Lupine. 90. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 91. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 92. *Lupinus carolynenſis*, The ſpotted Green Lupine. 93. *Lupinus carolynenſis*, The ſpotted Black Lupine. 94. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 95. *Lupinus carolynenſis*, The ſpotted White Lupine. 96. *Lupinus carolynenſis*, The ſpotted Red Lupine. 97. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 98. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 99. *Lupinus carolynenſis*, The ſpotted Green Lupine. 100. *Lupinus carolynenſis*, The ſpotted Black Lupine. 101. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 102. *Lupinus carolynenſis*, The ſpotted White Lupine. 103. *Lupinus carolynenſis*, The ſpotted Red Lupine. 104. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 105. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 106. *Lupinus carolynenſis*, The ſpotted Green Lupine. 107. *Lupinus carolynenſis*, The ſpotted Black Lupine. 108. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 109. *Lupinus carolynenſis*, The ſpotted White Lupine. 110. *Lupinus carolynenſis*, The ſpotted Red Lupine. 111. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 112. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 113. *Lupinus carolynenſis*, The ſpotted Green Lupine. 114. *Lupinus carolynenſis*, The ſpotted Black Lupine. 115. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 116. *Lupinus carolynenſis*, The ſpotted White Lupine. 117. *Lupinus carolynenſis*, The ſpotted Red Lupine. 118. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 119. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 120. *Lupinus carolynenſis*, The ſpotted Green Lupine. 121. *Lupinus carolynenſis*, The ſpotted Black Lupine. 122. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 123. *Lupinus carolynenſis*, The ſpotted White Lupine. 124. *Lupinus carolynenſis*, The ſpotted Red Lupine. 125. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 126. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 127. *Lupinus carolynenſis*, The ſpotted Green Lupine. 128. *Lupinus carolynenſis*, The ſpotted Black Lupine. 129. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 130. *Lupinus carolynenſis*, The ſpotted White Lupine. 131. *Lupinus carolynenſis*, The ſpotted Red Lupine. 132. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 133. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 134. *Lupinus carolynenſis*, The ſpotted Green Lupine. 135. *Lupinus carolynenſis*, The ſpotted Black Lupine. 136. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 137. *Lupinus carolynenſis*, The ſpotted White Lupine. 138. *Lupinus carolynenſis*, The ſpotted Red Lupine. 139. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 140. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 141. *Lupinus carolynenſis*, The ſpotted Green Lupine. 142. *Lupinus carolynenſis*, The ſpotted Black Lupine. 143. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 144. *Lupinus carolynenſis*, The ſpotted White Lupine. 145. *Lupinus carolynenſis*, The ſpotted Red Lupine. 146. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 147. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 148. *Lupinus carolynenſis*, The ſpotted Green Lupine. 149. *Lupinus carolynenſis*, The ſpotted Black Lupine. 150. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 151. *Lupinus carolynenſis*, The ſpotted White Lupine. 152. *Lupinus carolynenſis*, The ſpotted Red Lupine. 153. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 154. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 155. *Lupinus carolynenſis*, The ſpotted Green Lupine. 156. *Lupinus carolynenſis*, The ſpotted Black Lupine. 157. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 158. *Lupinus carolynenſis*, The ſpotted White Lupine. 159. *Lupinus carolynenſis*, The ſpotted Red Lupine. 160. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 161. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 162. *Lupinus carolynenſis*, The ſpotted Green Lupine. 163. *Lupinus carolynenſis*, The ſpotted Black Lupine. 164. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 165. *Lupinus carolynenſis*, The ſpotted White Lupine. 166. *Lupinus carolynenſis*, The ſpotted Red Lupine. 167. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 168. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 169. *Lupinus carolynenſis*, The ſpotted Green Lupine. 170. *Lupinus carolynenſis*, The ſpotted Black Lupine. 171. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 172. *Lupinus carolynenſis*, The ſpotted White Lupine. 173. *Lupinus carolynenſis*, The ſpotted Red Lupine. 174. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 175. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 176. *Lupinus carolynenſis*, The ſpotted Green Lupine. 177. *Lupinus carolynenſis*, The ſpotted Black Lupine. 178. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 179. *Lupinus carolynenſis*, The ſpotted White Lupine. 180. *Lupinus carolynenſis*, The ſpotted Red Lupine. 181. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 182. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 183. *Lupinus carolynenſis*, The ſpotted Green Lupine. 184. *Lupinus carolynenſis*, The ſpotted Black Lupine. 185. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 186. *Lupinus carolynenſis*, The ſpotted White Lupine. 187. *Lupinus carolynenſis*, The ſpotted Red Lupine. 188. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 189. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 190. *Lupinus carolynenſis*, The ſpotted Green Lupine. 191. *Lupinus carolynenſis*, The ſpotted Black Lupine. 192. *Lupinus carolynenſis*, The ſpotted Grey Lupine. 193. *Lupinus carolynenſis*, The ſpotted White Lupine. 194. *Lupinus carolynenſis*, The ſpotted Red Lupine. 195. *Lupinus carolynenſis*, The ſpotted Yellow Lupine. 196. *Lupinus carolynenſis*, The ſpotted Purple Lupine. 197. *Lupinus Lupine.

V. *The third, or Yellow Lupine.* It is like to the fir} Garden One in Stalks and flowers, which are both lejjer andjfwrter, but the Leaves arv larger than thofe of the Small Blew Lupine. The Flowers grow in two or three Rundles or Tufts round about the Stalk and the Branches, of a beautiful, delicate, and exceeding fair Gold-yellow Color, in Fafhion and Form liHe unto the other Kinds, being larger than thofe oY the Lejjer Blew Lupine, but nothing fo large as thofe of the Greater Kinds. They arelweet of Smell, and made up'nto an Ear: of the Color of the Tellom Violet, and forriething or the Smell. The Cods are fmall, hard, and somewhat hahy. The Seeds are little, flat, and round,* ill-favoured, much about the Form and Bigneſs of the Small Blew, or iomewhat bigger, but far leffer than thofe of the White Garden Kind, of an extreaiſ bitter Taſte, of feveral Colors, or rathdr of a whitifh Color on the ouriide, fpotted wrjh many* Spots.

VI. *The fourth, or Greater Blew Lun&.* The Stalk of this Lupine is greater than tbaYof the firſt or White Garden Kind, and the Lcavts are more foft and woolly than thofe. The Flower? are of a moſt perfect blew Color, with lbme white Spots in the middle. The Cods are long, rougfe, greeniſh, and very Jarqe or great, in which- are contained hard, flat and round Seed, not fo white x^n the out* fide as the firſt or Garden Kind, but fom&what yellower, greater alfo, and more roughef hard in handling.

VII. *The fifth, or Leffer Blew lupine.* This Kind of Wild Lupine differs not in th& form of Leaf or flower from the former^ but only that it "is much ſmaller \$ the Leaves are greener, and have fewer Diviſions in them : the Flower is of as deep a blew Color as the laſt. The Cods are fmall and long, containing fmall round Seed, not fo flat as the former, but more difcoiored or fpotted on the outſide, than the Greater Blew fort is.

VIII. *The fixtb, or Smalleſt Blew Lupine.* This ſmall Plant is very like unto the laji deſcribed in its form and ?ndner of its Growing : it is little or nothing woolly, but is ſmaller both in its Stalks and Leaves. The Flowers likewife are wholly blew^ as they are, or very feldom with-a white Spot in them. The Seed is ſmaller alfo, and a little ſpot* ted,

IX. *The Places.* The firſt is accounted the only Garden or Tame Kind, the others are ſaid to be Wild in the places where they are Natives. They all require, as Tbeopbrajius ſays, a fandy and poor Soil, and difficultly grow in tilled or rich Land, becauſe they are naturally Wild Plants. The frit is a Native in many places of Greece, and the Eajiem Countries beyond it, where it was anciently fown for their Food, being often watered to take away the Bitterneſs. The Tellow Lupine is a Native of Spain, from whence it was brought to us. The Great Btew Lupine is thought to come from beyond Perſia, and to be a Native of Car mania. The Leffer Blew is found plentifully Wild in many places both of Spain and Italy. The laſt or Smalleji Blew Lupine was brought by Boel out of Africa.: but they all grow now in our Gardens, with fuch as are great Lovers of Flowers.

X. *The Times.* They are planted in April, and they bring forth their Fruit at two or three feveral times, ſeeming as if they did. flower often, and bring forth as many Crops. The firſt flowers in My j the thiqI mfuly, and foalſa the fourth and tmjn the fixth in Srp/m^ but that feldom comes to Ktpenel's *, but the others, after the times of their flowering, i_o_o_n bring their Seed to Perfection. . .

XI. *The Qualities.* Jttipinesyi. £ the Grain, or Meal, is hot and dry In the firſt Degree* Aperitive, Digeltive, Diinblutive and AbMrriive, fo long as the Bitterneſs remains in them, but if that is taken away by Iteeping in Water, they become of an Earthy; clammy Subttance, fmp'laſtick, and. hard of Digeſtion.-

XII. *The Specification.* •llie^itc-peaiHarto o-pen Obltriidions of the Viſcefa, pfo.voke tlrne, ?nd the Terms, facilitate the Birch, expel the dead Child, and kill Worms * -bd'theſe things they do as not diverted of their Bitterneſs.

XIII. *The Preparations*. "You may have there- from, 1. 2. 3. A fa... 4. A Cataphiſnu 5. An Ointments

The Virtues.

XIV. *The Meal.* Strewed up^n old rotten Sores and Ulcerv it is ſaid to digeft, cleanſe, dry, and heal them. Mixt with Honey and Vinegar, and given to drink, it kills Worms in the Belly. Boiled in Lye, it cleanſe the; Head and other P:ff: fkm Ulcers, Scurft, Morpew* and other like De- filements."

XV. *The Fajle,* It is made of the Meal of l~ pines after they have been fo often or long ſteeped in Water, as to be diverted of jn their Bitterneis, whether it is made into Puddings" or into Bread, it leettis to be hard of Digeſtion, and to breed no very good Nourifhment, engendring grofs and clammy Humors.

XVI. *The Decollion ih Wine or Water.* It is good againſt the loathing of Meat, and provokes Appetite. Drank lweetned with Honey, it cures Worms in the Belly, and if a little Rue and Pepper are added to it, it will be fo touch the more effe&ual* Taken three or four Ounces Morning g od Night, it opens Obitru&ibns of the Liver and Spleen, pro- yokes Urine and the Terms, expels the Birth and dead Child, as alſo the After-birth ; and being uft^ as a Lotion or Waſh, it is good againſt Spots, Free- kles, Tanning, Sun-burning, Dicolorings of the Skin, Pimples,, Scurff, Morpew, and other D^f^&^ dations of the Cutis: it alſo cleanſes, dries *£ heals Scabs, running Sores, old Ulcers, and is ^ to take away the Marks of the Small-Pox, wniu* are left after healing -, as alſo all other blacky^ red and yellow Spots of the Skin. The Decoction of the Root in Water being drunk, provokes If If the Deco&ion ol: Lupines in Wine be made the Addition of Wormwood, Centory, and Bay Safr* it is good to iioo the running or ſpreading of a Gangrene, being applied thereto very hot-, and COP refts ſpread^ig Ulcers, being applied very hot th* to with Stiiphs of Tow or Hanntl.

XVII. *The Cataplaſni.* It is made of the bitter Meal with Vinegar by boiling. Being applied, i* takes away Pimples, and diffolves Nodes or Ker- nels ariſing in feveral parts from the KingVEvil, or other Cauſes. It ſipens and breaks hard Tumors and Apoitems, and is ſaid alſo to break Carbuncles* if uſed by a ſkilful Hand. Applied to the StomacB and Belly, it hebs to kill Worms in the Body, the £&ecofVion being^alfo given inwardly at rhe .. time. Ir likewife cures Clefts, Bunchings out, u^ cers, and Vic us in Ano<, being for ſome time appi^ ed to the Part.

XVIII. *The Ointment.* It is made of the bitter Meal by mixing it either with Honey, or with Gall of an Ox, Sheep or Goat, or with both them. Externally applied, it has the Virtu Decoiaion and Cataplaſm : ibme add alio the of Limns ton, and ib it cleanſes the tate Skin of aU Deformities .œctru>Hg thereto, as

other Breaking* dat; &c. It is; Scabs. beiiiig
 n Ulcers, Ragades, Vitut in
 tluly'applied.

 .ral pale, yellow, and very finall Flowers, ftand
 ing one above another feverally, on both fides 0
 the Stalks, which coii^rt into foinewlat large
 i3 fiat, tiiin, hoary, hard, rough" Husks, re
 ling little Bucklers; or rather mottlike *!

Greater Mad-wort of Diofcorid;

Mad-woYt of DioicprideS the Ltfferi

IV. Tm

IV. The second, or Lesser Mad-wort of Dioicori-
 dW, b-has a Root which is small and long, with
 divers fibres adjoining, which abides and Jhoots forth
 aneio, and is more Jharp in Tajie than the Leaves,
 ivh/ch are drying and aftringent. From this Root
 spring forth several long Leaves, lying on the
 Ground, a little waved on the edges, of a pale or
 blewifh green Color, about three Inches long, and
 one broad, rough and hairy, but fofter than the for-
 mer. Trom among which Leaves rife up flender,
 weak, rough Stalks, fcarce able to ftand upright
 parted into feveral Branches, on which grow the
 Leaves by Couples, one oppofite to ano^rier, fmal-
 ler, but notlefs hairy and rough than the aforego-
 ing. The Flowers firft begin to break forth at the
 tops, and afterwards on the fides or Wings, which
 are many fet together in Tufts, confifting of four
 white Leaves, notched in the middle, which makes
 every Leaf feem like a Heart, with divers yellowifh
 Threads in the middle of them[^] and each Handing
 in a green Husk ; the outfides whereof have longer
 Foot-ftalks, than thofe more inward *, and each
 Flower larger than the inner ones *, which being
 pafte, round Seed-Veffels fucceed, in Form like Buck-
 lers, a little fmaller than the former, hard and
 rough on the outfide, in which are contained flat
 Seed, in four round reddih Cells or Partitions, di-
 vided by a certain thin (hining Skin, two Seeds ly-
 ing in each Cell or Divifion.

V. The Places. They grow in Gardens both
 with us and in Italy, Trance, and the Low-Countries,
 but their original or native place is fcarcely or not
 well known.

VI. The Times. They flower in the Summer
 Months, as in May, June, July and Auguft, the
 fecond year after their fowing, and their Seed is
 ripe not long after.

VII. The Qualities. It is hot and dry in the firft
 Degree. Digeftive, moderately Abfterfive, Expul-
 five, and Alexipharmick.

viii. The Specification. It is peculiar for curing
 the Bitings of Mad Dogs, as alfo of Green Wounds,
 and of old running Sores, and filthy rotten
 Ulcers*

IX. The Preparations. From the Green Herb
 you may have, 1. A liquid Juice or Effence. 2. A
 Decoſion in Wine. 3. A Pouder. 4. An Oint-
 ment or Balfam. 5. A Cataplafm.

The Virtues.

X. The liquid Juice or Effence. Being taken in
 Broth or Wine, it cures the Bitings of Mad Dogs,
 and perfe&ly takes away the Venom or Poylbn
 thereof which Galen affirms *Simpllcium Medica-*
mentorum, l. 6. and this fome thinkto be manifeft
 from the fignature of the Plant, or likenefs of its
 whole fubftance, and that this is the Virtues there-
 of, had been found from great Experience[^] and
 that it would perform many other Cures, from its
 drying, digefting, and moderately cleanfing facul-
 ties: and therefore Galen and Diofcordes both fay
 of each of thefe Plants, that they cleanfe the Skin
 from Wheals and Pimples, from Spots and other
 difcolorings, as Morpew, Sunburnings, ©V.
 which is prefumed to be done by the Juice or
 Effence,

XI. The becotfion. It may be made with Water
 or Wine, but the latter is the better. It has the
 Virtues of the Juice or Effence but much weaker,
 and therefore may be taken to half a Pint or more,
 according to Age, &c. It is good for the Cure of
 Wounds either inward or outward, to digeff con-
 gealed or clotted Blood which is gathered together
 by any fall, blower bruife, and to cleanfe and heal
 old rotten and filthy Ulcers, and other creeping
 Sores*

XII. The Pouder of the Herb. It has the Vir-
 tues of the Juice and Deco&tion, and particularly
 it has a virtue to {top the Hiccough[^] and this it
 will do if the Pouder, or green Herb it feif is but
 held in the Tylouth, and alfo fmelt to* Dofe one
 Dram at a time twice a day, in Ale, Beer, Wine[^]oi
 Poflet Drink, &c. Outwardly ftrewed upon run-
 ning and putrid Ulcers, it dries up the moifture,
 and contributes much to their healing.

XIII. The Ointment or Balfam. It is of fingular
 ufe to be applyed to the Bitings of Mad Dogs*,
 becaufe it recalls[^] or draws forth the Venom or
 Poyfon out of the Wounds, and fome are of Opin-
 ion, that it might have the fame Operation, if it
 was applyed to the Biting of a Viper or Rattle-
 Snake: however outwardly applyed to running
 Sores, inveterate Ulcers, Hftulaes, &c. it has been
 found to digeff, cleanfe powerfully, then to dry*
 and induce a fpeedy healing, and this fo much the
 more if the Pouder of the Herb be ftrewed thicke
 upon the Sore or Ulcer.

XIV. The Cataplafm. It is of great ufe, being
 immediately applied to attraft or draw the Poyfon
 or Venom out of the Bitings of Mad Dogs, and
 to difcufs Tumors or Swellings caufed by fimple
 Contufion} as alfo to open the Pores-fo as to
 caufe an eduction of the Morbifick caulê of the
 Sore, or Morpew, &c.

XV. Note, That the fecond Figure, which J*
 that of the Lesser Mad Wort of *Djofcorides*, is
 taken from *Matthiolus* his Epitome \$ in this Cut,
 the Seed Veffels are very exad, but the pofition of
 the Leaves are not juft, for they ought to ftand by
 Couples, and be of three times that length.

C f i i A P. CCCCLXL

Of MA D D E R Great.

I. f-T*HE Navies. It is called in the Arabick
 1 Pave, and Yeve alfa baginx in Greek
 EfvS^jkvey \$ tivhJkvov, *Ermhrodanum* and *Erutbe-*
dattum: *Xicandcr* in *Tberiaci**, calls it Sx^r
Schyrium: in Latine, *Rubea*, and *Rubia*, (the
 color of the Root, and from its Dying
 Cloth or Leather into a Red color:) and in
 EnglJb, *Madder*. p^{nu}/us *JEgineta* fayz, it is
 called *Thapfon*: and in the Shops it is called
Rubin Tinctorum.

II. *The Kinds.* It is either *Great*, of which in this Chapter: or *Small*, of which we (hall Treat. in the next. The great Kind of Madder, is, 1. *Rubia, Rubia Sativa, Rubin TinSorum, Garden Madder* or Red Madder, which some call *Dyers Madder*, and *Crop-Madder*. 2. *Rubia Sylvestris, Wild Madder*. 3. *Rubia-Sylvestris foliis-longioribus*, Wild Madder with long Leaves. 4. *Rubia Marina, Sea Madder*. 5. *Synanchia hakchampi*, Quinfey-wort or Quinfey Madder of Dalechampius. 6. *Mollugo Montano, Rubia Sylvestris altera Gefncri*, Great Baltard or Mountain Madder. There are other Herbs which some Authors will have to be kinds hereof, as *Aparine, Aferula, Cruciate, Gallium*, which we can scarcely admit of, and therefore you will find them in other Parts of this Book, in their proper places of the Alphabet*

IV. *The fecond, or Wild Madder.* In this the Root grows greater, but not fully fo red nor clear as that of the Garden Kind. It grows up in

Wild or Field MADDER.

'the Descriptions.

III. *The firfl, or Garden Madder.* Its Root is fat and full of fubjlance, yet not very great, but very long, running down half a mans depth into the ground^ red in color, and very clear whileft it is

form, very like to the *Garden Madder* before described, but the Stalks are fmaller, not fpreading fo far* nor are the Leaves fo rough and hairy, but rather (as *Gerrard* fays) fsmooth and fhiningv and lefler alfo, and the Flowers white.

V. *The third, or Wild Madder* with long Leaves. Its Root is fmaller, but red like the former, from whence Spring up divers round jointed Stalks, two or three feet long, and fometimes longer, fomthing Smooth, or at leaji nothing S^ough as the other Wild fort. The Leaves which Hand at the Joints are a little rough, narrower, and longer than the other, feven or eight at a diftance: at the tops of the Stalks, ftand many white Flowers, made of four fmall Leaves a piece, which turn into fmall round Seed like the former.

VI. *The fourth, or Sea Madder.* Its Root is more red on the outfide than within, harder and more Woody than the other • from this Root fpring forth many fquare, hard, and fomthing rough Stalks, round about it, which are full of Joints, and from whence grow many fmall, long Leaves, a little rough, broadest at the bottom, and pointed at the end-, more white in the natural Places, than when Tranfplanted: from among which, (growing lefler at the Tops,) come forth fmall whitifli Flowers Star falhion, like the other, but longer.

VII. *The fifth, or Quinfey Wort, or Quinfey Madder of Dalechampius.* // has a Root which is crooked, blackifh without, yellow underneath the Skin, and white within and Woody, which is about five or fix Inches long, with many hairy firings-: From this Root arife many four fquare Branches, trailing upon the Ground, and fometimes reddifh, towards the Root. The Leaves are fmall and harp pointed, like thofe of *Gallium*, or *Ladies Bed Straw*, and grow along the Stalk on certain

frejh, Spreading feveral ways. From this Root fhoot forth many very long, four fquare, reddifh ftalks, trailing on the ground a great way, very rough or hairy, (which therefore *Vliny* terms *P»ofus prickly) and full of Joints. At every of «eie Joints come forth feveral long and fomewhat narrow Leaves, Handing like a Star, or the Rowel L^AZ about the Stalks, rough alfo and hairy: ...ds the Tops whereof come forth many fmall, ... if L^W *flowers > after which come fmall ... SI Y ... and reddifh a fe ... they are thorou Sh ripe, fo ... arc contained the Seed.

Knees or Joints, four of five together, and sometimes fewer. From these Joints the Stalk divides itself towards the Top into many parts,* on which grow many Flowers-,* each Flower having four Leaves, sometimes white, sometimes of a flesh color, and every Leaf *of the flesh colored Leaves is artificially streaked in the middle, and near the sides with three lines of a deeper red, but of no pleasant smell. After which comes the Seed, something round* growing two together like stones, or as it is seen in Goose Grapes.

VIII. *The sixth^ or Great Bastard or Mountain Madder. The Root is black without^ Fibrous, and abiding all Winter.* From this Root shoot forth a

number of slender and weak Stalks, but yet such as have so much strength in them, as that they need no propping, but will stand upright of themselves, which diversely branch forth themselves into many parts, so that it seems to be a pleasant bushy Plant, well spread, and having many shorter and broader smooth green Leaves set at the Joints, than either the Comfion, or red, or white Flowered Ladies Bed Straw. The Flowers are very small and white, [landing at the tops of the Branches, pretty thick or plentifully, which being past away, turn into small, black, round Seed.

IX. *The Places.* The first is only Manured either in Gardens or Fields in many Countries of Europe for the profit which is made thereof: and is very Common, in most places of England. The second grows in moist Meadows and Moorish grounds, and under Bushes almost every where: it is laid to grow also in Fields and Hedge sides near to Spire, and in many other places of Germany. The third also grows in many places in England^ as at a place called Hod-hill in Dorsetshire, on the side which is next the River, in the Parish of Stompaine, two miles from Blanford, and at Wdrham likewise in the same Shire, on a Mud-wall in the same Town, and at a place called Sommerpil near to a Chapel by the Landing place, coming from Afiferry to Chelwell,

in great abundance. The fourth grows by the Sea side in most places, as also by the Sea side in Provence^ and near Mompclier in France, and in Spain also as Oufius says. The fifth grows in dry chalky Grounds abundantly, being found Wild in many places \$ it has been found in great plenty on the Hill beyond Chat tarn in the way to Canterbury. The sixth is found on divers Hills in Germany and grows in Hedges and among Bushes in many places.

X. *The Times.* The first, second, and third, Flower towards the end of Summer, and the Seed is ripe quickly after \$ but Gerard says, they flourish from May unto the end of August^ and that the Roots of the first are gathered in Autumn by the use of the Dyers, and for Physical purposes. The fourth or Sea Kind, seldom gives ripe Seed in our Climate. The fifth Flowers all the Summer long. The sixth Flowers in May, June, and July, and the Seed is ripe in July and August.

XL *The Qualities.* Madder is Temperate in respect to heat or cold, but is manifestly dry in the end of the first, or beginning of the second Degree: it is Aperitive, and alibi Afringent, and admirably Traumatick or Vulnerary.

XII. *The Preparations.* The first Kind is most in use, and of that the Root, chiefly; and also the Seed: From the Root are prepared, 1. A Decoction in Water or Wine. 2. A Decoction in Aged or Honied Water. 3. A Bath, or Fume, or Fumat ion. 4. A Ponder. 5. An Eclagma or Electuary. 6. A Cataplasm of the Roots and Leaves. 7. A Powder of the Seed. 8. A Decoction in Wine of Siinfey Madder. 9. A Powder and Cataplasm of the same.

The Virtues.

XIII. *The Decoction in Water or Wine.* It opens obstructions of the Viscera, and cleanses the body of tough Flegm and gross Humors ^ it provokes Urine plentifully, as also the Courses in Women, and expels the dead Child and After-birth- * makes the Urine red like Blood, but it is from a Tincture of the Root, like as Rhubarb makes it yellow by virtue of its Tincture: and opens and afringes, as Rhubarb purges and binds: inasmuch that it is said to be good against Ruptures, and to stop the flux of the Whites in Women: It is profitable against the Hemorrhoids or Piles by Fomentation: and taken inwardly to fix or eight ounces, it is said to stop a Diarrhea.

XIV. *The Decoction in Mead or Honied Water.** It opens obstructions of the Gall, Liver and Spleen, and is profitable against the yellow Jaundice, Hypochondriack Melancholy \$ and is good for such as have the Palfie, numbness, and trembling of the Limbs: being also often taken it is effectual for the healing of inward Wounds.

XV. *The Bath^ Fomentation or Fume.* It is used by boiling a great quantity of the Green Herb Stalks, and Roots in Water. Being set in, as hot as it can well be endured, it is good against Palfie, Gout, Sciatica and Rheumatick Pains: It is good Fomentation for Women to fit in, to provoke their Courses, and to cleanse the Woifflie from filth, or any putrid Matter.

XVI. *The Powder of the Root.* Given inwardly to one Dram it stops Fluxes of the Belly. The Gross Powder is often times used in Vulnerary Drinks, for the curing of Wounded Perils, and such as are afflicted with running Sores, old Ulcers, Fiftula's, and the like, and is of excellent

fuch as have had outward or inward Bruifes by falls or blows, or any internal rflux of Blood, which it effe&ually flops.

XVII. *The Eclagma dr EleZtuary.* Take choije Honey clarified twelve Ounces: Madder Roots in very fine Powder fix Ounces: Roch Alum in fine powder three Ounces', mix them and let them Jimvtenover a gentle Fire till the mixture is of a good fetrlet color, which being cold put into a Gally-pot, and hep it clofe covered for life. It quickly cures all Sôres and Ulcers in the Gums, Mouth, Throat or Gullet, and Wind-pipe, and eales the pain and frengthens a weak Back. It may be taken Morning and Night, and feveral times a day, as much as a fmall Cheftnut upon a Knives point, letting it diftil down the Throat very leifurely, and for the pain and weaknefs of the Back, a Spoonful of it may be given at a time in a Glafs of ftrong Ale, Tent, or Alicant.

XVIII. *The Cataplafm of Roots arid Leaves.* Being beaten and applied to any part which is difcolored with Sunburnings, Tanning, Freckles, black and blew Spots, Scurf, Morphey, or any other like deformity of the Skin, it cleanfes it, and cures all thofe defoedations.

XIX. *The Pouder of the Seed.* Taken from half a Dram to a Dram with Vinegar and Honey, it prevails againft the fwelling and hardnefs of the Spleen, opens its obltr&ions, and removes Hypochondriack Melancholly.

XX. *The DecoSion in Wine of Qginfey Madder.* It dries without biting, and is excellent againft the Quinfey, being inwardly taken twice a day to fix or eight Ounces, and outwardly applied, both as a Gargarifm, and a Fomentation.

XXI. *A Pouder and Cataplafm of the fame.* A Cataplafm is to be made of the Root and Herb green, and to be brought to a Conffistency with the Pouder of the Herb or Root, and then it is to be applied to the Neck and Throat of fuch as are affe&ed with a Quinfey, renewing it twice or thrice a day, as often as it grows to be abfolutely cold.

CHAP, CCCCLXII.

Of M A D D E R Small.

t *-JTHE Names. It is called in Greek, **Κάρδαμω**.

JL cfowiuK^V: in Latine, *Rubia minor*, (y *Rubia parva*, and in Englifh, *Small Madder*.

II. *The Kinds.* There are 1. *Rubia fpicata Cretica*, Cluftij, Candia Madder with fpiked Heads. 2. *Rubia minor pratensis c<>ulea*, fmall creeping Madder with purplifh blew Ho wets. 3* *R^m minima Saxatilis*, fmall Rock Madder. There are about five other Kinds of thefe fmall *Field or Wild Madders*, but not beifg Natives or Inhabitants of our Country, and of little ufe in Phyfick, we (hall fay nothing more of them here,

The Defcription.

III. *the pjh or Candia Maddet* tvith fpiked Heads. // has a Root which is fmall, hard, woody; crooked or fcraggled, with many little Strings or Threads, red with out, and white with in, which always perifhes when the Seed is ripe. From this Koot fpring up many knotty four fquare rough little Stalks, about a foot high, divided immediately from the Root into many Branches, having but one fide Branch growing forth at one Joint; about which Joints grow and fpread abroad four or five, and fometimes fix narrow lhort (harp pointed Leaves, fomewhat rough. The tops of the Stalks and Branches are nothing but long, fmall, four fquare fpikes or ears, made of three Leaved green husks* Out of the Top of each husk grows a very ftrial greenifh yellow Flower, having four exceeding fmall Leaves, fcarcely tg be feen: after which follows in each husk, one fmall blackifh Seed, fomething long, round on thf one fide, with a dent or hollownefs on the other.

IV. *The Jecond, dr fmall Creeping Madder* with purplifh blew Flowers. Its Root is fmall and of a reddifh yellow color, abiding all the Winter with green heaves thereon, and tvill ertcreafd plentifully from the Seed it Jheds every Tear. This fmall Plant creeps upoh the Ground, with many fmail, fquare, fsmooth Branches, thuth divided or fpread out into other fmail ones-, full Joints, and at every of them, five or fix fmail, round, and very frefh green Leaves, fsmooth alfo, or but very little rough. From thefe Joints, and roundles of Leaves, as well as from the Tops of the Branches, come feveral fmall Flowefs, made of five, blewifh purple round pointed Leaves, with fome fmall Threads in the middle. The Seed is fmall and long pointed; two tor the* moft part (landing together.

V. *The third, or fmall Rock Madder.* Its Root is fmall and reddifh, as all the other forts are* This fmalleft Madder grows not much above an hand breath high, with a fquare Stalk* fpreading fmall Branches from the Joints-, at which grow feven or eight fmall long pointed Leaves, even the fmalleft and narroweft of any before mentioned, being fomewhat rough alfo. The Flowers are fmall, and of a pale red oi bluffi color, Handing in Tufts or Umbles at the Tops of the Branches.

VI. *The Places.* The firft is a Native of *Can* dia*, but with us grows in Gardens only. The fecond grows plentifully in many places of *Eng- land*. The third grow alfo in many places. of our *Britifh* Continent-, as upon the Chalky Hills neat *Drayton*, over againft the Me of *Wight*: It grows alfo upon *Vincent's* Rocks not far from *Bristol*.

VII. *Nota.* Label fays this laft very fmall Kind has its Leaves of the bignefs of *Rupture-Wort*^ (harp pointed, and growing after the manner of thofe of *Madder*, upon little creeping Stalks, an Inch and half high, on which grows yellowifh fmall Flowers: and that the Root is fmall and of the color of Corall.

VIII. *The Times.* They all Flower in the *Suni* tner* Months, as *May*, *June*, and *July*, and their Seed is ripe foon after.

IX. *The Qualities, Preparations, Virtues* and *Vfes*, of thefe are all the fame with thofe of the *Great Madder*, in the former Chapter, and therefore I refer you thither: but neither any of thefe

Clqqq fmall

final *Madders*, nor yet any of the other five last Kinds in the said foregoing Chapter, are any ways equal or to be compared to those of the *first great Garden Kind*, for which special reason, that is only or chiefly in Use.

C H A P . CCCCLXHI.

Of MAIDEN-HAIR Englitt.

I. ¹THE Names. It is called in *Greek*, X ^AJi^rm ^Anglic ^{urn}: in *hat* in *e* 5 *Capillus Veneris Anglicus*: and in *Engliff*, *Engliff Maiden-Hair*.

II. *The Kinds*. There are four several sorts of it, viz. i. [^]eix^oy^{-Ani} *Grace*: *Tichomanes La tine*, also *Capillaris*, and *Filicula*, as *Gaza* has it: in *Engliff*, *Engliff Maiden-Hair*, and *Common Maiden-Hair** 2. ^AJiavr^w £ < ^{pvh}Mv > *Thalij**, *Politicum aureum majus Bauhini*: and of some, *Adiantum aureum majus*, *muscus Capillaris*, *Polytrichum Apulei Fuchij*, the greater Golden Maiden-Hair. [%] *Polytrichum aureum minus Baubini*, *Adiantum aureum minus*, the lesser Golden Maiden-Hair. 4. *Capillus Veneris Tragl*, *Adiantum album Cordi*, *Saxifraga major Brunfelsij*, £? *Fuchij*; *Rut a muraria Matthioli*, who afterwards took it be *Paronychia Diofeoridis*, *Salvia Vit < z Lobelij & Lugdunenfis* •, in *Engliff*, *Common White Maiden-Hair*, or *Wall-Rue*.

The Descriptions.

lib. 1. c. 5. f. 1. Engliff Maiden-Hair. Its Roots
whence come forth a great many blackish

finishing little Stalks, scarcely a Span in length?, and in many Plants not half so long; on each side set very thick with small round dark green Leaves, and spotted on their backs like *Ceterach*, and other small Ferns.

IV. *The second, or Greater Golden Maiden-Hair**? *h* has a small and 'thready Root, whose Fibres art wonderful fine. It is a kind of Luofs, and ⁴1^s Stalks are not above a handful high, covered with short hairs standing very thick together, of an ^{eb}- (cure yellow green color, out of which Stalks, spring up sometimes very fine naked Sterns sprieewhat black* upon the tops of which hang as it were little Grains like Wheat Corns.

V. *Parkinson* says it has a very small and Thready Root: and that it has a company of small brownish red Hairs to make up the form of Leaves* growing about the Ground from the Root: and in the middle of them in *Summer* time, rise, up small Stalks of the same color, set with very n[^] yellowish green Hairs on them, and bearing a small gold yellow Head, lesser than a Wheat Corn, standing in a great Husk.

VI. *The third, or Lesser Golden Maiden-Hair* of "this there are two Kinds, viz. *the Lesser*, and: *the Leafy*, both of which are very like the former* but that the Stalks grow not to much more than half the height of the greater.

VII. *The fourth, or Common white Maide** *Hair, commonly called Wall Rue, but is generally accounted one of the Capillary Herbs or Mad*¹¹* *Hairs, and that not of the leafy account. It has a Root which is black, fr^o whence spring forth many heaves almost: round# & fiender standing -upon short foot Stalks. It h\$ rising up from among those Ground Leaves & @ pale green Stalks, almost as fine as Hairs, set cQ & fufedly, with divers pale green Leaves, on very short foot Stalks, somewhat near unto the colP* of Garden Rue, and not differing much in fot&i but somewhat more like unto the true *Adiantum* in the next Chapter, being more and more diversly cut in on the edges, and thicker* smooth £ⁿ the upper part, and spotted finely on the under.*

VIII. *The Places*. The first grows «P^o^fi Stone Walls in the West of England, and in ^ \ in Kent, and in several other places of this Lan. • it delights also to grow by Springs and vVek[^] and in Rocky, moist and shadowy places, and Mr-Goodyer said, that in January 1624, he & f enough to lade a Horfe, growing on the Banks ' & a Lane, as he rode between *Rake* and *Headly* # Hampshire, near *Woolmer Forrefi*. It was also found growing in a shady fandy Lane in *Betfonti* in the Parish of *South-fleet* in Kent: as also upon Stone Walls at her Majesty's Palace of *Richmond* The second is seldom found but upon Bogs ai Moorish places, yet sometimes also in shady Ditches, where the Sun does not come: found it in great abundance in a shadowy upon the left hand, near unto a Gate which lea from *Hampstead Heath* towards *Higgate*. The third is found in or near the same places where the second is said to grow. The fourth is found in places of England, ^ at *Dart ford*, and the at *Ashford* in Kent, at *Beckonsfield* in *Bu bam-shire*. \$-2t *Woolly* in *Huntington-shire*: on *lingham* Castle in *Suffolk*: on the Church* V at *May field* in *Suffex*, and on the Rocks *Wefion super Mare* in *Sommerfet-shire*: ^u Walls of the Church-yard at *Sittingburn* in the middle of the Town near a Lake of and upon the Church Walls of *Raify* in *Ej* other places.

Y&the Times. : Thefe Plants are always green both Summer and Winter, but have neither Flowers,

nor Fruits.

X. *The Qualities.* All thefe feveral forts of *Maiden-Hair* are temperate in refpect to heat or cold, but dry in the firft Degree. They are Aperitive, and Diuretick, Pectoral, Hepatick, Nephriticke, and Aiexipharmick.

Yd: The Preparations. They are altnoft equally in Ufe[^] but if there is any difference, the firft and fourth are mod in Vogue. And from any of them, pr all of them, you may have 1. A *DecoRion in Wine or Water.* 2. A *Infufwn or Tintfure in Whe.* 3. A *Pouder of the Herbs.*

'the Virtues.

XII. *The Vecotliph in Water or Wine.* It is very effectual againft Coughs, Colds, Catarrhs, and other Diftempers of the Brct and Lungs, caufing an eafy expe&oration •, it opens the obftructions of the Liver, Spleen and Reins, and is available to break the Stone, epecially in the Reins, expel Sand, Gravel, and other Tartarous Matters, to provoke Urine, and give eafe in the Srangury. It is alfo of good ufe *pi* fuch as are troubled with the Spleen, or affected with the Falling-ficknefs. The Head wafhed therewith, it ftrengthens "the Roots of the Hair, ftays it from fhedding or filing, and caufes it to grow thick where it is thin.

XIII. *The Infufwn or TinSure in Wine.* It has all the former Virtues, but much more pleafant to Jge, taken, for it has lefs of the Styptick, Terrene <>*i* Earthy parts, than the Deco&ion, the which are extra&ed by boiling 5 and more of the fine, fubtil, and volatile parts, moft of which in the former are loft, but in this retained, becaufe not tortured with the violence of the Fire. Dofe from 4 to 6 Ounces, Morning, Noon, and Night, as the Phyfician, fhall think fit, of the former alfo, as well as of this. But this is to be noted, That they may be both fweetned with Clarified Honey, which alfo contributes to the fame ends.

XIV. *The Pouder.* It has all the Virtues of the Deco&ion, or Infufion or Tin&ure: and being mixed with Clarified Honey and made into an Ele&uary, it caufes Expe&oration, and is a fingular Experiment againft the Afhma, or (hortnefs of Breath, and difficulty of Breathing, as alfo againft all Tartarous Mucilage in the Urinary parts, y Stone and Gravel, Ulcers in the Reins and the 4|ke. The Pouder may be given from half a Dram to a Dram, in Wine or other Vehicle, but feems to me to be beft made up into an Ele&uary With Clarified Honey, and fo taken. Thefe *Maiden-Hairs* treated of in this Chapter have been found by Experience, to be of the fame Nature, ^Qualities and Virtues, and to have as good Effects, i% the Tw *Maiden-Hair*, of Which we (hail Jtreat in the next Chapter, and becaufe eafiet to be come by, the oftener made ufe cfc

C H A P . CCCCLXIV.

Of MAIDEN - HAIR True.

1. *rHE Names.* It is called in *Greek* ^

X *'AA'avrov* (becaufe the Rain refts not on it, but flides off) and *Tov\Nreix^{ov}* *Diofcoridis*, *quafi multicomum, quod Capillos multos & denfos faciat* -; iff *KcLKvTax^{ov}* *Apuleij*, *quafi Pulcbncom'um, quod Capillos tingit pulcbr'iorefque reddit* : in *Latine*, *Adiantum* ^ *Polytrichum*, *Callitricbum*, *Capillus Veneris*, (*4/pecioJis*, *reddendis Capi/liſ-J* *Capillus Terra-*, *Supefcilium Terra*, (*ff Cfinita-;* and in *Engliſh*, *Maiden-Hair*.

II *The Kinds.* The *True Maiden-Hair* is but twofold, viz. 1. *Adiantum minus* (which is *verus*) *Capillus Veneris* *verus*, The *True Maiden-Hair*. 2. *Adiantum majus* (v#ich is alfo a kind of the *Verus* ^ and grows only larger according to the Region it grows in) *Adiantum Syriacum*, *Capillus Veneris Syriacus*, the *True Syrian Maiden-Hair*. To thefe we may add, 3. *Adiantum nigrum Vulgare* ^ *Onopteris nigra Qodonai* ^ *Adiantum pulcbrum Lugdunenfi fimiUThalij*, Common black *Maiden-Hair*. 4. *Adiantum alburn Plinij*; *Adiantum fillicis folio Baubini* ^ *Axx7*U XE^v*, *Dry opt er is alba* ^ *l)ryopteris Candida Dodonai*, of which we have already written in *Chap. 260. Setf. 4. and 9.* aforegoing. 5. *Adiantum Vruticofum Americatum*. The *American Maiden-Hair*.

The Defcriptions,

III. *The Brjl or True Maiden-Hair, has a Root which conjifts of a number of blackijb brown Fibres^ or Threads \$ from whence Springs up a final! low Herb, not above a Span high, whofe Stalks arc Qlqqq 2 fmalter,*

smaller, finer, redder, and more shining than those *Trichomanes*, or our Common English Maiden-Hair on which are placed delicate fine Leaves on both sides, without order, one above another, somewhat like unto the lower Leaves of *Coriander* or like the Leaves of *Anise*, but larger, cut in unequally on the edges, and spotted on the back with very final brown Marks scarce to be discerned.

IV. *The fecrid, or True Syrian Maiden-Hair.* Its Root is tough, and thready like the *Irji*, and the whole is an humble or low Plant, having Leaves

The Syrian MAIDEN-HAIR.

flat, smooth, and plain, set upon a blackish middle rib, like unto that of the other true Maiden-Hair, cut or notched on the edges, Nature keeping no certain form, but making one Leaf of this fashion, and another of another, far different from it. But yet in the main, this *Syriacum* is but one and the same Herb and Species with the former, though somewhat larger, which is from the Country, and nature of the Soil, for which reason, *Lobe I* calls it, *Capillus Veneris*.

V. *The Third, or Common black Maiden-Hair,* This differs little or nothing from the *Dryopteris Candia Dodonari*, which is the fourth Species next following, as is declared in the Kinds, and of which we have already written in the place aforesaid*, but that the Stales of this are blacker, and the Leaves of a fadder green, whereas that is greener and paler, so that that aforesaid to come in the fourth place here, may very well be accounted a Species of this: There are many Stalks of winged Leaves, not much higher than the aforesaid, scarcely exceeding 6, or 7 Inches in height, but the Leaves on the

VI. *The fifth, or American Maiden-Hair.* It has a fibrous Root, and grows up like unto a Fern, with allender blackish brown Stalky branched forth into others about which on each side, stand from 12 to 20 fresh green Leaves, small and fottiewhat long, joined together by small foot Stalks, somewhat like unto the first true Maiden-Hair, but cut in on the but side at the tops of the Leaves only, and not at the bottom.

VII. *The Places.* All these sorts grow on Stone Walls, and by the sides of Rocks, or Gravelly Springs, and other shady and moist places. The first plentifully, as *Pena* and *Lobel* %o, about *Mompelie* in *Narbone* in *France*, as also in some parts of *Gloucestershire*, and in divers parts of the West of *England*. The second grows in *Syria*, and is not to be found with us unless in Gardens. The third in many Barren, Rocky, and Unfilled places, especially where Springs are near. The fourth upon Oaks and among Oak Mols. The fifth in *Virginia*, *Carolina*, *New-York*, *Mary-land*, *Pennsylvania*, and other parts of *Florida*.

VIII. *The Times.* They all abide green through the whole year but have not any of them, either Flower or Seed.

IX. *The Qualities.* Maiden-Hair is temperate in respect of Heat or Cold, and dry in the first Degree, Aperitive, Diuretick, Traumatick, Femoral, Splenetick, and Nephritick.

X. *The Specification.* It opens Obstructions of the Lungs, Liver and Spleen, prevails against Ulcers of the Lungs, Coughs and Asthma's, and cures the Rickets in Children.

XI. *The Preparations.* The Preparations are much the same with those in the former Chapter, viz. 1. A simple Decoction in Water or Wine. 2. A Compound Decoction. 3. A Powder. 4. A Tincture in Wine. 5. A lye.

Its Virtues.

XII. *The simple Decoction in Wine and Water.* It prevails against the Cough, shortness of Breath, difficulty of breathing, the yellow Jaundice and diseases of the Spleen: it is said to break the Stone, open obstructions of the Reins and Ureters, and provoke Urine: it provokes the Terms in Women, rectifies the Blood, and cleanses the Lungs of Tartarous and putrid matter, by Expectoratation. Dose four Ounces four or five times a day.

XIII. *The Compound Decoction.* Take Maiden Hair 12 Handfuls; Ceterach, or Spleen-wort, Liver-wort, Ofmond Royal, of each 4 Handfuls; Liquorice bruised 2 Ounces, Fennel Seeds bruised 1 Ounce, Raisins of the Sun Stoned[^] blew Currants, of each half a Pound, blew Figs 4 Ounces, Spring Water 3 Quart; mix and Boil, then strain it and keep it for Use, Let it be taken in the Morning falling, an hour before Dinner; at 5; in the Afternoon, and at Bed-time; always squeezing into it, at the time of taking it the Juice of an Orange, or some of the Juice of a Limon. It not only opens Obstructions of Lungs, Liver, Spleen Reins and Womb, having all the Virtues of the simple Decoction, but cleanses the Lungs of Ulcerated or putrid Matter, heals Ulcers of the Lungs, and cures the Rickets in Children. It provokes Urine, gives ease in the Strangury, prevails against inveterate Asthma's * and being long taken, profligates the Gout and Rheumatick pains to a M

Dofe four Ounces or more at a time, as often as before dire&ecl

XIV, *The Powder of the Herb.* Being taken a Dram at a time in Red *Barcelona* Wine, or other like Styptick Wine, Morning and Night for 40 or 50 days together, it is laid to cure Ruptures. It is profitable against the Bitings of Vipers or other Serpents and Venomous Creaturqs, and has indeed all the Virtues of the Deco&ion and TinSture^ but for the other Difeafes, it is belt to be made up into an Ele&uary with twice or thrice its weight of Clarified Honey, and the Eleftuary to be given from 2 to 4 Drams.

XV, *The Lye.* It is made of the Affes by Hixivation in fair Water. It is fingukr good to cleanfethe Head of Scurff, Morpew, Dandriff, an& to heal a Scald Head, whether it be a dry or running Sore : It ftays the falling of the Hair, and is laid to make it grow thick, fair, and well colored, for which purpofe fome make the Lixivium in Wine, and others ufe the Deco&iftn of the Herb in Wine. And fome boil the Alhcs in Oil, and anoint therewith to cure Baldnefs, Scurff, Dandriff, Scald-Heads, ©V.

green, roundilli Leaves, yet fomwhat cornered and dented about the edges, Handing upon long foot Stalks next the Ground; from among which rife up feveral round, green Stalks, growing in time to be 5 or 4 feet high, efpecially when growing in good Soil, and to be more hard and almolt Woody, efpecially at the bottom* divided into many Branches, towards the tops, and with many letter Leaves, and more divided upwards ^ where it brings forth many Flowers, Handing in foft husks-, which Flowers twine themfelves, at their firft (hooting forth, before they open themfelves into five, large, broad pointed Leaves of a fine delayed purplifti red color, with many ftripes or Veins running through every Leaf, of a deeper color, which makes the Flower feem very beautiful: after which come round flat Cakes, with many blackifh Seeds fet in order round about them.

Common Purpliffi MALLOW.

CHAP - CCCCLXV-

Of MALLOW Common.

I. *T*/Ms' Names. It is called in Arabick, X *Chubeze* and *Chubes*^ and the Seed thereof *Bizeri Chubeir*: in Greeks M*A**W, *b emoliendo Ventre*^ but in the Coppies of *Epicbames* and *Antiphanes* it is written *MOXIK* in Latine, *Malva*, qua ft *Molva*^ quod ahum *Molliat*: in English^ *Mallow*.

II. *The Kinds.* There are feveral principal forts of *Mallows*^ as 1. *The Common Kind*, of which in this Chapter. 2. *The Marfy Mallow*, of which in the next Chapter. 3. *The Vervun Mallow*, of Which in Chapter 467. 4. *The Tree or Shrub mallow* or *'Marjh Mallow*, of which in Chapter 468 following.

• III. *The Kinds of the Common Mallow.* Of this there are thefe Species following. 1. *Malva vulgaris Flore purpureo*, The Common Mallow with purpliff Flowers. 2. *Malva vulgaris Flore nlbo*, The Common Mallow with white Flowers. ?• *Malva Sylvejiris minor Malva Syfveftris repens pumila*, The Small, or Dwarf Wild Mallow: 4. *Malva Montana*, The Mountain Mallow. \$. *Malva Uifpanica Flore carneo ampK* The Spaniff Bluff Mallow.

The Defcriptions.

IV. *The firft, or Common purpliff Mallow, h has a Root which is long and white, tough and fome what Woody, and running deep into the Ground.* **om this Root fpring forth many large, foft,

V. *The fecond^ or Common white Mallow. The Roots of this are like to thofe of the former : and in its Springing up, Stalks, Leaves, Flowers and Seeds, height, and majner of growing, it is fo like to the firft that it cannot be difcerned from it, till it is in Flower, in which confits the whole difference: Thefe Flowers being not foil out fo large as they, and of a pure white color, without any ftripe or Vein of any other color running through them.*

VI. *The thirds or Small, or Dwarf Wild Mallow. The Roots are like thofe of the two former i fo dlfo its Stalks, Branches, Leaves, Flowers^ and Seeds: faving that this Kind lies with its Branches more upon the Ground, and that it has many fmaller and rounder Leaves, not fo much cut in, or very feldom, and lefs dented on the Edges than the firft Common^ the Flowers are alfo fmaller and more white, otherwife it is in all refpe&s like the Vulgar Mallow,*

VII. *The fourth, or Mountain Mallow. The Root is like to that of the Common Mallow:* Its lower Leaves are as large as those of the first or Common Kind, but a little longer, with some round divisions or cuts in them, but not deep, and not much unlike in shape to an Ivy Leaf: the Stalk grows not so great and high as the first Common, and with something smaller Leaves thereon, and upwards they are somewhat rounder and lesser: the Flowers and Seed are wholly like to those of the first.

VIII. *The fifth, or Spanish Bluff Mallow. It has a Root which is small and long, and perishes every Year:* This Spanish Mallow, is in form and manner of Growing, very like unto our first or Common Field Mallow, having upright Stalks two or three feet high, spread into divers Branches; and from the bottom to the Top, beset with round Leaves, like unto our Mallows, but somewhat smaller and rounder, and less divided, yet larger below than above: the Flowers plentifully grow upon the small Branches, folding or writhing their Leaves, one above another, before they be blown, and being open consist of five Leaves, with a forked Clapper therein, of the same color with the Flower: the chief difference from the first Common Kind, consist in this, that the Leaves of these Flowers are larger and more wide, open at the brims (almost like a Bell Flower) and of a fair bluish or light Carnation color, opening all the day time, and closing at night. After the Flowers are past, there come such like round heads, with small black Seed like to those of the first Common Kind, but something smaller.

IX. *The sixth, or Curled Mallow, or French Crisped Mallow. It has a Root like to the first Common Kinds, which perishes when it has perfected its seed.* This Crisped or Curled Mallow, (which

is called by the common People *trench Mallow*, tho' it grows as frequently and naturally in *England* in our *Gardenis*) has many small upright Stalks growing a foot and a half or two feet high, and sometimes higher, as I have seen it, which is according to the goodness of the Soil ^ on these Stalks and Branches do grow broad Leaves somewhat round and smooth, of a light green color ^ which are Crumpled or Curled about the Edges, and also into the substance of the Leaf like a Ruff, very admirable and pleasant to behold. The Flowers are small and Mite, much like the former Kinds.

X. *This Kind Parkinson thus describes. The Root usually abides the first year, and the second year it runs up to flower and Seed^ but soon after the Seed is perfected it perishes^ from this K^ot* (shoots up an upright green round Stalk, as high sometimes as a Man-, on which from all sides grow forth round whitish green Leaves, Curled or Crumpled about the Edges like a Ruff, else very like to our first or Common great Mallow Leaf. The Flowers grow both upon the Stalk, and on the other Branches, which spring from it, being small and white, after which come small Cafes, with black Seed like the other Mallows. This Kind is much used as a Pot-herb, especially when these is cause to move the Belly downwards, which by its flippery quality it helps forward, it has formerly, and is at this time in some places, used to be boiled or stewed, either by it self, or with Butter, or with Spinage, or other Herbs, and so eaten.

XI. *The seventh, or Summer Mallow (called Malva trimestris, & Malva tffiva.) It has a small Root which perishes with the first Cold or Frost which comes, but sometimes if the Summer is kindly, it gives its ripe Seed before the coming of h'roijy Nights.* It has soft, round, green Leaves, without divisions, yet dented about the Edges, and something pale underneath. The Stalk rises up to be about a Foot and a half high, and sometimes higher, bearing smaller Leaves, and a little divided, somewhat like unto those of Marsh Mallow^: The Flowers are of a paler purplish color* than the Common and Lesser, the bottom of the Leaves are of a deeper color, standing upon foot Stalks, and not so many together, after comes small Seed.

XII. *The Places.* The three first grow commonly by Ways, and Hedges, and Ditches in Fields, and unfilled places, almost every where thro' the whole Land*, but the second Kind with white Flowers is not so plentiful -, it has been found at *Ashford* in *Kent*, and at *Thrapton* in *Northamptonshire*, and in several other places. The fourth is found on Hills and Mountainous Grounds. The fifth, and seventh are Natives of *Spain*, from whence they have been brought to us and are nourished up in our *Gardens*. The sixth grows plentifully both in *England* and *Prance*, in *Gardenis*, for it grows not Wild, that ever I heard of.

XIII. *The Times.* They all Flower all the Summer Months, from *May*, even to *August*, or later, till the Coldness of the Weather nips them-, and the Seed comes to ripeness in the mean time.

XIV. *The Qualities.* These Plants are all temperate in respect of Heat and Cold* and moist & the first Degree. They are Deobstruive, Emollient and Traumatick; Peroral, Nephritick and Hyfterick.

XV. *The Specification.* They expel Tartarous Mucilage out of the Breest and Lungs, as also Iron the Guts, Reins, and Womb: are profitable again

the Bloody Flux-, and prevails againii the Stone and Gravel, whether in the Reins; Ureters or Bladder.

XVI. *The preparations.* You ttay prepare therefrom 1. A *Liquid or Infpijiaie Juice.* 2. A *Ejence.* 3. A *Decoffio'n in Water or Wine.* 4. A *Syrup.* 5. A *Pouder.* 6. An *Ointment or half am.* 7. A *Cataplafm.* 3. A *Diftilled Water.* And all thefe Preparations may be made either of the Leaves or Roots alone, or of both together.

The Virtues

XVII. *The Liquid or Infpijiate juice.* The firft taken to 3 or 4 Ounces, or the latter to half an Ounce diffolved in Barly Water, opens the Body, and caues an Evacuation of Hot, Choleric, and other offensive Humours * eafes the Pains and Torments which come by Obftructions of the Bowels and Confipation of the Belly-; and therefore is good*to be ufed in Clyfters conducing to thofe purpofes: Taken by Nurfes which give Suck to Children, it increafes their Milk^ and helps to exporate pituitous and tough Humours from the Breft and Lungs, heals exoriationsof the Stomach and Guts, prevails againft the Phthifick, the Pleutifie and other like Difeafes. Given in Wine, it caufes fpeedy and eafy delivery to Women in Travel, is profitable againft the Bloody Flux, as alfo other Fluxes of the Bowels.

XVIII. *The Efience.* It has all the Virtues of the *Liquid or Infpijiate juices*, and being take to an Ounce or two in a Glafs of Generous Wine, it is profitable againft inward Convulfions of the Stomach, and Tortions of the Guts. It is alfo profitable againft Poifon, fo as the Poifon be prefently voided by a Vomit. Bathed upon the affected parts, it is good againft Scurffs, Morpew, foandriff, or dry Scabs, whether in the Head or other places, and is profitable againft Scalding with Water, q\$ Burning by fire, and to help an Eryfipelas or *Anthonies Fire*, and to difcuffs all other hot, red and painful Swellings in any part of the Body.

XIX. *The Decoftion in Wine or Water.* It has the Virtues of the *Juice andEjfe/ice*, but not full out io powerful *, but prevalent againft moft external Defbedations. The Feet being Bathed therewith, it helps much againft Defluxions of Rheum from the Head, rifing from the Stomach, and if the Head is wafted therewith, it prevents the fhedding or falling of the Hair: if a little Honey and Roch Alum be diffolved in it, it makes an excellent gargle for any fore Mouth or Throat, fo it cleanles and heals them in a very floirt time.

XX. *The Syrup.* It may be made of the *Juice, Ejence* or *Idecotton*, with Honey. It is effe&ual againft all the Difeafes before Specified, but is an admirable Pectoral and Nephritick. It loofens the Belly gently, and is effedual in Clyfters for to eafe all pains of the Bowels, opening the obftruted paffages and making them flippcy: given inwardly by the Mouth, it caufes Expectoration, and helps moft Difeafes of the Breft and Lungs, as Coughs, Colds, Hoarfnefs, Wheezing, ftionnefs of Breathy difficulty of Breathing; It is profitable alfo againft Excoriation of the Guts, Bloody Fluxes, and other Fluxes of the Bowels, by qualifying the fharpnefs and acrimony of the Choleric Humour: and by its Mucilaginous property, it eafes the Pains and heals the Ukera-

tion or Sorenefs* It may be given from an Ounce to 3 Ounces, in Parity Water, againft the Scone, Gravel, Sand, and other Tartarous Matter in the Reins, Ureters and Bladder, it eafes the Pijn and caufes fmall Scones and Gravel the more eafily to defcend and to be expelled, for which thing it is a molt celebrated Remedy. But tho' for all thefe purpofes *Commffn Mallow* may be ufed, yet we generally take the *Marjh Mallow* firft defcribed in the next Chapter, which is the chiefest *Mallow* of all others, and is called *Bifmalva*, for that it is twice as powerful in its effects as the others, and you may make ufe either of the Leaves or Roots, or of both.

XXI. *The Pouder.* It may be made either of the Leaves or Roots, or of both, and that either of the *Common Mallow*, or of the *Althaea* or *Marjh Mallow*. Given to a Dram, more or lefs, it hjs the Virtues of the former Preparations, and is peculiarly good againft the Strangury. It is good to be given to fuch as are troubled with Ruptures, given in red *Barce Ionia* Wine, or other Styptick Wine^ and is profitable againft Scrophulous or Strumous Tumors in the Neck and Throat called the Evil; it difcuffes Swellings in Womens Brefts: and being given with Milk and Honey, it is fpecial good againft the Chin-Cough: and given in a ftrong bodied Wine, induces the healing of Wounds and Ulcers, and reftores fuch as are ready to faid thro' the lofs of Blood, or are otherwife hurt by falls of blows, or Stripes, or have any Ach, Pain, or Swelling in the Nerves, Tendons or Mufcles- in any part of the Body. Applied to green Wounds it prefently conglutinates and heals them.

XXII. *The Ointment or BdJam.* If made of the Mucilage, chiefly of the Roots, and rather of the *Althxa*, than of any other, it rakes away the roughnefs of the Skin, difcuffes Inflammations* and firenghens Frafrures* and Diflocations* mollifies and digefts hard Tumors, or fuch as will Apoitemate-, digefts and cleanfes putrid Wounds and Eating Ulcers, making them fit for a Cure.

XXIII. *The Cataplafm.* Made of the green Herb and Root it is good againft hardnefs and fhinking of the Sinews: laid to the Eyes with a little Honey, difcuffes their Inflammations, and if apoftemated, prevents the coming of a Fiftuia. The *Cataplafm* made of the bruied Leaves applied to the Stinging of Bees, Wafps, Hornets, yea of the Scorpion, and the biting of that poifonous Spider the *Phalangium*^ is faid preiently to take away the Pain, rednefs and Swelling arifing thereupon, and keeps them from putrifaction. If it is made of the Leaves boiled and beaten, with Bean or Barly Flower, and Oil of Rofes, it is an elpecial remedy againft Inflammations, and hard Tumors, Apoftems, and Wellings of the Tefticles and other parts, and eafes their Pain, as alfo the pain and hardnefs of the Liver and Spleen, being put upon the place grieved. The *Cataplafm* made of the green Leaves beaten up with *Nitre*, and applied, draws Splinters, and Thorns out of the Flefh. If made of the mucilage of the Roots wjth the flower or pouders of *Lin-Seed* and *Fenugreek-Seed* and applied, it gives eafe to pains in any part of the Body.

XXIV. *The diftilled Water.* This being made when the Plant is in Flower, is good for all thofe Difeafes the *juice, Ejence*, or *DecoStion* are applied to, but a&s more weakly, yet it is much commended to be ufed in Burning Fevers, and the hot tits of Agues.

XXV. *The Vlowers of Mallows:* A *Decodion* of them in water fveetned with Honey, and in which 3 little Alum is diffolved, is good againft Rheum

Rheum in the Eyes, and Inttamations of thofe parts, asalfo makes a good Gargle for fore Mouths and Throats, cleanfing and healing them in a very little tūne.

XXVII. *The Seed* If green it is bruifed, and Infufed in Vinegar, or being dry, it is made into Pouder, and fo Infufed, it will cleanfe the Skin from Freckles, Tanning, Sunburning, Sew ff, Morphew, and all other defilements thereof, being well bathed therewith. And being made into Pouder (more efpecially the Seed of the *Altbāa* or *Marfh Mallow*) and given to a Dram, or a Dram and halt at a time, it gives eafe in the Stone, Gravel and Strangury, and provokes Urir.e, and this more efpecially if it be feveral times repeated * where note, that it is bell to be given in *Parfley*, or *Arfmart*, or *Onion Water*, or fome other proper Diuretick.

C H A P . . GCCCLXVL

Of M A L L O W Marfli.

I. *THE Names.* It is called in *Arabick*^ *Chitini*, *Chateni*, and *Rofa Zameni*, and by *Serapio*, in one place *Alfam*: in *Greeks* 'AA^I*, *Althāia*, & *'Kin*&, *Ibifcus*^ *'K*™@-, *Hibifcus*^ & *.EC*™@, *Ebi/cus*: in *Latine*, *Althaa*, *Malva Marina*, *Ariflalthaa* (from the excellency of its effc&s:) of fome *Olus Judaicum*, the *Jews Pot-Herb*: and by fome Authors, *Bifmalva*, and *Malva-vijeus* (as it were from *Malva* and *Ibifcus*;) in *Englifc* *Marfh-Mallow*.

II. *The Kinds.* Authors make many forts of this Plant: but we (hall defcribe only thefe five varieties following, viz. 1. *Alw&a vulgaris*^ *Bifmalva* *, *Malva Paluftris Cordi* *, *Malvx agreftk* genus *Gefneri*: *Malvavifcus Angular*<e ^ *Alth*a Ibifcus Lobelij*^ Our *Common Marjh Mallow*, 2. *Althaa palujiris Cytini ilore*^ *Water Mallow*. 3. *Althaa femper virens Bryoniac folio*, *Althaafrutefcens Bryom* folio Bauhini*, *Evergreen Marfh Mallow*. 4. *Altbāa lutea*, *Althxa floribus luteis Lobelij*; *AlthxaVereginaGefneris inhortis*^ *Althba Theophracij* -, *Altbāa floribus luteis palujbis Pen**, *yellow Marfh Mallow*. 5- *Altbāa rofea peregrina, vel Americana*, *Rofe Marfh Mallow of America*.

The Defcriptions.

III. *The Jirfl* , or *Common Marfh-Mallow* 5 *U has a Root which is long, Spreading it felf into manifold parts from one Head, of the bignefs of a Thumb or finger, very pliant, tough and bending like Liquorice, of a whitijh yellow color en the out fide, and more white within, full of a vifcous or flimy Juice, which being laid in Water, mil f_ thicken it, Bs if it were Gelly.* *F*^m e^hls ^_oot *p^rins f_orth feveral foft hoary white Stalks, rifing to be three or four Foot high, ipreading forth many Branches, the Leaves of which are lott and hoary or woolly, fomewhat lefler than

thofe of the *Common Mallow*, but longer pointed cut for the moft part into fome few Divifions, but not deep, the Flowers are many, but fmaller than thofe of the *Vulgar Mallow*, and white, or tending to a blufh color^ after which coifie fuch like round cafes and Seed, as in the *Mallow* firft defcribed.

IV. *The second, or Water Mallow; (or Marsh Mallow red Flowered.) It has a Root tokch u long, white, and tough, foment like nothing Jo great or muahginous. Horn which come forth many Toft Leaves, fomewhat like unto thofe juft before defcribed, but not io foft or whitilth, but of a pale green color on the upper fide, and wiser underneath, longer ahó, and dented fomething deeper about the edges, fending upon long Foot Stalks; among which rife up divers rould green Stalks, 3 or 4 feet high, faring the like Leaves on them, at feveral diftances: From the Joints of the Leaves, towards the tops ot the Stalks and at the tops of them likewise come forth the Flowers, confiftbg of five Leaves longer and narrower than in other Mallow* no! broad but tendin' o an Orange, and fometimes paler of mór dilufed, and in ibme Plants of a white colTM with divers threads ftanding in the middle, about a fmall green head, which in time becomes the Seed Veffel, or round Bladder, in fhape like the Fruit or Seed Veffel of round Anjhlochia, or Birth-wort, of a fad brownifh color, in which is contained' (in rive divifions) fmall blackifh or brownifh Seed.*

V. *The third, or Evergreen Marsh Mallow. Its Roots are difperfed into Jcveral parts under Ground, and die not, but retainfme of the Leaves upon them all the Winter, altho the Stalks die and perijh away. This Evergreen Alth* a\as many fair large, whinlh green Leaves, fomewhat thick, full of Veins, and rough or hairy, but whitioi or hoary underneath, cut in or divided ufually into five parts fornewnat like to a Bryonie Leaf! The Stalks are hoary, white, and round, rifing to be two or three Feet high, having fuch like large Leaves upon them, and fmaller alfo among them, ftanding all of them upon long Foot Stalks. The Howers are like unto thofe of the Mallows, and much about the fame color, confifting of five broad pointed Leaves having many red threads in the middle: after X 3 f com/flat Leav'd Heads r fuc! as other Maipws have, wherein is contained fuch like finall*

VI. *The fourth, or Yellow Marsh-Mallow. Its Root is not great or long, but with divers Fibres at it, and perijhes every year. This Althaa rifes up with one foft, woolly, green, round Stalk for the moft part, feldom with more, divided oftentimes even from the bottom into divers Branches. At every Joint itand feveral large round Leaves, as foft as Velvet, pointed at the Ends, and dented about the Edges, hanging down at the end of long Stalks which ftand forth right. The Flowers ftand figly but one at a Joint with the Leaf, which is imall and yellow, compofed of five fmall pointed Leaves, ftanding in a fmall green Husk -, which being paf, there fucced foft green Pods or Seed Veffels, turning black when they a:e ripe, compofed of many fmall Hopas or Pods let together, Hke unto an Head, or Seed Veffel of Fraxinella, in every one of which is contained fmall, black, roundifh Seed**

VII. *The fifth, or Rofe Marsh-Mallow of America. It has a Root which is thick, white, and feijhy, which abides fafe in the Earth all the Winter, tho the Stalks die away, and perijh every year. This Plant (hoots forth about May, feveral round greenifh, foft, branched Stalks like to the firft Althaa or Marsh-Mallow, befet with feveral foft green Leaves, which are grey underneath, refembling the foft Althaa but longer pointed; at the tops of the Stalks and Branches ftand feveral white Flowers* made of five large*

Leaves apiece, fomewhat like a Uollihock, with a tuft of white threads, compaffing a middle Umbone or Pointei, iffuing out of a great Button of Husk, which is as it were Ribbed, and broad at the bottom, narrowing to the top, before the Flower blows, and without any fmell.

VIII. *The Places. The firft-grows in moft of the Salt Marihes from Woolwich down to the Sea, both on the Kentijh, and Effex Shore, and may be found near Woolwich, Erith, Green-bitbj Grave/end, Tilbury^ Lee, Colchefter, Harwich, and in moft f^arthes about London: being Planted in Gardens, it profpers well, and continues long. The fecond Camerarius fays, he found in Italy, and in abundance, about the River Amefis hard by Avguilara, where men pafs over that River, and in the moift and Marfhly places of Ferraria between Padua in Italy and the River Eridanas. The third is not known in what place it is a Native. The fourth, its Seed is brought to us from Italy and Spain, v^re it grows in wet Grounds near lakes, Rivers, ^Tnd Ponds ^ we yearly Sow it in our Gardens, the which does feldom or never bring forth Seed to ripenefs, for which caufe fake, we are forced to have frefh Seed from the afore named places. The fifth was brough (as Cornutus fays) out of Africa^ but now, this, as all the other four Kinds, are Nurft up with us in Gardens.*

IX. *The Times. They all Flower in the Summer Months, from May to the end of Auguft^ and the Seed ripens in the mean Seafon^ faving that the yellow and red Flowered, do Flower in the latter end of Summer, but fo, that if the Seafon is not fair and warm, they never yield ripe Seed.*

X. *Tfo Qualities, Specification, Preparations, Virtues, and Ufes of thefe, are the lame with thofe of the Common Mallow in the laft Chap* ter, faving that the firft Althaa, or Common Marsh-Mallow in this Chapter, is of more than double Virtue to any of them, or any other in this or in the following Chapters ^ and therefore ought to be chofen, and have the preference before them all, for all the purpofes and ufes before expreffed, and to which they are intended.*

C H A P . CCCCLXVII.

Of M A J L L O W Vervain.

The Names. It is called in Græks *ab *:*:*» fobur, pmjidium, quaji cteris robulior & efficacior firet*, as Lobel fays: in Latine, *Alcea*, and by fome *Mulva Salvatica*: in Englifh, *Vervain Mallow*.

II. *The Kinds. Authors make many Kinds of this Plant, as I. Alcea Vulgar is, Malva. Verbena-ca, Alcea major, Herba Ungarica Angmlart, Out Common Vervain Mallow. 2. Alcea Vulgans Bore Corneo, Common Vervain Malilow with blufti Flowers. 9. Alcea Vulgar PI Flore albo, Common Vervain Mallow with white Flowers. 4. Alcei minor Matthioli, Tragi, C ahorum, fmall Vervain & rr 1 Mallow*

Mallow⁷. J. Alee a minor, Alee a VUlofa Da/eebaw-pij C? Lugdunenjis-, (hrAl hairy rough Vervain Mallow. 6. Alee a Vcfearia, Alee a Peregrin a , Aleea Veneta, Venice Vervain Mallow, Venice Mallow, and good Night at Noon. 7. Aleea pentaphyllea, Aleea fruticosa Cannabina, Aleea fruticosa pentaphyllea, Aleea Lamabini folio, & pentaphylli folio, Cinkfoii or Hemp like Vervain Mallow. 8. Aleea Americana, Sabdariffa or fabdanfa, American Vervain Mallow, or Thorney Mallow.

The Descripiousi

III. *The firft, or Common Vervain Mallow: It has a Root whieb is long, tough, and vobitd, but fomewbat more Woody within.* The lower Leases of this Plant are loft and green, fomething like to the Wild Common Mallozf^{eaves}., but Lefier, and mote cut in on the Edges, besides the denting: but thofe which grow up higher upon the Stalk, fwhofe Bark may be broken into herds or threads like Hemp, and fometimes as high as; the ordinary Wild Kind is) are more cut in and divided, fomthing like unto Vervain \ The Flowers are of a paler purple color than thofe of the Common Mallow*, but in mofit, not fo much divided into feveral Leaves, and laid fo open, but abiding more dole, or lefs fspread, and oftentimes without thofe Stripes, being fsmooth and a little fhining•, the Seed and Seed Veffels, are like thofe of the Common Mallow.

IV. *The fecond, or Common Vervain Mallow with blufh Flowers. Its Root is much like, and lives as the Root of the Common Mallow does.* This has long Stalks, and Flowers like unto the Common Wild Kind, and of the fame deep color \$ fo that

you can fcarcelly know it frofi that ordinary Kind, (and is found growing Wild together with it,) but only by the Leaf, which is as round and as large as the forme, but cut into many fine Divifions, even to the Stalk which upholds it •, fo that it feems to coiifit only of Rags, or pieces of Leaves, there is alfo another Plant of this Kind growing in all xepfefts, like to this jutt now defcribed, fnt differing only in the color of the Flowers, which are of the fame bluih or light Carnation color, not much differing, but with fome Veins therein, of a deeper color.

V. *Tbetbihb, or Common Vervain Mallow with White Flowers. The Roots, of this are like tbepl¹ * from which it differs fomething in its Leavcsfox u] & thefe are more finely cut in on the edges than that is- but in the flower confit the chiet difference, for that this is white, yet tending to a liijle bluin. the Seeds are alfo like the firft.*

VI. *The fourth, or Small Vervain Mallow, j^ is a lejfr Kind, never growing fo great or big! as the others, but is lower like-as the Small Mallow; The Leaves hereof, are more divided, and in on the Edges, and moft uually into five being deeply dented alfo. The t lowers are like the Common Vervain Mallow^ but lefier, in confits the difference.*

VII. *The fifth, or Small, hairy, rough, VerW* Mallow. Its Root is of a pale brown color, abovf the length of a Mans Hand, Mitb fmall Fibres w ioymng to it.* It has many very low and hairy Stalks not above a foot high, divided into lefier Branched fet with feveral fmall hoary hairy Leaves, cut &° three or more divifions. At the top of the Stalk and Branches come forth feveral large purple Flowers, like unto the firft Kind, but every <j* Handing in a hairy Husk, fo as it is almoit prickly • after which comes black Seed, contained in tho# hairy Husks, but more clofely inclofed in them, tha¹ in the others.

VIII. *The fixth, or Venice Vervain Mallow, 7 has a Root, which is long and fmall per every Tear. It has long and weak Stalks, uually lying or leaning upon the Ground: j # ^ here and' there upon them long Leaves and ion^2 What broad, cut in orgafhed very deeply on q edges-, ibthat it feems as if it were diverse fet together, every one itanding upon a l°n\$ / Stalk-, at the Joints of thefe Stalks where tn^ Leaves are fet, come forth feveral Flowers, ftanding upon long foot Stalks, which are fome what Uirg^{er} than any of the ibrmer Flowers, confiting of ri Leaves, fmall at the bottom, and wide at the brims. of a whitifh color rending to a blufh, and fometim^ all white, with fpots at the bottoms of the Leaves on the infides, of a very deep purple or murrw' color, which adds a pleafing grace to the Flower, which has a long pointel or peltel in the middle a^s yellow as Gold. Thefe Flowers are fo quickly, tided and gone, that you can fcarcelly fee any o* them blown open, ualefs it be betimes in the Morn' ing, before the Sun fhines warm upon them* fof as foon as they feel the heat of the Sun tW clofe up, and never open again, fo that you fitJJ very feldom fee a Flower blown open in the time, after nine a Clock in the Morning. thefe Flowers are pad, there come up in-their thin, round, fhining, or tranfporent Bladders* pointed at the top, and ribbed down all along, in which are contained fmall, round, black" Seed.*

IX. *The feventh, or Cinkfoil or Hcmp-lijJ Vervain-Mallow. // has Roots which are great wj long, ffpreading in the Ground like unto *j² Jy Marfh-Mallow, and fpongong up a frejh e*

year from the fame Root. Its Stalks are very long, hard, or Woody, more than any of the other *Mallows*, at the lower part whereof, and up to the middle, stand several Leaves upon long Foot-Stalks, parted or divided into five Parts or Leaves, and dented about the edges. But upwards from the middle to the top, the Leaves have but three Divisions. Among these Leaves stand large wide open Flowers, of the color of the *Common-Mallow*, after which follows the Seed, which is smaller than in any other *Mallow*.

X. *The eighth*, ^American Mallow, ^Thorney Mallow. It has a Root which is fibrous or stringy, and quickly perishes; for it will scarcely endure in our cold Country to yield flowers, much less Seed, unless it happens in a kindly year, and be planted in a good Warm place, and well tended. It has green Leaves, which lie next the Ground, which are almost round, but pointed at the end, and dented very much about the edges. The other Leaves which grow upon the Stalk, are divided into three parts like unto *Trefoil*, and some of them into five Divisions, all of them dented about the edges. The Stalk is reddish, with some harmless prickles in several places upon it, and in a good Soil rises up to be 3 or 4 feet high, especially if the place is warm, and the year kindly, bearing plenty of Flowers upon the Stalks, one at the foot of every Leaf, the top itself ending in a long Spike, as it were of Buds and Leaves together. The flowers are of a very pale yellow, tending to a white color, spotted in the bottom of each of the five Leaves with a deep purple spot, broad at the lower part, and ending in a point about the middle of the Leaf, which are quickly fading, and not abiding above one day, with a long Pointel in the middle, divided at the top. After the Flower is past, there comes forth a short prickly Pod, set within a small green Husk or Cup, which bore the Flower in which is contained whitish, or rather brownish yellow Seed, flat and somewhat round like unto the Seed of the *Hollihock*.

XL *The I* laces*. The first grows very commonly in *Kent*, and in many other Counties of *England*, being in some places more frequent than the first *Common mallow* is: It grows in a Field as you go to *Hampstead Church* from the Town. The second grows also in many places of *England*. The third has been found at *Westerham* in *Kent*. The fourth has also been found in some places in *Kent*. The fifth has likewise been abundant Wild in several parts of *England*. The sixth grows in *Italy* and *Venice* in Gardens, as also with us, being more plentiful in these colder Climes, than in those hotter. The seventh grows, as *Clusius* says in many places of *Germany*, with us only in Gardens. The eighth was first brought to us out of the *West-Indies*, but by reason it has an *Arabick* Name adjoined to it, I am apt to believe it may also be a Native of *Africa* also, and has been found in some parts of *Arabia*.

XII. *The Times*. They all Flower from the beginning of *June*, to the beginning of *August*, in which times, and not long after, the Seed is laid to ripen.

XIII. *The Qualities, Specification, Preparations, Virtues and Uses*, are much the same with those of the *Common Mallow* in *Chap. A^K*. foregoing, to which we refer you.

C H A P . CCCCLXVIII

Of MALLOW Tree or Shrub.

I. *in the Names*. I know no *Greek* Name that I know this Plant has, but you may call it

TeiKtr. in *Latine*, *Malva*, vel *Althaea arborea*, vel *fruticosa*: in *Englijh*, *Tree or Shrub Mallow*.

II. *The Kinds*. There are several sorts of this Plant, as 1. *Malva arborea marina* no fir as, vel *Anglic a-*, our *Englijh Sea Tree Mallow*. 2. *Malva Rofea arborea Indica*, *Rofea Sinensis*, *Ferrarij* ^ *Malva Japonic a arborea* *, *Indian Tree Mallow*. 3. *Althaea irutex flore albo velpur pur eo*, *Althaea arborea* ^ *Shrub Mallow* with white or purple Flowers*

The Descriptions*

III* *The first or Englijh Sea Tree Mallow*. It has a white great and Woody Root, having many long fibres annexed to it. Its Stalk is Ligneous or Woody, 5 or 6 Inches in Diameter, and of a brown hoary color, whereon grow whitish and hoary or woolly Leaves, which are soft in feeling,

and almost as large as the Leaves of the *Tree Hollihock*, being as smooth as Velvet. The Flowers are of a considerable largeness, and of a Diluted Purple color, not much unlike to the form of the *Common Wild Mallow* Flower.

IV. *The second, or Indian Tree Mallow*. It has a Root which is long, white, and Woody, diversly spread under Ground, with some small fibres coming from those Ramifications. In two or three years time, in a warm Country, this Plant rises up to be a

prettf great Shrub, or fñiall Tree, whose Srem or Trunk, being fomewhat white and woody, and 5 or 6 Inches thick, covered with a Imootli whitifh Bark, whose lower Branches being Fruhm, the upper Ramifications fpread into a round Ccrnpafs, px which grow feveral broad rough Leaves ibmthing like to Vine Leaves, cut into feveral parts, ajid dented about the edges, of a fair green color on the upper fide, and greyifh underneath, on thick, long and rough reddilh foot Stalks, fometimes buil one, and oftentimes two or three at a Joynt, whicf abide all the Winter without failing away. ^At thf tops of the Branches come forth the Flower-ftanding in green Husks, divided at the tops into five parts; in fome of thefe Plants, the Flowerf will be (ingle, confiding of five, fix, eight or ten large crumpled Leaves, all white; for a little blufh about the edges: in others the Flowers will be ven. double, and as large as a province Rcfc, of the fame colors-, but after they have abiden awhile blown open, they change more Blufh, and on thf fading, deeper: thefe changes are often feen in one and the lame day, yet many times not in two or three days continuance: in the middle of the Flowers, ftatids a green Head, encompassed with many yellow threads as the Rofe has: which Head growing to Maturity has feveral ridges and furrows on the out fide ., and Ml of Seed within, diftinguifed by feveral Partitions * and are of a redifh color, fomewhat fmall, long, round, crooked, and a little hairy on the back fide. An Hundred fixty and three Seeds have been taken out of one Seed Veffel.

V. *The thirds* or Shrub Mallow with white or purple Flowers. *This Kind of Shrub Mallow has fomewhat large, long, and divided Leaves, of a whitifh green color, foft alfo, and as it were woolly in handling, fet • difperfedly on the whitifh, hard and woolly Stalks.* The Flowers are large like unto a fingle Rofe, or *Hollihock*, in the one, being white, with purple ipots in the bottom : in the other of a deep red color, or elfe of a pale purple with a deeper bottom, and with Veins running in every Leaf, they are fomewhat tender, and will not fuffer to be uncovered in the Winter time, or abide abroad in the *Garden**, but in a Pot or Tub to be preferved in a Houfe or warm Cellar, if you would have them live.

VI. *The ?laces.* The firft grows in *England*, in an Ifland called *Dinnie*, three miles from *King-road*, and five miles from *Bristol*-, as alfo about the Cottages, near *Hioji* Caftle, over againft the *Ille of Wight*. The fecond was firft brought from *Japan* in Seed unto *Rome*, or fome parts of *Italy*, where it was Sown, ffrom whence ic was Communicated to feveral Countrys of *Europe*, and in particular to *England*. The third, grows both in *France* and *Spain*, and with us in *England* in *Gardens*, as the fecond alfo does.

VII. *The Times.* They all Flovfer late in the year, or in the latter end of *Summer*, fometimes in *Auguft* and *September*.

VIII. *The Qualities, Specification, Freparations, Virtues, and Ufes,* are the fame with thofe, of the *Common Mallow*, of which we have written in *Chap. 465.* aforegoing.

C H A P . CCCLXIX

Of M A N D R A K E .

I. *Hp HE Kama:* it is called in *Arabick*, A *Jabora* and *Tabrvhhhh*: in *Greek*, *Μανδραγορα* y* & *t in *Latine*, *Mandragoras*: and in *Hebrew*, *Mandrake*. *Diofcorides* fays, that in his time foffie called it *Arri^cr*, and *K/pp?*, *Circ&a*, (from *Circe* the great Enchantrefs:) *Pythagoras* called it *Ανθρωπομορφος* *Anthropomorphos, a forma humana*, becaufe the Root has in fome Meaifure the likenefs of an Hum^ñ Body, with a kind of Breft and Bèll/ (as it were) and two Legs.

II. *The Kinds.* It is twofold, "viz. 1. *Μανδραγορα* y'ot* < 3f > priir% Mh < > w >, *Mandragoras* *Μανδραγορα*, *Morion*, *The Male Mandrake*. 2. *Μανδραγορα* bnKhcL^ywb, *TciAW: Mandragoras fmina, Tri-dacias* (of the *Lettice* like Leaves) and *Mandrd* goras feminem & nigre: The Female M^ drake*,

TheDefcriptions.

III *The firft, or Male Mandrake.* It has a Root, which is long and thick, *Blackijl* on the put fide and white itoithin, confifting many times but of one long Root, and fometimh divided below its Head or Belly,

MANDRAKE Male.

into

into *tioq* main Roots running down right into the Ground, like to a Mans Thighs and Legs; and Sometimes (tho not often) three of those Roots have been observed, which some by Transplanting have Occasionaly cut off for humor or admiral ion fake, and to amufe roots, to which are annexed usually federal small fibres. From this Root springs up many Leaves together, which being full growft, are fair, large and green, lying round about the said Root, and are larger and longer than the Leaves of any Beet, to which it is likened by some. From the middle among these Leaves rife up many Flowers, each one upon a long, slender foot Stalk, Hanging in a whitish green Husk, confisting of five pretty large round pointed Leaves, of a greenish whije color, which turn into iinali round Apples, being green at first, and afterwards ivhen they are through ripe, as yellow as Gold, very smooth and shining, and as big as a reafnable Pippin, of a strong suffocative or heady Smell, in which are contained feveral whitish, round flat Seeds*

IV. *Mandragoras ma* alter**, another Male Mandrake. This was formerly found growing in the Lord Wottons Garden at *Canterbury*. Its Leaves were of a more greyish green color, and somewhat folded together, differing in these particulars from the before described Want, which grew there hard by it also: but as to its Fruit it is unknown for at that time the Plant had not borti any.

V. *The fecond^ or Female Mandrake*, It has a Root like ayp former, bldckish without, and white with in^ near unto the fame form with the Male, but fometimes with more, and Iometimes with fewer Part, or Legs. This has likewise many Leaves,

MAN DRAKE Female.

lying on the Ground, but fimller, narrower, more crumpled, and of a darker green color, refembling

thofe of *Lettice*, as *Diofcorides* compaies them, being more filming, and of a ftrdnger fmell. The Flowers alfo rilè up from among the Leaves, each upon a slender foot Stalk as in the former, but of a blewifh purple color. The Fruit which follows, is much dialler than that of the Male, but round like it, (and not Pear fashion, as some have thought and laid, and which *Clufius*, who law feveral of them growing, alfo denies) of a paler yellow color when ripe, and of a more pleafing, or rather of a lefts heady fmell, than thofe of the Male, in Which are contained litch like Seed, but dialler and blacker.

VI. *The Places*. They grow in Woods and (hady places in many places beyond the Alps, and in manjr places in *Italy*, efpecially on Mount *Garganus* in *Apulia*, in *Gratia^ Candia*, and other parts of the *Mediterranean Sea*, and in *Spain*, and other hot Regions, but not naturally on this fide the Alps. *Clufius* fays he found the Female in many wet Grounds in *Spain*, as alfo in the Borders of thofe Meadows which ly near unto Rivers and Water Courfes. But with us they are only Nurfed up in *Gardens*, for pleafure, as well as forulé: And the Female, as it is the more Tender, fo it is the more Rare, and only kept by fuch as are very Curious.

VII. *The Times*. The Male Kind Flowers in *Aiacrh*, and the Fruit is ripe in *July*: *Gerard*, fays it Flowers in the end of *April*, and the Fruit is ripe in *Aught*. *Clufius* fays, he found the Female in *Spain*, in Flower in *February*, and that in feveral places of *Spain*, he had ripe Fruit in the fame Month. But with us, where it is belt preferved and taken tare of it Flowers not untill *Auguft* or *September**, but without extraordinary Care, (as by its Situation, help of Glaffes, Coverings and the like) the Fruit fddom or never ripens or comes to perfe&ion.

VIII. *The Qualities*. The Herb, Flower and Fruit, are said to be cold in the third Degree: but the Root in the fourth Degree, and tnoift in the fecond. It is Stupefa&ive or Soporiferous, has a Cathartick or Emetick quality withall-, and if taken in too great a quantity, Deleterious.

IX. *The Specification*. It cools Inflammations, helps againft *Anthonies* Fire, foftens the hardnefs of Tumors, and induces Sleep.

X. *The Preparations*. You may make therefrom, I. A *Liquid Juice of the Root*. 2. An *Infpiffate Juice of the fame* 3. A *DecoSion in Wine*. 4. *Art Ophthalmic*:. 5. A *Juice from the Apples* 6» *The Seed*. 7. A *Suppoftary*. 8. A *Pejfyary*. 9. A *Catdpltifm of the Leaves*. 10. A *Cataplafam of thd Root*. 11. An *OiL* 12. A *Diftilled Water*.

The Virtues,

XL *The liquid Juice of the Root*. It is good ia all cooling Ointments, and is profitably put into the Ointment *Populeon*; and applied outwardly in an *Eryfipelas*, it helps on the Cure* And mixed with Honey or Oil, and applied, it cutes the Stinging of Scorpions, Hornets, Wafps, Bees» OV.

XII *The Inflate Juice.* Given to a Scruple *and young Hemlock, of each 1 Ounce-, Opium, Storax-Calamita, of each half an Ounce; mix all together, except the Opium and Storax; and Info; VonVu^ lie u n o S I; -, but taken in a greater. l^t of ten days, after vkcb boi b the Confumpfiuum, live uillu . f 'or^_imrv ufp io Grains* *of the Juices and firain eut*, then put in the quantity; it Kills: buc for ordinary. ule 10 urams* *Opium in fine Powder; and after that the Storax dijoived in half an Ounce of fine Strasburg Turpentine, and mix them according to Art. It is very Cold, and may be anointed upon the Temples and Noies of fuch as have a Frenfy\$ if the Patient sleep too long, dip a Sponge in Vinegar and hold it to the Noie. It eases vehement pains of the Head, as also the Toothach, anointed on the Forehead, Temples, Noitrils Cheeks and Jaws and br VVatchtelnels and Reftlefnefs, upon the Pu^fes and Soales of the Feet. It is good also againft the Gout, running Gout, and other Inveterate Yms.*

XIII. *TV Vecotton of the Kont or Bark in Wine.* It may be given from half an Ounce to an Ounce or two, according to Age and Strength-. It is Soporiferous, or causing Sleep, and eases extream Pains in any part: and it is sometimes given to fuch, where an Amputation is to be performed, or have a Limb Or Member to be cut off, to take away in great meafure the Sence of Pain*

XIV. *The OphthalmicL* It is made either of the *Liquid Juice,* or of the *Infpiffate Juice,* being diffolved in *Fennel* or *WhiteRose Water,* and sweetned with a little *Honey.* Being often put into the Eyes, it cures their Inflammations and eases the Pain.

XV. *The Juice of the Apples.* It is not fo cold as that of the Root, and may be used in all the lame cafes: mixt with *Fennel, Eyebright,* or other proper Water, it makes a good Collyrium for Sore, Inflamed, and pained Eyes, Bathed upon the Head, Temples, Fore-head and Noitrils, it induces Sleep and Rest.

XVI. *The Seel* Taken to half a Dram in any proper Vehicle, it is said to deanfe and cool the Ifomb; and to give ease to fuch as have any Cancer, or other Humour in thofe parts ^ the Dole being often repeated.

XVII. *The Suppofitary.* It may be made of the *Liquid* or *Infpiffate Juice of the Root,* or of the Root it self in fubftance, which being put up the Fundament, will caufe Sleep and Rest.

XVIII. *The Pejfary.* This may likewise be made of the *Juices,* or of the Root it self in Subftance, being put up the Womb, at the Seafon, it provokes the Courfes, it also brings away the dead Child, and the Afterbirth.

XIX. *The Cataplafm of the Leaves.* Being beaten up into form with Hogs Lard, or Barley Flower, and applyed, it will help all hot Tumours and Inflammations, difcuts all Hardnefs, Knots, and Kernels in the Flefh\$ otherwise if Apoftemated, it will mature and caufe fuppuration, and Is good to ease the Pain of hot and Inflamed Ulcers.

XX. *The Cataplafm of Jht Roots*.* Applied to the Head it eases the Megrim and other vehement pains thereof-, It cools the heat of *Anthoies Fire,* being beaten up into form with the belt *Dutch* white Wine Vinegar, and fo applied it eases any hot pain in* any part of the Body, and performs all that, the *Cataplafm* of the Leaves can do.

XXI. *Oleum Mandra^oor<t,* Oil of Mandrakes. This Composition you have in our *Pharmacopeia Londin^fis, lib. V. chap. II. fett*%2.* which becaufe every one has not that Book in their Hands, we will incert here *Take OU Olive 2 Pounds, Juice of Mandrake Apples, or Juice of the Leaves, Juice of white Henbane 2 Ounces, Juice of black Poppy Heads 3 Ounces-, Juice of Violets*

!and young Hemlock, of each 1 Ounce-, Opium, Storax-Calamita, of each half an Ounce; mix all together, except the Opium and Storax; and Info; VonVu^ lie u n o S I; -, but taken in a greater. l^t of ten days, after vkcb boi b the Confumpfiuum, live uillu . f 'or^_imrv ufp io Grains

XXII. *The dijiilled Water.* If a little Honey be diffolved in it, it is an excellent thing for Hot, Inflamed and Sore Eyes, and bathed upon Womens Breasts, which are hard, or pained, or are Cancerated, it softens the hardnefs, and eases the Pain.

XXIII. *The Antidote.* If any one is Poyfoned herewith, if but juft done, the only remedy is a Vomit made of *Vinum Benedidum, Tartar Unit* tick,* &c. but if it has been of continuance, the Antidotes are *Qafloreum, Contrayerva, MujUrd, Origanum, Rue, Scordium, Virginia Snake Root, and Wine:* and Preparations made from them.

C H A P . CCCCLXX.

O/MARIGOLD Garden.

I. *H p // E ~Nantes. It is called in Greek*, (if it X has any ancient Creek Name) "Xfyavlltitcv* *> &uv i in Latine, Qbryfanthem urn hortenf, Caltb d bortenfs^ & Calendula bortenfs, in Englifh, Garden Marigold.*

II. *The Kinds of Mangolds.* There are a great Variety of this Plane, which to describe all would be very troubleforne; thofe which we (rjall take notice of in this Work are the following, viz* i. *Caltba, vel Calendula bortenfs,* the *Garden Marigold:* of which in this Chapter. 2. *Flos Africanus,* The *African* or *French Marigold,* of which in Chap. 471- ?• *Chryfanthemum jcgetum,* the *Corn Marigold** of which in Chap. 472. 4. *Cbryfontbemum vel Caltha Paluftris,* the *Marjh-Marigol^* of which in Chap. 473. following.

III. *The Kinds of the Garden Marigold.* There are also feveral Kinds of this Plant, as 1. *CalenW^ Jitplex vel fimplici Wore,* the *Single MangoU.* where note, that the Name *Calendula* comes iron the *Calends* or first days of the Months, where they were thought chiefly to Flower. 2. *^nyid^ theltum* (from its golden color) M *Caltha vel Calendula major Polyanihs,* th

double Marigold. 3. *Caltha vel Calendula Polyanthina vulgaris* the common double Marigold. 4. *Calendula Polyanthina minor*, the letter double Marigold. 5. *Calendula mulliflora Orbiculara*, the double Globe Flowering Marigold. 6. *Calendula Prolifera*, the many headed Marigold, called by some *Jack an Apes on Horfe-back*, and this is all two-fold-

The Descriptions.

IV. *The first, or Common single Marigold.* It has a white Root which spreads it self under Ground, sometimes abides after Seeding and sometimes perishes, rising again of its own Seed, there is little or no difference between this and the following Kind, but in the Flowers, this consisteth only of one single row of gold colored or yellow Leaves, and some of a paler, and some of a deeper yellow, Hanging about a great brownish yellow Thrum in the Middle -, the Seed also, is alike, but for the most part, greater than that of the double Kind.

V. *The second, or Greater double Flowered Marigold.* The Root of this is also white, and spreads in the Ground, abiding in some places after the Seeding time, in the most part it perishes, & rises again of its own Seed, it has pretty large, round, green Stalks branching out from the ground, into many parts, on which are set long, rat, green Leaves, broader and rounder at the point than any where else, and smaller also at the setting of the Stalks, where it encompasses it about, the Mowers are sometimes very thick and double,

breaking out of a Scaly, clammy, green head composed of many rows of Leaves, set so close together, one within another, that no middle Thrum can be seen: and sometimes less double, having a small brown spot of a Thrum in the middle, and sometimes but of two or three rows of Leaves, with a large brown Thrum in the middle every one of which is somewhat broader at the joint, and nicked into two or three corners, of an excellent fair, gold yellow colour in some, and paler in others, and of a pretty strong and refinous smell After the Flowers are past, Heads of crooked Seed follow turning inwards, of which the outward most are the biggest, and the innermost least.

VI. *The third, or Common double Marigold.* The Root of this thick is and hard, with some Fibres or Threads adjoining thereto. From this Root spring up many fat thick crumpled Leaves, set upon a gross and spongy Stalk: upon which do grow fair, double, yellow Flowers, having for the most part in the middle, a bunch of Threads, thick set together, which being past, Heads of crooked Seed follow, such like as are described in the former.

VII. *The fourth, or Lesser double Marigold.* The Root of this is like the former, It is a smaller, and finer double Leaved Plant, and grows upright, having for the most part one Stem, or spongy Stalk, repleat with thick and fat Leaves confusedly. The Flowers grow at the tops of the small Branches, very double, but lesser than any of the former, consisting of a more fine jaggedness, and of a fair, yellow, gold color

VIII. *The fifth, or Double Globe Flowering Marigold.* It has a Root much like the others, from which rise up many large broad Leaves (immediately out of the Ground) and from among which rises up also a Stalk about a foot and a half high, dividing it self towards the top into other smaller Branches, repleat and set with the like Leaves, but confusedly, or without any order. The Flowers grow at the Tops of the Stalks very Double, the small Leaves of which are set in a very regular order, by certain Ranks or Rows, as several lines are in a Globe, travelling the whole Compass of the same whereupon it took the Name *Orbiculata*. There is another of this Kind, which differs nothing in its Description from it, excepting in the color of the Flowers, these being Flowers of a very light yellow or Straw color, in which consists the only difference.

IX. *The sixth, or Many Headed Marigold.* Its Roots, Stalks, and Leaves, are like to the Common sort of Marigold, differing only in the shape of the Flowers; for this Plant does bring forth at the top of the Stalk, one Flower like the other Marigolds, from the which come forth several other small Flowers, yellow, likewise, and of the same fashion. This is thought by some Authors to be per accidens, or *lusus Nature*, which sometimes comes to pass in several other Flowers also as some Children are born with two Thumbs on one Hand or with two great Toes, or with six or seven Fingers, and sometimes two Arms or Hands on one side, &c. And such is the Seed of this Marigold, which yet, if it be sown, it brings forth not one flower in a thousand, like the Plant from whence it was taken. There is another prolifick, or many Headed Marigold, coming from the Seed of the Double Marigold, and is doubtless a Degenerate Kind: whereas the former many Headed, always springs from the Seed of the single Kind, and produces the diminutive Flowers upon very much the longer foot Stalks.

X. *The Places.* We know of no Native place whence these Plants should come, with us they never grow Wild, but always in *Gardens*, where they prosper admirably, but the first single Kind is said to grow Wild in *Spain*.

XL *The Times.* The Flower from *April* and *May* thro' all the *Summer* Months, even till *Winter* and sometimes even in *Winter* time if the Season be warm,

XII. *The Qualities.* The Flowers are hot in the first Degree, and temperate in respect of dryness & moisture. The Herb is hot almost in the second Degree, and moist in the first. They are Emollient, Cardiack, and Alexipharmick.

XIII. *The Specification.* They resist Poyson, as also Malign and Peltential Feavers, provoke the Terms and bring away both Birch, and After-birth.

XIV* *The Preparations.* You may have therefrom, I. A *Juice of the Leaves*, i. A *Juice of the Flowers*. 3. A *Conferve of the Flowers*. 4. A *Distilled Water of the Leaves and Flowers*.

The Virtues.

XV. *The Juice of the Leaves.* Given from one Ounce to three it loosens the Belly* and Purges by Stool: and used as a Gargarism in the Tooth-ach, it eases the Pain.

XVI. *The Juice of the Flowers.* It is Cordial, comforts and strengthens the Heart very much, refills Poyson, and is prevalent against Pestilential Fevers. Dose from half an Ounce to an Ounce in a Glass of Generous Wine.

XVII. *The Conferve of the Flowers.* Taken in the Morning Fading, it Cures the Palpitation or Trembling of the Heart, and is given as a prophylactic or Prefervative in time of Plague or Pestilence.

XVIII. *The Distilled Water, of Leaves and Flowers.* Dropt into Red and Rheumatick Eyes, it cools the Inflammation, Hops the Rheum, and eases the Pain.

CHAPTER. CCCCLXXI.

OF MARIGOLD African.

I. n p # £ frames. It has no Arabick nor Greek Name that I know of* in *Latine*, it is called *Flos Indicus*, *Caryophyllus Indicus*, & *Flos Africanus*^ *Caltha Africana*, *Flos Tuniten/ts*, *Pedem Titenorum*: in *Englilh*, *African Marigold*^ and by some *French Marigold*, (tho it is no more true than *Englilh*.) Where note, that some, as *Lacuna* think it to be *Othona Plinij*: others *Lycopersicum Galeni*, but with what truth is uncertain.

II. *The Kinds.* There are several Kinds of this Plant, as I. *Flos Africanus major simplex*, w^l f^{ynp}Uci Wore, the Great single African Marigold. 2. *Flos Africanus minor simplex*, v^l f^{mplici}lon the Lesser single African Marigold; 3. *Flos Africanus major multiplex*, ilos *Africanus marinus multiplex vel Volyanthos*, the Great or Greater double African Marigold. 4. *Flos Africanus minor multiplex*, the Lesser double African Marigold, 5. *Flos Africanus Flore Fijhdofo simplex* & *multiplex*, the Hollow or Fiftulous African Marigold, both single and Double, as *Fabius Column** calls it.

The Descriptions

lit. *The first*^ or Greater single African Marigold. It has a Root spreading much in the Ground and full of small firings: and it is in all things so like to the double greater Kind^ that it is hard to distinguish it from it, but by the Flowers, only the Stalk of this is browner than that of the double, and it has been observed that this single Kind does every year rise from the Seed of the double Flower: So that when they are in Flower, you may see the difference (or not much before, viz. when they are in Bud:) this single Flower ever appearing with a Head of Thrums' in the middle, and the Leaves, which are the border standing about them, (hewing hollow or Fiftulose, which afterwards lay themselves flat and open (the double Flower appearing with all its Leaves folded close together, without any Thrums at all:) and are of a deeper or paler color, as in the double.

MARIGOLD African single small

IV. *The fecond, or Leffer fingle African Mari-gold. This very much refembls the Leffer double in every proportion, in the Roots, Stalks, Leaves, and Seeds: Only the Flowers of this are fingle, having five or fix broad Leaves, of a deep yellow crimfon color, with deep yellow Thrums in the middle, and of a itrong linking finell, more than thofe of the leffer double.*

V. *The third, Great, or Greater double African Marigold. It has a Root which is [mall and full firing^ fijreading much under Ground. It is*

a Noble Double Flower, which is the Grace and Glory of the Garden in the time of its Flowering and Beauty: The Plant rifes up with a ftraight and hard, round, green Stalk, having fome crefts or edges all along the Stalk, befet with long winged Leaves, every one whereof is like to an *Ajh* Leaf, being compofed of many long and narrow Leaves, Impt or dented about the edges, landing by Aples one againft another, with an odd one at the top, of a dark or full green color. The Stalks are three or four feet high, and divides it felf from its middle upwards, into many Branches, fet with fuch like Leaves to the Tops of them, every one bearing one double Flower, of a gold yellow color above, and paler underneath: ye fome are of a pale yellow, and fome between both, and all thefe riling from the Seed of one kind the fame Plant. The Flower before it is Wown open, has all its Leaves hollow: but when it is full, it is larger than any other of the former Kinds, and is like to it at the Mouth, and is of as deep a yellow color for the moft part, as the deepeft of the former, and yet fometimes it is alfo pale.

contained; fet thick and clofe together upright, of a black color, and fomething Hat and long. The Flower of this, as Well as of the fingle, is of the very fmell of New Wax, or of an Honey Comb, and not of that Poyfonous Scent of the fmaller Kinds.

VI. *The fourth, or Leffer double African Mari-gold. The Roots are like the former but leffer. Its Leaves alib are in all things like unto the former, but fmaller, which are fet upon rownd brown Stalks, not fo fuff or upright, but bowing and bending feveral ways, and ibmetimes leaning, or lying upon the Ground. The Stalks are branched*

put variously, on which grow fair double Flowers, like the former, and in the like green Husks, but leffer, and in fome, the outwardmoft Leaves will ha larger than any of the reft, and of a deeper orange color, almoft crimfon, the innermoft being of a deep gold yellow color, tending to crimfon. The whole Flower is fmaller, and of a franger and more unpleafant fmell: but for its doubleneffs, beautiful color, and pleafanmeffs to the Eye, it furspales almoft all other Flowers which grow. The Seeds are like to the former.

VII. *The fifth, or Single and Double African Marigold, with hollow or pipe Leaves. As the former great eft forts of Africans fingle and double have rifcn from the Seed of one and the fame Pod or Husk of double flowers, fo is it in this Pipe Kind, the fingle and double Kinds riling both of them from the Seeds of one and the fame Plant nor does it differ in any thing from, them, but that thefe are lower, and have fmaller green Leaves, and that the Flower being fmaller, has every Leaf abiding hollow, like unto a hollow Pipe, broad open at the Mouth, and is of as deep a yellow color for the moft part, as the deepeft of the former, and yet fometimes it is alfo pale.*

VIII. *The Places.* They grow naturally in *Africa*, about *Tunis*, and where old *Carthage* itood_h from whence long ago, they were brought into *Europe* \$ where with us, they are only kept in *Gardens*, and tiourifh wonderous well, being Sown for the molt part every year, unles in some mild *Winters*. But that Kind with hollow or Pipe-Leaves, comes not from *Africa*, but from *Mexico* in *America*, and is fo denominated according to *Uabius Columna*.

IX. *The Times.* They are to be Sown in the beginning of *April*, if the Seafon falls out to be warm, otherwise they mult be Sown in a Bed of Dung, or in very good Earth, and in a warm place. They bring forth their pleafant flowers very late, not till towards the end of *Summer*^ efpecially the greater Kinds ; but the leffer, if they abide all the *Winter*, do Flower more early^ for this -reafon thofe which are of the later flowering, ought to be Sown the more early, that they may Flower and Seed fo early, as not to be overtaken with the Froft, before the Seed is ripe.

X. *As to the Qualities,* They are unknown farther than that have been found by experience to be of a *deleterious* nature: and therefore no other Ofervations have been made of them as to their Virtues and tlfes in *Phyical Pra&ice*: their chief defign in this Book, being to bring them in Courfe, for the Ornament of our *Engliffh Gardens*, where they already appear fo Beautiful and defirable to the Eye.

CHAR CCCCLXXII.

Of MARIGOLD Corn.

*• HP HE 'Names. It is called in *Greek*, X XfvcaVSs^; in *Latin**, *Chryfanthemum**, ab *aureo Floris colore* fie *Diffum* : and in *Engliffh*, *Corn Marigold*.

II. *The Kinds.* There are many forts of this Plant, but not above two or three varieties grow in *England*_h one in our *Cornjiekls*, the other in our *Gardens*_h yet becaufe feveral ethers of them are found in fome of our Plantations in *ihelVeft-Indies*, we (hall defcribe the following, *vie.* 1. *Chryfanthemum fegetum noftras*, *Bellas lutea Bauhini*, the *Corn Marigold* of our Country. 2. *Chryfanthemum Creticum*, the *Candy Corn Marigold*. 3. *Chryfanthemum fegetum Bvticum*, the *Spamffh Corn Marigold*. 4. *Chryfanthemum latifolium Ameriainuw*, *vel hrafilianum*, *Broad Leaved American* or *Brafihan Corn Marigold*. Authors make five or fix KHKIS more of this Plant, but being wholly Grangers with us, we (hall fay no more of them in this place.

The Deferiptions.

III. *The firft, or Corn Marigold* 01 vu Country. *Its Root perifhes every year, and the Plant rifes again of its own Sowing.* It rifes up with (everal tender, pale, green, Herby Stalks, breaking forth into fome few Branches, with feveral long, blewifh, green Leaves, fet without order on them, being narrow at the Bottom, jnd broader

at the end, cut in a little *on* both edges: the Flowers grow fiftgly at the top of every Branch, being large, growing our of green Scaly heads, and of a fhining yellow color-, both the Thrutm and the borders of the Leaves about it: each Leaf being broad or flat pointed, and cut into three or four parts, lnnelling a little Iweet.

IV. *The Jecondror Candia Corn Marigold.* *It has a Root which ferifhes every year, ami rifes again (a* the other does) f us over! Sozving or Seed.* It is a fair Flower, and has for the molt part one upright Stalk, two feet high, on which are fet many winged Leaves, at every Joint one_h divided and cut into feveral parts_h and they again parted into feveral pieces or Leaves. The Flowers grow at the tops of the Stalks, riling out" of a fcaly Head, compofed of ten or twelve large Leaves, o* a tai⁵ but pale yellow color_h and more pale, almoit white at tfe bottpm of the Leave?, round about the yellow Thrum in the middle, being

MARIGOLD Corn of Cceet.

O R,

Mathiolus his Corn' MA R I G O L D.

being both larger and sweeter than any of the the other Corn Marigolds. After which follows the Seed, which is whitish and Chaffie.

V. The third, or Spanish Corn Marigold. The Stalks hereof are harder and browner than those of the Jirjt, and Jiand more upright the Leaves are greener and not so much divided or cut in on the edges as they are: the Flowers are not of fo ffining a yellow color, but of somewhat a deeper yellow: and the Seed is small and whitish, and is bitter as the first is ^ tho' the Herb is sweet and eaten as a Sallet Herb: and in these things consist the difference.

VI. The fourth, or Broad LeavM American or Brasilian Corn Marigold. Its Root pertjhes every year in like manner as the others do. It is a Marigold which is sweet, and springs up with a Stalk about half a yard high, something rough and crested, having severai Leaves set thereon, of four or five Inches long, and two broad, encompassing it at the bottom, and growing f mailer to the end, something dented about the edges, with marp dents: from the Bofom of whom, come forth somewhat long foot Stalks, sustaining each of them a fair yellow Flower, set in a green Husk or Cup ^ having seven or eight Leaves for a Border, dented at the ends, and eacompaffing a middle Thrum, consisting of long Threads, in which afterwards lies the Seed, very like unto the Spanish Kind.

VII. The Places. The first of these grows commonly in Corn-fields, and about their Borders, or where Corn has been formerly Sown, both in England and beyond the Sea: The others grow also in the Corn Lands in Foreign Countries: but with us issue Nurft up only in Gardens.

VIII. The Times. The first Flowers in August, the second in June, the others in the end of Sum^r m^r, and sometitties fo late, that the early Frosts taking it, never suffers its Seed to come to its ripeness.

IX. The natalities. They are said to be temperate in respect W heat, or coldness, dryness or moisture.

X. The Preparations. You may have therefrom, i. A Liquid Juice, i. A Balsam or Cerote, 3. A Sallet.

The Virtues,

XL The Liquid Juice, being drank by such as have the yellow Jaundice, after coming out of a Bath, or from Bathing, it quickly restores them to their natural color.

XII The Balsam or Cerote. It is made of the Flowers boiled in Oil to crispness, then strained, and made up with Wax, Frankincense, and Rosin: or, beaten up with Oil and Wax, applied it cures that Tumor called Steatoma, which contains in it a Substance like Fat or Tallow, and dissipates other cold and hard Swellings.

XIII. The Sallet. The Stalks and Leaves of the Corn Marigold, are eaten (as Dioscorides says) in the manner of a Sallet; as other Sallet Herbs are: But I suppose this is meant of the Candy Kind tho' I know not, but that ours when very young may be fo eaten also.

CHAP. CCCCLXXIII.

Of MARIGOLD Marjh

THE Name*. I know no Greek Name that it has but it is called in Latine, Caltha Valujris by Gesner, and Caltha Virgillij by Tragus: some call it ferraria, from the likeness of its Leaf to a tiorfe Shooe: Cor dm calls it Chelidonid Palustris: and TabernaemGfitanus, Populago tho' its Leaf is not like either to the Leaf of the Poplar Tree, nor of Colts-foot: in English we call it Marjh Marigold.

II. the Kinds. Some Authors make three several sorts hereof, viz. 1. Caltha palustris Vulgaris Jimplex major, the Greater fingle Marjh Mangold, 2. Caltha palustris funplex minor, the Lesser fingle Marjh Mangold. 3. Caltha palustris multi^{pe}lx, velflore pleno^ the Double Marjh Marigolds

'the Descriptwis.

III. Thejirfl, w Greater fingle Marjh Marigold, It has a Root which is composed of several long^g firings, which run down deep into the Mire. From this Root rise up severai great, broad, round, deep, green, shining Leaves, a little dented or waved about the Edges, each one, on a long^g S f f f a thick,

VII. The Times. The two first Flower in the Spring, when the Crow-feet do, and often times in Summer, The Leaves keeping their green. nets all the Winter. The double^, Flowers in April, or May, as the Year proves earlier or later, and its Leaves do in a manner perilli in Winter; and spring afreOi in the end of February, or thereabouts.

VIII. The Qualities. The Root hereof is Isharp, and Hot in the fourth Degree, coming near the Qualities and Properties of Crow-pot; but for any of its Medical Virtues, nothing yet has been observed by Experience-but I am apt to believe, from its hot, sharp and burning Nature, it may perform all the same things which the Crow-foot will

which come here and there small white flowers, and alter them small reddish Seed.

Garden fweet. MARJEKOM

CHAP. CCCCLXXIV.

Of MARJEROM.

I. The Names. It is tailed in Creek, JL 2* M AW(y'kula&w. in Latin, Sicutp- ficitim, Amaracum iff Marjoram: in English, Marjerom: of the Arabians it is called Merfenim & Morfangus.

II. The Kinds. There are several Species of this Plant, as 1. Majorana <estiva vulgaris, Our Common Garden fweet Marjerom. 2. Majorana tenuifolia, Marjerom gentle. 3. Majorana odorata perennis, Winter fweet Marjerom. 4. Majorana Latifolia, Majorana Anglica, Winter Marjerom, or Pot Marjerom. 5. Majorana latifolia aurea, yellow broad Leav'd Marjerom. 6. Majorana Sylvestris, Cunila bushula Plumj if Diocoridis: Wild or Field Marjerom.

The Descriptions.

Our Common Garden fweet Marjerom, which perL... This rferhic... Knots... called Knotted Marjerom; of a green color, out of

IV. The second^ or Marjerom Gentle- Its Root is like the other, from whence grow up several small Stalks and Branches^ not exceeding the former in height, but it has finer and smaller Leaves, hoary and loft, and much sweeter than the former^ the Heads are like unto that, and so are the Flowers and Seed, the whole Plant being more tender than the the first Cowmen Jmeet Marjerom; and abiding but a Summer in like manner.

V. The third, or Winter fweet Marjerom. This is an excellent Vhnt, and abides green all the Winter, ;/ it is not so violent^ growing in the same manner and form which the first does, and its Leaves are a little smaller and greener than it, but with the like Heads and Knots. Yet some take this to be but the Common Summer fweet Marjerom. which by Transplanting, is made more strong, and able to abide the Winter.

VI. The fourth, or Winter or Pot Marjerom. It has a Root which is white and thready, not perishing in Winter, but abiding many years, and is increased rather by Slipping and jets, than by Sowing the Seed. It is a small low bushy Herb, not growing much higher than any of the others, but spreading its Branches wider, on which grow broader and greener Leaves, let by couples, or pairs, with some smaller Leaves also, at the several Joints, all along the Branches: at the Tops whereof grow a number of small, purplish, white Flowers, let together in a Tut, which turn into small and round Seed, larger than the Seed of the Common fweet Marjerom. The whole Plant is of a sweet smell, but much less and inferior to the other, being also nothing so bitter as is the Common fweet Marjrom, and therefore the more fit for a Pot-Herb-

VII. *The fifth, or yellow broad Leav'd sweet Marjerom.* "This is of the fame fort with the Pot-Marjerom, differing only in the color of the Leaves, which are in Summer wholly yelhuo, in some Plants, or but a little green, or parted with yellow and green, more or less, as Nature is pleased to play her part > the smell being fraall like that of the Pot-Marjerom latt described: there is alib another of this. Species confiting of party colors, white and green.

VIII. *The sixth, or Wild or Field Marjerom.* Its Root creeps under Ground, and encreafes much, abiding from year to ye-ar. It fends forth several brownilh hard square Stalks, with many small, dark, green Leaves fet by pairs on them, very like to those of the Sweet Marjerom, but harder, and a little broader. At the top of the Stalks grow Tufts of dark or deep purplish red Flowers, which turn into small Seed, like that of the Garden Marjerom, but blacker: The whole Plant smells sweet but very strong.

IX. *The Places.* The first five grow Wild on the Mountains in Spain, and in other places, but with us they are all Nurfed up in Gardens. The sixth grows Wild in the borders of Corn-Fields, and Pajures, and in some Common Ground, and near the High Ways, in several places in England.

X. *The Times.* They are Sown, in April or May, and bring forth their scaly or chaffy Husks in August. They are to be Watered in the middle of the day, when the Sun shines hottest, (as Bajil ought also to be) and not in the Evenings or Mornings.

XI. *The Qualities.* Sweet Marjerom is hot and dry in the second Degree, it digests, attenuates, opens and corroborates: is Cephalick, Neurotick, Stomatick Hyfterick and Alexipharmick.

XII. *The Specification.* It is peculiar against the Lethargy, Palfie, Convulsions of the Nerves, Obstruitions of the Viscera, and cold and moist Diseases of the Head, Nerves Stomach and Womb: provokes the Terms, and gives ease in the Colick.

XIII. *The Preparations.* You may prepare from Sweet Marjerom, &c. i. A Liquid Juice. 2. An Efficence. 3. An Infusion or IV-cottion in Wine. 4. A Ponder of the Herb. 5. An Infused or Decofod Oil. 6. A Dihilled Water. 7. A Spirit. 8. A Chimmical Oil. 9. & Spirituous Tinture. 10. An Oily Tinture. 11. A Cataplasim,

The Virtues

XIV. *The Liquid Juice.* It is good against all Diseases of the Thorax, which cause (hormes of Breath, or difficulty of breathing, opens the obstruitions of Liver, Spleen, Reins and Womb, clearing them of those Tartarous Humours, which fluff them, and strengthens and confirms the Viscera. It expels Wind, gives ease in the Cholick, provokes the Terms in Women, brings down the Urine and causes a due cleansing to Women in S-nud-bed. It is also very profitable for such as are afflicted with Strangury, or cannot easily make their Urine taken Morning and Evening from one to three in good white Port, or white

Lisbon Wine: Dropt into the Ears, it eases their Pain.

XV. *The Efficence.* It has all the Virtues of the Liquid Juice, but is more powerful to all tk intentions and purposes aforementioned, being given from one Spoonful to two Morning and Night, in any fit Vehicle.

XVI. *The Infusion or Decoffiq in Wine.* It has all the Virtues of the Juice, and strengthens the Nerves, Head and Brain: If it is made with the addition of a sixth part of Pellhory of Spain, Long Pepper and Acerus, it prevails against the Paralysis of the Tongue, and loss of Speech: and the Power of cold Poyfons, which have been inwardly taken. It is thin, and of a digesting quality, and being drank from 4 to 8 Ounces, it is good for such as are beginning to fall into a Ljropiy; mixt with an equal quantity of the Juice and dropt into the Ears, it eases the ringing noise of them.

XVII. *The Ponder of the Herb.* Being used as an Ljropiy, by being blown, or snuffed up the Noftrils, it purges the Brain, of cold, moist, watery and Pituitous Humors: The Herb made into a very gross Powder, (if green Herb is used) being long chewed in the Mouth, draws forth much Flegm, and other Gums, and other Pains adjacent, and causes thereof.

XVIII. *The Infused or Deco&d Oil.* It is thus prepared: Take of the Herb bruised Ounces, Generous White Wine 6 Ounces, old Oil 12 Ounces, them together and Isolate, or Digest in an equal Sand bath: prefs out firongly, and repeat thrice more with the same quantity of fresh Herbs, and then boil in Balneo the conjunctivae of the Wine. It is a good Cephalick, eases Pains of the Head, and helps all cold Diseases thereof, as also cold Diltempers of the Stomach, Liver, Spleen, Womb, Nerves and Joints, noise in the Ears, bitings of Venomous Beasts, Strengthens the Ventricle, helps indigestion, warms, comforts, digests, and diffuses Wind, (ffc).

XIX. *Oleum Majoranae Compositum.* The Compound Oil of Sweet Marjerom. Take Sweet Marjerom 4 handfuls, Mother of Time 2 Handfuls, Myrtle Leaves or Berries 1 Handful, Water Mint, Southernwood, of each half a Handful; UJJa Liginea 2 Ounces: Cut bruise and put them into a hals in the SUM, or in a Bath, affusing thereon Oil Omphacine 3 Pounds; after % days prefs them out: to the expressed Oil, add fresh Simples, or Ingredients, which repeat the third time exactly in the same manner, and then perfect the Oil according to Art. It is a very good Anodyn, and eases Pains of the Head, Stomach, Bowels, Hypochonders, Joints and other parts, it comforts the Brain and Nerves, and is prevalent against the Palfie, Dead Palfie, Tremblings, Numbness, Cramps, Convulsions, Gouts, Sciatica, and pains of the Ears, Jaws and Back, by anointing it on the parts affected. It is good against the bitings of Venomous Beasts:

XX. *The Liffilled Water.* It has the Virtues of the Juice and Efficence, but much weaker, and may be given to 6 Ounces, or more, sweetned with white Sugar, or mixed with an equal quantity of Generous Wine: it may also, being dulcified, be used as a Vehicle, to convey some of the other Preparations in, down into the Body. It is good against Inflammations and weakness of the Eyes, and is mixed with other sweet Waters, to make a sweet Wafhof.

XXI. *The*

XXI. *The Spirit.* It is very Cordial, Neurotick, Cephalick, and Stomack, expels Wind, gives preferre ease in the Cholick, is good against the Apoplexy, Lethargy, Palfy, Convulsions, pain in the Stomach, want of Appetite, Indigestion, and loathing of Food it comforts the Heart, cheers the Spirits, and prevails against Fainting and Swooning Fits, and other like Distempers of the head and Thorax. Dose (being first dulcified with double refined Sugar) is from 2 Drams to 4, either alone, or mixed with a Glass of Generous Wine.

XXII. *The Chymical Oil.* It is a Specificke against the Colick, Palfie, Lethargy, Convulsions, Cramps, Hysterick Fits, and the Poyson of Serpents. Dose from 3 or 4 drops to 10 or 12, in white Sugar, or Syrup of Clove Gillyflowers, mixing the Oil very Well therewith, and then with a Glass of lbme generous Wine, or Sack Whey, and fo to drink m off, Morning and Night.

XXIII. *The Spirituous Tincture.* It has all the Virtues of the Juice, Effence, Spirit, and Chymical Oil but not so powerful as the last: it gives ease in the Cholick almost in a moment: Dose from 1 Dram to 3 Drams, in a Glass of Generous Canary Morning Fasting, and at Night going to Bed.

XXIV. *The Oily Tincture.* Given from 10 Drops to 20, 30, 40, or a Dram in any convenient Vehicle, it gives preferre relief in the vehement Colick, cleanses the Reins, Ureters, and Bladder, of Sand, Gravel, or final Stones, and provoking Urine powerfully, and expelling the recrements of those Parts, which stop the Urine and cause pain: Anointed well on the Back Bone, as also on the parts affected, it many times cures the Palfie, Numbness, and Trembling of the Limbs, beyond most other Medicaments, and has had a good effect in those cases when all other things have failed.

XXV. *The Cataplasme.* Made either of the Fonder of the Herb, or of the Green Leave beaten up to a Consistency with Honey, and applied, it takes away the black and blew mark of Blows, Bruises, Pinchings and the like: If it is made up of the Green Herb beaten with Salt and Vinegar, and Ponder of Ginger, and Long Pepper, and fo brought to a Consistency and applied, it is good against the Poyson of the Scorpions Sting, as also the Bitings of Mad Dogs, Vipers, Rattle-Snakes, &c being immediately applied after the Hurt done.

XXVI. *The Peffary.* Made of the Green Herb beaten, and brought to a Consistency with Pouder of the Roots of Pellitory of France, a little Salt, and Vinegar, and Bees wax, and then reduced into Form, and put up the Womb, and fo contained there for some time, it is said to produce effectually the Terms in Women.

C H A P. CCCCLXXV.

O / M A R J E R O M Goats.

THE Names. It is called in Greek, *T&y>&yw<*: in *Lai* in *Tragoriganum**, and in *English*, *Goat's Marjerom*.

II. *The Kin Is.* There are four especial Kinds which Authors take notice of, viz. 1. *Tragoriganum Crcticum*, *Tragoriganum Creense apud Venetos Lobclij* iff *Pent* ^ *Tragoriganum Clusij* ^, *Tragoriganum tertium Hijptinum-Casp.* *Bciuhini*, *Goats Marjerom of Candy.* 2. *Tragoriganum latifolium*, five, *Mar urn Cor* ufi Matthiolo*, *Tragoriganum alter urn Gefneri & Lobeli*; *Tragoriganum latifolium Bauhini*, *Broad Leav'd Goats Marjerom*: this second is that *Marum* which *Cortufus* feat unto *Matthiolus*, for *Thymum Creicum*, and by the Name of *Marum*, it is called by *Durantes*, and *Lugdunensis*: and *Lobcl* says, that among all the Plants which are called *Tragoriganum*, he could find none which came nearer to those of *Dioscorides*, than these two first Kinds we have here Named. 3. *Tragoriganum Hispanicum* ^ *Tragoriganum fecund urn Clusij*, *Do^ontfi* ^ *Camera-rij*, *Lugdunensis* (5? *TabernAmontani* ^ *Spanish Goats Marjerom*. 4. *Tragoriganum Matthioli*, *Lugdunensis*, iff *Tabernemontani*, *Tragoriganum ferpillifolium*, *Matthiolus* his *Goats Marjerom*, or *Goats Marjerom with Wild Time Leaves*.

ILK Descriptio 7ts.

III. *The first 1 or Goats Marjerom of Candia.* The Root spreads it self with many small Fibres, and the Plant abides green all the Winter if care-

fully

fully preserved and looked to, but left without Defence, it for the most part perishes. It is a low Plant, and has several small low Branches, not above a Foot high, something Woody, on which are set at several Joints, two Leaves, and some times more, which are somewhat broader, rougher, and harder than the Leaves of *Thy mūm Croricum*, and something like unto *Summer Savory*, but of a faded green color, the small, hooded, gaping Flowers, stand at the tops of the Branches, in several distances about the Stalks, of a purplish red color. The whole Plant, and every part thereof, tastes very hot and (sharp, and smells very sweet, with a Very bitter'g Sweetness, and very quick and piercing.

IV. *The second, or Broad Leav'd Goats Marjerom. It has for its Root, a blackish Bush of many fibres set together like those of Marjerom. This Herb grows up to be a fine small bushy Plant, little above half a foot high, whose Stalks are not so woody, but tenderer like Marjerom, with many small, smooth, gentle Leaves, two for the most part set together at a joint, something broader than our Maftick-Thyme, of so strong, hot, and quick a smell, that being a little bruised, and melted unto, it perceives the Sense more than the former and comes somewhat near unto the smell of Calamint or fenny-royal. The Flowers are small, and purple, growing up to the tops of the Branches, from between the Joints. This abides green all Winter as the former but requires as much care in preserving it in the Winter, as that does.*

V. *The third, or Spanish Goats Marjerom. The Root of this is more woody, and less bushy than the former. And this Plant rises up somewhat higher than the last, with whiter and harder Stalks: the Leaves are whiter also, smaller, narrower, and longer than they, and more fore of the joint usually at every Joint, (being something Sweet, but nothing so strong or quick, nor taiting so hot as they. The Flowers are white, and grow at several distances, towards the tops of the Stalks, but larger and more gaping, standing in brownish green Husks. This also abides green in the Winter, but is preserved with more difficulty than either of the former.*

VI. *The fourth, or Matthiolus his Goats Marjerom, or Goats Marjerom with Wild Thyme Leaves. This Plant Matthiolus jtrft set forth, and called it Tragoriganum. It has a bushy Yibrous Root, from whence spring up several hard Stalks and small Leaves growing upon them, at several distances, which are like unto the ordinary Wild Thyme. The Flowers are purple, standing in roundles at the tops of the Branches * and the whole Plant smells not much unlike to Penny-Royal.*

VII. *The Places. The first grows in Crete and in Spain also. The second is unknown. The third in Valentia in Spain. The fourth in the Province of Yorojulium, and several parts of Italy: but all of them grow with us in Gardens.*

VIII. *The Times. They all Flower with us very late in the year, Gerard says in Augusty others say that we scarcely see any Flowers till September, or October, and sometimes scarcely see any at all.*

IX. *The Qualities. They are (especially the two first) hot and dry in the third Degree: and much more Strong, piercing and effectual, in all their other Properties, than either Sweet Marjerom, or Origanum, of which we have and shall speak in their proper places.*

X. *The Specification, Preparations and Virtues, are all the same with those of Sweet Marjerom,*

of which we have largely discoursed in the former Chapter: having that as the first two first especially, are more strong and potent, than any of the *Marjoms*; for all the Preparations of these are much more effectual, to all the intentions and purposes there specified.

CHAP. CCCCLXXVI.

Of MASTR ^ W d R T .

I. *HP HE Names. It has no Greek Name, as being unknown to the Greeks: but is called in Latine, imperatoria, & Afrantia: in English Mafter-wort.*

II. *The Kinds. Authors make but two Species hereof, viz* i. Imperatoris, five Afrantia vulgaris Laferpitium Germanicum Fuchjij fimperniwn bortenfe Tragi, Cf Osteritium-, but the generality of Authors call it by the two first Names. In English our Common Mafter-wort. 2. Imperatoria Alpina, vel Afrantia Alpina Camerarij, Mountain Mafter-wort.*

The Descriptions.

III. *The first, or Our Common Mafter-wort. It has a Root which is something eat, and rather grows side wise, than deep into the Ground, shooting forth several heads, which taste sharp and biting on the Tongue and is the hottest and sharpest part of any of the rest of the Plant, (to which the Seed in heat comes next) this Root is blackish and the out side with several fibres or firings adjoining to it, and smells very well. From this Root spring up several Stalks of winged Leaves, divided into divers parts, three for the most part standing together, at a full foot Stalk, on both sides of the greater, and three likewise at the end of the Stalk-, each of which Leaves are somewhat broad, and cut in on the edges into three or more divisions, and all of them dented about the brims, of a dark green color, somewhat resembling Angelica Leaves at first sight, till they be better viewed, that these grow lower to the Ground, and upon*

leffer Stalks •, frsm among which Leaves rise up two or three Stalks, Which ire (hort in companion of *Angelica*, being about two feet high, and ilender, with fuch like Leaves at their Joints, as grow from the Root below •/but leffer, and with iewer divifions, bearing Umbles of white Flowers: and after them fmall, thin, flat, blackifh Seed, fomething larger than *Dill* Seed.

IV. *Thefecond, or Mountain Mafter-wort.* *The Root grows in like manner as the former, and is black on the out fide, but is more hot, fharp and biting upon the Tongue, than the Root of the firft or Common Kind.* This Plant grows alfo in form much like to the firft, but leffer in every part, having nine Leaves ftanding on each Stalk by three and three, but they are fmaller and narrower, and have fewer Incifions in them, but finely dented about the edges: The Flowers and Seed of this are alfo very like to the firft, without any material difference, unleis it be in the magnitude, thefe being fomething the leffer.

V. *The Places.* The firft grows Wild on the Hills in *Italy* and *Germany*, in Woods alfo and *Defarts*: Tue fecond was found growing on the Alps \Xi*Switzerland*: With us they only grow*, and are Nurtt up in *Gardens*.

VI. *The Times.* They are faid to Flower from the beginning of *June* to the beginning of *Auguji*, but if the Seafon is cold, and very moift, they * lower and Seed late with us, as not untill the end of *Auguf*.

VII. *The Qualities.* They are hot and dry in the fourth Degree, being hotter than *Pepper*, and of very fubtil parts. It is Attractive* Aperitive, ^arminative, Digeftive, Difcuffive, and Diuretick 5 \ephahck, Neurotick, Stomack, Cordial, Nephritick andHyfterkk-, Ptarmick, EmmenaROgick,

VIII in. Aiexipharmick. *ru v'1 sP^{ce}fication.* It is faid to cure the ^hohck, expel Sand, Gravel, and (mallStones,

provoke the Terms, refill Catarrhs, and is profitable againft the Falling-ficknefs, Hyfterick fits, the Gout from a cold caufe^ expels all forts of cold Poyfons, and heals wounds made by Poyfoned Weapons.

IX. *The Preparations.* The Root is chiefly ufed, and then the Seed for want of it, the Leaves very feldom, you may have therefore from the Root, i. A *Liquid Juice*. 2. An *Effence*. % A *Decoffion, or Infufion in Wine*. 4. A *Pouder of the Root*. 5. An *Infufwn, or Decottiion of the Seed in Wine*. 6. A *Ponder of the Seed*. 7. A *Diftilled Water of the Herb, Root, or Seed*. 8. A *Spirituos Finifure of the Root or Seed*. 9. An *Acid TinUure of the Root or Seed*. 10. An *Oily TinUure of the fame*. 11. A *Lohoch*. 11. A *Cataplafm**

The Virtues.

X. *The Liquid Juice.* It is good againft all cold Griefs, and Difeafesboth of the Stomach, and other Bowels, expels Wind powerfully both upwards and downwards: it provokes Urine-, and helps to break the Stone, and expell it from the Reins, Ureters and Bladder, and powerfully brings down the Courfes in Women, and forces away both Dead Child and After-birth: It is profitable againft Vapors and Hyfterick Fits: and being mixed with White Wine, and ufed as a Gargarifm, it attracts •Flegm, Rheum, and cold and watery Humours out of the Jaws, Gums, Throat, Almonds, Head, Brain, and other parts adjacent. Being put into old Ulcers and putrid running Sores, or Tents, or Pledgets dipt therein, and applied to the lame, as alfo into Green Wounds, it foon recovers, cleanfes and heals them > yea tho* a Gangrene, feems impending: And applied to the Gout from a cold Caufe, it gives eafe in the pain. Dofe from half a Spoonful, to a Spoonful > or more > in any proper Vehicle.

XL *The Effence.* It has 3II the Virtues of the *Juice*, and may be given in the fame Dofe and Vehicle, Morning and Evening •, befides which it itops Vomiting^ wonderfully frengthens the Stomach, caufes a good Appetite, and a ftrong Digeltion, difcuffes Wind, and gives prefent eafe in the Cholick •, and is profitable againft the Dropfie, Jaundice, Epilepfie, Lethargy, Drowfinefs and Sleepinefs, and other cold and moift Difeafes of the Head and firain: it has alfo a fingular Virtue and Power againft all forts of cold Poyfons, as alfo againft any malign Difeafe, and the Plague it felf: it provokes Sweat, and defends the Heart againft any Venom, Malignity or Infeftion.

XII. *The Infujbn, or Decoffiori in Wirle.* It has all the Virtues of the *Juice* and *Efence*, but not altogether fo powerful, and may be given from 2 to 4 Ounces, or more, Morning and Night, or as need requires, being dulcified with *Syrup of CbvegMiflowers*, 'or *Syrup of Violets*Y and ufed as a Wafh •o any putrid or rotten Ulcer, it itops the Putrifaction, cleanfes it, and induces the healing. *Tra* gus* fays that the *Decoffion of the Root in Wine*, be* ing drunk, does reftore the Ability of Generation in fuch as are Impotent, or where it is almoft extina, and this he fpeaks as a certain Truth.

XIII *The Pouder of the Root,* It has the Virtues of *Juice* and *Effence*, and may be given inwardly from II Grains fo a Dram^ mm with a little

Honey: It is good againſt Quartans, and expels the V#/#s and After birch : uſed as an Errhine, it Purges the Head and Brain of Cold Humors, and is profitable againſt Apoplex'es, Conviuſions, Cramps, Epileptics, Lethargies, Vertigo's, Megrims, and other like diltempers of thoſe parts. And inwardly taken, it excites alſo the Generative Faculty, and powerfully corrects the cold and motli habit of the Stomach and Bowels: And being ftrewed upon old running Sores, and putrid Ulcers, it corrects the Putridity, cleanſes them of the Corruption, and induces the healing.

XIV. *The Infuſwn or Decoltion of the Seed in Wine.* It has all the Virtues of the *Infuſwn or Decoltion of the Root*, and may be given in the ſame manner and the ſame Doſe. It is a ſingular Prophyla&ick againſt peſtilentialiſm, and againſt the very Iniection of the Plague it ſelf. Taken in the Morning Faſting, it comforts the Stomach, helps Digeltion, creates an Appetite, and expels Ventofities out of the Viſcera.

XV. *The Pouder of the Seed.* It has all the Virtues of the *Bonder of the Root*, and may be given to a Dram, before the coming of the Fit of a Quartan Ague (*ib* alſb the *Pouder of the Root*) for the Cure of the ſame-, it takes away the extream rigor of the cold, provokes Sweat, and prevails againſt the Dropſic: it may alſo be uſed as an Ermine, as well as the *Pouder of the Root*.

XVI. *The Dighlled Water of Root, Herb, and Seed.* It has the Virtues of the *Juice*, but much weaker, and may be given from i Ounce to 6 Ounces, it may alſo ſerve as a Vehicle to convey the other Preparations in, which are to be given inwardly. It may alſo be mixed with the *Juice* for a Gargarifm, or for a Lotion to waſh old Sores, Ulcers, OV. for it notably cleanſes and dries them.

XVII. *The Spirituous Tintfure of the Root or Seed.* Tho' it has all the Virtues of *Juice, Eſſence, infuſwn, Ponder,* &c. yet in an eſpecial manner, it rectifies the cold and moiſt habit of the Stomach, taking away all Pains and Aches there, and almoſt in a moment cures the Cholick*. And it is profitable for ſuch as have inward Bruifes, occaſioned by falls, blows, or other accidents, diſſolving the concreted Blood, and fo giving relief to the Patient. Doſe from i Dram to 2 Drams, in any proper Vehicle, Morning Faſting, and laſt at Night going to Bed.

XVIII. *The Acid TinOnre of the Root or Seed.* It is a potent thing againſt the Plague, and all forts of Peſtilential or Malign Fevers, uſed either as a prophyla&ick, or as a Curative: it prevails againſt Poyſons of all forts, and the Bitings of poyſonous and venomous Creatures, as of Mad-Dogs, Vipers, Rattle-Snakes, and other Serpents: it cauſes Appetite and helps Digeltion: is powerful ill breaking the Stone, and expeiling Gravel, both from the Reins and Bladder: it is good alſo againſt cold Catarrhs, or diltillations of Rheum upon the Thorax or Lungs, gives eaſe in vehement Coughs, and helps ſuch as are troubled with Hoarfenefs, Wheezing, (hortnefs of Breath, difficulty of Breathing. It is to betaker in all that the Patient chinks, whether at Meals, or otherwife, fo many Drops at a time as to give the Ale, Beer, or Wine, a pleaſing Acidity.

*-XIX. *The Oily Twfure of the Root or Seed.* It has the Virtues of the *Juice, Eſſence, Decoltion, Pouder, and Tintfures* *, but in particular it is good againſt Palfies, Tremblings; Numbnefs, Cramps, Invuſions, Lethargies, Colicks, Gouts of all Torts, and the Stone and Gravel, whether, in Reins

or Bladder-, provoking Urine, and giving eaſe in the Strangury, beyond many other Medicines, being outwardly anointed on the Back-bone, and other parts affected} and inwardly taken from 10 drops to 6c, according to Age and ſtrength, in any proper Vehicle. It provokes the Terms, facilitates the Birth, brings away the Dead Child, and After-birth, cauſes a good cleanſing, and gives prefent eaſe in After-pains, &c.

XX. *The Lohoch.* It is made of the *Liquid Juice*, mixt with a half part of Honey, firſt purified with whites of Eggs, and then by the heat of a Bath brought to a Conſiſtency. It gives eaſe in Coughs, Colds, Aſthma's, and moſt other Diffempers of the Brelt and Lungs, proceeding from *Cold*, and a Viſcous Flegm.

XXI. *The Cataplaſm.* It is made of the Roots and Leaves, bearen in a Mortar, and brought to the Form of a Pultife. Being applied, it is laid to cure Peſtilential Carbuncles and Botches, *znj* other like Apoſtems, Bubo's and Tumors: it *cum* Contuſions, diſcuſſes congealed Blood* and is an abſolute Remedy for the biting of a Mad-Dog, Viper or other Serpent, or venomous Creature, by ſtrongly attra&ing or drawing forth the Poyſon, *iſc.* bur this is to be linderſtood, of ſuch an Application as is made, when the Biting is newly done: applied alſo to poyſoned Wounds, or putrid Ulcers, it draws forth the Poyſon, and deſtroys the Putridity.

the Virtues and Vfes.

III. The Jirft, or Our Englifh Mat-weed. Its Roots creep in the Ground, and fifteen theynfelves firongly therein: It has divers long, hard, and very iharp pointed Ruffes, piercing their Legs who go among them that are not Booted. The Stalks have fofr. fpiked long Heads, like unto the Ears of Rye, and Blooming, like it alfo.

XL Thefe Plants are all ufeiefs in Phyfick, as having no known Medical Virtue, and alfo hurtful to Cattle!, but ferve to make Matu and Frails Withall.

IV. The jeeond, or Oar 6thér Sea Mat-weed. Its Roots creep like wife under the Ground, and are firongly faftned to the Earth, a* the others are: and this Mat-weed is in the growing like the former, but that the RulheS are brttader and (hotter, and fo alfo the Heads or fpikes*

C H A* P. CCCCLXXVIII.

Of MAUDLIN,

V- The third, or Small Mat-Weed. The Roots of Wis are likewife long, haH, and fomevohat tough, jit to be wrought into little Baskets or the like. It has fhorter, fmaller, and harder Ruffes: the Stalks are about a foot and a half high, haying finall, thin, long Spikes, and harder at the tops than the former.

T H E Names. It is called in Greek, 'Ayfi&Tov: in Latine, Ageratum: (quafi non Senefcens, vel Senefutum non Sentiehs; becaufe the Flowers thereof gathered in a fentiehs, will not wax old or decay by Age:) and in Englifh^ Maudlin.

VI. The fourth, or Our fmalleft Englifh Mat-weed. The Roots are long and yellow, like the former fmall Englifh Kind. From which rife up many fmall, flender, round Ruffes, like Threads, almoll 4 or 5 Inches long, growing thick together, among which, the Stalks which are very fmall, have fmaller Heads, and iingle-, that is confifting but of one or two fmall Rows.

II. The Kinds, Authors make about five feveral fpecies hereof, vis. i. Ageratum Diofcoridh Camerarij, Cajjtork, Durantps, Gefneri, Litgdunenfis, Matthioli^ Tabernxmontafti; Eupatorium Mefues; Balfamita fcemina, & minor, Dodomei \$ Cofir/f Hortenfis minor Gefneri; Mentha Corymbrfera minor Cordi; Camphor at a Cafalpini; Herba julia Anguillar£&Gefneri; & Eupatorium Mefues, Gefneri, Loniceri, Matthioli & Tragi; and in fhort, this is that Plant, which molt of the beft and latter Writers, or Authors affirm to be the true Agera- DioJcMdis, and the true Eupatorium Mefues, and is our Ageratum Vulgare or Common Maudlin* 2. Ageratum flore alb6, Ageratum fecundum Lugdunenfts, W Matthioli; Ageratum Floribus Candidis Lobelij-, Camerarij, Tabernxmontani, out white Flowered Maudlin. 3. Ageratum minus Lobelij, Camerarij, & Tabern^montan; Ageratum foliis non ferratis Bauhini; Small Maudlin. 4. Ageratum purpureum Lugdunenfvfi*; Ageratum ferratum Alpinum Bauhini: MofchafelU cxrulea Germanorum (but it is not the Mofchatella Cotdi) Purple Sweet Maudlin. 5- Ageratum ferulaceum LugdunefifiU; ChryfantheMm Alpinum foliis Abrotani Muhifidk, Fennel Leav'd Maudlin. This fort Bauhint/s refers to the Achillea Montana Arthemifu tenuifolia facie Lobelij, and to the Achillea Montana Lugdunenfik & TaberfarnQn* tan'u

VII. The fifth, or Spanifh Mat-weed or Frail-Weed. The Roots fpread in the Ground into many Tufts, matting therein, that in fome places they tike up two feet fquare of Gfound or more: From which rife up a number of round RuffeS, a foot and a half long, each of which is parted a little above the Ground, into 3 or 4, or more, flender, long, tough, and green Ruffes, fomething broader at the firft, being whirifh in the middle, which foon after have both their edges fo drawn together, that it makes them feem round, fo that the Partition is fcarcely difcerned, and then grow harder and whitifh, when they are dry (as we fee them in Ráifon Frails, ©V. and in the round Marts, "with which the Floors of Chambers are Matted, as they are Wrought there, and brought over here to us) from among which rife; up feveral Stalks fomething higher than the Leaves, bearing y the top a fmall long Head of many fharp pointed Husks, after which, come fmall long Seed, like unto fome other Graffes.

VIII. The Jixth, or Leffer Spanifh Ruff or Mat-weed. The Roots of this dv matt like the but grow in moifter places. From whence up the Ruffes or Frails in the very fame manner and order as the other Spanifli kind do j Thefe Ruffes are more fine and {lender, fofter al- 10, and bear a fhorter Tuft at the Top, breaking out of a fhining Husk, or Hole;

IX. TkPlaas. TheM- fcond, third, and ajurrrh, grow very well with us 'w EwIaxA\ very plentifully on the Coafts of Norfolk, and Suffolk, a? d in many other places orid the Sea Shore. And Vh r S o S them has Aeen fouild growing alfo in the of Tenet near the Sea fide, between alfo market and Sandwich: the two lait grow in Spain,

The Description.

III the frfi, or Our Comttion Maudlin fir has many Roots with Fibres adjoined^ which are long, lofting, or abiding all Winter for wmc years. It is lomewhat like to Coflmary, (of whkk

it is said to be a Kind,) and has fomewhac long and narrow Leaves, snipt about the edges *. The Stalks are about 2 feet Jiigh*, bearing at the tops many yellow Flowers fet roud together, and all in Umbles, of an equal height, much like to *Tanfie*^ after which follows fmali wfeitrh Seed, almolt as large as *Worm-Seed*^ the whole Herb, is Sweet

fcented and of a bitter taftc, and is increafedas well by flipping, as by fowing. *Gerard* fays it is fomc-thing like to *Cojlmery* in color, fmell, taftc, and in the golden Flowers let upon the tops of the Stalks in round Clutters, or Tufts.

A. ^{IV} \ I. *The jcco hd* or our* white Flowered Maudlin. *The Root .-is Jftall and Fibrous or firing* like the 'other.* It has woody Stalks, and many imall Leaves let thereon like tire other, but fomc-thing fxnaller, and leffer dented in on the edges.

At the tops of the Scalks grow many Flowers, & it were in an Umble or Tuft together, like to the former *Common Maudlin*, but in a manner wholly white, except a little Ihew of yellow in the middle. The fe^ll of the whole Plant is not fo ftrong as the other, yet very iweet and pleafant;

V. *The thirds or Small Maudlin.* *The Root is frnall and white, with many fibres adjoined to it.* It is but a fmall Plant, and has feverai hoary Stalks, not riling much above a fbot high, befet^as thick with l^eaves, or thicker than the former, upon all fides of the Stalk, or rather round the Stalk, which are fmaller, longer, narrower, and whiter than the other, and not dented at all about the edges, but fomc-thing like unto the Leaves of yel- low or golden *CaJlidotty ox Gold-Locks*^ in *Chap*, ^{^ii} *Sett*. ? . &g- 1- aforegoing. At the tops of the Stalks ftand many yellow Flowers thruft thick together in an Umble or Tuft, very well refembling the firft or *Common Garden Maudlin*, of a very good and Quick fmell, which convert into Dowiv and is carried away with the Wind. The flowers of this and the firft Kind, are very Beautiful, and will not lofe their glory in growing, till they are very old, from whence came the Name *dyk^rsv* or *dyigfrw**. *non fenefcent*, and ate like in the Tuft to *Ktiochryfon Theopbrafli*, which fome will have to be the *Gold-Locks* aforenamed, others the *Aureli*^ [^] *qmc aurea->* or *Golden Mcthiaort*,

VI. *The fourth, or Purple Sw^{et} Maudlin.* The Root is yellow, small and short, buſhing forth many ſmall Yibres, by which it takes faſt hold of the Ground. This rare and delicate Plant, has many imaii Leaves lying upon the Ground, round about the top of the Root, foſtrieth like to the Leaves of the firſt *Mdifllin*[^] above ddescribed, deſt ted in on the edges, towards their points, and not backwards or towards the foot Stalk, or iicking on to the Stalk : it is bitteriſh *vi* Taite, b^{ut} not fo bitter as the firſt cr common. From among the Leaves riſe up many ſmall Stalks[^] beſet with luch like Leaves as grow below, but ſomething ſmaller, unto the very tops-, where many Flowers Stand., one above another, every one upon a ſhort foot Stalk, conſiſting of five ſmall green Leaves, of an admirable *Vioſct* like purple color, coming forth of ſmall green Husks, of fo excellent and definable ſweet ſmell, that it much exceeds the *Violet*, and may be compared with *Musk* it ſelf. After the Flowers are pairt, ſeveral ſmall Seed Veſſels riſe up, containing in theⁿ ſmall Seed,

VII. *The fifth, or Fennel Leav^d Maudlin.* Its Root is ſomething long, I lack, and woody, rugged, and a little Wriethed, with ſeveral Yibres growing to it. It has many Fennel like Leaves, lying upon the Ground round about the Root, which (hoot forth ſeveral creftedor cornered Stalks half a Yard high, on which do grow at certain diſtances, on each ſide, one above another, ſuch li^e Leaves encompassing the Stalk at the feet of the^m, as thoſe of *fennel* do. At the tops of the Stalks ſtand large tmbles of Flowers[^] ſome of the Stalks not riſing ſo high as the others, yet all making a round compared Tuft of yellow Flowers, very[^] like to thoſe of *Ground/el* for the Form, but of a more excellent Gold yellow Color, which being gathered before they be grown to full Maturity, will abide a long time in their perfeſt Beauty: and this is that which has chiefly cauſed this Plant to be joined to the *Maudlins* for that the Flowers ^{*decay} not being gathered, For a very conſiderable Seafon.

VIII. *The Places.* The two firſt grow Wild in rough and untilled places in *Italy* and *France* -, The third on dry Grounds, and out of old Mud and iStone Walls. The fourth upon *Rocks* and *Clifts*, Where there is ſometimes but little Earth upon the Root, it growing or running many times into the Chinks, and moiſtned only by the Vapors of ſome Waters palling near it, or Dews falling on it. The laſt grows in dry and hungry Wood Lands: but with us they are all Nurft up ih *Gardens*.

IX. *The Times.* They bring forth their Tufts of yellow Flowers in the *Summèr* Months, viz. *June* and *July*, in moſt *Gardens* where they are Planted and proſper.

X. *The Qualities, Specification, Preparations, and Virtues* of *Maudlin*, are the lame with thoſe of *Cofmary*, which we have at large declared in *g Chap. 156. Sell. 6. ad 25.* aforegoing of this Book, ſo that we need ſay little moie of it in this pnce.

XL Nota. A *Compound Balfam* of *Maudlin* is thus made. Take frejb gathered *Maudlin*, *Adderſtongue*, of each. 12 *Uandfuls*: Oil Olive 1 *^j/drts*: white Wine a Pint: Boil to a *Criſpnefs*, and preſs ^{thk} repeat twice *Mòre*, ft raining out at lad ^{very gentle preſſure} : to this add Turpentine ² Ounces : Bees-wax 8 Ounces: Refin in fine Ponder 4 Ounces: mix and in a hath make a *Baljam*. Boihng till the moiſtu^r is evaporated. It is an Excellent Balfam for Burnings and Scoldings, as alfo for cleanſing, incarnating and healing old

and ruſning Sores, and rotten Ulcers, and to raife and bring up the Fleſh from a deep and hollow Wound, which things have been proved by a long Series or Number of Experiments.,

CHAP. CCCCLXXIX.

Of MAY-WEED.

O R,

Stihküig C A M O M I L.#

T H E Names. It is called in *Greek*., *Kwiv9*^εκ^εt* & *KwoCemwi*, *Cynanthemh* iff, *Cynobotanè* i. e. *Camomilla Canina* & *Canina Herba*: in *Latine*, *Cotula*: and in *Engliſh*[^] *May-Weed*.

II. *The Kinds.* There are three Kinds hereof, viz. 1. *Cotula fatida*, Stinking or ſtróng May-weed, 2. *Cotula ſion foetida*, May-weed not ſtinking, ot with out ſmell. 3. *Cotula Multiplex velfiore pleno*: double Flowered May-weed,

III. *The fir ſt, <sup>Stinking or ſtróng Scented May-weed, // has a Root which is Woody, and perifhei*

when the Seed is perfected. From whence (hoot forth round Stalks, green[^] brittle, and full of Juice, divided into many Branches, much thicker and higher than thole of our Common "Garden Camomil", the Leaves in like manner are broader, and of a blackish green color-, the Flowers are like in form and color to thofe of Camomil, but commonly larger, and of a rank fmell; the whole Plant giving alfo a rank or ftinking fmell. This grows more upright than either the Common Garden Kind, or the *nbn fectida* which follows, and ^{us} Leaves are longer and greater than it, as alfo are the Flowers, by the fmell of which alone this fort is diftingui/hed from the others-

IV. *The fecond, or May-weed* not ftinking or without fmell. *The Root of this is like the former**, and its manner and form of growing alfo: but it grows not altogether fo high, yet creeps not or runs on the Ground, nor takes Root at the Joints or Branches, as the *Garden* fort does[^] but the Léaves hereof are longer and greater than thofe of that, yet very like, but of a paler green color, having no fmell at all: the FloVvers are alfo very like to the former, and to thofe of the *Garden Kind*, but larger, both in the white row or border of Leaves, and[^] in the yellow middle Thrum: by which this fort is difcerned from that of the *Garden*.

V. *The thirds or Double Flowred May-weed*. *Tvis is very like to the firft Kind here tlefcrbed, and differs nothing at all from it, but in the flowers, which are commonly very double, and almoit as large as double Camomil Flowers.*

VI. *The Placet*. They grow plentifully Wild, in moft Counties of *England*, in *Corn-Fields*, and in, or near unto Furrows in Plowed-Lands, and by Path-ways in the borders of *fields*. The double Kind has been often found in léveral parts of *England*, growing Wild, as the Single Kinds do.

VII. *The Times*. They flower in the *Summer* McSnths, fometime in *June*, alfo in *July* and *Auguji-*, fometime earlier, and fometime later, according as the feafon of the year is kindly.

The Virtues;

rill. Thefe Plants as they are never ufed for Food, rior yet fcarcely for Medicine, fo their Medical Qualities and Properties are for the moft part unknown. Yet,

IX. *The Juice of- Effence of thejirfl, or ftinking Kind*, is Commended as *Gerard* fays, againft Difeafes of the Womb, and Hyfterick Fits, and therefore may be profitable againft Vapours, and other fainting Fits and Difeafes of like Kind. Dole a Spoonful or two in a Glafe of fair Water, or in *Angelica* Water, 01 in fome other fit Vehicle.

X. *The Qintment and Catapka made of the Herb.* They are faid to be good to diflblve Tumors or Swellings-, to difcuis Wind[^] and to eafe Pains and Aches in the Joints[^] epecially being made of the Stinking Kind, and applied Morning and Night to the parts afte&ed.

MEDOW-PARSNIP, y[^] Parfnep-Cow, Chap. ' "

C H A P . GGCLXXX.

Of MED £ - S W E E f *

5 R,

Q. U E. E N of the Meddows.

I. [†] *BE Names*. It is thought to be unknown to any Ancient *GretJb* or *Latine* Author[^]: but later Writers call it *Ulmia* * *foliorum Ulmi fimilitudine*, from its likenefs to Elm Leaves[^] in *Englifb*, *Mede-fweet*, *Meddow fwrt*, and *%ueen of the Meddows*!

II. *The[^] Kimls*. There are two Species hereof, viz. 1. *Ulmia* *Vulgarit* *ReginaVraU Dodon/i*; *Barb a*, vel *Barbula Capra*, or *Barb a Caprina* *Tragi* *Barb a Capri FuchfijyBarbi Capra Lobelij \$ Mede-fufwm Cordi*, our Common *Mede-fweet*, or *Meddow-fweet*: fome have thought it to be *Rodora Plinij*, but that cannot be pofitively affirmed: *Tragas* thought it might be* *Picnoco** *ition Diofvoridh*, as did alfo, *Gefner in hortis £>* *Lonicerus*. 2. *Ulmia* *?najor, five altera, Poterilla major prima Anguillara**, *Argentina major Thalij*, The Greater *Mede-fweet*, or *Meddow-fweet*. *Lugdunenfis* fays, fome took it to be *Melandrurti Plinij* [^] and fortie call it *Drymopogon** *Carnerar'uts* fays the *Germans* call the firft *Wornkraut*, Worm-wort; becaufe lays he, the Root is often found \ as if it were eaten by Worms: but it is more likely, from its curing Horfes of the Botts and Worms, for which purpofe the Country people ufed it.

The Defcriptions;

III. *The firft, or Our Common Mede-fweet*. // *hds a Root* which is fomewhat Woody and blackifh on the Out fide, and brownifh zwithin, with feveral greater Strings, and Icifer Fibres adjoining; of a ftrong fmell, but nothing fo f leaf ant as the flowers or Leaves[^] it perijhes not in Winter, but abides many Tear's, fhooting forth a new every Spring: Its Stalks are reddifh and eafy to break, riling to be 3 Feet high, and fometime to 4 or %; having at the Joints thereof large winged Leaves, ftamling one above another at Diftnces *, which are made of many ibmewhat broad Leaves fee on each fide of a middle Rib, being hard, rough, or rugged, and Crurpled much like to *Elme* Leaved from whence it took its Name[^] but having alfo lbme fmaller Leaves with them, like as *Agrimony*

has, ibmething deeply dented about the edges, of a fad green color, on the upper fide, and grey-
ifh underneath* of a p^fety fharp fmell and' tafte,
very like unto *Burnett* and will no lefs give a fine
relifh to a Glafs of Wine, if a few Leaves there-
of be put therein. At the tops of the Stalks and
Branches, ftand many Tufts of imall white

Flowers, thruft thick together, which fmell much
fweeter than the Leaves * which 'being fallen, in
their places come crooked and comered Seed,
crookedly turning or winding one with another
and fo making a fine little Head.

. IV. *Tlx fecond, or Greater Mecle-fweet, ar*
Meddow-fweet. *The Root of this is more Woody*
than the former, with many blackjh firings, which
Jmell firong, and tafte fomevobat barjhly. This Plant
grows higher than the former, with longer winged
JLeaves, fet one above another upon the Crefed
browmfh Stalks, having long foot Stalks support-
ing them-, each being ufually divided into three
parts, the two loweit one againft another; and
every part alfo confifting of three or five fmaller
i-eaves than the other, feparace each from the fcher,
toeing hard, crumpled and finely dented about the
edges, at the tops of the Stalks grow the Flowers
in longer Spikes, more fparedly and not fo thick
thruft together, turning down their Heads, which
are white like the former, and fuelling very fweet
more nearly refembling a *Goats Beard*, (which
ie fome Authors have given to it) than the
kind here defcribed. *Gerard* fays, it lia
the bignefs of *Wild Angelica*, and grow
atter the manner of *Wild Angelica*
are crefed and divided into feveral
which carry long bending Spikes of
Flowers or Seeds, each fingl

Flower and Seed being fomething like the for-
mer.

V. *The Places.* The firft grows in moift *Medows*
which ly much wet, or neat *Watercourfes*, as the
fides of *Rivers*, and watery *Ditches*, tilmoft every
where. The fecond grows in Woods, *Copfes*,
and fhady places in *Germany* and other Coun-
tries, but here in *England*, only in *Gar-*
vens.

VI. *The Tims.* They are found in Flower
thruh all the three *Summer Months*, viz.
June, July, and Auguft, and their Seed is ripe
in fome fhort time after.

VII. *The totalities.* *Mede-fvocet* is temperate
in refpeft to heat or cold, but dry in the firft
Degree. Abfterlive, Aftringent, and Traumatick,
ot *Vulnerary*-, *Cephalick*, *Neurotick*, *Stomatick*
and *Hytterick*.

VIII. *The Specification.* It Hops Bleeding, and
cures Fluxes of the Bowels of all forts, flops the
Whites and Terms in Women, and gives eafe In
the Colick and Gripings of the Guts. And heals
Wounds and old Ulcers.

IX. *The Preparations.* You may make from
either Flowers, Leaves, or Root, or from all of
them, t. A *Liquid Juice*. 2. An *EJfence*. 3. A
Decoffion or Infufwn in Wine. 4. A *Pauder*.
5. An *Oil*. 6. An *Ointment or Balfarit*. 7. A
Cataplafm. 8. A *Diftill'd Water*. 9. A *Spirituous*
Tintfxre. 10. An *AcidTmtfure*.

The Virtues.

X. *The Liquid Juice.* It flops all forts of
Fluxes, Bleedings, and Vomitings, as alfo the
overflowings of the Terms in Women, and the
Whites. It is laid to alter and take away the
fits of *Quartane Agues*, eafes the Gripings of the
Guts and moves the Belly downwards. Out-
wardly applyed it heals old Ulcers, which are
cancerous or eating, and fills up fitulous or hol-
low Ulcers with Flefh, and cures Sores in the
Mouth and fecret parts. Dofe from 2 to 6
Spoonfuls Morning and Night, or oftner in any
Convenient Vehicle.

XL *The EJfence** It has the Virtues of the *Julce*
and is more powerful to all the Intentions before
fpecified, and is only to be given from 1 to 3 or 4
Spoonfuls in any proper Liquor, Morning and
Night. It is Cordial and very much Cheers the
Heart*

XII; *The Decoffion or Infufwn in wine.* They
have the Virtues of the *Juice* and *EJfence*, but
may be given from 2 to 6 or 8 Ounces, fweetned
a little with white Sugar: It is very *Stomatick*,
ftrengthenes the Bowels, and caufes a good Ap-
petite.

XIII. *The Pouder.* It has the Virtues of the
former *Preparations*, taken from half a Dram to
a Dram in any proper Vehicle: if mixt with
Honey and taken, ir is good againft Coughs,
Catarrhs, Colds, Wheezings, Hoarfnefs, Shortnefs
of Breath, and difficulty of brearhing. Strewed
plentifully upon old, moift and running Sores
and Ulcers, it dries them, and induces a fpeedy
healing: it is alfo laid to kill Worms in Qiil-
dren.

XIV. *The Oil by hfohtioh or Boiling.* It eafes
Pains being applyed, and ftrengthenes weak Joints,
which have been lately Set, or where the Bones
have been Broken;

XV. The Ointment or BJJJWL It digests, cleanses, and induces the healing of old running Sores, putrid Ulcers, Fiftula's and the like, and breeds Fleth where it is wanting^ Apply'd to parts or; Joints pained with the Gout, it cafes, them.

XVI. The Catjplafm. Made of the green Herb, and laid upon the Skin, it will in a ifnall time (as Tragus fays) raife Bliiters thereon. Apply'd immediately to the Biting of a mad Dog, or Stinging of a Scorpion, Hornet, t^V. it draws out the Poyfon and gives eafe.

XVII. The Drilled Water. It has the Virtues of the Juice, but nothing near fo powerfull: and being dropt often into the Eyes, it eafes their pain, and allays their Heat and Inflammation. It may alfo ferve as a Vehicle to take fome of the other Preparations in.

XVIII. The Spirituous Tinfure, It is Cordial, ftrenghens the Stomach and other Bowels, flops Fluxes of all kinds, caufes an Appetite and good Digeftion, and is profitable againft inward Bruiles : and gives prelent eafe in the Colick.

XIX. The AcidimSure. It mightily ttrengthens the Stomach, and caufes a good Appetite 5 and Hops Vomiting tho^ of long continuance. It may betaken in all the Patient Drinks, whether Ale, Beer, or Wine ; fo much at a time as to give the Liquor a pleafing fharpnefs *, and that as well at Meals, as between Meals.

IT. The Kinds. "Authors have given us fourteen or fifteen feveral fores of this Plant, but the mect of them being unknown and not growing in England, nor in our Englifh Plantations beyond Sea , we /hall only defcribe the four following Species,^, i. Melilotus Vulgar is, Me/Hotix mapr Vulgar k Tragi, Melilotus Germanica CameranU & Dodonti; & Lobelij; Trifolium Odor at urn T7^ //; & Dodomei *, Lotus urbana & Jativa Matthioli, v Lugdunenfis; 4i.ixifraga Lutea alt era, Fuchft) V Loniccri: but Serta and Sertu/a Campana,xhe old La-//^Name, is now quite out of ufe: CommoL Melilote. 2. Melilotus Floredbo ; Melilott & major Candida Tragi,h Lotus Sylvejiris Wore albo Dalechampt) white Flowered Melilote. 3. Melilotus IraM? Camerarij*; Melilotm Italien folliculis Subrotunits Bauhini, Italian Meliote. 4. Melilotus Syria?*; Meliloti vulgar is Speties tertia Tragi -, Mehwf* Italic a Dodonti, Fuchfij, Gefneri, Cf MatWi^h Melilotus Syriaca odor a Lobelij, (becaufe 'r, 'r, 'r, 'r from Aleppo, as he fays, but is ufed in 'r, 'r, 'r the true Melilot, and therefore called by 'r, 'r Authors, as aforefaid, Melilotus Italica -, and }r, 'r Tragus thinks to be the Melilote of Serapto^f Aflyrian Melilote.

The Defcriptoins,

UI. Thefirjl, or Common Melilote. // has * Root which is long, white, and tough, or pliant, wfo feveral Fibres or firings adjoining thereto, tvhich dies not every Tear: From this Root rifes up feveral weak green Stalks, abbut two orthrefeej high-, on which grow longifh Leaves, fet round about at the Joints, three always fet together like a Trefoil, of a frefh green color, and fomewhat fweet fmeling, being unevenly dented or fnipt about the

T... elick: in Greek, MIAJA<T@-- quafi lotus, ffrom Lotus, which fmells sweet... Melilotus : and in Englifh, Mote. This Plant was anciently called in... from its growing in Cam- Panama, where they ufedtoput it in Garlands: alfo... because the yellow Flowers Crown... of the Stalks: and Trifolium Odoratum, ...ewicfs, but improperly, te- oTr^h Tr^oll nOdoratum, truly fo called, is... Garden 7 reoil^ of which we ihall fpeakhere-... It is alib called Tnfoli-... VQalallinum, becaufe Horfes delight... with it: and fo in many... is called Uirt-Oaver (from... feeding on H and ^... but it ys generally called... being the Nobleft and... or three Leaved Graffes:)

flood. W moit ufed^ and indeed beft under-

edges, and oftentimes eaten about the lame. Out of the bofoms of the Leaves come final! {lender j in the Counties aforementioned. It grows between Stalks about a handful long, fet thick on their tops with little yellow Flowers, hanging down and turning up again-, each Flower being composed of two little yellow Leaves i, of which the uppermoft turns up again * and the undermoft feems to be parted into three : they are made much like other Trefoils, but fmall and Handing in long Spikes, one above another for a hand breadth or better: which being paf away, turn afterwards into long crooked Cods, in which is contained the Seed, which is brown and fomewhat flat.

IV. *The fecond, or white Flowered Melilote.* Its Root is tough, white and flender, with many firings or threads adjoining, perijhing commonly after it has given Seed, but Springs up again of its own Sowing^ Howe ring the next year after its fpringing, or after the Seeding. This Meliote is very like the Former, but has more Woody Stalks, rifing up higher, greater, and with fmaller green Leaves, fmelling much like the former, but weaker. The Flowers grow alfo in long Spikes and more in Number, of a white color, and leffer alfo, which turn into fmall round Heads, and not crooked like the other.

V. *The third, or Italian Meliote.* Its Root is [small long and Woody, perijhing every year, and feldom rifes again of its fhed Seed, but muji be new fown every Spring. It has feldom mote than one firing from its Root, which quickly grows and a little Woody, fet here and there three Leaves at a Joint, which are much larger than the former, and the end Leaf larger than the other two, fomewhat unevenly waved or cut in on the edges, of a fmell almoft as ftrong as the firft, but fomewhat more pleafant. At the tops of the Stalks grow many Flowers, fpikefafhion, but of a more deep yellow color, and fomewhat larger alfo than the firft, which turn into round whitifli Heads, greater than the laft. Which ufually contain but one Seed or grain apiece.

VI. *The fourth, or Aflyrian Meliote.* Its Root is woody, and perijhes every year, after it has given firings. It rifes up with feveral Stalks about two feet high, fet with Joints: at every one of which are three Leaves, fomewhat larger than thofe of the firft, but not fo large as thofe of the laft or third defcribed, and a little dented about the Edges. The Stalks fpread themfelves forth in Branches towards their tops, on which grow many pale yellow Flowers, fet in order one above another^ as in the former, which turn into fmall, long, and fomewhat crooked, a little crooked or bending at the end like Hawks Bill, in which is attained the Seed. The whole Plants as well Flowed as Leaves and Joints are very fweet at their firft bringing * of Afia^ or Syria, into Europe, but gradually grew every year weaker and weaker, fo that as it has not now near half fo good a find as formerly. This Kind *Pena fays*, is ufed in the head of the true Meliote (which is the firft I write of in this Chapter) < * that there is great difference in growing in that Country.

The Places, The firft grows plentifully in the edge of Suffolk, and in Eflex places, alfo in huntington-Jhire, Cambridg and the JJJe of Ely ; but molt ufually in the corners of Meadows ; and among the Corn it felf: and that it grows not more plentifully in

any part of the World, than in England, efppecially in the Counties aforementioned. It grows between Sudbury in Suffolk, and Clare in EJjex, and from Clare to hennmgham, and from thence to Ovendon, Pulmatr and Pedmarfh, where many Acres of Ground are overgrown with the fame, fomuch, as that it becomes almott an annoyance both to the Land and Corn, generally overloading that part of the Shire. The fecond grows not Wild with us, but is Nurfed up in Gardens; ia Germany it grows plentifully as the other does. The third grows in Italy. And the fourth in Syria about Aleppo, from whence it was brought to Venice, and thefe two laft grow here alfo in Gardens, as the fecond does.

VIII. *The Times.* They all Flower in the Summer Months, in June, July, and Auguft, and their Seed is ripe quickly after.

IX. *The Qualities.* It is hot and dry in the firft Degree ; Aftringent, and Maturative, and yet withall Difcuffive, where Suppuration cannot be expected, alfo Traumatick or Vulnerary, Diuretick, Nephritick and Lithontti prick.

X. *The Specification.* It difcuffes Tumors,* heals Wounds and Ulcers, provokes Urine, expels Stone and Gravel, and cleanfes the Reins, Ureters and Bladder of Fituitous Humors and Tartarous Matter,

XI. *The Preparations.* You may have herefrom, 1. A Liquid Juice. 2. An Effence. 3. A Dfcottion in Wine or Water. 4. A Vinegar. 5. An Infolated Oil. 6. An Emplafier fimple. 7. An Emplafier Compound. 8. A Balfam. 9. A Cataplafm. 10. A Difilled Water.

'the Virtues

XII. *The Liquid Juice.* It cogitbrts the Stomach and Bowels, and is good to ftop Fluxes of the Bowels. Dropt into the Eyes it is finguiar good againft Pains and Incarnations there, and to take away Clouds, Films er Pannicles growing upon the Sight, and to ftrengthen the Eyes. And it is effeftual W be given to thofe who are in fear of an Apoplexy, or have fuddenly loft their Senfes by a Paroxyfm, to ftrengthen the Head and Brain, and reftore the Memory, the Head being alfo externally bathed with the fame. Dofe 2 or 4 Spoonfuils in a Glafe of Wine Morning and Night.

XIII. *The EJfence.* It has all the Virtues of the Juice, and may be given from one to three Spoonfuils in fome proper Vehicle. Dropt into the Ears it eafes their Pains, and dropt into the fore and running Eyes, it ftops the Flux of Rheum. Applied to hard Tumors or Swellings, it difcuffes and foftens them 5 and is profitably applied to fimple Contufions.

XIV. *The Decolion in Wine or Water.* Bathed upon the Head it gives eafe in the Head-ach: fpreading Ulcers being waifed therewith it cleanfes and diys them. The Decoijdn of the Flowers with Qamvmil in Mutton Broth, and ufed with Wine and Drank, it is good to ftrengthen the Memory.

YmV. *The Vinegar.* It is admirably difcuffive, eafe Pain and difolves Tumours by bathing the part affteted therewith: and fo ufed, it comforts the Head, Brain, and Nerves: It difolves Hafdfnes, difcuffes Wind, and Tumors of the Spleen, Liver, and Belly,

Belly, and Hypochonders, mightily easing the Pains of thole Parrs.

XVI. *The Infolated Oil* It mollifies hard Tumors and Incarnations, dilcusses Swellings in the privy parts of Man, or Woman ^ it is a molt Sovereign thing both for green Wounds, and old Sores, for Tumors, Cramps, Convulsions, Pains and Aches in any part of the Body whatsoever, whether in the Muiculous or Flefhy parts, or among the Nerves, Tendons, Veins, Arteries, Cfc. It is made of the *Flowers and Her I? with Oil Olive\ Infolated, vr boiled in Balneo, and then firained forth, repeating this with freflo Herbs and Flowers three times.*

XVII. *The fimple Emplajier.* It is thus made, *Take green Meilote cut fmall 5 Pounds % pure Ho fin 8 Founds 5 yellow Wax 4 Founds ^ Sheep fuei 2 Pounds 5 Turpentine 1 Found h mix, boil, firain out, and make an Emplajier according to Art.* It ripens Tumors, breaks and cures rhem, draws, cleanies and heals Wounds admirably in any part oi the Body^ only be cautious of applying it to Wounds of the Legs, or other depending parts, for fear it fhould caufe a flux of Humors, not eafily to be diverted.

XVIII. *The Compound Emplajler.* *Take Flowers (f/iM/of 6 Ounces: Gmm'/t/ovivtrs, Seed, Bay Berries, husked, Althaea. Roots, Tops of Wormwood and Marjerom, of each 3 Drams.: Seeds of Far fly, BifhopsweedandCardavs, Rootsof Urrice, Cyperus and Spicknard, CaJJa lignea, of each a Dram and half. Attoniacum 10 Drams; Storax Calamita, Bdelium, of each ? Drams: Turpentine an Ounce and half: Pulp of fat Figs, N° xij: Goats Suet, Rofm, of each 2 Ounces and half: Wax 6 Ounces: Oils of Sweet Marjerom and Spicknard, of each 3 Ounces: Beat thofe things which are to be beaten j Bxtratt thofe things-which are to be extracted, as the Pulp of Figs, Althra Roots, and fenugreek', &c. Diffolve the Ammoniacum and 'Bdelium in Vinegar, &£. Then mix and make the Emplajier according to Art, adding the Oils of Sweet Marjerom ajid Spicknard, towards the end of the Operation. #It is Maturative, Emolient and Anodyn, draws, cleanies and heals, Itrengthens the Stomach, Liver, Spleen, and Bowels, difcusses Wind and Tumors, helps Hypochondriack Melancholy, Vomiting, Indigeition, Rickets, &c.*

XIX. *The half am.* It is made by *boiling the green Herb bruied 2 Pounds, in Oil Olive 3 Pounds, to Crifpnefs, then flraining out, and renewing this Work three times: at length to every Found of the ft rained Liquor add Bees Wax half a Found \ Chio Turpentine, Balfam Capivij, Gum Elemi Ext rafted, half am of Peru, of each 4 Ounces: mix and cornpleat the Balfam.* It heals green Wounds commonly at the firft intention, and many times at one dreffing: It digefts eating Lllcers, cleanfes putrid tunning Sores, incarnates, dries and heals-, eafes Pains in any parts, chiefly of the Nerves and Tendons, and cures the Gout, being fitly applied.

XX* *The Gtaplafm.* It is made of the *Flowers and Leaves boiled in Wine, and brought to a Conffency with Meals- of fenugreek and Lin Seed, or Barly flower, or Poppy Seed beaten foft and fmall, vr Yolks of Eggs boiled hard.* It foftens all hard Tumors and Inftimations in the Eyes, Nerves, Tendons, Muicies, £?c in any part of the Body, Fundament, Tefticles, or private parts of Man or Woman ^ ripens and breaks Apoftems, flops .the courfe of eating and fpreading Ulcers, refills the P^u£^ity, digefts and eafes the Pain, ©V.

The Diftilled Water. Ir ^ made of the Herb and flowers, by an Alembick with a naked*

fire, or in Balneo. Some ufe it as a Perfume; but mixt with an equal quantity of common Spi^r fit of Wine, it makes a *Collyrium*, which dropt into the Eyes, cools, takes away Inflammations, and hot Rheums, clears the Sight, eafes the Pain, and itrengthens the part, thereby preventing any new or future Fluxion of tumors to the fame.

C H A P. CCCCLXXXH-

Of MELON . Garden:

☞ ☞

P O M P I O N . Garden*

L ^Tpi/f Names. It is called in Greek, *Million*, and *Pompion*.

II. *The Kinds.* There are four principal of this Plant, viz. 1. *Pepo Hortenfis*, the Melon or Pompion, of which in this 2. *Pepo Sylvefirik*, rhe Wild Melon, or Pompion of which in Chap. 483.- 9. *Melopepo, Melo M^o chat us*, the Musk Melon, of which in Chap. 484: 4. *Melo vel Pfpo aquaticus^ Citrullus*, the Cit^u or Water Melon, of which in Chap. 485: follow^g ing-

III. *The Kinds of the Garden Melon or Pompion** There are thefe following Species, viz. 1. *Pepo maxima oblongw*, the great long Melon or pompion. 2. *Pepo maximits rotiwdvvs*, the great round Melon or Pompion. 3. *Pepo maximm compreffui^* the great fiat bottomed Melon or Pompion. 4. *Pepo maxi7nus clypeatus*, the great Bu^z Melon or Pompion. ?. *Fepo minor, five nus*, the fmaller or Virginian Melon or called alfo *Virginian Macock*.

The Defections.

IV. *The fir^u*, or Great long *Uzlon* or *PomPion*. Its Root* of *hæb bignefs f of MilanThimkk* of *larger, difperfed under Ground, with many ft^l hbres thereto adjoinèd.* From this Roor coBf forth thick and rough prickly Stalks or Branch^ which creep upon the Ground, if nothing is *it to take hold of, otherwife with its Tendrels, it climbs upon iuch things as are it, as Poles, Arbors, Tales, Hedges, Shrubs,* upon which gear, ribbed, rough Branches, very large, rough Leaves, cut in on the with deep gadies, and dented alfo round like a Saw , with many, Clappers, which about ^my thing they meet withall The &^

Mt and large, hollow and yellow, like unto
 up, divided in the brim into five parts or
 ponits Handing out like Teeth. At the bottom of
 which, fas is in all the reit) grows up rhe Fruit,
 which is very great, thick, round, and long, or of
 an Uval form, fometimes of the bignefs of an
 ordinary Mans Body, f_et round with bunched Ribs
 in Ipme, and more plain and fiat in others. The
 Kijde is either of a green, or grey, or yellow
 veuct* or vvhmfh, or party colored > as Nature is
 Healed to vary it, and of a mean hardnefs. The
 Harder pulp of the Fruit is yellowifh, or of a
 yvrmih ydb'.v. and of a flatucnt tafte: but the
 winner pulp within thar.. lying in the middle, is of
 -Mirny, Hbrpus, and Watery SuMtance, in which
 the Seed is contained, which is white, large, broad,
 flat, thin, and almoft Oval, but fomewhat narrower
 end> an*i* of a fiveet or Milky.

Great round
 inhsRcot,
 ana Llapino Ten ire Is

the Stalks arc tenderer. The flowed are in like

manner yellow, gaping, cornered or pointed at the
 as thofe of the former, but the Fruit is fome-
 thing rounder, fometimes greater, and fometimes
 feller, and often times of a green color, with an
 harder Bark, and fometimes now and then
 joffer and whiter. The harder pdlp within is
 like the other, and the Seeds have alfo the
 wne form* with vetjr little difference in their
 Magnitude.

Greatflat Attorned Melon or
 This differs not much from the other
 Stalks* or *r«ches> and in
 Uaveu The Flower is alfo
 like thofe of the others: but
 (which is of a great bignefs; is com*

prefed or flat bottomed, and its Rinde is full of
 little hilly Whelks, not much unlike to thofe of
 die Citron Rinde or Peel> which when it is-ripe, is
 in like manner, yellow.

Vil. The fourth[^] or Great Buckler-like Melon,
 or Pompion. This very much differs from the
 others in form) the Roots, Stalks, Leaves[^] and
 blowers, are mirch like the others [^] but the Fruit is
 not long nor globular, but altogether broad, and in
 a manner flat, like unto a Shield or Buckler, thick-
 er in the middle, but thinner in the circumference[^]
 and curled, hilled, or bumped, up and down about
 the edges, like the rugged or uneven Peel of the
 Citron : and this Rinde is very loft, thin and white*
 The folider pulp within, is hard and durable, and
 the Seed in form, color, and talte, like the former
 Kinds, but fomewhat lefs.

VIII. The fifth, or Smaller or Virginian Melon
 Qt Pompion. Its Foot eonftis of many vohitijb
 Branches, creeping far abroad in the Earthy which
 perijt) at the Jirft approach of Winten From
 whence fpring up rough cornered or ftraked
 Branches, trailing upon the Ground^f, 8 or 9 feet
 long or longer, which fpre&d themselves and run
 upon the furface of rhe Earth, and are again di-
 vided into other Branches of a blackifh green color,
 covering and taking up a great deal of room, fend*
 ing fbrth broad, cornered rough Leaves, on great,
 grofs, long, rough, hairy foot Stalks* like and full
 as large as the Leaves of the firft or common Melon
 or Pompion[^] with clafping tendrels, and great,
 broad, fhriveled, yellow Flowers, like to thofe of
 the common Pompion. After them corhes the Fruit,
 upon the Stalks,, not commonly fo near the Root*
 but towards the tops or ends of the Branches; fome-
 thing round, and not *extending in length, but flat
 like a Bowie, and not fo big as an ordinary Bowie,
 being feldom above 5 Inches in thicknefs or length,
 and 4 Inches In breadth; of a blackifh green color
 when it is ripe. The eatable pulp is of a whitifh
 yellow color, containing within that, a great deal
 of a thinner, foft, flimy, fibrous Subftance, in
 which the Seed lyes in certain rows, like that
 of the firft or common Pompion, but much
 fmaller.

IX. The Places. They are all planted in Gar[^]
 dens- in England, and other Countries, and delight
 in a rich and fruitful Soil, and even in our Country
 they come to great perfe&ion.

X. The times. They are planted in the lat-
 ter end of March, or the beginning of April:
 Flower in the latter end of July, and Auguft[^]
 and their Fruit is ripe in September and Ofo-
 her.

XI. The Qualities. The Fruit (which is that
 which is chiefly made ufe of; is cold and moift in
 the fecond Degree * Abfterfive, Anodyn, Diuretick,
 Lenitive, Nephritick, and Lithonriptick.

XII. The Preparations. You may have here*
 froffi. 1. A Liquid Juice of the Bruit. 2. The
 Pulp of the fruit. 3. Aft Emulfion of the Seed.
 4* A Cataplafm rf the Pulp. \$* A Drilled Water
 of the Yruit,

The Virtues.

XIII. The Liquid Juice. Given from a
 full to two, in the Diftilled Water, and
 with Syrup of Clove-Gilliflowers, it quenches
 the violent heat of Burning US 5
 the heat and inflammation of th< Stomach and th< S
 U u u u ,

Bowels, prevails against the Scurvy in a hot habit of Body, provokes Urine, and gives ease in dig* Stone and Strangury^ being taken Morning and Night. It is alib good against Vapors, and & *flatus*, proceeding from the Spleen or Diftemper of the Hypochonders.

XIV. *The Pulp of the fruit*, it is never eaten raw but boiled, for fo it more easiily defeends, and by its lenitive property, makes the Belly Soluble. It has all the Virtues of the *Liquid Juice*^ and being crelt with Butter, Pepper, Salt*, and Vinegar, it may be eaten in quantity, according to pleafure: it nourishes not much, but being boil'd in Milk, and eaten as aforefaid, it makes a good and wholefome Food, cooling and grateful to a hot Stomach, and inward parts which are inflamed. The fame Pulp sliced, and fried in a Pan with Butter, is also good and wholefome but Baked in an Oven with Apples, it is very flatulent or windy, unlpfs it be fo often Baked, or in fuch a violent hot Oven, that the Pulp becomes red, then it looses its windy property, and becomes very wholefome, with an Emollient and cooling property.

XV. *The Emulfion of the Seed*. It has the Virtues of the *Liquid Juice of the fruity* but cleanses the Reins and Bladder much more, and more powerfully provokes Urine, being very good for fuch as are troubled with the Stone in the-Reins: It is an excellent thing against the Strangury, takes away the heat and folding of the Urine, and cures the pitting of Blood.

XVI. *The Cataplasm of the Pub*. Applied to pained Joints, and parts affected with the Gout it gives ease, and difcusses the Humor,^ abating the heat. It is good against Inflammations, and difcusses simple contufions being immediately applied to them. It also gives ease in the vehement pain of the Head, proceeding from heat and Inflammation, and takes away the Inflammation and Blood-heat of the Eyes.

XVII. *The Distilled Water*. It is good against an Eryfipelas by bathing the parts affected often therewith, and applying Linnen Cloths four or fix times double thereupon, wet in the fame. Taken inwardly, it has the Virtues of the *Liquid Juice of the fruity* and *Emulfion of the Seed*, and may serve as a Vehicle, for conveying other Medicaments^ in, appropriated to the Reins and Bladder: mixed in equal quantities, with a Spirit drawn from Sugar, it makes an incomparable Eye Water, to ease the pain of the Eyes, fop Rheums and Defluxions, take away Inflammations and Blood-heat, to heal Ulcers and Sores therein, clear the Sight,^ and strengthen the part against any future Defluxions.

C H A P. CCCCLXXXIU.

Of MELON - WILD.

OR,

POMPION-WILD.

I. *HP HE Names.* It is called in *Greek*, *«yuc<: fa ^atime Meh w -* *Sylvtjirts*: and in *Englifb*, *Wild Melon* or *pwn*.

II. *The Kinds*. There are two forts of this *Greater Wild Melon* or *Pompion*. 2. *Mb vel* *Pompion* or *The Leffer Wild Melon* or

The Descriptions.

III. *The Jirft, or Greater Wild Melon* or *Pompion*. *It hat a Root which is thick, round andjharp pointed, having feveral fibres adjoing to it*. From which come forth rough, uneven Stalks, fet with fharp, thorny Prickles; The Leaves are also rough, and jagged or much cut in on the edges, of an unpleafing green color, and the Flowers are of a yellow color much like thofe of the *Garden Kind*. The Fruit is thick, round, and long, almolt of an Oval fafhion, fharp pointed, and having a hard green Rind, whofe firft Pige or Meat is hard like the others: but the middle Pulp foft and flimy, in which is contained the Seed, which is like that of the *Garden Pompion*, but the whole very bit-

IV. *The fecond, or Leffer Wild Melon* or *Pompion*. *This in its Root, Stalks, Branches, Leaves, -Flowers, Fruit, Seed, and manner of growing, is very like the former but not*} defcribed, and differs from it only in its Magnitude, this being every ways much lefs than it.*

V. *The Places*. Thefe Plants grow Wild in *Burbarry*, and moft parts of the *West-Indies*^ but with us in *England*, they only grow (being Sown) in *Gardens*.

VI. *The Times*. They fpring up and Flower in the fame Seafons, with thofe of the *Garden Kinds*.

VII. *The Qualities*. Thefe *Melons* are hot and dry in the third Degree, and are very bitter: they are also Abfterfive, Hyfterick, and Cathartick.

VIII. *The Specification*. They are peculiar for the curing of Dropfies and the Kings Evil: and to provoke the Terms in Women.

IX. *The Preparations and Virtues*, of thefe *Wild Melons* or *Pompions*, are the fame with thofe of the *Wild Cucumber*, in *-Chap. 4.79-^m SeS. o, ad 27.* where you may have abundant fatisfadion.

X. *3333*

X. *Nota.* If into the Shell or Rind (after the Pulp or Substance of the Seed is taken forth) you put in White *Port* or *LATW* Wine, and it let remain therein fo long, till it becomes bitter, it admirably purge the Belly, and will educe Pituitous, Choleric, and Watery Humors, and carry off the the Morbifick caufe of the *Droffy. Sarcites*, or *Anafarca*, as alfo of the Kingg'Evil and the Gout.

XI. *The Infpiffate Juice of the Fruit.* It has the fame Operation with that of *Elaterium*, or *Infpiffate Juice*, or *fecula* of the *Wild Cucumber*; and may be very well ufed in place thereof, for all thofe Difcafes to Which the *Elaterium* is applyed^ but I am apt to believe it muft be given in a larger Dofc, viz. in full the Double quantity.

CHAP. CCCCLXXXIV.

Of MELON - MUSK.

I. *Names.* It is called in *Greek*, *Μελών* (which fignifies an Apple: and therefore fome Authors have called it) *Μελώνιον*, *Melopeon*: (or *Pepon* fmelling like an *Apple*;) in *Latine*, *Melo*, *Melopepo*, *Melo mofchatus*, and *Melo Mufchatellinus*: in *Englijh*, *Musk Melon*.

II. *The Kinds.* Authors make four Species of this Plant, to which we (hall add a fifth, growing in *America*, viz. 1. *Melo*, vel *Melopepo vulgaris*, Our Common Musk-Melon. 2. *Melo Hispanicus*, the Spanifh Musk-Melon. 3. *Melo Pyrifonnis*, the Pear-fafhion'd Musk-Melon. 4. *Melo Saccharinus*, the Sugar Musk-Melon. 5. *Melo Americanus*, vel *Floridianus*, *Melo Carolinianus*, vel *Virginianus*, the American or Carolinian Musk-Melon.

The Defcriptions.

III. *The firft, or Our Common Musk Melon.* It has a long Root with many Fibres at it, running not very deep into the Earth, but in a great ryeafure wider the upper cruft of the Ground. From this Kootthoot forth Stalks, Branches and Leaves, much refembling thofe of the *Cucumber*, both in the manner of growing, and in its trailing Branches, which are rough, with rough uneven Leaves, yellow Flowers: after which come the Fruit, which is rounder, thicker, bigger, and rugged, like any *Cucumber*, and fpotted on the out fide, with a ruffet color, and green underneath, which will change a little when it comes to be full, and will change a little when it is ripe, being deep furrowed and ribbed, and fometimes without Ribs, and having many times the Rind in fome places of the Rind, which is only eaten: The Pulp

within that, is very foft, flimy, and watery, and of a pretty deep yellow color, in which is contained the Seed, which is fomewhat larger and yellower than that of the *Cucumber*. The Fruit coming to be of a ftrong fweet fmell, and changing its color, either to yellownefs, or a green yellow, (hews its coming to ripnefs: but it requires much watering in the hot time of the day, to induce its fooner ripening.

IV. *Gerard* has this Defcription of it. It is like to the Common *Cucumber* in its Stalks, lying flat upon the Ground, long, Branched and rough. The Leaves are much alike, but leffer, rounder, and not fo cornered. The Flowers in like manner are yellow. The Fruit is bigger (than the *Cucumber*;) at firft fomewhat hairy, fomewhat long, and fomewhat round, often times greater, and many times leffer. The Bark or Rind is of an over-grown ruffet green color, ribbed and furrowed very deeply, having chaps or Chinks, and a confufed roughnefs. The Pulp which is to be eaten is of a faint yellow color, the middle part of which is of a flimy moifture, in which is contained the Seed, much like to that of the *Cucumber*, and of a browner color.

V. *The fecond, or Spanifh Musk-Melon.* It has from its Root which is like the former, long trailing Branches, on which grow broad Leaves, flightly indented about the edges, not divided at all, as are all the reft of the Melons. The Fruit is large for the molt part, and grow near unto the Stalk, like unto the *Common Garden Melon* or *Pompion*, very long, not crefted or furrowed at all, but fpotted with very many fuch marks or fpts as are on the back fide of the *Harts-tongue* Leaf. The Pulps (both the firmer and the fofter) as alfo the Seed, are much like the former.

VI. *The third, or Pear fashioned Musk-Melon.* It hits many long Vine Branches, upon which grow cornered heaves, like thofe of the *Vines* as allb great

great store of long Tendrels, clumping and climbing, and taking hold almost of any thing they touch. The Fruit grows upon tender foot Stalks, and is fashioned like a Pear, and of the largeness of a very great Quince.

VII. *The fourth, or Sugar Musk-Melon.* It has long trailing Stalks or Branches, lying upon the Ground, on which grow small clasping Tendrels, like those of the Vine; and also Leaves like unto the Common Cucumber, but of a greener color: the Fruit comes forth among those Leaves, growing upon slender foot Stalks, and round as a Coloquintida Apple, and of the same bigness, being of a most pleasant taste like Sugar, from whence it took its Epithet or Sir-Name*

VIII. *The fifth, or American, or Carolinian Musk-Melon.* It differs but very little from the first described in this Chapter, neither in its Root, Stalks, Branches, Leaves, nor its lowers, nor in its form or manner of growing, saving that the Plant is in all its parts much bigger. The Fruit is big, round ribbed* and very large, sometimes as large as Our Great Common Garden Pumpkins^ and almost of the same shape, both of the first long Kind, and of the second round Kind, saving in the ribbing hereof, and when it is ripe, it is in its Kind of a whitish yellow color, and of the thickness of Our Common Pumpkin. The more solid Pulp, as also the soft flimy, and the Seeds contained therein are like for substance and color, to the first here described, and very pleasant in taste: but the Seed is larger.

IX. *The Places.* They delight to grow in hot Countries, as Spain, Italy, Africa, the Coasts of Barbary and Egypt, in several parts of Asia, and the East and West Indies, yet they thrive and come to perfection here in England, being husbanded with Care: and the last grows plentifully in Carolina, an English Settlement in America^ and in other parts of that Continent.

X. *The Times.* They are sown in the latter end of March, and in April, and their Fruit is ripe in August, from the beginning of the Month to the end thereof.

XI. *The Qualities.* The Fruit and Seed are cold and moist in the second Degree, cleansing, and very grateful and refreshing to the Stomach and other Bowels.

XII. *The Specification.* The Fruit and Seed are admirably refreshing to the Luit.

XIII. *The Preparations.* You may have therefrom 1. The more solid Pulp. 2. A Liquid Juice. 3. An Emulsion of the Seed. 4. A Distilled Water of the fruit.

The Virtues.

XIV. *The Liquid Juice of the Fruit.* Given plentifully to two mixt with some of the Juice of the Citrus, and sweetned with Syrup of Quercitron, or of Violets, it cools and takes away the most burning Fevers, and by repeating it at short Intervals cures it: it also much refreshes the Luit, and takes away the Potency of Generation.

XV. *The more solid Pulp of the Fruit.* It is used plentifully to the outward Parts, being first dissolved in Vinegar, and then mixed with Honey, or with the Juice of the Citrus, and Salt, and some with the Juice of the Citrus, and very much cools and refreshes the Luit.

XVI. *The Emulsion of the Seed.* It cures the hot burning fits of Fevers, quenches Thirst, cools the Stomach and Bowels; loosens the Belly, cleanses the Reins, Ureters and Bladder, provokes Urine, eases the Strangury, takes away the heat and scalding of Urine, helps such as make bloody Water, and refreshes the Luit, (being long used) after a singular manner.

XVII. *The distilled Water,* it has all the Virtues of the Liquid Juice of the fruit, and of the Emulsion of the Seed: and may be taken from four to six or eight Ounces sweetned with some proper Syrup. Used as a Topick, it cools Inflammations, helps blood-hot and sore Rheumatick Eyes, and clears, softens* and whitens the Skin, removing Scabs, Itching, Scurf, Morpew, black and blebbed Spots, Tanning, Sunburning, and other defecations thereof: and this more especially if a little Juice of Limons, of very sharp white Wine Vinegar, be mixed with it, (but is not then to be used to the Eyes;)

C H A P . CCCCLXXXV.

OF MELON-WATER:

ok,

C I T R U L .

I. *The Names.* It is called in Arabic^ *Chate, Abdolavi, Chajar,* and is thought to be the *Dulhaha Serupionis:* in Greek *hyfEtii** (who first Named it in that Language) *A>**W* or *by**ua* (which with the Greeks did sometimes signify a Cucumber). In Latine, *Anguria, Citrus*^ & *Grullui;* a *Citreo colore & forma:* also by some *Cucumis Citrullus*, to distinguish it from the *Citrullus*: in English^ *Water Melon,* and *Citrull* or *Turky Melon.*

II. *The Kind,* there are several sorts of this Plant, but the three following are chief, viz. 1. *Anguria five Citrullus vulgaris*^ The Common Citrull, Water Melon, or Turkey Melon. 2. *Anguria Americana*^ *Citrullus floridianus,* *Citrullus Carolinianum*^ The American or Carolinian Water Melon, or Citrull \ *Anguria Egyptiaca*^ the Egyptian Citrull or Water Melon.

The Descriptions.

III. *The first, or Common Citrull, Water Melon, or Turkey Melon.* The Root Spreads under the Ground, with several Ratifications and fibres* or Threads adjoining to them^ and dies every year & the rest do. In its form and manner of growing* it is like other Melons and Cucumbers, trailing and lying upon the Earth, with its Vine-like Branches;

the Leaves of which are hairy, longer, and narrower than in any other ^ and more divided into several parts, having small Claspers and yellow Flowers: but the Fruit is greater than a *Musk-Melon*, and something near the fashion of a *Pompion*, with a smooth green(l) Bark or Rind, which will grow yellowish in

time, having some ribs thereon. The Pulp or inward Substance is watery, in some sweet, in others [a little tart, or acid, but in the whole very pleasant and delectable to the Taste. The Seed is contained therein, and is smaller, rounder, blacker, and harder Shell, than that of the Ground.

IV. *The second, or American, or Carolinian Water-Melon or Citrulus. Its Root is like the former; and the whole Plant varies but little from it in its Stalks, Branches, Leaves, Flowers, and Manner of Growing:* But the chiefest difference is in the Fruit, which is as great as a middle sized Melon or *Pompion*, some of which are a Foot or fifteen Inches long, and thick in proportion to that length, having a discolored Rind, variably spotted and striped with white spots upon the green* the inner Pulp of which in some is white, in some reddish, and in some almost a purplish color, very watery, and of a most pleasant and delectable Taste. but though it is watery, yet it is of firmer Substance than the former, and will keep after it is ripe for some small time. The Seed within this is like the other, but longer, greater, redder or browner, and more smooth or shining*

Citrulus: or, Water-Melons American.

V. *The third or Egyptian Citrulus or Water-Melon. This in its Roots, Stalks, Branches, Leaves, and Flowers, differs but little from the former; but its Fruit is much larger than those.* For some of these are so great, as *Bellinius* says* that about six of them will load a Camel, and one or two of them a Man: the outward Rind is yellow, the inner Meat or Substance very little and almost empty, filled in the middle with much Water which is very sweet, and much desired and drunk by the People of the places where this Fruit grows, with which some mix *Damask Rose Water*, others *Musk* and *Ambergris* to perfume it, and offer it as a great thing, for the Entertaining of their Friends: The Seed is not in great quantity, but smaller than the Seed of the former ^ in other things there is but little difference.

VI. *The Places.* The first grows throughout *Turkey* ^ and in all *Italy*, as also in *Spain*, the *West-Indies*, and other hot Countries. The second grows peculiarly in *America* or the *West-Indies*, and in a very great plenty in *Carolina*, both North and South. And in *Virginia*, and other places of the *Floridian* Continent. The third is a Native of *Egypt*, as *Proffper Alpinn* says in his Book of *Egyptian Plants*, and *Bellonius* in his *Observations* ^ *Lib. 2. Chap. 75.*

VII. *The Times.* They all are Planted of the Seed in the *Spring* time, viz. in *March* and *April* ^ and Flower in *June* and *July*, and the Fruit is ripe in *August*, or about the same time in which the others are ripe.

VIII. *The qualities.* The Fruit and Seed, are cold and moist in the second Degree: The Seeds being reckoned one of the four cold Seeds; They are Absterfive, Diuretick, Nephritick and Anri-fritick, even beyond all the other sorts of *Melons*.

IX. The Specification. They abate the

0^ MERCURY Herb En\$(b:

GOOD - HENRI

I. THE Names, h has no Greek Name

II. Of Herb-Mercuries there are

III. The Kinds of English Herb-Mercury. It is

The Descriptions.

IV. It has a great, thick, and long Root;

with a greyish or whitish green Dull, as if it was covered with a fine Meal, like unto *Arach*, for which reason, it is, as I suppose, that some have accounted it a Species or Kind of that Plant.

V. *The Places*. It is commonly found growing in untill'd Land, by Hedge sides in *Orchards* and *Gardens*^ and Ditch sides in some *Pasture Grounds*, and among Rubbish, near common Ways, old Walls, Pales, and other like places, in most Counties of *England*.

VI. *The Times*. It Flowers in *June* and *July*, and the Seed is ripe in *July* and *August*^ or some little time after*

VII. *The Qualities*. It is Temperate in respect of heat or coldness, dryness or moisture^ Absterfive or Cleansing, and Emollient or Loofen^m%-> by reason of its Fatness and flipperiness.

VIII. *The Specification*. It heals Green Wounds, and cleanses and cures old and putrid Ulcers.

IX. *The Preparations*. You may have therefrom, 1. A *Liquid Juice of the Herb or Root*. 2. A *Qataplasm of the Herb or Root*. ^ An *Uniment or Balsam*. 4. A *Sallet*.

The Virtues.

& T^e ^h^{U1} ^ Juice* Mixed 3 or 4 Spoonfulls of it with as much, or half as much *Hony*^ and given inwardly, it loofens the Belly and Purges away Cold, glaffy and flimy Humors * it

opens obstructions of the Lungs, and is good against Coughs, Colds, Wheezing, (shortness of Breath, difficulty of Breathing, and Ulcers of the Lungs: but then the *Hony* ought to be clarified, and mixt in equal quantities, with it: and so applyed *Xp* Green Wounds it heals them: and digests, cleanses, incarnates, and dries up old and rotten Ulcers.

XL *The Qataplasm*. Applyed to Green Wounds or simple Contusions it quickly cures them: and applyed to old and running Sores, it refills the Putridity, cleanses them, and afterwards wonderfully consolidates and teals them.

XII. *The Ointment or Balsam*. It is a singular good Vulnerary, healing simple Green Wounds at a few times Dressing: and if they are Compofed or Complicate, it causes Digestion in a very short time, then cleanses, incarnates and heals them. It heals also old Ulcers and Fistula's, Kibed Heels, and other Distempers of like Kind: and applyed to the Gout from what cause soever, whether hot or cold, it eases the Pain and cures it.

XIII. *The Sallet*. It is made of the **Herb**, being Boiled in Water, or in Broth, made of Fat Pork, or Bacon, or Fat Beef, or Veal* being drest up with Butter, Vinegar and Pepper, and so eaten, it makes the **Belly** soluble, and cleanses the Pituitous Humors.

Of MERCURY Herb French.

LT?? N*?f* iZ li called Jn Greet,

X f AIVO&H, Unozoflis, U EAff ffo^wi L E P* m&% Mercurij Herba: also n<f9w^t parthe/ion^ (%t not truly:) 3i Lathe, Mercurialis: and in English^ Herb-Mercury^ and French Herb-Mercury.

II. *The Kinds*. There are two principal Kinds hereof, viz. I. *Mercurialis vulgaris, vel Hortensis*, The Common or Garden French Mercury, which is twofold, viz. 1. *Mercurialis vulgaris MM*, The Common Male French Mercury. 2. *Mercurialis vulgaris Femirta*, The Common Female French Mercury II. *vKhdv% Phyllum, & EM'QVVKKQV, Elaophyllum ^ quasi Qlctfolmm 1 in *Latine, Phyllum*, and in *Engli*(7), Childs Mercury, and this is twofold, viz. 3. SVKKIV flwAJ^w, *Phyllum thelygnon*, Diofc. lib. 3. *Phyllum foemijicum, vel fceminiparum, Phyllum Spicatum Eau** him, Female Childs Mercury. 4. *>KKI*K*&y>hXm Phyllum EUophyllum, ^h ifnvoym, Phyllon Arrhenegonvn, Phyllum Testiculatum Bauhini, Phyllum Marificum, & Mariparum, The Male Childs Mercury. Of all which in order/

the Descriptions.

III. *Thefirji, or Common Male French Mercury.* It has a long slender-Root, very well furnished with a Bush, as it wens; of long and final Fibres: Which fends up a square green stalk full of Joints, about two Feet high more or less, with two Leaves at every Joint, and Branching likewise from both sides of the Stalks, fe

with fresh green Leaves, something broad and long, like unto the Leaves of Pellitory of the Wall, but lesser, and much about the bigness of the Leaves of Basil, finely dented about the edges. Towards the tops of the Stalks and Branches at every Joint come forth, (in this Male Kind) two small, round, green Heads, standing together upon a short foot Stalk, which growing ripe are the Seed, not having any Flower that ever we could see.

IV. *The second, or Common Female French Mercury.* This in its Roots, Stalks, Branches, Leaves, and manner of growing is like the former that it is not to be distinguished from it, but by its Flower and Seed. All Authors agree, that this Plant as well as that before Described, both rise from the Seed of one and the same Plant, as the several sorts to which they do, and they both are so like one another, that if it was not for the Flowers and the difference, they could not be distinguished one from another. In this the difference of the Seed is longer, and the root stalk of the Seed is shorter, and the flower round about

with small green Husks, which are the Flowers, and are made up in form, like small Branches of Grapes, which give us Seed that ever we could find, but abide in that manner a great while upon the Stalks without hedding. The

Roots both of the Male and Female perish every Year at the first approach of Winter, and spring up again of their own Sowing. Where once they are suffered to Sow their Seed, the Ground will never want them afterwards, even of both sorts, in admirably they encrease.

V. *The third, or Female Mercury.* Its Root is white, hard, and Woody, of the bigness and length of one's Finger, finishing every Year, and rising again from its own Seed, or the Seed of the Male Kind in the Natural places. From this Root rises a branched square Stalk, full of Joints and Branches, but weaker than those of the Male Kind, and more fruitful Leaves, higher also, and more bushy: at the Joints always send two soft woolly Leaves, somewhat longer, and narrower, than in the former Common Mercury, and not dented (or, but very seldom) about the edges, of an Acid and Saltish taste. The Joints of this Female come forth long root Stalks, of Seeds and Flowers, which are longer than those of the Male Kind following. These flowers which are, in a cluster as it were, are small, pale, and mossy, bearing any beel, but when they do, it is contained in little round Heads, and is small, and round like the Male Kind, sometimes two, and sometimes three or more, growing in a cluster together. This and the Male is stronger smell and tailed than any of the other Mercuries,

. VI. *The fourth, or Male Childs Mercury.* This in its Roots, Stalks, Branches, Leaves, and manner of Growing, is fo like the Female *juji* now described, that it is difficult to dijiin-
guish them alunder, but by their Flowers and Seeds. At the Joints of this Male Kind come forth ftiort foot Stalks, bearing at their tops two small round Seeds, like to thofe of the first *Common Male Mercury*, and without giving any Flowers like that aifo; which Seeds are of an *Aih* color, before they be perfectly ripe: but when they come to ripenefs, they become of a blewifh afpeft, and not much unlike to *Sputge* Seed, growing as they do, two and two together: the Leaves are not much unlike the Leaves of the *Olive Tree*, covered over with a fort Down or Wool, and of a gray color. Some Au-
tors will have that thefe *Childrens Mercuries Male and Female*, are the fame with the first *Common French Mercuries Male and Female*, only differing as they grow in a differing Clime: but if they do but confider only the forms of the Leaves of each, and compare them (not taking notice of the Seed) they may bs eafily convinced in their own understandings of the contrary.

VVL Tbetlaces. The two first Kinds are found growing Wild in *France*, as alfo in feveral parts *J* England*, as very plentifully by a Village called *Brookland* in *Rumney Marfh* in *J&vtf*: it grows ««» in *Vineyards, Orchards*, and other fhady *S: 115 Gcrr*?** found if under the dropping of *TM& %* Houfe* at *Rochepr-*, and are generally *to* with us in *Kitchin Gardens* among *Pot-*
The two laft grow about *Mompelier* in *France*, but with us

. VIII. *The Time**. They all Flower in hot Countries in *June, Jxly, and Aug^e Jl*, and give

their Seed in fome little time after: But the two latter Flower fo late here in our Country, that they fcarcely bear ripe Seed.

IX. *The Qualities.* *Herb Mercury* is hot and dry in the fecond Degree: Abfterfive, Digeftive, Hyfterick, and a little Cathartick.

X. *The Specification.* *Maftholus* makes it a Spectfck againft the Yellow Jaundice. It Provokes the Terms, eafes the Strangury, and prevails againft Scabs, Tettars, Ringworms, and other like Deformities.

XI. *The Preparations.* Ydu may have herefrom, 1. A *Liquid Juice of the Leaves.* 2. A *Deccuion of the fame.* 3. A *Pouder of the Seed.* 4. A *Lotion.* 5. A *Cataplafm.* 6. A *Cfypr.* j. A *Dijilled Watr of the Herb.*

The Virtues.

XII. *The Liquid Juice.* Taken to 4 or 5 Ounces in Broth or Drink, fweetned with a little Sugar, it purges *Cholerick* and *Waterifli Humors*: *Hippocrates* commends it wonderfully for *WorrienS Difeafesj* and he applied it to the Womb, to eafe the Pains of the Mother: and he gave it to provoke the Courfes in Women, and to expel the After-birth. He dropt the *Juice* into Sore and Watering Eyes, and applied it for *Deafnefs* and Pains in the Ears. It is good againft *Agues*, and cleanfs the *Brest* and *Lungs* of *Flegm*, but with fome little Offence to the *Stomach*. Snuffed up the *Noftrils*, it purges the *Head, Brain, and Eyes* of cold, fharp, and lalt *Rheums* afflicting them, and is very good againft *Catarrhs* which fall upon the *Lungs*. Bathed upon *Warts*, it is faid to take them away.

XIII. *The Decoffbn in Water, or Mutton or Veal Broth.* It has all the Virtues of the *Juice* afore declared, but much weaker, and; therefore may be given to 8 Ounces or more. If it is made with *Mprh*, and *Pepper*, It is good againft the *Strangury*, and other *Difeafes* of the *Reins* and *Bladder*. It purges alfo the *Stomach* and *Bowels*, of *grofs Humors*, but more weakly than the *Juite*. And ufed as an *Errhine*, it purges the *Head, Brain, Eyes, &c.*

XIV. *The Pouder of the Seed.* It may be given to a *Dram*, or a *Dram* and a half* either in the *DecoSion*, or *Dijilled Water*, and fo it helps the *Yellow Jaundice*. The *Seed* of both *Male* and *Female*, boiled in *Water* or *Wine* with *Wormwood*, and the *DecoilioH* drank, is faid to cure the *Jaundice* perfectly, in a moft admirable manner, and that in a very little time.-

XV. *The Lotion.* It is made of the *Liquid Juice* mixt wifli *Vinegar*. Being applied to *Scabs, Itch, Tettars, Ringworms*, and other like breakings out in the *Skin*, it cures them.

XVI. *The Cataplafm of the Leaves.* Applied to *Warts* it takes them away, as alfo other *DefqrJations of the Cutis*. It is *Digeftive*, being applied to *Tumors* or *Swellings* in any part it is alfo *Difcuffive*, (where the *Swelling* will not come to fuppuration) and will ipend the *Humor* which is the caufe of the *Tumor*, and allay the *Inflamatiofl*, by cooling and eafing the *Pain*.

XVII. *The Cfyfter.* It is made of the *Liquid Juice*, and of the *becoffbn of the Leaves* in *Mutton Broth*, of each equal parts. *Exhibitd warm,*

Warm, it evacuates from the Belly all forts of cold, (harp, acid, Salt, or other evil Humors, which are apt to offend the Bowels, and cause Belly aches, and other vehement and fick Pains ^ and works as well in this manner, as if a sufficient quantity of *Sena* had been intufed in the *Decollicn*. But if to the *Ciyfer*, 4 Ounces of brown Sugar be added, it will work fo much the better, and the more powerfully.

XVIII. *The Dijnled Water of the Herb*. It has the Virtues of both *Juice and Decottion*, but aſis in a much weaker manner. But if white Sugar Candy is diffblved in it, it will make a good *Collyrium* for weak, fore, and running Eyes. And if a few Grains of *Scammony* in fine Pouder be diffolved in it, and ufed as an *Errhine*, it will notably purge the Head and Brain, of thick, grofs, clammy, felt, (harp, and acid Humors, and Therefore may be profitable against Colds, Catarrhs, Apoplexies, Epilepfies, Palfies, Vertigo's, Megrims, Head-aches, Lethargies, and other like Difcafes of thofe parts. If fweetned with white Sugar and taken to 6 or 8 Ounces in a Morning fasting, it opens the Body and purges off grofs, Vifcous, and Melancholy Humors: And Authors fey, if it is mixt with *Manna*, and *May Dew*, taken off *Rofe* Buſhes (for which reafon fome Writers call it *Rhodomanna*) it will purge Cholera

dis Bauhini ^ *Cynocrambe vera Belli* 5 *Alfines facie* *Flanta nova Column* ^ The true Dogs-Mercury of Bauhinus. 4. *Mercurialis Sylvefiris Jiliqaofa*; *Perlicaria filujuofj Camerarij* ^ *Ti?ajij, Lobelij, t* *Liugdricnfis* ^ *Mercurialis Sylvefiris altera Tragi* * *TitbymeſhtsSyheflris Loniceri* ^ *viliium Caprearwn Gejneriy Impatiens* ^ *Herba podoxai* ^ *Catenance altera Gefalpiw* ^ *Balfamita altera Column* * 5 *Cbrytita Lugdunenſis* ^ *Balfamita lutea Baub'wi* ^ *Vf Noli me tangere Baubini, Camerarij* ^ *Gejneriy Lobelij & Tabern* ^ *nontam* ^ *Codded Wild Mercury*, bj *Ibme, Codded Arfmart* ^ *Quick-Seed, Impatience,* and *Touch me not*.

The Descriptions*

III. *Jhefirft, or Common Male Wild Mercury* // has a manifold Root, full of Intill Fibres, v^hico run under Ground and in time mat them/elves very much, not perijhing Annually as the former Mercuries do, but abiding the Winter, Jhoot forth new Stalks and Branches every Tear, the old ones dying away and ?erijhing. From this Root fpring up

CHAP. CCGCLXXXVHL

0/ MERCURY Herb Wild:

O R,

DO.GS -MERCURY,

J.v-jp *HE Names*. It is called in *Greeks* X^Rwia & *RvvoKtyvfit*, *Cynea* £? *Cynocrambe*; Which is *Canina* ^ *Braffica*, but for what reafon is hard to determine, for that it has no agreement with, nor is any thing akin to *Cabbage*, or *Coleworts*: it might properly enough have been called *Mercurialis Canina*, (propter ignobilitatem:) but foise Authors have rather called it *Mercurialis Sylveftri**, as *Cordus*, *honker us*, *Thalius*, *Qf Tragus*: it is the *Cynocrambe*, *Camerarij* ^ *podoxai*, *r^chfij*, *Lobelij*, & *Matthioli*: *Mercurialis Canina Columnis*, & *Mercurialis Montana Bauhini*, (theſe two daft thinking *Cynocrambe*, to be wholly improper:) in *Englijh*, *Wild Herb Menury* ^ and *hogs-Mercury*.

• *IL The Kinds*. The Principal of the *Wild ions of Herb Mercury*, are theſe four following, viz. • 1. *Mercurialis Syhe (iris vulgaris, Cynocrapibe dilla ahquibus* ^ *Mercurialis Montana tefiutlfti Bauhina* ^ *Mercurialis Sylvejrps vulgaris Mas*, The Common Male Wild Mercury. 2. *MerwidH Sylvefiris vulgaris Yocmina, Mercurialis Montana Spicata Bauhini*, The Common Female Wild Mercury. 3. *Cynocrambe Legitima Diofcori-*

federal Stalks, flendrer /and lower than the *Common Mercury*, and with no Branches at all upon them. This Male Kind is fet with two Leaves af every Joint, fomewhat greater than the Leaves of the next following Female, more pointed and ft of Veins, and fomewhat harder alfo in handling ^ of a darker green color, and letter ihipt or dented about the edges: at the Joints with the Leaves come forth longer Stalks than in the former, wi* two hairy, round Seeds upon them, twice ^ large as thofe of the firſt *Common Male Mercury*: the talte hereof is Herby, ahdtt^ fomewhat frong and heady.

IV. *The, jecond, or Common Female Wild Mercury. Its Root, Stalks., and manfter of growing is much like the former** Its Leaves are leiTer, not fo (harp pointed-, have fewer Veins, and foicer in feeling, and Handing upon longer foot Stalks. From the Joints come forth fuch like long Stalks, having long ipikes of greenifh Flowers, and which are longer than the Spikes of the former *Common female trench Mercury*, with many fmall Threads in them, which yield no more Seed than the Spikes and Flowers of that other *female Mercury* does.

V. *The third 1 or True Dogs Mercury of Bauhinus. It has a white, long, and fibrous Root, Spreading it felf round about in the Earth. The* Want it felf is tender, fmall, and fappy, and Springs up like unto the Jirll Common trench Mercury, with a round, green, cretted Stalk, about a Foot or more high* fet with many Joints, and branching forth from every Joint-, from whence come forth, at the firft, two fmall Leaves, and fomewhat round like unto Chick-weed*, after which, fpring forth two others, from the fame Joint, which are much larger and broader: and from the lame place alfo come afterwards feveral other Leaves, fmaller than the firft two: and this proportion it holds, not at one Joint alone, but at every Joint through out the whole Plant, from the loweft Joint almoft of the Stalk and Branches, up to the top. From whence come forth three or four fmall, whitifh green Flowers, with many Threads in the midft of them, which turn into finally hard, round Seed, like unto thofe of the *Common Male trench Mercury*, but fbomething leffer^ which are green at the firft b, but of a blackifh afh color when they are ripe.*

VI. *The fourth, or Codded Wild Mercury, ©V. Its Root is blackijh and thready, perijhing every year: which fends up a round Jointed Stalk, about two Feet high fometimes, branching it felf, from thence in many places, wherent continually grows but one Leaf, upon a very flender rough foot Stalk, moft like unto thofe of the trench Common Mercury, but longer pointed, and fomewhat fmaller at the Stalk •> not fo finely, but as it were groily indented about the edges, being thinner, fofter, and of a blewifh green color. From every Joint with the Leaf, from the middle upwards, and at the tops of the Branches alfo, comes forth one long brown foot Stalky as fmall and fine almoft as a HorfeHair, bearing one Flower thereon 3 and fometimes two or three, fomewhat clofe together, hanging downwards, and compofed of fix Leaves apiece, fome thing like to thofe of *Hollow Root* or *Cavious tumitory*, but greater, of a fair Gold-yellow color, which are fometimes alfo as *Bauhims* fays, found of a paler color: two of them which fend like Wings at the fides, are larger than the other two which ftand under them, which are fmall and round-, the loweft is longer than the other two fmall ones, and broad at the end 5 the uppermoft ends in a ftort crooked Horn or Heel, like a Spur, behind*, the bottom on the infide is whiter than the reft, which have fometimes red fpots in them. After thefe Flowers are part, fmall, long pointed Pods conie up in their places, which hang downwards, and are friped as it were all the length of them, in which is contained fmall, long, and fomewhat flat Seed pf a dusky color, which is very difficult to be gathered, for that even before it is through ripe, if it be but very lightly handled, or but juit touched, the Pods will break •> and twine and twift them. Telves a little, as the Husk or Pods of fome certain*

Pulfcis will do, and the Seed will leap forth of its own accord, with fuch a kind of violence, that it is not to be caught; yea for the moft part, the very flaking of the Branches by the wind, will caufe the Podds to break open, and died their Seed on the Ground, where the ripeit may beft be gathered or pickt up, if lookt after in Time. The tafteof this Herb is poor and waterifh while green, as G* *lumna* fays, and much the fame when dried; yet *Label* fays, it is Venomous * *hut* whether there he any danger in taking of it inwardly, is uncertain, we knowing nothing of it by experience, but what vulgar hear-fay has delivered to us.

VII. *The Places.* The firft and fecond of thefe are found growing Wild in feveral places in *Kent* and elfewhere, but the *female Kind* is more feldom found than the *Male*: *Gerard* fays, he found it in many places about *Green-hithe, Svoainfcombe Village, Gravefcnd* and *Southfieet* in *Kent*, alfo in *Huinpfted Wood* four Miles from *London*, and in all the Villages thereabouts. The third is not found Wild with us, as it is in *Spain* and *Italy*, but is only Nurfed up in *Gardens*. The laft grows in the fhady Woods of *trance, Germany, and Italy* t, it has alfo been found by the fhady Woods fide of the Mountains and Vallies in *Wales*, by one Mr, *George Bowles*, but is alfo Nurft up in our *Gardens*, for its rarity, where in fhadie places, it grows and flourifhes very well.

VIII. *The Tims.* The firft three Flower in the *Summer* Months, as *June, July* and *Auguft* \$ all the *Summer* long fays *Gerard*, until extream Froft comes and nips them. The fourth or laft Flowers about the middle and end of *Auguft* in the Fields, but in our *Gardens* in *June* and *Jufc* and prefently after its Flowering it yields its Seed, which cannot be gathered from the Plant, without very much care.

IX. *The Qualities, Specification, Preparations, and Virtues* of the three firft of thefe, are laid to be the fame with thofe of the *trench Mercury* in the former Chapter, fo that we (hall lay no more of them here.

X. As to the *Codded Mercury*, or *Noli me tangere*, Authors fay it has a ftronger Purging Quality, but it is by Vomit, and therefore it is thought that *Lonicerus* and *Tragus*, did rank it among the *T7-thymales*, giving it fuch a Name, as neareft partaking of their Natures and dualities; and for this reafon I fuppofe it may be that *Lobel* and *Pena*, accounted it *deleterious* or *Deadly* -, tho' at the fame time they fay, it Wants not its praife, as to its other Virtues: And *Camerius* in *hortQ*, fays that the *Difilled Water of the Herb*, is applied by fome, to places pained with the Gout with goodSuccefs.

CHAP. tCCCLXXXIik.

Of MILK-WORT Common:

OR,

CROSS-FLOWER,

.np H E Names. It is called in *Greeks* I. X no. *Polygala*, *Polygala recenti* or *urn Lobelij*, *A mar ella Gefnen* i§ *Flos cruets*: in *Englijh*, *Milk-Wort* and *G** *Polygala*.

II. *The Kinds.* There is i. *The Land* *Field Milk-wort*, of which in this Chapter. 2. *Tfo* *Milk-wort* ^ of which in CA^p. 490. following. Of *The Land* or *held fort*, we (hall give you the five *Defcriptions* enfuing, viz. 1. *Polygala majors Polagala vlgaris major Qluffj*, Our Common greater *Milt wore*. 2. *Polygala minor; Polygala vulgaris minor Clu Jij*. Oar Common fmaller *Milk-wort*. 3. *Polygala Kef ens Lobelij, C? aliorum*, *Creeping Milk-wort*. 4. *Poligala Mon/peliaca^ Polygala foliis acutioribus Bauhini, Onobrichis tertia purpurea Ltgdunenfis Bauhini*, *French Milk-wort*, j. *PolygaU affinh Bauhini, Cham&myrfine quorundam Lugdunenfis*. Baftard *Milk-wort*.

the Defcriptionsi

Hi. *Tfo* *ix?*, or *Common Milk-wort*, *h ha* a *Root* which is *hard and Woody* \ with *feveral Fibre*; *adjoining to it, endures all Winter, and abide*:

*long**, from this *Root* *Spring* forth five or six *hard*, (*tender*, and *flexible Stalks*, about a *Foot* or more *high*) *trikk fet* with *fomewhat long* and *narrow Leaves* like *thofe of tyrs-weeci*, or *fmall Hyffop* \ the *Flowers* grow at the *tops*, in *long Spikes*, *thick fet together*, *fomething like* to *tholè of Fumitory* ^ but *larger*, and of a *fine diluted reddilli purple color*, and *fhining withall** *Gerard* (ays, they are *fashioned like a little Bird*, with *Wings, Tail, and a Body eafie to be difcerned* by *fuch as will obferve the fame*: w^hich being *paft away*, *fmall, flat Pouches* *fucceed*, like *tholè of BurJa Paflorts* ^ *biic lefler*, having *ufually* two Seeds* in them, which are *long, blackifli*, and *hairy*.

IV. *The fecond, or Our Common fmaller Milk-wort.* *This in its Root, Stalks, Leaves, Flowers-, Form and manner of Growing, is like to the former, yet fomewhat bard or Woody, ^d not fo many Stalks r'ijing up from the Root, which have dfo fewtr, and fmaller Leaves on them* The *Flowers* are alfo *alike*, but *fmaller*, and *vary as much*, or rather *more* in their

*color **, being *fome of a blewifh purple* 5 others *purple and white*, *fome all white*, others *reddifh*, or of a *wan color*, or *over-worn red*, ©V. There is alfo another *fort* hereof 4 *whofe lower Leaves* which, *fpread on the Ground*, are *many*, and *rounder* than in any of the *former*, but *thofe which grow on the Stalks* are *long like the reit*; the *Flowers* of which are *only blew*, without *mixture* or *va-riation*.

V. *The third, or Creeping Milk-wort.* *This fmall Plant ha* a number of Stalks, full of Branches, creeping, or lying and fpread ing ort the Ground^ net above a (pan long, let thick by couples*

couples with very small Leaves, like those of *Herritaria* or *Rupture-wort*. The Flowers are of a whitish color, Hanging among the Leaves, at the tops in whorles, encompassing the Stalk, one above another.

• VI. *The fourth, or French Milk-wort. It has a Root which is much like the first and second Kinds, being small, long, and white, from whence spring up several upright Stalks, a foot or more high, having several longer and narrower Leaves on them, than those of the two first sorts, and set without order. The Flowers grow one above another, in longer Spikes, than in the second smaller Kind, and not fully like them, but of a reddish color. The Seed, which follows is small, and contained in long combed Husks.*

VII. *The fifth, or Bastard Milk-wort. Its Root consists of small, long, and white Fibres. This small Plant spreads itself much, with many weak, slender, round Stalks, upon the Ground, a span long or more, set with several small Leaves without order, in fashion something like unto Myrtle Leaves, but not so much pointed. The Flowers are very Beautiful, standing in a small Spike, one above another, with Leaves among them, consisting of six Leaves apiece, of a fine bright shining purple color, after which comes small Seed contained in small Husks.*

VIII. *The Places. Gerard says, that these Plants or Milk-worts grow commonly in every Wood, or Fertile Pasture, and that he had found them, where ever he had Travelled. The first grows also in Germany, and Austria and parts thereabouts. The second is more frequent with us, and is found in Barren and Untilled places, deaths and the like, as well as in Fertile and*

Pasture Grounds. The other three in *France Germany*, and several other places-

IX. *The Times.* They all Flower from the beginning or middle of *May* and continue Flowering a Month or more, *Gerard* says, till *August*, and perfect their Seed not long

X. *The Qualities.* They are all hot and dry in the second Degree, highly Absterfivive, and with all Cathartick. 'Tis more than probable, that these *Milk-worts*, not any of them, can be the *Polygalon Diofcorides*, because that, as *Diofcorides* says, breeds Milk in Womens Breasts whereas these do rather the contrary, diminish the same, which is manifest from its Cathartick or Purging faculty, for as much as all purging things are inimical to that intention.

'The Virtues.

XI. *The Infusion in Wine.* *Gesner* who calls it *Amarella*, because of its bitterness, says, that a Handful hereof steeped all Night in Wine, and drank in the Morning fasting, will purge Cholera effectually by Stool, without any danger and this he had made trial of upon himself.

.OR,

G L A U X ,

^{Latin} *HE Names.* It is called in *Greek*, *X Th&Z*, (from *Th&Z* or *Th&Z*, which is Milk:) in *Latin*, *Glaux*, from the *Greek* Name, and not a *Glauco Colore* as some would have it: and in *English*, *Sea Milk-wort*, and *Glaux*, also *Black Salt-wort*.

II. *The Kinds.* Authors have several sorts hereof, but the following three are chief, viz. 1. *Glaux Maritima Major*, *Glaux latiore folio Thuringiaca Baubim*, *TJK&KTW Plinij*: The Greater Sea Milk-wort. 2. *Glaux Maritima Minor*, *Glaux exigua Maritima Camerarij*, *Dodongi*, *Lobelij*, *Lugdunenjis*, *iff Tabernmontan*. The Lesser Sea Milk-wort. 5. *Glaux Maritima Veneta Alpino*, *Glaux in Maritime*, *Dorychnb congener Clufij Bauhino*, The Venetian Sea Milk-Wort of *Alpinus*: but *Bauhinus* would have this last to be of the Family of the *Trefoils* or *Lotus*, because they are in some things alike, yet with *Alpinus* we think them to be differing Plants, and that this comes as near, or more nearly to the *Glaux Diofcoridis*, than any other.

• the Descriptions.

III. *The firfi*, w Greater Sea Milk-wort. //
 E.w </ fnull Root . which fboots forth clown right
 with feveral Branches or A pus, a lrd fome Fibres
 adjoining to them: from this Rooc fhoots up
 feveral weak Scaiks , which fpread themfelves
 upon the Ground, and raife their Heads up-
 wards. , beier with ieveral Lentil like Leaves

vet-a little larger, and of a grayifh green color
 <hi> the upper fide, and more grayifh underneath.

The Flo ACTS are fet with the Leaves at the
 Joints of a purple color-, after which come
 imail Buttons, with Seed in them. The
 Branches as they fpread and lean upon the
 Ground -take Root again, by which the Plant
 very much increafes. *Bauhinus* lays, that there
 is a great Variety obferved in this Plants it
 fbmetinies having much large? Leaves, and
 fbmetimes Leaves much narrower.

•IV. *Thefecond* or Lefler Sea Milk-wort.
This lejfer fort, in its Roots, Stalks, Branches,
Leaves, Flowers, and manner of growing,
differs little from the former, but in the f?n ali-
ne fs of the Stalks and Leaves •, fome of the
 Stalks creep on the Ground, fome Hand
 upright, being tender, and fmall, and beiet
 with many little flat Leaves, ^ like *Tribal us*
Sylvejhis, or *Herniaria*, growing along the
 Stalks by couples, between which grow the
 imali purple Flowers, which being patt, little
 pullets or Seed Veffels fucceei_h and its Root
 is Imali and Fibrous, taking hold of the
 upper lace of the Earth, as well as running

much down right, and by its Fibres fpread-
 ing abroad it much encreafes. *Bauhinus* fays,
 that this lefter fort, has its Stalks thicker tored
 with Leaves, than the former greater fort,
 efpecially upwards, the lower being fallen away,
 leaving the Stalks bare as if they had great
 Joints.

V. *The thirds* or Venetian Sea Milk-wort
 of *Alpinus*. *The Root is long, tender, woody,*
and divided into feveral Branches. From which
 fpring up four or five (tender Stalks a Cubit or
 more high, fet at equal diitances, with feveral
 fomewhat long and narrow Leaves, green on
 the upper fide, and hoary white underneath 5
 and at the Tops four or five Flowers ftanding
 together as it were in an Umbel for form and
 bignefs, being very like unto the *Bafiard Scor-*
pion, like *Podded Sena of Candia*, but of a
 whitifh blu(h color, which are fucceeded by
 fmall, fhort round Podds, having fmall, round
 Seed within them, tailing a little fweetifh.

VI. *The Places*. The firft grows in many
 places in *Germany*^ as aifo in *Scotland*, horn
 which la ft place *bauhims* lays he had it ^ but
 with us in *Gardens*. The fecond grows very pl^n-
 tifully in moift places and *Salt Marfhes* neff
 the Sea, from whence it has been taken and
 Planted in *Gardens*: and is found iq places upon the *EJlex* and *Kentifh* Shores: *b*
 found it between *Whit liable* and the *Ifls of*
net, in *Kent*, and by *Graveferl* in the fi^J
 County, by *Tilbury Bhck-hoitfen Effex*, ^
 in the *Ijle of Sheppy* going from *Kings-ierry* *
Shorehmd-houje. *Bauhinus* fays, that this W
 fort is found growing near the Sea and *
 Lakes j but that the former greater Kind, Q
 found growing on Hills as well as near tn*
 Sea. The third Kind grows as *Alpinus* in
 the Salt Marflies near ro *Ooio* % a City
 Venetians,

VII. /The Times. They Flower in May and June, and the Seed is ripe in the Months following, or towards the end of Summer.

VIII. As to the Qualities, Specification Preparations, and Virtues of these Plants, Authors have said as good as nothing, at most, have been very differing concerning the same: but they have been generally cited as a Boiled Sallet, being boiled with Beef, Mutton, or Pork, and then dressed up with Oil, or Butter, Pepper, Salt, and Vinegar: This Sallet has been a common Food for Nurses, because it not only increased, but also fired Milk in Nurses Breasts and for which purpose it is now so often used, and eaten at this Day.

CHAP, cccckci
O/ M I L L E T.

1. *T* H E Names. It is called in Arabic *bick*, *Hareomen*, *Geguers* and *Givers*: in Greeks *liatwtVw*, *tvLemK* *Galen*: in Latine, *Milium* (a *Miliaria* Sum-Via derivation aut *Festus*: *Meline*, as *Varro* thinks but both *Dwfcorides* and *Galen* make *Meline*, to be *Panicum*: also *Paspilos*, *Palpile*: in *Eng/ijb*, *Milleti*

II. Th& Kinds. Authors make three several Species hereof, viz. 1. *Milium vulgare album*, Common white Millet. 2. *Milium vulgare nigrum*, Common black Millet; 5. *Milium Indicum* *Mattoli* *Milium Turcicum* *Milium Sarafenicum* *Fuchij* *Melica Dodon* *Sorgho*, *Sorghum Italarum* *Lobelij* *Panicum Indicum* *Gefneri* *Panicum tioscedridis* & *Plinij Trago*: Indian or Turkey Millet.

The Description

T The first or Common white Millet, it bears a hairy Root which spreads it self round in the Earth, and perishes every Year after Seed times, as the Roots of other Grain. From this Root rise up several hard jointed tall Stalks, full of a white Pith, yet soft, and a little Hairy on the outside, with long and large Reed like Leaves at them, encompassing one another: at the tops of the Stalks are a great number of whitish *Others*, *bowing* inclosed in a whitish Husk, which taken out, are of a shining, pale, yellow or whitish color, something harder than the Seed of F/

IV. The second or Common black Millet; This in its Roots, Stalks, leaves, Head and manner of growing differs very little from the former: saving that it is somewhat less with us, and that the Juba or Tuft is brownish, and the whole Flume or Head more loose and large, the Seed of Grain is also somewhat bigger, and of a blackish shining color.

V. The third, or Indian, or Turkey Millet. The Root of this bushes out more than the others, and perishes every Year after Seeding, as the others do. This Plant is in all its parts

larger, or greater, and higher than the toimer, riling to be five or fix Feet in height, or more. The Stalks are full of Joints with long large Leaves at them. The Juba or Tuft Hands upright, not bowing down its - Head as the other, on which grows the Seed, which is as big, but not as flat as *Lent ills* ^ ibmething (round, either whitifh, yellow, red, or blackilh colored, hard and (hining).

VI. *The Places.* All theft Grains came firft to us out of the Eattern and Southern Countries, as *Turkey, Barbary, Syria, the Eajhndies, Spain, Italy* ^ &c. and now they grow plentifully through all the *West-Indies*, and in moft of our *Engliff, Plantations*. They delight to grow in a light and loofe Mould, provided it is fat and well watered. for they foon empoverifh the Ground, and they thrive beft in a moift and Rainy Seafon. They grow as *Qolumella* lays, in great plenty in *Caw pa via* in *Italy*.

VII. *The Times.* They are to be Sown in *Apr* or *May*, and not before, -for they cannot endure the Cold: and in the hotter or more Southerl Climates^ the Grain will be ripe in *Auguft* of *September*.

VIII. *The Qualities.* The Grain is tempera* in refpeft to heat or coldnefs, and is drying in the icorid Degree. It has a tenuity of parts, Abfterfive, Aftringent, Diuretick, and Antifebr tick.

IX. *The Specification.* It reftores in Confumptions and abates the heat of Fevers: Stops Fluxe: of the Bowels and of the Womb.

X. *The Preparations.* You may have herefrom, 1. *The Grain, and its Meal* 2. *The parched Grain*. 3. *A becotton or Syrup*, called *Syrupus Ambrofij*. 4. *An Emplafter*. 5. *A Diftilled Water*. 6. *AJhes of the Stalks*. 7. *A Pouder of the Flowers*.

The Virtues.

XL *The Grain, and its Meal. Made into Brèad or Cakes, or Puddings*, and eaten, it reftores in Confumptions, and Strengthens the Stomach and Belly: Milk thickned with its Flower and given daily, flops *DiarAseas* and other Fluxes of the Bowels: Broth made of choice Beef, and thickned with the fine Flower hereof reftores the Tone of the Stomach and Intrails admirably.

XII. *The parched Grain:* eaten alone, it flops Vomiting: being applyed in Linnen Bags as hot as it can be endured, and applyed to the Stomach and Belly, it gives eafe in the Belly-ach and Cholick, and helps the Griping of the Guts, Stitches, Pleurifies, and other Illnefses of lik Kind.

XIII. *The Decoffion, or Syrup of Ambrofe- Take Millet a Pound, Boil it in Water 2 §>jjarts, till it breaks^ and then ft rain out by pr effing : to 4 or 5; Ounces hereof add White Fort or Lisbon Wine 2 Ounces: MIX them.* Let it be given to the Patient as hot as it can be endured: it prevails againft Fevers and Agues, chiefly Tertians-, is "Diuretick, and yet (trongly provokes Sweating, and quenches Thirft, the Sick being well covered down in a Bed ^ but it ought to be given in the declination of the Fit.

nf)h I^{oe} Em^{pl}a^{fl}*r. It is made of a mixture

leaf, it draws forth the toyfon, and fecures the Afe of the Patient.

XV. *The Bift&H Water from the green Vhnt, whileft in Vlovoer.* Being taken to 4 or 6 Ounces at a time, it is a fingular prefervative. againft the Stone, Sand, Gravel, and Tartaious Mucua^g* in the Reins, Ureters, and Bl#ider.

XVI. *The Afas of the Stalks.* Being drank, or rather the *Lixivium* of them,, they are gooc againft Kernels under the Ears, and in the Throat, and to abate Strumous or Scrophulous Swellings- *The Afhes mixed with an equal quantity of the Afhtg of a red Sponge, and with an eighth part offepper # fine Louder, and made up with Wheat Pafte into a Cake., and Baked under hot Embers*, and eaten, two or three Ounces at a time, is an excellent thing againft the Kings Evil, efpecially being taken in the Wane of the Moon.

XVII. *The Fonder of the Flowers.* The red Flowers in Pouder, given to a Dram in ^{rs};^{jr} Scriptick- Wine Cures the Reds in Women, fo ^a^¹ trie Pcuotr of the white Flowers given in thv terra Dole and Vehicle Cures the Whites-, ana they both of them, or either of them, care an forts of Fluxes of the Belly.

is, firin in the Leaves, ivhich are almoft as round as thofe, but more rough or crumpled: then, in the Flowers, which are of a purplilh color, itanding in Kundies about the tops of the Stalks, and laityly in the fmell thereof, this being full as tweet as any of them, but fmelling more like unto *Baww*, or rather coming near to the fmell of an *Orange*, for which reafon, ibme People gave it the Name of *Orange Mint*.

VIII. *The fifth, or Great Curled Mint* of Germany. *This excellent Plant creeps with its Roots, a* the other Mints do, from whence fpring forth feveral high Stalks, which fpread themfelves out into Branches, with two Leaves at every Joint, fome thing broad and large, but more deeply cut in On the edges, and as it were curled or crumpled together, more epecially the lower Leaves: for thofe which rife up with the Stalk, are not fo much torn or cut in on the edges, but aie a little deeper dented than the former. The Flowers ftand rounder, and in fomewhat larger fpiky Heads than others, and are of a pale purplilh color, the fmell hereftf is fweet and pteafant, but not fo quick or hot as fome of the former Kinds.*

IX. *The Places.* All thefe forts of *Mints* grow in *Gardens*, in moft places throughout the Kingdom, and delight in the Sun, and in a rich and fat Soil \$ jnet will grow alfo in fhady Places.

X. *The Times.* They all Flower about the beginning of *Auguft* for the moft part, but feldom give any good Seed, but make a recompence another way, by the encrease of the Root* which as it lives all Winter, fo it continues long, and advances its Stock fo plentifully > that being once Planted in a *Garden*, it will be difficult to get rid of it again, every fmall bit of it being left in the Ground, Springing upafrefh in a fmall time after.

XI. *The Qualities.* *Mint* is hot and dry in the third Degree-₅ Aperitive, Abfterfive, Afringent, Anodyn, Carminative, Digeftive, Difcuffive, Diuretick, Cephalick, Neurotick, Stomack, Cordial, Sudorifick, Alexipharmick, and Spermatogenetick.

XII. *The Specification.* It cures Vomiting, Green Wounds, Punftures of the Nerves and Tendons* Convulfions, Palfie, Lethargy, provokes the Terms, and facilitates the Birth, of Women in Labor, helps the Headach, provokes Urine, and gives eafe in the Stone, Gravel, Strangury, and other Difeafes of the Reins and Bladder.

XIII. *The Preparations.* You may have therefrom > i. A *Juice of the whole Plant.* # 2. An *EJfence of the fawe?* 3. A *Syrup.* 4. A *Decolion or Infufion** 5. A *Ponder of the heaves and Heads when in Viewer.* 6. A *Decofted or Infolated Oil.* 7. An *Ointment.* 8. A *Balfam.* 9. A *Cataplafm.* io. A *Dijlilled Water from the whole Plant when in flower.* 11. A *Spirit.* 12. An *Oil Diftilled.* 13. A *Balfam Chymical.* 14. A *Spirituuous Tinture** 15. An *Acid TinUure.* 16. An *Oily Tinture.* 17. A *Saline Tinfure.* 18. *Potejیات or Powers.* 19. An *Elixir.* 20. A *Salt by Incineration.* 21. A *Mixture** 24. A *Sawce or Sallet.* 23. *Obfervations.*

the Virtues.

XIV. *The Liquid Juice.* *Diofcorides* fays, that if it is mixt with Vinegar and taken, it will itop Bleeding-, and I have found by Obfervation, that fo taken it, will itop Vomiting, tho never fo extream: mixt with a *Syrup of Mint*, and a few Grains of *Long Pepper*, it is *mirorid* *Λ ? ** *Λ m * ch i c Λ* but alfo provokes Bodily Luft exceedingly/and to

kill long, round Worms in the Stomach and Guts. Mixt with the *Juice of Sower Pomgranats*, it flops the Hiccough; Vomiting, and Fainting, and allays the heat and violence of Choter. Some Authors fty that it Jtops the Courfes in Women: but I have found by great Experience, that it on the contrary powerfully provokes them, facilitates the Birth, and brings away tla\$ After-Birth, as alfo the Dead Child. Dofe from an Ounce to 4 Ounces, either alone, or mixt with a Glafs of Wine, or with its proper *Syrup*: as an Errhine, it Purges the Head.

XV. *The Ejfence.* It has all the Virtues of the *Juice, bcMts* which, being Dulcified with its proper *Syrup*, or mixt with a Glafs of *Canary* (from one Ounce to three) it prevails againit all cold and moift Diitempers of the Breft and Lungs, as Loathing, Sicknefs at Heart, Pain of the Stomach, want of Appetite^ Indigeftion, Coughs, Colds, Rheums, fhortnefs of Breath, difficulty of Breathing, Hoarfnefs, Wheezing. £V. Bathed upon the Forehead and Temples, it eafes their Pains: and is good to wafh the Heads of Young Children, to take away all manner of breakings out thereon, as Scurff, Morphew, Pimples, Sores, Scabs, &c. Taken with 30 or 40 Drops of Our *Stomach Tin&ure*, or with 2 or 3 Drops the *Chymical Oil of Mint*, it is good againit the Poyfon of Venomous Creatures. Taken to 3 or 4 Ounces, it Hops Bleeding at Nofe> and provokes Venery admirably: Dropt into the Ears, it eafes their Pains.

XVI. *The Syrup.* It is Stomack, and Pe&toral, good againit Coughs, Colds, Hoarfnefs, Wheezing, Althma's, and other Diitempers of the Breft and Lungs. Dofe 2 or 3 Spoonfuls in a Glafs of *White Port* or *Lisbon Wine* Morning and* Night: fo taken it opens Obftru&ions of the Reins, Ureters, and Bladder, gives eafe in the Strangury, and expels Sand, Gravel, Stones and Tartarous Matter, and is much more powerful for thefe Intentions, being taken mixt with an equal part or more of the *Juice* or *Efence*.

XVII. *The Decolion or Infufwn.* They have both of them the Virtues of the *Liquid Juice*^ *EJfence* and *Syrup*, and may be taken fr^{om}. 4 ¹⁰ 8 Ounces or more, Morning, Noon or Night, fweetned with *Syrup of Mint*: the *Injujion* is the Stronger of the two fbecaufe by its Decoding it loofes many of its Volatile parts) and it ought to be made in fome Generous fort of Wine, as *White Port* or *Lisbon*, in *Alicant*, *Barcelona*, or *Canary*; &c.

XVIII. *The Ponder of the Leaves and Heads.* It is very Stomack, and may be given from half a Dram to a Dram. It ftirs up Luft^ and taken with *Oxycrate* it ftops Vomiting of Blood. It is good againit Pain and Gnawing at the Stomach, and provokes Appetite: taken after Eating, it helps Digeftion, expels Wind, and is good for fuch as are troubled with the Spleen*

XIX. *The Decoded or Infolated Oil.* It is good againft Pains and Aches in any part, proceeding from Cold: and taken inwardly a Spoonful or two at a time, it is good againft Coughs, Colds, Wheezings, Afthma\ &c. and open all Obftru&ions of the Lungs; and if given in time is prevalent againft Stitches in the fide, Pleiiffies, &c.

XX. *The Ointment.* It cures Wounds and Uleefs, old and running Sores, and is good to Anoint any old Pain or Ach in any part of the Body: it is an Excellent thing to Anoint with in the Hemorrhoids 01 Files, as alfo againft *Yieusin Ano*: and put up the Fundament (being melteS) in a *Clyfter*, it is good againft a *Tenafmus*, and the Weaknefs of the *Retjunum Retfum*.

XXI. *The Balsam.* It is a thing singular for Wounds and Ulcers, and not inferior to the *Balfains* made of any other Wound Herb, except only *Angelica*, which I take (by my own Experience) to be one of the greatest of all Vegetable Vulneraries: This *Balsam* cures simple Green Wounds at once or twice dressing[^] and Contused Wounds, it causes to Digest immediately, suppurates Apoltoms, cleanses, incarnates, dries and heals them in a very short time: It is profitable also against old running Sores and Ulcers \$ it digests and cleanses them, and lengthens the part, refits the Defluxion of Humors, and induces their speedy healing: Injuncted scalding hot into Fiitula's, it softens the Calous, and in time dissolves it, refits the fluxion, dries, incarnates and heals them to admiration.

XXII. *The Cataplasim.* The green Herb beaten, and made into a *Cataplasim* with *Barly Wower*, and applied to Tumors not yet brought to Suppuration, dissolves them: it leproves Milk in Womens Breasts when Swoln therewith •, and is good for such as have fivln, great or flagging Breasts. If Salt be added to it, it is good against the Bittings of Mad Dogs, and of other Venomous Creatures. Applied to the Tore-Head or Temples, it eases the Head-ach. The Green Herb made into a *Cataplasim* with Honey and white Bread, and applied to bleared Eyes, it is said to Cure them. Made into a *Cataplasim* with the Pouders of *Ani feeds*, *Caraways*^ and *Coriander-feeds*, ^and applied to v simple Contusion, it Cures it ^ it also gives ease in the pains of the Joints, and the Gout. Applied warm to Kernels-in the Throat and Neck, and recent Tumors of the Kings Evil, it dissolves them. Applied to places affected with the Leprosie (mixt With Vinegar) it is said to Cure it, more especially if the *Juice* and *Ejence* be also taken inwardly.

XXIII. *The Distilled Water from the Me Plant when in flower.* It is an admirable Stomack, and stays Vomiting, having all the Virtues of the *Juice*, *Ejence*, *Syrup*, and *Infusion*, but is to be taken in much greater quantity, as from 4 to 8 Ounces sweetned with *Syrup* of *Juice* of *Mint*, It causes Milk in Womens Breasts, and hinders it from curdling: and taken as aforefaid, it is good against the Strangury, Stone, and Gravel.

XXIV. *The Spirit.* It is a singular Stomack and Cordial, good against Nauseousness, Vomiting, Indigestion, want of Appetite, Fainting, Swooning, Palpitation, and Sicknes at Beait-, and is a most excellent thing to be given to Children against Convulsion Fits, the Falling Sicknes and other Distempers of the Head, Stomach, Heart, and other Bowels. Dose from 2 Drams to 4 to Eider People, mixt with *Syrup* of *Mint*, bat from a Scruple*o agram, being given to Children.

XXV. *The distilled Oil.* It is a powerful Medicament against Stone, Gravel and Tartarous Matter in the Reins, Ureters and Bladder, gives present ease in the Strangury^ strengthens the Stomach to a Miracle, stops Vomiting, causes a good Appetite and Digestion, restores in Contusions, stops Roughs, and Distillations of Rheum, takes away Hoarfness, Wheezings, and obstruions of the Lungs, cures Asthma's, and is a potent thing against Fainting and Swooning Fits, Palpitation, Sicknes at Heart, Apoplexies, Convulsions, allies, Lethargies, Carus, and other cold and moist Diseases of Head, Brain and Nerves: It cures ruintures and other Wounds of the Nerves and tendons, gives ease in the Gout, Sciatica, Cramps, and other like Pains of the Muscles and Joints, It E. the Temis in Women 1 facilitates the brings away the After-Birth, and Dead

Child, and is a potent thing against the Cholick* Vapors and Hyfterick Fits* causes Fruitfulness, powerfully provokes Luft, helps forward Conception: and in a word, is one of the greatest Vegetable Productions that ever Nature produced. Dose from 3 to 12 or 20 Drops in any fit Vehicle.

XXVI. *the Chymical Balsam.* This is a peculiar thing, and is thus made, *Take choice Oil of Mace by Expro. Lion, 2 Ounces \$ Balsam of Peru, and of Tola, of each 1 Ounce-, Chymical Oil of Mint \$ 1 Ounce 5 Me it and mix them well together in Balneo, or in a Sand Heat, and keep it for use.* It has all the Virtues of ^t Chymical Oil beforegoing, besides which it is an excellent thing for the Lungs, as also for the Reins and Bladder, to provoke Urine, ease the Strangury, expel Stone and Gravel, and to heal Ulcers in* the Reins and Bladder. If prudently given, it is ail excellent thing against a Virulent *Gonorrhoea*. Dose from a Scruple to half a Dram in any proper Vehicle Morning and Night.

XXVII. *The Spirituous Tincture.* It stops Vomiting, eases the Pain of the Stomach upon the spot, and cures the Cholick, after a singular manner. It has all the Virtues of the *Juice*, *Ejence*, *Infusion*, and *Chymical Oil*-, being a most admirable Cordial, and prevails against Convulsions upon the spot, Dose from 1 Dram to 2 or 3, mixt with a Spoonful or two of the *Syrup*.

XXVIII. *The Add TinSure.* It is more Stomack than the former, stops Vomiting, creates a good Appetite and a strong Digestion. It is a potent thing against the Plague, of Pestilence, Spotted and Purple or Scarlet Fever, and against all sorts of Burning and Malign Fevers whatsoever, taking away the Fever in Ids than an Hours time* It may be thus used. *Take Mint Water a Squart^ of this Acid Tinture a hmvfi an Ountb, Double Refined Sugar, enough to mdke it very pleafant and drinkable-*, and of this the Sick may drink at pleasure.

XXIX. *The Oily Tincture.* It is profitable against the Stone, Gravel, and Tartarous Matter in the Reins and Bladder, provokes Urine, and gives ease in the Strangury •, and Anointed along upon the *Spina Dorfi*^ and other parts affected with the Palfie* it cures it. It facilitates the Birth, provokes the Terms, and brings away the After-Birth, and Dead Child* Dose from 10 Drops to 20 or 30, in some convenient Vehicle.

XXX. *The Saline TwSure.* It has the Vertus of the *Juice*, *Ejence*, *Decoffion*, and *Oily TinQure*^ in all respects, but not fo Stomack, by reason of the *Menstruum* with which it is Drawn. Dose from 10 to 60 Drops, or more, in *Par fly Water* \$ or in white *Lisbon*, or in *Canary*, or *Canary* mixt with *Parfly Water*. Outwardly it is good against Scurf, Morphesv, Itch, Scabs, and other Debedations of the Skin.

XXXI. *the Poteflates or Powers.* They have all the Virtues of the *Juice*, *Ejence*, *Decoction*, *Spirit*^ and *Chymical Oil* in perfection, and may be given from 40 to 80 Drops, yea to an 100, in a Glafs of Wine 2 or 3 times a Day.

XXXII. *The Elixir.* It has all the Virtues of *Juice*, *Ejence*, *Tincture*, *Spirit*, *Chymical Oil*, and *Powers*, with this preference, that it is more Excellent than the last, and operates in somewhat a left Dose, being one of the greatest Stomackicks in the World; Dose from 30 to 60 Drops in a Glafs of White *Lisbon* or *Canary*, or other fit Vehicle, as the Physician (hall advise, and as oft as need shall require.

XXXIII. *The Salt by Incineration,* It admirably strengthens the Stomach and other Bowels, by

abforbing the preternatural Acid which afflicts chem : is good againt Surfeits, Gluttony and Drunkenefs, and gives eafe in the Strangury, cleanfingthe Reins, Ureters, and Bladder of Stones, Gravel, Sand, or Tartarous Mucilage, which may any ways obfruct them. Dole from io Grains to 20 or ?o in a Glafs of *PtirJly Water*. It carries off the Recrements of the Blood and Humors, and the caufes of many Difeafes by Urine, for which reafon it is of extraordinary Ufe in Fevers.

XXXIV. The Mixture. Take Powers or Elixir of Mint 6 Dram*, Powers of Cloves 3 Drams \$ Powers of Angelica 2 Drams \$ Acid Tiniure of Car aw aies 1 Dram*, mix them. Dole from 60 to 80 Drops in any proper Vehicle againt the Cholick, obfructions of the Terms in Women, Hylterick Fits, Vomiting, and weaknefs of the Stomach. It is profitable alib againt ConviiffionS, Fainting and Swooning Fits, Sicknefs at Heart, and a Coniump-tive habit of Body.

XXXV. The Sauce or Sallet. It is made of the green Herb fhred fmall, and made grateful with the belt Wine Vinegar, a little Salt, and a fuffi-cient quantity of double Refined Sugar. It is acute and grateful to the Stomach, caufes an Appetite, and is ufed as Sawce for Lamb, when in Seafon, and fome other Meats.

XXXVI. Obfervations. In ancient times, the ufe of *Mint* was forbidden to Soldiers, not/or any hurt it did them, but becaufe, it did too much incite to Venerly, and thereby took away, or abated their Courage and Valor. It is alfo farther obferved, that a *Lotion made of the Juice, EJJence, & DecoStion, by mixing with them a little of the Acid TinUure^ and honey of Rofes, that it cures* the Scurvy in the Gutps and a Sore Mouth and Throat. And a *Gargarifm* made with the *Effence, Juice, Deco&ion, Powers' or Elixir, by mixing with either of them, the Spirituous or Acid Tintfur of Coriander Seed and Rue^ or by infufwg thofe two things in them,* is an admirable remedy againt a Stinking Breath, by gargling the Mouth and Throat therewith > and alfo oftentimes holding it in the Mouth: and it caufes the *Uvula* or *Palate* of the Mouth when down, to return to its place and ftrength again. And an *Errhine* made with the *Juice or Effence, two parts mixt with the Di filled Water one part, and the Acid Tintture half c part,* is an Excellent thing againt the Megrim-Head-ach, Vertigo, Lethargy, &c. by purging the Head of cold grofs Humors. Being Snuffed up the Noftrils, and held in the Mouth, it is good againt a Stinking Breath, which proceeds from iotten or corrupted Teeth.

Of M I N T Wild ^

0 K,

Horfe M I N T .

I. *T HE Names. It is called in *Greek*, 'HAW- in *Latme*, *Mintha Sylvejris*, *Mintha tgreftis*,

Mentafirum : in *Englifb*, *Wild Mint* and *Horfe Mint*.

II. *The Kinds.* There are feveral forts of this. *Wild Mint*, as, 1. *Mentafimm Hortenfe*, *Mentha Sylveflris Hortenfis*, *Sifymbria Mentha agreftis Lo* belij*, Our Garden or Manured Wild-Mint. 2. *Mentafirum niveum Anglic urn*, Our white or party colored Wild Mint, or Horfe Mint. ?• *Mentafirum folio Longiore*; *Mentafirum aliud Lobelij Mentafirum Campenfe Lugdunenfis* •, *Sifymbrium Syl* vefire Matthioli*, Long LeavM Wild Mint, or Horie Mint. 4. *Mentafirum Montanum-*, *Mentafirum Pannonicum Clujij*, Mountain or Hungarian Wild or Horfe Mint. j. *Meraafirum Tuberofum CUfjis Mentafirum Radicc Tuberofa* h, *Tuberofe* or *Knobbed Wild* or *Horfe Mint*. 6. *Mentha geniculata Radice*, Wild or Horfe Mint with Kneed or *Jointed Roots*. 7. *Mentafirum hirtutum-*, *Menia-ftirum minus Spicatum Lugdunenfis* h, *Mentafirum aliud hirtutum Camerarij-*, *Mentafirifolia aquatic** *hrlfuta*, & *Lilamintha tertia Biofcoriuk Lobelio** *Mentha jnilufins folio oblongo Bduhni Hairy Wild* or *Horie Mint*. 8. *Mentajirum votun&folium minus*, & *Mentha rotundifolia Paluftris Minot Bauhnii* Small ronnd Leaved Wild or Horfe Mint*

TheDefcriptions.

III. *The firft, or Oirr Garden or Manured Wild Mint. Its Root is creeping, and much like to that of the Garden Kind.* From whence fpring up fquare Stalks, which ate hoary and a little hairy alfo, on which grow larger and rounder Leaves than thofe of the *Garden Kind*, of an hoary white color, and covered as it were with down. The Flowers Hand at the tops of the Branches in fpikei Heads of a pale purplifh color, the fmell of which is heady and ftronger than thofe of the *Garden Kind*.

IV. *The fecund, or Oar white or party colored Wild Mint. This is 7iitich lefs, and better fmelling than the former:* Its Leaves are partly green and partly Milk white-, and fometirties its Leaves are fame of them wholly white : but more commonly all green: the Roots, Stalks, Flowers and other parts, are like thole of the Former but leffeiv This is allb Nurft up, and found growing in many of our Englifh ^ Gardens. It is the Mem aft rum alter u?n Dodon&i.

V. T7: third, or Long Leav'd Wild Mint, or Horfe Mint. *This ha* fquare brownifh Stalks, and fomewhat broad, but longer heaves growing on them than the laft, nothing at all hoary, but rather of a dull green color.* The Flowers ftand at the tops'-of the Branches, in founder Tufts, of a pale purplifh color: and the fmell of the Leaves and Branches, is fomething more pleafant than die other.

VI. *The fourth I or Mountain Or Hungarian Wild cr Horfe Mint. ^ It ha* a pretty hard, thick, long J Root, with many Fibres fpringing forth from it, more like to Nep than Mint.* From which fpring up feveral fquare Stalks, on which grow by couples at every Joint, fomewhat large Leaves, like as on the others, which are more green than the laft, and dented alfo about the edges. The Flowers are whiter than the former, Itanding about the Stalks, at feveral fpaces, and ending [in fmall long Spikes. The whole Plant much refem-Uing *Common SpearMint*, an* ms of a hot and ftiarp taft, fmelling very like to the other *Wild Mints*.

VII. *The fifth, or Tuberos of Knobbed Wild or Horfe Mint. Its Root is fomething reddijh within, and brownifh on the out fide, having feveral tuberous Heads joined thereto, which being feparated will grow into Plants.* From this Root fpring up fquare hairy green Stalks, full of Joints, tirith two Leaves fet at every Joint, which are long and rough, dented about the edges \$ fomewhat hoary, of a whitifh green color, and of a ftrong, fmell. The tops of the Branches do end in Spikes of hoary Leaves, among which, at certain diftances, the Flowers ftand, with two Leaves at a fpace of a whitifh color: after which follows fmall black Seed.

VIII. *The fixth, or Wild or Horfe Mint with Jointed or Kneed Roots. Its Root is fomething thick, and fet with Joints or Knees, at certain fpaces, fhooting forth fibres at the fame.* The Stalk rifes not above a Foot high, being fomething hard, rough, and fquare, o which grow at the Joints, two long dark green Leaves, being, fofc in handling, but a little wrinkled and dented about the edges. The Flowers ftand at the tops of the Branches in fhort Tufo or Spikes, like unto *Nep* of a pale purplifh color •/ after which com: fmall, round, fweet fmelling Seed, like in fcn: to the whole Plant.

IX. *The Jeventh, or Hairy Wild or Horfe-Mint Tte hoi faxare hairy Stalks, fpread forth into many Branches,* higher and greater than the Common fort of *Wild Mint**, on which grow hairy long Leaves at the Joint thereof, and many purplifh Flowers at their feveral tops.

X. *The eighth, or fmall round Leav'd Wild or Horfe Mint. The Stalk is fquare, hairy, <md reddijh, much about a loot' high, having two Leaves at a Joint, fomewhat long and round, J°Jti hairy, and dented about the edges, of*

a fad green on the upper fide, and hoary un dcrncatb*, from the joints fpring forth fome Branches, fet with the like Leaves, and round Heads of Flowers at the tops, of a purplifh color, the fmell of the Plant is heady, and of a ftrong fweetnefs.*

XI. *The Places.* Thefe are all of them Wild ly Nature, and grow in moift and watery Places, as in Meadows near unto Ditches which have Water in them, and in Grounds many times overflowed with Water, as in Fenny Grounds, OV. but the two firft are Nurft up in our Gardens, and fo are allb the others in many Places.

XII. *The Times.* Thefe Flower when the *Garden Mints* do, viz. about the latter end of July, or beginning o! *Auguft* h and fpring up again the next year from their old Roots, by which they alfo very much encreafe.

XIII. *The Qualities, Specifacitm, Preparations^ and Virtues* are exactly the fame (If ^{n?t} ^{m?r} [^] Powerful) with thofe of the *Garden Kinds* declared in the former Chapter, to which I refer ou.

C H A P. CCCCXCIVo

Of M I N T Water.

1. ^{Tp} *H E Names.* It is called in ^{℞.℥.7.} JL *SiffilpSeAovt* in *Ldtine* ^ *Sifymbrium* ^ *Menth aquatica* : and in *Englifh*, *Water Mint*.

II. *The Kinds.* Of this there are two forts, viz. i. *Mentha aquatics rubrd*, *Sifymbrium majtsi Sifymbria Mentha Lobelij*: Beyond-Sea Apothecaries call it as *Tragm* fays, *Balfamina*, as alfo "*Balfdmita*, as *Befler* in *horto Eyjietenfi* fays, *Aquatica five Sifymbra Me/ttha folio rubro Lobelij*, *Sifymbrium agrefle aquaticum Gefneri** *Sifymbrium Sylvefire Lugdunenfts*, *Red Water Mint*, or *Water Mint the Greater*, 2. *Menth Aquatica five palujiris miñor* ^ *Mentha rotundifolia palujiris minor Bauhini*, *Sifymbrium minus*, The lefler *Water Mint*.

The Descriptions.

III. *The jirfi, or Red Water Mint.* & has a creeping Root, running and fpreading in Muddy and Watery Places, From whence fpring forth many fquare brownifh Stalks^ Branched forth almoft from every Joint, with i Couple of fomewhat broad, but pointed and dented Leaves, of a brownifh or reddifli color, and of a ftrong fweet *Mint* like fmell liie Flowers are fmall and of a purplifh color, ftanding at the tops of the Stalks or Branches, in loofe round Tufts, one above another.

IV. The Second, or Letter Water Mint. It has a Root like the former, which sends forth a square reddish hairy Stalk, and sometimes a link hoary, of about a Foot in height...

V. The Places. They both grow by Ditches and Water sides, and in wet and plashy places, as also in Fen Grounds, where they very much delight.

VI. The Times. They Flower late in the Summer, viz, about the beginning of August.

VII. The Qualities, Specification, Preparations, and Virtues, are the same with those of Our Garden Mint, declared in Chap. 492. And probably may exceed them in many respects.

CHAP. CCCCXCV.

Of M O L Y:

O K,

ION - CARLI. CK.

T Names. It is called in Greek, Pellio, vel Hipp. i. e. caput Jimp/ex, neque in lymtm nuole.

osdivifum, as Galen Interprets it. Or morbis: vel a pw^w^ i. e. ctov^i(u^ quod Xcmt'f' cia del eat: in Latine, Moly, Alii ufa Xfpeuhi: k-Engliff, Moly, Onidn Garlivk, and Soarcr's Oarlick-.

II. The Kinds. There are many sorts of Moly Plant, as, 1. Moly Theophrasti vel Moly homericum, Theophrastus or Homers great Moly. 2. Moly Indicum Lobelij, Clusij, aliorumq;tte, Ctiuctijoni, The Indian Moly. 3. Moly Montanum Pannonicum bulbifrum prim urn, The first bulbed Hungarian Moly. 4. Moly foliis^Narcifinis, Daffodil Leav'd Moly. 8. Moly Ahnt anum latijolium flare Litteo, Yellow broad Leav'd Moly. 9. Moly Pyrcnxum pircpureum Purple Mountain Moly. 10. Moly Montanum folium purpureum Wpanic am ^ Purple broad Leav'd Spanifh Moly. 11. Moly pur-pure imm neapolitannum, Purple Naples Moly. 12. Moly Pykidaturo argent cum Hifpanicum, Silver Cupp'd Spaniui Moly. 13. Moly Servinum conifnim, The late ripe Pine Apple Moly. 14. Moly Diofcorideum Diofcorides his Moly. 15. Moly Diofcorideum Spanilh Moly of Diolcorides. 16. Moly Mufchdt iftuin, Moly Zibet tuum Monfpelienfe, Sweet imdling Moly of Mompelier. 17. Moly Pannonicum Lit ifolium Prim urn Clufij^ The broad Leav'd Hiffearian Moly of Cuijui. 18. Moly Pannonicum Wore odorate, Sweet Hungarian Moly. 19. Moly Montanum Capitt rot undo purpureo, Purple round Headed Mountain Moly. 20. Moly Africum umbella purpurafcente, Purplifh Fleaded African Moly. 21. Moly halicuum album Caule Triangulo, Indian white Moly with a triangular Stalk.

The Descriptions.

III. The first, of Theophrastus and Homers great Moly. Its Root grows very great, greater thin arty Man's bift, is one great Lib, and U

two, but sometimes earihick! long, and hollow guttered with five of a whirifh green color, Very near to the color of a Tulip Leaf: having sometimes at the end of some of the Leaves, and sometimes a part by it self; a fraall whitifh round Button, likeurtO a small Bulb, the like or which also, but greater, does grow between the bottom of the Leaves and the Stalk, near the Ground, which being planted when it is ripe, will grow into a Root of the same Kind. Among thde Leaves rife up a round, strong, and tall Stalk, a Yard or more high, bare or naked unto the top, where it bears a great Tuft or Umble of pale, purplifh Flowers, all of them almoit, ftanding upon equal foot Stalks, or not one much higher than another, confiding of five Leaves apiece, ltriped down the Back with a small p Line, having a round Umbone or Head with ibm Threads about it in the middeit. These Flowers abide a great while blown, before they fade, but fmell not itrong like thole of Onions or but have a faint scent. When they are Seed cornes, which is black, and endofed in clofe Husfes.

«V. The third, or Indian Moly. Its Row is
 fch like Lives as the former, tat (hortertnd) broader. In the middle of which rife up a fhort
 ing ciofe one unto another upon irs foot Stak, or
 the bignefs of an Acorn, which being planted will
 be a Plant of the fame Kind : but befides that
 Head, it bears fmall Bulbs above the Ground, at
 the bottom of the Leaves, next the Stajk, like un-
 to the former.

V. The third, or Firft Bulbed Hungarian Moly.
 Its Root is not great, but white on the out fide, very
 like urto the Root of Serpents Moly, defer ibed at
 Seft. VII. following, increafing much under Ground,
 and fmelling ftrong. It has three or four broad and
 long, green Leaves, folded together at the firft.
 Which after open themfelves, and are carried up
 with the Stalk, ftanding "thereon, one above another,
 which is not above a Foot high. At the top of
 which does grow a few fad reddifh Bulbs, and be-
 tween them long foot Stalks, bearing Flowers of a
 pale purplifh color. After which Flowers, black
 Seed eniiee enclosed in roundifh Heads.

* VI. The fourth, or Second Bulbed Hungarian
 Moly. Its Root is like the former, arid covered
 with a blackifh purple Coat or Skin. It has narrow-
 er green Leaves than the former: the Stalk is about
 the fame height, at the top a great Ciufter of final*
 green Bulbs, which after turn of a darker color :
 from among which come forth long foot Stalks, on
 which grow purplifh Flowers..

*VII. The fifth, or Serpents Moly. Its Rdot is
 fmall, round, and whitifh, encreafing into a number
 of fmall Roots, no bigger than Peafe, round about
 the greater Root. This Plant is of the Species of
 the Bulbed Moly, but of greater Beauty and De-
 light, becaufe the Bulbs or the Heads of the fmall
 Stalks, are redder, and more pleafant to behold.
 The Stalk is lower, and its graffie winding Leaves,
 which twine themfelves like Serpents (whence
 came its Name) are fmaller, and of a whiter green
 color. It bears among its Bulbs purplifh Flowers
 alfo, but more Beautiful, whofe fmell is nothing
 fo ftrong as fome others.

VIII. The fixth, or Three cornered Moly. Its
 Root is white on the out fide, and very like the yel-
 low Moly. It has four or five long, and fomewhat
 broad, pale, green Leaves, flat on the upper fide,
 and with a ridge down the back of the Leaf, which
 makes it feem three fquare or cornered. The Stalk
 rifes up a Foot and half high or better, and is tri-
 angular or three cornered alfo, bearing at the top,
 out of a fhining Husk, feveral white Flowers fome-
 thing large and longe, almoft Bell fafhion, with
 ltnpes of green down the middle of every Leaf,
 yd a few Chives tipt with yellow in the middle
 about the Head-, wherein, when it is ripe, is
 a fmall black Seed. Both Root, Leaf,
 and lower have a Garlick fmell, but not very
 ftrong.

IX. The feventh, or Daffodil Leav'd Moly. Its
 Root is fometimes knobbed, but more often bulbed,
 having in the Knobs fome marks of the old Stalks
 to be feem'd the??:, and of a Garlick fmell, by which
 the Plant may be known. It has many long, nar-
 row, and flat, green Leaves, very like unto the
 Leaves of a Daffodil (from whence came its Name)
 or rather of the early greater Leucoium Bulbofum*
 or Bulbed Violet. From among which rife up two
 or three Stalks fometimes,, each of them about

like as in the others
 It has but one long, and broad Leaf, when
 it bears no Flowers, but when it bears Flowers, it
 has two long, broad Leaves, yet one always longer*
 and broader than the other, which are both of the
 fame color, and near of the bignefs of a Tulip
 Leaf Between thofe Leaves grows a flender Stalk,
 bearing at the top a Tuft or Umble of yellow
 Flowers out of a skinny Husk, which parts three
 ways, made of fix Leaves apiece, laid open like a
 Star, with a greenifh back, or out fide, and with
 fome yellow Threads in the middle, after which
 follows black Seed, like as in the others.

XL The ninth or Purple Mountain Moly. It
 b/u a Root which is whitifh, of a ftrong Garlick
 fmell, but quickly perifhes with the extremity of
 our cold Winters, which it will not endure without
 defence. It has two or three Leaves, a little like
 the former Yellow Moly, but not fo broad, nor fo
 white. The Stalk has not fo many Flowers
 thereoi, but more fparingly, and of dull purple
 color

XII. The tenth or Purple, broad Leav'd Spanifh
 Moly. Its Root is fmall, and bulbous or rounds
 with many Fibres adjoining, from which other fmall
 Bulbs fhoot. It has two broad, and very long
 green Leaves, like unto the Yellow Moly, at Seft*
 X. above ; but in this they encompafs one another
 at their bottoms, between which rifes up a ftrong
 round &alk, two Feet or more high* bearing at
 the top out of a thin Husk, a great mamr fair,
 large Flower upon long foot Stalks, confifting of
 fix Leaves apiece, fpread open like a Star, of a
 fine dilaid* purple* or blue color, With feveral
 Threads of the fame color, tipt with yellow, ftand*
 ing about the middle Head: between the Stalk and
 the bottom of the Leaves, fome fmall Bulbs grow,
 which being planted, will foon fpring and encreafe!
 Neither the Root, Leaf, nor Flower, have any
 Garlick like fmell iuhem.

XIII. The eleventh, or Purple Naples Moly*
 Its Root is white, round, and bulbous^ quickly
 encreafing as the other MolyS do-, and has a
 more Garlick like fmell than the other parts
 of the Plant. It has three or four fmall green
 Leaves, growing upon the Stalk, after its fpring-
 ing up, which bears a round Head of fine pur*
 pie Flowers, made of fix Leaves apiece, but fo
 ciofing together at the edge, that they feem like
 unto fmail Cups, never laying themfelves open as
 the others do.

XIV. The twelfth, or Silver Cup'd Spanifh
 Moly. Its Root is fmall and round, white, and
 in a manner tranfparent, at'leaft fo fhining as if
 it were fo ; and increafes nothing fo much as many
 of the other forts. It has two or three very long
 Ruffh like Leaves, which rife up with the Stalk, or
 rather dye away when the Stalk is rifen up, to be
 about three Feet or more high, bearing a great Head
 of Flowers, ftanding dole at the firft, but after-
 wards fpreading much one from another, every
 Flower ftanding upon a long foot Stalk, being of
 a white Silver color, with ftripes or lines on every
 fide, and fhaped fmall and hollow like a Box or
 Cup. The Seed has fcarcely been obferved with us,
 becaufe it Flowers fo late, that the Winter hinders
 it from coming to perfe&ion,

it for the moft part
 Z 14

VIII. *The Qualities.* Money-won is cold in the first Degree, and dry in the second. It is Afringent, Vulnerary, and Pectoral.

IX. *The Specification.* It flops all forts of Fluxes of the Bowels and Womb, heals Wounds and Ulcers, and prevails against Confutations of the Lungs.

X. *The Preparations.* You may make therefrom, 1. A *Liquid Juice.* 2. An *Effence* 3. An *Infufion or Decottion in Water or Wine.* 4. A *Syrup or Lohoch.* 5. A *Poufcer of the Herb or Seed.* 6. An *Ointment or Balfam.* 7. A *Cataplafm**

The Virtues.

XI. *The Liquid Juice.* It is very Afringent, binding, and dryings and is good to flop all Fluxes of Blood in Man or Woman, whether it be a Diarrhea, Dyfenteria, Lienteria, Hepatick Flux, or the overflowing of the Courfes in Women; it flops alfo all ibrts of Bleedings, whether outward, or inward, as Spitting, Vomiting, or Piffing of Blood, reftifies the Weaknefs of the Stomach, ftrengthens it, and flops Vomitings healing all excoriations or Ulcers thereof, as alfo of the Lungs, and of other inward parts. Dofe 3 or 4 Spoonfulls at a time either mixt with Honey, or in a Glafs of red fort, or red Florence Wine, Morning and Night.

XII. *The Effence.* It has all the Virtues of the *Liquid Juice*, and may be given in the fame manner, from 2 to 4 Spoonfulls: befides which, it is an excellent thing to heal all fimple green Wounds and to digeft, cleanfe, incarnate, dry, and heal all forts of old Ulcers, not yet become cacoethick, flopping the Fluxion of (harp and nioift Humors which attends them, caufing them either to ipread, or to be long in curing.

XIII. *The Infufion or Decoffion in Water or Wine.* Thefe have the Virtues of the *Juice* and *Effence*, but nothing near fo powerful, and therefore may be taken Morning and Night, from 4 to 6 Ounces, fweetned with a little of the *Syrup*.

XIV. *The Syrup or Lohoch.* Thefe ate made of the *Juice*, the first of them with fine Sugar, the latter with Clarified Honey. They have all the Virtues of the *Liquid Juice* and *Effence*, befides which, they are excellent againft Coughs, Colds, Hoarfnefs, Wheezings, fhortnefs of Breath, difficulty of Breathing, Excoriations and Ulcers of the Lungs, fpitting of Blood, &c.* Dolè from an Ounce to two Ounces, every Morning Yafthg, an Hour before Dinner, and laft at night going to Bed.

XV. *The Pouder of Herb or Seed.* Drunk in Water in which red hot Iron has been quenched, it flops Fluxes of the Bowels: and any old Sore or running Ulcer waftied therewith, it cleanfes, dries and heals it in a fhort time: fo alfo the dry Pouder befretwed upon the fame pretty thick every time it is dreft.

XVI. *The Ointment or Balfam.* They cleanfe running Sores and old putrid Ulcers, it incarnates, dries, and heals the fame: and are of efpecial ufe for Green Wounds in any part of the Body: Applied to the Gout it eales the Pain in a fhort time, and fo ftrengthens the parts affi&cd, as to prevent a S. K. f Humors to the fame.

the Qataplafm. The Flowers and Leaves and laid upon Wounds and Ulcers, cure; bunt is much more effectual being ftamped

and iToiled in *Oil Olive*, with an addition of *Rofin, Wax, and Tupentine.* Authors fay, that there is not a better Wound Herb than this, no not *Tobacce* it feUj nor any other Herb whatfoever,

CHAPTER CCCCXCVII

Of MOON-WORT.

THE Names. This Plant was not known to the Ancient Greek or Latine Writers, fome would have it to be the *Ceratia Plinij*: Some to be *Tragiumfecundum Diofcoridis*, which growing on the Mountains, has the Leaf of *Scolopendriu* or *Spleen-wort*, but I think erroneoufly. Modern Authors call it *Lunaria minor* (*M. Lunx, Crefcantis modo falcatis*:) Gefner calls it *Lunaria petraa & Tour a*: it is the *Rut a Lunaria vel jeeoraria Tabernamontani*; and is called in English, *Moon-wort*.

II. *The Kinds.* Authors make feveral kinds of this Herb, as, *Lunaria minor*, the Lefler Mopfl-wort, of which in this Chapter, and it is fhought by fome to be *Hemonitis altera* (ff *Selenitis*.) caufe they make, *Lunaria major*, to be *Hemionitisi* or, Mules Fern, in Chap. 542.- Alfo, *Viola L#M#ria, bulbonack*, or Satiin Flower, which fee in order. ? *Lunaria minor ramofa Cluffj*, fin Branched Moon-wort 5 but this latter being totally a Stranger in England, and Native of *Silefia*, w< (hail fay no more of it in this Place,

The Descriptions.

III. *The first, or fmall Moon-wort, has a fmall and fibrous Root, from which Jprings up ufually but one dark, green, thick, and fat Leaf, flarJin,*

upon a jhort foot Stalk, not above two or three fingers breadth \$ hue when it comes to Flowering, it then bears a fmall, {lender Stalk, or about 4 or 5 Inches high, having but one Leaf growing from it In the middle thereof, which is much divided on both fides, fometimes into 5 or 7 parts, or more on a fide, each of which parts is fmall next the middle Rib, but broad forwards, and round pointed, re-iembiing therein an half Moon, (from whence came the Name) the uppermoft parts or divifions being lefs than the lower. The Stalk rilés above this Leaf 2 or 3 Inches, bearing many Branches of fmall, long Spikes or Tongues, every one" of them. alm#t like to the fpiky Head of *Adders-Tongue*, of a brownifh color, which v\ hether they are to be called Flowers' or Seed, is fcarcely deremnable. Thefe Spikes after they have continued a while, reloive into a mealy duft.' Sometimes this Plant is found with feveral fuch like Leaves, as the Leaf above defcribed, with fo many o Branches or Tops arifing from one Stalk, each divided from the other.

IV. *The Places.* It grows on Hills and Heaths, yet where there is much Grafs, for therein it delights to grow. *Gerard* fays he found it growing about *Bath* in *Somerfetjhire* in many places, efpecially at a place called *Carey* ^ two miles from *Bruton* ^ in the next Clofe to the Church Yard: on *Cocks-Heathy* between *howfe'W)* & *Lint on*, three miles from *Maidftone* in *Kent* \ as alfo in fome Grounds by *Colcbcefter*, in the Ground of the then Mr. *George Sayer* called *Miles-end*: ir grows likewiie on the fide of *Black-Heathy* near the Stile leading to *Eltham Houfe*, about an hundred Paces from the Stile : and in *Lancajhire* near to a Wood called *Faireft* by *Lathaw* : in *Nottingham-jlhire* by the *Weft-wood* by *Gringley*, and at *Wefton* in the *Layield* by the Welt fide of the Town : in *Bijhopsjield* at *York* : near unto *Wdkefield*, in the Clofe where formerly Sir *George Savils* Houfe flood, called *Heath Hall** 3x16. in many other places.

V. *The Times.* It is to be found only in *April* and *May*, for in *June* and the following Months, when the hot Wether comes, it for the molt part whiter and dyes away.

VI. *The Qualities.* It is cold in the firft Degree, and drying in the fecond-, Abfterfive, Afringent, and Vulnerary.

VII. *The Specification.* It flops fluxes of Blood of all forts, whether inward or outward, Vomitings, and other fluxes of the Bowels, fluxes of the Womb, and heals all forts of fimple Wounds, whether inward or outward, Ruptures, Fractures, &c.

VIII. *The Preparations.* You may have there-
*rott, 1. A Juice or Effence. 2. A Decofion or In-
jufion in Wine. 3. A Balfam or Ointment. 4. An
W- 5- A Caiaplajm.

The Virtues.

VS.. *The Juice or Effence.* They are molt excellent things for all Wounds whether inward or outward, they flop the Whites in Women, as alfo the overflowing of the Terms, and all forts of Fluxes, of the Bowels as Diarrhea, Dyfenteria, and Lientena, as alfo die Hepatick Flux, and all other fluxes of Blood, whether, by Spitting, Vomiting, or by Urme, as alfo inward Fluxes of Blood, made by Wounds. They ftep Vomiting, lengthen the Jtomack, and other Vifcera, and reitore the Tone of the Bowels being hurt. Dofe from 2 Ounces to 4> in any fit Vehicle.

X. *The Injufwn or DecoUion in Wine.* They

have all the Virtues of the *Liquid Juice* or *Effence*, and may be given Morning,-Noon, and Night, from 4 to 6 or 8 Ounces, fweetned with *Syrup* of *Redliofof*, or of *Covegillifowirs*.

XL *The Balfam or Ointment.* They are excellent for healing of Green Wounds, digetting, cleanfing, incarnating, and drying, or heahng of old, ro.cen, putrid, and running Sores and Ulcers, bringing them to a fpeedy Cure: They arc good alfo ro conolidare Ruptures, Fractures, and Dilocations, being duly outwardly applied, the Juice or tlijence being alfo taken at the lame time. .

Xif. *The Oil by Infolation.* It is an excellent thing against Burnings and Scaldings however made^ and being timely applied, pr-fendy takes our the Fire, eafes the Pain, and in a fhort time afier cures the fame.

XIII. *The Cataplafm** It is good against Ruptures, Gaulings in any part, Infiations^ and con- folidates*Fratiures and Diflocations. And timely applied, itdifcufles iimple Contufions wherefoever, prevents Inflammation and Apoftemation, and ipeedi* ly reftores the patt.

Of MOSS Ground, or Land.

I. ^ *HE Names.* , *Mofs* is called in *Greek* X Bpuj,fc rTAaxw5 m *Latine* ^ *Mufcus*, which is *Byron Phnij*: in *Englijh*, *Mofs*.

II. *The Kinds,* TKere are three Generick Species of this Plant, viz. 1. *Jyvov x* r**W* *Mufcus Terrefttris* ^ Ground or Land Mofs, of which in this Chapter, 2. BpuV <hvfea.ltr% ^ 'TTTVOVM', <r<i>Jyvf, *Mufcus Arboreus*, Tree Mofs, of which in Chap. 499. 3. BpuV 6axw5 K) \uSw, *Mufcus Marinus*, Sea Mofs, of which in Chap. ?cc, following.

III. *The Species of the Land or Ground Mofs**
1. *Mufcus Terr eft r is vulgatiijftmus, vel Terrefttris Lobeltj & Dodon** \ *Mufcus Hortenfis* *Tragi Bauhim*, Our common Ground Mofs. 2. *Mufcus Terreft rh vulgaris alter Gerardi, Mufcus denticulato fimilk Bcwhini, Mufcus mom anus Tabcrn & montani*, Our other ordinary or common Ground Mofs. 3. *Mufcus TcrreftrU fcoparius*, ' *Mufcus fcoparius Lobeliji Selago tertia Thalij*, *Beefom* Mofs. 4. *Mufcus Clavatus, five Lycopodium, Lobelij & Do* dondis Mufcus Terrefttris, Matthicli & Tragi, Se* laginis Species altera Thalij, Mufcus Vrfinus Gef fieri** Club Mofs, or Wolfs Claw Mofs, greater and lefler, 5. *Mufcus denticulatus major & minor*, *Mufcus Terr eft ris aliorum* ^ *Mufcus hufitanicm Clujij*, Toothed or Dented Mofs, greater and leffen 6. *Mufcus Pennatus major & minor*, Winged Mofs greater and leffer. 7. *Mufcatus Jpic' at us repens*.
Creep*

Creeping Mofs with f' piked Heads'. 8. *Mufcus cretus Ramofus major & minor Bauhini*, Branched Mofs greater and leffen ?. *MJ feus parvus ft e liar is Bduhini*, *Mufcus in Ericetis prove nicens Lcbelij*, Heath Mofs. 10. *Mufcus Stellatus Rofe us Bauhini*, Rofe or Star-like Mofs. 11. *Mufcus Pyxidatus Lobelij*, of which *Bauhinus* makes two forts, viz. *Mufcus Pyxiodes Terrestris*, & *Pyxiodes Saxatilis*, Cup Mofs, or, Cup like Mofs. 12. *Mufcus Corniculatus Gerardi* Ef *Tabcrnxmontani*; *Mufcus Cera-noides major & minor Bauhini*, Horned Mofs. 13. *Mufcus minimis Terrestris Tragi* ^ the fmalleft Ground Mofs. 14. *Mufcus Abietis facie Bauhini* ^ Firr-like Mofs. 15. *Mufcus Filicinus major* £? minor, *Gerardi & Tabern&montani*, minor *Bauhini*, Fern-like Mofs. 16. *Mufcus Polytrichoides Bauhini*, *Mufcus Capillaris*, five *Adiantum aureum ma jus & minus Gerardi*, Miiden-hair Mofs, or Golden Maiden-hair greater and leffer, as *Gerard* calls it. 17. *Mufcus Saxatilis Ericoides Bauhini*, Stone Heath Mofs. 18* *Mufcus Terrestris Coralloides incanus Bauhini*, Hoary CoraHike Mofs. 19- *Mufcus Terrestris Coralloides rufefcentibus Cormbus Bauhini*, Coral-like Mofs, with reddift Horns. 20. *Mufcus Corallinus Mont anus*, *Mufcus Cor alii-nus five Corallina Montana Tabernamontani*, Moun-tain Coralline-like Mofs. 21* *Mufcus Coralloides Saxatilis*, Rocky Coral-like Mofs: this *Columna calls Litbobryon Coralloides*. 22. *Mufcus Clavatas Cupreffii formis*, *Sabina Sylvejtris*; *Gefneri & Tragi*; *Selaginis Plinian** prima Species Thalij; *Qximacypa-riffus Gerardi*, *Tabernamontani & Turneri*, Mofs Cyprefs, or Heath Cyprefs, called alfo Cyprefs Mofs, of which we have already Treated at large in Chap. 188. aforegoing.

with many Jmull Jingle Stalks, about a Foot in height fometimes, and very oftentimes not half that height. with a great number of foft Leaves like Hairs, grove* ing thick and deft together, the tops of which, in the hottest time in Summer will be Jbmewhat round and whitish; the whole Tuffock is often found differing in color, being either green or reddijh, or of a whit ft yellow color.

V. The fecond, or Our other ordinary or com* mon Ground Mofs. Its Roots are like the former, and it grows up with many branched Stalks, of long ivinged, but jhort green Leaves, almojl hke Heath, /moth and foft, not hard like Heath: it spreads much in the Ground, and rises not above half a Foot high: this Plant is more^ common in Germany, and other Foreign Countries^ than with us.

VI. The third, or Beefcm-Mofs. It has a long, bushy fibrom Root, and takes its Namt f^otjj manner of its growing^ which is from d fmall W^i below, fending up fever al'fhining, blachfb, f^x^P Stalks, of winged green, Thread-like ^rns about twelve Inches high, which spread weit^ /elves out broadest in the middle; at the top V which breaks forth fometimes fmall yellowjh ^ed^ whuh quickly fall away, without any Seed follows them.

VII. The fourth, or Club-Mofs, or Claw-Mofs, greater and leffer. These run the furjace of the Earth to a great ^oot breaking into other long, round Branches, y^ ing forth fibres into the Ground a* they c

The Descriptions.

IV. The fir ft, or Our common Ground Mofs. Its Roots are very Jhort, which are fajned in the Earth, from which the Herbfpings up verythick^ together

6 4 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 OSS

along, being made of m.my Short y^ecn, hairy Leaves: at the joints ^tbrt* * Branches i grow iN fever al placet > two ^ small, round, long, yellenish, My

jj&e the Catkins or Bloomings of the ttafle-Tfee, which as in all the other Mosses come to nothing.

VIII. The fifths or Toothed or Dented Moss greater and lesser. Both these sorts of Mosses grow one like the other, but one larger than another, and each of them somexohai like thk laji, Rooting in

divers places, as they riith oft the Ground. The Stalks are almoft as fmall as Hairs, upon which grow fmall Leaves thick fet together, as if they were Scales, laid clofe one to another-, the ends of them, Jlick'itig out like Teeth.

IX. The fixth, or Winged Moss greatet and lesser. Both these Mosses need also hut one Be* fcription, not differing but in thj largnefi and multitude of their Branch's one from another: they creep on the Ground, and Root as they run: vohofe Stalks and fhort Branches arc thick fet with fine yelloibifb, green Leaves like Wings on both fides, from whence it took its Name. They grow in Woods, as also upon the Rocks and Stones.

X. The feve nth, or Crepping Moss with Spiked Heads. This grozvs near to, and under Trees, creeping jar abroad, with thick and long Branches, which fend forth many fine heaves, fet clofe together, in manner of long fpiked Heads 5 one fort being green 5 and another white*

XI. The eighth, or Branched Moss greater and lesser. The greater Branched Moss grows thick and clofe together like a Turff, or Haffock of high Grafs, whose Stalks are 4 & 5 Inches long -, fpreading into Branches of 2 dr ^ Inches a piece, and thofe into others agdin*, all which are covered with very fine Hair like heaves, among which fhoot forth fmall naked Stalks of an inch long, with fmall yellow round Heads like Wheat torns. The lesser fort hereof has its Stalks fhorter, and its heaves are fo fmall that are they fcarcely to be difcerned.

XII. The ninth, or Heath Moss. It grows much on dry heathy Grounds, and being a fmall fort of tools ^ it rifes up with fever at

hard Stalks of, fmall fhort heaves-, and at tie top, many others fet thick and ro.ind like a Turff:

XIII. The

XIII. The tenth, or Rofe or Star like Mo&. It is a small Mofs which grow upon Rocks and Stones, and Scarcely rife above an Inch in height, having many small, pale, green, Sharp pointed Leaves, jet at the tops of their small Stalks, in manner of a Rofe, Spreading forth like a little Star.

XIV. The Eleventh, or Cup Mofs, or Cup like Mofs. The Leaves of this Mofs ly like Liverwort, creeping upon the Ground, and are of a whitish yellow color, as are the small hollow Leaves like Cups,

which rife from them; inhere is another Kind here-of growing not on the Ground as the former, but on Rocks and Stones, whose Cups are fmaller, more in number, and notfo white.

XV. The twelfth, or Horned Mofs. This grows on those Rocky Barren Hills, and Stoney or Rocky Grounds, where almo/i nothing will grow. It rife out of the Ground with feveral slender, weak, and fomewhat broad Stalks, three or four inches high, naked and without Leases, from the bottom to the top, but parted into fmaller Branches, and they again into leffer, which are forked at the ends like unto Horns, of a dusky white color.

XVI. The thirteenth, or smallest Ground Mofs. This small Kind of Mofs usually grows with us, not only upon those Grounds, which are not Jhrred or turned up for two or three years together, but also in Flower Pots of Earth in Gardens many times, which have not been lately Jhrred. It is nothing else but a number of jhort green Hairs, matting upon the Ground, which in the heat of Summer, and sometimes fooner, will fend forth small jhort Stalks an Inch high, with small yellowish or greenish Head* on them. This is well known to many, hm been little regarded by most, and not mentioned h any before, except Tragus, and them which have followed him.

XVII. The fourteenth, or Firr like Mofs. It grows close upon the Ground, creeping thereon with J everal long Branched Stalks, withjine, jhort, hairy,

green Leaves, jet on both sides of the middle thereof, refembling a Fin-Tree Branch, from whence it took its Name. TU,*}

XVIII. The fifteenth, or Fern-like Mofs. inhere are feveral Kinds of this Mofs, some bigger, and some leffer than others, all of them rising up w". fevrat Stalks, some blackish, some reddish, andj* Leaves on them, much like to Fern Leaves; w in some more finely cut or jagged into several parts, than in others; on the tops of the Branches of w leffer fort, hang small, round, pointed, croozea.

XIX. The fifteenth, or Maidenhair Mofs, or Golden Maidenhair greater and leffer, as Oerarg calls it. There are three Kinds of this Mojs, *} One that has many Jhort Stalks thick covered <> short, but fomewhat hard, rough, Hair-like <yl growing in wet € rounds. 2. Another vowel. T.S. in each part, and the Lefves not rough or hara. all 3. Another which h'the leafi fort, and w Leaves fmoothejl: These two lad grow vp^o Walls. Gerard fays, that the first of these << hjs. Stalks about an handful high, covered with Hairs Jlanding very thick together, of an fr yellow green color, out of which Stalks fp^v%. Sometimes very fine naked Stems, and fomewhat black upon the tops of which hang as it were little like Wheat Corns: Its Roots are also very ft and extremely fine. 2. The second differs only in magnitude from the former, and has many J T)re'ads upon its Branches. 3. The third is the very leafi of all (and possibly the least of Plants which grow) has only three or four of those hairy Threads close to the Root.

XX. The feventeenth, or Hoary Coral-like This small Mofs has many small Hair-like next the Ground, like unto the Common Mofs, among which rife up, rough Stalks, three or four Inches Ugh, in some places bare of Leave*, ind covered in the rest', with many such h***f* as are growing on the Erica Cohs folio, but without order; on the tops of each whereof lands 4

XXI. The Eighteenth, or Hoaty Coral-like Mofr This is all of a hoary white, Rowing about a loot, hiah whose upright Branches are thick, foldt, and ntblitkided into any ^ifications each whereof is like unto a Stags-Hirn, and MP

of the end. Coral-like Mofs with ... on the ground ... out from ...

Corahnj-lite Mo& "TbisTa" small low, wbttilh, dry hf> with small hollow Stalks, not Jony or hard at Jj bu, lly cut and. divided into mmy parts, *#* refembling the true Coralipe: Il,, ,, ojentit^ found upon dry heathy Grounds. r 14like

XXIV. The twentyjirst, or Reeky Coral-like Mofs. This grows on Rocky Mills among J Moftes in Naples, <w Columna/>* ,^{no} Jj *%?i && are many, and each ending >^{na} r fjo^ n o (A Horn, Jomcthing like the double forked TMf of Stag, being hollow and white within, ani gr without: but of an ill earthy fmen-

XXV. The Places. They molt of them upon barren, heathy, dry am, rocky, < J. Grounds, according as is expreht in their Defcriptbns. But the

fkteenth Species, is feldom found but in wet tvoody Grounds, upoti Bogs and Klodrifh places, yet ibmetimes it has been met with in fhadowy dry Ditches where the Sun does not comè. Gerard lays, he found it in great abundance in a fhadowy Ditch upon the left hand near unto a Gate which ledds froh *Hampfied-Heath* towards *High-Gate*.

XXVI. *The Times*. They all flourifh chiefly in the *Summer Months*.

XXVII. *The Qualities*, they are cold in the firft Degree, and dry in the fecond -, Afringent, Repercu(Five, Vulnerary, Diuretick, Stomatick and Kephritick: and of them all, the firft, fourth, and eleventh, viz. the *Common-Mofs*^ the *Club-Mofs*^7 and the *Cup-Mofs*, ate faid to be the rhoft fingular and effeSual

XXVIII. *The Specification*. The firft and fourth are gbod againft the Strangury, to provoke Urine, dnd break and expel the Stone. The *Cup-Mofs* effe&ually helps the Chin-Cdugh in Children. The *Club-Mofs*^& faid to recover Loft or Prickt Wine. They ail of them are good to heal Wounds and did Ulcers, to flop all forts of Fluxes of the Bowels, as alfo Flaxes of Blood.

XXIX. *The Preparations*. You may have therefrom, I. A *Decofion in Wine*. 2. A *Powder*. £. A *Cataplafm*+

The Virtues.

XXX. *The Decofion of the Common or Club-MoSs in Wine*. Being drank for fome time is faid to be drying and Altringent, to ftop Fluxes and Bleedings of all forts, and is a finguter good thing to break Friable Stones in the Reins or Bladder, and to expel the fame, as alfo Sand, Gravel, or Tartarous flatter affeeting thofe parts: it opens their obftru&ions, provokes Urine, and gives eafe in the Strangury. *The Deco&ion of the Cup-Mofs in Water or Whey*, effectually cures the Chin-Cough in Children \$ being taken for feveral days toge-

XXXI- *The Powder*. Made of any of the *Mofes* and given to a Dram, it has all the former Virtues, and outwardly applyed it ftops Bleeding upon the fpot, and dries up old Sores and putrid running Ulcers. The *Powder* of the *Cup Mofs* given to Children for feveral days together, Morning, Noon, and Night, it certainly cures them of the Chin-Coughs more efpecially if it is given in the *De-*

XXXII. *The Cataplafm*. *Mofs* bruifed and boiled in Water, and applyed to any Inttamation, or pains atifing froh a hot caufe, allays the heat, and ^Tes them^ and therefore it is applyed by many to fSaces affeeted with the Gbiit, and that as it is laid withgood fucefs.

XXXIII. *An Obfervation*. *Club-Mofs* being hung in a Veffet of Wine, thlat has loft its Vigor, and is become flat or pfickt (fo much as is convenient for the bignefs of the Veffel) is faid in fhort time to recover it again: for wjiich reafon *Brim felfius* called it *Weinkraut*^ or the *Wine Herb*.

is dried^ anil grows more rough by the drynefs: it has a very Salt tafie^ and being feaked a while in Water, grows pliant and foft again.

VII. The fifth, or Venetian Coftus-like Sea-Mofs. This grows on Rocks in the Sea, which by the often agitation of the Water, is broken from it, and carried to the Shore, not having any Root, but being made as if it were a Tuft vj fmall Sticks fet together, which being dry, much refembles the Root of CoftusIndicus, but whiter: and being moiftned again, opens it felf into form, being full of Salt, much like to fmall Sand.

VIII. The fixth, or Soft Sea-Mofs. This is like unto thofe Mofes which grow upon the Ground or on Ties without any Roots*, and grows only upon Rocks, or Shells of fever al Shell-lifhes, being a foft ikk^ compofed wholly of woolly white Hairs without any branch or Stalky and is oftener found white than reddifh or gray, but feldom or never green. There is alfo another fmall fort 'hereof found growing on the Stones by the Sea fide, as alfofometimes on Woo.i; and is likewife fometimes caft up by the Sea on the Shore among the Alga, or Sea Wrack, of fever at forts growing fomething like to the former or Ground Mofs, but that it is white, and a little faltifh arid binding.

IX. The feventh, or Red Sea-Mofs, or Red Dying Sea-Mofs. This is a fmall fort of Mofs., and much like to the fourth Species, or Neapolitan Sei-Mofs; it is furnijhed with a greater pore of foft Stalks, but fewer Branches^ and with as fine fmall Leaves on them like unto Fennel, of a reddifh^ color, but withfome whitenefs mixed together. This is ufed by fever al Dyers to fiain and fir ike a deep criwfon color, or a reddifh purple, which willaft long.

X. The eighth, or Silver Feather-like Sea-Mofs. This moli beautiful Mofs grows on Rocks in the Sea, tipon the dry Shells of Fifties, and is oftentimes found wrapped among the Alga, or Sea-Wrack, or Sea-Weeds, when caft upon the Shore, growing up with titany Stalks, and fpreading it felf out into many particular Branches, made as it were all of hairs like other Mofes, but very much representing fever al Jprigs of leathers, of fo pure, a white Silver-like color, that it is to be voondred at, that ever any thing fould become fo white by Nature, or be made fo white by Art.

XI. The ninth, or Golden Feather-like Sea-Mofs. This is a Mofs alfo of excellent form and beauty, Branching it felf out into fever al Sprigs, refembling the Natural form of fmall long leathers. The Branches are filled with Leaves on both fides fine like hairs: and both Stalks and Leaves are of a woffhining Gold color, beautiful to behold, and have a great refemblance of the Spartum Auftnacum, Clufit which we call Feather-Grafs.

XII. The Places. The Defections (hew that moft of them grow upon Rockj, Stones, and Shells in the Sea, and on the Shore: fcarcely any of them growing out of the Ground except the firft: fome of them are found in the Seas and on the Shores of other Country s •, and fome or moft of them on our own Coafts.

XIII. The Times. They grow and flourtfh all the year long, and live Summer and Winter very much alike.

XIV. The Qualities. They are cold and dry in the fin\ Degree, are Afringent, Anodyn, Vulnerary, andNephrick.

XV. The Specification. They cool Inflammations, gives eafe in the Gout, kill Worms in the Body, fluxes ftay Vomiting, refitt Huxions of the w^ a * f r i s > s t o p f u * * * of the Belly, pre-againt Sand and Gravel in Reins, and Bladder,

XVI. The Preparations. You have therefrom only, i. A Decoffion in Wine. 2. A Pouder of tbr whole Body of the Mofs. 3. A Cataplafm.

The Virtues.

XVII. Th Decoffion of the fourth and f^ Species in Wine. Injefted into the Bladder or Urethra with a Syringe, it abfterges very much, wales Carnofities or Caruncles in thole parts which ftop the Urine, and heals Ulcers in the Bladder and Urethra; itfaid to have cured one who was woubLea with that Difeafe in a very fhort time. And Jz this reafon it is very probable, that it may be very effeQual in healing a SwAeat Gonorrhœa in Man or Woman, univerfals being firft premifed.

XVIII. The Ponder. Given from a Scruple, a Dram in fome fit Vehicle, it is faid ro »J* Worms in Children-, but it ought to be made or w fourth and fixth Kinds. The louder of the touw Kind is faid to be very cfredual tor Watering »» Eyes, if mixt with Fennel Water, and put into tneñ. And the fame Ponder taken with Vinegar ltops vomiting and ftrengthenes the Stomach. *he & > # * of the fifth Kind, or Venetian Sea-Mofs, is good £ deanfe foul Ulcers of all forts, whether inward < outward, and being given to a Dram in Wine,, » expels Sand and Gravel from the Reins, and givw eafe in the Strangury.

XIX. The Catapfafm. It is made of any of «» Mofes being green and frefh, by beating a lu«e in 2 Morter. Being applied to Inflammations, it them, and eases their Pains: And in a hot u<? it gives prefent eafe, becaufe it dries, thickens, a cools: and withal it refitts the Fluxion, and admiral* ftrengthenes the part afflicted.

XX. The Virtues of the eigth Species, "1^YJF Feather-like Sea-Mofs. Applied Pultife-wje with Vinegar, it eases the Pains of the Spleni itaU difflbles ftumous Swellings or Kernels in the Neck and Throat, or other Parts. The DecoSton inw^ given to fix or eight Ounces at a time^ m f | g Lisbon Ufine, abundantly pr^ profitable againtt the Dropfy: Ureters, and Bladder, from "y^ be "gieffn wg?****, or in Drilled 7Jter of Ery),^ or Hedg-Mujhrd, 01 oi Sea Holly or of Parfly, or of tydropiper^ mixt with an equal proportion of Jmce of Limns,

CHAP. DI, Of MOTH - WORT. OR, Golden C U D W E E V >

I. THE Names. It is called in Greek, «i in Latin i Uelichryfum, h Of Tmearia, alib Coma aared, uererdi, Gaz«: in Englifh, Mothwrt, Golden GoldenQtdweeds^

II. *The Kinds.* It is suppoied to be a Species of the *Cudweeds*, but seems to me, to be a fingular Plant of its own Kind, and is the *HcHchryfum* of *Dioscorides*. But *Yarkinfen* gives us three other forts of it also*

The Descriptions.

til. This Plant has a long Root, of a considerable ibickness, and furnished with severall fibres or Strings, Springing from the sides thereof round about, from which spring forth slender fls some-thing hard and woody, divided into severall small Branches *, upon which do grow Leaves somewhat rough, of a white color, and much jagged, not much unlike to those of Southernwood. The Flowers jland on the tops of the Stalks, joined together, of a yellow color glittering like Gold, in form resembling the fealy Flowers of Tanfie, or the middle bottom of the Camomil flower, which being gathered before they be ripe or withered, remain beautiful for a long time after. For which cause of long lasting, the Carved Images of Heathen Gods or Idols were wont to wear Garlands thereof. For which reason Ptolomy King of Egypt, did much observe it as Jnny says. Thus Gerard.

IV. *Parkinson* thus describes it. *Heliochryfum* or Golden Flower of Life, has a Root which is small and Woody, Spreading under the upper crust of the Earth, living long in its own Natural place, but very hardly endures the cold of our Winters, unless they be mild, or well defended. From this Root rise UP many hard, round, white Stalks, a Foot and half high, on which at certain distances stand many fine cut Leaves, or rather one Leaf cut into many fine and small parts, almost as small as Fennel, but of a grayish color, like unto the *Cudweeds* or *Xottonweeds*, (whereof certainly this is a special Kind.) At the tops of the Stalks stand many round blowers, of a pale gold color, in an Umbel clove together, yet every Flower upon its own Stalk, and all of an even height, which will keep the color (being gathered and kept dry) for a long time after, and are of an hot quick Smell

To this *Parkinson* gives us also the Descriptions of three other Plants, (which he will have to be Species of the same Kind,) and which we here deliver you, as follows.

V. *Heliochryfum Creticum*, Candy Gold-locks, or Golden Flower. It has two or three slender Branches, which are white, and set here and there very Scatteringly, with small, long, and narrow hoary Leaves, having yellow heads of Flowers at the tops, made into Umbels or Tufts, not so round and even at the former, but longwise, one above another, the Heads being made as it were of Scales, loose and not closely set together*, as in the next Mowing: which when they are full ripe do pass into Down, and are blown away with the Wind, having a small reddish Seed at the end: but will abide a long time, as the others in its beauty, being gathered in its due season.

VI. *Helichryfum Orientale*, Oriental Gold-Locks, or Golden Flower. Its Root dies not every Year but lives long, especially in the Southern and East Countries, which have no cold Frosts, but with us, in our cold Quimates, it requires much care and diligence to keep and preserve it. It is a beautiful Plant, and much like to the former *Cretick* *Kinihi* described, but grow up higher, with many more Branches, and more hoary, white and woolly, having also long and narrow white Leaves, but somewhat broader, and thicker set on the

Branches. The Tuft of Flowers or Umbels Aolike* wife consist of longer and larger Heads, more fealy and closer compact together, of an excellent pale yellow color, and shining, with some yellow threads or thrums in the middle.

VII. *Heliochryfum Citrina*, Chryfocome, Scaxhas Citrin3, Gold Tufts, Gold Caifidonw. Its Root is small and Blacky and the Plant is Somewhat like to the Candy Gold-locks, at Se& 5. above, having hoary Stalks, and Leaves standing confusedly on them., being long and narrower than those of *Cret* or Candy. The Tops of the Stalks are divided into many parts each bearing a small, long, yellow Head or flower at the top, with some yellow Thrums in them, which Heads being many, are diffusedly set together like a lode or SP^{ed} ^{reil} ^{Seed} ^{like} ^{Mar} ^{erol} ^{See} ^{JL} ^{bat} ^{leffer}. The whole Plant (at well Leaves, and Flowers, as Roots, is of a strong, and sharp, but pleasant smell

VIII. *The Places.* They all grow in Hot Countries, as in Barbary, Candy, Italy, Provence in France, and in Spain: where they grow in untilled Grounds, and in Barren Meadows, as also about the Banks of Rivers- With us they only grow in Gardens, and are very carefully to be looked after in Winter.

IX. *The Times,* roffibly in their Native Countries they may Flower in the latter end of the Spring or Summer Months, as *Thenphrafius* and *Pliny* say, but with us, they all Flower in the end of August, or rather in September, to the time called *Michaelmas*.

X. *The Qualities.* They are hot and dry in the second Degree, incide, attenuate, and are Diuretic.

XI. *The Specification.* They are (chiefly the first and last) peculiar against the Strangury, Congelation of the Blood, and Bitings of Serpents and other poisonous Creatures.

XII. *The Preparations.* You may have her:from 1. An Infusion or Decoction in Wine. 2. A Powder of the Herb and Flowers. 3. A Spirituous Tincture of the same. 4. An Acid Tincture*

The Virtues*

XIII. *The Infusion or Decoction in Wine.* It heats and dries, and is profitable against Catarrhs, provokes Urine powerfully, and gives ease in the Strangury: comforts a cold Stomach, and helps Digestion. It is good also against the Bitings of Serpents and other Venomous Creatures, and being drunk diffolves congealed Blood.

XIV. *The Powder of Leaves and Tops or Flowers.* It has all the Virtues of the Infusion or Decoction, and may be given Morning and Night, from half a Dram to a Dram, in a Glass of Generous Wine* *Dioscorides* says, that the tops thereof being drank in Wine, are good for such as can hardly make Water, against Bitings of Serpents, and Pains of the Huckle Bones, by which I suppose meant the Sciatica: and being taken in sweet Wine it diffolves congealed Blood.

XV. *The Spirituous Tincture.* It is good against weakness of the Stomach and Bowels, expels Wind, and prevails against the Colick and Gripping of the Guts: strengthens the Head, Brain, and Nerves, comforts the Bowels and Womb, and admirably provokes Urine. Dose from one Dram to three Morning and Night, in a Glass of Wine, or from other proper Vehicle,

XVI. *The Add Tintture.* It Stops Vomiting, strengthens the Stomach, creates an Appetite, and caufes a good Digeftion. It opens obftru&ions of the Reins, Ureters and Bladder, and expels the Morbifick caufe of Fevers by Urine. It opens alfo obftru&ions of the Lungs, and caufes free Breathing: Dofe fo many Drops in Ale, Beer, or Wine, as to make it gratefully Acid -, and to be repeated as often as the Sick drinks, till the Difaffe&ion is removed.

XVII. *Nota.* Any of thefe Herbs, (but chiefly the firft of them) being laid inChefts among Cloaths it keeps them from Moths -, and from thence came the Name of *Moth-wort.*

OTHER of TIME, *fee* Time Wild, *Chap.*

CHAP. DII.

Of MOTHER-WORT.

THE Names, t do riot find that this Plant was known to the Ancient Greek, or Latines: Our Moderns call it *Cardiaca* (from comforting and ftrengthening the Heart; and might Z, TL V* u ^ M T £ Herba *MaMatricana alterl* (from its curing of Difeafes of the Womb:) The prime *Matncaria* being that which we call *Parthenum* or *Featherfew*. And in *Engifh* we call it *Mother-wort*, from its curing *Fits of the Mother.*

u... i be Kinds. Moft of our Botanifis have made but one Species hereof, and a fingular Plant of its **S i t u a t i o n s.** *Rex has added many more, but*

here Defcribe is *Cardiaca vulgaria*, Our Common Mother-wort. *VIZo* 2* *Cardiaca Crifpa*, Curled or *Wort*. 3. *Cardiaca Americana annua* *Nepeu* or *Cat-mint* Leaves. 4. *Cardiaca Americana minor* *Nepeu fliu*, The leffer American Mother-wort with *Nep* or *Cat-mint* Leaves- Thefe I fay, of thofe which he has added, he fides which he has enumerated about feven other Kinds, alj which being Foreign fas the Plants themfelves are) to our defign, we fliall pafs them all over.

The Defcriptions.

III. Our Common Mother-wort has a tender Root which fends forth and is compattofa great Number of mil Fibres or long tender Strings, which are of a yellowifh or brunnifh color, taking pong in ground, and perifhes not, but well in the Winter. **Stalks** Sr *Stalks* are four Foot high, on long, andas *Stalks* are four Foot high, on

fad green color, and deeply dented in about the and almoji torn or divided. From the middle of Branches tip to the tops of them, which are very long and finall, grow the Flowers round about them; fiances, in/harp pointed, rough, hard lts/cs, which are more purple or red, than in any O} we tfayms, or in any Hore-houndj but in the Jam manner, form, and roughnefs a* thofe of the, Hore-hound are-, after which come finall, round, b/ach/h Seed in great plenty.

IV. Gerard has another kind of Defcnption of this Plant, which fomewhat better pleafis me, and it is this. Its Root is compati of many finall Smngs, which fends forth a Stalk four fquare, Wick Dajd, and about two Cubits high, of an obfcur or over-worn red color. The Leaves are fomewhat black hks thofe of Nettles, but greater and broader than the heavens of Hore-hound, deeply indented, or cut in on the edges. The Husks are hard and pricking, which do encompass the Stalks like Wharlcs, or little Core nets, out of which grow purplijb Flowers, not unlike to thofe of Dead-Nettles, but leffer. The whole Plant ha* a bitter Tajie and rank Smell.

V. The Places. It grows among Rubbifh and by the fides of Walls, and Hedges, and Banks of Ditches, in many places beyond Sea. And *Parti ft* Jon* (ays, he never knew, or heard that it grew with us any where but in Gardens where it had been one? Sown or Planted. But Gerard fays, that it joys only in RubbUh, Stony, and other Barren places, and has been found in Ibme places about Oxford: I my felf in Travelling about England,- have fometimej found it growing Wild, in feveral places.

VJ. The Times. It Flouriflies, Flowers, ana Seeds from June to September, yielding a plentiful quantity of Seed. The Root endures all Winter, though the Leaves and Stalks dye away and perifh.

VII. The Qualities. It is hot and dry in the feconcl Degree, Abfterfive Aitiingent, Diuretick, Vulnerary, Cardiack, and Hyfterick.

VIII. The Specification. It prevails againft Faintings and Swoonings, a* alfo Hyfterick Fits,

vuifions, Cramps, and Paifies, opens Obftruftions eafes the Strangury, provokes Urine and the Terms, and facilitates the Birth, in Women in Labor.

IX.* *The Preparations.* You may make therefrom, 1. A *Liquid Juice* or *Efence* of the Herb. 2. An *Infufion* or *DecoQion* of the fame. 3. A *Powder* thereof .4. A *Spirituos Tintfure*. 5. A *DiJilledWater*.

The Virtues.

^ *The Liquid Juice* or *Effence*. It may be given from one Spoonful to three in >a Glais of *Canary*^ or other Generous Wine, againft Faintings, Swoonings, ficknefs at Heart, Convulfions, Palfies, Lethargies, *Cfc.* Given in *Pennyroyal-Water*^ or in its own *DiftiUed Water*, it is good againft Vapors add Hyfterick Fits. Given in white *Port* or *Lisbon Wine*, it facilitates the Birth of Women in Labor, induces the Terms, provokes Urine, and gives eafe in the **Strangury**.

XI. *The Infufion* or *Detoation* in Wine. It has all the Virtues of the *Liquid Juice* or *Effence*, but much weaker, and may be given Morning and Night, from four to fax or eight Ounces, according to the condition of the Patient.

XII. *The Powder.* The *Powder* has all the former Virtues, and may be given from half a Dram to a Dram, or Dram and half in a Glafs of Generous Wine, Morning and Night: It cleafes the Breaft and Lungs of cold *Flegrii*, and caufes it to be eafily expe&orated * and kills Worms in the Stomach and Belly.

XIII. *The Spirituous Tinaurt.* This is much more Cordial than any of the former Preparations, and therefore more effbaual againft Diieaies of the Nerves, Heart, and Stomach* it warms and dries up cold Humors, difperfes and digefts them in what part of the Body foever, and gives prefent relief in Cramps and Convulfions.

XIV. *The DiftiUed Water.* It has the Virtues of the former Preparations, but in a weak Degree, and is chiefly ufed as a Vehicle, to convey the former, or other Preparations in relating to the fame Diieafes.

fella alt era ereffa^ The fecond or other upright Moufe Ear. 4. *Pilofella minima*, The fmalleft Moufe Ear. 5. *Auricula Muris tertia Tragi*, *Myofotis Scorpioides hirtuta*, *Alfinc Myofotis Lobelij*, (referring it to the kinds of *Chick-weed*.) Blew Moufe Ear with a turning top. 6. *Myofotis Scorpioides repens*, *Helitropimn minus alter urn Gefalpinr*, Small creeping blew Moufe Ean 7. *Pilofella Americana*^ *Pilofella Americana odor at a*, *Pilofella Indica odor at d*, Sweet Indian or American Moufe Ear. 8; *Pilofella ?iinor*, *Pilofella Montanum*, *Pilofella minor Montanum Flore albo & Flore putpurw*, *GnaphaUum Montanum I lore albo Of purpuero*, The lefler Moufe Ear, or Mountain Moufe Eat, with white and purple Flowers,, or Gats-Foot, or Mountain Cudweed with white and purple Flowers. 9. *Pilofella Rofea*^ *GnaphaUum Rofeum*, The Rofe Moufe Ear, Rofe Cudweed, or C. -II- Rofe. *

The Descriptions.

III. *the firfi*^ or Our common finali creeping Moufe Ear. *Its Roots are fmall with fome fibrous firings, whence shoots forth a low creeping Herb^ running upon the Ground^ and Rooting with fmall firings from fever al Joints, almott after the maner of the Strawberry Plant: at or from which grow upon the Ground many f?nairand fomewhat fhort Leaves fet in a round form together^ hotlowifh in the middle^*

where they are broadest, of a hodry color all over, as well above as below, and very hairy-, which being broken do yield a white Milk, or milky Juice. From among thefe Leaves fpring up two or three fmail hoary Stalks, about a Span high, with a few fmailer Leaves thereon. At the top of which ftand ufualh but one flower, confining of many pale yellow Leaves broad at the points, and a little dented m, fet in or 4 rows, the greater outermof, and the fmalleft inwards?,

CHAP - DHL

Of MOUSE EAR.

Names. This Plant is called in *Greek*, A Morfm: in *Latine*, *Pilofella*, *Myofotis*, & *Auricula Muris**, in *Englifh*, *Moufe Ear*. They are Called *Pilofella* from the hairinefs of their Leaves and Stalks.

II. *The Kinds.* They ate manifold, as, 1. *Pilofella minor vulgar h repens*^ *Pilofella major rePens* (fo called in refpect to the eighth Kind_h) *Holofium Lacun<e*, Our common fmail creeping Moufe Eat. 2. *Pilofella media vulgaris ereffa*^ *Pilofella major quorundam* (fo called in refpeQ: to the eighth Kind, as aforefaid:) *La&ucella Sylveftris repens CdmerarijinhOrto*, Our common upright Moufe Ear, v M*.

inwards, very like a Dandelion flower, and a little reddish underneath about the edges, especially if it grows in a dry and not wjwi Ground, which after they have flood long in blower, do turn into Down, which with the Seed is carried away with the Wind.

IV. The second, or Our common upright Moufe Ear. This is very like the former: the chief difference between them confining in thk, that the Leaves are longer and greener on the tipper side, and somewhat hoary underneath, softer in handling, and not Jo much hairy*, the Stalks of Flowers ft and ing more upright and higher: this Plant, if its Stalk or Leaf be broken, docs give a white or Milk-like Juice cm the former.

V. The third, or second, or other upright Moufe Ear, which Gerard calls Pilofella major, or great Moufe Ear. It hw a small, tough, and rous Root, whence shoot forth a few hoary and Dairy broad and long Leaves, lying upon the Ground*, among which rises up a slender hairy Stalk, bearing long and narrow Leaves thereon \ and at the top two or three small, pale, ycloto flowers, like in fashion to the former, which tiwn into Down at thofc do.

VI. Gerard has this Descrption of it. Its Roots are hard, woody, and full of Strings. It haj great 6ntL large Leaves greater thtn the common (creeping) Pilofella, or Moufe Ear, thick and full of Substance. The Stalks and Leaves are hoary and vohite, with a filken Mojjinefs in handling, and fed. foft at Silk, ¥ leaf ant and fair in View. It bears three or four four square Stalks fomewhat knotty, and about a foot in height. The \lowers come jiorit, nt the tops of the Stalks, like unto the small Dandelion or Piffabed flowers, of a bright yellow color.

VII. The fourth, or finallest Moufe Ear. This is in all things like unto the second Kind, or Our common upright Moufe Ear, before described a. Set. IV. and is fmailer by half than the first common Kind) both in Leaf and flower^ but creeps not by firings cut that dees.

III. The fifth, or Blew Moufe Ear with a turning top. It has a small and thready Root, from whence rises up, usually but one Stalk, (feldom any more) which is round^ hairy, and about half a lard high or better^ at the bottom of which grew somewhat long and broad hairy Leaves, very like as well for roughness, as for Jhape and color unto the Wild Borage Leaves* The Stalk is sometimes Branched, and sometimes not, with feveral such like Leaves, but growing leffer and Ieffer thereon, as they grow up to the tops of the flowers, which turn or wind them\elves inward like unto a Scorpions Tail, or the Herb Heliotropium: The flowers consist of five small Leaves apiece', which are round, and of a pale blew color, very much refemhling the flowers of Buglofs, or Wild Borage, with a yellow spot or Eye in the middle, and ft and all on one side of the Stalk and branches D after they are past, there come in their places, small rough fiat heads, in which the Seed is contained.

IX. The sixth, or Small creeping blew Moufe Ear. This is very like the last Kind, but that it is fmailer \$ and most commonly has fmailer Leaves and flowers on the Branches^ which do not ft and fo upright, but trail or creep more on the Ground. The flowers also ft and not on one side only, but en both, and open by degrees. Tlje turning tops, which are like the last do grow up, and dilate them\elves ^ and toe flowers are of a blew color, but some of them J. more purple, with a yellot* Eye in the mid-

X. The feventh, or Sweet Indian or American Moufe Ear. Thk Plant has a fleshy Root creeping under Ground, not growing deep, with many fibres idjcinning thereto; from whence shoot forth several fomewhat long Leaves, fet with very long Hairs. The Hairy Stalk ivhich rifes from them, grows to be about half a foot high, at the top of which ft and* seven or eight fair flowers, like these of our common Moufe Ear, but of a deeper yellow or or&ngt color, fmclling very facet like Musk.

XL The eighth, or Uffer Moufe Ear, or Mountain Moufe Ear with whits and purple Flowers, or Cats-Foot. Ihk Moufe Ear may be accounted f certain Kind of Mountain Cudweed, or Cottonweed. Its Root k compefed of fever al small bktKifh fibres, Threads or Strings, from which spring forth many small, white, woolly Leaves, lying upon the Ground, fomewhat like unto the Leaves of tU small Moufe Ear, but fmailer than them. fr^{om} among which rises up a small Stalk of about half a foot high, beset here and there with some few Leaves; at the top of which comes forth a Tuft of small flowers, fet close together, in some of a pure white, in others of a purple or reddish color, in some of a pale red or blujh, and in others of a white and purple mist together. This Plant for in beauty is much com* mended, but will scarcely abide all Winter with us in our Gardens, unless the Season is mild.

XII. The ninth or Rofe Moufe Ear, Rofe Cudweed, or Cotton Rofe. Its Root is f'all long and Thready. And from the same spring up* such && woolly Leaves a* in the former, growing upon fad) sbort Branches, scarcely high^m fka*c fomehing like unto Daify Leaves, but kjerani "round pointed. At the top of every Stalk or ~Branch stands one flower, composed of two rows of few white Leaves, laid open like a Star or Role, whenc came the Name, having a round Head in the middle made of many yellow Threads or Thrums, which fal' ling dway, a small round Head rises up. full of small Seeds.

XIII. The Places^ The first and second grovt promifcuously on Ditch Banks, and *,metimes in or near to Ditches, if they be dry, as also on Sandy Grounds, and untiliM places, which ly open to the Air. The third is more rare, and but now and then to be met with in 'England, but is more plentiful in Germany. The fourth is found growing upon dry barren Heaths, especially upon Hampstead Heath, where it grows in such plenty, that one can hardly fet a Foot but upon the Heads of it. The fifth and sixth grow in dry and barren Grounds in many places of our Land*, the fifth Parkinson found in the back Clofe of formerly Sir John Tunstal his Houfe near Croyion. The seventh, its Title or Naffifhews where it naturally grows, and whence it caxsfi to us, I have found much of it growing in the Continent of florida. The eighth and ninth grow # franee and other Southern Countries-, but g^{row} also as well in the colder Countries of Germany>> an< with us 3re only Nurit up in Gardens.

XIV. The Times. The first and third are first by Gerard, to Flower in May and June: but the first seven, generally speaking* Flower in June allj July, and abide green all the Winter. The eighth and ninth Hower very late, towards the latter of September*, sometimes they flew not their at all with us, it is so late.

XV. The Qualities. The first seven are hot dry in the first Degree; Abiterfive, Aitringent, foiidative, Diuretick, Traumatick or Vulnaw, Pefctoral, Nephritick, and Hyiterick. The first lait are laid to be cold and dry in the Decree.

. XVI. *The Specificatioh.* It is powerful against the yellow Jaundice, Stone and Gravel, Tortors and gripings of the Bowels, the Dropfy, obitruētions of the Spleen, stops the overflowing of the Terms, or any Flux of Blood: is gwd against Coughs, a Phthifis, or Uiceration of the Lungs, and Coniūmptōns^s prevails against Quartan Agues-, cures Green Wounds, 'as also Ulcers in any part of the Body. The first is what we intend here, and next to that the fecond Kind, and then the third.

. XVII. *The Preparations.* You may have herefrom, 1. A *Liquid Juice of the Herb.* 2. A *Ejence of the Jarne.* 3. A *Decottion in Wine,* 4. A *Ponder of the Herb.* 5. A *Syrup of the Juice.* 6. A *Balfam or Ointment.* 7. A *Cataplafm of the Green Herb.* 8. A *Difilled Water of the fame.* 9. A *Spirituos Tintture.* 10. An *Acid Tintture.* ii. An *Oily Tiritiure.*

The Virtues,

XVIII. *The Liquid Juice of the Herh* It may be taken from an Ounce to 2 or 3 Ounces, Morning and Night, in a Glafs of fuch Wine as is moft proper against the Difeafe it is given for. It is good against the yellow Jaundice, and cures the Difeafe tho' of long continuance, but it is more powerful in this cafe, if a quarter part of the *Black Tintfure of Mars* be mixed with it. And if a few Grains of *Salt of Tartar* is difblved in it, it is a fpecial remedy against the Stone and Gravel and other Tartarous Matter bred in the Reins, Ureters, and Bladder* And fo also given in the *Eecoflion of Centory and Succory* it is faid to be effe&ual against the Dropfy: and W eafe all Tortors and Griping pains of the Bowels.

. XIX. *The Ejence.* It has all the Virtues of the *Liquid Juice*, and may be taken from 1 Ounce to a in the fame manner; It contributes to the curing of Green Wounds and Ulcers, inwardly taken, and outwardly applyed, by way of *Lotion.* It gives eafe in the Colick and Griping of the Guts, and is of fingular ufe in curing a Diarrhaea, Dyfenteria, Lienteria, and Hepatick Flux. It stops Fluxes of Blood either at Mouth or Nofe, as also piffing Blood, and the overflowing of the Terms in Women. Taken to 4 Ounces Or more, before the Fit of a Quartan Ague, it keeps the Fit Back, and lef*ens it, and by the conftant ufe of it for fome time, it takes it quite away and cures it.

XX. *The Decoſion in Wine.* It has all the Virtues of the *Juice wXEffenc'e^* and may be given from 4 to 8 Ounces, fwetned with the «S»^uP of the fame Plant: outwardly applyed, it is an incomparable thing to cleanfe, incarnate, dry, 2nd heal up . old Ulcers: The *Pouder^l of the dry Herb* being firewed upon the fame, after wafhing with it.

XXI. *The Pouder of the Herb.* It has the Virtues <F the *Juice* and *Ejence*, and may be given from half a Dram to a Dram and a half in *Syrup* of the fame, and that Morning and Night, It is faid to cure the Pain of the Stomach, tho' never fo inveterate, to stop Vomiting, and to ftrengh-fcn it.

. XXII *The Syrup of the Juice.* Being made with double refined Sugar, or Clarified Honey, it is an excellent thing against Coughs, Colds, Hoarfenefs, Wheezing, Afthma's, Phthificksor Ulceratiōns; of the Lungs \$ and indeed is prevalent: against a *iabes I* Pining^ or Confumption of the whole Body; and moft other Diftempers of the; Lungs,

and Thorax or Breft -, it is alfo faid to be good against Ruptures or Burftennefs: Dofe two or three Spoonfuls Morning and Night, in & Glafs of Styp-tick red Wine, or other proper Vehicle.

XXIII. *The Balfam or Ointment.* They cure fimple Green Wounds at the first intention \ digeft, cleanfe, incarnate, dry and heal old running Sores, and putrid, or eating' Ulcers. It gives eafe in the Gout, and other Pains, being dtly applyed to the parts affe&ecl

XXIV. *The Cataplafm of the green Herb.* Being laid to any firmple Green Wound, it quickly conglutinates the Lips thereof: it alfo is prevalent against fimple Contufions, and either prevents or difcufles the Tumor, if any irifes, and reduces it to its natural color.

XXV. *The Dijilled Water.* It is available a-gainst all the Difeafes afore named, in the *Juice,* Effence, Ponder, Decoffion, or Syrup*, but muft be^g given in much greater Dofe^ as to 8 Ounces or more, fwetned with the *Syrup*: and if a little of the *Spirituos Tinffure* is added to it, it will heal Sores and Wounds which are outward, being wafhed therewith, and Tents, or Cloths wet therein being applyed.

XXVI. *The Spirituous TinSure.* It takes away the pain of the Stomach, eases the Belly ach, and ftrenghens all the Vifcera: If mixed with the *Ponder* to the thicknefs of a *Cataplafm*, and applyed, it is fingular good to ftay the Malignity of ^reading, fretting, or eating Cankers, Sores, and dicers wherefoeyer, as well in the Mouth, as in the fecret parts of Men pr Women.

XXVII. *The Acid TinSure.* It is good against the Plague, and all forts of Burnihg and Malign Fevers: It quenches Thirft, stops Vomiting, ftrenghens the Stomach, caufesa good Appetite, and a strong Digefcion, and kills Worms in the Bowels whether in old^ or young. Dofe 40 Drops or more in any thing the Patient drinks.

XXVIII. *The Oily Tintture.* It is prevalent against the yellow Jaundice, the Cholick, Gripings of the Guts, the Stone, Sand, Gravel, and Tartarous Humors in the Reins Ureters and Bia Ider, and prevails against Convulfions, and the Palfie* and is a potent thing to give prefent eafe in the Strangury. Dofe from 20 to 60 Drops, Morning and Night in a Glafs of White Port Wine.

XXIX. *Nota.* The *Juice of Moufe Ear*, is faid to be fo powerful to harden Iron or Steel, that if any edged or pointed Tool, (hall be often quenched therein, that, it will cut all other Iron, Steel or Seone very eafily, without turning the edge or point.

CHAP. DIV.

Of M O U S T A I L :

T H E Names. . It is called in *Greeks* ~~Μουσειου~~ w&U % v.voa4&i in *Latine^* *Cduda Muris, Holoſteum Loniceri, Holoſteo affinU* *Cauda M.urk Bauhini: Corortopus Sylveliris Tragic Myofcuroi quorundam:* in *Engliſk,* *Mouſe Tail.*

II. *The Kinds.* It is a fingular Plant of its Kincl but enumerated both by *Bauhinus^ Lonicerus* and *Parkxnfon⁷* among the *Holoſtea^* becaufe it is as they fay, w Taſte and Property like them,

The Descriptions.

•III. It has a small, hairy, fibrous Root, from whence Spring up many small grassy Leaves (for which reason it might have been placed as well among the Grasses) which Leaves are very short, rough and hard: from among which spring up several small slender Stalks with small long blackish green, spiked Heads like unto a small Plantain

Head > but smaller having white Ylovers on them which quickly fade and fall away -, after which there is found very small blackish Seed in the long Heads, which then in some are a little crooked, and in others straight, resembling a Mouse Tail, from whence it took its Denomination or Name.

IV. Gerard thus describes it. It has a small and thready Root, from whence spring up many small grassy leaves spread on the Ground, an Inch long or some what more: among which does rise up small tender naked Stalks, about two Inches long, bearing at their tops a little blackish Torch, or spiked Knob in shape like that of the Plantains, resembling very notably the Tail of a Mouse.

V. The Places. It grows in many fertile Pastures and Meadows, as also on dry Banks, and by the Path sides in many places of England. It has been found growing upon a barren Ditch Bank, near unto a Gate leading into a Pasture, on the right Hand of the Way, going from London to Hamstead: and in a Field as you go from Edmonton in Hartfordshire, unto a House near to it, called Pirns, by the Foot path side. Also in Woodford Row in Waltham

It lowers often in April, and is gone in May, but if the Weather is not

too hot and unseasonable, it is sometimes found in June.

VII. The Qualities. It is cold and dry in the first Degree: and of an Astringent or Binding quality: much of the nature of Plantain.

VIII. The Specification. Country People apply it for the stopping of Hemorrhages, whether of the Nose or Wounds, and find it a very excellent thing.

IX. The Preparations. You may make therefrom, 1. A Juice or Effence. 2. A Decoction in Wine. 3. A Powder of the Herb and its Heads.

The Virtues*

X. The Juice or Effence. Syringed up the Nostrils it stops an Hemorrhage, or Bleeding at the Nose: and given inwardly from a Spoonful to two Spoonfuls, it stops any inward Bleeding, Spitting or Vomiting, Pissing Blood or the Bloody Flux: it may be given in Alicant, or some strong Bodied Styptic Wine.

XI. The Decoction in Wine. It has the same Virtues, but much weaker, and may be given Morning, Noon, and Night, from 4 to 8 Ounces, sweetned with Syrup of Comfrey.

XII. The Powder. Blown up the Nostrils thro' a Quill, it is said to stop the Bleeding of the Nose: given inwardly in Styptic Red Wine from a Draught to two Drams, it performs all that the Juice and Effence will do: Applied outwardly upon Bleeding Wounds it stops the Hemorrhage, and being made into a stiff Cataplasm with the Juice or Effence it secures them against their future bleeding.

CHAP. DV.

Of MUGWORT.

THE Names. It is called in Greek, *Artemisia* in Latine, *Artemisia* (from *Artemisia* the Wife of *Maufofus* King of *Caria*;) formerly it was called *Artemisia*, quasi, *Virginalky*, i. e. *Maidenwort*: and as *Apuleius* says, was also called *Farbenium*, which is indeed the proper Name of another Plant, viz. *Fetberfew*. But some think the Name came from *Artemis* (one of the Names of *Diana*) because it is chiefly applied to Womens Diseases: and in English, it is called only, *Mugwort*.

II. The Kinds. There are four Species of this Plant, usual with us, viz. 1. *Artemisia vulgaris* called by some *Mater Herbarum*, Our common Mugwort: and this is common almost in all Countries. 2. *Artemisia minor*, The lesser or *Mugwort*. 3. *Artemisia Montana*, *Artemisia folia Montana*, Fine Mountain Mugwort, 4. *Artemisia virginiana*, *mi ja Virginidna*, Virginian Mugwort.

The Defections*

III. The first, or Our Common Mugwort, a Root which is long and hard, with many Joints, and Fibres growing from it, whereby it takes firm

in the Ground •, but both Leaf and Stalk dye^ and a perih every Tear, the Root remaining all Winter, andjhooting out anew the next Spring, from th^ Root Spring forth divers Leaves, lying upon the Ground, very much divided or tut in deeply about the edges, fomething like unto Woimwoodj but

much larger, of a fad or dark green color on the ^u^* and of a very hoary white underneath, ^j b^{ial}TM> {whichgrow in fome t« be purplifh, *md .in fome to be deeper colored) rife to be fometimes three, four, or five Feet high, on which growfuch like Leaves as thofe below, but fomething fmaller. Branching forth very much towards the top, on which grow very fmall, pale, yellowijh Flowers hke Buttons, which fall away, after which comes fmall Seed, inclofed in fmall round Heads. The whole Plant has a reafonable good fmell, and is Seed eⁿly proⁿated ^ fiP'-> than b the

It ^u^* or Le^{fe}r> or fmall Mugwort. zoheZ^u^* mu^{ch} likethe ^{fo}mer* hut^e ffetⁿ from fu^{ri} JPⁿi forth Leaves like unto the form^r alireJ^We Flant ^ing like it) which Leaves onthT^{or} fUt In on both f^{les} M that * &reen fmall " & TMl wkitifb underneath, but much time; \ ^L the y- The Stalk ^h wife, (for many treat ^h rife^{up}, not fa high, nor is fo of 1^h ^s Me Mowers, yet paler-, the fmell <J the whole Plant is llike the other."

ha, \ D^{iri} > or Fine Mountain Mugwort. It TntLr^h ?Long ani blac K Spreading it felf

tt^y Stal^{is} £. ?r Bra^{abes} th^lur^{ke} a dot and TM Grower, and much and pale. > llike and foUr^h > Or Vir^ginian Mugwort. It ^h lite the Common Englifh Kind,

and the whole Plant very much refembles it, in its divided Leaves: but it rifes up fomething higher, and fpreads v^t felf larger out, and its jagged or deeply cut Leaves are fomewhat bigger. •

VII. The Places. The firft grows plentifully throughout all England, as well as in other Countries by the Way fides, by Ditch fides, on Banks alfo, and by Brook fides, or Water courfes, almoft in an infinite number of places-, as alfo in the borders of Fields. The fecond is alfo found in fome of thofe places but not fo frequently. The other two are only Nurlt up with us in *Strdenr*. The laft according to its Title or Name grows very plentifully in *Virginia*, and other parts of *Florida*.

VIII. The Times. They all Flower and Seed in *July* and *Augitjl* ^ or in the end of *Summer*.

IX. The Qualities. *Mugwort* is hot and dry jfl the fecond Degree. A^{er}itve, Abfterfive, AftrilH gent, Anodyn, Diuretick, Difcuffive, Nephritic[^] Hyfterick, and Emmenagogick.

X. The Specification. It is prevalent againft Vapors and Fits of the Mother: it powerfully provokes the Terms, brings away both Birth and After-Birth, and expels the Dead Child ^ it is good againft the Palfie, as alfo Cramps and Convulfions \$ it cures the Strangury, as alfo the Poyfon of the *Black Pvypp* ^ or the over-much taking of *Opium*.

XI. The Preparations. You may have herefrom , 1. A *Liquid Juice of the Herb*. 2. An *Effence of the fame*. 3. An *Infufion or Decoction* -c. A *Powder*. 5. A *Balfam or Ointment*. 6. A *Zataplafm*. 7. A *Pejjary* ^ made of the Root, or of the Juice, 8. A *Dijilled Water*. 9. A *Spirituous Tintfure*. 10. An *Acid Tintfure*. \ An *Oilf Tintfure*.

The Virtues.

XII. The Liquid Juice of the Herb. Being taken every Morning Falling, and every Night at Bed time, from two Spoonfuls to four, in a Glals of White *Port* ^ or *Lifbon Wine*, or in *Madem Wine*, it provokes the Terms powerfully, and facilitates the Birth of Women in Labor, bringing away the After-Birth, and caufing a due cleaningj It is good to expel a *Mola*, when the Woman has fped beyond her Time ^ as alfo the Child when it is Dead. It fuppreffes Vapours, being duly taken ^ and I have cured Hyfterick Fits with it to admir^a tion •, but then in thefe two laft cafes, it ought to be given in its own *Dijilled Water*, or in fair Spring *Abater*.

XIII. The Effence. It has all the Virtueſ of the *Liquid Juice*, but more Powerful, and more Sto^r ma tick : it opens all obftruⁿions not only of the *WomJ*, but alfo of the Reins, Ureters and Bladder, provokes Urine ^ admirably, gives eafe in the *Strangury*, and expels fmall Stones, Sand, Gra^{vel}, and other Mucilaginous or Tartarous Matter from thofe Parts: if ary one is poyfoned with the *Juice of the Black Poppy*, or has taken too large a Dofe of *Opium*, this is faid to be a prefent remedy. 3ofe from one Spoonful to four, in a Glafs of Generous Wine.

XIV. The Infufwn or Decoft'wn in Wine. They have all the Virtues of the *Juice* or *Effence*, but muft be given in larger proportion, as from 4 to 6 or 8 Ounces Morning and Night: and it may be fweetned or made pleafant with double refined Sugar. If the *Decoction* is made in Water,

it may ferve as a Bath for Women to fit in, or ro fit over its fumes, it loofens the Womb, opens the obftru&ion thereof, and caufes the Courfes to come down, and alfo facilitates the Birth: and if fat in, as a Bath, it not only opens the obftru&ions of the Womb, but alfo takes away the Intiamation thereof, if any be. If the *DecoUion* is made with the addition of *Agrimorty* and *Camomil*, whether in Wine or Water, it has an Anodyn power and quality, for if any part which is pained, if the Nerves are hurt, or are troubled with the Cramp, and they be bathed and fomented herewith, as hot as i, can well be endured, it gives prefent eafe and relief.

XV. *The Vouier of the Herb.* It has the Virtue of the *Juice, Effence and DecoUion*, and may be given from 2 Scruples to 2 Drams in Generous Wine, or other proper Vehicle. If it is given to three Drams in Wine, Authors fay, it is the belt, and pertain help for the *Sciatica*. But I fuppofe it Ought to be given Morning and Evening, with a *Continuando* for fifteen or twenty days, taking now and then, a proper Purge between whiles. When it is to be given in fo large a quantity, it Ought to be given in a Mefs of hot *Water Gruel*, or *Mutton Broth*, or in three or four Spoonfuls or more, of *Syrup of Clove Gilliflowers*, or of *Violets*.

XVI. *The Balfam or Ointment.* They cure Green Wounds excellently well: they being applied to Wens, or Gums, or hard Knots, or Kernels which happen about the Neck and Throat, it eafes their pains and takes them away, and they are faid to be more effe&ual, if fome *Field Daijies* be added to the Composition: I am fure, they will be then the better for the curing of Wounds and Ulcers.

XVII. *The Cataplafm.* It is made of the Green Herb, and is, of good ufe to diflipate the Fluxion, and cure a fimple Contufion. And if it is applied to the Joints and Limbs of fuch as are very much wearied with Travelling, it eafes and gives them much relief, as *Pliny fays*: and that they (hall feel no wearynefs, in their Journeying.

XVIII. *The Peifary.* It is made either of the Raw Root, either whole, or beaten into a Mafs in a Mortar: or of the *Juice*, mixed with fine *Powder of Myrrh*, enough to bring it into a Body, of fuch a confluence as may be formed into a *Peifary*. Being put up the womb, it induces the Terms which have been ftopt* and if a Woman is at the time of her Labour, it facilitates the Birth, and afterwards brings away the After-Birth.

XIX. *The Di&illed Water,* ^ho' poffibly it has the Virtues of the *Juice, Effence, Deco&tion*, and *Powder* yet it is weak in its Operation, and may be given (fweetned with *Syrup of Violets*) to half a Pint or more; but it is chiefly ufed as a Vehicle, to convey the other Preparations in.

XX. *The Spirituous Tintfure.* It is of excellent ufe to be given to Women in Labor to facilitate the Birth, as alfo after Delivery, to prevent After Pains, and to caufe a full and compleat deairifing, for the want of which thing a great many Women fuffer much, incur many Weaknefs and Diftempers, and are many times ruined by it. It is good aifo, againft the Colick, as alfo Tortions and Gripings of the Bowels. Dofe 2 or 3 Drams at a time in a Glafs of Wine.

XXX *The Acid Tintture.* It prevails powerfully againft the Poyfon and Malignity of *Poppies* and *Opium*: re&ifies the Stomach, flops Vomiting, and caufes a good digeftion. It allays Vapors, and cures the forts of Obftru&ions of the Bowels, and

cures the Rickets in Children: It likewife cleanfes the Reins and Bladder of Tartarous Mucilage. Dofe from twenty to fixty Drops or more, according to the quantity of the Vehicle it is taken in: it may be given in *Canary*, or other Generous fort of Wine, two, three, or four times a day.

XXII. *The Oily Tin ft are.* If it is inwardly given from half a Dram to two Drams, it gives prefent eafe in the Colick, and Gripings of the Guts, as alfo in the Strangury^ powerfully provokes Urine, and cleanfes the Urinary parts of all kinds of Heterogeneous Matter: is good againft Fits of the Mother, and many times cures the Palfic (if not in old People) as alfo inward ConvulfionS of the Stomach and Bowels. In the Palfie, it ought to be Anointed alfo outwardly Morning and Night on the Back Bone from the *Vertebra* of the Neck, to the *Anus* almoft: Anointed likewife upon the part affi&ed with the *Sciatica*, it has been found to give eafe, and many times a cure.

CHAP. DVL

Of MUG WORT Sea.

I. *The Names.* It is called in *Greek*, *Αΐΐϋ* X fwwall**A*Wa* in *Latine*, *Artemifia Marina*: and in *EngUjh*, *Sea Mugwort*.

II. *The Kinds.* It is a fingular Plant of its own Kind: but is thought by fome good Authors to be a Species of the *Mugworts*, and therefore being a Sea Plant they called it *Artemifia Marina*, as *Garrard*: and *Artemifia folio Lavendulæ*, as *Clufius*, becaufe it has a kind of *Lavender* like Leaf.* *Lobel* and *Tabernoemontanus* call it alfo *Artemifia Marina*: Others taking it to be a Species of *Wormwood*, of the Sea Kinds, have call'd it, *Abfinthivum Marinum latifolium*, as *Camerarius*, and he thinks it to be fo: *Dodan** calls it *Abfinthium Angulifolium*, viz. Narrow Leaved Wormwood, and narrow Leav'd it may well be thought, in refpect to the *Common Wormwood*. But *Parkin* calls it, *Abfinthium Maritimum Lavendulæ folio*, *Lavender Leav'd Sea Wormwood*.

The Descriptions*

III. *Gerard* thus Defcribes it. *It hoi a woody Root, from whence rife up many Branches, (landing upright in diftances one from *nothcr, of an afhie color) befet with Leaves not much unlike to thofe of Sea Purflane: ibefe Leases are of two forts, for foim of them are long and narrow, like thofe of Lavender, whence Clufius called it Artemifia folio Lavendule, other]ome are cut in or divided, almoft to the middle Rib5 about the lower parts of the Stalks, and towards the Tops of the Branches, they are narrower and cleffer, and cut with great and deep jaggs, thicM in Subftance, and of a whitifh color, as all the reft, of the Plant is, The I lowers are many and yellow % which fading away, there follows Mofsie Seed like wto that of Our Common Wormwood. It yel^{ds} a pleafam Smell like unto Abrotanum MarifUj: and in Tafte is fomewhat Saltifi or Brackifh. \A* to the lafte. I fear that Gerard is a little out * I^{naVi}*

sometimes tasted of it, but could observe no such Salfthness; yet for all that I know of it the Taste may vary, according to the differing places in which it may grow.

IV. Parkinson Describes it thus. It shoots forth many slender, weak, woody, and brittle Stalks, bending a little downwards, whereon do grow divers, hoary, white, long leaves, somewhat broader than Lavender Leaves, having sometimes some cuts or divisions at the Bottoms of them, which are but seldom seen, and in a very few of the lowest next the Ground. Those which are set on the Stalks are smaller, and sometimes are cut or divided at the ends, of a reasonable weak scent, between Lavender and Southernwood, and of a displeasing taste. The Flowers grow after the same manner of those of the Common Wormwood, and of a yellow color, and the Seed is not unlike thereto also.

V. The Places. It grows about the Sea Coasts, as on those of the Venetian Gulph, and likewise in the Island of Chio. It has been found growing also about Rye in Suffex, and Winchelsea Castle, and at Portsmouth, in the Isle of White, as Gerard lays.

VI. The Times. It Flowered in July and August, & towards the latter end of Summer, in which it is ripe for Seed.

VII. The Qualities, Specifications, Preparation, and Venues, are said to be the same with those of the Common Mugwort, in the former Chapter, and thither we refer you. Some will have it that of the nature of the Common Wormwood, but it can scarcely be, because it wants much that bitterness, Afringent, and Stomack property.

CHAP. DVIL

Of MULLEIN Common,

OR,

HIGTAPER

THE Names. It is called in Greek, *Flamtna* a Flame for that it served as a Wick to put into Lamps to burn, from whence some of the Latines called it *Candela regia*, and *Candelaria* because in the Ancient times, they used to dip the Stalks hereof in Suet, Tallow, or Wax, to make Candles, Tapers, or Torches of. It is called also in Latine, *Thapfus*, *Thlapfus*, *Tapfus barbatus*, *Verbasum* and *Lanaria*: and in English *Mullein*, *Higtaper* or *High Taper*, because it was used sometimes as a Taper or Torch at Funerals.

II. The Kinds. There are three Principal Kinds of this Plant, viz. I. *Verbasum vulgare*, five *Tapfus barbatus communis*, our Common Mullein, of which in this Chapter. II. *Verbasum Nothum*, *Tapfus Nothus*, Bastard Mullein, or Base Mullein, of which in Chap. 508. III. *Blattaria* Moth Mullein, of which in Chap. 109. following.

III. The Kinds of the Common Mullein. There are, i. *Verbasum Mas* *Verbasum Mas Eatifolium* *Verbasum album vulgare*; *Tapfus barbatus commitnis*, our Common white Mullein, which is the Male white Mullein. 2. *Verbasum Foemina Lobelij* I *Verbasum album Fvmina*, *Verbasum folm longioribus Mas quorundam*, *Phlomos alter Lobelij* *Verthifcum Lychmte Matthioli* *Verbasum Candidum Mas Fuchfij* *Verbasum album F&mina Gefneri* *Verbasum augustius Dodonai*, our white Mullein with long Leaves, Female white Mullein. 3. *Verbasum Fcemina flore albo vel pallido*, *Tapfus barbatus maximus odor at us meridionalium flore albo*, Sweet white Mullein.

The Description,

IV. The first, or Our Common white Mullein which is the Male white Mullein. Its Root is long, white, and woody, perishing every Year after it has born its Seed: from thence spring up many fair, large, white, woolly Leaves, lying next the Ground, something longer than broad, pointed at the ends, and as it were dented about the edges: the Stalk rises up to be four or five Feet high, covered over with such woolly leaves as the lowest, but lesser, so that no Stalk can be seen, for the multitude of leaves thereon, up to the blowers, which come forth on all sides of the Stalk, without any Branches for the most part, and are many set together in a long Spike in some of gold yellow color, in others

more

more paler', consisting of five pointed Leaves*, which afterwards give small round Heads, which contain not thin them small brownish Seed.

V. The second, or Our white Mullein with long Leaves, which is the Female white Mullein. Its Root is somewhat long, thick and hard, but not woody, with several long fibres adjoining thereto. From whence rise up many thick, white, woolly

Leaves, lying upon the Ground, like unto the Common Male white Mullein in the former Section^ but that they are somewhat narrower, and thereby becoming longer: from among which, springs up, A round, hard, woolly Stalk, about three Feet-high, set with the like Leaves, as those which grow below, but smaller unto the middle thereof, where it begins to give Flowers-, and in some Places, to divide itself into branches, whereon grow many Flowers, Standing round about the Stalks or Branches, thick set together-, consisting every one of five round pointed Leaves, of a whitish color, and in some Plants and Places more yellow, with a few yellow Threads in the middle^ which being past away^ round, hard, Seed Vessels come in their places, very like unto the Seed Vessels of Fox-Gloves, or Finger Flowers, but not so long, in which is contained very small and brownish Seed.'

VI. The third, or Sweet white Mullein. It has a Root like the former, from which spring up white, hoary, and woolly Leaves, like the other^ but longer, narrower, and more indented about the edges, and not so many growing below on the Ground. The Stalk is woolly, and rises higher than the former, having greater Flowers growing at the tops, much sweeter also than it, and of a white color, wherein sometimes some reddish lines: are to be seen: in other particulars, it differs not from the former.

VII. The Places. The first grows plentifully in Florida, in the West-Indies, and in some parts it grows in great plenty in the Southern Carolina. It grows by Waysides and in Lanes, as also in the borders of Fields and Pastures, Ploughed Fields, Cawties, and in dry sandy Ditch Banks, and other unfilled places in most parts of England. The two last grow also in many places in England, but not so universally and plentifully as the first.

VIII. The Times. They all Flower about July, and from July to September, and bring forth Seed, the second year after their Sowing.

IX. The Qualities. Mullein is Temperate in respect to heat or cold, and dry in the first Degree: Aperitive, Astringent, Peccoral, Hytterick, and Nephritick.

X. The Specification. It prevails against Coughs, Colds, Obstructions of the Lungs, Asthma's, Fluxes of the Bowels, the Strangury* cures Agues and the Piles, and gives ease in pains of the Gout.

XI. The Preparations. They are manifold, as, 1. A Liquid Juice or Essence of the herb. 2. A Decoction in Wine or Water of the same. 3. A compound Decoction. 4. A Ponder of the Roots* 5. A Ponder of the Flowers. 6. A Fume. 7. Tap* simel 8. Tapstvalentia. 9. An Infused or Decoded Oil. 10. An Ointment of the Flowers. 11. A Cataplasm. 12. A Distilled Water. 13. A rituous Tincture. 14. An Oily Tincture.

The* Virtues.

XII. The Juice or Essence. Taken from a Spoonful to three Spoonfuls in a strong Bodied or Styr* tick red Wine, it cures Diarrheas, Dysenteria's, Lienteria's, and the Hepatic Flux; and is good against a Rupture or Burstenness: they cure Catarrhs, and Disfluxions of Rheum upon the Lungs, and used as a Gargle, heal a sore Mouth and Throat. And being drunk Morning and Night for 20 Days together, it cures the Gout, The Juice or Essence of the Roots, made before it bears a Stalk, and taken in a draught of Muskadine, for three or four

limes or ofneman ho*ir before the coming of the Fit
 <£ a Quartan Ague, wiH. certainly cure it. The
 Juice of the heaves and Flowers being put upon
 ough Warts, and rubbed on, quickly takes them
 way, as Alathiolus says, but does no good to those
 v/hich are Irhooth.

XIII. *The Decoction in Wine or Water.* It is profitable for thole which are Burthen, and for such as have Cramps and Cbnvulsions, and likewise for such as are troubled with an old Cough. Being used as a Gargle, it eases the Tooth-ach. The *Decoction of the Root* in Red Wine or Water, is good against an Ague, as also the Bloody Flux, more especially, if Gads of red hot Steel or Iron has been often quenched therein. The lame opens obftru&ions of the Reins and Bladder, and is good against the Strangury. It is of great force to dissolve Tumors or Swellings, and Inflammations of the Throat. The *DecoUion of the Herb in Water* Country People give to their Cattel, when troubled with a Cough, or by reason of a Loofenefs of the Bowels have a falling out of the *inteflinum rctum* or Fundament.

XIV. *The Compound Decoction.* Take Leaves of Mullein two parts, Camomil Flowers, Marjoram, Sage, of each one part, make of all these a *Dvcoffion in Wine.* With this bathe Morning and Night where the Veins are Swoln, or the Nerves are contracted, or where the Cramp commonly aflies, it gives relief, ease and comfort^

XV. *The Pouder of the Roots.* Given to a Dram in a itrqng or Stiptick red Wine, Morning and Night, it Itops nil forts of Fluxes of the Belly. If it is rubbed often on rough Warts, it v;:il take them away In a (hort time, but it does no good to such as are fsmooth, as was iaid before of the Juice.

XVI. *The Voider of the Homers.* It is an efpecial remedy, for such as are afflicted with Belly-aches, and Inch as are troubled with the Colick, tho' periodical. It may be given from a Dram to a Dram and half, Morning and Night, in any proper Vehicle.

XVII. *The Fume.* Take Seeds and Flowers dryed of Mullein, of each three parts ^ white Rofin two parts ^ Camomil Flowers, and Caraway Seeds of each one part<>, mix them, and put them l upon live Coals in a Chafing Dish, or fome Earthen Pan, and fet it in* a Clofe-Stool, and let the person who is troubled with the Hemorrhoids or Piles, or falling down of the Fundament, fit over it, to receive the Fumes up the Body ; it gives much ease and relief-, and is also very profitable for such as are troubled with a *Tenafmus*, which is a desire to go often to -Stool, and can do nothing.,

XVIII. *Tapfimel, Hony of Mullein.* Take Juice 0/Maie Mullein, Juice 0/Celandine, of each one part*, Clarified Hony, two parts-, boil them by Degrees, till the Juices are confumed^ adding (if the Phyfician fhall fo prescribe) Vitriol and Alum burnt , *a*fefficient quantity-, Ink enough to make a thin Body that they mi* well \$ boil again to a confidence of an Ointment according to Art. The fimple *Tapfimel* (without the Vitriol^ Alum, and Ink) being taken three times a Day, an Ounce or Ounce and half at a time ftops Catarrhs powerfully, and is good against the *alling-Sicknefs. That with the *Vitriol, Alum, and Ink*, is good to cleanse old Sores, Ulcers, nltula's, take away a Calous, and confume proud and dead Fldh.

XIX. *Tapjhalentia*, an Ointment containing the Powers; Force, or Strength of *Mullein.* Take Juice of Mullein, Hogs Lard, of each equal quantities \ mix and beat or grind them together in a

Stone Mortar -, keep it in a convenient *Veifel nine or ten days, then beat it well twice, once more with fresh Juice, until it be green, and another time without juice, firji c a fling away what is thin and difcolored, then keep it clofe covered for use.* It foffens hard Tumors, and eases their pain; anointed on the Bell/- it ftops a Loofenefs and a Bloody Flux -, fo also given, in a Clyfter. Anointed on the Crown of the Head, and Sutures, as also on the Nape of the Neck and Stomack, it Stops Ca7 tarrhs, and is an excellent thing againil Coughs of the Lungs. And it has been found by experience to, cure the Hemorrhoids or Piles.

XX. *The Infolated or Decoffed Oil.* It is made by an *Infufwn* or *DecoBion* of the Flowers in pure Oil Olive, often repeated. It is very powerful against the Hemorrhoids or Piles, being often anointed on the part affe&ed.

XXI. *The Ointment.* It is made of the bruifeM Flowers, the Talk of an Egg, Juice of Leeks, anis Crumbs of white Bread, beaten together into the form of an Ointment\ Apply ed to the Piles when they iweli, and their pains are moft vehement, it gives wonderful ease upon the fspot, and ina-fhort time cures them.

XXII. *The Cataplafm.* 1. *Made of the Leaves and Seed boiled in Wine*, and laid upon any Diflocation, after it is fet, it eases all the Pains and diffuffles the Swelling. 2. *Made of the Leaves and Tops of the Lefler white Mullein boiled in Water* and applied to the Gout, it gives wonderful ease, and diffuffles the Tumor. 3. *Made of the green Leaves beaten in a Mortar*, and applied or bound to a Horfe Foot, which is very much pricked with a Nail, or Thorn, or Splinter, it eases the Pain, and heals it in a fhort time.

XXIII. *The Diftilled Water of the Flowers.* Taken to 3 Ounces at a time or more, Morning and Night for fome days together, it is faid that there is not a better remedy found out for the hot Gout. Dropped into the Eyes, it takes away the watering of them, and also cures the redntfs of the Face, called in *Latin, Gutta Rofacea*, or the *Rofe*^ if it be wafhed therewith often . more especially if a little *Camphorated Spirit of Wine* be added" to it. This Water, is also used against creeping and running Sores or Ulcers, or any other deformity of the Skin.

XXIV. *The Spirituous Tincture.* It cures a vehement pain of the Stomack, and is profitable against Convulsions, Fainting and Swooning Fits* Palpitation of the Heart, Sicknefs at Heart, and Vomiting, a vehement Diarrhea, and the Bloody-Flux. Dofe from 1 Dram to 3 in a Glafs of *Maiera*^ *Sherry, ox Canary.*

XXV. *The Oily TmSure.* Outwardly applied to the Piles, it eases the pain, heals and cures them. Applied to the Gout, it eases the pain and cures it: Anointed on the Back Bone and other parts affected, it prevails against the Palfie, Numbnefs of the Limbs, and a Trembling. Inwardly taken from a Scruple to a Dram, Dram and half, or more, according to the Exigency, it gives ease in the molt Vehement Colick, prevails against inward Convulsions of the Bowels, induces the Terms in Women if ftopt, facilitates the Birth, gives ease in the Strangury, and provokes Urine powerfully, expelling all Heterogeneous things, as Stone, Gravel, Sand, or Tartarous Mucilage from the Reins, Ureters and Bladder.

C H A P . D V I I L

*>/ MULLEIN *Baftard Or Me.*

L f-v^KHE Names. It is called in *Greek*, *QKóp* X yñ©: in *Latine*, *Verbaſcum nothum*, *Verbaſcum vile* Tapus nothus, Tapus vilis: and in *EngHJh*, *Bafe Mullein*, *Bajiard Mullein*.

II. *The Kinds*. There are three Kinds of this *Plarit*, viz. I. *Verbaſcum nigrum vulgare*, *Yerbaſcum nigrum*, *Verbaſcum nothum vulgare*, Our Common *Bafe* or *Baftard Mullein*, or Common Black Mullein. 2. *Verbaſcum nigrum olorum* Tapm nothus odoratus, Sweet *Bafe Mullein*, or Sweet Black Mullein. 3. *Verbaſcum nothum Laciniatum*, *verbaſcum aliud Matthioli*, *Verbaſcum Erucifolium Lobelij*, *Verbaſcum Laciniatum Matthioli*, *verbaſcum folio Pdpaveris cornuti Camerarij*, *Jagged Mullein*, or *Jagged Bafe* or *Baftard Mullein*. To theſe we may add, 4. *A/8/«* \$ *JEthiopsis*, *Verbaſcum JEthiopium*, *Verbaſcum Laciniatum*, & *nonLaciniatum*, *Schrea JEthiopica*, *Ethiopian Mullen Jagged* and not *Jigged* which *Parkinſon* will have to be a Kind of *Clary*: but we thought it very proper to be enumerated among the *Bajiard* or *Bafe Kinds of Mulleins*, it being none of the *true Kinds* in the former Chapter, nor yet of the *Moth Mulleins* in the following Chapter, and withall ſeeming to be much more a *Mullein* than a *Clary*.

The Deſcriptions.

lit Tffe fir ft ^ or Our Common Bafe or Baftard Mullein, or Common Black Mullein. Its Root is pretty large, long, and Branched and fibrous, which

MULLEIN *Bafe or Baftard Common* 3

MULLEIN *Black Common.*

perihes after *Seed time*. Its *Leaves* are nothing *woolly* or *Hairy*, but of a *dark'green color*, somewhat *large\longe\pointed* and a little *dented* about the *edges*. The *Stalk* or *Stalks* *rife* tip almost as high as the *Common Mullein*, and *fometimes parted* at the *trcps* into a few *Branches*, bearing long *fpiky Heads* of *Gold yellow flower*, and in some tending to *purple*, like the other, with some *Threads* in the middle, which are *reddiſh* in some and *purplijh* in others, with *Sved* following them like to the *true Kinds* in the former Chapter. The whole *Plant* has a *ſtronger ſmell* than that in the *White Kinds*.

IV. *The ſecond, or Sweet Bafe Mullein*, or *Sweet Black Mullein*. Its *root* is ſomething *great* and *long*, with *fevet*al fibres* adjoining to *l>*, which *perifhes* not, but *abides* many *Tears*. It has *four* or *five Leaves* lying upon the *Ground* some what *long* and *broad*, ending in a *long point*, some what *hard* and

as it were crumpled, of a *dark green color*, without any *manifeji dents* or *notchngs* on the *edges*, but only *unevenly waved*-, from among which *rifes ut>^a* round, *hard*, *green Stalk*, and *fometimes two*, about *three* (feet high) *oftentimes* without any *Branch?** and *fometimes* again *divided* into two or three %^{on} which grow many *yellow flowers*, *fmailer* and *thicker* fet together, viz. two or three at a place, than in any other, and *ſmelling* pretty *ſneet*, which for the *moſt part* fall away without giving any *Seed*-, and. *vſott* it does bear *Seed*, it is very *f?nall*, and contained^{l11} *ſmall round Heads*.

V. *The third, or Jagged Bafe* or *Ba#ard Tm^b* lein. Its *Root*is* much like the former-, and *jl* has *large* and *long Leaves* *unevenly cut* in on *edges*, *fomewbat* like the *Leaves* of *Horned Po⁷* of a *dark green color*, and a *littlè hairy^{r,a}* The *Stalk* is *ſmall* and *green*, but *high*, and *variouP/* *Branched*, bearing [*mailer yellow flowers*, <M&fⁿ *ſparfedlyjct* than in the two former *Black* and having after them *Seed* much alike. *Lob⁷*

the Flowers are fet under the Stalks, as Sage or Wild Clary are, afd. of the fame form and color.

. VI. The fourth or Ethiopian Mullein, Jagged & V& not Jagged. Their Root are Woody, and periph a&foon as they have born their Seed, which is ujuall the fecond Tear after their Sowing and Springing Ufa for the firft Tear they feldom run up to Flower. Each of thefe have divers very large heaves fspread upon the Ground, every one near a Foot long, and almoft half a Foot broad, ending in a point, in the one, very much torn in on the edges on all fides, and dented thereabouts, and in the other fmooth and not dented or jagged: both of them are of a whitifh, hoary, green color, with much white hoariness upon them, far Jfurpajjirig any of the White Mulleins, which grow wild abroad in Our Country, or beyond Sea, for thy are of ayeldvoijh white hoariness, and are nothing fo pleafant to look on as this. In the middle of thefe Leaves rifes up a hoary, fquare, firing Stalk four or five Feet high, fet full of fuch like Leaves as grow below, Jbut much leffer, and leffer ft ill up to the top, all hoary and bodly a* the reft. This Stalk towards the top, is jft out into feveral Branches, on which alfo grow di fmaHeft Leaves like the former up to their top, which Branches fspread far, and take up a great compafs Or room. On each of the Stalks and Branches, at fet diftances are fet two fmall Leaves, and with them round the Stalks feveral large white hooded or gaping Flowers, and fome fay they are of c pale, black, blew, color: after which comes the Seeds two Seeds always joined together in one Seed Veffel, which are brownifh, and thofe of the jagged like thofe of the not jagged.

VII. Gérard Delcribes the fmooth and not jagged Kind thus. It has a Root which is black and hard and of a Woody fubftance. from which fpring firth many very broad hoary Leaves, fspread upon the Ground, very foft and downy, or rather inoolly like thofe of our Common white Male Mullein, but far whiter, fofter, thicker, and fuller of voollines* which Wooll is fo long, that one may toith his fingers pull the fame from, the Leaves, even as Wooll is pulled from a Sheeps Skin: from among which Leaves, rifes up a four fquare downy halk fit with like Leaves but Jmailer: which Stalk U divided at the top into feveral Branches, fet about and orderly placed: at certain dijiances, ivith many flowers like thofe of Arch-Angel, of a tohite color, tending to blewnefs: which being faff, there follows a three cornered brown Seed.

VIII. The? laces. The firft grows in many places of Eifex, Kent, and Surry: The fecond is fometimes alfo found growing Wild in our Country, but aot: commonly to be met with, unlefs carefully lookt after. The third Lobel fays he found near the Riines of an old Church, by the Baths at Bath in England. The fomix Diofcorides fays, grew upon Mount Ida in Phrigia near Troy, and in Mefferia a Province of the Morea: zra has of late been vgathered upon fome Hills in Greece and Illyria Which are near the Sea: but it aifo grows naturally in Ethiopia, from whence it took its Name: it alfo grows ih Meroe, an Ifthm in the River Nilus: from fome of thefe places it has been brought to us and grows here in our Gardens: Gerard fays, he had k growing in his Garden: I have alfo feen it grow wild, upon fome of the Southern Parts of the Continent ift Florida, where it is in abundance.

IX. The Times. They all flower in July and Auguft, or latter end of Summer, as the other Mulleins do, and their Seed is ripe in fome little after*

X. The totalities, Sped neat ion, Preparations and Vertues, of thefe Mulleins, are the fame with thofe of the Common Mullein in the former Chapter fo that no more need be faid of them here.

XI. Observations. A Decoction of the Golden flowers of the Black Mullein in Lye, is faid to dye the Hair of the Head yellow, and to make it fair and fmooth. And a Decoction of the Leaves in Wine with a little Honey, is good to wafh and cleane old and putrid Ulcers, and foul, rotten, and running Sores, and to induce their healing. A Decoction in Vinegar alfo, is very profitable to ftop the bleeding of Green Wounds, and to heal them, and if it is made with Rue, it is a Remedy againft the Stinging of Scorpions. The Decoction of the Leaves and flowes in Wine or Water, is good againft Diieases of the Breft and Lungs, and for fuch as Spit corrupt land rotten Matter. An Ointment made of the Leaves, is uied with good Succes againft Scaldings and Burnings with Fire or Water. A Cataplafm of the Leaves made by boiling in Water and ftamping them in a Mortar, 2tc. being applied, is profitable againft an Oedema, and other cold Tumors: it cleanes and cures Ulcers alfo, and is of excellent ufe againft an Ophthalmia, or Inflammation of the Eyes.

XII. The Virtues of the Ethiopian Mullein. The decoction of the Root in Wine or Water, is good againft corrupt and rotten matter of the Lungs: helps the afperity or roughnefs in the Throat, and is faid to be pbfirable againft the Sciatica. An Eleffuary or Lohoc, made of the Root with JHony has alfo the fame Vertues, and caufes an Expectoratibtt of the purulent or rotten Matter in a Pfeurifie.

CHAP. DIX,

Of MULLEIN Moth.

I. THE NamH. It was unknown to the X Greeks, and therefore has no Greek Name: but it is called in Latine, *Blattaria* from *Blatta*, a Moth: h*c abjeSa *Blattai* in fe contrahit unde nomen accepit, as Pliny fays, lib. 27. cap. 9. And in Englijh, *Moth Mullein*.

II. The Kinds. Auchois have made twelve or thirteen Species of them, of more^ but as many, of them are perfectly Forreign to us, and not at all to be come by, we fhaU here omit them, and give you only the Defcription of fuch, as either grow Wild in our Country, or are commonly Nurft up in our Gardens 5 and they are the following fevert. viz. 1. *Blattaria lutea odorata*, Sweet yellow Moth Mullein. 2. *Blattaria lutea minor five vulgaris*, Our, Common yellow Moth Mullein. 3. *Blattaria Flore albd*, White Moth Mullein. 4. *Blattaria lutea major, five Uifpanica*, The greater yellow Moth Mullein; 5. *Blattaria Flore lut&o purpu* rafcente*, Cloth of Gold Moth Mullein, or yellowifh purple Flowered Moth Millein. 6. *Blattaria Flore pur pur eo*, Purple Flowered Moth Mullein.. 7. *Blattaria Flore taruleo*, Blew Flowered Moth Mullein..

The Descriptions.

III. The Jirji, or Sweet yellow Moth Mullein. It has a long Branched. Root, pretty thick with some fibres adjoining to it, which abides all the Winter, and lives many Tears, which few or none of the others do. It has many hard, grayish, green Leaves lying the Ground, Somewhat long and broad, link or

nothing snipt about the edges, but pointed at the ends. The Stalks are two or three Feet high, with some smaller Leaves on them, branching forth from the middle upwards into many long Branches, furnished with many small, pale, yellow Flowers, having a pretty sweet smell, stronger than in the others, which pass away, very rarely giving any Seed.

IV. The second, or Our Common yellow Moth Mullein. It has a Root pretty thick and long, with several Fibres coming from its sides, which produce every Tear after Seed time. It has such like long Leaves as our fourth Species at Sett. VI. following, but narrower, and roundly dentefrabout the edges: The Stalk is usually single and without Branches: on which towards the top, grow such like Gold yellow flowers as those are, but lesser, with the like purple Threads in the middle. The Seed Vessels are finer and the Seed/mall, both so like to that fourth Species following, that they cannot be distinguished.

V. The third, or White Moth Mullein. The Root of this is like the last or Common yellow Moth Mullein: but the Leaves of this are of a little less height, and the Stalks are branched about the middle, and somewhat larger, with the like

purple threads like Flies creeping up in the middle as are in the Common yellow: and the Seed is like the former: in all other respects, it differs nothing from the former.

VI. The fourth, or Greater yellow Moth Mullein. This is a Spanish Kind, whose Root is not so full of Fibres, but produces every Year, after it has given Seed, except the Winter is very mild: It has longer and greener Leaves than the Jirji Kind, and rounder also at the ends than the second Kind. The Stalk is stronger and higher than it also, on which besides the Leaves, grow towards the top, many Gold yellow Flowers, and give Leaves apiece, as all the rest do; not so thick, set at the Jirji Species, but a pretty deal larger, with some purplish threads in the middle, formed somewhat like unto a Fly: after which come their places, round Heads, two or three, or more sometimes together, but most usually one, in which is a small dusky Seed.

VII. The fifth, or Cloth of Gold Moth Mullein, or yellowish purple Flowered Moth Mullein. This abides longer in its Root than some others, though in a hard Winter it will perish like the last. The greatest difference between this and the former Species, consists, first in the Flower, which is of a yellowish purple, or the ground yellow, overlaid with a bright crimson color, which is very pleasant and delightful. Secondly, The threads in the middle are not so purple, as in that second Species, but near unto the color of the Flower. It seldom bears Seed, which that Kind for the most part does.

VIII. The sixth, or Purple Flowered Moth Mullein. Its Root is long, thick, and blackish on the outside, abiding many years and much increases by the sowing of its own Seed. Its Leaves are broader, shorter, and of a grayer green color, than the third Species or white Moth Mullein, and without any denting on their edges for the most part, yet pointed at the ends: The Stalk rises not so high as that, but is sometimes branched, bearing such like Flowers of a fair deep blue, or purple color, inclining to redness, the threads in the middle of the Flower being yellow. The Seed Vessels hereof are smaller also, than those of that third kind.

IX. The seventh, or Blew Flowered Moth Mullein. This blew Kind is in all respects like unto the former purple Kind, saving only in the color of the Flower, which is of a bluish violet color; and is not much inferior either in the greatness of the Plant, or in the largeness of its Flowers unto the said purple Kind, and endures many Tears in like manner.

X. The Places. The three first have been found growing wild in several places of England, as on Black-heath in Kent, and near Deptford, and in other places: the four last grow only in Gardens, and do sometimes the same.

XI. The Times. They all flower in their proper time, as in July and August, and yield their ripe Seed not long after.

XII. As to their Vitalities, Specifications, and Virtues, the Philosophers have laid down what they ascribe to them, especially the Common sort, which is, to gather Moths, wherever it is laid. And what Cameron says of the said first Species, that the Decoction of its Flowers or Leaves opens Obstructions of the Bowels and Meferack Vein.

CHAP. DX.

Of MUSHROOMS.

OK

TOAD-STOOLS.

L nrHE Names. This Plant is called by the
X Arabians, *Fater*, and *Hot at*: in *Greek*.
Musc. Pl. (jLvyy. Fms - in *Latine*, *Fungus*. Pl. *Fungi*:
in *Englijh*, *Mufhrome*, PL *Mufhroms*, *Toad-*
stools.

II. Tfo K/Wi. There are several Species of
Mufhroms, some of which we have already
Treated, or fhall hereafter Treat of, in their par-
ticular and proper Chapters, viz. I. *Such as grow*
upon or in the Earth, as, 1. *TuberaTerra*., Earth
Balls, which see in *Chap.* 238. aforegoing. 2. *Cz-*
pitaTerrse, *Lupi Crepitus*, Fufs-Balls, which see
in *Chap.* 306. aforegoing. II. *Such as grow upon*
Trees, as, 3. *Auricula Jud*^ *Fungus Sa?nbucinus*^
Jews Ears, which see in *Chap.* 404. aforegoing.
4. *Lichen Arborum*, *Pulmonaria lungofa*, *Mufcus*
tulmonarius, Tree Lungwort, which see in *Chap.*
458. aforegoing, y. *Fungus Arbore us igniarius*^
Fungus igniarius, *Fungus incendiariits*, Touch-
Wood, or Match-Wood, of which in *Chap.* .
following. 6. *Agaricus*, Agarick, or Mufhrom
of the Larch Tree, which see in the *Third Book* of
this our *Botonologia*, or *Hiftory of Plants*. Of all
or any of thefe, we have nothing to fay in this
place. Thofe which we (hall Treat of in this
Chapter are the *Fungi Terrei*^ or Mufhroms of the
Earth, which we divide into two Gaffes, viz.
I. *Fungi Efculenti*, The Edible Mufhroms. II. *Fun-*
gi non Efculenti, The non Edible Mufhroms ^
which are laïd to be *Fernitioji vel Deleterij*, Dan-
gerous or Deadly. Now becaufe there is a great
number of both thefe Kinds ^ to avoid as much as
may be being tedious, we (hall forbear the enu-
merating of them here in particular, and give you their
Names, as we (hall Treat of them, or Defcribe them,
in the order following.

The Defcriptions.

I Of the Edible, or Wholfome *Mufirom*.

III. The General Defcription. *Our common fort,*
Mufhroms have fmall, fsmooth, round tie ads,
ftanding upon thick Jhort Stalks, and are for th-
part white h yet in fome the upper Skin / <
niijh or yellowifh ^ but genially more yellow, af-
they have flood long and are decaying ^ moft Q
m are ffrom whit flafld and hollow underneath,
Wb many Lines, or thin Feather-like Subftances,
runing direffly from the Center or middle of th-
wad, to the Edges round about. Their Subflanc
J generally loofe and fpongy^ eafily yielding to I
roken between the Fingers, if but preffed ahit,
ward. The Tafte and Relifli is according to th-
and Place where they grow. Clufius fays, Th-
an: s Germans and 6th A s, do efteem tho-
grow in the Woods, and chiefly th01
S S n S l ? A and next to them, thofe which
grow under Oah: But doubtlefs, thofe which gro

the open Air, in Champian Fields and Meadows.,
re nit only fafer from danger, but of better reilifti
han thofe which grow in Woods and under Trees,
fpecially with us in *England*: and herewith
grees *Horace* in his *Satyrs*^ *lib.* 2. *fatyr* 4. *ver.* 20.
nl 21.

IV. i. *Favaginofi, Spongiofus Dalechampij* The
Honey Comb Mufhrom. *Some of this Kind grow*
bigger than other s^ and fome more Topped or Spiring,
and fome are parted a it were all over into fundry*
divifwns^ making it feem like an Honey Comb, and
its Head many times refembles a Mulbery. These
are not dangerous as *Gerard* lays-, and *Clufius*
accounts them as one of the firft or principal Kinds
of *Edible MuJJ)roms*, and *Camerarius* fays, that the
Jermans are much delighted with them.

V. 2. *Fungi altiufculi & pdrvi.* *Thefe art higher*
han any of the reft^ and fmallwithall^ But good
of the Kind.

VI. 3. *Fungus Vyramiidk*, Spear or Pyramidal
fashioned Mufhrom. *Its out-fide is of a whitijb*
brown color, is more Steeple fashioned and larger^
than fome others^ and as good as any of the former
- being the greateft of the fourth fort of Clufi-
us his Edible Mufhroms.

VII. 4. *Fungus Georgij* St. George's Mufhrom;
It is rounds fome what foft and whitifh, having a flit
moft ufually on the Edges: They are called by this
Name, becaufe they Spring up much about that time
of the Tear.

VIII. 5. *Fungus Populneus*, growing under Pop-
lar Trees and Elme Trees. *It is cornered either*
more or lefs, and fome jagged about the Edges,
having longer and Jhort er Stalks, and fome of them
fuller^ and lanker than others.

XXII. 18. *Fungi Ungulati, Lingua C&falpini.* It grows on the Bodies of Chelhut Trees, or near them: its head is something red: and its Stalk h red, but not so red, a* that of the true Boletus.

XXIII. 20. *Boletus Verus,* The true Boletus. This is white of an Egg, and of the same form when they first spring up: but after two or three days, the white Ski/2 or Coat breaks above, and fbevs yellow like the Tolk of an Egg, which then grow* greater, and into the form of a Mufhrom (the white Skin falling away by little and little) being raised somewhat higher in the middle, and fo much of a gold yellow color, that it seems deeper colored, than Saffron it self, but less yellow underneath, with as many Feather-like Lines or Divifions, or Septa a* irj other Mufhroms. The Stalk likewise is yellow^ and an inch thick: when it grows old, it breaks into three or four parts, and looses the fresh color above, becoming more pale, and underneath almost white. These are of fo delicate a Tafte, that those who are decuftomed to feed on Mufhroms, desire them more than any other Kind, nor can they easily be satisfied with them. They are accounted by all Hands to be very voholefome, and yet it is said that Claudius Catfar, wa* kill*d with eating them. This might chance indeed after the eating of this Kind: but the question is, whether the Mufhroms were the cause of his Death, or that there might be some other cause thereof going before, or unknown, which might effc3 it: It is good to lay th* Saddle on the right Horfe. Clufms says, That some of these being dreft, and Served up, as a Difli at Table, that they seemed unto him, as if they had been colored with Saffron,

X. 7. *Fungus Muliebris,* The Womens-Mufhrom: It is like a NaveL They are of an unequal size, being brownish, greenish, or yellowish Coated.

XL 8. *Fungus Tube fof us,* The Tuberous Mufhrom. It is not Flat throughout, but round in the Body, and Jometimes torn on the edges, of a pale brown color, [polled with white.

XII. 9. *Fungus vel Fungi nentorum -y Boletus vel Boleti Cordi:* Mufhrom of the Woods. It is almost round and white, Spotted with yellow brown spots, some of them bigger than others: those growing under Beech-Trees, are redder than others: some chuse for eating, the pale sort, rather than the redder.

XIII. TO. *Fungi Capreolini,* The Goats fcluff-10m. They differ not much from some of the kafi, but in being yellower above, and browner underneath.

XIV. 11. *Fungi rubei,* Red Mufhroms, They grow in Woods about the beginning of Summer, and for their redness above, are called Red Mufhroms I altho' ftoth the Stalk and the under part be not fo fufkyinkes: Amanita vulgares Boleti Tragi: These are the Fungi Species, or kind of Mufhrom, which are said to be the most Common both by Lobel and others.

XVI. 13. *fungi Villofi, Fungi hirfuti cervim,* The Hairy Mufhroms. These are round, and a Tittle flat above, are all hairy, and of a bluff) color: some of them will also be blackish, and some will likewise grow two together.

XVII. 14. *Fungi abictini, FirMufhroms,* because they grow in the Fir Tree Woods. These are less hairy, but otherwise much like the last* of which some are mixed with white, 'p'e, and browns and some fmooty with all, or many blue 16fo with purple Lines underneath.

XVIII. 15. *Fungi ungulati, Caprei ungulati,* Goats Hoof Mufhrom. They are cut in on the edges into such parts, that they very well resemble a Goats Hoof, being brown above, and white beneath*: and is more torn on the edges, when it grows old, than when it is new sprang up, cr is put young.

XDt. 16. *AminitiC Pauli JEGaeti.* These have their Stalks sometimes bigger in the lower part, than the upper Bole is: and a-e much discolored with blew, green, and brown, or yellowish, as in some -, the upper part of the Bole being brown 3 and without any Lin^h and flesh.

Branched Mufhrom. These are of fo delicate a Tafte, that they are easily eaten: it is flat at the head, and of areddish color. A sweet Milk when it is broken.

Kinky Mufhroms. These are great, white, and round, smelling very sweet, and of as pleasant a Tafte as the former, and may be given to such as are Sick, without any danger.

XXIV. 21. *Fungi Porcini, Fungi Suilli,* SwineS Mufhroms. They are somewhat pointed, of a fmoaky color, spotted with white spots, and underneath with blackish fepts, or Feather-like lines or divifions and the upper part in some will be, red. But Cefalpinus says, that with them, some were of a brownish yellow above-, and of an AJh color underneath.

XXV. 22. *Scarogia Cafalpin:* These grow i* Meadows, the Head being broad, and the Stalk very long, and of divers colors.

XXVI. 2?. *Fungus guercinus dipfacoides,* Bafon or Teafel Mufhrom growing among Its Head is white, and like unto the common Jort in form, but that the top is brown and grows to K [polled: but the chiefest matter of difference is & the Stalk, which has about the middle of it, or higher, a certain hollow Dish, like as the Teafel has, being rough and brown about the brims. The lower part of the Stalk is as it were knobbed, and blackish next to the Ground^ with some hairy Fibres thereat.

XXVII. 24. *Fungus acris vel Piperitis, Fungus Piperitis Sapore,* The Pepper tailed Mufhrom, a Cor Jus on Vwforides calls it. It is white in color* and tafts fliarp and hot like Pepper.

XXVIII. 2j. *Fungi Prunuli Ofalpini.* It is a very small Mufhrom^ of an Ash color and very f^{6t} infmell.

XXIX. 26. *Fungi ramihei vel ramojl B<** Hirci, The Branched Mufhrom. It is spread o& large into many Branches, being in some yellow others reddish, and in others of a pale white, they call the Goats Beard. The most common is that that which is yellow, and has white upon it.

XXX. 27; *Fungus Digitatus major & Fungi Digitelli* as the Italians call them. Finger Mufhrom. It is of a large Size, and will suffice a Man for a Meal.

XXXI. 28. *Fungus digitatus minor* will suffice a Man for a Meal.

XXXI. 28. *fungus dentatus*, pi. *Fungi denia*^ The Toothed Mufhrom. This is a Jmall Mufhrom, and a tittle long, being formed like unto, a Tooth.

XXXII. 29. *fungi artificiales prolu*Ui, Mufhroms produced by Art. They are made to grow at the foot of the white Poplar Tree, inthin four days, by fpnnkling warm Water in which fome Leave* have been Decoded, and Yonder of the fa?ie Leaves mixt therewith, or rather the green heaves beaten into afoft Pulp, andfo mixt with the warm Water: I fay if the Water thus ordered fhall be poured in upon the Root, which muft be flit before hand, efpecially upon thofe parts of the Root which ly above Ground, or even with the furface of the Earthy Mufhroms will be produced in a very fhort

XXXIII. The Preparations. The order of Dreffing them is various, i. Some Boil them, and drein or prefs the Water out of them, and then flice them, and put Oil and Vinegar to them with a little Salt, and ūgar, as fome will, and a little Spice, and fo eat them. 2. Others Boil them foft in Water mixt with Vinegar and Salt, then Butter, Sugar, and Spice them, andfo eat them. 3. Others Boil them in Milk, or Cream, or Fat Broth, till they are tender, then drefs them up with fweet Butter, Vinegar, Salt, Pepper, or other Spice. 4* Others having cleared them, and SkinM them, flice them, and ftrew fine Flower on them, and then Fry them with Oil, or Suet, or Butter, and fo eat them. 5. Some Pickle them by firft Boiling them foc in fair Water, mixt with fome Vinegar and Salt, then taking them out they let them cool, and make a Pickle of the Liquor they were BoiPd in, by adding more Vinegar and Salt, fome Spices, and a fifth part of choife Brandy^ into this Pickle when cold, they put the former Boil'd Mufhroms, which yvill preferve them good for a*Year or more, being kept dofe ftopt up. 6. Some firing them and dry them, and fo keep them, as Clufius fays, and fome Salt them, and fo keep them until Winter, and then Boil, Drefs and Eat them. 7. Some Boil them with Wild, Choaky, Sower Pears, and then Drefs them as aforefaid, and fo Eat them •, for thus (as Authors fay) they may be Eaten without any danger: and if Wild Pears cannot be gotten, the Sowerer and Harfher forts of other Pears may be ufed: Garlick, Onions, and Vinegar are alfo conducing to the fame purpofe.

IL The Non-Edible or Poifonous Mufhroms.

XXXIV. 1. *Pruneoli*, *fungi Pruneoli*, £he Plum-Tree Muftiroms. Some grow under the Trees in the beginning of the Tear, of differing lorms and largenefs: and fome grow many together, from one and the fame Root, a* it were, with little or no Stalk at all: fome are roundfashioned; fome are Cornered; fome are larger, and fome fmailer than others, all of them being mixt with white, pale, yellowifh, and brown together

XXXV. 2. *fungus fimetarius*, *fimetarij*, The Dung Mulhrom, becauie found growing among Dung. It is of a round flatnefs, fomewhat thin, white, and covered as it were with Meal all over, having brown Septs underneath.

XXXVI. 3. *fungus Cory let i*, *fungi Avellanei*^ The Mufhrom growing under Hafle Trees. < » sometimes of a whitifh red, and as it voqefmoaked over^ it it round, and fomewhat bro

4. *fungus Corneolus*, Flefh colored colored Mufhrom. It is full of round Spots above, and pale yellow underneath

full of blackifh Septa, £r] Divifions, found much in Wales.

XXXVIII. 5. *Bufom*, *fungi Bufonei*, The Toads Mufhrom. It is of a wan color, and round like an Helmet^ or more yellowifh, but froaky\ or elfe more fiat and reddifh zvithfome Spots.

XXXIX. 6. *fungus Ruber parvus*. The fmall red Mufhrom. It is very fmall and round, not exceeding the IN ail of ones finger: reddifh above, and very hollow underneath. It is called alfo fungus Hircinus.

XL. 7. *Boletus nothus*, *fungus Boleti familis*^ The Mufhrom which is like to the true Boletus. It is about half an Inch broad, fpiring a little at the top ^ of a whitijh color, with a long Stalk, and of the bignefs of ones little fingger. This is alfo called, the foolk Mufhrom.

XLI. 8. *fungus Mufcarius*, The Fly-bane Mufhrom. Of this there are two or three forts, fome of them being greater and broader than others-, fomfy much redder andfpotted with white Spots, all which grow in Woods which have been fejd. They arc faid to kill as many flys as fit and feed on them^ a* well when they dre dry, at when they are frefh.

XLII. 9. *fungi Lethiftes albi*. Thefe are found in felPd Woods about Auguit: One whofe Stalk is larger below than above, and the Header Top round and of a pale whitijh color, but no bigger than the bottom of the Stalk.

XLIII 10. *fungus Lethalis niger*, The black Deadly Mufhrom. This Kind is much frequent with us, and is of a blackifh color, much rent or torn on the edges, and hanging lank about a Jmail long Stalk.

J Lethales eduis fimiles. Thefe are of divers forts, which because they arefo like to fome of the Edible Kinds, have deceived many which have gathered them, and are often afudden Death to fuch as eat them. Of which fome are reafonably Jmall, others very large • and moft of them are of a beautiful Appeff^ eithe whitijh or reddifh, or more red, and as l> were fmoaked over.

XLV. 12. *fungi abietales hirtuti*, Mufhtoms growing under Firr-Trees. Thefe are like to the Edible ones which grow in the fame places and have no other difference, but that thefe are hair* underneath, for which reafon they are refufed to be eaten.

XLVL 13. *Phallus Holandicus* (ai Adrianus wmtf calsit) The Hollanders Tool, or Working Tool. At its firft rifing up, it is fomewhat round \$ but the Skin breaking, there rifes up a Stalk of the thicknefs of ones Thumb, and of a fingers lengthy fomething like to the Penis of a Dog, having a Nut, or Cap on the top^ an Inch thick, of a blacki/h green color atfirji, and after blacker^ with certain Cells or hollow places in it. The lower part or Furfofom whence the Stalk rifes, is of an AJh color, andfome* times brownifh & the Stalk at firfi is white, but afterwards of divers colors and/potted. This Kind /links at the beft, but withering, it is turned into a moifi blacknefs, coloring the very Grpund on which it falls: and flys are kilPd which feed thereon. Junius fays, It is plentifully found on the Dutch Sea Shores.

XLVII. 14. *fungus imbricatim difpofitus verfi* color. The folded changeable Mufhrom. This grows on Cherry Trees which begin to putrify: % j, a Kind which rifes up many together laid flat one upon another, about an Inch or more broad below, and fpreading to be 3 or 4 Inches above, and about half a foot high, being of divers colors on their tops^ the edges being of a deep redcolor\ with a mealy white Lift

or Border about. The Imer part for an. Inches breadth upwards, is a pa\$khiti\$ color; up higher it is yellow and red mixt together, crossing it athwart-, then yellowish, and above it red and yellow mixt again ^ and then yellow to the very edge, but marked with federal fnoaky Spots, pale or yellowish underneath. This is deleterious being given to Men, but dried and made into Powder, it is laid to be fafe to be given to Cattel.

XLVIII. 15. *Fungiotundi* £f *albi* magni. They are large, round, and whitish, full of black Septa or Lines from the Center to the Circumference^ both above and below \ but those vohich are above are greater, and not paight as those below, and a little waved, the edge also is finely dented about.

XLIX. 16. *Fungus* *Ilacknienfis*, The Hackney Muffrom. It is fmall, dented in like manner about the edges, and of a black Chefnut color, ^but not piped above, and has been found about Hackney.

L. 17. *Fungi* *Ligni*. These grow on rotten Board* arid Timber, which ly, or are Jet into the Edrth, and are fmall like a green Fig, having final! Seed within them.

LI. 18. *Fungus* *Capitibus*, *Terra* *fimilis*, The Muffrom much like to a Fufs Ball.* It is round like a Fufs Ball^ of a brovonish color above, and of a dark red underneath, which when they are broken are of a blewish green color.

LII. 19. *Fungus* *Clypeo* vel *Scutulo* *fimilis*. These are some of them like Brimleys Hats, many growing together: and some of them broad like Shields, with their Brims turned up,

LIU. 20. *Fungus* *cancellatus*, *Lüpi* *crepitus* *eiflorefcens* *Column**. It has a fmall firingy Root, differing from all others, and is a round white *Fungus* atfirft; which afterwards breaking open, divers reddijh BrMthes do arife from it, which do all join together, making round Arches of hollow netted "Bars, or Latteffes as it iver, Jeparated one from another. It has a very finking fmell, from whence came the Name. It is much eaten by Flys.

-LIV. 21. *Fungi* *AurichUs* *Judt* *Jimiles*, Muihroms like to Jews tars. These grow upon the Arms, Bodies, or Stocks of Trees, which are rotting or dead, or at their Roots, or upon dry Boards. They are very much differing, yet none^ of them are of the hardnefs of Touch-wood: Some of them are like unto Jews Ears, either whit/Jh or yellowish, crumpled, and of a skinny fubftance like them.

LV. 22. *Fungus* *multicaulk*, *Fungus* *multiplex*. This Grows like the Common Muffroms very many together, on feveral Stalks, differing in brownnefs, whitenefs and rednefs one from another, and all rifing from one and the fame Root. They grow either on the rotten Arms of Trees, or dead rotten Bodies of Trees, lying upon the Ground.

LVL 23. *Fungus* *Fruticofus* *argenteus*, The Silver colored Shrub-like or branched Muffrom. // grows like a Shrub with many Branches, which are of fo pure a whitenefs that they feem a* if they were viade of pure Silver, // they were fhining withall. This has oftentimes no Stalk, or of it ha* o?ie, 'tk not above half an Inch long, and grows on the rotten Bodies of Trees, which ly rotting upon the Ground.

LVII. 54. *Fungus* *Cinar** *forma*, Artichoke-like Muihrom. -Its Stalk is like unto other Muffroms, but the Head is made of Scales, like unto an Artichoke, of diftinal whit color. It is found growing in the Kew, near A. J. Ford, also on Brimly-Green, and at Warehorn in the M. f. l.

Clufius, *Bauhinus*, and other Authors, have given us a great many more than we have Defcribed, they are too numerous for our delign, and ierve for no purpofe, and therefore it would be in vain for us to exhibit all their Varieties here. For as much, as they have no peculiar properties yet known, for the benefit of Man-kind, and with-dllj are moll of them perfect Strangers in our Climate.

CHAP. DXI.

Of MUSTARD Garden.

I. *ng* *H E* Names. It is called in Arabic^ X *Car del*: in Greek, <2v*m\ zhmi N*^ *Ariftophanis* & *Athenti*: in Latine, *Sinapi*, and *Sinapis*: and in Engli/h, *Mustard*.

II. *The Kinds*. There are three Generick Kinds of *Mustard*, viz. 1. *Sinapi Sativum* vel *Commune*-, Our Common or Garden *Mustard*, of which in this Chapter. 2. *Eryfimium*, five *Irio* Hedge *Mustard** of which in *Chpp*. 512. 3. *Thlafia* *Treackle* *Mustart*, of which in *Chap*. §13- 13- following.

III. *The Kinds of our Common Mustard*. These is, 1. *Sinapi fat hum*, *Sinapi primum* Garden *Mustard*. 2. *Sinapi Sativum Rap** *Sinapi* *Burfa* ? aft or is folio *Lobelij*, *Sinapi tertiufti* *Matthioli*, *Sinapi Syhefti* re *Dodonai* & *Lugdunenjis** *Eruca fat ha* *Fuchfi*, *Eruca horteffis* *Turner** Common broad *Leav'd* *Mustard*. 3. *Sinapi album*, *Sinapi fativum alterum* *Lobelij*, *Sinapi album*, *Yjflcinarum*, *White* *Mustard*. 4. *Sinapi agrefte*, *btape agrefte* *Burfe pujioris folio*, *Sinapi Syhefti*, *Dodonti*, *Sinapi Eruca folio* *Baubini*, *Wild* *Mustard*. of all which in order.

The Defections.

IV. *The fir ft*, or *Garden Mustard*; It has a *Root* which is tough and white, running deep into the *Ground*, with ?nanyfmall *Fibres* adjoining to it. From whence rifes up great rough, long, divided, *Leaves*^ of ^ over-worn green color, like to those of the *Tumep* (a* Gerard fays) but rougher and leffer* The *Stalk* is round, rough and hairy, three, four, or five *Feet* high, divided into many *Branches*, on which grow many fmall, pale, yellow *Flowers*, in a great length, which turn into fmall, [tender, long^ rough *Pods*, in which is contained fmall blackijb *Seed* inclining to rednefs, of a fiery, fharp, biting *Tafte*.

V. *The fecond*, or *Common broad Leav'd* *Mustard*. Its *Root* is fmall, long, and *Woody* when it bears *Stalks*, and perifhes every *Tear*, its *Leaves* are long, large, and broad, and very much jagged with uneven and unorderly gashes, much like to nep *Leaves*, but leffer, and not fo rough: 'p^e *Stalks* are round and fsmooth, and grow fometimes to be four, five, or fix *Feet* high (according to the goodnefs of the *Soil*) fpreading themfelves out in^o many *Branches* from the inddleup to the top, having fuch like *Leaves* as the former, but fma *Her*. «? & towards the tops, growing long and narrow, growing on jhort foot *Stalks*. Vpon these *Branches* grow

described^ but only SJfs leffer^ and grows not Jo high ^ the Stalks arcjtoore whitijh; its Flowers art yellowi/h like the former, and its Tods are rough and crooked, in which are contained whitijh SeeJ^ which isalfo veryjarp and biting.Thek three Kinds of Muftard, juft now defcribed, have been fo briefly treated of by all Authors, that it is hard to give the true differences of them •, and a matter of .nore difficulty than could have been expe&ed in a thing fo commonly known and ufed as Muftard is.

VII. The fourth^ or Wild Muftard. It has a Root which is long, not very large, but Fibrous, from whence rife up Leaves like thofe of Shepherds-Purfe, but larger^ and more deeply gafht, The Stalk is round^ rifwg up to be about two Feet high^ (but the whole Plant is lejfer than any of the former;) It isfspread out into Branches towards the Top^ and its Spikes are fumifbed with fmall yellow Flowers^ made of four Leaves apiece ^ after which follow the Pods•, which are fmall and flender, where-in is contained brownijh or reddifh Seed^ lejfer than any of the former, and not full out fo fharp or biting*

VJIL The Places. The firft is'not Found Wild with us, but grows only in Gardens. The fecond and third, grow alfo in Gardens, but are oftentimes found growing Wild in the Borders of Fields, and in low Rills and Furrows: thelaft only grows Wild. Johnfon upon Gerard fays, that our Common Muftard, and the other two forts, viz. the three firfc Kinds, grow Wild in many places of this Kingdom, and might all three be found on the Banks of Ditches, about the back of Old Street near London^ and in the way \olflingtons, in which laft I have for feveral years together found them growing.

IX. The Time*. They are ail Annual Plants, and may be Sown in the beginning of the Spring? they come to perfection in the fame Year tjey are Sown, they Flower in july^ and their Se#d is ripe in July and Augufl.

X- The Qualities. Muftard Seed (which is part of the Plant which is chiefly ufed) is according to Galen hot and dry in the fourth Degree: it is Aperitive, Abfterfive, Attractive, Anodyne. Carmi-native, Cofmetick, Digeftive, Difcuffive, Diure-tick, Incifive, and Suppurative: Cephalick, Neu-rotick, Stomatick, Peaoral, Nephritick, Hyfterick. Arthritick: Ptarmick, Alexipharmick, and Sper-matogenetick.

XI. The Specification* It is found by Experi-ence to be of efpecial ufe, to provoke the Terms in Women, provoke Urine, and give eafe in the Strangury, Stone and Gravel: it Cures Hyfterick fits, pains of the fides and Spleen, Tooth-Ach^ Kings Evil, Gout, Cramp, and Convulfions of the Bowels, and prevails alfoagainft Agues, Epilepfy, Lethargy, Carus, Vertigo, expds Poyfon of all forts, is good againft Impotency in Men, and re-moves Scabbinels, and other Defoedations of the Skin.

XH. The Preparations. Thefe are all of them taken from the Seed •, and confidering the exceeding ufefiilnefs of it, they are not many neither, being thefe few following, viz. I. A Powder. 2. A Condiment. 9. An Infufion. 4. A Cataplafm. 5. A Spirituous Tintture. 6. An Acid TinSure; 7. An Oily Tintture. 8. A Saline TinBure. 9. A Spirit. 10/il Dijlilled Water both from the Seed alone, and from the Leaves alone: alfofrom Seed and Leaves together. 11. An Oil of the Seed by Expreffion. 12. An Errbine,

Thi Virtues.

XIII. *The Voider of the Seel* Given[^] from a Scruple to 2 Scruples or a Dram, mixt with some proper *Syrup*, or in Wine, or other fit Vehicle, it provokes Urine, and the Terms in Women, is good against EpUeptick, Lethargick and Hytterid Fits, the Nottrils, Temples, and Forehead being tubbed with the *Condiment*, for lo it allays the Vapours, and quickens those dull Spirits, which were asleepe as it were, or almost dead, for by it Volatile and Sharp Particles, it pierces to the Brain, and purges it of the Recrements which offend, by Sneezing, and drawing down the Rheum, and other Viscous and Clarhmy Humors which hurt the Nerves, and caufe a perturbation of the Spirits, and may otherwise fail upon the Lungs and Thorax, and caufe Coughing, Wheezing, Hoarfnefs and shortness of breath. It comforts and Warms the Stomach helps Digestion, and cleanses the Head, Brain, Thorax, and Lungs, of cold, viicid, pituitous Humors. Taken to the quantity of a Dram, made up into a *Bolus* with *Syrup of Citron Peels*, refills and expels Poyfon, and does wonderfully provoke tuft, and being continued for some time, cures Impotency in Men: warms and comforts the Womb in Women, and caules Fruitfulness. It also eases the Pains of the Spleen and Hypochonders, the Gnawings and Tortions of the Bowels, and refills and expels Poyfon of all Kinds.

XIV. *The Condiment or Sauce.* It is made of the *Seed* by Grinding it with White Wine Vinegar, or with warm Water, adding a little Brandy to either of them, and it is Ground either in a small Quern, or Mill, or in a large Bowie, with a Cannon Iron Bullet by routing it up and down upon the Seed. It is used as a general Sauce both for Fleth and Fish, and is indeed a very wholesome and excellent thing, and has all the Vertues of the *Powder* aforegoing: being given as a Medicine, it may be taken from a Dram to two or three Drams in a Glass of Wine, and so it is profitable against Convulsions, the Palfie, Megrim, and all sorts of Poyfon, it refits the Malignity of *Mujhroms*, the Venom of the Scorpion, the bitings of Vipers, Mad Dogs, and other Poisonous Creatures.

XV. *The Infuswn or Deco3ion.* It is commonly made in Wine, and has all the Virtues of the *Powder*, being given from 2 Ounces to 4. It provokes Urine powerfully, gives ease in the Strangury, expels watery Humors from the whole Body, and evacuates them by the Reins and Bladder, and has been found of admirable life in curing the Dropie. It powerfully refills Poyfon, not suffering the Virulency thereof to smight the Spirits or Vital parts, to the overthrow of Life, W immediately Mailers or overcomes it, if taken in time. Taken an Hour or two, before the Fits of Agues, it warms the Blood and Spirits, that it keeps back, and lessens the cold Fit, and so thereby alters the course thereof and at length cures it. Made into a Gargle with some of the *Condiment*; it helps the weaknels or hanging down of the Uvula, commonly called the Palate of the Mouth, and as an Apoplegmatick draws Humors from the Head, Brain, Jaws, Teeth, Almonds, and parts adjacent to the Neck, whereby it prevails against Lethargy, tarus, Palfie, Convulsions, and Strumous Swellings about the Neck and Throat, commonly called the Kings Evil. The *Infuswn* prevails against Impotency in Men, and stir* up bodily Luft in Wo-

men, and is admirable against Wind in the Bowels, and Pains and Stitches in the Sides.

XVI. *The Cataplasn.* It diffuffles, rarifies, and draws out Thorns, Splinters of Bones, or other things out of the Fleth. Applied to the warm Forehead, and Temples, it warms and quickens the Animal Spirits, and is good against all cold and sleepey Difeases of Head, Brain, and Nerves. Applied to Scrophulous Tumors or Kernels in the Neck, and about the Throat, it is said to Dissolve or Diffuse hem. Applied upon the pained place in a Sciatica, is also in the Gout, and other Joint Difeases, it eases or lessens the Pain, and diffuffles the Humors abounding in the part. It takes Pains in the Side, is Stitches, Spleen, and V. pains in the Back and Ains, Shoulders, and other parts of the Body: it many times raises Bilsters (if mixt with Leaven) and by drawing the Pains to the place from the inward or more remote parts, it many times cures the Difease, or diverts it to those outward places where Topicks being applied may do the Cure. Being immediately applied upon the Biting of a Mad-Dog, or of a Viper, Rattle Snake, or other poisonous Creature, it attracts and draws forth the Poison, and so prevents the danger which might ensue. Applied also (mixed with a little Honey) it takes away black and blew spots or marks of Beatings and Bruisings or the like: it diffuffles fine Contuions, and removes the roughness of the Skin, also Scabbiness, Scurf, Morpew, Leprosie and the Loufie Evil: it gives ease also to the Crick in the Neck, or when it is so pained, that the Head cannot be turned, without turning the whole Body.

XVII. *The Spirituous TinCture.* It is an excellent thing against the Palfie and Gout, and has all the Virtues of the *Powder*, and *Infuswn* aforegoing, and may be given inwardly from a Dram to two Drams, in a Glass of Canary or other Generous Wine two or three times a Day, and outwardly may be Bathed upon the parts affected. It is an incomparable Stomack, warming and comforting the same, and gives present ease in all extremities and griefs of the Stomach and Bowels, proceeding from an Acid Humor.

XVIII. *The Acid Tinffure.* It prevails against all internal Poisons, is good against loathing, vomiting, and other weakneses of the Stomach, causes a good Appetite, and a strong Digestion, and puts a good color into the Face. It opens obstructions of the Liver, allays Vapors powerfully, and by a continuall use of it for some time, it cures Fits of the Mother: It may be given in a Glass of Ale, Beer, or Wine, for many Drops at a time as to make it Pleasantly Acid, and to be taken two or three times a Day, or in all that the Patient drinks. It is much better in Wine than in other Vehicle: and I am apt to believe (from my own Experience of it) that it is one of the best Remedies against the Scurvy in the World, and for which it ought to be esteemed as a Jewel.

XIX. *The Oily Twtture.* It is good against the Stone, Gravel, Sand or Tartarous Mucilage whether in Reins or Bladder. It provokes Urine powerfully, eases the Strangury, induces the Terms in Women, and facilitates the Birth of a Woman in Labour, and forces away the After-birth: and being prudently used, it not only causes a due cleansing, but also prevents After-pains: It has all the Virtues of the *Powder and Infuswn*, and may be given from 12, to 20, 30, or more Drops according as the exigency and occasion may require. Outwardly anointed upon any part, it eases all pains proceeding from a cold cause.

Cingular uſe againſt the Palfie, Trembling, Num- plion Dioſcoridn: in latine, Eryſimum, & Irio bednefs, Convulſions, Cramps, and other like, Plinij, lib. 28, chap. ic; quod ab acumvnia ſua Difeaſes of the Nerves and external parts.

Y& The Saline Tincture. It is a good difcuffive Bank-Creſs. II. The Kinds, Authors have made many Species Sunburnings, Tanning, and other difcolorings of the Cut icula: It is excellent againſt Scurff, Mor- phew, Leuca, Leprofie, as alſo good againſt Scabs, Itch, Pimples and other Breakings out, and cleanſes the Face and Skin from all other Deformities thereof.

XXI. The Spirit. It comforts the Head, Brain, Nerves and Heart, revives the Spirits Animal, Vital, and Natural, Diffolves all congelations of the Blood and Humors, makes them thin and fluid, and to run freely in their Veſſels, and is profitable againſt Afthmas, and molt Difeaſes of the Stomach and Lungs, cauſing a free and eaſy reſpiration* and is a powerful thing againſt all forts of Convulſions in young or old, alſo the Palfie, or other like Diſtempers of the Nerves. Dofe from one to two Drams in a Glaſs of Wine, Morning, Noon, and Night

XXII. The Diſtilled Water. It has the Virtues of the Fonder, Infuſwn, Tinſure and Spirit, but nothing near ſo powerful, and may be given from two to four Ounces, in a Glaſs of Wine. It provokes Urine, and gives eaſe in the Strangury: It is good to make a Gargle for a fore Mouth and Uvula, and uſed outwardly in a Waſh, and is good againſt all Defcedations of the Face and Skin, cleanſing and clearing them from their Deformities. If it is Diſtilled alſo from the Herb when in Flower, it is good, and may be uſed to all the purpoſes aforeſaid, but it is not full out ſo prevalent, as that which is diſtilled from the Seed.

XXIII. The Oil of the Seed by Expreſſion. Schroder ſays, it is good in cold Difeaſes of the Nerves: it certainly eaſes pains ariſing from a cold and moiſt cauſe, is good againſt Palfies and Convulſions, and ſtrengthens parts which are weak.

XXIV. The Errbine. It purges the Head admirably, of cold, moiſt, viſcous, and pituitous Humors, is good againſt Catarrhs and diſtillations of Rheum upon the Lungs, clears the Eye ſight, and draws off Humors which fettle upon the Amigdales and parts adjacent belonging to the Throaty and being often uſed is of ſingular uſe againſt the Kings Evil, becauſe it attra&s and draws away much of the Morbiſick Matter cauſing the fame.

The Engliſh Name

III. The firſt or Our Common Hedge Muſtard. Its Root is ſlender and Woody, running down deep into the Earth, abiding all Winter, and ſpringing up again every Year from this Root it uſually ſprings up with but one blackiſh green Stalk, tough or limber, eaſy to bend, but not to break, ſpreud out

B A N K - C R E S S .

* TP ^f E Name. It is called in Greeks *ἑρπύριον* *herpuryon* quod ob ſuam caliditatem attrahit facultate praxiditumefl: alſo *Xanthoxylon* Ch...

into fever al Branches*, and ſometimes with -diui>* Stalks, fet full of Branches, on which grow Idng, rough or hard rugged Leaves, very much cut in or torn on the edges into many parts, ſome bigger and ſome

some leffer, of a dirty or
 flowers are annual, and of
 for the most part of four small
 at the tops of the several
 flowering by degrees: so that
 flowered stalks, or branches
 round cods at the bottom, growing
 to the stalk, while (I the top
 flowers yet show themselves:
 yellow seed, which is sharp
 it self also is.

IV. The second, * True Hedge
 its root is small, and perishes
 it self, it never misses to be
 it once has seeded, from this
 divers large winged leaves, of
 a greener color than the former,
 and something jauncer, than
 the following third kind, which
 are cut in both sides into
 several parts, but in manner
 resembling the divisions of
 some of the leaves of

Dandelion, or rather, like to Rocket
 Leaves, each part or corner
 looking downward, the end
 of the leaf being large, almost
 oval, but sharp pointed, and
 unevenly dented upon the
 edges. From among those
 leaves rise up sometimes two,
 sometimes three stalks, and
 sometimes but one, almost
 usual, which is round and
 about half a yard high, having
 on them a pretty many of
 those like leaves, but smaller,
 the stalk or stalks, spread
 themselves out into branches
 towards the top, from all
 which come forth very small
 yellow flowers, continuing
 for some time, after which
 follow several small cods or
 pods, growing like the former
 close to the stalk, making a
 pretty long spike, which has
 also flowers continuing at the
 top, till the seed is ripe, and
 then all the seed is blown
 away by the wind, and the
 plant is left without any
 seed.

V. The third, * True Hedge
 its root is not so long, nor
 woody, but it is more fibrous,
 an annual, not a perennial,
 a tear, from this root spring
 up several more dark green
 leaves, which are indeed
 large, bigger than either of
 the former, and are divided
 into several unequal parts
 down to the very rib, viz.
 into three or four several
 divisions, almost equal
 gashes on each side, each
 of which are directed
 towards the bottom or foot

growing larger as they are
 and division of leaves the
 largest of all, it is
 also cast somewhat deeply
 on each side, and is
 divided at the very ends
 into several parts, each

Small leaves apiece:
 long round pods
 stalk like the former,
 making a two first,
 not altogether so long,
 but divided withal,
 the pods themselves
 being almost like
 those of the Rocket.

VI. The Places. The first
 is very common in all
 England by High-ways,
 and in Hedge sides,
 and sometimes on the
 tops of open hills.
 It grows in Gravelly
 and stoney places,
 and in all sorts of
 biff, as all upon
 earth or mud-walls,
 and in all sorts of
 untill'd places. The
 second grows as
 the first as Mxthiolus
 says, and is very
 common wild in
 many parts of
 the Kingdom.
 Si Gardens: Gerard
 says, he found it
 at a place by
 Chelmsford in
 Baddow, and in
 sundry other
 places. It is
 not altogether so
 common as the
 first, but is
 rare to be met
 withal, yet it is
 almost
 common.

but till in the better Grounds, for which /eafo n it grows fo large.

VII. *The Times.* It Flowets in *June* and *July*, but molt ufually in the latter Month: and the Seed is ripe in *Auguft*, or not long after.

VIII. *The Qualities.* The Seed is chiefly in life, and is faid to be hot and dry in the fecond Degree* it is like in Talte to *Garden Crefs*, and is as *Galen* fays, of a heating duality, confiding of a thin Subftance, does exceedingly attenuate, and is of a cutting, cleaning nature. It is Aperitive, Abfterfive, Vulnerary, Pectoral and Alexipharmick.

IX. *The Specification.* It is a fingular thing a* gainit Afthma's, for it not only helps Wheezings, Hoarfnefs, and difficulty of breathing, but alfo is faid to reftore fuch as have loft their Voice, and therewith their Spirits almoft alfo. It is prevalent againft the Jaundice, Gripping of the Guts and Poi* fon; gives eafe in the Gout and Sciatica, and induces the healing of hollow Ulcers, Fiftula's, tunning and eating Sores, Cankers in the Mouth and Throat, &c.

X. *The preparations.* You may have herefrom, 1. A *Liquid Juice* or *EJfence*. 2. A *DecoSion* in *Water* or *Wine*. 3. A *fimple Syrup* or *Lohoch*. 4. A *Compound Syrup*. 5. A *Powder of the Seed*. 6. A *Cataplafm* of the *Seed*.

The Virtues.

XL *The Liquid Juice* or *EJfence*. They are made of the whole Plant when in Flower. They are very good for fuch as have the yellow Jaundice, the Plurifie, pains in the Back and Loins, as alfo for Tortions and Gripings in the Belly, and the Colick, or for fuch as have taken Poifon ^ being given inwardly from two Spoonfuls to four, in any proper Vehicle -, or given by Clyfter in double that quantity, in a fufficient quantity of Mutton Broth.

XII. *The DecoSion of the whole Plant* in *Wine* or *Water*. It has the Virtues of the *Juice* or *Effence*, comforts and warms the Stomach and Bowels, and is good to heal Excoriations of the Guts: epecially being ufed Clyfter-wife. Old running Sores and Ulcers, Fiftula's and eating Cankers in the Mouth or other parts, being waftied therewith it induces their healing.

XIII. *The fimple Syrup* or *Loboc* of the *Juice* of *be Plant. It is made with *Hony* or *Sugar*, by gen*le boiling them together, and deftpumating the mixture- It is inciding and cleaning, and caufes an tpe&oration of Vifcid, or tough, or Salt Flegm Tu-n the Stomach and Lungs, making it eafy to spit forth: and indeed it is a very good Hlvg in moft Difeafes of the Lungs, as Hoarfnefs, Wheez-ing, Vehement Coughs, Atthma's, or difficulty of Breathing, and fhortnefs of Breath: as alfo for fuch as have utterly loft their Voice, with a kind of finking of the Spirits, it being taken every day, four or ^ve times a day or oftener, for fome reafonable time.

XIV. *Syrupus de Eryimo Compofitum.* The Compound Syrup of Hedg Muttard. Take *Hedge Muffard* (the whole Plant) frejh gathered when in Mowen 6 Uandfulsx *Leaves* of *Borage*, *Cichory*, *Maiden-Hair*^ of each 2 *Handfuls*^ of the *Cordial* *lowers, *Rofemary*^ *Betony*, of each half a *Handful*, *Katjons* *Itoned*, *Roots* of *Elecampane*, *Colts-fat*,

Liquorice, of each J^T Ounces; Amfeeds half an Ounce \ *Water*, *Hytromel*, of each 2 *Found* and half-, *Juice* of *Hedge Hyffop* depurated 8 Ounces: *Digeft* a whole Day *, afterwards *Boil* in *Balneo*, preffing out the *Liquor* firingly: to 4 *Pounds* of which *Clarified Liquor*, add *Sugar Candy* 4 *Powids* and a half and make them into a *Syrup* in *Balneo* according to *Art*. It is a very good Pe&oral, and caufes eafie Efcpeftoration of "Vifcid Flegm, or other putrid Matter out of the Lungs, curing moft Difeafes of that *Vifcus*-, as Afthma's, Hoarfnefs, Wheezing, ihortnefs of Breach, fpitting Blood, Ulcers in the Lungs, Vehement Coughs, OV. Dofe an Ounce and half or more at a time, twice a Day, either alone, or mixt with fome proper Vehicle.

XV. *The Powder of the Seed.* It is held to be a fpecial remedy againft Poifon, being inwardly taken from half a Dram or more, mixt with *Hony*, or in *Syrup of Green Ginger*, or of *Citron Peels**, it is alfo prevalent againft the Colicky and all other inward Pains, and Tortions of the Stomach and Bowels: it provokes Urine and the Terms ^ gives eafe in the Strangury, facilitates the Birth, and forces away the After-Birth, given in a Glafs of *White Port* or *Lisbon Wine*: made into a *Loboc* with *Hony*^ it caufes eafie expeftoration of cold pituitous or corrupt Matter, out of the Breft and Lungs, is prevalent againft Coughs, Catarrhs, Afthma's, and other like Diftempers of thofe parts, and has all the Virtues of the *Juice*, *EJfence*, *Decoflwnwd Syrup*, aforegoing,

XVI. *The Cataplafm.* It is made of the *Seed brutfed* and *mixed* with *Honey*. Applied, it is fingular good for ^ains, in the Hips, ot Huckle Bones, called the *Sciatica*, the Gout, and all othefc pains of the Joints* as alfo for Fiftula's, hollow ulcers, running Sores, and eating Cankers, in Mouth or Throat, or behind the Ears, as alfo for the hardnels or fwellings of Womens Breasts, or in the Tefticles or Stones,

CHAP. DXHL

Of M U S T A R D Treacle*

OR,

Mithridate MUSTARD. •

I. **T**HE *Nathes*. It is called in *Greek*, *κλαπτι*, & *Thlafpe*, quod *fruSus* quafi *infra&us*: & *flXaa-cwc/W*, *TbldfpuLion*, quafi *fruttum Clypeatum*: alfo *Zivrm aye/w*, *Sinapt* *agrefte*: in *Latine*, *Thlafpi* alfo: yet forrie do call it *Capfella* *, *Scandulaceum*^, *NaJiurtiumTefforum*^ *Sinapi rufticum*: In *Englijh*, *Treacle* and *Mithridate* *Mustard*, becaufe thb Seed hereof is ufed to be put in *Treacle* or *Mithridate*.

II. *The Kinds.* There are atleast Nine Genefick or Principal Kinds of this Plant, as, *Thlafpi arvenfe*, the Field Kind: *Vmbellatum*, the Umbelliferous: *Creticum*, the Candy Tufts: *Montanum* the Mountain: *Clypeatum*, the Buckler-like; *Fruti* cofum* the Shrubby: *Exoticum*^ the Strange:

ba, vel Arabis, the Ahbiin[^]fttod fort/m velTurvita, the Towering. Each of[^]Refe diverfifie themfelves again, into feveral other Species-, fo that of them all, or in the whole,⁴ there are about three²-core federal Kinds. But whereas the 'greateft part of them are unknown to us, and neither grow in the compafs of our Britifh Iflands, nor yet in our Plantations abroad in the Weft-Indies, We (hall permit the greater part of them, and only Deferibe fuch as grow either Wild in our Fields and by Ways: or in the Gardens of our Country and Plantations, and are daily ufed in Phyfick, which are thefe following, viz. 1. *Thlafpi Drabx folio Lobelij; Scorodo-Thlafpi Dodonti (ff Dalechampij; Thlafpi fecundum Matthioli; FLityearpon Camera-rij; Tblafpi arvenfe fdiquis latk Baubini, Treacle Muftard with broad fiat Pouches. 2. Tblafpi Majus Tabcrntmontani; Tblafpi arvenfe Acetoft into leevique folio Gerardi iff Baubini, The greater Treacle Muftard. 3. The Defcriptions.

m. The firft, or Treacle Muftard with broad fiat Pouches. // bai a fmall and Fibrous Root, which perijhes every Tear, from which rife up a hard, round Stalk, about a foot more or lefs high, which then is parted or fpread out in fome Branches, which are long and brittle, having feveral foft green Leaves, fomewhat long and narrow, fet thereon, waved, but not cut in on the edges, broadeft towards the ends, and fomewhat round pointed. The Flowers grow at the tops of the Branches one above another Spike fajhion, after which come large round Vouche, parted in the middle with a Furrow, having one blackijh brown Seed on either fide, fomewhat thicke and larger than in any of the other Thlafpies, fharp in Tafte, and fmelling fomewhat like Garlick, efpecially that which grows in the Fields, where it is natural \$ but that %*hich is nurfl up in Gardens it

lefs acute in its Tafte, and not of fo Garlick like fcent.

IV. Thefecond, or Greater Treacle Muftard. It has a Root long and Fibrous Me the former* from whence rife up feveral pretty large Leaves[^]

pointed at the ends, and unevenly waved, and sometimes dented unequally about the edges, which are larger/moother, and broader than the firji- Those which grow upon the Stalks, or Branches, are longer, narrower, /harper pointed, and come from the Stalks at the Joints without any foot Stalk, having at their lower end two sharp points, and divided into two parts, not much unlike to the Narrow Leav'd Arrow-Head^h. It rises up with one or more Stalks about 3 feet high, on which grow the /aid /maile Leaves, with the flowers on the tops of the /aid Stalks or Branches, in long Spiked Heads, growing one above another, /mall, and of a whitijh color : The Seed Ve/Jels are round, containing brownifh Seed: the whole Plant is of a ftrong unplea/ant Tajie and Smell.

V. The third, or the Greater Mithridate Muftard. Its Root perifhes after Seed time, but abides the firji Winter after Springing. This grows higher than the firji, /spreading more, and having longer Branches: its Leaves are al/o/maile and narrower, and/ometimes unevenly dented about the edges. The flowers are /mall and white, and growing on long Branches, with much /maile and rounder Seed Ve/jels after them, and parted in the middle,

in the same manner, with the /aid firji Kind, and containing within them /maile brown Seeds, which

V. The fourth, or the Lesser Mithridate or Treacle Muftard. Its Root is a little long, and fibrous towards its lower part; from whence /pring up /everal sharp pointed Leaves, which are long and not very broad, very like to the Leaves of the third being fmoother, and of a dark green color. The fourth, or the Lesser Mithridate, is a little higher than the third, and its leaves are narrower and sharper pointed. The flowers are small and white, and growing on long branches, with much smaller and rounder seed vessels after them, and parted in the middle, / arc lejjer, at they grow higher up^ unevenly

dented upon the edge^Jfidin /ome places almoft like a Saw. Towards tje top, the Stalk/preads it /elf out into many Branches, as four, five, fix, /even, or more ; each of which are filled and almoW covered with /uch like Leaves, /omc of them dented it

on the edges, and /ome not, they growing flM shorter and shorter, al/o very narrow, and very sharp pointed. The flowers are /mall and white and grow one above another, at the tops of the feveral Branches, Making each of them a long Spike the/e being pa/t away, the SeM Veffels appear, which are broad at the Head, and not much unlike to thofe of Shepherds Purfe, but a little larger.

VII. The fifth, or the Greater Treacle Muftard with Throughwax Leaves-, /ll Root is long, white, Woody, and fibrous: from which /pring forth Leaves which ly upon the Ground, and are /mall and fome what round, like to tho/e of Bafil, but yet a little cut or notcht on the edges at the bottoms, where they are fmalleft, and a litte dented about the other part, of a grayijh green coler, every one upori a /mall foot Stalk, among which rife up a ^pund Stalk or Stalks a foot high, ?nore or le/s, purplifh at the bottom,* and fomtt'wies /potted, on which grow ftngle Leaves at the Joints one above another, at certain diJJances, which encompa/s it at the bottom, in the manner of Thorough-wax Leaves; and whereat likezbi/e come forth, other /maile Leaves upon jhort Branches, on which at the tops of the Stalks, jUnd feveral /mall white flowers, which break forth out of reddifh Husks -, after which /mall fiat Vouches appear, like unto thofe of Shepherds Parfe parted in the middle, as is ufual in mojl of the Thlafpies, on each fide whereof lie /mall flat yellow* ijh Seed. The whole Plant is more milde, or le/s sharp than any of the firmer. There is another of this fort/omething lejfer, which has a few Leaves lying upon the Ground, of a grayifbgreen color, not much unlike to the Smaller Moufe Ear; or to Godded Through-

Through wax, but m:rch TBSr: tboje
if higher upon the Stalk, tñBW is fearcely < I wi
high, and but few fat thereon, arc flilt foia/er,
printed at (k• ends, and broad it the bottoms, en-
compaffing it like the tafl: the Fbwiers art' jmall
ami white, and the ^Lid'Vefjels,iat, and jomewhat
jliarp pointed.

Y'H. The sixth, or American Thlafpi rarely
bearing Seed, Its Root is hard, with many Fibres
adjoining thereto, which tajics /harp like Cteftls.
This Plant Branches from the Root divert ways
fomesehat thick, fel with fat green Leaves, fom-
thint long, not very broad, and jharp pointed, not
notched, dented, or waved on the edges: T'-
tops' of the Branches or Stalks are tsithou,
Leaves, but fiored vojly with Jmall yelbwifl
flowers, confining of four Leaves, which endur
only one day, jailing away for the mofi part, with-
out bearing any Seed, or if any yet very Jparingly
fo that on the whole Plant, there will fearctly
be jour or jive busks of Seed gathered any Tear
which arc flat and a little long, like thojc of the
Manured Woad, in which ^contained a Jhar,
t afted Seed.

IX. TJjeventh, or Candy Tufts, with whit
and purple Flowers. Us Sect is /mail and. hard
and Penjhes every Year, after giving its Seed. It i
but a/mall Plant, andjeldom njes above a Foot an
half high, txiving Jmall, narrow, long, andwhitijh
green Leaves, notched or dented Kith three or
Jour notches on each Jtde, jrem the middle to
the point-wards: from amng which, rife »
the Stalks, Branched from the Bottom almoft, int
divers Jmall Branches; at the tops vshero)
jund many finall Flowers, put thick togethei
in an Vmble or Tujl,- making them Jeem to b
fmall, round, double Flowers, of many Leaves
when as rjery Flower is fingle, and jlands apar
by it Je/J, of a fair white color, in Jome Plants
•without any Jpot; and m others, with a pur-
plijh jfpot in the Center or middle, as if Jome of
the middle Leaves were purple. In others again
the wfole Flower is purplijh all ever, which appears
beautiful in a Garden. The Seed is contained in
many Jmall and flat Seed VeffcU, which
together in an Umbte, a\$ the Flower did: in
vibich are contained, Jomewhat reddijh Seed, like un
to Jome of the other Jorts O/Thlafpies, or Treacle
Muftard.

X. T)je eighth, or Spanith Tufis. The Rent
cj this is much like the Jormer: from whence come
Leaves (before any Sttlk Jprines up) which are
little toothed or finely dented about the edges: the
Stalk it about the bejht of the jormer, but Jpreads
not it Jilf out fo much into Branch's; but carries
an XJmble of purplifh Flowers Me unto the former
after which comes the Seed, which is of Jomething
a paler yellow cokr.

Xfc The ninth, or Greir white Candy Treacle
Muftard. Its Roct is fmall and Fibrin, and abides
many Tears, not dying Annudly of the othi
From whence fpring up Jmeralhard and fmall Stalks,
bearing a fete hng and narrow fharp pointed Jtn < ah
Leaves, Jet one above another up to the tops, tola re
Vmbles of tehite Flowers, in braid round
Tufts, fomewhit larger thàn ih thlfe of the former
Kind at Sea. IX. ajcregoing. J}?e Seed Veffeh
are greater alfo, with a Pointel in the viiddle of
them

XII. The tenth, or Ivy Lcav'd Treacle Muftid.
lit Root is fmall, long, and Fibrous, perilling every
Tear: which fends up many weak, /lender Stalks,
leaning downwards, or rather creeping upon the
Ground, fetrcely raifwg it Jetf above a Span high,
ernot much higher, theje Stalks are dijperftdkjet,

•Alh jmall brudd Leaves, thick and jhjrt, broad at
h- bciiout, cornered about the middle, and pointed
it the en:!, fomcchat refembling Ivy Leaves. J
YIPIWS an (mall and wrlite, growing Spike jajhion
at the tops if the Stalks or Branch's: which beirg
pajl away, Jmall Seed Vcjfels come in iWir plaau
which are ported at ike ettis^ and (Pnt^nfmlSeci-
fharp and hot tike the other Thlafpies.

XIII. The eleventh, or Common Towers or
Towering Muftard. Its Sort is compojed of mfy
white Fibres or Strings, abiding after it has gr
its Seed: but being find, there Jyrings up jeverd
Plants before Winter, which fo abide, and Hkvt*
and Sudd the next Summer. This Common Kin"
hjs many rough hairy Lewes, full of Sap or Juice,
of a deep green color, about two Inches long, jnd
and more than one broad, pointed jb.n-p at the ends,
broadefl in the middle, nothing ^Aented about the
edges, lying round about the Head of the Root upon
the Ground. From auung tehich rife up, I
rough and hairy Stalks almjl two Feet high-, f#
orderly witbfjfc tike Le.rves, one above another on
all fides, but encompjijftg them at the bottom, K-hkh
are narrower than theajore defcribedGroundLeavet,
longer, crjh < irper fcimed^ broader at their joining
to the Stalk, milk two round corners. At the topt
of the Stalks, which are feljom Branched, come
forth very many finall white Flowers, as h were in a
Tuft, together; but lowering by degrees the low-
ermoji jufi, and jo gradually upwards, they bring
forth long/lender Pods prefemy after, which Hand-
ing upright, round about the .Stalks, before the high-
eji flowers are blown, each whole Stalk feems like
a Pyramid, or Spire Steeple or Tower, from whence
came its Kame. In which Cods or Pods are
contained, fmall, brown, and/harp biting Seed.

XIV. The twelfth, or Arabian Muftard, or
Turkey Crefs. I %e more common or known Arabian
Muftard {for there are 8 or 9 Kinds wore, all

Arabian Muftard, or Turkey Crefs.

Stranger*

Strangers to us) has a long, white, creeping Root, with many Fibres adjoining to it, which abides all Winter, and penjhes not: but creeping along under Ground, it fends up in feveral places many Nrait Stalks, which are Jbreaked, and Jet about with gray-ifi green Leaves, fomewhat broad, and not very long, a little pointed at the end, and brpad at the bottom compajing them -, but thofe which grow at the foot of them have each of them a Jfidrt foot Stalk, and gre all of them unevenly dented about the edges: *the tops of the Stalks are Jpread into fume Branches, & U of them rifing to an equal height, with many Small white Flowers fet thereon, confijiing of four Leaves apiece, and forming a large Umble or Tuft, where jfter they are pa ft, come forth fmall round SeedVejfels, -divided into two parts, like fome of the former Thlafpies, w& a fmall Pointelat the end-, in each part of which is contained one Secd^ which n hot and fharp, as are alfo the Leaves.

XV. *The Places.* The firft and third have been found growing Wild in feveral parts of England, as halt a Mile from Hatfield by the Rivers fide under an Hedge, as you Travel to Hatfield, and in the Street of Peckham on Surry fide. The fecond and fourth are alfo Natives of our Land, and have been found growing Wild in feveral places^ thefe four firft Kinds grow Wild in Corn-fields, upon Ditch Banks, and in Sandy, dry, and Barren Grounds, and in Stony and Untiiecl places. The firft of them Gerard fays, he found in Corn-Fields between Croydon and Godftone in Surry-, at South-fleet in Kent*, and by the Path which leads from Hornfey (near London) to Waltham-Crofs, and in many other places. The others he fays were alfo found growing Wild in England in feveral places, which he gathered, and placed in his Garden. The fifth, fixtb, feventh* eighth, ninth, and Twelfth, grow with us only in Gardens, as do alfo the firft four. The tenth, Lobel fays grows in Portland, and about Plimouth, and upon other Rocky places, on the Sea Coafts of England^ This fays Johnfon, is a little creeping Herb, having fmall, red, crefted Stalks, about a Span high •, its Leaves are thick •, and falhioned like Ivy-, and the white Flowers and fmall Seeds do in fhape and tafte refemble the Thlafpies. The eleventh, delights to grow more in the open Sun upon Hilly Grounds: it has been found growing in the Weft of England, upon Dunghills and fuch like places: Gerard fays, he found it by the City Walls of Wel-Chefter: alfo in a Flax Ground new Cambridge: and diPyns near Edmondton, not far from London.

XVL *The Times.* They moft of them Flower from May, through June and July to Augufi^ and their Seed is ripe about a Month after. The Seventh, eighth, ninth, and tenth, Flower about the end of June or beginning of July •, and their Seed is ripe not long after. The eleventh Flowers ior the moft part early, fometimes in April, but ufually in May, and the Seed, is ripe in June. The twelfth Flowers about the end of May, through June and July, its Seed ripening in the mean Seafon.

XVII. *The Qualities.* Treacle Mujiard (the four fiftt Kinds are chiefly ufed, and of them the third Species is principal, and that which is always ufed in Venice Treacle and Mithridate) is hot and dry in the end of the third Degree, or beginning of the fourth: Parkinson determines it to be abfolutely hot in the fourth Degree, and near unto Creffes. It ^ Attenuating, Attra&ive, Aperitive, Abfterfive, Inciding^ Cofmetick, Carminative, Digestive, Diuretick, Stomatick, Neurotick, Nephritick, Hyfterick, and Alexipharmick 5 Tor that its Seed is an Ingredient in Mithridate, and Treacle as afore-

faid, being of it felf an-Antidote refilling Poifom Venom, and putrifa&vjn, where, by its fharpnefs it acuaes thofe Compoftions.

XVKI. *The Specification.* It provokes the Terms powerfully, and facilitates the Birth of Women in Labor, and expells the After-Birth. And has all the other Specifick properties of Common Mujiard Seed, which fee in Cbdp. 511.

XIX. *The Preparations and Virtues,* are "the fame alfo with thofe of the Common Mujiard Seed, in the aforecited Chap. 511. to which you are referred, but it is thought that the Treads Muftard is the weaker (if any difference is) of the two.

XX. *Not a.* 1. *The Ponder of the Seed,* given to a Dram or more, forcibly brings down the Terms in Women, and caufes Mifcarriage, for which caufe Women With Child ought to forbear it. 2. *A Clyjler made of it with Mutton Broth,* and Exhibited, gives eafe in the Sciatica, fo alfo, 3. *A Cataplafm of it* applied to the Hip or Huckle Bone, draws out the Humor, and eafes the Pain. 4. *The Arabian Mujiard* is as hot and fharp as any of the Thlafpies, and is effe&ual to the fame purpofes 5 and according to Diofcorides^ is ufed inftead of Pepper to be put among Broths and Meats. 5* *The PtiJane made of its Seed* is available to cut tough Flegm, which fluffs up the Breat and Lungs, and caufe an eafie Expectoration thereof.

L *T^p H E Names. It is called by ~~myrrtilus~~, JL As, Aes, & Alas: in Greek, Mi^w, \$ wjijhtii Pena fays, yfc vocation volunt^ propter <zmulam Myrrbd ddoris gratiam, in ejus baccis recentibus: others a MyrfmeJithenienfipuella amica Pal-ladis. Alfo MuETC- #, fuAVwi ab odore Myrrhs • w/ fcfy* redolens: in Lflriw, Myrtillus, Myrfine* C/ irjyl'^^j #. ij Englfh, the Myrtle.

IL T^ IC/WJ. There is the ilfyr/tr tree or S/?wi, of a confidefable Magnitude, of which we fhall not treat in this Chapter, but refer you to the proper place, in the fecond Book of this Work What we fhall difcourfe of here, is a fmall bufhy Plant, fearcely removed from the degree of an Herb, and is called Myrtus Nobili*, alfo Myrtillus, from the final nefs of the Plant being commred with the Myrtts Arbor: This alfo is an Inh^Rant of our Garderft^ for which reafon we give it a Place hefe. There are two Kinds of it, viz. I. Myrtus minor Tarentina. Myrtus minor vulgaris Lobelij, Myrtus Nobilis prima, Myrtillus Nobilis primus, Myrtus minor acuto folio, Myrtillus Nobilis acuto folio, The prime Noble Myrtle, or fmall fharp pointed Myrtle. 2. Myrtus minor folio rotundiore, Myrtillus Nobilis alter, The other Noble Myrtle, or fmall roundilh or BoxLeav'd Myrtle.

The Defcriptions.

III. *the fir fa or Prime Noble Myrtle,* or fliarp pointed Myrtle. It has a Branched Woody Root, fpread

spread out into many A\$rs* [with several Fibres ad-joining to them. It is a little* low buffy Plant rising up to be two or three i'et high, which spreads it self out into many Branches from the main Stalky whereby it looks like a small Bush; every Arm or Branch, and Twig of which, are thick set wit I small, fine and green, narrow, finning heaves, with smooth edges, and a little fharp pointed at the ends.

Herb Maftick; but of a little deeper, or fresher green. It is a little* low buffy Plant rising up to be two or three i'et high, which spreads it self out into many Branches from the main Stalky whereby it looks like a small Bush; every Arm or Branch, and Twig of which, are thick set wit I small, fine and green, narrow, finning heaves, with smooth edges, and a little fharp pointed at the ends.

IV. The second, or other Noble Myrtle, or Box Leav'd Myrtle. This grows in Us Roots, Stalks, Branches, «nd in all other points like the former; wrefpet to its magnitude, placing of its Leave s, deep greenness of their color, thick growing of the Branches, and thick fitting of the heaves thereon, that it might be thought, by the looker on, to be the same with the former, without good heed to, and ob-^{ser}vation thereof, by comparing the one with the other; but the Leaves of this are a little broader, end somewhat rounder at the ends, not very rhuch

unlike to the fmleft Leaves, of the fmallest fort of Box, now called Datch Box^ by which alone, it appears to be a differing Kind from the former, and in nothing elfc. The Viewers are like the fir ft, and grow mfpnringly, and the fweet Smell, and beautiful Af pell of the Plant, are full as much and pleafant, and altogether the fame vsitib that juft before defcribed.

V. The Places. Thefe Myrtles grow naturally in Spain, Portugal, Italy, and other hot Countries in great abundance. Thefe here with us are Nurft up in Gardens -, or put into Pots; which may be removed into Houfes, and fo taken care of, that as foon as cold Weather begins to come, they may be fheltered from the fame. They are a pleafant delightful Plant, and great Ornaments to a Garden, as being among the Number of the molt defirable Ever-Greens.

VL Tx Times. In their native places, they Flower in May and June-, and their Fruit or Berries are ripe in September-, but with us, they Flower not untill Auguft at Iboneit; which is the reafon that they feldom or never bear Fruit in England.

-VII. The Vitalities: The Noble Myrtle is hot and dry in the beginning of the fecond Degree * and of fine, thin, and Volatile parts, as well as Earthy., It is Abfterfive, Attringent, Diuretick and Vulnerary: Peaoral, Nephritick, Hyfterick and Alexipharmick.

VIII. The Specification. It refills Poifon, ftopsthe Terms and Whites in Women, provokes Urine, gives eafe in the Strangury, Stops all forts of Fluxes of the Bowels, and heals Wounds and Ulcers.

IX. The Preparations. You may have from the Leaves or Fruit, or both, i. A Liq^{uid} Juice. 2. An bfpiffate Juice. ?. A Decofaon in Wine. 4. A Decoit ion in Water. 5. A Syrup.

6. A Fonder of the Leaves or bruit. 7. A Lotion, ottenas the Coura is violent upon them, or troubles them.
 * Myrtidanum* 9. A Decoded OIL 10. A Bal- j XV. The Yonder of the Leaves or Fruit. It
 Jam. II. A Syrup Compound. 12. A Compound Oil may be given in a Glafs of Red Port or Barcelona Wine, or in the former Syrup, either with the Syrup alone, or mixt with any of thofe Wines, Morning and Night from 2 Scruples to a Dram and half, or more, for all the purpofes and Intentions for which the Effence, Juices Liquid or Infpijiate, DecoUion or Syrup are given for •, tho³ I do not think ic to be of equal power with the Juices or Effence. Strewed upon bleeding Wounds it Itops their bleeding: and put upon old rotten or putrid Sores and Ulcers, it deftroys the putridity, cianfes them, incarnates, drys and induces their healing. Put upon a Whitlow, or Feilon, which is laid open, it cures them. And applyed to the Groyns, Privy parts, and Arm^{*} pits which ft ink, or are affe&ed with a (linking Sweat, it drys them, and takes away the ill Smell.

The Virtues.

X. The Liquid Juice or FJfence. They flop all efufions of Blood in what part foever, whether inward or outward both in Men and Women. They flop Catarrhs, and the molt vehement Coughs, and are good to heal Exulcerations in the Lungs. They itop fputting or pitting of Blood, the Bloody Flux, and all other Fluxes of the Bowels, and are incomparable Medicaments againft the Whites, as alib the overflowing of the Terms in Women. Drank in Wine they refft Poifon, the Bitings of Venomous creatures, and the malignity of Mujhroms, and caufe a fweet Breath, where it is fetid or (linking. Dofe 1, 2, or 3 Spoonfuls Morning and Night in a Glafs of Red Port Wine.

XI. The Infpijiate Juice. It has all the Virtues of the former, and may be given Morning and Night, from 1 Dram to 3 Drams in a Glafs of Generous Red Wine, MulFd and fweetned with white Sugar. It is a molt excellent thing for the Cure of a Gonorrhœa, whether fimple or virulent, Univerfals being firft premifed* for it not only ftops the Gonorrhœa, but aifo ftrengthens the parts, tho³ they:have been much weakned through the long continuance of the Difeafe.

XII. The DecoUion in Wine. It has all the Virtues of the Effence and Juice, whether Liquid or Infpijiate. It cures a (linking Breath, refills and expels Poifon, is good againft the Palpitation and Paffions of the Heart, the Bitings of Serpents, Mad-Dogs, and other Venomous Creatures, and heals Ulcers of the Reins, Ureters, and Bladder, bathed very hot upon the Nerves, Tendons, and Joints, it takes away their weakneffes, and admirably ftrengthens them. And Jo it helps to consolidate broken Bones* and reftore Srength to Joynts that have been diflocated. A DecoUion of the Berries cures a Scald or Scabby Head, and cianfes it from Scuff and Morphew, being often wafhed therewith: it alfo keeps the Hair from falling, and makes it of a black color: and being daily drank, it is faid to cure Ruptures or burftneffes.

XIII. The LecoUion in Water. It is good for any one to fit in, who are troubled with the falling down of the Fundament, as alfo for Women to fit in, who are afflifted with the failing down of the Womb. It makes alfo an excellent Inje&ion to aft up the Womb with a Womb Spring, 2, 3, or 4 times a Day, to ftop and cure che overflowing of the Whites, it cianfes and very much ftrengthens the parts.

XIV. The Syrup malt of the green Leaves, or Juice, or of the Fruit. It is a molt excellent thing againft fputting or piffing of Blood, exulcerations of the Lungs, and other Bowels, Ulcers of the ReUis, and Neck of the Bladder: (lops the molt vehement Coughs and Catarrhs, and after Univerfals prevails againft the molt obdurate Afthma's, caufing an eafie expectoration of the Morbid Mat*: and being conllantly taken for fome confiderable time, it is faid to confoiidate Ruptures in Children. Dofe is 2 or 3 Spoonfuls Morning, Noon and Night, in a Glafs of Red Port or Barcelona Wine*, or alone, drinking a Glafs of the fame Wine after it, but in a Vehement Cough, the Patient often taking of it, or licking it, even as

XVI. The Lotion. Take of Red Port W\$g a Quart; of the Infpijiate Juice 2 Ounces-, or for want of it, of the Liquid Juice 6 Ounces ^ of the Syrup 8 Ounces ^ Powder of Roch Alum, half an Ounce \$ mix and diffolve. It is good againft moift, running, and fretting Sores and Ulcers in any part of the Body •, and indeed it has been found by experience to cure all Ulcers which dre hard and difficult to be healed ^ it is profitable againft Blains, and Wheals and other breakings out in the Skin; as alfo to Foment hot withall in the falling down of the Fundament, it heals Whitlows and Fellons on the Fingers ends, and Ulcerated Kibes in Childrens Feet: it heals all forts of Ulcers in the Mouth, Throat, and Private parts: and put into the Eyes takes away their Inflammation, Watering and Soreneffes, and clears the Eye Sight, taking away any Cloud or Film, which is beginning to grow over them,

XVII. Myrtidanum. This Pliny lib. 14. cat iS lib. IJ. cap. 29. & lib. 2?. cap. 9. makes to be a Myrtle Wine, or Wine of Myrtle Berries- which according to him has almoft all the Virtues afcribed to all the former Preparations: It may be made of the Leaves as well as of the Fruit, by beating the green Leaves in a Wooden Mortar, then adding Red Wine in a fufficient quantity, and therewith they prefs out the Juice, and fo make a Wine thereof by a gentle Fermentation: But new Wine ought to be choſen, viz. that which is new preffed from the Grape called Muft, and is yet unfermented. If it is made of the Berries only, they ought to be thorough ripe: and fo they ought to be if the Leaves be joyned with them.

* XVIII. Myrtidanum Apophyas. The Excrefcence growing upon the Myrtle. It is often found upon old Myrtles. It has all the Virtues of the Myrtle and Myrtle Berries; and is faid to be of force to dry, Bind, ftop Coughs, Bleeding, Fluxes, &c. than either the Leaf Juice, Effence, Powder, or Berries of the Myrtle: And you may make thereof all the aforegoing Preparations, and give them in like manner, for all the fame intentions and purpofes.

XIX. The Decoded Oil. It is good to difcufs and give eafe to the Hemorrhoids or Piles, being anointed thereon^ it difcufles alfo Swelling in the Tefticles, as alfo Tumors in other parts of the Body, and is good to heal Wheals, Boils, Pimples, and other breakings out in the Skin, and gives eafe to the Gout, and other pains of the Nerves and Joints.

XX. The half am. It heals fimple Green Wounds at a few times dreffing^ cianfes old putrid Ulcers, incarnates, drys and induces their healing. Applyed

plied to the Gout, it gives ease *iri* a fliort time, and in fome reasonable time after cures it: it is also good to cure Punctures or Wounds of the Nerves and Tendons, being applied very hot to them according to Art

XXI. *The Chpoux'd Syrup.* Take Myrtle Berries 2 Ounces and half, Sanders white a fid red, Sumach, *hdaufuihs** Barberries, of each an Ounce and half: Aled/ers cut half a You rid: bnnfe and boil all in fair Water 8 Pounds., till half is coufumed; then "drain out^ and add Juice of 'gjtinces, Juice of four Pomgranets, of each 6 Ounces: and zwith white Sugar 4 Pounds, boil them into a Syrup, adding the Juices towards (he end. It is good^ agatnft all ibrts of Fluxes of the Bowels and Hemorrhages, chiefly Spitting of Blood; it is cooling, binding and ftrengthning, refists Vomiting and Naufeoufneis, comforts and ftrengthens the Stomach, and is profitable againft a Catarrh and an old Cough ^ it is faid to cure Ruptures and (top the Whites in Women. Dofe 2 Spoonfuls.

XXII. *The Compound Oil.* Take Myrtle Berries well bruifed a Pound: Jharp Wine a Pint: Juice of Quinces, and Juice of Mint, of each a quarter of a Pound: Oil Omphacine 4 Pounds: mix them well and fet all in the hot Sun, or in an equivalent Sand heat for a Week, then boil andprejs out the Berries^ and repeat this Operation twice more with frejh Berries, infolating, boiling andpreffing out as before, and then keep it for ufe. It admirably ftrengthens weak Limbs and Joints, fattens loofe Gums and Teeth5 and anointed on the Temples, Cheeks, Jaws, and Gums, gives ease in the Tooth-ach: The Hair of the Head being Shaved off, and this Oil being anointed thereon, it fattens the Roots of the Hair, and hinders the fheddirig thereof: it ftrengthens the Nerves, Brain, Stomach and Joints, ftays Vomiting, and flops Fluxes, being anointed on the Stomach and Belly, and ufed Clyfter-wife.

NAILE-WORT, y & Whitlow-Grafs* Clap.

CHAP. DXV.

OF N A V E L - W O R T S

OR,

P E N N Y - W O R T ,

I. *Tp *HE Nantes.* It is Galled in Greek,  *X Mfw** Cotyledon, ab Acetabuli five Umbilici figura: in Latine, Umbilicus Veneris, Acetdbum, Cotyledon, Scaturn Cocli, Scutelum, Terr<e Umbilicus, Hortix Veneris, herb a Coxndtcm^ in Englifh, Navel-wort, Penny-wort, Kidney-wort, Hip-wort, and Venus Navel.

II. *The Kinds.* This Plant feems to be a Species *?Lol*  *Sydum* or *Houfteek*: and thereof Auf  *glVen us man y Kinds* some of which, becaufe they are total ftrangers in our Country, we lhaU pretermit, and defcribe to you only thde fol-

lowing, which are found to grow either Wild, or elfe Nurltup in our Gardens, i. *Umbilicus Vene** *rk vulgar U, Cotyledon, Terra Umbilicus, Scutelluffl, llortus Veneris*, our Common Navel-wort, Wall Penny-wort, or Kidney-wort. 2. *Cotyledon alter a Mdthioli**, *Umbilicus Veneris alter*, Spotted Navel-wort. 3. *Cotydon alt era minor folio fub rot undo-*, *Cotyledon minor Montana alt era*, imall Navel-wort, with roundifh Leaves. 4 *Cotyledon alters F/oribus verficoloribus*, fmall Navel-wort with party color'd Flowers. % > *Cotyledon feu Scdum latifoliu??iferratiM guttato fiore*, *Jedum Montamm.*, *vrl fednm fera** *turn llore rubente Maculaio*, (potted Navel-wort ^ with Saw-like broad Leaves, The Princes Feather.' To theie may be added, 6. *Cotyledon paluftrls*, W^ter Navel-Wort or Penny-wort. *Columna* and *Bakhine* refer this to the *Ranunculi* or Crowfeer, for it has no affinity with the *Cotyledons*, but only in the roundnefs of the Leaf, the former of them call it *Ranunculus aquaticus Umbilicato folio*: and the latter *Ranunculus aquaticus Coyledonis f&lio* in the North of England they call it *White Rot*: and in Norfolk, *Ylock-wort*. *7* *Umbilicus Veneris Officinarum Lcniceri -*, *Cotyledon hederaceo folio*, *Cymbalaria hederacea Lobelij y Cymbalaris, Cyntbald-rfa, Linaria he'dera folio Columns*, Ivjf LeavM Navel-wort, or Ivy-wort-, this islikewife no more a *Cotyledon* than the former, but Gerard has placed it among the Species. 8. *Umbilicus marinus, Cotyledon Marina Lobelij; fungus Marinus minimus Cafalpini*, Sea Navel-wort. Neither is this ft Species of the *Cotyledon*, but fox the Name fake it has a place in this Chapter j but that of *C<efalpinus* is the more proper Name. Some will have it to be the *Androface Diofcoridis*, but what plant that wa*? is fcarcely now known.

The Vefcriptions.

III. *The firji*, or Our Common Navel-wort, Wall Penny-wort, or Kidney-wort. It has a Bwt

which is round, someing like unto the full Root of an Orchis or Dog Stone, most usually smooth, but sometimes rugged or knobbed, grayish without, and white within, having d great many small Fibres, (not at the bottom of the Root, but) at the top of the Root, or foot of the Stalk, more resembling the Root of an Orchis than the Root of an Houfleeck. This Our great Navel-wort, has many thick, flat, and round Leaves growing from the Root, every one having a long foot Stalk, fitted underneath, about the middle thereof, sometimes a little unevenly waved about the edges, of & pale green color, and sometimes hollow on the upper side like a Spoon or Sawcer; from among which rise up, one or more tender, smooth, hollow Stalks, half a foot high, with two or three small leaves thereon, not usually round, as those below, but something triangular, and divided at the edges: the tops are sometimes divided into long Branches, bearing a great number of Pendulous Flowers, set round about a long Spike, one above another, which are follow and like a little bell, of a whitish green color. As for which come small Heads, containing very small brownish Seed, which falling on the Ground, will plentifully Spring up before Winter, for the Season is moist

IV. The second, or Spotted Navel-wort Its Root is small, and Fibrous, being not far from the former, but the Leaves are not so round, but rather triangular, and divided at the edges: the tops are sometimes divided into long Branches, bearing a great number of Pendulous Flowers, set round about a long Spike, one above another, which are follow and like a little bell, of a whitish green color. As for which come small Heads, containing very small brownish Seed, which falling on the Ground, will plentifully Spring up before Winter, for the Season is moist

This Spotted Navel-wort (as many call it) is not many thick small Leaves, not so broad as long, of a whitish green color, lying on the Ground in Circles, after the manner of the Heads of Houfleeck, & finely dented about the edges. From the middle whereof sometimes (for it does not Flower every Year in many places) rises up a Stalk nearly a Foot high, beset with such like Leaves as are below, but somewhat longer. From the middle of the Stalk up to the top, it Branches forth variously, with a Leaf at every Joint, bearing three or four Flowers at every Branch, consisting of five white Leaves, spotted with small red Spots, like unto the Spotted Sannicle, but with fewer and greater Spots, having a yellowish Circle or Eye in the bottom of every Flower, and many whitish Threads, with yellowish tips in it. The Seed is small and black, contained in round Heads.

V. The third, or small Navel-wort, with roundish Leaves. Its Root is small and Fibrous like the former, sending forth Heads of the like Leaves, as those of the other Head round about it. This small Navel-wort has much rounder and smaller Leaves in the Heads than the former, not so big as the Nail of ones Thumbs and of a pale green color, or more white, and finely dented about the edges, in the same manner as of an asfiringent Taste like the other Houfleecks. From the middle of some of the Heads, Tearly rise up, (tender, bard, rough Stalks, about an hand length high, set with a few smaller, and longer Leaves thereon: at the tops whereof appear small Flowers upon long foot stalks, consisting of five and sometimes six Leaves apiece, sometimes wholly white, and sometimes spotted with red Spots, and sometimes having several purple Lines, running down the back of every Leaf, so that it makes the whole Leaf full of a purplish color, which being past away, fall Heads follow, containing within them small Seed.

VI. The fourth, or Small Navel-wort with particolored Flowers. This has a Root like the last, and grows in like manner with many Heads of small Leaves, each circlewise as that does, of which this is a peculiar sort, greater than the [smaller] Cotyledons,

or smaller than the greater: each of which Leaves is something long and narrow, of a whitish green color, dented as it were about the edges, or rather set with Silver white Spots about their Brims, making them seem like unto white leath, (or a? Gefner compares them, to the Silver like Finns of fishes) very pleasant to behold: for in the Winter when no Flowers appear, this and the last, at also the second Species being all of one Genus, give a much delight, as when they are in bloom, which are many standing on several fact Stalks, each Leaf whereof is part of a bite, and part of a pie, variously diversified in every one of them.

VII. The fifth, or Spotted Navel-wort, with Saw like broad Leaves, called by some the Princes Feather. Its Roots are small threads, which spread under the Ground, and shoot up again, with several Heads round about the Mother head: This kind of Navel-wort, or Houfleeck, is composed of Heads of larger, broader, and thinner Leaves, than any of the former, of a fadder green color, somewhat unevenly indented about the edges, and not so close set together, but spreading forth into several like as the former sorts do, although not so plentifully. From the middle of divers of which rise up brownish or reddish Stalks, set with smaller Leaves thereon, to the middle thereof, and then Branch forth into several Sprigs, set with several small reddish Flowers, consisting of five Leaves apiece: the inner sides of which, are of a pale red, some what whitish, spotted with many small Blood red Spots, as small almost as Pins points, with some small Threads in the middle, standing about a small green Head, which turns into the Seed vessel, parted four ways at the Head, in which is contained small blackish Seed.

VIII. The sixth, or Water Navel-wort, or Penny-wort This is called by the Husband Men in some places Sheep-Bane, because it kills Sheep which eat thereof. The form of the Leaf is not much unlike to the third Species foregoing, but it is not so fleshy thick as like it, nor are the round edges of the Leaves so even as that. It has a small Fibrous Root, and is a creeping Plant, lying and creeping upon the Ground, and taking Root almost at every Joint: From every Joint of which also spring forth a Leaf, round, and as it were Scollop'd, having about seven Scollops, round the edge of it, it stands upon a pretty long foot Stalk, which is fitted to the lower side of the Leaf, about the middle thereof And from most of the Joints with the Leaves, comes forth a Flower, standing also upon a long foot Stalk.

IX. The seventh, or Ivy leaved Navel-wort; or Ivy-wort. Its Root is small and Fibrous, which sends forth a small Herb creeping upon the Ground, with slender firingy Branches, all taking hold of Walls, or any thing it meets, shooting out again at every Joint small Fibrous Roots into the Earth, all along at it runs. At the several Joints grow small broad Leaves, cut in on the edges into corners, somewhat like unto a cornered Ivy Leaf, each standing upon a small and firingy foot Stalk: at the Joints likewise come forth several small Flowers upon slender foot Stalks, fashioned like unto a Snap Dragon, or Fluellen Flower, with a Tail or Spur behind it, mixed with yellow, whitish, and purple colors, and the Spurs as it were, washed over with a purplish color also, which being past away, in their places succeed small round Heads, containing within them small blackish Seed*

X. *Johnfon upon Gerard*, Describes the laft Plant thus. *It has a Root which is finally creeping and thready. The Branches of thh Plant are many, long, slender, and creeping, upon which grow without any certain order, many little, smooth, thick Leaves, fahioned like thqfe of Ivy, and fajned to foot Stalks of about an Inch long: and together with thefe Stalks, come forth other Stalks of the fame length, that bear Spur-fajioned flowers, of the fhape, and bignefs of thqfe of the Female Fluellen: their out fide is purple, their infide blew, with a Spot of yellow in the opening.*

XI. *The eighth, or Sea Navel-wort.* This is generally called by divers Authors *Androface*

Matthioli, because he firft fet it forth, being fent to him from *Pifa* in *Italy*-, but it no ways agrees with the *Androface Diofcoridis*. *This is a Set Excrrefcence, formed like fmall round Sawcers, hollowifb in the middle, like unto a Avel, and born of by fmall, fsmooth P'dot Stalks., about two Inches long, every one by its jelf fpringing from feme Stone, Rock, or Shell in the Sea, or Salt Lakes, being of a pale greenifh AJh color, whileji growing under Water, but afterwards grow a* white almoft ax Coral, or the like, and of a Stony Sub fiance,*

XII. *Gerard* Describes. it thus. *Sea Navel-wort has many round thick heaves, like unto little Sawcers, jet upon fmall and tender Stalks, bright, fhining, and fsmooth, of two Inches long -, for, the moft part upon the furrowed Sh&ls of Cockles, or the like: every fmall Stem, bearing upon its end or point, one little Buckler and no more, refembling a Navel. The Stalk and Leaf are fet together in the middle of the Leaf upon which it was called, Umbilicus Marinus, or Sea Navel-wort. The Leaves and Stalks of this Plant, whileji yet i* the Water, are of a pale AJh cohr; but taken forth, they prefently grow white and hard, as Sea Mofs called Corallina, and are of a Saltijh Tajie.*

XIII. *The Places.* The firft grows very plentifully in many parts of *England*, but efpecially in all the Welt of this Land, upon Stone andnMud Walk, upon Rocks alfo, and in Stony ^places upon the Ground, at the bottoms of old Trees/and fometitnes on the Bodies of them which are decayed and rotten* It has been found to grow plentifully in *North* hampton*, almoft upon every Stone Wall about the Town* as alfo, *ztBrijiol, Bath, Wells,* and other Places, upon Stone Walls. Thefecond, third, fourth, and fifth, upon the *Pyrenxan hills* and *Alps* of *Switzerland*, on Rocks, Mountains and Stony places in *Germany, hungaria, Aujirta,* and other Countries, where they grow upon the Rocks, and among the very Stones, where there is fcarcely any Earth for the Roots to fix in, or to nourifh them: but with us they all grow* in *Gardens* very well, if they be Planted in fhadowy places, and not in the Sun. The fixth or *Water Navel-wor** grows and creeps upon the futface of the Earth in *Swiamps* and other moift places* it grows on the *Boggs* upon *Hamjied-Heath*, and on many funn moift and rotten Grounds in other places. The feventh, or *Ivy Leaved Navel-wort*, grows naturally in divers places of *England* Wild, as at *Hatfield in Hartford-shire*, and in other places which are (hady* in which it delights to grow ^ as alfo upon Thatcht Houfes in the North parts, as it is faid, and moft abundantly in *Lancashire* \$ it alfo grows in many *Gardens* throughout the Kingdom, and if it is planted near any Wall, it will run up the fame *td* a confiderable height. The laft will not grow but in the Sea, as the name thereof imports.

XIV. *The Times.* The firft Flowers fooner thajl any of the others, as at the beginning of *May*; and the Seed ripening quickly after, (beds it ielf, & that about the end of *May* ufually, the Leaves and Stalks are withered and gone, until] *September** that the Leaves Spring up again, and fo abide all *Winter*. The fecond, third, fourth, and ff* Flower about the beginning of *June*, and through the whole Month, and fometimes in *July*, acco** ding as the Seafons fall out* and their Seed is «P» in *Auguji*. Thofe Heads which bear Stalks, u g £ ly perifhing together, and the others which Kg not, abiding all the extremity of *Winter*. «»» fifth Flowers in the beginning of *Summer*, and T* Seed ripens not long after, the Plant it felt* beu* green all *Winter*, The feventh feldom Flpwers of

"the end of July, *zniu Auguft*^ and continues many times Flowering, till a Froity Seafon comes and nips it-, and the Seed is foon ripe after the Flower are withered and gone.

XV. *The Qualities.* The five firft are cold and noift in the fecond Degree >. Abiterfive, Difcuffive, and Repercuffive, Anodyn, and Diuretick. The Jxth, is hot and dry in the fourth Degree, and has all the other Qualities of *Water Crowfoot*. The feventh is cold and moift in the fecond Degree, and has all the other Qualities of the firft five.

XVL *The Specification.* The firft five cool Innamations, repel fluxes of Humors, provoke Urine and cleanie the Urinary parts, yet heal Ulcerated Kidnies: They give eafe in the Gout and Sciatica 5 and are profitable againft Scrophulous Tumors, as alfo to cure Green Wounds. The feventh has the like Specific*; Vertues-, befides which, it is faid to ^{cu} « * 5 Whites in Wömen.

+ *Preparations.* You may have from the firft five and the feventh, 1. A *Liquid Juice*. \ *vecotlion* in *Water* or *Wine*. 3. A *Syrup of the green Herb*, or *Juice*. 4. An *Oil by Infolation* or *DecoSw*. ^ An *Ointment*. 6. A *Cataplafmj of the Green Herb*. 7. A *Dijilled Water*.

the Virtues.

XVIII. *The Liquid Juice.* It cools, repels, cleanfes, and eafes pain. It is effe&ual againft all Inflammations and unnatural Heats, whether inward pr outward. Inwardly taken to a Spoonful or more in a Glafs of *Barley Water* or Broth in which a little of the *Juice* of an *Orange* or *Limon* is Iqueezed, it abates the heat of Fevers, quenches Thirft, refrefhes a fainting Stomach, cools the heat of the Liver and BoWels, opens obftru&ions and cleanfes the Reins, Ureters, and Bladder, and takes away the heat and fcalding of the Urine. The *Juice* of the *Ivy-wort*^ takea to 2 Spoonfuls Morning and Night in Red Wine cures the Whites in Wömen.

XIX. *The DecoUion in Water or Wine.* In Water it has all the former *Virtues*^ and may be given Morning and Night from 4 to 8 Ounces. In Wine, it more effe&ually cures inward Ulcefs in Reins or Bladder: made with Water, and mixed with ^{an} white PO/? Wine when drank, it provokes Urine, and is available againft the Dropfie: and in the Hemorrhoids or Piles, it gives prefent eafe, the parts ^{being} fomented hot therewith. The *DecoUion in Water* is good againft heat, rednefs, and Pimples in the Face, as alfo *Anthoies* Fire, the parts being Jjell Bathed therewith, Morning, Noon, and Night: and being drank, it admirably cools the heat of the Stomach and Liver.

XX. *The Syrup of the - Green Herb., or Juice.* ^{ai} has all the Virtues of the *DecoBion* and *Liquid J'xe*, but not near fo powerful as it: mixt with *Syrup* or *Juice* of *Limons*, it is good againft Fevers, quenches Thirft, and comforts a weak and fainting Stomach. It heals alfo exulcerations of the Lungs, excoriations of *ih* Jkwe^s, and other inward parts. Mixt with the *DecoUion* made in White Wine, it powerfully provokes Urine, and is profitable againft the ©reply.

XXI. *The Oil by Infolation or DecoBion.* It is ^{made} with *Oil Omphacine*^ or of *Unripe Olives*. It cools Inflammations admirably, eafes the pain of the Piles, and cures Chilblains: and being ap-^{tyed} „, it gives eafe in the Gout and Sciatica.

Anointed upon Scrophulous Tumors in the Neck and Throat, it eafes the pain, waftes, and confumes them} anointed upon Chilblains, it takes them away.

XXII. *Tire Ointment.* It has all the Virtues of the *juice* and *Oil*, outwardly ufed. If to every Ounce of it two Drams of *Scammony* in fine *Fonder* is added, it will be a moft effectual thing for the cure of all old running Sores and Ulcers, and will heal ulcerated Kibes almoft to a Miracle, And above all things, it will digeft, draw, cleanfe, and induce the healing of frumous Ulcers, beyond moft other Topick Medicaments, being skilfully applied. It alfo quickly cures ulcerated Hemorrhoids or Piles •, and is an excellent thing againft rednefs, Scurff, Morphew, Pimples, Scabs, and other like Def&datations of the Skin.

XXIII. *The Cataplafm of the green Herb.* Being immediately applied upon a fimpie Contufion, it difcuffes it, or repels the prefent afflux of Humors. It eafes pains of the Gout and Sciatica, abates the Inftamation and Tumor in the Tefticles and *Penis*, giving in a little time eafe and relief

XXIV. *The Dijilled Water.* It is Cofmetick, and good againft moft Defcedations of the Face and Skin, taking away, Heat, Rednefs, and Inflammation. Inwardly taken being fweetned with the *Syrup*, it abates the heat of Fëvers, cools the Stomach, Liver and Reins, gives eafe in the Strangury, cleanfes the Reins and Bladder, and takes away the heat and fcalding of the Urine. Dofe from 2 to 4 Ounces, or more, Morning and Night. It is faid alfo to heal Ulcers of the Reins and Bladder, being duly raken for Tome confiderable time.

Of N A V E W S

OR,

Long T U I N E P . .

I* /T P *HE Names.* It is called in *Greek*, BSW* X *Bounias*: in *Latine*, *Napus* and *Bunias*^ in *Englifh*, *Navew*^ or *Long Turnep*.

IL *The Kinds.* We may very well take *Navew* to be a Species of the *Turnep*, for the *Sweet Garden Kind*^ eats like it, and full as well or rather better and iweetter, being dreft like the *Common Turnep*. This Plant is either i. BJV^ ^ « P, *Bunias five N&pus Hortenfis*, *Napus dulcis*, *Garden Navew*, or *Sweet Navew*, or *Navew Gentle*. 2. *ihm ayeict*, *Bunias agrejtiis*, *Napus Sylvefrifis Dodon* < zii \$ *Lugdunenfis*, *Kapum Sylvefire Tragi*, *Napus agrejtiis Turneri*, *Wild Navew*,

The Deferiptiotis.

HI. *The Garden Navew*, or *Navew Gentle* i\$ like unto the *Turnep*, I* its *Stalks*^ *Leaves* *Flower*, and *Seed*, as alfo in its *Jhape* and *manner of growing*^ but the *Leaves* of the *Navew* are much *mother*: it alfo differs in the *Root*, for the *Turnep* is rounds almoji like a *Ball*^ but the *Root* of the

Navew is long, and much fletcherd O.n in length, whereby it seems to be degenerated from the form of the Common Tunicp. This Garden Navew, or Navew Gentk is tllc of ttxo Kinds, viz. T/J* grtater and the lejfer. The greater is long and great, almoft as forge as the Jlwrt Carrot, hstt for

Navew Gentle, or Garden [maile].

Nave® Gentle Garden greater.

he moji part of tin uneven lenth and rcundneft, a the very indjibere it fends from it { fides Jevtrnl n>M long fibres. The fmaHer in its growth and nee above Ground, ;s at all things like the orner, differing only in its Root, which is very ntich !effe\ for it h fomewhat round with its lengthy •ndis about twice as big as a Mans Thumb, jome 'iggerj foms kffer-, both thefe are fe liKe to the Common Garden Tuincp, hi States, Leaves? Mov- ers, and Seed, that they are hardly to be know* jixnder,

IV, T^ Wild Navew. In Rent is likevitfefomf what Tuberos, foundand long witkall, of the big- nefiof a Mans Thumb, or Jomevihat larger^ toith Several fibres fprinpxgfrom it tsiwds the bottom- lit Leaves are long, J'moth, and not liairy% and wore deeply jagged than the Garden Kind. Tk(

Navew Wild.

Flowers are alfo yellow, and the Seed in fmall Pods like the former, but more hot, fhsrp^ and biting, Whofoeverfays Lobel hat feenor known the Garden Navew, or Navew Gentle, vsili even upon the fight of this, fudge it to be the Wild fort, it is fo lih(thereto.

V. Neta. There is a difference between Buniai, and Burnxm, (tho' Pliny by a miltake makes them but one Plant) for Bun'ms is truly the Naveai, of which we treat in this Chapter, whereas Bunium* is a kind of Daucus ¶etrofelint vel Corianiri folio, of which opinion are Baubinus & Dafccbampitf- Gtf/r»likewifeputsno difference between r»yf** Gonguk, Rapum, a Turnep.- and Ki i * Buniai, Af pus, Navew, (i.e. the Garden Kind) becaufe there is but little difference in their form, manner of grow ing, greatnefs of the Root, and fweetners alfo: taf there is really a difference between the Plants, whtCH is chieHv determined by the Hoot, which is mucn tong« titan any Turnek and ftaroely ever fo

fane of the smaller Turneps •, besides, some Authors do assert, that the Root of the Raven Gen-^h is yet sweeter than the sweetest Turnep that grows,

VI. *The Places.* The first is only planted, and to be found in *Gardens*, in many places of the Kingdom: it requires a gentle, soft, loose and yellow Mould, like as the Turnep does, and is sown in a fruitful Soil-, it is sown in *France* and some parts of *Germany*, in the Fields, for the Seed sake, as is likewise that of the *Wild Cohort*, *Oil Löle-R*pe_n*, for the plentiful increase of the Seed, is very profitable to the Husbandmen of those Countries, because that being pressed forth in their *Oil-Mills*, a great quantity of *Oil* is produced, which they use not only in Lamps, but also for the making of Soap, and some of the poorer sort of People, it is there eaten, and used instead of *Sallet Oil*. In *Holland* and *Flanders* and other places it is boiled into Soap, by mixing it with a strong Lye, made of Pot Ashes. It is said, that it is also sown in several places of *England* for the same purposes. The second or *Wild Navep* grows wild by Hedge sides, High-ways, Ditch Banks, as also in Clay Grounds, and the Banks sides of Fresh Marshes, near to Towns and Villages, in many parts of the Kingdom.

VII. *The Times.* They are sown in the end of ^A and beginning of *September*, as also in the ^{-,} and Flower and Seed about the same time ^{Turneps} and *Charlac* do.

VIII. *The Qualities.* *Navep Gentle* is temperate in respect of heat or cold, and moist in the first Degree •, but this is understood of the Root ⁵ for the Seed is hot and dry in the second Degree. The *Wild Navep* is hot and dry in the first Degree, ^{*,} but the Seed (which is only used) in the third Degree. The *Garden Kind* is Aperitive, Absterfive, and Restorative in Confusions. The *Wild Kind* has the same Virtues, as to its Seed, which is also Alexipharmick, or a Refister of Poison.

IX. *The Specification.* The Roots of the *Garden Kind* increase Seed, provoke Lust and restore in Consumptions. The Seeds of both Kinds expel Wind, give ease in the Strangury and Colick, and are good against the Poison of Vipers, Rattle-Snakes, Mad-Dogs, and other Venemous Creatures: They provoke the Terms, facilitate the Delivery of Women in Labor, and remove Obstructions of the [;]

X. *The Preparations.* You may have i. A *Liquid Juice of the Root of the Garden Kind*. 2. An *Offence of the same*. 3. A *Syrup of the Juice*. 4. A *Decoction of the Roots*. 5. A *boiled Sallet of the *y*^{*}*. 6. A *Cataplasm of the Roots*. 7. A *Sallet of the first Sprouts*: 8. An *Oil by expression from the Seeds of both Kinds*. 9. An *Infusion in Wine of the Seeds of both Kinds*. 10. A *Ponder of the * & of both Kinds*. 11. An *Oil of the Root of the Garden sort by Decoction*. 12. A *Wine of the *oot of the same Kind*.

The Virtues,

XI. *Liquid Juice of the Root of the Garden* ^W nourishes, restores in Consumptions, is good against Coughs, Colds, Hoarseness, Wheezing, Asthma's, and Ulcers of the Lungs, increases Seed, provokes Lust, and provokes Urine, giving ease in the Strangury, Stone, Gravel, &c. Dose 2 or 3 Spoonfuls at Morning, Noon, and Night, or 3 or 4 times a Day, in a good Draught of warm [;]

XII. *The Effence of the same Root*, It has all the Virtues of the *Juice* and may be given two Spoonfuls at a time in the same manner, or in a Dish of strong Meat Broth, or Gelly Broth: This does moreover strengthen all *Viscera*, and heal excoriations of the Bowels, Reins, Bladder, &c and is good for healing of a *Gomvrhra*.

XIII. *The Syrup of the Juice.* It is singular good against Rickets in Children, and prevails wonderfully against a Cough, and fluffing of the Lungs, causing an easy Expectoration. It has all the Virtues of the *Juice* besides which, being long used, it restores the Voice so much as had lost it.

XIV. *The Decoction of the Roots in Water.* It has the Virtues of the *Juice*, *Effence* and *Syrup* but may be taken from 4 to 8 Ounces, several times a Day: it powerfully provokes Urine, and gives ease in the Strangury, expelling Tartarous Mucilage from the Reins, Ureters and Bladder. Being taken for some time, sweetened with fine white Sugar or Clarified Honey, it cures an habitual Costiveness of Body, and withal, it heals Excoriations of the Bowels.

XV. *The Sallet of the Roots.* It is made either by boiling, baking or roasting, and then being chopt small with a Knife, it is seasoned with Pepper, Salt, and Butter, adding if you please a little *Juice of Oranges* or *Lemons*. Being thus eaten for about five or six Weeks together, with only a little white Bread, and forbearing all other Food whatsoever, whether Flesh, Fish, Eggs, Cheese, &c. and only drinking either the *Decoction of the Root*, or new Milk, for the whole time, I have known it cure several times, the most inveterate Rheumatism, beyond all hope or expectation: and all this it does purely by sweetning all the Juices of the Body, destroying their acerbities.

XVI. *The Cataplasm of the Roots.* Being made of the green Root by beating it in a Mortar, and applyed to Kibed Heels, it cures them. Being made of the Roots Baked or Roasted, and applyed to the Tumors of the Testicles or *Penis*, or swellings in any other part of the Body, it allays the Inflammation if any, eases the Pain, and in a short time dissolves the Tumor.

XVII. *The Sallet of the first Sprouts out of the Ground.* It is eaten raw, as other green Salleting: it purifies and cleanses the Blood, strengthens the Stomach, Liver, Spleen, and Lungs, opens Obstructions of the Reins, and frees them from Tartarous Matter powerfully, with all provoking Urine.

XVIII. *The Expressed Oil from the Seed, of both Kinds.* It facilitates the Birth, prevents or gives ease and takes away the After-Pains of Women in Childbed: and given to young Children against the Worms, it kills and drives them forth. If the *Oil* is washed well with fair warm Water, it becomes sweeter and softer; and is then good to anoint the Skin withall, it allays Inflammations, and takes away roughness of the Skin, and other Deformities thereof.

XIX. *The Infusion in Wine of the Seeds of both Sorts.* It gives present ease in the Colick, and Gripings of the Guts, opens Obstructions of the Reins, cleanses them of Tartarous Matter, gives ease in the Strangury, provokes Urine, and powerfully refills and expels Poison, whether the Poison is taken inwardly by the Mouth, or by the Biting of Serpents, Mad-dogs, or other Venemous Creatures: for which reason sake the Seed is always put into the Compositions of *Treacles*, and other Counter-Poisons.

XX. *The Ouder of the Seed, of both Kinds.* It strengthens the Stomach, causes a good Appetite and

and Digeition, eases the Colick, provokes Urine, gives relief in the Strangury, and induces the Courfes in Women. It is good againil all forts of Poyfon, and is ever an Ingredient in *Venice Treacle*, viz. the Seed of the *Bumas dulcis*, and both *Biofcorids* and *Pliny* fay, that the Seed of die *Garden Bunira* is put into Antidotes, not the Seed of the *Wild*: and yet that of the *Wild* is certainly the itronger and the more effectual: it kills alfo Worms in Children. -Dole from half a Dram to a Dram or more in any fit Vehicle, Morning and Night.

XXL *The Oil of the Garden Root, by Inflation or Becoftion.* It allays Inflammations, difcufies hot Tumors, and is profitable againit Chilblains and Kibes, they being anointed therewith.

XXII. *The Wine made of the Juice of the Root of Navew Gentle.* The Koot is to be Ground in an Engine or Mill, and the Juice to be prefled forth, which is to be put into Wooden Fats or Veffels, and left to Ferment, as Wine or Cyder, are: The Fermentation being over, and the Liquor grown Fine, you will have a noble delicate Liquor for drinking, very Pleafant beyond Cyder, and much *tiroi*cx; and not much Inferior to Wine. This Wine if well made, by reafon of the ftrength of its Body will keep fome Years.

CHAR DXVIL

Of NEP; ^CAT-MINT,

I. *THE Names.* It was unknown to the *Greeks*, fo far as we can Learn^ the *La-**wealled h *Nepeta*, *Menthafelina*, *Mentha Cat tana*, and by fome is (imply called *Cat aria*, and *Cat-taria*, alfo *Herba Gattaria*: we in *Englilh* called it, *Kep*, *Neppe* and *Cat-Mint*.

II. *The Kinds.* Authors make many Kinds hereof, but the following fix are Principal, viz. 1. *Nepeta major Vulgar is*, *Herba Gattaria Matthiolij* *Nepeta Cordi & Tragi-*, *Cat taria*, *Sf. Mentha Cat aria Lobelij**, *Common* Garden *Nep*, or *Cat-Mint* 2. *Nepeta Media*, *Cat taria Media-*, The middle Kind of *Nep*, or *Cat-Mint*. 3. *Nepeta minor Carrier ari*], *Mentha Cat art* a minor *Bauhini*, *Cat taria tenuifolia Hfpanica Clufij-*, Our fmall *Nep* or *Cat Mint*. 4. *Nepeta Perrgrina latifolia*, *Mentha Cattaria Peregrina latifolia Lobelij*, *Mentha felni* a fat iv a *latifolia Tabern&mentani*, *Nepeta Perigrini Befleri*, *Cattaria alt era Gerardi*; Strange *Nep*, or *Cat-Mint* with broad Leaves. 5. *Nepeta Piregrina Mguftifolia*, *Mentha Cat aria auguftifolia minor Eauhini*, *Mentha Cattaria Veregrina agu/hfolia Lobelij*, *Cattaria folio longiore Dodonxi*, *Salvia Romana Gerardi*^ Strange *Nep* or^ *Cat-Mint* with narrow Leaves. 6. *Mentha Cat aria minor Alpina*, *Nepeta minor Alpina*^ Small Mountain *Kep*, or *Car-Mint*.

The Descriptions.

III. *The fuft*, or *Common Garden Nep* or *Cat-Mint* Its Roots are compofed of many long Strings and Fibres, fafining themfelves ftrongly in the Winter. From this Root flmt forth a hard four JqaarcStalk, or Stalks, with an boarinefs on

them, a yard high, or more, full of Branches, bearing at every Joint, two broad Leaves, for j arm anilargenefs Jomewhat like unto *Buwim*, but *pr* and *ff*. pointed, Jofter, whiter, and more hoary, and notch a alfo about the edges, which hive a ft rang *f*^a* fmell, not offensive to any, but very pleafing to *Cats*,

Nep: or, Cat-Mint Common*

who will rub themfelves thereon all over, & eat the Leaves thereof, they are fo ?much with it, whence caine the Name. The Flowers gro in large Tufts at the tops of the Branches, and W derneath them like wife on the Stalks.; many together, of a whitifh purple color. In this particular of the Flowers, our Figure here infertc&i* defeflivc.

IV. *The feconi*, or Middle Kind of *Nep*, or *Cat-Mint*. Its Roots are greater, longer, and &&^* Woody than the former, abiding many Tears in & Ground, but retaining no green Leaves thereon *n the Winter Seafon. It ha* likewise hard Stalks, not fo great as the former, but more in number, andfometimes as high: the are fmailer aim ft by half, harder, greener, and nothing fo fironq funted, and are Jet by couples on the Stalks, which fprtd not themf elves out Branches, in 'that manner which the fir ft does. +f Flowers are fewer, f miller, and growing only *7 fpaccs, along them, up to the tops, of a faint. W* plifh color, gaping like the other, and after tW^ fuch like fmall round Seed in tbe Husks.

V. *TJ?e third*, or Our fmall *Nfc*p, or *Mint*. It has a long, fmall, Fibrons, Woody which fend forth Jeveral fourfquare, kf^J hoary Stalks, which die not away after See a but fhoot forth again frefh Branches\ not foot high i with two fmall and long narrow fnipt or dented about the edges, and hoary a. a fh'onger Smell than the firft or Common J ^ J and of a hotter Tap. The Stalks fbcv? ft^C'

VI. The fourth, or Strange Nep, or Cat-Mint with broad Leaves. It has a long small slender Root, spread out into in many Branches with several Fibres adjoining to them, from which Root springs up a square hoary Stalky reading into Branches on all sides, from the bottom almost to the top, set with twelve Leaves at every Space, which are broader than those of the next Kind following, the not much; but longer than our first or Common Nep; dented about the edges, and of a hoary green color. The Flowers stand in the spaces about the tops of the Stalks, almost of a pure white color, like in front to those of our first Common Nep, but larger after which comes the Seed, which is also black like it: The smell of the whole Plant, is likewise stronger and sweeter, and more pleasing than that of our first Common forr.

VI. The fourth, or Strange Nep, or Cat-Mint with broad Leaves. It has a long small slender Root, spread out into in many Branches with several Fibres adjoining to them, from which Root springs up a square hoary Stalky reading into Branches on all sides, from the bottom almost to the top, set with twelve Leaves at every Space, which are broader than those of the next Kind following, the not much; but longer than our first or Common Nep; dented about the edges, and of a hoary green color. The Flowers stand in the spaces about the tops of the Stalks, almost of a pure white color, like in front to those of our first Common Nep, but larger after which comes the Seed, which is also black like it: The smell of the whole Plant, is likewise stronger and sweeter, and more pleasing than that of our first Common forr.

VII. The fifth, or Strange Nep or Cat-Mint with narrow Leaves. This is a Species of the same Kind with the former and is like it in its Root, Stalks branching out, Flowers, Seed, color, smell and manner of growing, and differs from it in nothing but in the Leaves which are smaller and narrower than those are.

VIII. The sixth or Small Mountain Nep, or Cat-Mint. This has a small Fibrous Woody Root which sends forth a Plant: smaller than our third Kind or small Nep foregoing. It has square brownish Stalks of about a Foot high, spreading themselves, forth into Branches, on which grow smaller Leaves than those of the former small sort, but they are somewhat broad, almost three square, and hoary withal the Flowers are small and whitish, fit or placed Spike-fashion at the Tops of the Stalks and Branches, like unto those of the Common Kind.

IX. The Places. The first grows about the Borders of Gardens and Fields as Gerard says) near to rough Banks, Ditches and Common Ways, and is delighted in moist and watery places, from whence it was brought into Gardens. Parkinson says that the first and second grow Wild in other Countries, but are Nurft up with us only, in Countries, as all the rest are. The third, fourth, and fifth grow naturally in Spain, from whence they were brought to us in their Seeds, and notwithstanding the coldness of our Climate, grow here to be goodly sort of Plants. The sixth grows in Italy about Naples from whence the Seed was brought hither.

X. The Times. They all come forth in the Springy Season, Flower in July and August, and their Seed is ripe soon after.

XI. The Qualities. • *Kepov* Cat-Mint is hot and dry in the third Degree, Aperitive, Absterfive, Altringent, Anodyn, Carminative, Digestive, and Traumatick } also Cephalick, Neurotick, Stomack, Hepatick, Cordial, Ptarmick, JEmmenagogick, Sudorifick, Alexiphannick, and Analeptick-

XII. The Specification. It provokes the Terms in Women, hastens and facilitates the Labor, stops Catarrhs and cold thin Rheums, expels Wind, gives ease in the Colick, cures Asthma's or difficulty of Breathing, as also Cramps, Convulsions, and ail cold and moist distillations of the Nerves.

XIII. The Preparations. You may have therefrom 1. A Liquid Juice. 2. An Infusion 3. A Juice. 4. A Powder of the leaves and Heads of Flowers. 5. A Syrup. 6. A Lotion. 7. An Ointment or half an. 8. A Cataplasm. 9. A Distilled Water. 10. A Spirit. 11. A Spirit. 12. A Distilled Oil. 13. A Spirituous Tincture. 14. A Tincture. 15. An Oily Tincture. *

The Virtues,

XIV. Tfo 1/j///i jfaV*. Taken one or two Spoonfuls at a time in a Glafs of choice *Canary* ^ or other proper Wine, it cures fuch as are inwardly Bruifed by any Blow, Fall, or other Accident. It expells Wind out of Stomach and Bowels* gives eafe in the Colick -, and being constantly taken for fome time, it provokes the Courfes in fuch Virgins as never had them, and brings them down in fuch Women as have had them ftopt for fome time, it alfo takes away Sterility or Barrennefs in fuch Women, in whom it is cauled through a coldnefs, over-moifture or flipperinefs of the Womb, and other weaknefses of thofeparts: Given*alfo to Women in Travel in a Glafs of White *Lisbon* Wine, it haftens and facilitates the Birth, brings away the After-Birth, and prevents, or eafes After-Pains.

XV. *The EJfence*. It has all the Virtues of the *Liquid Juice* ^ befides which, it prevails againft all cold and moift Difeafes of the Head, Brain and Nerves_h is profitable againft Apoplexies, Vertigo's, Megrimis, Epilepfies, Lethargies, Carus, Palfies, Convulfions, and other like Difeafes of thofe parts. Dofe a Spoonful or two every Morning falling, and every Night going to Bed, in a Glafs of Generous Wine- It alfo expels Poifon, whether inwardly received, or externally by the Stinging or Biting of any Venemous Creatureas, Vipers, Rattle-Snakes, Mad-Dogs, *fcc.* if it is prefently given in a proper Vehicle., and a *Qataplafm* of raw *Garlicky* be alfo applied forthwith to the Wound.

XVI. *The Infufwn in Wine*. It has the Virtues of the *Juice* and *EJfence*, but nothing near fo powerful: yet ic is a fingular Cordial, defends and Cieafs the Heart, enlivens the Spirits, and is proffible agaiast deiiquiums of the Vital Spirits, as JErntings, Swoonings, Vapors, Hyfterick-Fits, ©V. Dofe 4 Ounces, at time of the *Paroxyfm*.

XVII. *The Foudor of the Leaves and Heads of flowers*. It has all the Virtues of the *Juice* and *EJfence*, but aQs not with that fpeed which they do: yet it feems to comfort the Stomach and Bowels after a wonderful manner: it provokes Appetite, and caufes a good Digeftion: is a fingular expeller of Wind, and Hops Fluxes of the Belly. It is alfo good againft Coughs, Colds and Catarrhs, or thin diffillations of Rheum, which difaffeas the Lungs. It alfo warms, drys and Irtrengthens the Womb, and is laid frongly to provoke Luft, and induce Conception. Dofe one Dram at a time in *Syrup of Citron Peels*, Morning and Night, drinking a Glafs of frong Wine after it.

XVIII. *The Syrup of the Jgice or Green Herb*. It is a molt admirable Pettoral, and isfaid to alleviate the molt vehement Cough, being taken often in the day time with a *Liquorice Stick* -, it profligates a Cold, and caufes an eafy expe&oration of the vifcid pituitous matter lodgM in the Stomach and Lungs. It is good to cure an Athma or difficulty of Breathing, fluffing of the Stomach, Hoarfnefs, Wheezing, (hortnefs of Breath, and a continual diffillation of Rheum, which is very obnoxious to molt of the *Vifcra*. It maybe taken particularly Morning and Night, and as often in the day time as need requires.

XIX. *Take of the EJfence* ^ parts
other
of Wine 1 part, mix them. Being ufed as an Injection up the Womb, with a proper Womb Syringe

it cleanfes, warms, comforts, drys, and ftrengthens it, takés away its flipperinefs, and makes it apt for Concejttop 5 and if this *Lotion* be fit in a Copper or Earthen Pan over live Charcole in a Clofe-StooJ, fo that the Fumes thereof may be received up the Womb, it does alfo the fame things, takes away the overflowing moifture of the Mother, difcuffes the Wind, and eafes the Pains of thofe parts, and by the frequent uie thereof takes away thofe caufes of Sterility or Barrennefs. It is alfo good to wafh the Head, to dry up running Humors, and cure the Scabs thereof, and is effectual for the like affe&s in other parts of the Body. Bathed for Fomented on the Pilés, it eafes their Pain, and irt a fhort time difcuffes them*

XX. *The Ointment or Bdlfam*. They are good Vulneraries being applied to moift and running Sores and Ulcers:, they ftrengthen the Nerves, or any Limb or Member weakned through Cold, or moifture, or blows, or any over-fraining: and applied to Ulcerated Piles, they difcufs the remaining Tumor, eafe the Pain, and in a fhort time heal them: the fame thing they do, being alfo applied to Ulcerated Kibes.

XXI. *The Pejfary*. It is made of the *Green Herb*, with its *Tops or Heads of Floivers*, and a little *Wool*. Being put up the *Vagina Uteri*, it eafes the Pains of the Womb, draws down the Vapors, prevents Fits of the Mother, provokes the Terms -, and in a Woman with Child, if it is near the Moments of Delivery, it haftens the Birth.

XXII. *The Caiaplafm*. Applied to the Fundament in the Hemorrhoids or Piles, it gives prefent eafe tho' the pain be never fo Vehement: applyei t8 the Joints it alfo faves the pains of the Gout, proceeding from a cold caufe, or an accidental weaknefs of the part.

XXIII. *The Dijlilled Water*. It has the Virtues of the *Juice*, but very much weaker in its effects, and may be given to 6 Ounces fweetned with the *Syrup* aforegoing-, otherwjffej it is ufed for the moft part as a Vehicle to convey the other *Preparations in*. It is a very good Stomatick.

XXIV. *The Spirit*, _h is a great Neurotick and Cordial, good againft Palfies, Convulfions, Tremblings, Numbnefs, Vertigo, Lethargy, Carus* Fainting and Swooning Fits, Vapors, Fits of the Mother, and the like Nervous, Cardiack, and Hyfterick Diftempers. Dofe one, two, or three Drams dulcified with the *Syrup* at *Sell* 18. afore-

XXXV. *The Diliilled Oil*. It has all the Virtues of the *Juice*, *EJfence*, *Infufwn*, and *Spirit* afore* going : it provokes the Terms powerfully, brings away the Birth (when ripe) momentarily, and prevents and cures After-pains upon the fpot; It has not many equals for the Difeafes of the Head, Brain, Heart, Nerves and Womb. Dofe from 6 Drops to 12, 20, 50, or more, according to Age, Strength, and Necessity_h drop them &# into fine pouder *Sugarf*, mixing both very well together -, then give the mixture in a Glafs of Wine.

XXVI. *The Spirituous Tintfure*. It has all the Virtues of the *Juice*, *EJfence*, *Spirit* zn&OUhj* is fronger and more powerful than the three firft but weaker much than the *Oil*: It may be given u' the Coiick, Fainting and Swooning Fits, Lethargy* *ffife*. from one Dram to two Drams, in a Glafs of Generous Wine_h but if it is given againft Hyfterick Fits, it will be beft to give it in a Glafs of the *Dijlilled Water*, which may be re- ted Morning and Night.

XXVII. *The Acid Tintlhtre*. This has all the Virtues of the *Spirituous Tintlurc* p and n: poWE*

powerful than it, in fuppreffing Vapors and Hyfterick Fits, alfo Vomiting, Sicknefs at Heart, and other Difcafes of the Stomach, and exceeds all the other Preparations, in curing Cauterous, burning Fevers, the Plague, and all forts of Malign and Peftilential Fevers, for which it is a kind of Specifick. Dofe fo many Drops as to make the Vehicle it is given in gratefully Acid, and to be repeated as often as need (hall require.

XXVIII *Toe Oily TinQure.* It is a powerful Antiparaly tick, Neurotick, Hylerick, and Nephritick^ outwardly it is good againft the Palfie, Lamenefs, Numbnefs, and Trembling, being anointed very well all along th# Back Bone Morning and Night, taking fome few Drops of it alfo inwardly, and anointing withail the parts affected. It facilitates the Birth, and powerfully provokes the Terms in Womeri: And is a fingular Medicament againit the Stone, Gravel, Sand, Tartarous Mucilage in the Reins and Bladder, Strangury, fcalding and heat of Urine, in all which Cafes it gives prefont relief. Dofe from Oie Dram to three Drams in any proper Vehicle.

XXIX. *Nota.* The firft Kind is moft ufed, but *Lobe/* fays, the fourth and fifth forts are more effectual to all the Purpofes and Intentions, than the firft Kind: And if my Observation may fignifie any thing, I am of Opinion, that the third Kind is not inferioi: iii gbbdnefs to any of them all

NESPITE, *fee* Calamint, Chap. 104.

CHAP. DXVIII

Of the NETTLE.

P # E Name. It is called in Arabick, *Hu- i mure*, & *Angiara*: *Serapio* calls it *Ha- ere XJraith*: in *Greeks* $\gamma\alpha\upsilon\upsilon$ (*quia tafpa afpera* ^ *injucunia eft*;) alfo $\kappa\alpha\upsilon\upsilon$ (*quoive Uicet ffpun- & et*;) in *Latine*, *Urtica*, *ah Urendo*, *quod pruri- in pufiulafque igni fmiles excitet*: and in *Englifh*, ^ / / ^ **and Stinging Nettle.**

The Kinds. There are laid to be four Kinds of Nettles, viz. 1. *Urtica Hortenfis*, *Urtica Ro- ana* ^ *XJrticalitalica*, *Urtieaprima Diofcorid/s*, *Ur- ta Legitima Clufij* ^ *Urtica Mas*, *vel Mafcula*, ^ the Garden or Roman Nettle. 2. *Urtica Sylvejiris wiajor* ^ *Urtica major*, *Urtica Urens*, *Urtica Foemina*, ^ the great common flinging Wild Nettle. 3- ^ *Ka media Sylvejiris* ^ *Urtica urens vulgark alter a* ^ *Urtica Olygophyllus* (*a paucitate folioruni*) ^ middle fort of flinging Wild Nettle. 4. *Urtica minor Sylvejiris*, *Urtica minor*, *Urtica Exigua* ^ *falpin**, *Urtica urens minima*, *Urtica tertia* ^ *gdunenfis* ^ *Matthioli* & *Tragi**, *Urtica Cania*, *Jl* ^ *Canina Flivij* ^ our kffet or fmall flinging

The Deferiptionr.

III. *The firji^ or Garden or Roman Nettle.* Its Root is yellowifh, and fpreads under Ground with many long fibres or firings, whereby it takes fafi hold, yet perifhes every Tear, requiring to be new Sovo'd every Spring. It jprings up with one or more great Stalks^ which fpread themfelves out ifr

to many round hairy Branches, rather ledning Jown^ than (landing perfectly upright, fome times rifwg to be four or five Feet long, fpreading out into fevenil Ramifications: whereon at the Joints, are two heaves fet together, very rough: and tbd it has no Jharp Trickle, yet it has a hairy Down thereof which will Jiing the Skin egregiouly, if but touched therewith^ and raife it full of Blijers, a* if it wa* burnt with Fire: and dented round the edges, fomewhat deeply. At feveral places of the Branches, come forth fmall Stalks of re ddifli and yellowifh Flow- ers, made of threads which fall away, without bearing any thing elfe: but at the Joints with the Leaves in other places, from the middle of the Branches upward, come forth finally round, roughs green, prickly pellets bigger than Peafe, in which are contained feveral fiat, Jmooth, flippery, glittering or fhin'wg Seed^ much like to Line or Flax-Seed, but rounder, and fmaller.

IV. *The fecond, or Great common flinging Wild Nettle.* The Root of this perifhes not like the former, but continues all the Winter, voith fome green Leaves upen it, if the Seafon be not too extrem: It is pale and yellow, and fpreads it felfy ruming very deep into the Earth, with long firings and fmall Fibres, from tbn^ Root fhoots forth one,

inA fometiMes more Stalks, which Jpread thsmfithes cut ivto many Braa.vcs, any ff which ff they lye upon the Cwund, viillki ... abroad, and taie up a great deal if rosm. The

others. The Seed is fmall and white like to it'

Nettle Stinging Great.

leaves are esbarker color than the former, and fometims brounijh, or red, as ljrge, rough, and fling- in asthe former, but not fo deeply dented on the edges. At the topi of the Branches and iikewise, from the Joints with tbeLcjsva vnjtrnrab, come forth finally long, Branches of flowert, and Seeds after them, in fashon very like to the Branches of the Female Mercury, in which is contained, jnull, jht, whitifh Seed.

V. The third, or Our middle fort of Stinging Wild Nettle. Thii in in Creeping, firingy and fibrous Root, St.il.i, Branches, linnery, Seed, and Manner of groining fiems not to differ from the former /aft described, excepting that this is lower, an&fmolkr, and thinner fet with Branches: for tbc teajon, // it thought by many, that it is one and the fame Kind with the Greater soft described, and differs nothing from it, /wing toot it grows not full out Jo greet, whub may btwjb refpeft to the Soil, being poorer, and not fa fat and good.

VI. The fourth, or Our Lefler, « fmall flinging "Nettle. Its Rwf* art /miller than any of Reformer, and penjh every lftfr, *o tmti or thrice jometimes In a Te*r, for tt hai been obferved to fi>cd its Seed t«K* iff & tot lear, and jpring ut> again the third time of the ftxd Seed- idieb being near Watts, ptrtftx Kith the firfl Yrefls, but Springs vf again the next Tear. This Nettle « « *»oft things hke to the two fafl, but r/ies feldom above half « Tard high, and is nothing Jo much Branched as *ve grtat Kind. Its heaves alfo are much fmailer, rounder, much Jharper notched on the edges, and of a frejher or lighter green color, and more Jbarply flinging wan any of the

Nettle flinging small.

VII. The Plant. The mill is usually Sown in Gardens with us, and is usually in Upper and Lower Germany, and in most parts of France, but in Italy Wild to the Women. It is also found in some parts of the North, and in the South as the Name of Lute by name, and in the North of

Tom of Smng in »*r, r l V U W that JulmsCilfer with his SoldiersLandedUnJ"

for a time, whence u is ttiougnc me pwwt ^— Name, being by them called Romania, and we tor (honnefi Rovoiey, and alfo obtained the fiitt pio- duce of the Plant; tver Wlcc which time, ir is thoufht that it has continued there, growing, and rife Yearly of its own Sowing. But it has bee" found growing Wild alfo in orher patre of this Kingdom, as in the Siieet of Bardney in Lincoln- jhire. The other three forts grow in watte Giounds, by Hedges, and on Ditch Banks, by High-way* and Walls fides, and in many other places both till'd and untilli'd, and in Paitures, and in Gardr** and in all forts of Grounds both rich and p^{oor} good and bad, where it' they be ibiiered to g^ a while, it will be difficult to clear the pla- diem.

Vil. Tfe Times. They come up p enuy in the Spring and through all the Sn* Months, and they Flower and Seed in 7*& A ,quji, and Septm&er, but the fmallr Kind m«t early, becanfe it many times Flowers and itf? twice a Year, as was before obferveJ.

IX. The Qualities. Nettie is hot 3rd 07' the firft Degree, and is of ihin and fubtil p^1; now it dots not hum and fting, becaufe of ifs * tram heaii but k-caufeinidowny ot fmallpri are hard and ftiff, piercing like a Sting or the ^ Points of Needles; for rf k is once ^ % s it flings not at all, becaufe its fine hard

igrow foft and fljggy. It is Aperitive, Abfterfive, and Diuretick, Pt&toral, Nephritick, Hytterick, and Alexipharmick.

X. *The Preparations.* You may make herefrom, *• A *Liquid Juice* 2. An *EJence of the whole Plant*. 3. A *Deco&ion of the Plant*. 4. A *Wine of the Plant*. 5. A *Lohoch of the Juice of the Plant*. 6. An *Elettuary*. 7. A *Pouder of the Leaves and of the Seed*. 8. A *Lotion*. 9. An *Ointment*. 10. An *Oil by Dt' coition*, u, A *Cat aphw*. 12. A *Dijilled Water*.

The Virtues.

XL *The Liquid Juice*, Taken inwardly to 3 or 4 Ounce&s of more, according to Age, it will make the Belly Soluble, it opens obftm&ions of the Stomach and Lungs, helps Wheezing and fhortnefs of Breathy It provokes the Terms, allays Vapors, and prevents Hyfterick-fits: it provokes Urine, and expels Sand, Gravel and Tartarous Matter out of the Reins and Bladder. It kills Worms in Children, eafes and takes away Stitches in the fide, removes the oppilation of the Spleen expelling the windnefs thereof -, and is faid alfo to provoke to Venery: being taken for two or three Days together it flops Spitting or Vomiting Blood, coming from the Lungs or Stomach, being put into Green Wounds or old Sores, it cleanfes them and induces their healing. The common Dofe is 2, 3, or 4 Spoonfuls at g time in a Glafs of Wine, or other fit Vehicle.

XII. *The EJence*. It has all the Virtues of the *Liquid Juice*, and more powerful than it, for which reafon it may be given in a lefs Dofe, as from 1 Spoonful to 3 in Water, Broth or Wine. , It warms the Stomach, heals Sores and Ulcers in the Mouth or Throat, and given with 10, 15, or 20 Grains of *Myrrh in fine Pouder*, it helps moft cold and moift Difeafes of the Womb. It eafes Pleurittick Pains, helps the Cholick, expels Wind from the Vifcera, refifts Poifon, and is good againft the Stinging or Biting of any Venomous Creature as of Serpents, Mad Dogs, Scorpions, Hornets, &c. and refits the Poifonous qualities of *Hemlock, Henbane, Mandrake, Mufhromes, Nightjhade*, &c. Bathed upon overwearied Members it refrefhes them, eafes Pains, and Difcuffes f&mples Contufions.

XIII. *The Deco&ion in Water or Wine*. It has all the Virtues of the *Juice* and *EJence*, but nothing near fo powerful, and therefore may be given Morning, Noon, and Night from 3, to 6, or 8 Ounces, made pleafant with a little double refined Sugar.

XIV. *The Wine*. It is made by a cold *Infufion of the Green Herb or Plant in Wine for 3 or 4 Days, withen preffing out the Wine **, and repeating this *Infufion in the fame Wine, 3 or 4 times or more,* ^u *U the Wine is very Jirong thereof, and at laft tiffing it out again I after which, letting it Jiand* ^u *il its fine, the clear is to be decanted and kept for* *• It may be done with *Madera Wine, White Rort^ White Lisbon, Sherry, or Canary*, as every &ne likes beft. It has the Virtues of the former *Preparations*, is very Stomatick, and a fafe and lure Medicine to open Obftu&ions of the *Vifcera*, but chiefly of the Womb, which it warms and ttrenghens very much.

XV. *The Lohoch of the Juice*. To every Pint of the *Juice*, half a Pound of Honey is to be put*, < *nd they are to be melted together in a Sand heat, or in halneo, and the humidity is to be evaporated till ^u *comestothecofiftency of a Lohoch*: It opens the obftu&ions of the *Bronchia* of the Lungs, and

cures Coughs, Wheezings, Hoarfnefs, fhortnefs of Breath, Afthma's, and helps to expectorate cold, tough and impa&ed Flegm in the Lungs or Stomach, and to fpit forth the puritency of a Pleurifie, and to fpend it that way: it is alfo good to difcuff the Tumors or Swellings of the Almonds and Throat, to ftrengthen the *Uvula^* and reduce it to its place. Drank alfo mixt with *White Port Wine*, from an Ounce to 2 Ounces, it provokes Urine and cleanfes the Reins and Bladder from Sand, Gravel, Stone, and Tartarous Slime.

XVI. *The Elettuary*. Take of the *Pouder of the Seed 2 Ounces* •, of the *Leaves in Pouder, Myrrh in fine Pouder, of each 1 Ounce*-, *Clarified Honey ic Ounces*; mix and make an *Ele&uary*. It has all the Virtues of the *Juice, EJence, Wine* and *Lohoch*, and may be given from 1 Dram to 2 or 3, in any proper Vehicle: It is an excellent Hyfterick, provokes the Terms, ftirs up Venery, facilitates the Birth, and brings away the After-birth.

XVII. *The Pouder of the Leaves and Seed*. That of the Seed is the ftrogeft, or more effettual: It provokes Urine, Stone and Gravel, from the Reins and Bladder, kills Worms in Stomach and Belly, eafes Pleurittick "pains, opens obftu&ions of the Liver and Spleen, and provokes Luft^ it is alfo a Remedy againft the Stinging of Venomous Creatures, the Bitings of Mad* Dogs, the Venom of *Hemlock*, and other cold Poifons which ftupifie and dull the Senfes. It is good againft the Lethargy, being taken with a little Salt, the Forehead and Temples being rubbed alfo therewith. Dofe a Dram or Dram and half in a Glafs of Generous Wine. If it is blown up the Noftrils, it is faid to flop their Bleeding: and takes away the *Polypus* of flefhy Excrefcence growing therein. Given to Hens in their Meat in *Winter* time, it is fkid to make them to lay Eggs all *Winter* more plentifully.

XVIII. *The Lotion*. Take of the *Juice EJence a Pint^ of the Deco&ion* 5 and *Wine* ^, each half a Pint \$ *Clarified Honey 6 Ounces* \$ *•, * and *dijolve*. It is good againft Coughs, CoidT* Wheezings, Afthma's, caufes expeftoration from the Stomach and Lungs, and has all the Virtues of *Juice, EJence* and *Lohoch*. It is good to gargle with when the Almonds and Throat are Swelled affwages the Tumor of rhe *Uvula*, and reftores it to its place, heals Infiamations, Sores and Ulcers of the Mouth and Throat, and flops fpitting of Blood arifing from the Stomach. It is good alfo for outward Wounds and Sores^ they being wafhed therewith. And if it is made without the Honey^ it is good to cleanfe the Skin from Scurf, Morphew, Leprofie, and other Defbedations\$ and is profitable to wafh old, rotten and ftinking Sores, or Fiftula's, and Gangrenes, and fuch as are fretting and corroding: It heals Green Wounds by wafhing them therewith, and inje&ing it with a Syringe 15- to them, if th&y be deep.

XIX. *The Ointment*. It is made of the *Juice* by adding *Oil* and a little *Wax*, boiling gently to the *confumption of the humidity*. It eafes the Gout, and other Pains, and is good jto Anoint cold and benumbed Members therewith, to bring them to their proper A&ivity again.

XX. *The Oil by Deco&ion*. It is made \$jbt *Juice*, or *Green Herb bruifed and boiled to Crifpnefs in Sallet Oil*, and then f refit forth, reiterating the *Operation three times*. Being Anointed upon a place ftung with *Nettles* -, it is laid to be a preftent Remedy, to take away the pain and Hinging.

XXI. *The Cataplafm*. It is made of the *Green Herb being bruifed in a Mortar*. Being put no the Noftrils, it ftops their Bleeding. Appfyed to places affe&ed with *Scurf, Morphew, Leprofie,*

Scabinefs, it cures them ^ and is faid to cure old rotten Sores and Ulcers, tho* the Fleth was. feperated from the Bones -, Applied to Dillocations after the Setting of the Joint, it ftrengthens the part drys up Humors, hinders defiuions, and gives eafe in the Gout, and other like Pains. If it is rtaade with equal parts of the green Leaves of Nettles, and Dwarf Elder Leaves, and applied to the Gout, Sciatica, or Joint aches in any part, it quickly gives admirable eafe,,and in a little-time Cure.

XXII. *The Dijtilled Water from the whole Plant.* It is faid to be good for all the purpofes to which the Juice and Effence are applied, but nothing near fo powerful. But outwardly it is Cofmetick, and an excellent thing to wafh Wounds and Sores with, and to cleanfe the Skfn from Scurff, Morphew, Leprof/, Scabs, and other Defedatjōns thereof.

XXIII. *Not a.* The Garden or Roman Nettle is faid to be the moft effe&uai of them all: yet where that cannot be had, the others may very well be ufed in its place •, and ate thought by fome to be no lefs powerful *• and fome likewife think the leaf of the three, to be no lefs effe&ual than the greater, and it may be to exceed them in efficacy too.

CHAR DXIX.

Of NIGELLA

OR,

THE FENNEL-FLOWER.

I. *np HE Names.* It is called in Arabick, *Xa- X min* •, *Sunn* •> *Sunici* ^ or *Sunizi*: in Greek, *μηκυστιορυ ** *ρ*xcLva'mt(XQV* i, *Ldine*, *Melanthium*, "*Nigella*, *Salufandra*, *papaver Nigrum*: in Englifh? *Gith*, *Fennel Flower* and *Nigella* : *VuchfiuszxA Cordus* took this Plant to be *CumnumSylveftre alterum Diofcorid/s*.

II. *Tfe Kinds.* There are two principal Specie: of this Plant, viz. 1. *The Garden Kind*, which are, 1. *Melanthium Hortenfe Nigella hortenis Flore fimplici*, Our Garden Nigella with a fingle Flower. 2. *Nigella Cretica latijolia odorata*, broad Leav'd fweet Scented Nigella. 3. *Nigella Cretica tenuifolia odor at a*, narrow Leav'd fweet Scented Nigella. 4. *Nigella Citrina Flore albo fimplici*, fingle Flowered white Nigella with yellow Seed. All the former are fingle Flowered •, thefe following are double Flowered. 5. *Nigella Damafcena Flore multiplici*, Blew Nigella with a Double Flower. 6. *Nigella Citrina Flore albo multiplied* white Nigella double Flowered. II. *The Wild Kind.* 7. *Melanthium Sylveftre*, *Nigella Sylveftis*. Wild Nigella

The Defcriptions.

The Garden Nigella with a fingle Flower, is a long Root, with fome *. The Wild Nigella has a thick Stalk, and me times Stalks, about

a foot high, full of Branches h be jet with Leaves^ very much cut or jagged, much refernbling the Leaves of Fumitory, but much greater. The Flowers. grow at the top of the Branches, of a whitijh b/eto color, each Flower being divided into five fmall Leaves Star faghion. The Flowers being pa

there come up fmall Knobs or Beads, having ft ends thereof, % or 6 little Jharp Horns or Vorn^ and every Knob or Head is divided into feveral fmall Oils or partitions, in which the Seed is contained, zvhich is of a blackijb color, very like)nto Onion Seed, Jharp intafte, and of an excellent fweet fmell

IV. *Thefecond*, abroad Leav'd fiveet fcented Nigella. Its Root is yelbwijl?, ihready and Annuah, from whence fpr ings up a /lender weak Stalky divided into fame Branches, having long and divided Leaves fet thereon, but not of the jorm of fome of the other Nigella, which are Fennel like, or Lark Spur-like, but much broader, and parted into feveral Divifvns, fome what like to thofe ^Groundfel, but cut into lejjer and finer parts. At the tops of each of the Branches* grows a jingle white Flower, like unto the\ other Nigella's, and Heads fomezvhath like them juceeding, containing black Seed alfo, and having^ fweet fmell.

V. *The third*, or narrow Leav'd fweet Nigella. The Roots of this Candy' Nigella, are faid to be harder than the reft, yet Annual like them.' the Stalks which rife from thence are many, upright and/lender, parted into feveral Branches, with but few Leaves fet thereon, thofe below not being J° finely cut or divided, as are thofe which are bigb?r. The Flowers^dre fmall, yellowiJJ?, and white, gro@** ing at the Tops of the Brarthcs, after which contt cornered black Seed, Jharp, and fometimezvhich are much like to two fmall Berries.

VI. *The fourth*, or fingle Flowered white Nigella, with yellow Seed. This fort of fingle

gella zve have also In our Gardens, proceeding firji from Seed fent from other more Southern Countries: but it differs fo little from the other Annual forts, that it can fcarcely be difcerned exiept it be in the frefter greenriefs of the Leaves, before it comes to Slower, which then is fmall like the Nigella Rottiana arvenHs, or Wild Katherin Flower in Chap. 4¹⁰. Sect. 6. aforegoing of this Book; but oj a voftte color. The Heads alfo are fmall, but formed alike, having fmailer Seed within them, not black as others are y but yellowifh, and without fmell, and herein it kfomething like the double white Kind defcribed in SeQ. 8. following.

VII. The fifth, or blew Nigella with a double Flower. Its Root is fmall and yellow, perfifing every Tear, as the others do: from which Spring forth federal Green Leaves, finely cut, and into Jo many parts, that they are finer than Fennel, and divided fomewhat like to the Leaves of Larks-heel, from among which rife up Stalks with many fuch like Leaves upon them, Branched forth into feveral pans, at the tops of which, upon each grovjs one fair large Flower, which confifis of three or four rows of Leaves^ laid one upon another, of a pale blew color, with a green round Head, compajfed with feveral fhort threads in the midft, and having five or fix ^{pech} ^{f^{small}} ^{green} Funnel^l like Leaves, under the blower, to bear it up (as it were) below, adding thereby a greater grace to the Flowers, which ^a! the firft fl) cwfo?netimes white, but quickly after change. The horned Heads hereof are like to the Heads of the Wild Kind, which are fomewhat rounder and greater, having within them black uneven Seeds, without the leaf} Smell.

JVIII The fixthi or white Nigella double Flowered. Its Root is yellow, and perfifhes every ^a* the of far dots^ This double white Ni-

gella, has fuch like Leaves as the lo.fi has, but of a yellower green color, and much larger and broader and very much jagged, being nothing like the fine cut of the former, as you may perceive in the jingle Leaf of this Plant placed near the bottom of the Cut, belonging to that lafi defcribed in Sect. 7* aforegoing. The Flowers are fomewhat lefs, and leffer double than the former, and in color white^ having no green Leaves under the Flower, as the former has: the Head whereof in the middle, is very like alfo to that of the lafi defcribed, but not fo great^ in which is contained for the mofi part bhck Seed, and fuelling fweet like the Roman Nigella in Chap. 410. Sect 4; aforegoing, which is the only fvoeet Scented be fides this: iut the Seed of this is fometimes not fo black, but rather a little more white, or yellowiffo.

IX. The feventh, or Wild Nigella. It has a long flender Root, with many long firings and Fibers adjoining to it, zohich perfifh every Winter, The Stalk or Stalks, are a Foot or more high, befet full of grayifh Leaves^ very finely jagged, almoli like the Leave* of Dill \$ the Flowers are like to

thofof the firfi 0* Garden Kind defcribed at Se&L fo aforegoing in this Chapter, excepting that thefe are blewer. The Cods or Pods are like the Heads: or Husks of Columbines, in which is contained a fweet and pleafing Seed, tho* not fo fweet^ fmelting as the lafi.

X. The Maces. The firft is the Gar Jen Kin^ and grows with us in Gardens, and fo do all the other fix Kinds: which in Candia, Italy, and other hot Countries grow Wild in the Fields,

XI. The Times. They are all Annually to be Sown in the Spring, if they do not Sow themfelves^ they Flower in jane QT J#fy7 %n<X the Seed is ripe

XII The Qualities, Specification, Preparations, and Virtues of these, are the same with those of Katharine Flower, or Roman Nigella in Cbdp. 41c. aforegoing^ fo that we (hall say no more thereof in this place ^ faving that the Garden sweet fuelling Roman Nigella^ is rather to be chosen than any of the others, as being very much the strongest> but if that is wanting, then the first Kind in this Chapter is to be first admitted, and after that the sixth Species aforegoing or white double Flower &c.

This Cut should have come in, in Chap. 140. Se8. 3. But was there over-look't: We have thought good to put it in this place, that it might not be lost.

ajum vel manicum, is very doubtful \ some will have it to be the *Soldnrm Lethale*, but others deny it, and will have it to be another Plant, of tvhich we (Hall fpeak more in the next Chapter.

The Descriptions.

IV. *The fir ft, or Our Common or Garden Night-fhade.** Its Root is white and a little Woody (after it has -perfelt its Flowers and Fruit) with many fmall Fibres adjoining to it : and it fends up an upright, round, green hollow Stalk, about a Vodt, half a lard, or two FeeHiigh, fpreading itfelf forth into many Branches, on which grow many dark grt?n Leaves, fomething broad, and pointed at the 'njs, foff inifull of Juice, larger than the Leaves

Safil, elfe fomething like, and a little unevenly about the edges. At the Tops of the Stalks BRanches, come forth three or four, or more Flowers, made of five f?nall pointed Leaves f?anding on a Stalk together, one by, or above of flour or Jive yellow Threads fet together. The whole Plant is of a waterift? infipid Juice, like unto a thin Milkilage, and is of a f?ng and binding quality. The fecond, or Common Night-fhade Red. This is in all refpetts like the former mon Night-fhade, in its Roots, Stalks, Brarich-Leave*, Flowers, and wanner of growing, (X*

opting that its Leaves are fomewhat harder and rougher, and the Berries when they are ripe are of a ycllowifh red color-, the whole Plant growing alfo a little bigger than the former. In hot Countries its Root hide's many Tears, but fcarcely fo with ust it feerns that this Plant is but a degenerate Species from the former, by re of on of our Climate, as it happens in Sweet Fennel Seed, which being Sown with us^ in a fhort time becomes (by tranfplantation into our Country) changed into our Common Fennel.,

VI. *The third, or Sleepy Nightfhade.* Its Root is thick, long, and hard, and of a brownifh color oh the out fide. It rifes up with feveral thick, round^ foft, Woody Stalks^ divided into other Branches, on which grow many foft, woolly, but green, broad^ round Leaves, very like unto Quince Leaves ^ two always fet at a Joint, one againft another, of a fomething hot Tafte, cut Clufms fdys. The Mowers come forth at the Joints with the Leaves, all along the Stalks and Branches, 5 or 4 together, roundabout them, which are long and hollow, ending in 4 fomewhat long and pointed Leaves, of a pale white color*, which being pazi, green Berries come forth in their places fet in woolly Husks, which being ripe are of a yellowifh red color, and larger than thofe of the former.

VII. *The fourth, or True Sleepy Nightfhade of Theopbrajhs and Pliny.* Its Root is fomewhat great and Woody, covered with a whitifh Bark, not very thick, of an ill Smell, and infipid Tafte. It fprings U^wl of 6* if ^, or more thick^ round, fraight^ whitifh Stalks, about a Tard or more higKfspread out into fome other Branches, hard to break\ fet with fomewhat broad Leaves very like unto Quince Leaves, Jianding on fmall foot Stalks, not always 2 at a Joint, but many ftanding fingly at the joints: from the middle of the Stalks upwards, come forth feveral reddifh Flowers together, confifting of 4 Leaves a piece •, after which follow f?nall ftriped and pointed greenifh Husks, but red when they are ripe, very like unto Bladders of Winter Cherries^ but much lefs, with a red Berry within it in like manner, containing within it Several fmall Seeds.

VIII. *The fifth, or Red Nightfhade, or Red Weed of Virginia.* Its Root is white, and grows very great with us, but perifhes if it is not defended from the Froft in Winter, which ufually rot it: but in its Native places, it grows as big as a Man's Leg, (and fuch I have feen of it in Carolina, and other Southern parts of Florida) and above a Foot long, which being cut crofs has like a Bryony Root^ many circles to be feen in the middle. It is a large Plant, and takes its Name of Solanum from the Ukenefs of its Leaves. It rifes up with a great thick, round, reddifh Stalk, of the thicknefs of ones Thumb at leaft ~, and four or jive Feet high, or more^ fet with many very-large, frefh, green Leaves full of Veins (but without any order,) fome greater, and fome fmaller, and fometimes many of them turning reddifh^ from the Joints where the Leaves jand^ from the middle of the Stalk upwards, come forth many fhall foot lStalks with Flowers, which are very pale and f?nall, and of a watery Tafte, as it bring forth f?nall blackifh round Seed, 4 ufually fet in one Husk; which feldom come to ripenefs with us in England.

IX. *The fixth, or Great Inchanters Nightfhade.* Its Root is fmall, very white, and full of Joints and Branches, by which it fhoots forth and creeps every way under Ground, quickly taking up a great compafs. It rifes up with one or more % % rottni

round and jointed Stalks, most commonly standing upright, yet sometimes leaning down to the Ground, and taking Root again at the Joints: it grows about a Foot or half a Tard high, especially if it grows in a moist shady place, with two Leaves jet at every Joint, each of them growing upon a pretty long foot Stalk, which are broad, and round almost at the bottom, but very long pointed at the end, something waved about the edges, much like to the Leaves of Nightshade as some think, or rather like to those of Pellitory of the Wall, being of a firming green color on the upper side, and tender, soft and gentle in handling, but a little hairy, and of a dark grayish color underneath. From the middle of the Stalk almost upwards, the flowers grow in Spikes, many jet together, one above another, which seem to be of a dark brown color, while they continue Budds, not blown open, but being blown are small Star like Flowers, consisting of five Leaves apiece, dashed over, especially at the brims or edges, with a light Jew of blush, with many brownish yellow Threads in the middle; where, after they are past, small, rough, roundheads come forth, like unto small Burrs, flicking to Garments in like manner, in which are contained small shining black Seed, something like unto the Seed of Parietaria, but lesser.

X. The seventh, or Letter Inchanters Nightshade. This in its Root, Stalks, Leaves, Flowers, Seed, form, and manner of growing, and indeed in all respects is like to the former, and differs from it only in that it grows much lesser in every part, and this, altho' it grows in the same Ground or place. These two Plants obtained the Name of Inchanters, from Circe the Inchantress, they being something like the Circea Diofcoridis, and not from any Inchanting.

XI. The eighth, or Tree Nightshade, which is a beautiful Plant in respect to its green Leaves, and

red Berries. It has a small long woody yellow firing Root, with many Fibres adjoining to it: from whence springs up a Woody Stem or Stalk, as thick as ones Finger or Thumb, and about 4 or 5 Feet high, covered with a white or green Bark, spread out into many green Branches, having on them many fair green Leaver

Sometimes unevenly Auvcl on the edges, than any Nightshade Leaves, and very resembling the Leaves of Capficum or Guimiy (whence the Name Pseudo Capficum for it & thing of the nature of that Plant in the Winter, and narrower, falling away in the Winter, /hooting fresh again in the Spring. The Ylo grow often 2 or 3 together at the Joints of Branches with the Leaves, they are white and fashioned, but sometimes turning themselves with a yellow Point in the middle, very like Nightshade flowers when they are past, green Buttons come in their places, which wards come to be pleasant round red Berries, of bigness of small Cherries when they are ripe? with us ripen not till about Christmas in are contained many small whitish Seed the whole Plant, as well Leaves and Seed, are without either Swell or Taste.

XII. The Places. The first grows Wild in us under old Walls, and among Rubbish, by common Path Ways, by Hedge sides, and bank Ditches, both in hot and cold Countries in all Climates it grows naturally or spontaneously in most Gardens, without any Sowing in it. The second and third grows Wild in hot Countries, as Spain, Italy, &c. in the Alps, grows in Candia, in Virginia, Carolina, New-England, and other parts of Wmfc But the best four grow with

in *Gardens*. The fixch and feventh grow in moift and ficady places, and Fome times at the Roots of old rotten Trees in Woods, and fometimes by Hedg-fideS, and borders of Fields. The laft is thought to come from the *Weft-Indies*, but it has been an Inhabitant a long time in our *Engliffh Gardens*, where it Lives and continues reafonably well. To that fome care be taken of it in Extremity of *Winter*. •

XIII. *The Times*. They all except the laft dye away in *Winter*, and come up frefh again in the *Spring*. The third or *Sleepy Nightjhade*, by reafon it cdnes out of a warmer Country, will fcarcely endure, but periffi by the extremity of our *Winters*, unlefs it be well fenced or defended. The two firft which dye every Year, and rife of their own Sowing, fpring not out of the Ground, till late in the Year, as about the latter end of *April* or beginning of *May*. The firft five, Flower in the *Summer Months*, and continue Flowering till *Autumn* is well fpenf, after which their Berries come to ripenefs. The fixth and feventh fpring up in *April*, are in Flower in *June*, and give their ripe Seed in *Auguft*, then dye away to the Ground, the Roots abiding fafe all *Winter*. The eighth Howers fometimes in *June*, but generally in *July* and *Auguft*; and the Fruit is ripe about the latter end of *Deeember* or begining of *January*.

XIV. *The Vitalities*. Of all thefe Plants before defcribed, the firft is only, or chiefly ufed in *Phyffick*. It is cold in the third Degree, and dry in the fecond: Anodyn, Aftringent, Cofmetick, Diuretick, Repercuffive, Hyfterick, Nephritick and Arthritick.

XV. *The Specification*. It is prevalent againft Inflammations of the Throat and Tonfils, eafes the Head-ach and Gout, provokes Urine, and gives feafe in the Strangury.

XVI. *The preparations*. You may have herefrom, 1. A *Liquid Juice*. 2. A *Decoſion in Water*. 3. An *Infolated Oil*. 4. An *Ointment*. 5. A *Peffiary*. 6. A *Cataplafm*. 7. A *Pouder of the Bark of the Root*. 8. A *Pouder of the Seed*. 9. A *Decoction of the Root in Wine*. 10. A *Diffilled Water of the whole Herb*. 11. A *Collyrium*. 12. A *Lotion*.

The Virtues.

XVII. *The Liquid Juice of the Herb or Berries*. It is of ufe to cool vehement Inflammations, whether inwardly given or outwardly applied, being no t^hays dangerous as that of the *Solanum Lethale* is, <* as the *Solanum Somniferum*, which is fcarcely &fe for internal ufes. But however the Juice of this *Common Kind* by reafon of its great coldnefs, touft be given in due proportion ^ being firft clarified, it may be given (mixed with a little Honey) to a Spoonful or fomething more : It cures an Eryfpelas by Bathing therewith, and dipping double i-innen Cloths in it, and laying it over the Sore, 2nd is good againft creeping and corrodng Ulcers. •Bathed upon the Temples, it takes away the heat and Inflammation of the Eyes. The Juice of the *Somniferous*, comes nearly to the Quality of *Opi-^vn*^ to procure Sleep, but it is fomething weaker: dropt into the Ears, it prefently eafes their pain.

XVIII. *The Decoction in Water*. It has all the Virtues of the Juice, but not full out fo powerful, and may be given inwardly againft Fevers to three or four Spoonfuls, The Eyes wafhd therewith.

it takes away their heat, inflammation, and eafes their pain,

XIX. *The Infolated, or Decoded Oil*. It is made of the Juice or bruifed Herb, with Oil Olive or Oil of *Rofes*. Anointed upon Inflammations, Shingles, and Fiery breakings out; it cools, eafes, and heals them.

XX. *The Ointment*. It is made of the Juice mixed with Wine Vinegar, Oil of *Rofes* and *Cerufe*, ground together for a considerable time in a *Leaden Mortar*, till it comes to the confidence of an *Ointment*. It is good to Anoint with in all Heats and Inflammations, *Anthonies Fire*, Shingles, Fiery Puftules, and other like eruptions, in whatfoevf part vehemently afflicted with heat: it eafes the Head-ach, gives relief in *Frenzies*, the Temples and Fore-head being Anointed therewith, and cools Inflammations of the Eyes. And is profitable alfo againft Ringworms, Tettars, Shingles, Herpes and all forts of running, fretting, eating Sores or Ulcers, weeping and moift *Fiftula's*, &c.

XXI. *The Pffary*. It is made of the Green Herb and Roo} beaten together, and formed with Wool or Cotton, and then dipt into the Juice. Being put up the Womb, it flops the overflowing of the Terms, and the Flux of the Whites in Women.

XXII. *The Cataplafm*. It is made of the Greeti Herb, beaten in a Mortar, and brought to a moderate Confficiency with Barley flower. Applied to the Tefticles or Cods, it eafes the pain and difcuffes the Swelling, Applied to the place in a *hegrim*, or other Head-ach, it prefently eafes the Pain : and, difcuffes hot Tumors in the Throat; It gives prefent eafe alfo in the Gout.

XXIII. *The Pouder of the Bark of the Root*. Taken to a Dram in Wine, it eafes pain like *Opi-um*, and procures Reft and Sleep, but this Dofe is not to be exceeded for fear of danger.

XXIV. *The Pouder of the Seed*. It W j taken in White Port or Lisbon Wine, from h> Dram to a Dram: fo taken, it powerfully pro- vokes Urine, and is profitable againft the Dropi- and takes away heat and fcalding in Piffing: it ought not to be taken too often, nor in too great a quantity, becaufe it is apt to induce a Frenzy; The remedy of which is (as Authors fay) to Drink I liberally of Warm Honied Water. *

XXV. *The Decoction of the Root in Wine*. Being held in the Mouth, it gives eafe in the Tooth-ach: and *Pliny* fays, it is good to faften loofe Teeth.

XXVI. *The Diffilled Water of the whole Herb*, It has all the the Virtues of the *Liquid Juice*, and may be ufed in the fame manner, but in a greater quantity or Dofe: And Authors fa?, that the Water is fitteft and fafeft to be taken inwardly, and in that repect prefer it before the Juice.

XXVII. *The Colly rium*. Take of the Juice of the Root 3 Ounces.- Clarified Hony 2 Ounces; Vinegar half an Ounce-, mix them. Put into the Eyes, it eafes their pain and finarting, cools their heat or Inflammations> it ftrenghens weak Eyes, and clears the fight.

XXVIII. *The Lotion*. Take of the Clarified Juice 8 Ounces^ Red Port Wine 4 Ounces \$ Clarified Hony 3 Ounces •, mix them for a Lotion. It eafes the pains of the Teeth, cleanfes old, running and putrid Sores and Ulcers, and heals Cankers, and other like Sores in the Mouth and Throat, they being often wafhu and gargled therewith.

CHAP. DXXI.

Of NIGHT-SHADE· DEADLY.

OR,

D W A L E,

1. The Names. It is called in Greek,

In *hating Solanum Lethale; Solanum Lethiferum, vel Lethificum; Solanum Deleteriunt: in English, Deadly Nightshade, and Dwale.*

II. The Kinds. There is, i. *Solanum Lethale* (properly so called) *Solanum majus Matthioli* C^e-*falpini* & *Camerarij*; *Solanum hortense rugrum Tragi*, *Solanum fominiferum, Lobelij* & *Lugdunenjis*, *Solanum Lethale Clusij, Dodonai, & Tabernaj*, *Solanum Sylvaticum Gefneri, Juiguillar* Guillian-dini, & *Dodonai*, Deadly Nightshade. or Dwale. 2. *Solanum Lethale minus*, The lesser Deadly Nightshade. 3. *Solanum Somniferum alterum Matthioli, Camerarij, Gefneri* i^{ff} *Lugdunenjis* Solani *Lethali aliud genus Dodonai*, The other Sleepy Nightshade, which *Dodomeus* calls another Kind of the Deadly Nightshade.

The Descriptions

III. The first or Deadly Nightshade, or Dwale. Its Root is great, growing down deep into y^e and spreading great Branches therein

and he fides creeping under Ground rising up in several places di^lant, quickly spreading over a Ground. It grows sometimes to the height of a Man, but usually it rises up not above 2 or 4 feet high or something more having round green Stalky ^let with divers large Leaves much greater than any of th^e before, smooth and of a dark green color, ^let upon very short foot Stalks, among which at the Joints with the Leaves come forth several long hollow flowers dented at the brims of ^l deadish purple color in a green Husk growing upon a short stalk, which being fallen away, round Berries succeed, which are at first green but afterwards when ripe, come to be of a shining color, like shining or polished Jet, full of a purple Juice, many (sometimes) Seeds being contained within the whole Plant has no good Taste nor is it un^favorable, bitter, and very pernicious; the Berries are a little sweet and luscious, but not pleasant to an acute Palate.

IV. The second or lesser Deadly Nightshade. It is in its Roots, Stalks, Leaves, Flowers, Berries, Seed, Smell, Taste, form and manner of growing, unlike the first, having that in this the Leaves are

and of a darker green color, and first and upon long foot Stalks, and the flowers which are Bell-shaped as the other, are not so great and large as they are.

V. The third, or other Sleepy Nightshade called by *Dodonaus*, the other Kind of Nightshade. Its Root is great, and spreads it out into many Branches under Ground, with many fibres adjoining to them. It has an upright or cornered Stalk, with many Leaves thereon, longer and narrower, than those of the True or Deadly Nightshade, and more inclining downwards to Ground, full of Veins running longwise and transverse therein. At the Joints of the Stalk, from the middle part upwards, come forth several

lous Flowers, hanging by very long Stalks, being longand, hollow like unto a Bell-Flower, of a purplish color each of them set in a large green Husk, dented or cut into five parts at the edges, but not very deep: in which after the Flower is past, comes forth a round Berry of a deep blackish purple color, enclosed therein to the middle, and having a Crown like form to the Head of the Berry, which has a white like Juice, and many small white Seeds within it.

VI. *Hie ? laces.* The first and second grow Wild, not only in several Woods in Germany, but also in a great number of places in England, as in the Castle Yard of Yramingham in Suffolk under the Wall of Jesus Colledge in Cambridge, and in many other places of that Country: at Ilford in Essex: at Croydon among the Elms, at the end of the Town: in More Park: in the Park of formerly Sir Percival Hart, at Lellingstone in Kent, on the CWy Borrows in Barling Park like life: also in the Way going from S. Mary Cray, to Fooks Cray, over against a great Field called Wenael. In former Years it was found growing in 3n Orchard in Lynt-Regis in Norfolk, near the South Gate where it bore noble and great Berries as large, * large Black Cherries * of which I remember a little Boy of about 7 Year old, (Job Taylor by Name, a Gardiners Son there by) eat several of them, by which he was Poisoned, and died in a violent Fever, swelled in the Stomach and Belly, the whole Body being as red as Fire, an U in about ? Hours time the number of the BBRes, according to the belt of my remembrance, did not exceed a dozen, for this Accident sake, the Owner of the Orchard, rooted it out of his Ground. The last grows in the East Countries in Syria, as also in Italy near Jrent but with us only in Gardens, where it is Nurft up by the more Curious. The first is also found plentifully in Holland in Lincoln-Mre, and in the Ile of Ely, at 3 place calkd Wai-

forken in Norfolk near Wisbicb: it was also found growing near High-Gate, not far from the Pond on the left Hand, as Gerard says: It grows generally in untird places, near Highways, near Hedges and in the corners of Wood-land Grounds, and sometimes in Marshy places.

VII. *The Times.* These Plants flourish all the Spring and Summer: They Flower in July and August: and their Fruit is ripe in August and September, after which they fade and dye away.

VIII. *The Qualities.* Deadly Nightshade is said to be cold in the fourth Degree, and dry in the third: Anodyn, Narcotick, Repercussive, Arthritic, and Deleterious.

IX. *The Specification.* It is prevalent against Inflammations, Shingles, Anthonies Fixe, Ophthalmies, and to cause rest, but by reason of its Mortiferous quality, is scarcely ever given inwardly.

X. *The Preparations.* You may have herefrom, 1. A Liquid Juice of the Leaves, 2. An Ointment, 3. A Cataplasm. 4. A Distilled Water.

The Virtues-

XL *The Juice of the Leaves.* Used either alone, or mixed with a little Vinegar, and Bathed upon the Fore-head and Temples, upon any great Distemperature, or in a Frenzy, long watchings, or in a long Sickness and Weakness, it causes Kelt and Sleep. It takes away the Violent pains of the Head from a hot cause, allays Inflammation, and is good against the Shingles, and an Erysipelas or Anthonies Fire, and all other Fiery and running Cankers, it cools them, and stops the spreading of the Gout, it eases the pain and the Humors, if in the beginning but is not proper to be Applied if the Disease has been of continuance, left it tends it up into the Stomach to the Patients farther detriment.

XII. *The Ointment.* It has all the Virtues of the Juice, it cools, allays Inflammations, eases pain, causes Rest and Sleep, being anointed upon the proper parts, and is found to be a very good thing against the Distemper of the Spleen; being anointed upon the Region thereof.

XIII. *The Cataplasm.* It has all the Virtues of the Liquid Juice, besides which, being applied to simple Contusions, it repercusses the flowing Humor, and cures them. It eases the pains of the Gout upon the spot, and in the beginning prevents the afflux of the Humor.

XIV. *The Distilled Water.* It has all the Virtues of the Juice, but much weaker. It may be given inwardly from 1 Ounce to 2 (as Authors say) and that without any danger: it is good against Heart burning, and Inflammations of the Viscera, and being bathed upon the Eye Lids, Or put into the Eyes, it is good against Ophthalmies, or Inflammations there; but it is much more powerful for this purpose, if it is mixed with equal parts of the clarified, or filtrated Juice. It Cools and removes the Fluxion, to admiration.

XV. *Nota.* This Plant is of itself Malign and Destructive Qualities, that neither its Juice, Roots, Leaves, or Berries, ought to be given inwardly, but the Berries are a certain Poison even upon the spot, as appears by the sad Example of the Roy before related, who was out next Neighbors Son and my Play Fellow, my self being much about the same Years: I eat one or two of the Berries at the same time, but by reason of their Lufurious

or Maukifli Taffe, eat no more of them, and fox that reafon efcaped the danger.

This Cut fhould have been placed in Chap. 77. aforegoing -, but that it might not be loft, we have put it at the end of this Chapter.

CHAR DXXII.

Of NIPPLE - WORTS

*• HP H E Names. It is called in Greek, A«p X 4*V»: in Latine, Lampfana, albo, and is thought to be the true Lampfane Diofcoridts: in Englifh Nipple-wort.

, U. The Kinds. Some will have this Plant to oe a Species of Sonchus or Sotqfbijile \$. others Of Hieradum, or Udwkweed^ -if it is a Species of either, it feems rather to be of the latter; I rather think it to be a peculiar Plant Jui generis, or of its own kind. The three following Species we (hall defcribe to you, vis. 1. Lampfana Vulgaris, Lampfana Diofcoridis ; Lampfana Lobelij, Dodonai, Lvgdunenfis, Tbfy & Cawerarij^ Papfflaris Carrierarij^ Sonchis ^ognatum Ge^fneri^ Cf Sonchi genus 5 Our Common Nipple* Wort 2. Soncho affinis Lampfana Sylvatica -, Bauhin\ Sonchus Sylvaticus fecundus Tabern&monta- "K Wild or Wood Nipple-wort,, Baftard Nipple-wort, 3, Lampfana AuJtriacaParkinfonii Sonchm ^annonkm quart us Flore pur pureo Qlufij j

Lattuca Montana Flore purpureo Bauhini, Clufius his Auftrian Nipple-wort,

The Defcripöiohfi

III. Vie/üft, or Our Common Nipple-wort, Its Root is fmall arid threddy^ and being broken orcu?, yields a white bitter Milk or Juice. From whence fpring up one or more upright hard Stalks, on which grow dark green Leaves, from the bottom to the tops^ but leffer ft ill as they grow higher: in fome-places whole without dents on the edges, and in others zyith a few uneven cuts therein^ fometbing after the manner of Hawkweed. The tops of the Stalks have fmall long Branches, which bear ^ary, jmall Star likeyellowifh Flowers on them, which 'ton* vert into fmall Seed.

IV. In Gerard, the former is thus DefcribedL Its Root is fmall Fibrous and white 5 its Leaves are roughifh and hairy, of an over-worn green color, deeply cut or indented^ on both fides like the Leave* of fmall Turneps. # The Stalks grow to the height of two or three Cubits, and fomeitimes higher, dividing- them/elves towards the top, into fun*9 little Branchto, whereon grow many fmall Flowers, like thofe ^Hieracium or Hawkweed: which decaying are fucceeded by little Crejied Heads, containing a longifh fmall Seed, fomewhat like to 1-24 tice Seed, but of a yellowifh color. The. vbi 81 albo Milky, and the Stalk Woody.

V. The fecond, or Wild, or Wood, or Nipple wort. This Wild or Wood Kind is not much either in Root, Stalks, Leaves, Or M-Wncr of growing from the

being very like unto it -, but its Leaves are Jome-wbat broader *, and it has a greater ft ore of Branches, but in it's Flowers and other pãrticulars, it differs not much.

VI. *The third, or Clufius his Auftrian Nipplewort.* Its Root is Jmal\ fibrous, and enduring many Tears. And it has feveral J slender j smooth and folid Stalks, not cafy to break, a Cubit high or more-, on vohich are Jetzvithout any order, fomeziohat long and narrow Leaves,, broadeft in the middle, and Jharp at the ends, waved a little about the edges, and compaffing them at the bottom, yielding a little Milk. From the upper Joints with the Leaves, Jpread forth Jmall firm Branches, yet d little bending, bearing each of them four or five long green Hush, and in them Jmall purplifh Flowers, of five Leaves apiece, nicked in at the broad ends, with Jowè Jmall Threads in the middle, which turn into Downe, which is carried away with the Wind.

VII. *The Places.* The firft grows almoft every where by High-ways, upon Walls made of Mud or Earth, in Stony places, upon the Banks of Ditches, and Borders of Fields, in moft Counties of England. The fecond near Wood-fides and Hedge-rows. The third *Clufius* found in *Hungaria*, and in *Saxonies tiarcynia Sylva*, and other places \ but with us it is only found Nurft up in *Gar dens*.

VIII. *The Times.* The firft Flowers from May to the end of *Auguft*, and the Seed is ripe in *July*, *Auguft*, and *September*. The fecond and third Flower in the *Summer* Months, and their Seed is ripe, foon after.

IX. *The Qualities.* The firft which is that which is only ufed, is temperate in refpett to heat or cold, drynefsormoifture. Digeftive, Abfterfive, of thin parts, and able to abforb the Virulency of (harp and corroding Humors.

X. *The Specification.* It is pectftrar againit Shingles, breakings out of the Lips affer Feve*\$ Jharp and running Sores, and the exulcerated Nipples of Womens Breafts, whence it came to be Called *Papillaris* or *Nipple-wort*.

XI. *The Preparations.* You may have therefrom, 1. A *Liquid Juice*. 2. An *Ointment*. 3. A *Cataplafm*.

The Virtues.

XII. *The Liquid Juke.* It cools Inflatnations, dilcufflès Tumors, and is good againft fore Eyes, Shingles, Pimples, and breakings out of the Fao and other parts -, applied to the Sore Nipples 0 Womens Breafts, it heals them.

XIII. *The Ointment made tatb Hogs Lard, and * little Bees Wax.* It is one of the beft things i the Woild to heal Womens fore Breafts and ion Nipples being applyed: 15 alfo heals fuperfickll tuning Sores in other parrs.

XIV. *The Cataphifm.* It has all the fame Vi tues of the *Liquid Juice* and *Ointment* : Abforb the acid and corroding Humor, and cures fimpr Contufions*

CHAP. DXXIIL

OAK of CAPPADOCIA.

THE Names. It is called in *Greek*, *Au- C'cidL %vj&eg. (quafi TO ?£? Qsav C? <yua> Dect-ti??i* *ibus*, the Food of the Gods, from its exce.i. :t fragrançy, and for that it feems to give long L.,Z r0 fuch as eat thereof, that they might be held io be in a manner ImmortalJ In *Latine*, *Ambrcftã Hortenfis*, *Ambrofia vera**, *Ambrofia Mar it imaBau- zini*, *Ambrofia Sativa Cawerarij*, *Dodonji*, *Lobelij*, *J-Tabernicmontani*; *Artemifia fecunda P/inij* h Ar7 emifu genus *Gefneri*, who with *Anguillara* and *Jameranus* fuppofe it alfo to be *Conyza Hippocra* zis*; *Artemifia monodones Lugdunenjis*: in *Englifh* ^ *Oak of Cappadocia*.

II. *The Kinds.* It is a fingular Plant, fui ge- neris -, I know other Authors make two or three brts of *Ambrofia*, but two of them are other Herbs, which have no relation to this, as the *Coronopus reffvs.*, (ff *Coronopus ropens Ruellij*, *Bucks-Morn*, or *Wart-Creffè*, of which we have already difcourfed in *Chap. 91.* albrẽgoing: buc what we creat of here is the firft Kind, both of *Lobe I* and *Gerard*, which is the True *Garden Ambrofia*, rhofe other being *Ambrofia agria*, and Plants of another Species.

III. *This Plant, or Oak of Cappadocia* 7- long flender Root, Jpreading iffelfforth into many Branches and Fibres-, from which comes forth onè hoary, white, firiped, or Jtreaked Stalk, riling r he two Feet high at leaft, in any good fort of Ground which divides or Jpreads it Jelf out into many Branches, from the very bottom h on which grow without any certain order, Leaves fomewhat large^ upon pretty long foot Stalks, very much cut in QH the edges, Jomewhat refembling the divifvns of Mugwort Leaves, efppecially the ends of them, but much Jmailer than they, being all whitifh or hoary upon the green, and of a very f leafing Smell, not Jo hot or Jtrong a* feotrys or Oak of *Jerufalenio* At the tops of all the Branches both great and Jmall^ grow the Flowers, which are Jmall, round, yellow^ Moflie Buttons, never opening abroad, nor bringing any Seed, but fall away like Chaff But under thefe Flowers from among the Leaves, come forth Jmall fioort Stalks, hearing two or three or four Jmall rough and pointed Heads, without any Flowers before them, in which is contained Jmdll, round blachfh Seed, almoft like the Kernels or Stones of Raifons or Grapes.

IV. *Gerard* gives us another defcription, which being compartUwith the former, will more excellently declare and fit out the Plants and it is as follows. *The Root and whole Plant perifhes with us in England at the firft approach of Winter.* Di- ofcoridesy2/hr, that it grows about three Handfuls high, but in *Gerards Garden*, it grew to be about three Feet high, yielding many weak, crypkql, an& v Jtreaked

fir caked Branches, dividing them/elves into fever a- other fmailer Branches, having from the midft u: the top thereof many Mofsie, yellowifh Howers, not much unlike to thofe of Our Common Wormwood, ftanding one before and above another in good order. And the whole Plant is as it were covered over with Bran or a Mealy duiff. The Flowers do change into finally prickly, cornered Buttons, much like unto Tibulus Terrefttris (in Chap; 106. aforegoing) h- which is contained black, round Seed, not unpleafant, in either Tafte or Smell. The Leaves are inftant like unto the Leaves of Mugwort, but thihner and More tender: all the whole Plant is hoary, and yields a pleafant fcent.

^ V. *The Places.* It grows Naturally in *Cappadocia*, and it is a Native alfo (as *Bellonius* fays) in many Places of *Afia Minor*: but with us, and fo likewife thro^s all *Europe*, it is only Nurft up, and found growing in *Gardens*.

VI. *The Times.* It feldom Flowers in our Country till *Auguft*, and very rarely gives us any ripe Seed; for theleaft cold Night coming before it Seeds[^] makes it prefently dye away and perifh, fo that for the moft part (without very great care) we are to feek out for Seed, from *Spain*, *Italy*, and ether like places.

VII. *The Qualities.* It is hot and dry in the fecond Degree, and of thin and fubtile parts. It incides, is Abfteriive, Afringent and Peftoial.

VIII. *The Specification.* It flops a Fluxion of Kheum of Humors into the Stomach and LungS^{*} cures Fluxes of the Bowels: and (as *Gerard* fays) cuts tough Flegrh, and is good for fuch as are Inort Winded, and cannot eafily draw their Breath,

IX. *The Preparations.* You may make herefrom, i. A *Liquid Juice*. 2. A *Decollion in Water or Ifine*. 3. A *Conferve of the fyeen Herb*. 4. A *Ponder of the dried Herb*. 5. An *Ointment or Balfam*. 6. A *Qataplafm*.

The Virtues.

X. *the: Liquid Juice.* It is Abfterfive and cleanfing, and flops the Flux of Humors into any part, and therefore is of excellent ufe to ftrengthen the Stomach and other Bowels, and cure Fluxes o^{*} all kinds in thofe parts. Externally applied to any part, it repells the flowing Humor, cleanfes old running Sores and Ulcers, and induces their healing. Dofe i, 2 or ? Ounces morning and Night in any proper Vehicle.

XI. *The Decoſion in Water or Wine.* It has all the Virtues of the *Liquid Juice* but notfo powerful; it may Be given from 4 to 6 Ounces, sweetned with white Sugar, or Sugar Candy, and fo exhibit^s it is profitable againit Coughs, Colds, Wheezings, fliontnefs of Breath, difficulty of Breathing, and caufes an eafy Expectoration of the pituitous matter lodged in the Brett and Lungs.

XII. *The Conferve of the greep Herb.* It has the Virtues of the *Juice* and *Decoſion*, and is ufed as an excellent thing by fuch as are in Confuraptions, and have lain under the tedious languifhment of an inveterate Cough. Dofe as much as a Cheftnut.

XIII. *The Ponder of the dried Herb.* It is given ^{a ^ r a m} or more in any proper Vehicle againit the Bloody Flux, and all other Fluxes of the Bowels: outwardly being plentifully itrewed upon *J. f t* running Sores and Ulcers, it cleanfes ^{«?»} reprefles the farther Flux of the *Ulcers*: and dif^{po}fc[>] them to a fpeedy healing.

XIV. *The Ointment or Balfam.* They are Vulnerary and of great ufe in healing nbt only of Green Wounds, but alfo of old Sores and running Ulcers, of difficult cure, for they djgeft, cleanfe, incarnate j dry, and induce the healing to a wondel^{*}.

XV. *The Caiaplafm of the Green Herb.* It repells the Humor and cures fimple recent Contufions/ According to *Diofcorides*, it has a property to flop, repel and bind thofe Humors, which fall into any part of the Body, being outwardly applied ^ and of the fame opinion alfo is *Galen* himfelf.

CHAP. DXXIV.

O/ O A K of J E R U S A L E M

I. **T**HE Names. It is called in *Greek*, *Βοτρύς* in *Latine*, *Botrys* alfo: and in *Englifh* >> *Oak of Jerufalem*. All Authors call it *Botrys* -, but *Diofcorides* fays, that in his time, The *Cappadocians* called it *Ambrofia*, and fome others called it *Artemefia*. *Cordus* upon *Diofcorides* calls it *Ambroftf alter a Species* *, and he fays that in fome Apothecaries Shops in *Germany*, the Seed was taken for *Amomum*. In the *Hortus Eyftetenfis* it is called *Artemefia Turcica*: and *Camerarius* fays, the *Italians* call it *Patentia*.

II. *The Kinds.* Formerly there was but one fort of *Botrys* known, but now we have found out another, growing in *Virginia*, i. The firft is called *Imply Botrys* (a *Mori bus* & *Seminibus* in *Botryos formam ramulis infidentibm*, from the Flowers and Seed growing like unto a Bunch of Grapes.) Alfo *Botrys vulgaris* but *Bauhinus* calls it *Botrys Ambrofioides vulgaris*, Our Common Oak of Jerufalem. 2. *Botrys Americana*, which *Baubinus* alfo calls *Botrys Ambrofioides Mexicana* \$ it is likewife called *Botrys Virginiiana*, iff *Botrys Fruticofa Americana*, American, or Virginian Oak OI Jerufalem, or Shrubby Oak of Jerufalem,

The Defcriptions.

III. *The firft, or Our Common, Oak of Jeru- falem.* Its Root is long and bard after giving Seed, perijhing Tearly. It is a fmall Bujhy Plant full of Branches, about a loot and half high, with fome few, and not many leaves thereon, which at the firft jpringing up, are reddifh on the underfide, and afterwards grow to be of a yellowifh green color, more efpedaily when they grow old, and in the time of flowering and Seeding, which are much cut in on the edges, like unto Grqundfel, but larger. *Gerard* fays, that the upper fide of the Leaf is of a deep green, and fomewbat rough or hairy ^ and that the Branches are befet with fmall Leaves deeply cut in or jagged on the edges, very much refembling the Leaf of an Oak, which caufed our Englifh Women to call it Oak of Jerufalem. From the middle of the Branches upwards to the very tops, grow fmall, pale, yellow, Flowers like the Bloffoms, or young Blowings or Clufters of the Vine, which turn into fmall brownifh Seed. The whole Pl[^] of a very pkafant Smell and of a kind of

*Aromtick Scentvand while ft itis green is fome-
tbing clammy in handling**

IV. *The Second, or American, ^Virginian Oak of JeruJWem. Its Root is, finally fibrous and and Woody. W rife stup alfo higher than the former, and its Branches are wore Ligrtcus and durable. The Leaves are Something like unto Wild Arach, but larger, and much, cut in on the*edges, like un- to the former. The ihhole Plant both Flowers and Seed, k moft liketo the fir ft or our Common Kind-3 and where it is d Native, a* in Virginia, Florida, Mexico, &c. it will abide the Winter Season, be- zausfe it is nothing fo violent as ours ^ but it will not endure the Winters cold* with us, without much care in Houfing and preferving 'it: but- it will Spring up again of the SeedSown the next Tear, a* Some other Plants do. The Smell hereof k Some- thing ftrong, but very fleaSant, and comes very near to that of the former.*

V. *The Plates.* The firft grows plentifully in Italy, as alfo in the Southern parts of France, both by Water fides, and in dry Sandy Grounds, but with us it is Nurft up only in Gardens. The Second is a Native of Mexico, Florida, Carolina, Virginia, front fome of which places, it has been brought home to us, and planted in our Gardens, or in Pots, that it may be Houfed, and fo be< preferved againft the coldnefs of the Winter.

VI. *The Times.* They both Flower and Seed in j, Auguft and September, and do often times raife themfelves of their own fowing, more efppecially the former.

VII. *The Qualities.* They are hot and dry in the fecond Degree: they are both Aperitive, Attenuating, Inciding, Pe&oral, Arthritick, Hyfterick j and a little Cathartick as fome Authors hold.

VIII. *The Specification.* Tney are of extraotdi- i nary ufe in the curing of Athma's, Coughs, Wheez- ings, and other obfru&ions of the Brest, Lungs, Reins and Womb.

IX. *The Preparations.* You may make, 1. A Liquid Juice. 2. An Effence. ?; A Deco&icn^ or Infufion in Wine. 4. A Pouder of the Herb. 5. An Ointment or Balfam. 6. A Fumigation. 7. A Cataplafm. 8. A Spirituous Tinturei 9. An Acid Tintfure. 10. An Oily Tintfure. iu A Syrup.

The Virtues,

X. *The Liquid Juice.* It is a very good thing ~~z~~pinft an Althma, Wheezing, and Ihortnefs of breath, being taken with an equal quantity of Honey Morning and Evening: It opens obftiffitions of the Brest and Lungs, and caufes an eafie ex- ploration of the tough Flegm, and other crude Humors which opprefs them: It cleanfes aifo filthy and corrupted Lungs, caufing the putrid Matter to ^{be} fpit. forth, and if they be pculcerated, it very ^{uch} conduces to the healing. Dofe from twp ¹⁰ three Spoonfuls Morning and Night.

XI. *This Effence.* fc has all the Virtues of the Juice, and may be given from 1 Spoonful to 2, ~~z~~ with an equal quantity of Orarified Honey, ~~z~~ with as much Syrup of Violets, and fo to be ~~z~~ twice a day as the former. It is an excel- ~~z~~ thing againft a Cough or Catarrh, df conji- ~~z~~ tual deluxion of thin, fair, and fharp Rheum. *&

XII. *The Decoftion or Infufion in Wine.* If a Jittle of Liqtorice Root bruifed, be added to ³ it will be fo much the better^ and then ⁷ ken from .3 to 6 Ounces mixed widi a Spoon, ²ui or 2 of Clarified Hony, or Syrif of Violets, ^{ix} will have all the effects of the Juice ox Eflnce,

Outwardly ufed as a Gargle for fore Mouths and Throats, or for old running Sores, or putrid Ulcers l in any other parts, it cleanfes them, drys, and admirably induces their healing.

XIII. *The Pouder of the Herb.* Taken to a Dram (in any fit Vehicle) ir ftrenghens the Stomach, expek Wind, gives eafe in theCholick., and flops all fortts of Huxes of the Bowels, and ftrewed very thick upon external moift and running Ulcers, ir cleanfes them, correQ^ the acrimony.; drys and heals them.

XIV. *The Ointment or Balfam.* They are good Anodyns and Vulneraries, digeft and heal fimpie Green Wounds., and that in a little time, difqufs flatulent Tumors, digeft, cleanfe, and incarnate (where need is) old Ulcers, dry, and difpoie therri to a fpeedy cure, if in places eafily admitting the Opefttion.

XV. *The Fumigation.* It is made of the Decoffi* oh or Infufion in Water or Wine, which being put into a Copper Pan is to be Set upon a Chafing Dijk of thoroughly kindled Char cole, in a Cloje-Jiool: The ai Woman fitting over ir, fo as the Futoes may be received up the Womb, it is laid to bring dowrf the Courfes, and to expel the Dead Child,

XVI. *The x Cc&aplafm.* It is* made of the Green Herb, being hWted in a Frying-pan, or otherwife^ and moifined, with a little Canary, Mu/cadine, or other Wine, and applyedhot to the Region of the Womb, it gives eafe in pains of the Mother. O^ ySu may make it of the Green Herb, with the-ad* dition of Fstherfew and Camomil Homers, and fryed together vbith the Oil of Li Hies, or of Rofes, of Camomil This being applyed hot to the Bëlly, of a Woman in Child-Bed, prefently gives eafe in- and takes away the After-Pains.

XVII. *The Spirituous Tintfure.* It wa ~~z~~ns ~~z~~ comforts the Stomach, expels Wind in the ~~z~~ is good againft Convulfions of the .Vijccra ~~z~~ gives eafe in the Cholick.

XVIII. *The AcidTintfure.* It (Sbwerfully openj obftuffions of the Thorax, cuts tough Flegm, ani makes ir fit for expectoration, ftrenghens the Stomach, caufes a good Appetite and Digeftion, and kills Worms in Children, Dofe 20 or 30 Drops in any fie Vehicle.

XIX. *The Ohiy TinUure.* It is good againft Convulfions of the Stomach and Bowels, prevails againft Paralytick Diftempers, opens obftuffitions of the Reins, Ureters and Bladder, gives relief in the Strangury,*powerfully provokes Urine, and gives prefent eafe in After-pains, to Women in Child- Bedl Dofe 20 or 30 Drops.

XX. *Syrupus Botryos.* Syrup of Oak of Jeru* falem. Take Oak of JeruJalem, Hedge Muftard, Nettles, of each 2 Han df ids, Coltsfoot a Handful and half: Boil them in a fuffient quantity of Spring Water till half be confumed-, ftrain out, and to 2 Pounds of Se Decoftion add 2 Pounds, (fome fay 1 Pound) of the Juice of Turners baked in an Oven in 4 clofe Pot: and with 3 Pounds of white Sugar, boil it to the Confiffency of a Syrup, It is a good Pe&oral, defigned againft Athma's, Coughs, Colds, Shortnefs of Breath, Ulcers of the Lungs, Spitting of Blood, Confumptions, and other likd Infirmities of the Brest and Lungs, proceeding from cold, fait, fharp Rheums, and tough Flegm, obftuffing thofe Parts. Dofe from an Ounce to 2 Ounces, to be fuckt in leifutely with a Liquo* rice Sticki

XXI. *Nota.* This Plant or Herb, (as alfo Oak of Cappadocia) are much ufed to be laid in Ward- robes, or Prefles and Chefts, both to kiil and drive away Moths, and by their ftVeet Smell to Perfume the Garments,

CHAP- DXXV.

O / . O A T S Manured and Wild.

THE Names. This Kant is called by the Arabians, Chartal; in Greek, >C> and <B?<, quod Cibum fignijicat: in Latine, Avena and in Englijb, Oats.

II. Tfo IC/WJ. It is two fold, I. ManureS, viz. i. Avena Vffca, Manured Oats. 2. Avena nuda, Naked Manured Oats. II. 'Wi/i O<tfr, viz. 3. BfjK Tca, Avena Sylvefris, Avena Sterilis, Bromos Herba Dodon&i; Bromos Sterilis longiffmularifitis Lobelij, h iefiucaGo Gaz& •, hejiuca & Avena fatua, Avena Graca, all or urn: Lofij primum genus Tragic JEGilops Matthioli*, Common Wild Oats, or Wild Bearded Oats. 4. Avena Sterilis minor ^ Bromos Sterilis alt era Lobelij; feflucaaltera Dodon<ei -, Syphonium iff Bromos herba Tabern* (montanii) Small Wild Oats.

The Descriptions.

III. The firft, or Manured Oats. The Root is fmall and fibrous or Thready, which [ends up feveral tall jointed Stalks, with large Graffy Leaves, fomewhat refembling Wheat, bearing at the Tops c large fspread Tuft, of many pointed Aglets^ hanging dojin like fmall winged Birds, from fmal

Threadlike foot Stalks*, within every one of wbk Husks lies a fmall and long round Grainy fomewhat UKS_unto Rye> fqt longer, and more pointed, cover

ed with a hard, horny, jhining Husk, flicking clafe

IV. Thefecond, or Naked Manured Oats. W ?lant grows in all refpeUs like the fanner \$ fliving hat the Grain being fomewhat fma^m^ & whiter, fyes not fo fa ft enclosed in the Husk, but is very afily rubbed out with ones Hand.

V. The third, or Common Wild Oats, or Wild* Bearded Oats. Its Root is fmall and ftr^*£ Thready like the firft: and this Common Wild Oar, grows both in Stalk and Leaves, fomemng like unto the firft Manured Oat, but that it feldom fnes fo high, being lovoer, flenderer, fmallr, ##

fofter. The tufted Head is fspread in the like ner, having fuch like winged Husks, with h Awns mt the ends of them, but gentle, and >10* prickly, growing upon fmall tender threadlike fo^ Stalks. In thefe Husks is contained the Grati* which is fmall and lank, a# if it had nb Subft&^C* in it.

VI. The fourth, f or Small Wild Oats. V* Wild Oat is very like the former, but leS^ m Stalk and Leaf The fparfed Top, confifis of ^f flender long Chaffy Ears, Bearded only at the growing upon long jlender foot Stalks, andha^ h down their H*ids, with fmall Grains in them, at that in the former. Of ibis Species there is anow fort, called Avena fterilis minor Serotina ^ >arsifits Oatsllate, or notilll the oherbte P^N LU

VII. The ?laces. The Manured Kinds of w forts, are Sown in Fields, for both Mans; a f Horfes Food, but the Naked Oats are f^M^nf frequent as the firft Kind, and they deligM: i ^

up. The M^r/i Kinds are found in many places with us among Rye and Early-, and the fourth Kind many times plentifully by Hedge-fides.

VIII. *Tb[^]Times** The *Manured Kinds* are *Summer Grains*, *grown in the Springy* and Reaped or Cut down in *Autumn*. The *Wild Sorts* are ripe in *July* and *Auptjl*.

IX. *Not a*. The *^wtftf ^/ ^>* are fo called *<** *Vefcendo*, becaufe in many Countries they are eaten, feeing made into *Out-Meal*, of which they make Bread, Cakes, Puddings, £?V, and being Malted, are alfo by ibme People made into Ale or Drink, very good, and exceeding in pleafantneis that made of *Barly*. The *Avena nuda*, is like unto the former *Oat*, but differs in that thefe *Naked Oats*, as foon as they are Yhraftied or Rubbed out, without help of a Mill, become *Oat Meal*, and fit for ufe[^] for which reafon, in *Norfolk* and *Suffolk* they are called *Unhulled-* or *Naked Oats*.

X. *The Qualities*. *O[^]ts* (according to *Galen*) are cold and dry, and acording to our Opinion in the beginning of the firft Degree, ' *Abfterfive*, *Afringent* and *Nutritive*.

XI. *The Specification*. Authors fay , they flop Fluxes of the Bowels: and yet made into Water Gruel, or Milk Porridge, they certainly open, and loofen the Belly.

XII. *The Preparations*. You may, have therefrom, 1. *Oat-Meal*. 2. *Bread, Cakes, Puddite*. 3. *Gruel or Broth*. 4. *A Cream*. 5. *A Cataplafm*. 6. *Malt*. 7. *Ale or Beer*. 8. *A Decottion**

The Virtues.

XIII. *The Oat-Meal*. *It h hulled in a Mill*: Eaten in any quantity raw by Young Virgins, it gives them the Difeafe CMwjfr, or that called the Green Sicknefs, caufing a frefh and well colored Maid to look white, or of a Tallow Complexion', and almoft as pale as Death. Made very hot in a Frying-Pan, and put into a Linnen Bag, and applied to the Stomach or Side pained, it gives eafe in the Colick, and takes away Pains and Stitches in the Side: but this ought to be done with whole *Oat-Meal*, or with *Oats* unhulled.

XIV. *The Bread, Cakes, or Fudding*. They are made of the flower of the *Oat-Meal*, according to the ufual Method. They (top Fluxes of the Bowels, nourifh much, and reftore in Confumptions. But *buddings made of the whole or Ground, and filled very full with Beef Suet Jhred fmall[^] and blew Currants[^] or Raifons of the Sun*, always loofen the Belly.

XV. *The Gruel or Broth*. If made fayory with Salt, and eaten with a good quantity of frefh Butter, it loofens the Belly, and by continuing thereof makes it foluble; it fweetens the Juices and *Lympha*, and takes away the Acrimony of the Humors: the thicker it it made the more it Jjourifhes, but if made to take with Purging Phyfick, it ought to be thinner. If Milk is added to^{xt}, tho^o it loofens the Belly, yet it nourifhes much more than the fimple Gruel alone.

XVI. *The Cream of Oat-Meal*. *It is made by boiling with Water 1 the Head being continually fcumnd off: or it is made with the very fine[^] the Flower, firft boiled with a little Water, them[^] ding Milk to it, it is boiled to a Confiflency*. It lias all the Virtues and goodnefs of the *Gruel otBroath*, but much more delicious or pleafant: Mixt with fine Sugar or Sugar Candy, and fo given, it is profitable for fuch as have gotten a Cold or Cough,

XVII. *The Cataplafm*. *It is made by boiling in Milk, and till it comes to a Confiflency*. It moderately difcuffes, and that without biting or any ftirpnefs: it allays Inflammations, and ftrengthenes the part it is applied to. If mixt with *Oil of Bays* and applied, its good againft the Itch and Leprofe: it diffolves or difcuffes hard Apoftems-, and is profitable againft a *Fiftula in Ano*, or in the fundament. *If the Cataplafm is made of Wine Vinegar[^] it difcuffes hard Tumors Strengthens weak parts[^] and takes away Sp6ts, Freckles and Morpew in the Face, or other places of the Skin*.

XVIII. *The Malt*. *A firong Decozlion of it male into a Syrup with Hony*, is good agaiqft an *Afhma*, as alfo for Coughs[^] Colds, Wheezings, fhortnefs of Breath, &c. *Mixt with Turpentine and Tolc of an Egg*, it Digefts old, running and eating Ulcers, and facilitates their Cure.

XIX. *The Ale or Beer*. It has all the Virutes of thofe made with *Barly Malt*, but this is much pleafanter, and is not fo Heady: it quenches Thirft more, and inflames left, b7 which means, thole who drink ir, Live in good Health and Strength of Body: and paffes fluch better off by Urine," carrying away with it the Recrements of the Reins, Ureters and Bladder.

XX. *The De&a'wn of the Oat-Meal*. If fuch as have a *Serpigo*, or *Impetigo*, in their Hands or Feet, (hall daily twice or thrice a day for fome confiderable time, Bathe them here in, for half an Hour at a time or more, it will at length heal thofe Chops, Clifis, or Rifts: but it ought co be done as hot, as the Patient can well endure it. So alfo if fuch Hands or Feet be held over the Fumes hereof, it is very profitable forthe fame Purpofe[^] more efpecially if the *Deeoftion is made with White Wine Vinegar*.

THE Names. It is called in Greek, *αλάριον* X SAWCA* *} 8el's i&M<ma: in Latine, *Laffuca Marina*, *Fucus Marinus Laffuarius*: in Exglifh, *Oifler-Green*, *Sea-Lettice*, and *Sea-Lungwort*.

II. *The Kinds*. There are two feveral Species of this Plants viz. *i[^]LaSuca Marina*, *Fucus Marinus Diofcoridis*; *Mufcus Marinus alt era Matthioli*, *Fucus Marinus prior Dodonxi*, *Mufcus Marinus Theophrasii*; *Fucus Marinus primus Diofcoridis* iff *Theophrasii* \$ *Bryon Latfuc<e foliis Flinio* & *Lo-befio'i Lichen Marinus Gerardy* 1 Our Common OifU*^o

Oifter-Green, Sea-Lettice, or Sea-Lungwort. 2. *Lichen Marinas rotundifolius* Gerardi, *Opuntia Marina Qortufi**, *Corallina Latifolia**, *Sertularia Imperati*, *Lichen Marinus Cufij*, *Fucus Marifimus*^ iff *Fucts folio rotundo Bauhini*-, Oifter-Green, or Oifter-Weed round Leav'd ^ Sea-Lung-wort round L. Sea-Garland.

the DefcriptioftA

III. The firft^ or Our Common Oifter-Green, or Sea-Lungwort, is a Kind of Sea Fucus, or Herby Sub fiance, like unto Liverwort, or Lungwort, altogether without Stalk or Stem, bearing many green Leaves, very uneven or crumpled, and full of Wrinkles, fomthing broad, not much differing from the

Oifler-Green, or Sea Lung-wort

Leaves of curled Lettice. It grows upon Rocks within the Sea, but more especially among Oifters, and in great plenty among those called Wall-Fleet Oifters. It is very well known even to Oifter Women, who make use of the said Moss for setting off their Oifters, that they may Sell the better. It is a tender Herb, with dark green Leaves, thin and crumpled, growing upon Rocks or Stones, and is a kind of Food for Oifters.

IV. The second, or Oifter-Green, or Oifter-Weed round LeavM. It is a delicate Plant growing up from some Rocks or Stones, in or near the Sea, spreading several flat, thick, short and round Leaves, one set on the top of another*, and some also growing from the sides, forming Branches of Leaves leaning downward*, each being as it were rising on a Thread, which yet is scarce to be discerned, like a* a Country Garland of Field and Corn Flowers, made for the Ornament of Country Houses; for a* the whole Plant seems to be made of nothing but firung ^{Bauh} ^{inus} ^{<2j} ^x. The lower Leaves are somewhat brown, the rest are of * xbitijb green, and those

which are new sprung forth are green, and all of them smooth and shining, which may be kept between Papers for a long time: yet by long keeping, they will grow rougher, and full of Wrinkles, but fit to tough, and not brittle like Corallina. which by steeping in Water will become soft and smooth again, and retain their first Taste, which is very Salt.

V. Gerard says, That the Branches of this Elegant Plant, are about a Handfull or better high, spread abroad on every side and only consisting of Jun Arj Jingle roundish Leaves, where to are fastned sometimes one, sometimes two, or more such Leaves* so that the whole Plant consists of Branches made up of small round Leaves, fastned together by divers little and very small Threads, the lower which stick to the Rock, are of a brownish color the other of a z&tijh or light green smooth and flowing.

VI. The Places. They are generally found on our English and Scotch Rocky-Shores, chiefly where Oifters are bred, and indeed in other Seas wherever Oifters grow. But the second grows upon Rocks in divers parts of the Mediterranean, upon the Coast of Cerfica, and in many other Seas.

VII. The Times. They are in the prime of their Beauty in the end of Summer and all the time Oifters are in Season.

VIII. The Qualities. They are cold and dry in the first Degree, Aperitive, Absterfive, Anodyn, Vermetick, and Arthrick.

IX. The Specification. They are both good to expell Sand, Gravel, and small Stones out of the Reins, Ureters and Bladder: and a Bath of Sponges is laid to kill Worms in Children.

X. The Preparations. You may make from these Plants, 1. A Decottion. 2. A Pickle. 3. A Pouder. 4. A Fricasie. 5. A Cataplasme*

"the Virtues.

XI. The Decottion in Water or Wine. Being given to 2 or 4 Ounces or more, well sweetned with Honey 2 or 3 times * Day, it is good against Coughs and Wheezing, (shortness of Breath, and difficulty of Breathing, and cleanses the Urinous parts of any kind of Tartarous Matter lodged in them.

XII. The Pickle. Either of them are an excellent Sallet, being Pickled in a mixture made of white Port Wine, Brandy, Vinegar and Water, in an equal proportion: They strengthen the Stomach much, and cause a good Digestion.

XIII. The Pouder. That which is made of the first sort is much Commended by Learned Physicians against Diseases of the Lungs, especially against Inflammations and Ulcers of the same, being taken to about a Dram in fair Water or lbne proper Vehicle. Being given in Red Barcelona Wine, or other Red Styptic Wine, it stops the Terms and prevails against the Bloody Flux, and other Fluxes of the Bowels, as also it stops Vomiting, and all these things more especially if they proceed of Cholera. Given also in Parsly or Hydropiper Water, it cures the Strangury, provokes Urine, gives ease to the Stone, and expels Sand, Gravel, and stones out of the Reins and Bladder. Outwardly applied, it heals Bloody and Green Wounds, and cures Ulcers in the Secrec parts. The Pouder of the second sort, or round Leavd Kind, from half a Dram, to a Dram, mixed with Water or in any other proper liquid Vehicle, kills Worms in Children.

XIV. *The Fricafie.* The firft Kind, or both the forts, being Fried with Eggs, as you Fry Oar Leaves, and fo eaten, it is laid to be a fingular Medicine to cure the Weaknefs of the Back.

XV. *The Cataplafm.* Being made of either of the Green Herbs, and applied to places affected with the Gout, it cools, eafes the Pain, flops the afflux of Humors to the Part * and in ibme reafonable time cures the Patient.

es and Fibres fpreads it Jelf under the upper Ctujt of the Ground, fomtbing like a Couch-Grafs Root but not fo white, and not much leffer than the Root of the White Wild Anemony, or Wind-Flower, and almoft of as dark a color, being much like there-to in its "creeping. This Root Jhoots forth Staks with

One Berry t or, Herb "True Love.

I. >-p *HE Names.* It knows no *Greek Name*;

X But the *Latines* call it *Herba Paris*, and fo it is generally called by all *Herbarijis*; and in *Eng-Hjh*, *One Berry*, *Herb True Love*, and *Herb Pans*. Some have thought it to be a kind of *Aconitum*, but Were deceived, and therefore *Fuchsius* called it *Aconitum Pardalianches*, zn& *Cordus* seems to be of the fame Opinion, and therefore calls it *Aconitum Pardalianches monococon*, they accounting it to be dangerous and deadly: but *Matthiolus* contradkls all this, for that it has been found by Experience, not to be hurtful but Salutiferous, for which reafon *Tabernamontanus* called it *Acomtum Salutiferum*, Which yet I think to be an improper Name alio, for that it is no Species of the *Aconites* Some have thought it to be a kind of *After*, or *Star wort*, and therefore *Tragus* called it *After fed nonS&ttic/f*, but it is no Species of the *Star worts*: liealfo called it *Uva Lupin a*, and *Vvt Canina*. Others have thought it to be a Kind of *Sdanum* or *Aight-Jhade*, but it is no more a Species of that Plant than it is of the two former > but upon this fuppoficion Pw^ and *Lobel* in their *Adverfaria* call it *Solatum Tetraphyllon* (from the form of the Leaves and Berty:) and *Baubinus*, as leaning to the fame Opinion, *Solanum quadrifolium bacciferum**, both of Which fo call it very improperly : and I think the firft Name *Herba Paris*, is the fitteft We can bellow f p p o n i t

II. *The m Kinds.* There are three Species of this plant very tvell known, viz. 1. *Herba Paris vulg**, *Herba Paris Tetraphyllos^* Our Common ~~Herb~~ True Love or One Berry. 2. *Herba Paris* ~~Herb~~ *Herba Paris Floridiana, vel Brafilian*, ~~Herb~~ *Paris Tripbyllos Brafiliana, Solanum Try-* ~~Herb~~ *Herb Brafilianum Baubini, Herb True Love, or One Berry of Florida, or of Brafil.* 3- *Herba Paris Ganadenfis radice rotunda, Herba Paris Floridenfis* ~~Herb~~ *«dice tuber of a: folanum Tripbylium Canadenfis* ~~Herb~~ *t-ortufi* Herb True Love of Canada,

The Defcriptions*

HI. *The jirft* ^{OR} ^{OUR} Common Herb True Love, or One B^rry. H&* a Root which is long and tender, Small and creeping under the Earth, difperjing it Velf hither and thither, its Tajie is Styptick or ~~Styptick~~, anivery nnpledapt7 and by its Branch-

Leaves, fame of which bear 710 Berries, and fome do, every Stalk being fmoth, without Joints, and of a blackifh green color, rifing to about fix Inches high, if it bears its Berry, but feldom fo high, if it bears none. This Stalk bears at the Top four Leaves, fet directly one againji another; in manner of a Crofs, or a Crofs-Knot, commonly called a True Loves Knot: which are each of them a-part^ fome-thing like to a Night-fhade Leave, but a little broader and in fome places, twice as broad a* in others, for they oftentimes vary much, and the? the tinted number of the Leaves is generally four: yet fometimes there are but three^ and fometimes five, and fometimes fix, which are fometimes fmaller, and fometimes larger, and that by a quarter or half part, and fometimes they are (a* is before faid) twice as large. This Plant has been feen fo neti??ie alter or degenerate, and that the four Leaves have not only been twice as large, <u the ordinary^ but they have alfo been dented in, both an the edges, and at the points, which have been parted, or forked, and have born larger Berries, than commonly this plant is 2 fed to bear: all which are of a Jre/I) green color, not dented about the edges. In the middle of befe four Leaves, there rijes up a fmall fte rider stalk, about an Inch high, bearing at the top thereof, one Flower, fprcad open like a Star, confifting of four j mall and narrow long pointed Leaves* of a yellowjijb green color, and four other lying between ibem^ leffer than they. In the middle whert*

of

grows a round dark purplish Button or Head, e.v-
compaffed with eight J mall yellow mealy Chives, or
Thirds, which three colors make it the ??wre Confpi*
cuous and Beautiful to behold. This Button, or
Head, v'r rather Berry in the middle, when the
other Leaves are withered, becomeſ a blackiſh pur-
ple Berry full of Juice, of no hot nor evil flavor,
nor yet of any fvoeetiſh or •fulfome Taſte, of the
bigneſs of a reaſonable Grape, having within it,
many white Seeds. The whole Plant is almoji in-
flpid, without any manifeſti Taſte, and by its effelis,
in repreſſing hot Inflammations and Humors, it is
accounted as cold at Nightfhade, tho" no Species
of that Plantf^

IV. The ſecond, or Herb True Love, or One
Berry of Florida, or of Trafil. The Root hereoj
is ſmall and creeping like the former tender the up-
per Cruſt of the Earth •, from which ſprings forth
a Stalk of four or five Inches high, having three
fuch like Leaves as the other, but broader and long-
er growing thereon. The Stalk riſes up about \.
Inches above them, bearing at the top, 3 much nar-
rower Leaves, which are M it were the Husk of the
flower ſtanding in the middle, confining of three
white Leaves, having ſome Veins in them, and are
about three Inches long, and one ^gull-

V. The third, or Herb True^pfre of Canada.
The Root of this Plant creeps not as the former do,
but grows into, a fma'i round Tuberos Subjlance,
having ſeveral ſmall Fibres iſſuing out from its
ſides almoji round about, from this Tuber ofe Root
ſprings up one Stalk, with three large Leaves like
> to the lad, from the middle of which, the Stalk
riſes up, yet ſome few Inches farther, at the top of
which is one flower, confijling of fix Leaves, three
whereof are green and ſmall, which are as it iver
the Husk to the other three Leaves, growing in the
middle, which are larger and longer,, of a dark pur-
pie color, and in ſome white : < in the middle where-
of grows a ſmall round blackiſh Berry, full of ſmall
Seed, like Nightfhade Seed. "

VI. The Places. The firſt grows in our Woods
and Copſe, as alfo ſometimes in the corners and bor-
ders of Fields, and waſte Grounds, in many places
throughout England. Gerard ſays, it grows plenti-
fully in Chalkney Wood, near to Wakes Colne,
leven Miles from Olchejter in Effex: in the
Wood by Robin Hood's Well, near to Nottingham:
in the Paribnage Orchard, at Rodwinter in Effex,
near to Saffron Walden: in Blackborn at a place
called Merton in Lancaſhire: in the Moore by Can-
terbury a Wel the Clapper: in Di'igly Wood, fix
Miles from Preſton iii Alder neſs : • in Boeking Park
by Braintree in Effex: at He/let in Lincolnſhire:
and in Cotting Wood, in the North of England. It
It has alſo been found growing (as Par kin [on ſays)
in Hinbury Wood, three miles from Maidjlone
in Kent: in a Wood by Chiffelhurjt in Kent, called
Longwood': in the next* Wood ^hereto, called
Jfcets-Wood, eſpecially about the ſkirts of a Hop
Garden bordering thereon: in the Wood called
Harwarfh, near to Pinnendon Heath, about a mile
diſtant from Maidjlone : and in a Wood alſo over-
gainſt Boxly Abhy\ a mile from Maidflone afore-
named, where it grows in great abundance, not far
from the Hedge ſide of that Medow, thro' which
a ſmall River cr Rivulet runs. The ſecond Bauhi-
niis ſays was found growing in the Woods in Bra-
file: but both the ſecond and the third have been
found growing in Canada, as Cortuſ us and others
affirm, and I my ſelf have alſo found them grow-
ing, in the Southern Provinces of Florida, as in
the South Carolina, in ſome of the Woods adjacent
to Wadmala and Stonow Rivers, Cfc.

VII. The rimes. They ſpring up about the lat-

ter end of March, Flower in April and May, and
the Berry is ripe not long after, viz. in the end of
May, or before the middle of June.

VIII. The Qualities. One Berry is cſld and dry
in the firſt Degree, Anodyn, Vulnerary; and Alexi-
pharmick, or Refitting Poiibn.

, IX. The Specification. It cauſes Reft and Sleeps
gives eaſe in the Colick, expels Poiſon> and cures
the Plague or Peſtilence*

X. The Preparations. You may have herefrom,
1. An Effence. 2. A Pouder of the heaves. 3-
A Pouder of the Roots. 4. A Pouder of the ber-
ries* 5. An Infuſwn or Decoſign of them in iVine*
6. An' Ointment or Half am of the Leaves an&
whole Flant. 7. A Cataplaſm of the heaves. 8. A
DiſtilliedWutcr of the leaves and Roots. 9- f
Spirituous Tinflate of Leaves, Roots, and Ber-
rieſ, ip. AnAcid'fin&tireof tpefame.

The Virtues.

XL -The Eifence of Herb, Root, or Berry. It^{is}
Anodyn, gives eaſe in the pains of the Colick, eX-
pels Poiibn, and powerfully refills the Plague or
Peſtilence, and all forts,ot Peiiilential and Maugⁿ
Fevers. Particularly it is laid to,be an Antidote
againſt the Poiſon of the Aconites and all other l&c
forts of Poiſons. It is profirable for ſuch as have
lain long in a lingering Sickneſs, and for ſuch who
have been thought to have lain under the Power
of Witchcraft, fo as to become half Fooliſh, or
wanting their Senſes. Doſe 1 Spoonful in v:*.?>
or other fit Vehicle, Morning falling, andatNig&c
going to Bed, for a Month together. <

XII. The Pouder of the Leaves. It has all the
former Virtues, but it fo effeſual as the Pouder
of the Berries or Seed, and may be given to J
Dram Morning and Night, in a Spoonful of Syrup
of Citron Peels, or other like Vehicle.

XIII. The Pouder of the Berries or ~~Root~~ ^{Seed}
a Potent thing 2nd performs all that: the ~~Root~~ ^{Seed}
does. Given to aſiram at a tim c; Morning
Night in a Glaſs of Tem, or old Mtullag ~~g~~
every Day for 20 Days or more together, - it relto
ſuch to their Healths, who have lain under long
lingering Sickneſs; and relieve them to theſe
primiteneſs. Both Both M**oink ~~of~~ ^{of}
of the Leaves, are ~~of~~ ^{of}

XIV The louder of the Roots.' Being givert
from half a Dram to a Dram in a Glaſs of Wine
it gives immediate eaſe in the moſt extream,
Colick, and other vehement pains of ^
Viſcera.

XV- The Infuſwn or Decoſtion of the Leaveh
Roots^ and Berries in}Vine. They have all the V^{is}
tuts of the Eifence and Pouders, refitt all forts or
hot Poiſons and malign Difeaſes. Being give" ^
Bed-time, they procure Reft and Sleep: Outward
ly uſed as a Lotion, (with a third part of ^
Eifence being added) they are very effe&uai to
the cure of ſimple Green Wounds: They a^{ll}
cleanſe, dry^ and heal ojd filthy, running Sores ana
id Ulcers: and are very powerful to, "o%'
all Tumors and Swellings, and fP^e!y^{ly} ~~ors~~
allay all Inflammations, and to abate thoſe Tum
which happen in the Groin, Teftides and rn i
parts.

XVI. The Ointment or Balfam of the ~~Root~~ ^{Seed}
and tohole Plant. They are exceeding good
neraries, Abfterſive, Deficcarive and Healing' J
a?#

Inflamations in Wounds, reprefes the flux of Humors, and eafe their pain and anguifh; and are excellent good againit Felons, Whitlows, and the like happening to the Fingers ends and Nails of thofe parts. They Suppurate or Ripen Apofterns and make them break, or fit to be opened- in a little time.

XVII. *The Cauphfm of the green Leaves.* It is effe&ual to cure fimple Contufions, and to heal Green Wounds, cleanfe and dry old running Sores, and putrid Ulcers, abate Mamations, difcufs Tumors, and to eafe the Gout, and any other kind of pain in any part of the Body, being duly applied: It affo is good againft an Ophthalmy, and heals all Inliamations and Sorenefs of the Eyes, - eafing their Pain almoft upon the fpot.

XVIII. *The Diftilled Water.* Being put into the Eyes it cools Inflamations therein, eafes their Pains, and takes away their Sorenefs and rednefs, more efppecially if alfo Cioaths two or three times double, be dipt therein and applied. But the *Juice or Effence of the Herb*, performs this yet more effectually.

XIX. *The Spirituous TinBureof Leaves, Roots ani Berries.*, Being taken from ons Dram to two Drams in any proper Vehicle, - it alleviates the pains of the Colick, gives eafe in the griping of the Guts, comforts the Stomach, and obtunds fharp Humors, caufing/Heavinefs and Melancholy.

XX. *The Acid TinBure.* It may be given to a pleaing Acidity 3, 4, 5, or 6 times a Day in *Water Gruel*, or in the *white Decotfwn*, or other like Vehicle againft the Purples, Spotted Fever, all forts of Malign and Peftilential Feveis, and hÿ Plague it felf: it deftroysthe malignicy and Poifonof theDifeafe, and in a fhorc time fecures the Life of the Patient againft all dangers accrewing from the fame.

The Defcriptionk

III. *This/mall Plant, has a very /mall Root of the bignefs of a Ruffh, lying, and creeping under the upper Cruji of the Earth, having feveral fibre* /mall Threads adjoining to it, which Jhoot forth out of the Earth again in fever al places, from thn*

Root /prings forth one Stalk, which never bears more than one Leaf, but only when it rizes up with its Stalk, above that Leaf, in order to the bearing a Head of flowers, and then it bedrs another Leaf feldortt any more, which are of a blewifh green color and therein very like unto the Leaf of the Lilly & onvaliy, but fomthing broader at the bottom^ having many Ribs or Veins in it, and pointed at the end, not much unlike to*a Plantain Leaf At thi top of the Stalk, grow many /mall white flowers^ Star fashion, frnellling fomewhat /iveet^ after which come /mall reddifh Berries when they are ripe.

IV. Gerard defcribes it after this manner. *Its Root is fmall, tender, and creeping far abroad under the upper face of the Earth. Its Leaf is not much unlike the greateft Leaf of Ivy, with many Nerves or Ribs, like thofe of the Plantain Leaf, which /mgU Leaf does always fpring forth of the Earth alone, but when the Stalk^ rizes up, it brings upon its^fides two Leaves, the latter in fashion like the formers At the top of which /tender Stalk, come forth fine /mahI flowers HAeYytoh, which being faded away^ /mall red Berries /ucceed.*

V. *The Places.* It grows in moift, (hadowy and Graffie places of Woods and Groves or Copes, in many»parts of England. Gerard fays it grows in hancashire in Dinglywood, fix miles from Prejion in Alderwefts; 2nd in Harwooi near to Blackburn likewife.

VI. *The Times.* It Flowers about May, and the Berries are ripe in June, and then it quickly perifhes until! the next Year, it fpringing afrefh, from the lame Root again.

CHAP. DXXVIII

Of ONE BLADE,

OR,

• MONOPHYLL.

I. **T**HE Names. It fcarcely appears that this Plant was known to the Ancien Greeks. But it may be called in Greek M^U'A^K^ Monophylon, after the Latin Name Unifolium! from whence it is called in Engliç One Blade.

• IL *The Kinds.* This is *Planta fingulans jn generis*, unles you would have *Opbwglojjum* or *Ad ders Toneue*^ to be a Species of it, which no Author that" I know of has ever yet admitted. *Dale cbampius* upon *Diofcorides*, fuppofes it may be th^ • *tyclamims Flimj*, in lib. 2\$. chap. 19. but doubtlefs this is a miftake. • *Tragus* calls this Plant (fides *Unifolium*) *Cotyledon Sylveftre*: but me H our latter Writers call it *Monophyllon*^ or *Vn um*^ but *Baublnus* referring it to the *Lilium ton* "Oallium calls it, *Lilittm Convallium minus*, O leffer *Uÿly ofVally*-, I will not difpute the point with him, but rather givs him his way,

VII. *The Qualities.* It is hot and dry in the first Degree, Absterfive, Vulnerary,⁴ Sudorifick, and Alexipharmick.

VIII. *The Specification.* It is a peculiar thing, for refitting Poifon, profligating the Plague or Pestilence, and all manner of Malign and Ptdilential Fevers, and for the curing of fituple Greer Wounds, old running Sores and Malign putrid Ulcers.

IX. *The Preparations.* You may have herefrom, i. A *Liquid Juice, or an Effence.* 2. A *Voider of the Root.* 3. A *Ba If am from the who³ Plant.* 4. An *Acid TmUure of the Root, and who³ Plant.*

the Virtues.

X. *The Liquid Juice or Effence of the Root and whole Plant.* It is a potent thing to expel all ibrts of Vegetable Poilbn taken into the Stomach, and to defend the Heart from their Malignity: it is also a cure for all forts of Malign and Ptdilential Fevers, being given a SpodfilL at a time in Canary, made pretty fharp with^{R:} of Limons, and repeated as need requires: and to ufed it cure: also the Plague it felf.

XI. *The Powder of the Root.* Being given from TM1/ a Dram to a Dram at a time, in a mixture of Wine and Vinegar, of each equal parts, and the patient (being in JBed) laid presently to Sweat thereupon, it is faid to be a Sovereign Remedy for thofe that are infected with the Plague, and have a Sore upon them, by defending the Heart and vital Powers from the danger of the Malignity and Infe&ion, and expelling the Poifon of the Difeafe: it has also all the Virtues of the Juice or Effence.

XII. *The Balfam from the whole Plant.* It is a ^{ar} S^{ood} Vulnerary, admirable for the curing of Wounds whether recent, or old[^] as also for the curing of malign, putrid and Inveterate running Sores and Ulcers, more efpecially thofe of the Nerves and Tendons.

XIII. *The Acid Tintture of the Root and whole riant.* It may be given to a grateful acidity in any proper Vehicle 3, 4, j, or 6, times a Day againft the Purples, Spotted Fever, Calenture and Plague it ielf, as also in all other Malign Fevers, it refills the Poifon and Malignity, and performs the Cure to a Wonder.

II. *The Kinds.* Onions are either Red or White: and of both thefe Kinds,[^] • 1. *The fiat Red Onion.* 2. *The long Red Onion.* % . *The round-Red Onion, or Sweet Span iff) Onion.* 4* *The flat White Onion.* 5. *The long White Onion.* 6. *The round white Onion[^]* all which White Onion's are almoft like to *Chalk-fiones*, lying upon, the GrouflB when they are ripe and fit to be gathered* 7. *Afcalonica, or Afcalonitis[^]* The Scallion, which is thought to be the *Gethyum[^]* or *Gethylh^{*}* of *The^{*} ophrajjus[^]* thefe *Afcalomtides[^]* are faid to beour *Set Onions* the leffer fort of which are called *Chiboliⁱ* all the other Kinds are produced from Seed. The *Flat Red Onion* is the itrongeft of all, fome of them are Red throughout, very large and pleafint to Bat. The *Long Red Oman* is the *St OmersOrtion*, commonly called *St. Thomas Onion*. The *Round Red Onion*, called the *Strasburg Onion*, is red only on the out fide, and is very fharp and frong. All thefe variety of *Onions*, have one and the lame manner of growing above Ground, ^{^nci} the fame Form, and therefore One Defc^{ip}* tion may ferve for them all* which take & follows*

The Description.

III. Onions have a Root which is [in JoW [^] great, in fome very fmall[^] and are either, f[^] rounds or long[^] bulbous[^] or made of many ^{^b} Peels or Coverings growing one upon another, ^{^7} which the outermofi is thinneft[^] and thofe more in* ward, growing thicker and thicker, according

Of ONIONS.

ⁱ Tⁱ # £ Names. This Plant is called in Ara-
* jicK, Bafi⁹ and Baffal: in Greek\ % w[^].
m\ ?*P*, C<epe, & Cepe: and in E.
One. 3 becaufe the Root is %

to their remoteness from the first outward Coat: at the lower part or bottom of which Bulb, is a Beard of Fibres or Strings like a Taffel. Some are red on the outside only, others are red quite thro' cut: some are white, and these are either small or great, flat, long, or round. Some are very sharp and strong, others milder and more pleasant: and some of those growing in Spain, are so pleasant that they may be eaten as an Apple. All these Winds of Onions, contrary to the Nature of all other Bulbous Roots, have no off-sets, or other Roots growing to them, but are every one alone single by themselves; and therefore it seems the Lacines, as Cplutifella, do give to the Plant the Name of lmo, from which our English Name Onion: Root if it remains on the Ground after Seed

time, dies, rots, and perishes every Year, *JLFWWh* this Root spring up several green, long, hollow leaves, seeming half flat: among which rises up a great, round, hollow stalk, thicker and bigger in the middle than any where else: at top whereof stands a close round head, covered at the first with a thin skin which breaks of its own accord, the head grows larger and larger, and shews forth itself as a very large Globular Umble ^ I white' blowers, which being past away turn into black seed. This head is many times so much that the stalk cannot bear it, but must be upheld by some convenient prop from falling to the ground, that it may not rot or perish.

IV. Some will have it that there is no Wild Onion which is long, and has a very long

A scalonitides, which is also called by some Gethyllides, and this is that of which they say Theophrastus mentions under the Title of Gethy-

V. *The Places.* All forts of *Onions* are Sown, Planted, and Nurft up in *Gardens* not only in *England* but in almoft all Countries throughout the World; and they grow and proffer belt in a Fat and Rich Soil, which has been well Dunged and Digg'd, or turn'd up and made mellow and loofe. The *Scallion* takes its Name from *Afcalon* a City in *Palefine*, where they grew plentifully, and from whence they are faid to be brought into all parts of *Europe*, and from thence Transplanted into *America*, where all the other Kinds of *Onions* grow alfo very plentifully, and come to great perfection.

VI. *The Times.* Tliofe which are Sown for Store fhould be Sown in *February*, or before the latter end of *March* at fartheft, and in the increafe of the *Moon*; and are to be gathered when the Blades begin to flag towards the Root. Thofe that are for Seed, are to be Set at the fame time, when the former are Sown: This Seed tho' it is perfected in *England*, and will grow again with us, and produce good *Onions*, yet it is apt to degenerate, for which reafon we commonly make ufe of Seed brought to us from beyond Sea.

VII. *The Qualities.* *Onions* are hot and dry in the fourth Degree, yet not thought*to be full out fo hot as *Garlick*. They are Attenuating, Aperitive, Abfterfive, vehemently Attractive, Digestive, Difcuffive, Diuretick, Incifive, Emollient and SUD-purative: Stomack, Peftoral, Nephritick, Hyfterick, Arthritic* , Ptarmick, Emmenagogick, Alexipharmick and Spermatogehetick.

IX. *The Preparations.* I. *Raw Onions eaten as a Sallet.* 2. *A Liquid Juice.* 3. *An bifufion in Water.* 4. *An Infufion in Wine.* 5. *A Decottion.* 6. *An Errhine.* 7. *A Lohoch.* 8. *An Elettuary.* 9. *A Lotion.* 10. *Roafted or Baked Onions.* 11. *A Ponder of the Seed.* 12. *A Cataplafm of Raw Onions.* 13. *£ Cataplafm of Roafted or Baked Onions.* 14. *A Difilled Water from Onions.* 15. *A Spirit fm Onions.*

The Virtues.

X. *Raw Onions eaten as a Sallet.* They are of Heating, Volatile and Subtil parts, ftrenghen the Stomach, caufe Appetite, and a good Digestion, eafe pains in the Stomach and Bowels, increafe Seed, provoke Luft, gives eafe in the Strangury, and force away the Urine; and are good againft Sand, Gravel, Stones, or any Tartarous Matter lodged in the Reins, Ureters and Bladder, they make thin, and fcatter grofs and clammy

XI. *The Juice.* It is good againft Hemorrhoids, the Juice drdpt into the Eyes* takes away the Dimnefs of Sight, and if ufed at the beginning, takes away Mifts, Clouds, Spots, Haws, CV. in them. Dropt into the Ears, it is good againft Deafhefs, Noife and Ringing in them, and cleanfes them from filthinefs and corrupt Mat- ter. A *Pejjary* imbibed in the *Juice*, and put up into the Womb, it provokes the Terms, and brings away the After-Birth. The *Elead* and other parts O] the Body troubled with Scabs, Itch, Scalds, Scurff, Morpew, Leprofie, £?V-, being often wafted; O] bathed therewith, it cures them. It {tops the fall- ing of the Hair, and cures Baldneis, &c. \&n% often applied. The *Juice mixed with Juke of Penny-Royal*, and applyed to the Gour, is ufed in the pain, Cloth dipt therein, being applyed upon the fame. *Beatn up with Oil*, and applyed to it is good againft Burnings with Fire or G* Pouders, and heals Wounds made by Gun-Shot.

XII. *The Infufion in Water.* The *Onion*-bet* thin fficed and fteeped in Water all NigU, and the ju- fufwn given to Children which are troubled wrtl Worms, it kills them.

XIII. *The Infufion in Wine.* It may fee made in *White Port Wine*, or *White Lisbon*. It provokes Urine powerfully, gives prefent eafe in the Stran- gury, and forces away Sand, Gravel, Srones and Tartarous Matter from the Urinary parrs. This *Infufion* to a referable Patient, who had made Water 'in eight Days, and in an n- time after it, they pitt above a Gallon, and; cured of their Strangury.

XIV. *The Decottion.* If it is made firing O] M, *Onions*, and in *Veal Bntb*: it eafes pains ana gripings in the Stomach and other Bowels, Strengthens the Stomach, caufes a good Appetite, and makes the Belly Soluble.

XV. *The Errhine.* It is made of the *JutC mixed with Pouders of Scatmony* a Dram of the *Scammony* to an Ounce of the *Juice*. Snuft up the Noftrils it cures the Lethargy, *Orus*, dulnefs and heavineis of Head and Brain, Megrim, and other cruel and inveterate Hea- aches, and prevails againft an Apoplexy, became it draws away the Morbifick Matter through tns *Os Ethmoides*, by the Noftrils.

XVI. *The Lohoch.* It is made of the *Juice mixed with Honey and Oil*. It cuts tough Flegll and loofens^ it is good againft Coughs, Colds, Wheezing, Hoarfenefs, Shortnefs of Breath, Afthma s, & being often taken, it caufes eafie Ex- T- loration.

XVII. *The EveHuary.* Take Pulp of %odd *Onions* ("Baked in their Skins) a Pound, Honey % quarters of a Pound; Pouders of Elecampane, arid of *Onion Seed*, of each 3 Ounces; *Rue* cut find and bruifed, or Pouders of *Rue* 2 Ounces: mix and make an *Eleffuary*. It has all the Virtues of the *Lohoch*, and much more Powerful to all the Inten- tions: befides which, it expels Poifon inwardly taken, and outwardly applyed, it is good againft the Bitings of Mad Dogs, Serpents, and othr Venomous Creatures. Dole as much as a *Cbejt** Nut Morning and Night.

XVIII. *The Lotion.* Take *Juice of Onions* t, %rts; *Wine Vinegar* 1 part: mix them. It take^ ^ way Spots, Marks, Scurff; Morpew, Leprone, inT Other blemifhes of the Skin, being often barhea therewith. Applyed in the Gout, with Cloths dip- in the fame, it gives prefent eafe.

XIX. *Roafted or Baked Onions.* They ought to be Baked dry in their Skins, once or twice, j» ofter, till they are perfectly foft. Their Pulp being then taken from the Skins, and djest up,

choife Butter, Sugar, and a little Salt, and fo eaten with Bread, Morning Fading, and at Night going to Bed, fo much at a time, as to make a Meal thereof for 2, 3, or 4 Days running, it never fails of curing the moft extream Cold, eafes the Cough, caulés eafy Expe&oration, takes away Afthma's, Hoarfnefs, Wheezings, and (hortnefs of Breath, and reftores the Voice to fuch who had almoft loft it, or could fearcely fpeak fo as to be underftood.

XX. The Foudrof the Seed. It ftrongly provokes Urine, gives eafe in the Strangury, cleanfes the Reins, Ureters and Bladder, of Sand, Gravel, or Tartarous Matter-, provokes the Terms in Women, facilitates the Birth, and brings away the After-Birth. And being confandy taken for fome time, it very much increafes Seed, provokes Luft, and heightens the pleafure of Coition- Dofe from half a Dram to a Dram, at Bed time in a Glafs of Wine, or other fit Vehicle.

XXI. The Cataplafm of ram Onions, It is made by beating the Onions with Green Rue, and a little ialt, and brought to a confiency with Orobous Meal, or Fonder of Elecampane Roots. Applied upon the Bitings of a Mad Dog, Viper, Rattle-Snake, or other Serpent, or flinging* of any Venomous Creature, whileft the Wound is recent, it powerfully draws forth che Venom or Poifon, and fecures the Life of the Patient from danger. It gives alfo prefent eafé in the moft extream pains of the Gout, draws it out of the Stomach, if it is flown upwards, and in a lhort time after cures the Difeafe.

XXII. The Cataplafm of Roafted or Baked Onions. It is thus made. Take of the Pulp \$ parts \$ Rue 3 parts; Pulp of Figs and Mithridate 2 parts -, Salt 1 part -, beat all well together for a Cataplafm. Applied very hot, and repeated every fix Hours, as long as need requires, it will ripen and break any Apoftem, and fuppurate Peftilential Bubo's, and other Tumors of the like nature* it is alfo good for the Biting of a Mad-Dog, being prefently laid thereto-, it is profitable againft Kibes and other putrid Sores of the Legs and Feet, which are hard to heal: and being applied to the Piles or Hemorrhoids, it eafes the Pain, difcuffes the Tumor, if not broken, and cleanfes and heals them if Ulcerated. Take a great Onion., make it hollow in the middle, and fill it with Mithridate or Treacle of Andromachus *, clofe up the bole, and Roaft it througely in the Embers: then taking away the outwardmofi Skins, let them be beaten together to a Cataplafm. This Applied to any Plague Sores, or putrid Apoftems, it brings them to fuppuration., draws forth the Poifon or Malignity, cleanfes them, and induces their healing.

XXIII. The Diftilled Water of Onions. It is one of the nobleft Nephriticks and Diureticks in the World, fuperior to Parfy Water, Uidropiper Water^ or any other Vegetable Water of that kind: nor does it feem inferior to the Decofior of Hops- or Infufion of Lignum Nephriticum. It provokes Urine powerfully, gives eafe in the Strangury, and cleanfes the Reins and Bladder of Sand, Gravel and Tartarous Mucilage. Dofe from 4 to 8 Ounces, either alone, or mixt with a little white Fort Wine. If it is given with the Ponder of the Sequit it will be yet much more effe&ual.

XXIV. The Spirit. It is exceeding Volatile, fharp and piercing, and a noble Antifcorbutick, Nephritick, and Arthritick, in a cold habit of Body: it ought not to be given to hot Confituti ons, for in thofe, it may put all into a Flame, and kindle fuch a Fire, as may not eafily be extinguifhed. It is a good Stomatick., creates an Appetite, and caufes a good Digeftion; expels Wind

out of the Stomach and Bowels, and gives eafe in the Colick: and is a very profitable thing for fuch as are inclinable to a Dropfie, or are newly cured of one, becaufe it warms and comforts the Blood, and ftrenghens its Tone or Crafis. Dofe from 1 Dram to 2, in any proper Vehicle..

XXV. Not a. Authors fay, that if an Onion be Oiced, and dipped in the Juice of Sorrel, and given to be eaten by one that is lick of a Tertian Ague, that it will take away the Fit, at once of twice fo taking it.

FLIES - STONE ^

TT ^{AE} ^{Na} ^m ^{is} ^{is} called in Greek, X Of x*f PMx5^ J_n JW/><?_ 0/rfor i H ^ - ra- Tefuculus Mufcarius: in Englifh, Flies-Orchis, or Flies-Stones.

II. 17.* ICfmfr. Thefe are Species of Kw- 5/^ ^ i* > in C&^p. 298. aforegoing, of which wa gave you nine feverai Kinds: The reft which are Wanting there, we (hall fupply jrou withall here in this Chapter, which are the following nine Varieties. 1. *Orchis Serapias bifolia, vel trifolia minor Clufii & Thalij*, The leffer Twa Blade, or three LeaVd white Butter-Fly Orchis. 2. *Orchis Sphegodes alt era, vel fecunda Lobelij* ^ The WaQj Orchis. 3. *Orchis minor culicem exprimens \$ Culi* ces minores TriphyU Lobelij-*, The leffer Gnat Flower. 4. *Orchis Sphegodes, five Teliculus Vut* pinus primus Lobelij*, The greater Gnat Flower, j. *Orchis Melittias, five aptfera Lobelij* \$ The Honey Bee Flower. 6. *Orchis Myodes minor, vel Myodes prima Lobelij*, The leffer Fly Flowef. 7. *Orchis Myodes minima* ^ *Orchis Serapias tertius Dodon&i*, The leaft Fly-Flower. 8. *Orchis Myodeslutea* Nar* *bonenfis Lobelij*, The great Fly Flower of Narbone*. 9. *Orchis Myodes arruguftifolia Bauhini, & minor Ta« bernxmontani*, The narrow leav'd Fly Flower*

The Deferiptiōvs.

III. The firſt, or leſſer Twa-Blade or Three Leav'd white Butter Fly Orchis; from two long Tejiicles or Stones, with a long Tail at the bottom of its Root, ſpring up two or three large Leaves leſſer than thoſe of the Hungarian or greateſt Twa-Blade Fox Stones in Chap. 298- Se&. 4. The Stalk is more than half a Foot high, with 2 or 3 finally long, narrow Leaves thereon, and a ſmall Tuft or Spike of white Flowers juſt the top thereof thinly ſet thereon, ſomewhat reſembling white Butter-Flies, with their Wings ſpread, each flower having a crooked Tail behind it, full of aſweet or Honey Liquor.

IV. The ſecond, or Walp Orchis. The Roots or Stones are pretty large and more roundly Tuberos. The Leaves are a little narrower than the former. The Flowers ſiand in the ſame manner end almoſt of the ſame faſhion, but ſometh'ing greater, and of a brown yellow color, the Wings being a little inclinable to purple. This Gerard makes the Bumble Bee Orchis.

V. The third, w. Leffer Gnat Flower. It has two longiſh Tejiicles of a mean magnitude, having three Leaves uſually ſtanding below the Stalk, with ſome few ſhort ones up higher. The Flowers are but ſmall, but much reſembling a ſmall Gnat or Fly, of a yellowiſh brown color, whoſe lower part is ſmaller than the Greater Gnat Flower following.

VI. The fourth, or Greater Gnat Flower. The Teſticulous Root or Stones are a little larger than in the laſt, and pointed at the Bottom. The Stalk hereof is greater and higher, the Leaves alſo are larger and longer than in the two laſt, but much ſmaller upon the Stalk. The Flowers are fewer at top, but larger by much: and their color differs not much, but is rather paler,

VII. The fifth, or Honey-Bee Flower. Its Teſticulous Root conſiſts of two ſmall round Tubers. The Stalk is ſeldom a Span high. The Leaves thereon are few, narrow and ſmall, but pretty long, turning ſometimes inward, ſome growing upon the ſides, ſometimes two or three Flowers, ſeldom more, each whereof is in ſhape much like to the Honey or Hive Bee-, that many who have not ſeen it before, would verily believe, that it were either a living or the Qarkafe of a dead Bee, but that the upper Leaves, which are like Wings, are of a paleblewiſh purple color-, and the Head yet paler, the Body being full and round and of a dark brown color, with ſpots of yellow thereon.

VIII. The ſixth, or the Leffer Fly-Flower, or Fleſh Fly-Flower. Its Teſticulous Root is a round Juber and ſometimes longiſh, with Fibres ſpringing from its top. It has leſſer Leaves and more ribbed than the Greater Fleſh Fly-Flower, in Chap. 298. Seft. 6. The Stalk riſes not fully ſo high, the flowers in form, are like to thoſe- but leſſer, end of a little darker color, both at the bottom and about the middle part, but paler between the Wings being of a pale color, enclining to blew.

IX. The ſeventh, or Leaft Fly Orchis, or Fly-Flower. Its Teſticulous Root conſiſts of two round Tubers and ſmall It has three narrow Leaves end Ribbed, growing cloſer to the Stalk than in the laſt. Its Stalk is ſmaller and lower than it, having two or three ſmall flowers at top like the ether, but ſmaller, and of a browniſh purple color, ſomewhat ſpotted.

X. The eighth, or Leaver Fly-Flower of the ſecond Kind. It has three narrow Leaves end Ribbed, growing cloſer to the Stalk than in the laſt. Its Stalk is ſmaller and lower than it, having two or three ſmall flowers at top like the ether, but ſmaller, and of a browniſh purple color, ſomewhat ſpotted.

parts-, it has three or four Leaves, which are larger than the laſt and full of Ribs. The Stalk is higher. And the Flowers much larger or greater and of a yellow color, like ſome Flies with us.

XI. The ninth, or Narrow Leav'd Fly-Flower. Its Root conſiſts of two ſmall, round, longiſh, tuberos Teſticles, a little pointed at the bottom, with many ſmall all Fibres at the tops. It has ſeveral Leaves upon the Stalk, as fix, eight, or ten, which are very narrow and very long, and grow upon the Stalk, even to the very top, where grow the Flowers which very much reſemble a ſmall ſhort Fly.

XII. The Places. They grow in open Grounds and in Wood-land Grounds, in Clay Grounds, as alſo in a moiſt fertile Earth, in Marſh Grounds and in dry ſandy Soils, and barren Fields, in many parts of England-, and all of them are found Nurſt up in the Gardens of ſome of our Floriſts.

XIII. The Times. They Flower from the middle or latter end of April to the end of May.

XIV. The Qualities, Specification and Preparations of theſe Fly-Flowers, or Fly-Stones, are the ſame with thoſe of Dog-Stones in Cknp. 226- aforegoing, to which we refer you, and thereto* (hall ſay no more thereof in this place.

CHAP. DXXXI.

Of ORCHIS Handed*

OR,

PALMA CHRIST?.

T* H E Names. It is called in Greek, "OtX" < 1 AXIWWW*: in Latine, Orchis Palmat*, Orchis Digitata, Palma Chriſti, and W Handed Orchis, Finger Orchis, and Palma Cbnjiu

II. The Kinds. Of theſe which are common to us the following nine are chief, viz. 1-Orchis Palmata major, vel Mas; Palma Cbnſii Mas Lo-Mpb* great Male: Handed Orchis, a. Orchis Valmata major pratenſis anguſtijolta Bauhm, The great Male Handed Orchis with narrow Leaves. 2. Orchis Palmata ſxmina, Palma Chriſti Yesminji folio maculato Lobelij, The Female Handed Orchis. 3. Orchis Palmata pratenſis maxima-, Conopſa diſa Lobelio, The greateſt Handed and Hooded Orchis. 4. Orchis Palmata minor llore rubro, SeW. piat minor Lobelij, StmU Handed Orchis with red Flowers. 5. Orchis Palmata anguſtij oha'miner, Ore Fcemina Tragi, The leſſer Handed Orchis with narrow Leaves 7- Orchis Palmata anguſtijolia minor odor-tiffima' Bauhini, The ſweet ſmall Handed Orchis. 8. Orchis Palmata Caryophyllata Lobelij, The Clove Rnted Handed Orchis. 9. Orchis Palmata Bottrichius, vel Myodes Lobelij, Handed Orchis reſembling Frogs or Flies. There are others of the orchides Palmau, which grow in Marſh and ſome places. Theſe are the Orchides paluſtes, Fenny orchides, or Marſh Palms, of which we have already treated: but the Cuts or Figures of the ſix ſecond Kinds, there treated of, were overlooked and not inferred in their proper places >

thought good, that they might not be bit, to place them here next following.

I. *Serapias*, vel *Orchis Valmatapritfirh laifolu*
Fenny Orchis, or Marfh Handed Palms wit!
broad Leaves, *Chap. v. St. Se8. 2JV*. i.*

phytia, Fenny Orchis Handed, or Marfh Palms
thin Leav'd, *Chap. aji. Seff. 2. A". 2.*

The Descriptions.

III. *The first*, or Great Male Handed Orchis
The Root is Handed, Primed, or Fingred, as in the
M or Figure, flat and broad, two, and ivty, joined
together at the Head, like unto Hands, parted at
the bat torn into short pieces, as if the Fingers were
cut short off by the Knuckles, with some Fibres at
the Head thereof also, one of them being firm^

Orchis landed Male Great ;
or, Valma Cbrijiu

The other loose or spongy, at in the round Tuberous
Tubercles, which rise and decay in like manner. It
The Root is large^ broad, and long, smooth, green
leaves, lying on the Ground, among which rises up
a round Stalk, with some few Leaves on it, but
erect up to the top, where grows a large Head of
small purple Flowers, spotted with a deep purple
color. each flower having a Heel of the same color
behind it,

IV. The second, or Great Male Handed On
the Root is with narrow Leaves. The Soots of this are
double Handed like the former, parted into three
parts below. the Leaves are long, and narrower
than the former, thro' which the Stalk rises up, at
the top a Vipe, to be a foot and half high, on which is
set a spiked Head of Flowers of a pale purple color,
with a Spur behind, and a small leaf set with every
flower lower at the bottom-

V. The third, or Female Handed Orchis, the
Root is Handed or Fingred like the others. The
leaves hereof are long and narrow, spotted diversely
with black Spots. The Stalk has like some few
narrow

narrower heaves thereon, and a/picked head of hooded flowers, some reddish, either deeper or paler, or white, the lowest of them being potted, but several of them have sometimes none.

VI. The fourth, or Greatest Handed and Horded Orchis. The Root is like the former, but larger & aimed and Fingered, from the Head of which rises Up a Stalk 3 feet high, having several long and narrow heaves set thereon, almost encompassing it at the bottom, the flowers whereof are Hooded like the last, but of a delicate pale purple color and sweet smell, just flowering late.

VII. The fifth, or Small Handed Orchis with red Flowers. Its Root is small and Handed like the others. It is but a small Plant, and has a slender Stalk, with a few long and narrow heaves set thereon, smaller above than those below, having a/piked Head, of shining red Flowers.

VIII. The sixth, or Lesser Handed Orchis with narrow Leaves. Its Root is Handed and Fingered much like to those foregoing, but lesser, and the lower divisions of them are longer. The Leaves are very long and narrow, and the Stalk grows to be about a Foot high, the Flowers at top whereof, are of a pale purple color and the whole Spike shorter than the others.

IX. The seventh, or Sweet smelling Handed Orchis. This Kind has small Roots Palmed like the rest. The heaves are much narrower, and long almost as high as the Stalk, with many small Leaves up to the top, bearing thereon a small Spike of pale purple Flowers, very sweet, each having a Hood and a lip hanging down, divided at the bottom into four parts, with a heel between them.

X. The eighth, or the dovecot Handed Orchis. Its Root is Palmed & fingered, much like the others, but has its lower divisions much longer, running down deep into the Earth. The heaves of this Kind are long and narrow. The Stalk is slender, with several short heaves thereon. The piked Head of Flowers is Purple, each resembling small Hies, and smelling as sweet as a Clove, or Clove Gilliflower: after which came great Heads of small Seed.

XI. The ninth, or Handed Orchis resembling frogs, or Flies. Its Palmed or Fingered Root has shorter divisions in one part, and longer in another. Its Leaves which grow on its Stalk, are somewhat short and broad, encompassing it at the bottom. Its Flowers which grow at top of the Stalk, are small, with Wings as it were above, and a long small Body hanging down, and does in some sort resemble a fly, as well as a Fly.

XII. The Places. These Palmed or Fingered Orchides, grow for the most part in Fields and Meadows in many parts of England, and are also found up in Gardens, by the more curious sort of Herbarists. The Marsh or Fenny Palmed or lingers Orchides grow in Marsh, Moorish, or Fenny Grounds, as their Name does inculcate, and of which we have already spoken in Chap. 251. See 10 foregoing.

XIII. The Times. They Flower in April, May, June, but seldom after, except they degenerate, or that it has had some hinderance at the time when it ought to have naturally Flowered, indeed sometimes happen.

XIV. The Uses. See the Specimen, & the Description of it in the Appendix to this Book, mCb, 226, to which we refer you.

ORGANIE, see Origanum, Clap. 5? 2.
OROBANCH, /? Broom Rape, dap. 11:

· C H A P . D X X X I I .

Of O R I G A N U M :

0* , .

Bastard M A R J O R A M .

I. n p H E Names. It is called in Arabic pick- Faudenigi, or Faudenegn 1 bh, or 6. Greek, (Oe) vcy & 'Oe^ mhatine, Origanum and in English^ Origanum, Organj, and Marjoram.

II. The Kinds. Late Authors make many hereof, but the most used in Physick are the Species following, viz. 1. Origanum Herae cum verius hobelij, Matthioli, Gefneri, hugdunenjis, Tabernmontani, & Dodon call it by the Name of Creticum, and Plinij Bauhino, and is the Cunila Di Greek Origanum. 2. Origanum Omtis Mi Geheri, Bauhini & Lugdunen/s, and called by some by the Name of Bulicum, which is Greek Origanum Bauhini; Origanum Creticum Gerardi, white Origanum. This third has so great a resemblance with the former second Species they are very much suspected both of them be but one and the same Kind, and that differ but in the largeness of the Leaves, may be occasioned by reason of the difference of the Soil, or fertility of the Ground in which they may grow. 4. Origanum Vulgare Origanum, Origanum Sylvestre, Cunila Buxula Ruelliof Bauhino: Our Common Origanum. Dioscorides says (if it is his Wild Kind) vvascaile in his time Cunila. This is the strongest in Smell, and quickest in Taste, and is in Galens Opinion, the best Origanum Anglicum Querardt* Our English Origanum.

The Defections*

III. The first* or Gt&k Origanum. // long slender Root, with some small Fibres ing to it; from whence rises up ever at hand reddish green Stalks, a Foot and sometimes in height, spreading forth into many other on which grow many Leaves by couple. These Leaves are of a whitish very like unto those of Marjoram, but whiter and harder or rougher in handling the tops of the Branches small long Spikes or Ears such like as in Marjoram out of which shoot forth small whitish flowers, like the Flowering of Wheat, which comes small brownish Seed. The Plant rises up with us not much

Origanum Greek.

Marjoram, but of s hotter an& Iquhker Sfnell, yet very fvoect, and has djhzrper biting Tajle,

IV. Xhe seeond, or White Greek Origanum. "This Plant is more tender to keep than the former^

Origanum Greek white.

/carte ly abiding the fharpnefs of our Winters, thd it he as well defended: it differs fontething front the former tho' not much -, but in the color of ihs ich in this is white - in its Leaves izhicb :ter and. krger-, and in its Magnitude or Stdtare, ibis being much higher. Tlie Heads are alfo more divided, and jeparaiied into fmaller Spikes oi- Em'i.

V. The third, or Greater white Origanum.

M more hardy than the ldfani with better abide lbs call of a Winiet, if there be care used to freferve it. it bds larger and whiter Leaves than the former i the Jpky Heads are larger alfo. and more ffrend abroad than thofe, and bear v\$ite flowers e manner.

VI. Gerard describes this third Species thus, l; has many thready Roots : from which rift- up Ji-vert weak and feeble Branches^ ;

Ground, fet whk jttir green Leave?,

Penny-royat,

at she to • jh/id \$.•;y ,»• Chaffy Ears of a purple color-, ami.

I m facet Smell. The Rr

Gerard fays, endured in his GarJcji, an

aljb green all the Wink.

have faid that it perijhes at thejirjl ifrojt^ us Sweet Marjoram does.

Vlf. 17?e fourth, or Our Common Origanum, Its Root, fays Farkinion, perijhes when it has given Seed; It rifes up with divers round bard Stalks, on which ere fet fomevibat broader, !effe,^ and rougher Leaves than the former. The tfoixsrs

Origanum Common, or Wild,

grow'at the tops of the Branches, in fmaller fpihel Heads, &nl more difperfed than the former vfa reddijh purple (okr-, after which comet findl hroviniyb Seed.

VIII. *The fifth, or Ox English Origanum.* Its Root creeps under Ground, and encraves much abiding from Tear to Tear from whence come forth several brownish hard, square Stalks, with small dark, green Leaves, set by couples on them, very like to those of Sweet Marjoram, but harder, and broader. At the tops of the Stalks stand

Tufts of dark or deep purplish red Flowers, which turn into small Seed like that of the Garden Marjoram, but blacker. The whole Plant smells pleasantly strong.

IX. *Gerard* says, That this fifth Species of English Kind, has a Root which creeps in the Ground, is long lying, and sends forth long, stiff and hard Stalks of two Cubits high. Set with Leaves like those of Sweet Marjoram, but broader and great of a ruffet green color. On the tops of the Branches stand tufts of purple Flowers composed of many small ones set together very closely, in a single row. This Plant is called by *Linnaeus*, *Origanum Onitismajus*, and *Agrioriganum*, and is the *Origanum Italicum Caesalpini*.

X. *The Places.* All these Kinds of *Origanum* grow Wild in hot Countries, as *Greece*, *Italy*, *Spain*, *Creet*, *Florida* in *America*, and other *Warm* Climates: But with us they are Nurft up in Gardens. The fifth or last grows (as well as in Gardens) Wild in the borders of Fields, and low Copfes, in most places of *England*. I found it to grow Wild in many Plantations in the South of *Wales*, where it grew spontaneously, and flourished after an admirable manner.

XL *The Times.* They bear their ripened Heads or Mower about the middle or end of *August*, or

middle of *September* with us, that their Seed (except that of the last) does not often come to Maturity in our Country.

XII. *The Qualities.* *Origanum* is hot and dry in the end of the third Degree: it attenuates or makes thin, incises, is fortifying, aperitive, attractive, carminative, digestive, anodyne, cephalic, neurotic, stomatic, hysterick, ptarmic, emmenagogic, and alexipharmic.

XIII. *The SpecificatM.* It prevails against Poison, the Bittings of Serpents, or other venomous Creatures, Convulsions, the Dropsie, Disturbances of the Terms, Coughs, Swellings of the Throat, Ulcers of the Mouth, Jaundice, Colick, &c.

XIV. *The Preparations.* 1. A Liquid Juice. 2. An Essence. 3. A Decoction or Infusion in Wine. 4. A Powder. 5. An Errhine. 6. A Distilled Water. 7. A Spirit. 8. A Distilled Oil. 9. A Spirituous Tincture. 10. An Acid Tincture. 11. An Oily Tincture. 12. An Electuary. 13. An Emetick.

The Virtues*

XV. *The Liquid Juice.* Given with Wine, or Oxymel, it is good against Poison, and the Stomachy of Hemlock, Henbane, and Opium, and the Root of Colchicum Ephemereum, which is Mordant, Saffron, that kills in about a Days time: may be given from 1 Spoonful to 4: given of Figs it is good against Ruptures, and Cramps: and mixt with an equal quantity of &way, it Purges downwards black and mean Humors. Taken in a Glass of White Port or Wine, it provokes the Terms in Women, prevails against the Dropsie. Mixt with Wheezing, Hoarseness, and Shortness of

XVI. *The Essence.* It is given from 1 to 2 or 3, against all the Disturbances afore named in Wine or some other proper Vehicle. Brought into the Ears, it eases their pain. It is good for such as are Itchy, Mangy, or are and being taken for some considerable is an excellent thing for the cure of Jaundice.

XVII. *The Decoction or Infusion in Wine.* have the Virtues of the Juice and Essence, being near so powerful, and therefore may be given Morning and Night from 4 to 6 Ounces according to the Age of the Patient. These are potent Remedies against all sorts of cold Disturbances whatsoever: as also against the Bittings of Serpents, mad Dogs, Scorpions, Spiders, &c. securing the Life of the Patient up to the spot.

XVIII. *The Powder of the Herb with the flowers.* It has all the Virtues of the Preparations, but operates not with that Force which they do, because it requires some time to be digested in the Stomach: but being given in Honeyed Water from a Dram to 2 Purges downwards, black and melancholy is good against the Jaundice, provokes the and facilitates the Birth of a Woman

XIX. *The Errhine.* Take of the Juice 1 Ounce: of the Essence 2 Drams: of the Spirit half a Dram, mix them, to be snufft up the Nose. It purges the Head and Brain that way

forth Pitukous Humors, and other kinds of Matter out of the Cavities of the Brain, and therefore is profitable against the Head-ach, Megrim, Vertigo, Lethargy, Apoplexie, Epileplie, and other like cold diseases of the Head: in which being often used, Morning, Noon, and Night, it is found to be a thing of great efficacy.

XX. *The piftilled tffc* It has the former Virtues, but is much weaker than either Juice or Effence, and may be taken from 4, to 6 'oi 8 Ounces, dulcified with double refined Sugar: it will be much more effectual if half a Spoonful or Spoonful of the Spirit is added to it; however it may be used as a Vehiculum to convey the other Preparations in.

XXI. *The Spirit Dijilled from the whole Plant.* It is Cephalick, Neurotick, Cordial and Hyfterick: good against Lethargies, Comas, and all other cold and moist Diseases of the Head and Brain, is prevalent against Palfies, Tremblings, and Numbness of any part, Sicknefs at Heart, Fainting, Swooning & Palpitation, and all cold and moist Diseases of the Stomach and Womb. Dose from 2 Drams to 6 in a Glass of Wine.

XXII. *The Distilled Oil from the spiked Heads of Flowers.* It has all the Virtues of the former Preparations, and is one of the most powerful Vegetables in the World against the Palfie, though universal, being taken inwardly from 3 to 10 or 12 drops in any Antiparalytick Vehicle: and outwardly anointed upon the Spina Dorfi and parts affected, Morning and Evening: but by reason of its extraordinary heat, it ought to be mixed with Chymical Oil of Limbs in equal parts, and then used: and it is a most excellent thing against Cramps, and Convulsions of the Nerves in what part of the Body soever.

XXIII. *The Spirituous Tinture.* It has all the Virtues of the Juice, Effence, Spirit and Oil, but is milder, and more fit to be taken than the last of them, unless in an inveterate Palfie, in which I think, scarcely any Medicine can be too strong. It is a great Stomackick, and this as well as the Oil are potent things against the Colick, whether in the Stomach or Guts: it strengthens the Viscera, expels Wind, and makes a cheerful Countenance, Dose from 1 to 2 or 3 Drams, or more in a Glass of Wine Morning and Evening.

XXIV. *The Acid Tinture.* It is a great corrector of all sorts of Poisons of Vegetables or Animals, but more especially against the Poison or malignity of the Plague or Pestilence, and refits the utmost force of all sorts of Malign or Contagious Fevers: it very much strengthens the Stomach, causes a good Appetite, and a strong Digestion, and being used for some time, very admirably restores languishing Nature. Dose from 20 drops at a time, as to make a Glass of Wine, or Dilution of Broth, pleasantly and gratefully Acid.

XXV. *The Oily Tinture.* It has all the Virtues of the Oil and Spirituous Tinture, besides which it is prevalent against Diseases of the Reins, Uterus and Bladder, cleansing them from Sand, Gravel, and Stones, and other Tartarous Mucilage obstructions. It strengthens the Back, eases the pain thereof being inwardly taken and outwardly anointed upon the same, provokes Urine Powerfully, and gives present relief in the Strangury. Dose from 20 to 40 or 60 drops, in any Vehicle.

XXVI. *The Elettuary.* Take of the Powder of Sal nitre in fine Powder 4 Drams, Honey 2 Ounces and half, mix them. Held in the Mouth, it

between the Gums and Lips, or Cheeks, it eases the Tooth-ach: and being rubbed upon the Teeth, it makes them white, and fattens them: given inwardly, to 2 Drams or more, in a Glass of Wine, it potently provokes Urine, gives ease in the Strangury, and heat and scalding of the Water, and evacuates the Watery Humor in Dropsies.

XXVII. *The Emetick.* It is made of the Juice with Onions sliced, and Saffron in it, in a Copper Vessel for the space of 40 Days. Dose a Dram or 2, more or less, according to Age and Strength, in a Glass of Wine in the Morning Falling.

XXVIII. *Not a Galen* says, all the sorts of *Origanum*, are of a cutting, ratifying, and attenuating Faculty, and heat in the third Degree 5 and that the *Heracleticum* is of more power or force than the *Onitis*, and that the Wild is stronger than either. It is also said that the *Decoffion of Origanum, with Cloves, sweetened with Sugar* helps such as are troubled with the Hiccough.

CHAP. DXXXIII

Of ORRICE Florentine.

I. *The Names.* It called in Greek, "Iris Tuberosa"; in Latine, *Iris Tuberosa*; in English, *White Orrice*, *Florentine Orrice*, and *White Tuberos Flower de Luce*,

II. *The Kinds.* We have treated of this Plant already in Chap. 287. foregoing, where we have described three several Species thereof, viz. *Iris alba Florentina*, the Sweet Florentine Orrice: of whose Root Sweet Pouders and Waters are made, and of which they make their *Rasp-Berry Ale*, by putting a little bit of it into each Bottle. 2. *Iris Flore pallido Florentina*, The Straw colored Florentine Orrice. 3. *Iris alba major verfi-color*, The white particolored Orrice. To these we shall add in this Chapter, 4. *Iris C&rulea odorifera, vel odorosa*. *Iris Camerarij Germanica*, Camerarius his Sweet German Orrice-, or Sweet blew Flowered Orrice: 5. *Iris Pannonica*, Hungarian or Austrian Flower de Luce, or Orrice. And with these, we here give you the Cut, or Figure, of the *Sweet white or Florentine Orrice*, which was over-past in Chap. 287. Seff. 3. above mentioned, which is now here placed.

The Description

III. *The first of these, or Sweet Florentine Orrice* has a tuberous Root of a considerable thickness, which is admirable for its sweetness, and being put into Ale, or Wine does give them an absolute Rasp-Berry Flavour of Taste; also being reduced into Powder makes a yellowish or Cream white Powder, of a very pleasant sweet Smell, of which many sweet Pouders and Breads are composed and which is generally now sold

1. Or rice Florentine Sweet: or Sweet white Or-rue \ or Sweet tuberous Flower de luce.

in Perfumers Shops: This Orrice in its form and way of growing, is altogether like to the Common Flower de luce, faving that the Flowers of this are of a white color, and the Root of an exceeding sweet Smell. The larger description hereof see in the afore cited Chapter and Settion.

IV. The fourth, or Camerarius his Sweet German Orrice, or Sweet blew Flowered Orrice. Camerarius in his Hortus Medicus says, That it has a great thick and knobby Root, which smells as Sweet as the Florentine Orrice. The Stalk is Jingle and fsmooth, thick and full of Juice. The Leaves are very large and broad, and twice as broad as any of the other Flower de luces. The Flower grows at the top of the Stalk, conjijling of fix great Leaves, of a noft bright Jhining blew color, welted down the middle, with a middle Rib, of a yellowish white color, the three tipper Leaves being somewhat yellowish. At the bottom next the Stalk, it is of a white color, with some yellownefs fringed about the fold white, as also about the brims or edges, *Uch e *pre JJes the Beauty thereof.*

V. The fifth, or Hungarian, or Auitrian Flower de luce or Orrice. Its Root is tuberous, and very sweet when it is dry, out-vying, or contenting in sweetnefs, with the first or Common Sweet Florentine Orrice it self. It has great broad Leaves, thick end flat, of a purple color near unto the Ground, like to the Dalmatian Flower de luce, which it very much refenibles. The Flower is of all the others, the most confusedly mixed with various colors, being very Beautiful, infomuch as it is very difficult to *Line or ^roke, according to the truth thereof The three Leaves which ft and uYright,*

«w color. The Leuves which look dovmmrds/are

about the edges, of a pale color, the middle part of white, mixed with a Line of Fur pie, and has many small purple Lines, piped *ver the *fid wJ Flower, even to the brim of the pale colored egg^ This being lightly fine It to has a Smell almost IM^thofe of the Hawthorn Flowers.*

VI. The Places. The Titles or Names of tljg OrriceH (hew in what Places or Countries they are Natives: with us th^ are only Nurlt up Gardens, where they flJfcfh very well.

VII. The Times. They Flower in July and ^gufi; and their Seed is ripe in September, otw long after.

VIII: Tlxiauitics, Specifications, Prep^ and Venues of thefe, are the fame with we^rentine Orrice, declared in Chap. 287. Sect-17. aforegoing, to which you are referred.

The Descriptions*

III. The fir ft, or Our Common Orpine. **T**he Roots are manifold, thick, round, rW «?/,*³, *w& glandulous or tuberous Clogs, not much unlike to thofe of /fo^panifh IC^rf following, but leffer. It rifes&p with fever al round brittle Stalks, thick Jet with thick, fat, and flefhy

leaves, without any order, and little or nothing dented about the edges, leffer than thofe of the Spanifh fort, and of a paler green color. The Flowers grow in leffer Tufts, and are zobite, or of a whitifh color, which afterwards bear chaffy Husks, containing within them fmall duft like Seed. This when it is found S^i/going Wild in Fields and Woods fides, does generally grow f mailer than when it grows in Gardens.

IV. The fecond, or Small Orpine. Its Root ^zs long and Fibrous, fm lling Something facet, ^•"Rofe-wort Root as Camerai;ius (ays, and "perifhes every Tear. fo that if it rifes not i the JJjed Seed (which it ufudlly does, if it is Offered to foed it) it muft be new Sown /jvery Tear* It has a fmall weak Stalk, fcarce- "K <* Foot long, lying almoji upon the Ground, Jpread out into feveral Branches, and they a&un into other fmailer ones, fet with fmall thick long Leaves, without any order^ and Sometimes like unto Purflane. At the tops of *be Branches grow many fmall white Flowers, in Tufts, but more thinly, or fpardedly fet, than in fome of the other Kinds, confijling

f f^ LTMves apiece-, after which come fmall heads, like to the other Orpines, in which is contained fmall dujly Seed.

V. The third, or Great Spanifh Orpine. Its Roots are thick^ -white, and tuberous, bigger and l^ r than thofe of the firft, or Our Common Orpme, which abide til the Winter, with the erec Leaves on their Stalks, which have not yet Flower- fJ\$ZL^R o O L^if of U K f^ TMTM^TM<, round fppy -alks, about two Feet high, on which are fet adijtances two large and thick broad Leaves verl MeuntotheCommonOrpln., but much larger and fometunes browner of colored a little unevenly den^ ted about the edges. At the tops of the Stalks grow lufts of Flowers, larger and more fspread, than thofe in cur firft or Common Kind which confift of five fmall whitifh "Leaves apiece, which being paji away, fmall chaffy Husks fucceed, with fmall duft like Seed within them.

VI. The fourth, or Orpine purple Flower^ . It ha* a tuberous Root like the firji Kind, but much, fmailer, and very much fuller of Fibres or Strings. Nor does it much differ from our Common Kind, but, that the Stalks are more flexible and weak, vnd the Leaves (which grow without any order) are more finely dented about the edges. The Tuft of Flowers at the tops of the Stalks are of a reddifh purple color\ confijing of five fmall Leaves apiece, like the former. This has been found alfo faaller in all its parts, but not other- TM^f differing^ than in that the Stalk* with all the Leaves, utterly perifh every Tear to the Root which every Spring fends forth new Stalks. *

VII. The fifth, or Small' creeping Orpine, called by fome French Orpine. Its Roots are, not tuberous but fibrous or flriiigy; yet do endure with the ere *n Leaves on them, the greateri extremity of^ \\ L ter, loofing only fome few of the lower Leaves of the Branches. This Root fends forth revert/ weak round Stalks, lying* on the GrQurd, and erf* § K 2

ly taking Root again as they lye[^] thick Jet wit **I** thick fat Leaves[^] like unto Purflane, but J^mallei and fsmall upwards[^] of a dark or rufy gree^t color[^] from among which rife bare or naked weak Stalky without any[^] or with but few Leaves thereon **I** at the tops whereof Jiand Jmall Tufts of purplifh Flowers like the other,

VIII. *The fixth, or True Orpine of Imperatu* Its Root is fsmall andlong[^] of 4, 6, or 8 Inches in length, with divers Branches and fsmall Fibres adjoining to it •, at the Head whereof fame Branches of green heaves, which have not fceded, ivill remain, thd* thofe that have floi&ered and Jceded dye away arid perijb. It is a-fsmall Plant and fspreads it filf upon the Ground with many fsmall and long trailing Branches, a Foot or more long: whereof thofe which will not flower the fame Tear have fsmaller, and fome what longer Leaves on them, and thicker jet together: but thofe which will bear Flowers, are Jet [parefedly with out any order to the tops, and are lejfer in form, and lefs thick andfappy than any of the others before, tind of a fad blevoifagreen color. At the tops of the Stalks, jiand thkk xlujiers of white Flowers of five Leaves apiece, after which come fsmall corner* A Heads containig fsmall brownifh Seed.

IX. *The Places.* The firftof both forts, both greater and lejfer, are frequently found almoft in every County oⁱ England, tje greater being generally Nurft up in Gardens[^] the lejfer fort is found to grow in the fhady fides of Fields and Woods, Thefecondwas firft brought to us from Padoua[^] and is now planted in many places in our Gardens* The third Clufms found in Spain, as aifo in Hungary, and upon the Alps. The fourth has been found often in feveral places of Germany, as Tragus, Camerarius, Clufms and others affirm. The fifth was a Native of Italy, and was fent thence by Alphonfus Pancius an excellent Herbarift of Ferrara. The fixth came from Imperatus of Naples • from Corttfus and Jofephus de Cafa bona, *of whom Clujius fays, that he received the Seed. Thefe are the Native places* of thefe five laft, but with us in England, they are all Nurft up in Gardens.

X. *The Times.* They do all of them Flower thro' the whole Month of July, and their Seed is ripe in Auguft.

XL *The Realities.* They are cold and moift in the fecond Degree, as fome fay^h and Vulnerary, as being good to heal Wounds and Ulcers, whether inward or outward.

XII. *The Specification.* They are peculiar for cooling Inflammations in Wounds and Tumors, and eafing their Pain: They abforb the acidity of Humors in the Bloody Flux, flop fluxes of Blood in Wounds[^] allay Vapors, and cure Excoriations or Ulcers in the Stomach, Bowels, Liver, Lungs, Reins, Womb, or other inward parts.

XIII. *The Preparations.* You n[^]ay have therefrom, 1. A Liquid Juice. 2. An E^Jfence. 3. A Deco^aed or Infolated Oil. 4. A Cataplqfm of the Leaves, 5. A Dijilled Water. .

The Virtues.

XIV. *The Liquid Juice.* Ufed with Vinegar as a Bath or Wafh, it takes away Scurf, Morpewh, Leprofy, and all other Deformities of the Skin, and is good to wafh old filthy Sores, and putridllcers, tocleanfe and heal them. It prevails againft a Qⁱinfey, the Throat being gargled therewith feveral times a Day,, and outwardly it being

bathed therewith double Cloths wet therein, being alfb bound thereto.

XV. *The E^Jfence.* Taken inwardly 1, 2, or Spoonfuls at a time, it is good to heal any gnaw[^]ing, Excoriation, or Ulcer in the Stomach, Inteitines, Lungs, Liver, Spleen, Reins, Ureters, Bladder, or Womb, or other inward parts, being taken for feveral Days together. It allb abforbs the acrimony and acidity of the Humors, heals other Bowels in the Bloody F[^]x, and flops all the Fluxes of Blood in the Body. as alfo the bleeding of Wounds outwardly, The Rdbt of thefe Plants, is faid alfo to perform the fame things, viz. The E^Jfence made of the Root: Inwardly taken for fome confiderable time, it wafts and confutes Scrophulous Tumors, or Swellings of the Throat, from the Evil

XVI. *The Decoded or Infolated Oil.* It maybe made of the green Herb, or Root. Or it, n[^]be made by beating the Juice and Oil Olive together. It cools Inflammations, gives eafe in hot Apoftems, as alfo in inflamed Wounds, and Is excellent to heal Scaldings or burnings with Water, Oil, Lead, or Fire, &c. Anointed upon Strumous Swelng^s in the Neck and Throat, it is faid to abate them, prevent the afflux of Humors, and in a fhort time to cure the fame.

XVII. *The Cataplafm of the green Leaves or Roots.* Applied to any firrple Green Wound W. Hands, Arms, Legs, or Feet, or other parts of the Body, it quickly heals them. Being bound to the Throat of One that has a Quinfey, It repels the Humor, fuddenly puts the Patient out of Pe[#] and in a fhort time cures it, the Throat being gargled alfo with the Juic^e or E^Jfence, five or h[%] times a Day. Applied to Ruptures, it is faid to confolidate them, epecially if the Patient is young.

XVIII. *The Diftilled Water.* It has all the Virtues of the Liquid Juice and E^Jfence[^] and may be given to fix Ounces or more, a little dulcifta with double refined Sugar. Mixt with an equal part of Vinegar, it is faid to be a fingular W metick.

CHAP. DXXXV.

Of O X E Y E.

I. *THE Names.* It is called in Arabick³ & har: in Greeks Bi<p9*tyoy: jn u<u>: Buphthalmon[^] & Oculus Bovis: and in Ox Eye.

II. *The Kinds.* Authors give us feveral of this Phnt, but thofe which grow with us England, are chiefly thefe following[^] vⁱ: Buphthalmum vulgare, Buphthalmum Matthioli folij folii[^] Oculus Bovis vulgaris[^] Cachle P[^] dii, Chryfanthemum CorAi[^] fitchfij[^] Gefneri neri[^] The Common or Vulgar Ox-Eye. 2. thalium altermn CotuU folio Camerarij, & I. Buphthalmum Narboiefefe, Camomil-like Ox V 3. Buphthalmum jlonepurpurafcente[^] Ox Eye P[^] pie Flowered. 4. Buphthalmum Ajricanum ten[^] vlium Boelijy Ox Eye Fennel LeavU

the Descriptions.

III. The fir ft, or Common or Vulgar Ox Eye. It has a small and slender Root, and fibrous withall, which perishes yearly, or otherwise abides the second Tear after the first Sowing, which Yarrow is not. This is the most common Ox Eye with which its leaves are fair and green, divided very much

into several other leaves, somewhat resembling Common Yarrow, and so taken to be by many who look but superficially upon it, but being carefully observed, it is found plainly to differ from it, the divisions not being so thick nor small. The Stalks *bd* they grow upright, yet are not so stiff or *thick* as those of Yarrow, and at their tops they *but* the Flowers, less than shape of the Corn-Marigold, but wholly of a deep yellow, and not shining, after which follows the Seed in the middle yellow Thrum. The Figure we here exhibit *you* is that which is in Mathiolus his Epitome, *out* the more Elegants, Cut of this Plant, is that which is in Bauhinus his Edition of Matthiolus his Dioscorides.

IV. The second, or Camomil-like Ox Eye. Its *ot* is tough, long and slender, with some fibres adjoining to it. The Stalks are weak, supple -> flexible or apt to bend, and green withall, which grow *times* to be about 2 Feet high, with fine Camomil or May-weed-like Leaves, but a little larger, *perfectly* growing thereon, as also on its Branches; every one of which bear a Flower like unto the former Ox-Eye, *the* Corn-Marigold, but its leaves are fewer, yet somewhat larger, than those of Camomil, and yellow; the yellow Thrum in the middle *of* & of a deeper yellow color, and somewhat hollow

V. The third, or Ox-Eye purple Flower. Its Root is much like the former. The Stalk also (which, in the other is green) is more reddish in this. In the main, the Plant differs not much from the last in the manner of its growing, or in the form of its Leaves and Flowers, saving, that in this, the Flowers are either wholly purplish, or else purplish in the middle.

VI. The fourth, or Ox-Eye Fennel Leaf'd. It has a long slender Root, which is full of Fibres or Strings, and perishes every Tear after Seed time. It rises up with one slender Stalk, with several long thin Leaves, variously divided, and cut into small fine parts, coming nearer to the form of Fennel, than any other, bearing a large yellow Flower at top of each Branch, Leaves and Flowers growing together.

VII. The Places. They generally grow in moist Grounds, by Water Courses, and the like in other Countries, but with us they grow only in Gardens.

VIII. The Time. They Flower in June and July and sometimes in August, the Seed being ripe not long after.

IX. The Use. They are very short in this part, all that they say of Ox-Eye, is, that it is Discurfive.

X. The Specification. It is laid to discurf Tumors, and to be helpful against the Jaundice.

XI. The Preparations. You may have herefrom, 1. A Powder of the Heads of the Flowers, 2. A Cerot made of the Juice.

The Virtues.

XII. The Powder of the Flowers. It may be given in White Wine, from a Dram to two Drams Morning, and Evening, and so it is helpful against the Jaundice: Or it may be given immediately after Bathing, as Dioscorides says and so it gives a good color to the Skin.

XIII. The Cerote of the Flowers, Applied to cold and hard Tumors or Swellings, it softens and discurfles them; and therefore may probably be good against Scrophulous Swellings.

CHAP. DXXXVL

Of OX-LIPS.

I. THE Names. They have no proper Greek Name: but are called in Latine, Paralyfis absque calicibus: and in English, Ox-Lips.

II. The Kinds. It is a Species of the Cowslip, and of that sort, whose Flower is without any Husk, or green Husk to contain it, or if it has any, it is a very short one. It is threefold, viz.

1. Paralyfis absque calicibus simpliciter, Ox-Lips single; 2. Paralyfis sine calicibus duplici, Ox-Lip double. 3. Paralyfis calicibus differens, Ox-Lips with jagged Husks. 4. Paralyfis Flore Viridante, five, Qalamifirata, Ox-Lip green Rose, or Fether Flowered. All these we have treated on already in the Chapter of Cowslip, viz, Chap. 530. SeS.

so, n, 17. aforegoing-, ib that no more need be laid of them now, faving that we (hall here give you *Ger&rds* general Deicription of them ^ and then add a fifth. Kind, viz. ?. *Fara/yis Wore Geminato fallidiore inodora*, Ox-Lips double of a paler yellow color without Smell.

Hhc Descriptions.

lit. *Cerards* general Defcription. *This well known Flower by the Name of Ox-Lip, differs not from the Cowflip, faving that the flowers afe not Jo thick tbrufi together, and they are fairer, are*

not fo many in number, and fmell not fo pleajant as the other: (to which we add) and (land- ing naked, or vñthout any green tiofe or Husk, to contain them, or if they have any, it is a very fhort one, fee the Figure.

IV. *The fifth, or Ox-Lips* double of a paler yellow color without Smell. *Its'Root is long, firingy, and very Fibrous, from whence fpring forth many green heaves, very like to thofe of the Common Field Cowflip, very much of the fame fhape and make, rough, ftiff, and a little Crumpled about the edges, each Leaf ftanding Upon a ffort foot Stalk. It h[%]a* Stalks of Flow- ers, much like the Cowflip, growing in bunches at the tops of the Jaid Stalks. The Flowers them- felves are double, like thofe of the Double Cowflip, one within another, Javing that this has no Husk or Hofe to contain them, no more than the Single^ Ox-Lip bar, but ft and bare or naked, ¶¶* the very Jaye largenefs each of them, havwg very link or no Smelly but wth this*

difference-, i. That the Leaves of this Plant arc fome thing larger. 2. That the Flowers are alfo a little larger. 5. And thai they are of a paler yellow color. *

V. *The Places.* They are all found growing Wild in Meadows and other Pafure Fields alitibt throughout all *England*: from whence they have been Tranfplamed into *Gardens*, for delight fake, with fuch as are Lovers of Flowers, where they abide, flourifh, and grow fairer than in th'il' natural places. *

VI. *The Times.* They' Flower in the *Spring* of the Year, at the fame time when *Cowflips* are in Flower, fome earlier, and fome later, but generally later, or after *Primrofes*, fo• that their Sea- fon may be faid to be from the beginning of *April* to the end of *May*; But I have feen ¶¶ of them in Flower almoft to the middle of ¶¶, tho⁵ not often.

VII. *The Qualities, Specifiation, Preparations^ and Virtues* of thefe are the fame with thofe of *Cowflips*, which we have enumerated at large in *Chap. 157. Self. 18. ad 32.* aforegoing. They are fingular Cephalicks, and Neuroticks, and therefore mult be. of extraordinary ufe in Difeafes of the Head, Brain, and Nerves: and for eafing pains in the Head, are accounted next to *Betony** Experience has fhew'd that they are profitable for the Cure of the Palfie, for which reafon the whole Tribe of *Cowlips* (of which thefe are Species) are called by many People *Palfie-worts*. They are alfo profitable againft pains of the Joints or Gout, (as are the *Bears Ears* alfo, which are another Species of *Cowlips*) for which reafon they have obtained the Name *Arthritica*, as well as *Paralytica* or *Paralyfis*.

VIII. *The Juice of the flowers.* It is com- mended by fome Authors; to cleanfe, foften, and whiten the Skin, and to takeaway the fpots, dilco- lorings, and defcedations of the Face or Skin. The faid *Juice* drank Morning, Noon, and Night, from 3, to 5, or 6 Ounces, for fome Days in a Glafs of *Maker a, Sherry*, of *White Lisbon Wine*, is faid to prevail wonderfully againft both Palfie and Gout.

IX. *The Juice of the Leaves.* Snuff up the Noltrils as an *Errhine*, it purges the Head, Brain, and original of the Nerves, of cold and moit Humors, which fall upon other parts, and caufe Palfies, Gouts, Convulfipns, Evil, and many other dangerous Difeafes. •

. O R,

GÜINNY 'Cbftk

I. ⁹ *T*HE Naze**. It is called in Arabick, *Do-
JL ebon*: in Greek, *E*tr©-> Elymos*: in La-
tine, *Pamçum*: and in Englijh, *Panicky Guinny*
Corn, and *Indian Corn*.

II. *The Kinds*. There are several forts of this
Plant, as," 1. *Panicum Indicum*, *Panicum Americanum*
Panicum Carolinianum, *M. Aw Diofcorides* &
(*a/eni, pē*h& as *Diodes* has it: *Mel frugum*
Plinijh, *Pliny* fays *Panic urn āPanicu/is diftumfuit* •,
Indian Panick or *Guiny Corn*. 2. *Panicum Caruleum*
Indicum, *Blew Indian Panick*. 3. *Panicum*
Indicum Panicula Villosa, *Indian Panick* with a
more hairy *Spiked Head*. 4. *Panicum Germanicum*
Panicula minor-c , *Panicum album vulgare* ,
Ordinary or *Common Panick*, *German Panick*.
5. *Panicum Sylvejire Gerardi*, *Wild Panick*. Of
the *Manured Panick* growing with us in *Europe*[^]
there is but one fort. But the *Indian ox Gniny*
Panick is manifold, coming from • *Eaji India* ,
Guinny, *Mithiopia*, or *Africa*, and from *America*
alfo; *One fort* has white *Heads* as big as ones
Fift, thick and fhort, with round white *Grains*,
having an hole or dent in every one of them.
Another, has a *Head* or *Spike* a *Foot* long,
with a bowing top, as hairy as the third fort
afore named. *Another* has a flender *Spike* a *Foot*
and half long, larger at the lower part thereof,
and fmaller at the upper part, much like to the
firftKind. *Another has* a bald fpiked *Head*, larger
than both ones *Fifts*, and 9 or. 10 *Inches* or more
long, whose *Stalk* is a full *Inch* in *Diameter*, of a
fine whitifh yellow color: befides all thefe, there
are *several other forts* growing in their *Native*
places, too many to be enumerated here[^] and
which to mention would be to little other pur-
pofe than to fjtup Room. We (hall give you in
this Chapter the Defcriptions only of the
five *Kinds* we have firft Named, which take as
follows.

The Defcriptions.

III *The firft*, or *Indian Panick*, or *Guinny*
Cora Us. *Root* is fibrous, confifting of many
Threads or *Strings*: *Its Stalk* is very tall, as tall
ti* the higheft *Indian Maiz* -, *Its Leaves* or *Blades*
are like to thofe of *Millet* or *Maiz*, very long and
broad, and of a confiderable thicknefs, with a *Rib*
running all along the length to the middle. *Its*
Ear is thick, clofe, and compaU, made *Taper*
fashion[^] broader or thicker at the *Jovoer end*, and
at the top[^] a *Foot*, or almoft a *foot* and
½ in' length. *Its Grain* n much like that
in Se&. 4. following, faving that many of them
are contained together in one *Hairy Husk*, which
[^] fajinedto a very fhort foot *Stalk*.

IV. *The fecond*[>] or *Blew Indian Panick*. i>
has a fibrous or stringy *Root* like the former,
which fends forth *Stalks*[^] growing up to the

height of a *Alan*, or more, with firing and great
Joints, full of a white fpungy *Pith* like to the
former, or that of *Maiz*, which near the *Ground*,
are of a firing purplijh color: it fpreads it
felf out into fundry *Branches*, with large an'
long *Leaves* on them, like to thofe of the firft,
which encompafs the *Stalk* at the bottom, having
each a thick *Rib* running its whole length
through the middle. From the *Joints* towards the
top, as alfo at the tops, come forth fhort round
Panick like *Heads*, clofer fet together, than in
the next following, and of a blewifh jhining purple
color, as the *Stalk* below, or rather much more
Orient and frefh, full of hairy *Husks*, and fmall,
long, blewifh, round *Seed*, or *Grains* in them[^]
like unto *Naked Oats*.

Y. *The third*, or *Indian Panick*, with a more
hairy fpiked *Head*. *Its Root* is a buffy of fibres
or *Strings*-, which fends up a thick, flrong, joint-
ed *Stalk*, four, five, or fix feet high, an *Inch*
and quarter or more in thicknefs, zvbq/e *Cavi-*
tity is filled with white fpungy *Pith*, at the
Joints of the *Stalks*, and their *Branches*, corns
forth long) broad, thick "Leaves like to the former[^]

with a thick *Rib* running through their middl*
from the one end to the other, which when dry is
white like *Straw*. At the top of the *Stalks*[^] comes
forth a large fpiked *Head*, almoft *Corn* *fashion*[^]
round, thick below, and fmall at top, a foot or
more long, fometimes fifteen or sixteen *Inches* in
length, a little inclining or bending downward, by
reafon of its weight, for it is very full of *Grain*
clofe fet together, the which is white or yellowifh
and *fashion* almoft like to *Gromel Seed*, or not
much unlike to that of *Millet*: but the *vohok*
Spike is much more hairy than either of the
former.

VL Tfo fourth, or Ordinary, < Common Panick, or German Pdnick. Its Root is bujhy likes to thofe of the former Kinds, but fmaler, and dying every Tedr ax they do. It grows up with a reafona* ble Jlrong jointed Stalk, full of a fpungy Pith, but not Downy as Millet is, having thereon^fome- what large Leaves, greater, by Thuch than thofe of Wheat, and very near to the l&rgenejs of thofe of Millet, fo that they can hardly be diftinguifhed* At the top, of the Stalk comes forth a tohitifb, long, rounds clofe Spike, round at the end, Joft, and as it were hairy, with fmall Jlwrt Brancheſ, all the length of it, when it is full ripe and opened, it is full of hairy Joft Husks, which include a fmall white Grain, fomeibing lefs than that of Millet, and not fojhining. The tiargrotis at top, Jingle, not unlike to the Spike or Ear of that laji defcnbed, but much lefs.

VII. TJje fifth, >or Wild Panick. Its Root is fmall and fibrous or thready. It grows up with long, slender, jointed, Reedy Stalks, Jet at the Joints with long Leaves, like to thofe of Sorghum,

or Indian Panick at Seft. V. aforegoing. The Tuft or Feather like top^ 2s like to the Common Reed, or Ear of the Grafs called Ifchamon, or Manna Grafs.

VIII. The Places. The firft three grow in J... as alfo in the Eaft and Weft Indies, and admirably well in our Plantations in ... but of them the third ſpecies is Princi- that, which is chiefly planted, not only but alfo with us in the Weft Indies, Tm > many Places throughout all IC thrives ver y well. The fourth and with ^ in many places Gardens. The fifth grows Wild in the hotter

Climates, but in England, it is preferred only in manured Grounds

IX. The Times. • They are not to be Sown till April, unlefs the Year be hot: The fecond Kind does not often come to Maturity here, but the firft many times will, if the Summer is leafonable and warm, and it be Sown in a ftrong and fan Ground. But they proffer belt in hot and d Climates, and are apt to wither with much watering. The Grain is ripe about the beginning of Auguſt, and being full ripe when gathered, maybe kept good a long time, if it is carefully preferred from the Wevil, or other Vermin which may eat it.

X. The Qualities, * Spec'ijicat ion, Preparations and Virtues of the Grain are the fame with thofe of Millet, in Chap. 491. Se3. 8, ad 17. aforegoing, to which I refer you. But Galen fays. That Millet is better to all purpofes than Panicky fweeter alfo in Taſte, and eaſier of Digeftion-, but he fays, that Country people feed thereon, as we do of Wheat, being boiled in Milk, and fo eaten. He alfo fays, That that which grows in exceeds in goodnefs, that which grows Afia.

XI. Not a. Johannes Leo, Hijloria Africa, That in fome places in thofe Countries, they make very fine Bread of Panick. It is eaten too, in our Weft Indies, where alfo we Feed our Dughil Fowls, Ducks, G^ie, Turkeys, Pidgeops, &c. therewith. The Bread made of the Meal or Flower of fynick flops Fluxes, by talon of its very drying Quality or Property. A Cataplafm of the Meal or Flower, is faid alfo to be cooling, ana dryings Strengthens the parrts affected, and repress a Flux of Humors.

XII Panick boiled (a* Winy fa*) Milk, or in Cows Milk, which & J know may do as well being E* twice a or Fluxes of the the Difeafe is recent.

Of PARNASSUS-GRASS.

OR,

LIVER-WORT White.

I. **T**HE Names. It has no Greek Name: but is called in Latine, *Gramen Parnaffi*: and in English, *Parnaffus Grafs*.

II. *The Kind*. There are two Kinds of this Plant, viz. i. The single Flowered, which may be called in Greek, *Ay?*><rif i i^mfya^S which is the Name *Camerarius*, in his Epitome of *Matthiolus* gives to our *Unifolium* or *One Blade*, but very unjustly: *Matthiolus* himself in his laid Epitome calls it in Greek, *A>f of ja^CC^W> which he ascribes to the true Plant, but with out any Flower, which we here give you in the first place: so that upon the whole it is much to be questioned whether our *Parnaffus Grafi* here intended, was ever known to the *Greeks*, however these Greek Names will very well suit with what we here offer you: in *Latin*, it may be called *Gramen Parnaffi*, and probably may be the right *Gramen Parnaffi Def* (tho' I think we cannot be positive of it:) for *Gefner* in *horth Germanic*, says, that the right is not known to any in our Days: *Cordus* in his History of Plants calls it *Hepatica alba^Lobel^Gramen Parnaffihederaceum recentiorum*: and *Tabern&montanix*, *Gramen hederaceum^ft?* *Flos Hepatieum*: Common *Parnaffus Grafs*. a. *Gramen Parnaffi Flore duplicate Lobelij*: *Parnaffus Grafs* double Flowered,

Vdrnaffus Grafs of *Mathiolus*, without Flowers.

*The Description**

III. *The first* ^ or Common *Parnaffus Grafs* which is single. Flowered. It has a Root consisting of a small blackish fibrous husk of Threads, enduring all the Winter. From the Head of this Root rise up many Leaves + not altogether round^ but shaped below like the upper part of a Heart, broad in the middle, and ending in a point, sometimes (harp, and sometimes blunter like the lower part of a Heart, finer c;nl thicker than Violet Leaves, not much unlike to some Ivy Leaves or Leaves of *Afarabacca*, but finer, and not of so dark a color^ yet of a fresh sort of green\ every

Parnaffus Grafs Common single Flowered.

one standing on a long foot Stalk; among which there rises up several slender weak Stalks about a Foot high, so weak as, that they are scarcely able to stand upright, on which grow at the several Joints, such like Leaves as the former, but smaller, and without any foot Stalk 5 but joining themselves so close to the Flower Stalk, that the said Stalk seems almost to run thro* it. The tops of the Stalk are naked and bare of Leaves, unto the Flowers, for a good way. The Flowers are at the tops of the Stalks^ and are white, consisting of five Leaves a piece, round at their ends and not pointed: in the middle of which is a small round green Head or Button, which the Flower being fallen, grows somewhat larger <nl contains within it 7 small reddish Seed. ^ * .

IV. The fecond, or Parnaffus Grafs double Howe'd. This fecond Kind docs anfaer the jor^
•mr almoft^ in all resells, its Root, Leaves, and
okak^* -ve* -vsh^ alike Javing that in this, the
Leaves of the Plant are something larger, and
%he flower has a double row of Leaves one with

in another, which makes the Flower JJJOVQ double •,
the Leaves of which Flowers both the inward and
outward are long and sharp pointed, otherwise
in its form and manner of growing, this Plant is
like to the firil^, but it feldom gives any Seed
ay the former does.

V. The Places. It is very probable that Parnaps
Graf grew formerly very plen/ifully upon Mount
Parnaffus, from whence it ieems to take its Name,
where Cattle feeding became fat and in good liking,
as they do when they feed upon Clover Grafs, or
St. Wine with us. The first grovys in moift, marlly
Ground, in England. It grows very plentifully in
'Lanf dall, and Craven in the North parts of Eng-
land: at Doncajler, and in Thornton Fields in
the fame County: in the Moore near to Lint on
by Cambridge: at Heffjet and Drinkfl&ne alfo in
Suffolk, in the Butchers Clofe thereby: in a
Meadow clofe on the back fide of the Parfonage-
Houfe at Burton: and at the bottom of Barton
Hills in Bedford'fhire: in the Boggy Ground
below the Red Well of Wellingborough in North-
«mpton-shire: and in the Cape-Fie Ids of Barwick
ppon Tzveed, where it is found plentifully:
in the middle of the great Town Field of Had-
aington, about a Mile from Oxford: in a Pafture
next unto hot ley, in the High-way, on the other
fide of Oxford i and in feveral other places. The
lecond was found growing in Brabant in Flan-
ders: but With us only in Gardens.

VI. The Times. They Flower about the mju-
dle and latter end of July, and the Seed is r*p*
about the middle or end of Auguft. ^ ..

VII. The Qualities. It is cold and ary in the
beginning of the first Degree, Abfterfive^ An-
five, of thin parts, Diuretick, Nephntick,
nerary, and Alexipharmick. *

VIII. The Specification. It is prevalent ag
the Stone, Sand, Gravel, and Tartarous Matter
in* the Urinary parts, provokes Urine, ®ATM'
in the Strangury, lengthens the Stomacii, it°B
Vomiting and Fluxes of the Bowels: abate;

CHAP. DXXXIX.

OF PARTLY GARDEN.

I. THE Names. It is called in Arabick I Chars, Chares, and Cbarfi: in G/w*, siAiwF: in L<///>, Aplum, V Fetrofehnum: and in E ^, ParJly. Here is to be observed that thd' formerly ^, was the proper and true Name of Parfly, even when ufed finely and alone, yet of late Days, it seems to be rejected, without fonic other Epithite be joined with it as Apium Hortenfe, which is our Common ParJly, whose vtlgar Name now is Fetrofehnum ^ andApur, firmly fo called is with us;only Smallage; tho it is also called Apium Palufire, tf Paludapium, or Water Parfly-

II. The Kinds. Authors have given us many Species of Farfly, as, i. si w W ^, Apium Hōrtenfe, Garden Parfly, of which in this Chapter. 2. ner&fitovov, Apium Macedomcum, Petrojelin'um Macedonian, Stone Parfly, or Macedonian Parfly, or Stone Parfly, of which in Chap. 540. a. &v;n*ytiw>Zi'«r Diofcoridfs, Apium Agrejte be/ Sylvejlre, Wild Parfly, of which in Chap. 541. 4. s»ww» «ew, Krtv^iji Apium-nothum, caucalis, Baftard Parfly, of which in Chap. 542. following. To these we may add, \$.'fTM%TM> % W 0 "i, Urfelimum, Equapium, Horle Parfly or Alexandri' wWch in Cfo^ 7- foregoing 6. S«.w Seltnum Segetale, Smmjerrefre ^ Stum Segetum , , ^ ^ ^ ^ g j. f ^ Aufini Laugh- ter-, Palque Flower; of which in Chap. 543- 8 S Wiw 'dices!' *^«««^»» ii'^/« palujtre, Talu- dāpm, Smallage, of which in Chap. tol-

III. ^ Kinds of the Garden Parfly. There are four forts of Garden Parfly common with us: viz. i. Petrofehnumvulgdre, Apium hortense, Sehnum bortenfeDiofcoridis; Apium Veterum, Apium Do- ZSm Our common Garden Parfly. 2. Tetraq- feltnum Crifpum, Aplum TMf.f^n >/P^n TM%J- pum, iff Apium hortense Cnfpum, Curld Parfly i Petrofelinmajus, Petrofelinum Virginianum, Apium majus Virginianum, Virginia Parfly; 4. Petrofelinum Creticum, Apium Creticum, family of Crete or Candy.

the Descriptions.

IV. The first. ^ Our common Garden Parfly. It his aioSLhichis vbe TM*^? *% /% what a rueged Bark, which is as Aromatica! Herb is very pieafant to the Tajie, and agreeable or w fpring"fofilmany Stalks of fresh, ^ divided into feveral paris fig wo three parts or Leaves from the middle Stalk, and then elch of them^ncubree parts orLeaves again, fomewhat roundish, and finely finitM about the edges. The Stalk nfes much higher ^, ^ places than in others, according to the goodnE of the Soil in which it grows > wib divers fmaller Leaves at the Joints, and ft ill finer cut . an ^ tons, "teofi nke Feniv?i? fomlike rO {f} j^

that one would not think them to be Parfly Leaves, The Flowers are white and small, growing in Umbles, and the Seed is small, longish, a little furrowed, of a whitish brown color, and hot and sharp in Tajie.

V. The second, or Curl'd Parfly. This is also a Garden Parfly, and is in Ttfie and Virtue, like and equal to the former. This fort differs not in any thing from the former (for that it groves after the fame manner) but only in the Leaves, which are very finely crisped or curled, or folded in, on the edges, seeming like a Ruff, or Yahifs of curled, feathers, whence came the Name.

VI. The thirds or Virginian Parfly. The Root of this is greater and shorier than th*at of the Qovn- mon Kind, and perishes like it. The Plant groves alfo after the very fame manner that the Garden Parfly does, but larger, having greater Stalks of Leaves, fet by three and three, at in the former, but much larger, even at large a* Smallage, and of a paler, or yellower green color. The Stalks, Flowers, and Seed, are alfo like the first, but still larger\ the Seed being twice if not thrice as big or large a-s it. The Root tho' it perishes after Seed time; yet endures usually the first Tear of its Sow- ing: the Leaves an they are much larger, fo they are alfo something rounder: and the Stalk grows to be fometime three Feet high, which fpreai them)"elves out into fundry Branches, on which grow Umbles of volitish Flowers. The Seed when ripe, falls arid commonly Sows it self and fpringing up, bears Seed the second Tear, after its Sowing. This Virginia Parfly is now become natural to our Englifh Clime, and being of a* good use a-t the first is grown almost a* common an it.

VII. The fourth, or Cretick or Candy Parfly. Its Root is always fingle, or but one, of the thtck- nefs of a Mans Thumb, long and covered with a thin Rind or Bark, of a blartijh, color, which may

be rubbed off with ones Finger s[^] being white underneath[^] and of a sweetish Tajie, Vike unto our Eirth Nuts, and is often eaten by the Natives: it lives and continues after Seedtime, > (hooting, fortya fr[^] every year. In its manner of growing, it is very like to our Compn Garden Par%, but leffer in every \$ art, having heaves made and cut into fuch like Divifions, hit leffer, and Something thicker. The Stalk Is like, but Jhorter than in our Common Parfly, bearing fuch like Tufts or XJmbles of white Flowers[^] after which follows fmatter Seed than that of Par fly, but blacker.

VIII. *Nota.* There is another Species of this Candy Parfly, but it differs nothing from that laft defcribed, but in the color of its Root, which is reddish on the our fide, and not black as the former. This Flowers and Seeds alfo earlier than the others, and its Root is, as fit to be eaten. The Country People in Cindy call it *Jgricapflica*, i. e. *Pajtinaca Sylveftis*, but it has no likenefs to; or refemblance of a *farf*?

IX; *The Places.* The Names of fome of these (how whence they firft came. \$ but they all of them grow in our *Gardens in England*[^] where they thrive admirably well. They delight to grow in moift and watery Grounds, near Fountains and Springs and other moift places: and *Yuchfius* fays, that *Parfly* is found growing of it felf in many Fenny Grounds in *Germany*.

X. *The Times.* It may be Sown in the *Spring*, but it comes flowly up[^] and in its growing may be often cut and cropM: if it Sows it felf, yet it brings forth its Stalk > but in its fecond Year, after which, it Flowers in *June* or *July*, and the Seed is ripe in *July* and *Augufi*, after which the Root (except in the *Candy Kind*) dies away and perifhes.

XL *The Qualities.* The Leaves and Roots of *Parfly* are hot and dry in the fecond Degree, but the Seed in the third Degree. It is Aperitive, Abfterfive, AttraQive, Carminative, Digestive, Difcuffive, Diuretick, Cephalick, Neurotick, Stomacktick, Nephritick, Hyiterick, Emmenagogick, Alexipharmick[^] Analeptick, and Spermatogenetick.]

XII. *The Specification.* It is peculiar againft! the Cholick in the Stomach and Bowels, expells! Wind, opens obftructions of the Liver, Spleen, Reins and Womb, givec eafe in the Srangury, provokes Urine, is faid to break and expel the Stone, Gravel, Sand and Tartarous Slime, is profitable againft the Jaundice, Dropfy, and Falling Sicknefs, provokes the Terms in Women, facilitates the Birth, and refits and expels Poifon.

XIII *The Preparations.* Of this Plant the Leaves, Roots, and Seed are allufed: the Leaves are weakest: the Roots are next in ftrength: and then the Seed which is the ftrongeft of all. Thefe following forms may be made of the whole, viz. 1. A Liquid Juice, of Leaves or Roots. 2. An Effencc of the fame. 3. A DecoBion of the Roots. 4. An Infufion of the Seed. 5. A Poicdcr of the Seed. 6. A Compound Becothon from *Tragus*. 7. An Oil of the Leaves, Roots or Seed by Decoffion. 8. A Cataphifm of all the three. 9. A Diftilled Water of the whole Plant. 10. A Spirituous TmSure of the Seed. 11. An Acid Tincture of the fame. 12. An Oily TmBurethereof. 13. A Chymical Oil of the Seed. H. Potcjates or Powers of the Seed. 15. An Elixir of the fame.

The Virtues.

1. Juice of the LeaTM or Roots. 2. Is comfortable to the Stomich, eafes the Stran-

gury, and powerfully provokes Urine and Womens Courfes: expels Wind whether in the Stomach or Bowels, and does a little open the Body, making the Belly Soluble. It is a iingular Aperitive, and opens Obftructions of Lungs, Liver, Spleen, Reins and Womb* and therefore is mixt with Solutives, or things which "move the Belly[^]ownwards. The Root is one of the five opening Roots \ and therefore the Juice thereof mult be profitable againft all Difeafes proceeding from Obftruction. Dofe"4^{OT} 6 Spoonfuls Morning, Noon, and Night, either alone, or mixt with a Glafs of White *Port*, or *Lisbon Wine*.

XV. *The Effencc of the fame.* It has all the Virtues of the *Liquid Juice*, and more powerful to the Intentions: befides which, it is did to break the Stone whether in Reins or Bladder, as alfo to expel Stones, Gravel, Sand or Tartarous Matter from the Reins and Bladder. It eafes the pain of the Stomach, refits and expels Poifon, and is good againft the Bitings of Mad Dogs, Serpents, or other Venemous Creatures: It helps fuch as have been hurt by taking of *Litharge*, fupprefes Vapors in Women, which offend the Head and Eyes, and is profitable againft the Dropfy and Yellow Jaundice. Dofe 2 or 3 Spoonfuls or more, Morning and Evening in a Glafs of Wine.

XVI. *The Becoffion of the Root.* It is a powerful Aperitive, and opens all Obftru&ions of the Vii[^] cera, having all the Virtues of the *Juice* y[^] Effencc: but as it is a much weaker Preparation, fo it muft be given in a much larger Dofe, with a *continuando*, as from 4 to 8 or 10 Ounces Morning and Night.

XVII. *The Ponder of the-Seed.* It may be given from a Dram to 2 Drams Morning and Night, againft the Stone, Gravel, Sand, and Glutinous Slime in the Urinary parts, and is v[^] effectual to expel the fame, and alfo to provoke Urine and t h e W in Women: to give: < f e m the Cholick, Gripings of the Guts, and After pains of Women in Child-Bed: It eafes pains of the Stomach and Bowels, proceeding from Wind, and has all the Virtues oi[^] the *Juice*, Effencc ana *Becoffion*.

XVIII. *The Infufwn of the Seed.* It eafes, tw Gripings of Infants, and may be given agamt a[^] the Difeafes for which the *Becoffion* is given* Dofe Morning, and Evening, from 6 Ounce to 8, a little dulcified with double Sugar.

XIX. *The Compound Becoffion of Tragus.* Seeds of *Parfly*, *Anife*, *Carrawaies*, *fennel*, Of an Ounce: of the Roots of *Parfly* of *Saxifrage*, *Carrawaies*, of *Bur net*, of each an Ounce and let the Roots be wajfhed and chopt fmall[^] and the S[^] bruifed: let them infufe a Night, or two in 2 of White *Port Wine*: after which, gent[^] ther in an Earthen Veffel cloje cover[^]d z Alembick Head, till about a third part is then fir am out, and let it Jhnd to fettle* opens Obftructions of the Liver, Spleen, and Womb, prevails againft the Falling-Si and forces away the Morbifick Matter of Jaundice and Dropfy by Urine, curing thofc eafes in a fhort time. Dofe 4 Ounces at a firft and laft Morning and Night.

XX. *The BecoUed Oil of Leaves, Root Seed.* It is Anodyn, or an eafes of Pain[^] difc[^] recent Tumors, alleviates pains of the Gout, takes away black and blew Marks, means of Bruifes, Falls, and the like. upon Womens Breasts, which are SwreUed, ful and hard with their Milk, it abates the luy Diicufles the Humor, and eafes the pain

XXL. *iW Cataplam of the Leaves, Roots, or Seed, or all of them.* Applied it gives ease in the Gout, difcufies and cures fimple recent Conditions: laid to Womens fivln and hard Brpafts, it fofteris the Tumor and Difcufes it: and applied to the Eyes, which are inflamed with heat, or fivln, it quickly gives q[^]p and relief, more efpecially if [^]Mi[^]ly. Flower be mixed therewith.

•T[^]XIL *The DijVilkd Water of the whole Flam.* it is a familiar Medicine with Nurfes to give their Children, when they are griped in their Stomach or Belly with Wind, or (harp Humors, which they call the Frets, and is no lefs available than *Saxifrage Water* for that purpofe, as alfo for thofe which are of elder Years. *Riverius* (as I remember) commends it as an admirable thing, (a few grains of *Salt of Tartar* being difflvled in ir) againft the Stone, S[^]d, Gravel, Strangury, and other like Diftemperscft the Urinary paffages

XXIII. *The Spirituous TinSture of the Seel* It is admirably Somatick,caufes a good Appetite and Digeftion, expels Wind, and eafes the gnawing pains of that BôweU and is very profitable againft Fainting, Swooning, Convulfions, Colick, and flie like: Dofe almoft half a Spoonful in a Glafs of Wine, Morning and Night.

XXIV. *The Acid TinUure of the Seed.* It is profitable againft Vapors, and Fits of the Mother, weaknefs and ficknefs of the Stomach, want of Appetite and Digeftion: It is lingular againft all Sorts of Poifons; cures all forts of Burning and Malign Fevers, and refits the Poifon and Malignity of the Plague or Peftilence it felt, and all forts of Peftilential Fevers. Dofe many drops at a time (in all that the Sick drinks) as may give it a grateful or pleafing Acidity.

XXV. *The Oily Tinture of the fame.* It powerfully provokes Urine and the Terms: gives prefent ease in the Strangury, Stone, Gravel, Tartar, *Gfc.* obftruffing the Urinary paffages. It facilitates the Birth of a Woman in Labor, forces away the After-Birth, and prevents or eafes After-Pains: Dofe from 15 to 30, or 40, or more Drops, dropt into Sugar, and then mixt with *Fenny Royal Water*, or other Vehicle proper for the Patient. •

XXVI. *The Chymkal Oil of the Seed.* It potently cures the Cholick, all inward pains of the Stomach and Bowels, Convulfions, Palfys, Carus, Lethargy, and other Difeafes of the Head, Brain, and Nerves, proceeding from obftru&ions, cold and moifture, or other remote and hidden Caufes. It forces away the Birth, and After-birth, and gives prefent relief in the Strangury, Stone, Gravel, or any obftru&ion or heat of Urine. Dofe from 8 drops to 16 drops or more[^] to bE taken in the fame fanner, and in the like Vehicle, asis directed in the giving of the *Oily Tinffure* aforegoing.

XXVII. *The Powers.* They may be given from a Dram to 3 Drams or half an Ounce in any proper Vehicle Morning and Nigttt againft the Cholick, Convulfions, Palfy[^]Stone, Strangury, and all the j[^]ffeafes for which the *juice, Effence[^] Decoftions, TinUm[^]s,* or *Chymical Oil* are given: This Medic[^]atnent is more pleafant than any of them, and [^]perates with much more fpeed.

XXVII. *The Elixir.* This has all the Virtues of the Powers, and more potent in its operation, 3n& therefore may be given from 1 Dram to 2 fhatns in a Glafs of Wine, Morning, Noon and Night, or when extreamity or occafion may require § either in a Glafs of Wine, or in any othef fit > ehide. Tis indeed an admirable Preparation,

C H A P - DXL.

Of P A R S L Y Macedonian,

O R,

Mountain P A R S L Y /

I. [^]Tp H E Names. It is called in Greek, *vov:* in *Latine, Apium Macedonicmn Pet r apium, Cf Se/inum, vel Petrofelinum Mdcedonicum:* and 4 in *Englijh, Macedonian Far fly, Mountain Farfly[^] and Stone Farfly.*

II. *The Kinds.* What the *Macedonian, Farfly[^] or Stone Farfly of Diofcorides* was, is hard now to determine, by reafon he is fo deficient in his Delcriptiön thereof: what our Modern Authors account for the fame, we (hall here give you[^] two kinds of which they have Defcribed to us, viz. 1. *Fetrofclinmn Macedoriicu?n quibufdam,* The firft fupposed Stone Parly of Macedonia, and that it was thought to be, by *Matthiolus[^] Lobely, Dodontfa, Lugdunenfis[^] Tabernamontanus[^] and Cajior JDurantes[^]* in their times, and till continues to be thought fo in our Days, and that defervedly -> for that the forms of the Roots, Stalks, Leaves, Flowers and Seed, fo nearly refembles our *Common Farfly[^]* and the qualities of the Seed are anfwerable to the properties which *Galen* does appropriate to it. 2. *Fetrofelinum Macedonicum forte Dalechampij,* The fecond fupposed Stone Parfly of Macedonia[^] this feems to be the *Fetrofelinum Plini^j* and differs from the former, in the form of the Leaves, as being finer cut than any of them, for which reafon as I fuppose it is that *Bauhinus* calls it *Apium Montanum folio tenuiore,* but agrees much with it, in the qualities, (harpnefs and bitternefs of the Seed. Now becaufe *th[^]ih Stone Farflies* grow upon Hills and Mountains, they may properly enough be called alib *Oreofelina,* or *Apia Montana* Mountain Parllies. III. But of the *Mountain Farfly,* properly fo called, there are feveral Kinds, which by reafon they are altogether of the fame Nature and Qualities with the former, we fliall take the Liberty to Treat of them in this place, the chief cf which are the three following, viz. 3. *'Ofiooihtvov* C[^]M[^]W, *Oreofelinum vulgatius, Mont apium, Apium Mont anum vulgatius[^] Oreofelinum Dodon& \ Oreofelinum majus Lobelij ~ Clujij& Lugdunenfis,* *Apium Mont anum Dale[^]cbamfij* \ The > more Common Mountain Parfly. 4. **o\$eoffiuvcv aA«6l[^]V,* *Apium Montanum veris Selinum Fercgrinum Clufij, Bauhino[^] Apium Feregrinum •Cicuta folio Baubini,* The truer Mountain Parfly, or the *Oreofelinum verum D/ofcoridi*.* 5. *Oreofelinum Farifenfium Lugdunenjis •" Apjum Montanum Farifenfium: Apium Montanum Nigrum,* The Paris, or Black Mountain Parfly,

TheDefcriptions.

III. *The fir fa or Firft fupposed Stone Parfly of Macedonia. Its Root is fomewhat thick (h, t and white, ptrifhing in our Country, after it Cl yielded its Seed, iW not fo as it\$ %7/ESe*

warmer

warmer Climates where it is a *Patwe*. From the Root springing up several Stalks of Leaves, next to, or lying upon the Ground, winged and divided into parts, much like to the Common Garden Parsley, with greater, broader, and rounder Leaves, dented round about, and in some places more deeply cut in

or gasht, of a bright pale green color: among which rises tip, affjort, thick, and some what hairy Stalk, about half a Tard high or higher, full of Joints and Leaves, and so spread out into Branches, that it seems a small thick bush; at the tops of all which are small Umbles of whitiJJ Flowers, and after them, small, rough, dark, grayish Seed, some thing like unto our Common Garden Parsley Seed, especially after the roughness is rubbed from them, yet somewhat longer and darker, of an aromattick or sharp Taste, with an unfavory bitternefs lajl of all, not much unlike to Cumin Seed.

IV. The second, or second fupposed Stone Partly of Macedonia. Its Root is long (as Columna says) like that of our Garden Parsley, and black on the out side, with a tuft of hairs at the Head thereof, neither sharp, nor Sweet, (but Columna says it is more Jharp and bitter, than the Root of Ifo Garden Parsley :) From this Root rise up several slender Stalks of winged Leaves, having several very thin cut Leaves thereon, all of them like the uppermost, and not the undermost Leaves of the Common Garden Parsley, or like unto Dill, of a blew green color, having three of the heaves always fet together, at the end of the winged Stalk, as Parsley has, and smelling so like unto Parsley, as both Columna and Lugdunenensis do say, that if it is smelt to, when a little bruised, tho' the eye on was blinded and did not see it, yet they would judge it to be Parsley, such as we commonly use. At the

Umbles of pale reddish or bluish colored Flowers, after which follow small Seed, like to that of

blackish, and furrowed or guttered like unto Cumin Seed, of a very sharp Taste, almost burning the Mouth, and of a Jwct Smell. Bitfo bitter withall. that it may well be accounted the next bitter Seed of all the kinds of Parsley. The Kind is taken by Dalechampius, to be the True Paxily of Macedonia, to which futhm ferns to cenfent.

V. The third, or the more common Mountain Parsley. The Root of this Plant is long, great and thick, with a bush of Hairs at the top, thereof, being sweet of Taste, Jharp and Aromatick: from whence spring up several reddish Stalks of large winged Leaves, winged and divided into several parts, being like a bush upon the Ground next the Root, very like unto Garden Parsley, but something larger, smelling well, from among which rises up a Stalk of about half a lard high, with dwtrs like Leaves upon it, branching or preceding it out towards the top, and bearing thick Umbels of white flowers, after which comes Seed, like that of Smallage, smelling a little sharp in Taste, and bitter withall.

VI. The fourth, or Truer Mountain Parsley, Diofcorides. The Root of this is small, long, white, not much differing from that of Coriander Garden Parsley, from whence shoot forth next the Ground several Stalks of winged Leaves, among them a hollow Kexie Stalk, in some growing tall and high, in others more short according to the Soil in which it grows, thereon several large spread Leaves, cut at divided something like to those of Hemlock, or den Parsley, bearing at the top, Umbels of flowers after which comes the Seed, and blackish, not much unlike to Cumin seed, facet in Smell, and sharp in Taste.

VII. The fifth, or Paris, or Black Mountain Parsley. Its Root large, white, and smelling much like to the Root of Herb Terribly ubich is hot, bitur, and unpleajant I be. Plant does resemble our Common Garden Parsley, thick, and bushing on the Ground: as the L-sgrow at the top of the Stalk and in Umbels; of a white color. after which comes Seed, which is sharp in Taste, but smelling

The Places. The first grows in and Venice, and the Seed has been brought thence to us. The second grows (as Lugdunenensis on the Rocky Hills of Gratianopohs; and (as Columna says) on the Hills of Ompoclaensis: where they flourish very well. The third, of the Mountain Parsley grows near unto Icnia, (as Clufius says) and on the Mountains on Rocks in Germany, and other Places, says, it grows upon the Hills which divide from Moravia: also it is said to be found on the Hills and Mountains in the North parts of The fourth, or second Mountain Parsley, on the borders of Fields on the Mountains of the curidy. The fifth, or third Mountain Parsley, found on the sandy top of the Surene Paris: but these two last grow with us Gardens.

IX. The Times. The two first Flower Summer Months, but Seed late with other three Flower also in the Summer yield their ripe Seed soon after.

X. The Vitalities, Specification, Preparation Virtues of these Species; are the same as those of Our common Garden Parsley. Chap. 59- jult foregoing, so that we need more of them here,

But it is here to be observed, that the two first Kinds of *Macedonian Stone Parfly* are much stronger, and much exceed our *harder Parfly*, in their properties and effects. And some have thought that the *Mountain Kinds*, exceed also the *Macedonian* in their Virtues and Operations: howe^this is certain, that they all of them exceed *tinB&ommon Garden Kind* by many ^ 5 ^ 5_7 and are therefore to be chosen before it, if they can" be had.

XII. *Nota*. 2. *Galen* says, that the Seed of the *Macedonian Stone Parfly* is most in use: The Herb and Root are also used alike, but are of a weaker property than the Seed, which is very (harp in Taste and bitter also, hot in quality, and of an attenuating and inciding property withall, for which reason it mightily provokes Urine, and Womens Courfes: warms and comforts the inward parts, being hot and dry in the third Degree, and therefore expels Wind. It is profitable against Wind and Belchings in the Stomach, as also the Wind Colick, and gives ease in the griping pains and torments of the Bowells *, as also in Stitches and pains of the Sides and Spleen, and the excruciating torments of Stone and Gravel, whether in the Reins or Bladder, being put into those Medicaments which provoke Urine.

XIII. *Nota*. 3. *Dioscorides* says, That *Mountain Parfly* provokes Urine, if the Root and Seed be taken in Wine. It brings down also Womens Courfes, and is put among those Medicines which expell^Band , Gravel and Stone^ and by its^ heat, warms and comforts such parts as are weakened by cold and moisture. *Galen* says, It operates like to *Smallage*, but it is more effectual. *Dodonaus* says, That the *first Mountain Parfly* is hot and dry in the end of the second Degree, or beginning rather of the third, and is good for many things. That it does incide, and attenuate, or make thin, thick and grofs Humors ^ that it cuts tough and clammy Hægms, opens obstru&ions of the Liver and Spleen, provokes Urine, and Womens Courfes * breaks and expels the Stone-, and is profitable against the Yellow Jaundice: And being chewed in the Mouth, that it draws away much watery Humor and eases the Tooth-ach.

CHAP. DXLL

OF PARSLEY Wild.

It is called in Greek, *Seinum vel Pe-*
and in Englis *Parfly*.

II. *The Kinds*. - There are several Kinds, of this Plant as 1. *Sison vulgare*, *Sison Ga-*
Rinnunh (to that f^ J^)
be but one Plant, as *Condu* does not a c k g e
Wild Parfly. The Ignorance of many Ger-
n Apothecaries took the Seed of this, to be
S t^Tragus, *Gefner*, and others affirm,

which is yet
led it, *Mistake* as the former. 2. *Sison*
as great a *ini* Sweet Wild Parfly. 3. *Odoratum*

vefire, Jagged Parity, Wild Parfly with small jagged Leaves, Wild Parity, Wild "Milky Parfly *Gefner* in *llortis* calls it *scalcum Palustris*-, it is the *Olfeiuichium Cordi*, (so called from the German Name, *müick* :) *Apium Syhefne Dodoncci*, & *Lugdu*^yts; (but both *Dodon*^ts and *Lobel* fay, that in former times it was used in the Shops for *AleumoiSpignch*") *Bauhinus* calls it, *Apium Syl-vefne Succo laltco turgens*, which we render in Englis, *Wild Milky^ Parfly*., to distinguish it from the other sorts of Wild Parity*

The Description.

III. *The first*, or Small Wild Parfly, Common Wild Parity. *Its Root grows down deep, and spreads every way, by which means it takes fast hold of the Ground, and abides long. It rises up with a tall slender Stalk, scarcely able to stand upright without help, thinly set with winged Leaves on its Branches, the lower Leaves being largest, and several being set on a Stalk on both sides, each of which is almost, a? the Leaves of our Common Ammi, or Bifhops-Weed *, some whereof will be "cut in on the edges more or less, and some not cut in at all but all of them dented about the edges. At the tops of the Stalks and Branches, grow small Umbels of white Flowers, which turn into small blackish Seed, something lesser than Parfly Seed, but of a strong Scent, and of a quicker, and hotter Taste.*

IV. *The second*, or Sweet Wild Parfly. *Its Root is long, white and slender, from whence springs forth a single Stalk, about three Feet high, with long Fennel like Leaves at the Joints, which have: a sweet Smell, between that of Dill and Fennel. At the top of the Stalk and Branches, are small Umbels of white Flowers, which are thin set. After which follows the Seed, which is small, black, of a good fine II, and bitter ifh in Taste, somewhat like to Smallage Seed. This Plant is called Qdoratum, or sweet Scented, to distinguish it from the former Sison vulgare, thd* I am apt to believe, that this is not the Sison verum Dioscoridis. Some have thought also that this Herb was the Sefeli Mafli- lienfe, or Hart-wort of Marfellis, but were mistaken.*

V. *The third*, or Jagged Parfly, Wild Parfly with jagged Leaves, or Wild Milky Parfly. *Its Root spreads its self out into many long Strings and Fibres, blackish without, but white within, and running deep into the Ground, somewhat like unto Meum, or Spignel, abiding or living many Tears. This Kind of Wild Parity, has several large, well spread winged Leaves, something resembling those of Garden Parfly, but are divided into more parts, and each division hath smaller Leaves, which look^as if they were cut or jagged into small parts: from among which, rises up an hollow fraked Stalk a Tard high, reddish towards the bottom, sometimes with the like Leaves at the Joints, where it Branches out diversely, bearing at the tops of the Stalks and Branches, thick Umbels of white Flowers, reddish on the one side, and pale on the other, and after them flat Seed, somewhat like unto Parsnep Seed, but a little less, hot in Taste, and somewhat Aromaticall The whole Plant and every part thereof, if broken in any part yields a Milky Juice. **

VI. *The Places*. The first was formerly thought to be a Foreign Plant, the Seed being to be had

in the Apothecaries Shops in Germany, under the Title of *Amonim*, or as some have had it, *Amyjum Germanicum* tho' it was no more than Seed than it was *Anife Seed*: but afterwards *Gefner in Hortis* (hews, it was found growin Wild in fundry places in Germany, as it has been found in like manner. growing with us, near Hedges, by moift Ditches, almost every where. The second grows with us only in Gardens. The third is found by Ponds sides, in Ditches also having in them (landing Water, in moift and marfhy or moorift Grounds, and in Water-Courfes, also in moift Woods, near the old Stocks of Alder Trees.

VII. *The Times*. They all Flower in *June* and *July* and the Seed is ripe in some short time after.

VIII. *The totalities, Specification, Preparations and Verties* of these several Wild Parslies, are the same with those of our Common Garden Parsly, having that in the effects, these are, or have been found to be the more potent and operative.

IX. *Not a*. The Root of the third or *Milky Kind* as it is found to be hot and dry in the third Degree, so being chewed in the Mouth, it draws away much Rheum or pituitous Humor from the Head Throat, Tonfils and parts adjacent, and in an especial manner eases the Tooth-ach. And this duality, *Pliny* says, the Root of his *Tbyjfelinum* is endued withall. The other properties of the other Wild Kinds, are, no doubt to be found in this, and that to no less effect, as well to incide, as to attenuate, be aperitive, and diuretick, forcibly to provoke Urine, and the Terms in Women when stop'd.

7- *Caucalis arvensis latijolia purpurea* Echinophora major platyphyllos purpurea Columna Baftard Parfly broad Leav'd, or the Greater with prickly Seeds. 8. *Caucalis tenuifolia purpurea* Echinophora Leptophyllon Columna Baftard Parfly Leffer, Baltard Parfly fine or small Leav'tt. *Caucalis magno frufu echinata* Echinophora afferior platy carpos Columnar ca Echinato frufu magno Bauhini Plinij Lugdunenfe Caucalis fecundo Tabemontani Baftard Parfly with great prickly IQ. *Caucalis major flore fatur rubente* Baftard Parfly the greater deep red Flowered, *Caucalis tenuifolia Montana*, Baftard Mountain Parily, with small fine Leaves. 12- *Caucato hispanica Camerarij & Clufij*; *Gingidio congener Cafaipini* *Caucalis Peregrina* Spaniish Baftard Parfly.

The Descriptions.

III. *The first, or Our Common Baftard Paty*. It has a Root which is straight and single, run deep into the Ground, of a white color and having the top of a Parsnep. It rises up with a Stalk, about half a yard high, and set at the whitish rough Leaves diver fly cut. It

Parfly Bafiard; or Camalts*

CHAP. DXLII.

Of PARSLEY Baftard;

Hedge Parsley.

I. **T** Names. It is called in *Greek*, *σϋνικαν* in *Latin*, *Selinum nothum* *Apium nothum*, & *Caucalis*: in *English*, *Baftard Parsly*, and *Hedge Parsly*.

II. *The Kinds*. There are many Species of this Plant, as i. *Caucalis vulgaris floribus albis* *Lobelij* *Lappa agrejlis* *Tragi*, *Lappula Canaria* *Plinij Angulara*, *Caucalis alba vulgaris* *Myrrbis Lappa Dalecampij* *Lugdunenfe* *Caucalis Dodon* *Gefneri*, *albrumque* *Echinophora Columnxi* our Common Baftard Parsly. 2. *Caucalis Anglica flore rubente*; *Caucalis Apij foliis flore rubro* *Gerardi* our English Baftard Parsly with reddish Flowers. 3. *Caucalis Maxima Bauhini* *Caucalis major Clufij* *Caucalis maxima femine aculeata* the Greatest Baftard Parsly, or Great rough Parsly. 4. *Caucalis minor flore rubente* *Caucalis minor ftofculis rubentibus*, Small Baftard Parsly with reddish Flowers, Hedge Parsly, as *Gerard* has it. 5. *Caucalis nodifto femine echinato* *Dauoides minor* & *TM'h* Knotted Parsly, small Kaltard Parsly with knotted Joints. 6. *Caucalis jolio* *Fmiculi* *Caucalis Angulara* *Lobelii* *Caucalis ftofculis* *Caucalis ftofculis* *Peucedani* Baftard Parsly *Fennel Leaf*, *Hogs Parsly*,

rough hairy Herb, not much unlike to *Cat* The Leaves are parted into many small iW Jr smaller than Parsly, and much like to *boj* *J* *Coriander*. At the top of the Branches i *z* *y* or spoty Rundles, confistmg *oj*

flowers, the outermost being the greatest being past away, there follows rough, round Seed, like Carrot Seed, but greater, two always being joined together, which makes them but half round when they are parted.

IV. The second, or Oar EngliOi Bastard Parfly, with reddish Flowers. Its Root is small and long, white and hard, 'mijhing every Tear after Seed tune. This English Kind grows to be about two feet high, of an Olive green color, with a strong, round, crested, rough and hairy Stalk; set at the Joints (which are two or three Inches asunder)

the flower lye six or seven such like small flowers* The Leaves being broken, give little or no Taste* After the flowers are past, come the Seed, which are roughjyrrs, (licking to any thing they touch, like the ^Jp of Hounds-Tongue, within which are contained two brown Seeds, like unto bulTd Oats, but larger.

V. The third, or the greatest Bastard Parfly, or Great rough Parfly. Its Root is white, hard and woody, from whence spring up many upright tall crested Stalks, three or four feet or more high, being hollow within, and with divers Joints on them. These Stalks are spread out into several Branches \$ and at each Joint they fend forth long and large winged Leaves, encompassing their Stalks at the bottom, which Leaves are large, and someihing like those of Angelica but rougher, and of a darker green, set by couples on the middle Rib, and an odd one at the end, all of them finely cut or dented, about the edges. At the tops of the Stalks and ^ branches, grow long Umbles of whitift) flowers *, someizbat of a purplish, or bluish, or flesh color underneath, after which come very large and flat rough Seed, almost like that of Cow-Parfnep, but rougher, which is forked at the Head or Tcp, with a double point, and prickly round about.

VI. The fourth, or fm^ll Bastard Parfly with reddish Flowers, or Hedge Parfly as Gerard has it. Its Root is small and white \$ from whence spring up small and rough Stalks, crested and hollow, grow-

Bastard^o Farfly Englifi, red Flowered.

Varfly Bastard final! 5'

OR,

Hedge Farfly.

Red FlowerM

Leaves three or four Inches long, consisting of seven or nine narrow hairy Leaves, set by couples, upon one middle Rib or Stalk, and one single Leaf at the end, somewhat deeply dented about the edges, the foot of the Stalk being a broad thin Skin or leaf and from between it, and the Stalk, come forth several Stalks of Leaves, towards the top, divided into three or four Branches, which at three Inches distance, do each of them, from one Center, shoot forth four, five, or six equal Sterns^ about an Inch and half long apiece, having a thin Skin, in all the length of them, and the two inner Strings, being of a dark red color, composed of Spoky Umbel of flowers. At the tops of each of them^ grow five or six long, rough, hairy, small knops or bottoms s croudei with flowers, of a Pink red color, consisting of five leaves a piece, the outermost whereof shews like two, by the jolding of it inwards *, and the inner four with five leaves, and a double point el shew not half so big as when they are full blown, In the Center of

ing up to the height of two feet or more: on which at the Joints grow winged Leaves, made of sevenat little

little iongish ones, fet one again} another, snipt or dented in about the edges, and ending in a long and jharp pointed Leaf, not much unlike to the winged Leaves of Hemlock, but each of them junder, and the end Leaf longeft: TbeSe Leaves^ffalfo the Stalks, are rough and harjh, and of a dark green color. At the upper Joints of the Stalks come forth (lender Branches, bearing Spaced Small Urndies of reddijb flowers, and fbmetimes more white, which being pajl away, there follo-ws fmall, round, rough Seed, of Somewhat a ftrong and aromatick Tafte and Smell. It is an Annual Plant, and Springs up every Tear from its Seed, being Sown.

VII. The fifth, or Knotted Partly, fmall Baftard Parity with Knotted Joints. It has a white long and Small Root, which perifhes every Tear, it Springing up again by the j^ual^rS of the Seed, whether in the Field or Garden. From this Root Spring up feveral crefted, long, fmall, rough and trailing

branches,, which commonly ly_e along upon the Ground, fome longer, fomc fhorte_r, fome a Foot long, fome a toot and half or more in length* which are fet at Jeveral diftances w_{ith} long winged Leaves, which are fmall, rough and deeply jagged, pretty deeply cut or dented about the eāges, having 2, 4, 5, ^d Sometimes 6 couples or pairs of Leaves upon a Wing, growing upon a middle Rib, with one /ingle Leaf fomething larger than the reft at the end thereof. Thefe Leaves are rough, or a little crumpled, but not hairy, and of an overworn, or decayed green color. At the Setting on of each Leaf at the Joints, dofe to the Stalks, at every joint round about it, almoft clofe unto it, ufually "P^o> T^{My} fhort foot-Stalks, come forth fmall tobnijh or reddijh Flowers, out of rough Husks, ~~HTJJ~~ V^{ar} L^{owc}* We" ..> after which follows trick^e-v- \^{VIM}ls Small, round and rough, bard and prickly, growing dofe to the Stalk

VIII. Thefixth, or Baftard Parfly Fennel, sayd, Hogs Parfly. Its Root is fingle, long and w^m* running deep into the Earthy thrumed about toe upper end, with many fibres or Threads of a brqwn color, w^{ich} Root has the Tafte of a Parnep- From which rifes up divers Stalks full of Joints, covered with a (heath or skinny Film, like unto that of Meum, rifing up +o be about half * Tardhigk Gerard fays, The Leaves are finely cut or jagged, refembling the heaves of Our Engli[^] Saxifrage: But Parkinon fays, That both in SIM and Leaf it is very like unto Fennel. At the tops of the Stalks it bears fpoky Rundles, or Vmbles of white fweet fmelling Flowers, fet clofe together, like thofe of Fennel alfo_n which being pajt^{ed}h the Seed is produced, not rough like the fi^e ? but fmall like that of Parfly. M

IX. The Seventh, or Baftard Parfly broad Leav^a, or the Greater, with prickly Seeds, Itr^w w^oh^o ivbite, hard[^] and Aromatical, which j^eh^r j^o n^o feveral Stalks of hard rough Leaves, divided in five parts, each leaf being three Inches long, an Inch broad, deeply dented in on the edges Jo^o what like unto Oaken Leaves. The Stalk is r[^]E and hoary, two Feet long, fo crefted that i^r fgitare, bearing at the tops, Vmbles of (landing three together, upon pretty fhort aⁿ Stems. The Flowers are red like the next j^oll^h ing, but greater, having fmall Leaves like Bed^e under them: after which follows the SeedVc)^e being/maile^r than the next Species, and not J^r rough, containing l[^] like Seed within them, v[^] fmaller and Aromatical.

X. The eighth, or Baftard Paifly the Letter, Baftard Parfly fine or fmall Leav'd. The Roof like the former but lejjer. The Leaves are finely cut into Several parts like unto Wild can[^] The Vmbles oS Flowers grow at the tops of Stalks and Branches, and (land^{thee}?[?] a place, and So the Seed after them. The Kerne^e Shed within the Husk, is Something like to W

ti The ninth, <j Bated Mⁱ prickly Seeds. Its Root isjmall fomething Sweet both in Tafte and Leaves hereof are divide* JTM of the Greater Parfly Leav'd Dauois, ana j underneath: The Stalk is about two teetbf, fomewhat rough, having the like ^ ^ K Joints upward, but hater, ^ " ^ { " ^ j of whitifb Flowers, fiEnding three together, ify^u tfually but two Seeds on them, whid^e Wtce Jbig mothers, and more rough anⁿ n laree flat "Kernel within it.

W The eleventh, or Baftard Parfly the deeo red FlowerU This Great red Kind has larger -winged Leaves than fp[^]cuis, or Spanifh Kind following, and cut in, after the manner of our B^e We Leaves. The flowers hereof, are lar^e Me^r of the M Sort, or our C o m mⁿ Parfly but each \pf an equal bignefs, a

W The eleventh, or Baftard Parfly with fmail fine Leaves. The Root what long and thick, from which rifes aU* Foot in lteighthjpread out from the bottw^o fmall round fsmooth Branches, and they are lejjer; wbofefalleft Branches, even near aswellasWe others, bear fmall Vmbles[^] fmall or white Flowers, and afterwards J^r J^ripped Seeds. The Leaves narrow and folded into very fine and fsmall Leaves above on the Stalk am much more flairs*

XIV. *The twelfth, or Spanish Bastard Parfly, Root perishes after Seed time, and thd this is a Milky Plant yet being cut or broken, it gives no Milk, from this Root rife up fever at crefied rough Stalks, dnd Leaves very like to the first Common Bastard Parfly-, but the Umbels of white Flowers are fmailer, and grow ?nore round together,, as it were into the form of a round Head: and the Seed which follows is greater, very much striped, and rough, but not prickly. The Herb being broken in any part, it yields a [meet Milk.*

XV. The Places. These feveral Bastard Parflies grow Wild in several Countries of *Aufria^ England, France, Germany, Italy, Spain, &c.* The first is common almost every where in our Country. The fecond was found in *Lincoln-Ilrre*, on the North Decent of the North Field of *Witham* nigh to *Bourn*: it wa& also found growing in the Corn Fields about *Bath*. The third and fourth grows about Hedges, and in Plowed Fields, almost every where. The fifth grows Wild with us in several places: *Gerard* says it grew upon the Banks in the Fields about *St. James's* and *Pickadilly*, which was before these places were Built upon, and made into Streets, &c The rest Naturally grow upon Rocks and Stoney Grounds, and thofe which grow not Wild with us, are many times to be found in the *GW^x* of the more Curious.

XVI. The Times. They all Flower and Seed very well in *England^* from the beginning of *June* to, the end of *Auguft*. The fecond and third Flower in *June*, or *July*, and the Seed is ripe in *July* or *Auguft*. If the Seed is Sown in *September^* it will come up and continue green all the *Winter*.

XVII. The Qualities, Specification, Preparations and Vertues of these Bastard Parflies, are the fame with thofe of our *Common Garden Parfly* in *Chap. 539.* aforegoing, to which you are referred.

XVIII. Nota. 1. The Juice of Ballard Parfly, not only provokes Urine and the Terms, but as *Matthiolus* lays, is comfortable to the Heart, opens obitru&ions of the Liver and Spleen, deanfes the Reins of Stones, Gravel, and Tartarous Mucilage^ and therefore muft be profitable againft all Difeafes of thofe parts, excites Luft, andftrengthens the Infruments of Generation.

XIX. Nota. 2* The green Herb. According to *Dioscorides*, it was a familiar Sallet Herb, and therefore ufed in his time more for Meat than Medicine: but later Phyficians have found it to be good for many other Difeafes, even for all that the *Common Garden Parfly* is good for, as is before expreffed: if the whole Herb is eaten with Vinegar, after a Vomit, it cleafes the Belly, and caufes a good Appetite, taking away loathing of Meat, and Indigeftion.

XX. Nota. 3. The EJfertce. It has the Virtues of the Juice, befldes which it prevails againft *Hypochondriac^ Melancholy* > is good againft *Qjiartan Agues, Scabs, Itch,* and *French Difeafe*, being given 2 Ounces at a time Morning and Evening either in a Glafs of Wine, or other fit Vehicle.

XXI. Nota. 4. The Vouder of the Seed. Given to a Dram, more or lefs in a Glafs of *White Port,* or *Lisbon Wine,* it is faid to clear and fharpn the Eye Sight, and provoke Luft exceedingly in feoth Sexes, as also the Terms in Worthen. It is likewife given with *Ceteracb* or *Spleen-wort,* and *Seeds of Agnus Castus,* againft the Running of the Reins, The Pouder being drank also in Wine,

caufes Fruitfulnefs in Barren Women, and is good againft the Bitings of Venomous Beasts, more el^cially if a *Xlatdplajm* of the green Herb be also applied to the Wound.

Of P A R S L Y Laughing ;

ò R,

P A S Q U E - FLOWER,

I. *Hp HE Names.* I know no *Greek* Name X that this Plant has-, but it is called in *Latine, Pulfatilla, also Apium Rifus, Apium Sardoniurn, Herb a Sardoniam, C Herb a Venti: in Englijh Laughing Parfly, by fome, and Pasque-Flower^ or Paffe-Flower,* by others, becaufe of their Flowering about *EaHer,* or time of the *Pafchai Solemnity.*

II. *The Kinds.* This Plant is no Species of the *Pasque* (through Cuftom) it has obtained the Name of *Apium rifus.* Nor do I think it any Species of the *Aqemonies,* tho' fome Learned Men are of that Opinion, nor yet a Kind of *Crowfoot,* which fomewould have ittobe, but rather a (4 ^ of its own, not related to any other. Of this *Pasque-Flower* there are feveral Kinds, as, 1. *Pulfatilla Anglica purpureo, Pulfatilla Vulgaris, Anemone Limonia Dalefchampij ~, Samolus Plinn- Our Englijh purple Pasque Flower.* 2. *Pulfatilla Flore rubro, Pulfatilla rub A Gerardi, The red Pasque Flower.* 3. *Pulfatilla Flore luteo, The yellow Pasque Flower.* 4. *Pulfatilla Flore albo^ The white Pasque Flower,* s. *Pulfatilla Danica, The Danifh Pasque Flower.* 6. *Pulfatilla Danica Flore dupla,* The double *Danidi P a^e Flower*

the Defcriptions.

III. *The first, or Our Englijh purple Pasque Flower. The Root is pretty thick and long, running downwards, or deep into the Ground, and not lying or running under the upper Cruft thereof, as the Wild Anemonies do, having at the top of the said Root, a Tuft of Uair^ or kind of hary Beard adjoin^ ed thereto. From this Root rifes up many winged Leaves- lying upon the Ground, fomewhat rougher hairy, hard in feeling, and finely cut into many fmall Leaves, of a dark green color, in form almost like to thofe of Carrots, but finer and fmailer. From among these Leaves, rife up naked Stalks, rough and hairy, fet about the middle thereof, with fome small divided Leax)es, compaffing them-, the said Stalks rife above thofe Leaves, about a Span hhh bearing at the top of every one of them one pendu^ bus Flower, Bell fashioned at Gerard /<n& an^ very beautiful of a bright delayed purple color^ or confiding of fix Leaves of a fine Violet purple^ and fometimes deep withal. In the thereof is a tuft of many yellow Threads or Th^ rums,^ et about a middle purp^ flower*

fecdnaw KwnZ, *Label* fays, was brought from *itt/ThQ* third or *Tellow Kind*, *Clufius* makes to his third *Wild Ane?none*, and fays, it was found growing plentifully at the foot of *St. Bernards Ml* near to the Cantons of *Switzenland*. The fourth or *White Kind* is growing on the *Alps* neaj *Aufiria*: in *Trance* likewife, and in other places. Now all thefe are planted and grow with us in our *Gardens*, where they flourilh as well as in their Native places.

X. *The Times*. They all Flower for the moft part about *Ealier*, from whence came the Name of *Pafque Flower*. They do indeed Flower early in the Year, at the fartheft in the beginning or middle of *Aprils* accordingly as the *Spring* proves feafonable.

XL *The Qualities*. Thefe are all of them hot and dry in the fourth Degree: vehemently attractive and exuiceratingj and therefore not fit to be taken inwardly.

XII. *The Specification*. By external application they are good againft the Bitings of Mad-Dogs, Vipers, Rattle-Snakes, and all other forts of Serpents and Venomous Beasts, drawing forth the Poyfon by means of their ftrong attraflve force: and for the fame reafon they prevail againft an inveterate Sciatica.

XIII. *The Preparations*. You may make of the *fafque Flower*, all the *Preparations* which you make of *Crowfoot*, which you may fee in *Chap. 176. Seti. 16. ad 3?*. Thefe having all the fame Virtues with thofe there mentioned. But generally we only make, 1. A *Cataplafm of the frejh Herb or Root*. 2. A *difilled. Water of the whole Vlant*.

*The Virtues**

XIV. *The Qataplafm of Herb or Root*. It is applied againft the Bitings of Mad-Dogs, Vipers, Rattle-Snakes, and other Poifonous Creatures, and to places affe&ed with the Gout, Sciatica, &c. with admirable fucefs.

XV. *The Difilled Water of the whole Plant*. *Qamerarius* in his *Hortits Medicin* fays, that in *BoruJia* it is ufed with good Succefs, to be given to thofe whb are troubled with a Tertian Ague, for he faith that it is an *'IM&MTMQV)* or *Me die amen-um ecphraticum; vel deobfiruttivum*, a Remedy to Open Obftruttions.

XVI. *The Danger*. The Herb, Flower or Root, bing taken inwardly in fubftance, are without doubt deleterious, or deadly: It kills by making the Patient look Laughing all the while, whence *t obtained the Name of *Apium Rifus*. And yet ^otwithftanding the Standers by, or lookers on, tt^y think, that the Patient is really a Laughing, or in a Laughing Humor, there is indeed no fuch thing. It only by its Poifonous qualities, hurts the Senfes and Underftanding, thereby caufing Foolifhnefs 5 and Convulfing the Nerves, epecially of the Mouth, Jaws, and Eyes, draws them this ^ay, and that way, and fometimes in a manner tt ways, making the Sick feem to be by ftanders ! s tf he continually Laughed, whereas, it is only a Convulfive Motion, wringing, or drawing, of the Mouth and Jaws awry •, and fo the poor rati-^?t dying in this Condition, the lookers on , think he dyes Laughing, and fo report it •, when at the fame time there is no fuch matter, but he g^es out of the Wbxid under the Senfe of violent Convul-

fions, vehement Pain, and the moft extream Torment imaginable.

XVII. *But the chief ufe that is now made of thefe Flowers* is for Ornament fake, more than anything dtfy and to let off and Adorn a Garden ^ among *mih* as are curious and delight in things of this Nature •, they being very beautiful in their Kind*

Garden and Wild.

I. *HE Names*. It is called in *Arabick*: *Jezar*, *Gezar*, and *Giezar*: in *Greek* *Staphylinus latifolius* :, and in *Englijh* *Parfnep*,

II. *The Kinds*. There are feverai Species of this Plant, as, 1. 27«^AIV©- x,t)ml'o\$, *Pafinaca latifolia Uortenfis vel Domefiica*, The Garden *Painnep*. 2. *7* <pvKhot EyeA&9 *Pafinaca latifolia Sylvefiris*, The Wild *Parfnep*; of both which we fhali Treat in this Chapter. 3. S^J>A_w> *Sphondilium. CowP^ nep*, of which in *Chap. 54^*. 4. ^U_v% *Stum*, *Pafinaca Aquatic*^ The Water *Parfnep*, of which in *Chap. 546*. following.

III. *The Garden and Wild Kinds*. Of the G<ir~ den fort there are two Species, viz. 1. *Pafinaca latifolia fativa communis* j *Pafinaca latifolia Domejiica* ^ *Pafinaca alba fativa* 5 *Sifarum Jat hum Magnum luchfjh* *Sifer Diofcoridis Colum*^h *Elaphobofcum fativum Tabern&montani*, Our Common Garden *Parfnep*. 2. *Pafinaca alba fativa alter a h Pafinaca Pine ay* The Pine *Parfnep*. 3. *Pafinaca latifolia Sylvefiris*h *Pafinaca Sylvefiris* •, *Pafinaca Sylvefiris Gallica Cordi* •, *Sifer Sylvefire Fuchfij: jKwGoem Diofcorids*, Lib. 3. *Chap. 80. Elaphh bojewr*, *Phni*^h Lib. 22. *Chap. 22. and toDodon*-us, Matthwilus, and Taberntmontanus*^ call it; Our Wild *Parfnep*, 4. *pafinaca in/ana: Md* , *Neps*,

The Descriptions

IV. *Thefirft, or Our Common Garden Parfnep* The Root is mite^ great, long and large, thick at its top or upper part, and Jfharp or fpear pointed at bottom •, and as it is white without, fo it is aljo within, of a very fweet and pleafant Tafie^ being boiled, baked, or roasted, which then are drefi up with Butter and Vinegar, a>? every one likes be fi. From this Root fprirfg up large winged Leaves, a great many leffer being fet on both fides of a long ribbed Stalk, each of them ftanding for the moft part direffly one againft another, with a Jingle one dt the end, being much larger than thofe of the Skirret, and clofer jet together, and rougher, being aljo dented about the edges. The Stalk grows four five., or fix Feet high, with divers the like Leave)

<wd Branches thereon, but leffer. The Bowers
 tybich grow in Umbels at the tops of the Stalk,
 and Branches, are yellow', which fassing away,
 brownifh^thin, roundifh, fat Seed comes in their
 places, having a good, and a kind of Aromatick
 Smell.

V. The fecond, or Pine Parfnep. This is not
 fo common in every Garden as the former,
 but yet is found in many. The Root is white
 both within and without, which is not fo long
 as the former, but it is thicker at the Head and
 fmailer below. The Stalk is neither fo big, nor
 fo high, but Branched forth in like ??ianner. The
 Umbels of flowers at the tops of the Stalk
 and Branches are leffer than the former, and
 the Seed fmailer. The Root hereof is not alto-
 gether fo fweet in eating, but more flafhy and
 infipid, but its T<i(ite is more pie afant, if it
 grow in a fat and Sandy Soil,

VI. The third, or Our Wild Parfnep The
 The Root (as ??ioft Writers of every Country
 affirm,) is fhorter and more woody, and therefore
 not fo fit to be eaten as the former Garden Kinds
 are, but is thought to be more Medicinable.
 This Wild fort differs very little from the
 fifft Garden Kind, but only as a Wild Plant,
 and fo grows not fo fair and large, nor has
 it fo many Leaves, nor fuch large Umbels of
 Flowers ^ it is thought to be the Garden Kind
 found Wild, (a* the Garden Kind is thought
 by others to be the Wild Kind Tranfplanted
 into Gardens:) And it is to be met with in
 many places of England, as fweet and tender,
 after the Sowing as thofe of the Garden fore
 be. This Wild Species grows in fome Fields
 f nd places fo plentifully , that a Sack full of
 its Seed might be gotten from it, which be-
 ing Sewn ;n Gardens (having a Sandy but

yet rich and fat Soil,) and there w^{ll}o*^r!*&
 will prove as good as the former uaru
 Parfneps.

VII. Fajlinaca Infind, or Mad-Rep.* m^{de} defer.o
 nor, for that it is the fame Plant with our
 Garden Parfnep, or Fine Garden Parfnep, W^{III}
 Defcribed, the only difference between them
 the Alad-Xeps is the time of Flowering, as i[<]
 kinfon fays \$ for if (lays he) the Common b^o
 Parfneps do Flower in the firft Year after Sowing^{*}
 the Country People do call them ^¹^²^³
 There are only to be known by the report or
 Gardner, or fuch as Gather or Sell them -, for
 are fo like to the Choice Laudable ones, that rtt[^]
 is no diftinguifhing them by the outward app^{e:2r}
 ance. They are found by long experience to h^{^c}
 an evil and pernicious quality ± for they not
 caufe a Vertigo or Swimming of the Head,
 Frency alfo, and in fome even Madnefs it felt*
 of which the Patient is not prefently refto^{^>}
 fome having continued in that Condition for tifi
 fpace of twenty four Hours, and others not ^K
 ving come perfectly to themfelves for rhe fy[^] \
 2 whole Days and Nights. Gerard fays, that
 Mad-Nept, are the Produce of our Common
 den Turneps, arifing from the Seed of the/Gi[^]
 Kind, which if they Flower the fame Year wv[^]
 are Sown, they are laid to degenerate, and beco[^]
 what the Country People in Chefhirc, about Jw[^]
 wjcb, &c. call Mad-Neps. But I luppofe t^h
 a miftake, that being the molt probable, r[^]
 Parkinson has declared of our Common ^[^]
 Parfnep, as is aforeiid.

VIII. The Places. The firft and fecond
 only \Gardens, where they^are^Nur^up^
 Food, but efpecially the firft lbrt.
 grows Wild in feveral places of England*£
 the Marfhes by RecbcJU^ in the Groups 01[^]

John Levifon: It grows in Salt Marfhes, v^r upon the Banks and Borders of the fame. Gerard fays, That the Seed thereof being gathered and Sown in Gardens which have a fertil and flit Soil, does bring forth better Roots, fweetet and larger, than thofe which come from Seeds of the *Garcfy Kind*.

IX. *The Times.* They Flower and Seed generally the fecond Year after they be Sown: and then it is in the Month of July, the Seed being ripe in Auguft, or not long after.

X. *The Qualities.* They are hot and moilt mthe firil Degree, are Diuretick, Attenuating, Cleanfing and Opening: Stomatick, Nephritick, Chylifick, Analeptick and Spermatogenetick, The Seed is Alexipharmick,

XL *The Specification.* *Parfneps* reftore in Confumptions, make the Body Fat, plentifully encreafe Seed, and provoke Luft exceedingly.

XII. *The Preparations.* 1. *The Boiled, Baked or Roafted Roots.* 2. *Bread made of Parfneps.* 3. *A Decottion of the Roots.* 4. *A Pudding made of the Roots.* 5. *Sanguis or Blood of Parfneps.* 6. *A Pouder of the Seed.*

The Virtues,

XIIL *Boiled^ Baked, or Roafted Yatfneps.* Eaten as common Food they fweeten the Blood and Juices above all other Roots in the World restore in Confumptions, make the Eater of them grow Fat and Flefhy, nourift much, and indeed irmch more than either *Carrots*, or *Turneps* ^ Breed Seed after an admirable manner, and potently provoke Luft. They ftrenghen the Stomach, Reins and Bladder, and provoke Urine. But the *Wild Kindz* more Phylical, being Aperitive, Attenuating, Inciding and more Diuretick than thofe of the *Garden*. They are dreft up with Salt, Butter, Pepper, and Vinegar, or Juice of *Lemons*,

XIV. *Bread made of Parfneps.* It has all the former Virtues, it is fweet, and eats pleafantly enough, but ought to be eaten whileft it is new, for then it is beft. It is made of *Baked or Boiled Parfneps* with the addition of fome fine pure *Wheat Slower or Meal*; as they yfually make *Bread of Eddo Roots* in *Carolina*.

XV. *The Decoffion of the Roots.* It is comwly made in *Water*, to which at the end of the *Boiling^ a little, as a quarter part, of White or Red Port Wine* may be added. It comforts or cleanfes the Stomach, Reins, Bladder, and Womb, opens, incides, provokes Urine, and gives eafe in the *Strangury*. Some make the *Decoffion* by a long foiling them in *Milk*. This reftores in Confumptions to admiration, and in^h^ort time makes a thin, lean, extenuated Body, plump, flefhy, and in good liking.

XVI. *The Pudding.* It is made of the *Garden Parfnep* half *Boiled*, then chopt fmall, and mixt with *Eggs*, *Rice*, *Beef Suet* Jhred, *Salt*, and the other proper *Ingredients*. It is excellent Food, flourifhes extreamly, and has all the Virtues of the *Boiled Roots*, *Bread*, wA*Decoilion*, made with *Milk*, aforegoing*

XVII. *Sanguis Pafinaca latifolU.* The Blood of *Parfneps*. It is made as the *Blood of Potatoes*, *Satyr on*, *Eddo*, &c. after this following manner, viz. Take of the beft *Garden Parfneps* (if they be fir ft *Boiled or Baked in their Skins*, or half ft^ol. it mty be fo much ibe fatter, th/ whilft

raw, they will alfo do) cleanfe them well from their *Skins*, beat them well in a *Marble Mortar* with a *Wooden P eft el*, till they become a *Pulp*: Take of this *Pulp* fix *Pounds*; Crumbs of *White Bread* three *Pounds*: mix them well together, f^{ij}pr inkle them with *White fort Wine*, and put all into a *Bolt Head*, flopping it well with *Cork* and *Wax*, Jo' that nothing may tranfpire: place this *Matrajs* in warm *Horfcchn*, or in *Balneo*, or in a warm *Sand* heat, till the *Matter* is changed into a *Rubicund* or *Bloody Chyle*: then force it fir ongly out with a *Prefs*, and put the expreffed *Blood* into *Balneo Vaporola*, or Juch a like heat again, that by this fecond *Digeftion* it may acquire a greater rednefs, and fome faxes may fettle, which feparate: this *Digeftion* and *Separation* continue, till the *Blood* becomes abfolutely clear, and of a moft perfe S red. From this you may (if you fo pleafe) with an *Alembick*, jeparate a thin and clear *Liquor*-, Jo have you remaining in the bottom ^ the *Blood of Par/heps* of a very glorious color. It has all the Virtues of the *Roots Boiled, Baked, Roafted, or made into Bread, Puddings, Broth, &c.* afore enumerated. I do not believe that there is any greater Vegetable reftorative in Confumptions in the World befides, if invigorates to a ftrange Degree, Dofe from a *Dram* to two, three, or four *Drams*, Morning, Noon, and Night, in a *Giafs* of choice *Malaga* or *Barcelona Wine*: or if the Patient likes not *Wine*, in *Milk*.

XVIII. *The Pouier of the Seed.* It is ftrongly *Aperitive*, *Abfterfive*, *Carminative*, *Digeftive*, *Diuretick*, *Stomatick*, *Nephritick*, *Hylterick*, and *Alexiphdrnick*: being given from two *Scruples* to a *Dram*, or *Dram* and half in *White Port Wine*, or other proper *Vehicle*, it ftrenghens the *Stomach* fingularly, expels *Wind*, gives eafe in the *Colick* and *Strangury*, provokes *Urine*^ cleanfes the *Reins* and *Bladder* from *Stones*, *Safld*, *Gravel*, *Slime*, or any *Tartarous Matter* obftu&ing them: It potently provokes the *Terms* in *Women*, and refills *Poifon*, and cures the *Bitings* of *Serpents*, and other *Venomous Creatures*. It is an admirable thing alfo againft *Stitches* and other *Pleuritick Pains*, apt to affiiQ: fuch as arc *Hypochondriacal*.

XIX. *Nota.* You may alfo from *Parfnep Seed* prepare, 1. *A Diftilled Water.* 2. *A Spirit.* 3. *An Oil* by *Diftillation*. 4. *A Spirituous TinUure.* 5. *An Acid TinSure.* 6. *An Oily Tintture.* 7. *Toteftates or Powers.* 8. *An Elixir.* Every one of which are poffeffed with all the Virtues of the *Seed*, before enumerated in the *Seffion* immediately aforegoing.

Seed. 6. A Juice of the Vmbles or
7. The raw Root. 8. A Pouder of the
9. A Decoction of the Root. 10. An Oil of
the Root. 11. A Cataplastm of the Root.

'the Virtues.

XL The Drink or Beer made of the Leaves or Seed. You must first make a strong Decottion of them with Water ^ and then, being Blood-warm^ you are to Ferment or Work it up with left or Leven, as Brewers do their Ale or Beer. It is used in all re-
lpe&s to be drank as Beer or Ak^ for the quen-
ching of Thirty and is a common Drink at Meals in Poland and Lithuania.

XII. The Pouder of the Seed. Given to a Dram ttiixt with Honey, it is good against Afthma's, Coughs, shortness of Breath, Hoarseness, Wheezing, Epilepsie, Jaundice, Lethargie, and cleanses the Bowels, from tough, flimy, pituitous humors, flicking in the Passages of the Guts. For according to Galeh^ it is of a (harp and incifive Quality. It prevails also against the Rickets, or such as ate Liver-grown, as the Vulgar call it. It provokes the Terms in Women, and prevails against Vapors and Hyfterick Fits.

XIII. The DecoUion of the Seed. It may be jflade either in Water or Wine: and being sweetned with Honey or Sugar, it has all the Virtues of the Pouder t>f the Seed afore enumerated, being drank inwardly, and bathed with outwardly upon the part attested, it gives ease in a CepbaUii^ qLrthat which is called an inveterate Or old teachiSich.

XIV. The Spirituous Tinfiure of the Seed: It expels Wii^d, gives ease in the Colick, provokes Urine and the Terms, and has all the Virtues of the Pouder aforegoing, being given from a Dram to two or three Drams in any proper Vehicle: outwardly* applied, it is good against Scabs, Pimples, Shingles, running Sores, and other break-
ings out.

XV. The Fumes of the Seed^ from the Seed being burnt. Received up the Mouth or Noltris, it is good against Cams, Lethargy, Epilepsy, and other cold and moist DiseaseS of the Head and Brain: received up the Womb by a Funnel, it prevails against Vapors, Faintings, Swoonings, and Fits of the Mother.

XVI. The Juice of the Umbels or Ftcwers. If tt is dropt into Ears which are ulcerated or l^tte, and which run and are full of Matter, it cleanseS and heals them. It also deanfes, dries and h^b Ulcers and running Sores in any other part r^f the B9dy, they being daily wafhr therewith v^zm.

XVII. The raw Root. Being scraped as you scrape tiorfe Radijh Roots, and the scrapings applied to the Calious of a Fiftula, it softens it, and takes it away, disposing the fame to a ipeedy sealing.

XVIII The Yonder of the Root. Being ftrewed ^Pon a Callofity in a Fiftula it confumes it: and oc-ing taken inwardly to iDrarh or more, in Honey Or any other proper Vehicle, it is said to have all u^e Virtues of the Pouder of the Seed before enumerated. It is said to cleanse and strengthen C^e Stomach and Bowels, and to give ease in the C^ury.

XIX. The Decottion of the Root in Water or Wine, It is of like quality to that of the Seed^

and available to all the fame purpofes: and either alone, or mixt with Honey, makes a fingular good Lotion to cleanse Fiftulas, Ulcers, and old running Sores with, to dry them and induce their healing, as also to wash Pimples, mattery Puffles,, Scabs, and Shingles withall

XX. The Oil of the Root. It is made by Decoding it in Oil Olive, as is usual. The Head being anointed and rubbed therewith, it helps not onljr such as are fallen into a Frenfy, but is profitable for the Cure of such as are fick of a Carusor Lethargy, and who have for a long time been affli&ed and grieved with a Cepbaha, or old Head-Ach.

XXI The Cataplastm of the Roots. Apply ed to the Gout, or any part painèd, it gives ease and relief in a very short time^ and applied very hot to the Sidès and Hypochonders, it gives present ease in Stitches, and other like Pleuritick pains.

CHAP. DXLVI.

Of PARSNEP Water.

T Names, It is called in Arabick; *Kocbathalmo, and Inhamehanella, or Ham-hanella:* in Greek* sfor* fo called *W*S^AW, ab Urms calculifque ciendis, in Latin, *Sium: m Enghfh, Water Parfnep.*

II. The Kinds. The chief of the we fhall treat of in this Chapter are, 1. *Sium, Sium mams* Sium majus Latifolium Bauhini, Gerardi^&Ta-bern&montani: Pafinaca Aquatic a major\0? Aquitica latifolia,* The Greater, or broad Leav'd Water Parfnep. 2. *Sium verum Diofcoridis, Matthioloj. Thalio e> Lugdunenfe, Sium majus Anguftifoliua Janfom, Stum odoratum Tbalij & Gefneri • Sii t?ri-mum genus pod tf Laver Fuchfij, silalm Plnii Anguilar*, Stum iff Laver Cordi, Dodonti & LL beltj, Stum Olufatn folio Lobeli f^p^AZ Muatua, Sum verui Camer^L E^m true* foho Taberrumontani, Bauhin?VS dunenju -, Sium dierum Olufatri facie-, Pafihacu Ayiatica^ minor, The Lesser Water Parfnep. 3. *Sium majus Anguftifoliumi, Sium minimum Alphi-Fadinaca Aquatiea Anguftijolia^ Sium alterum Do-don<ei^ Water Parfnep narrow Leav*d. 4. Sium Umbellatnm repens, Creeping Water Parfnep.**

The Deferiptiottf,

III. He firft or Greater broad Leav'd Water Parfnep. Its Hoot is black with many Fibres at the Joints thereof and at the Joints of the Stalk under the Water, near the Ground. It riles up with great hollow and crefted Stalks, three, four, or more Feet high, spread out into several Branches, on which (land long winged Leaves, made of mam long and fomewhat broad Leaves, pointed at the ends ani dented about the edges, fsmooth, thick, and Sapm; or Juicy; every one of which is as large as tholev Parfnep. The Flowers grow at the tops of Z Stalks m Tufts or Umbels, and are of a white Jnr-our which ernes the Seed whi fmlTwJ^Zd

VI. The fourth^ or Creeping Water Parfnep. It has a bushy Fibrous Root, not much unlike to the fecond i, hut in these things it differs from ... The Stalks in this never grow upright, but ... lean and creeps and are also less than those. 2. The Leaves of this are also less than those of the fecond Kind, and ... 3- The creeping Stalks put forth an Umbel of Flowers almost at every Joint, whereas the other, bear them only at the tops of the Stalks and ^Branches.

VII. The Places. The first grows Wild in Germany, with us for the most part in Gardens, in places apt to have standing Water, or where it is Planted by Ditch sides. The fecond grows in Kent in several Handing Waters, and watery Ditches. It has been found between Redriff and Deptford, in a rotten Boggy place on the right hand of the Way. The third grows (as Label f^ys) near Antwerp, but has been found growing Wild in several parts of this Kingdom: it has been found in the Ponds about Moor Park, and in the Citches about Elfemcre, and in divers Ponds in Flintshire. The first I have sometimes found growing in Cambridgehire, in watery places on the Borders of the Fens adjoining to the Land Ground, commonly called Medlands. The fourth grows almost every where in watery places, thro' the Kingdom.

VIII The Times. They all Spring about the middle and latter end of Match \$ fspread and grow green in Aprili Flower in July, and Seed before the end of August.

IX. The Qualities. Water Parfnep is hot and dry in the third Degree, Aperitive, Absterfiv, Carminative, Digestive, Diuretick, Incisive, Neurotick, Stomack, Hepatick, Nephritick, Hyfterick, Alexipharmick, and Spermatogetick.

X. The Specification. It powerfully provokes the Terms in Women, and Urine, breaks and expells the Stone in the Reins and Bladder, gives ease in the Strangury, facilitates the Birth, and expells the dead Child and A#er-birth.

XI. The Preparations. You may make thereof, I. ii Liquid Juice. 2. Art Efftrice. 3. A Decofion. 4. A Syrup. 5. A Pouder of the Seed. 6. A Cataplasm of Herb and Root. 7. A DifiMed Water. 8. A Spirituous Tintute. 9. An Acid TinQure. 10. An Oily Tinfure. 11. A Spirit. *2. AFixtSalt.

The Virtues.

XII. The Juice of the Herb and Root. It powerfully opens obstruptions of the Viscera, especially of the Stomach, Lungs, Liver, Mesentery and Reins: it is good against the Scurvy in a cold yaot of Body, provokes Urine and the Courfes Very powerfully, gives ease in the Strangury, breaks Stones whether in the Reins or Bladder, and expells Sand, Gravel, and other Tamrous Matters from those parts- It facilitates the Birth in a Woman in Labor, and brings away the After-birth. We 3, 4, ^ or 6 Spoonfuls in a Glafs of Warm WhitQ Port Wine, or other proper Vehicle.

XIII The Effence of Herb or Root. It has all the Virtues of the Liquid Juice^ and is moje powerful to all the Intentions; It refists Poifo^ and the Bitings of Serpents, or other Venotaous Creatures, being inwardly given. It is a singular good against the Dropfe Sarcites^ cany ing off

the Morbifek Matter by Urine: It prevails also against the Jaundice, and carries off the recrments of the Juices and Blood which breed the Gout. Dofe 2 or 2 Spoonfuls Morning and Night, in a Glafs of Wine, or Wine and Water, or in the lijiilled Water of the Plants or in Pxiirfly Water.

XIV. The Decofion of Herb or Root^ or Umbels of Flowers. It may be made in Water or Wine, and given from j to 6 Ounces, Morning and Night, It has all the Virtues of the Juice and Effence^ but operates not fo frongly as they, for which reason it is given in larger quantities: it warms, comforts, and rectifies the Stomach, caufes a good Appen^ and Digestjoh, and prevails against Vapors and Fits of the Mother.

XV. The Syrup. It is Pefloral, good against Coughs, Colds, Wheezings, Hoarfnefs, obstruptions of the Lungs, Afthma's, and other like Disorders (tempers, proceeding from a Vifcid Mucilage: It is Diuretick, and gives ease in the Strangury.

XVI. The Pouder of the Seed. It is Diuretick, Nephritick, Lithonriptick, and an excellent thing against most difaffes of the Reins and Bladder, proceeding from Obstruptions, or Tartarous Concretions: it carries off the Jaundice and Dropfie by its Diuretick property; it expels Wind powerfully, and gives present ease in the Colick: and has all the Virtues of the Juice and Effence aforegoing. Dofe from half a Dram to a Dram, or Dram and half, in the Syrup aforegoing, or in Wine dulcified with the Syrup.

XVII. The Cataplasm of Herb and Root. If it is immediately applyed to the Biting of a Mad Dog, Viper, Rattle-Snake, of other Serpent or Venomous Creature, it attracts or Draws thrtth the Poifon, and secures the Patient against the danger thereof. It difcuffes fimple Cohuions: and being applied gives ease in the Gout*

XVIII. The Juice of the Root. It is a singular good against the Stone, Gravel, and all manner of Tartarous Matters obstruptions of the Reins, Bladder, and Ureters, and gives present ease in the Strangury, and is a singular good against the Dropfe Sarcites^ cany ing off

XIX. The Effence of the Root. It is a singular good against the Stone, Gravel, and all manner of Tartarous Matters obstruptions of the Reins, Bladder, and Ureters, and gives present ease in the Strangury, and is a singular good against the Dropfe Sarcites^ cany ing off

It is an Antidote against the Plague Spotted Fever, and all firs Peftilential and Malign Fevers. It takes off the Febntick heat momentarily, deftroys the Lrid and corruDtive Ferment^ and is a singular good against the Dropfe Sarcites^ cany ing off

It is a present remedy against the Strangury, Stone, Gravel^ and all manner of Tartarous Matters obstruptions of the Ureters, and Bladder. It gives present ease in the Colick: eases pams' in the Vmefr of the Back, and strengthens it, being inwardly given, any proper Vehicle, from 15 to 30 Drops, or 60 Drops. and also outwardly anointed the part. It is profitable also against the Strangury, and inwardly given, it is a singular good against the Dropfe Sarcites^ cany ing off

the Terms, and haften and facilitates the Birth, I and forces away the After-Birth.

XXII. The Spirit. It is Cordial, good againit ficknefs at Heart, Fainting and Swooning Fits, and other Diftempers of the Heart and Stomach. It expels Wind, cheers the Spirits, repreffes Melancholy, and caufes a kind of Elevation of Soul. Dofe a Dram, two, or three, noWand then in a Glafs of Wine.

XXIII. The Fixed Suit. It is highly Diuretick, Nephritick and Hyiterick: and is a Specifick againft the Stone, Sand, Gravel and Vifcous Slime in the Reins, Ureters and Bladder. It gives prenent eafe in the Strangury, prevails againft Vapors and Hyfterick Fits, and cleanses the Womb of cold, vici, and putrid Humors which may offend it. Dofe from 8 Grains to a Scruple, in Parflyox Hydropipe Wnter, Onion Water, White Tort Wine', or any other fit Vehicle.

Paiiente Gardeii, of Monks-Khubarb.

CHAP. DXLVII.

Of PATIENCE Garden.

OR,

Monks RHUBARB.

I. HT#£JVJ^J^ It is called in Gr^rf, r W X wawSoM ^6w9cvx»a^: in Latine, Hippolapathum, Lapathum Uortense, Patientia Hortenjis, Rhabarbarum Hortenfmm, Rhabarbarum Monachonim: and in EngliJJ, Garden Patience, Garden Lock, Horfe Dock, and Monks Rhubarb.

II. The Kinds. Of the Hippolapathum or iftr/> D^ there £re two fpecial Sorts, viz. i. Hippolapathum \$ h^aov mw, Patientia Hortenfis h, Lapathum Sativum, Rhabarbarum Monachorum, Garden Patience, or Monks Rhubarb. «z. Hippo, lapathum nothum, Hippolapathum rotundifolium, Lapathum Rotundifolwn •, Lapathum Sat hum rotundifoliumClufij £? Camerarij; PseudoRba recentiorum Lobelij h Rbabarbaricum Cordi in Hijioria Flam arum, Lib. 4. Foi. 201. Baftard Rubarb, Garden round LéavM Horfe Dock, or Great round Leav'd Garden Dock-

The Descriptions.

III. * i^f/its or Garden Patience, or Monks Khubarb. It has a very long great Root, brown without and yellow within, much like to thofe of the Common Wild or Water Docks, but a little *A. like to the true Rhubarb h, having alfo a lefs ft ore of difcolored Veins, than the next following when that is dry, It grows up with very large Jlrong tall Stalks, chauffered or jurrwed (and rifes up to b; about 8 or 9 teerhgb, as Gerard fays, when it grows in good £md Jeru(ground;) Jet about with great, large or nkethofe of the their to, J^vS them S^ out into feveral fmall towards their tops bear reddifh or

purplifb Flowers, or Flowers of a light purple color, declining to brownnefs. Which being pafst awjy, W. Seed follows, contained in thin chaffy Husks, at* of a triangular form, like to the Seed of our Common Docks. This Patience or Garden Horfe DOCK, was obtained the Kame of Rhubarb, for fome finw- purging faculty which it has, much like to that O] the True Rhubarb.

IV. The fecond, or Baftard Rhubarb, or W den round Leav'd Horfe Dock. Its Root is exceed ing great and thick, very like unto the Rha Barf* ricum, as well in color and tafte as proportion and Purges after the fame manner, if given in <*, greater Dofe or quantity: it grows much gredtf than thai of the Patience before described, &* & many great Branches and Fibres adjoining to it: # is indeed yellow on the out-fide, and fomewhat % a paleifh yellow within, with fome Store of &l* colored Veins therein, like to the True RhubaA but much lefs, efppecially when it is dry, which tw^d loofes its frejb color, which the True Rhubarb conftantly retains. This Baftard Rhubarb rifes #£ tvith feveral large, great, broad, round, thirt- > yellowifh green Leaves, injhapelike to thofe O] Garden Bur-Dock, a little waved about thejb they rife up from the 7\$oot, every one ftandh reasonable thick and long brownifb foot Stalk among thefe Leaves, rifes up a yretty large much like the former, about two Feet or 7 having fome fuch like Leaves as before thereon^ but /mailer. Towards the top, the fpreads it felf out into feveral Branches, greater and fome leffer, towards the tops of grow long hiked Heads full of (mall brow Flowers-, after which follows in thin chap the feed, which is fhining and triangular h& Common Docks, or of the Garden Patience *\$, y# *\$ deftribtd*

V. [^] *Places.* The first grows naturally about *Niffima* in *Savoy*, as *Tragus* says. The second grows naturally upon the Hills not far, from *Cqrh* in *Germany*, as also near *Friburg* in *Switzerland*, and on the Mountains in *Auftria*: But with us they both grow only in *Gardens*, where they t[^] and flourish very well.

VI. *The Times.* These Plants when Nurft up in our *Gardens*, Flower about the beginning or middle of *June*, (much about the time when our *Common Docks* Flower) and their Seed is ripe in *July*. The Roots are not to be taken up, till the Leaves and Stalks are quite withered and gone, which is about the middle or end of *October*: for if they be taken up, either a little before the Leaves do spring, or a while after they are sprung tip, the Roots will not retain half so good a color in them: It is also to be noted, that when they are taken up, they are to be scraped very clean, and carefully dried, so as they may not touch one another till they are perfectly dry.

VII. *The Qualities.* Both these in respect to heat or cold, are said to be Temperate: Authors will have them to be moist, with a kind of clamminess: this possibly the Leaves may be, while they are young: but the dried Roots are doubtless dry in the first Degree. They are Aperitive, Absterfive and Astringent, though they have a Cathartic or Laxative force in loosening the Belly, for they certainly Bind after Purging.

VIII. *The Specification.* The Roots and Seeds of both Kinds are prevalent against a Bloody Flux, as also against all other Fluxes of the Bowels: Vomiting and Sickneses of the Stomach, bitings of Serpents or other Venomous Creatures, the Dropfy, Jaundice; and all manner of Scabs, Leprosy, and breakings out. The Roots of both Purge as the *True Rhubarb* does, saving (that they may have the same effects,) the Dose must be augmented to treble the quantity. They are also said to be absolute in the Cure of Agues,

IX. *The Preparations.* 1. A Sallet of the young end tender Leaves. 2. A Liquid Juice of the Leaves. 3. A Decottion or Infusion of the Roots. 4. A Diet Drink. 5. A Pouder of the Roots. 6. A Pouder of the Roots compound. 7. A Pouder of the Seed. 8. A Difilled Water.

The Vinnes.

X. *The Sallet of the young and tender Leaves.* Sewg boiled, and eaten with Butter, Vinegar, Salt and Pepper, as you eat Beets or Spinach, (though it is not altogether so pleasant) they nourish but little, yet make a thin Blood, loosen the Belly, and purge away flimy Humors.

XI. *The Liquid Juice of the Leaves.* Given $\frac{1}{2}$ Spoonfuls, more or less (according to Age and Strength) it is a certain Cure for an Ague, being given in Glafs of warm Ale, clarified Whey, or the like. One *John Benet* a Chirurgeon of *Maidstone* in *Kent*, cured a Lad of an Ague therewith, which did grievously vex him: he took 3 or 4 Leaves (as *Gerard* says) of this Plant of *Rubarb*, beat it, and strained out the juice with a draught of Ale, and gave it the Lad jo tte[^] Mofning to Drink: it wrought extremely upwards and downwards, within one Hour, and never ceased until Night: in the end, the Purging faculty of the Medicine abated and gave over working, and the Youth lost his Ague. The time (says he) he has cured with this

fame Medicine, many others of the like Difease, having always a regard to the quantity, which was the cause of the Violent working in the first Cure, I have sometimes also seen that the *Liquid Juice of the green or jrest) Roots* Jotting given in like manner, has also cured Agues, as well as the Juice of the Leaves. The Juice of the Leaves or Roots, mixed with a little Vinegar, is used as a most effectual Remedy for the Cure of Scabs and running Sores.

XII. *The Decottion or Infusion of the Roots.* The Roots fined and boiled in Water of *Carduus Benedictus* to the conjunction of a third part, and then sweetned with a little Honey: Being given to the quantity of 8 or 9 Spoonfuls at a time, before the coming of the Fit of an Ague, generally cures it at 2 or 3 times so taking it; such as are of a robust or strong Body, may take 12 Spoonfuls of it at a time. The truth of this has been proved by many Experiments, (as *Gerard* says.) The simple Decottion of the Roots of *Patience* or *Monks Rhubarb* loosens the Belly, Purges gently, helps against the Jaundice and Dropfy, and other like Diseases proceeding from a cold cause, is good against the Stinging of Serpents, helps the Sickneses of the Stomach arising from Cholera; and cures the Bloody-Flux, as also other Fluxes of the Bowels: and being taken with *Acacia*, or *Juice of Sloes*, it is said to cure the pitting of Blood. The Decottion of the Roots in Vinegar, is effectual to heal inveterate Scabs, and old running Sores. The Decottion of the Roots of *Bajard Rhubarb* in Vinegar has the same Virtues, and being dropt into the Ears it eases their pain: gargled in the Mouth it cures Sores and Ulcers therein, and eases the Tooth-ach: and being Drank, or taken inwardly it prevails against the Jaundice, Dropfy, Gout, Rheumatism, Kings-Evil, Stone, Gravel, Sand, Strangury, &c. it opens and purges the Liver, Spleen, Reins and Belly, and cleanses and cools the Blood. But for the general use in curing all these Dittempers the Decottion or Infusion may be made in Water, or Clarified Whey, and if the Patient like it, it may be a little sweetned with Syrup of *Violets*, or Syrup of *Roses Solutivei*.

XIII. *The Diet Drink.* Take Roots of *Monks Rhubarb* sliced, and Roots of red *Madder*, of each $\frac{1}{2}$ Ounces: *Sena* $\frac{1}{2}$ Ounces: *Aniseed* bruised, *Liquorice* bruised, of each 2 Ounces: *Agrimony*, *Scabions*, of each one Handful, which cut a little with a Knife, put them into an Earthen Steattj, or a small Wooden Cask, which may hold 4 Gallons or better: off use thereon 4 Gallons of Strong new Ale; which let sit and for 3 Days. At the end of that time the Patient may drink of it, as ordinary Drink for 3 Weeks or a Month together, (and the longer it is continued the better) providing another like Cask of the same, to have in readiness, one under another. It is said to Cure the Dropfy, Jaundice, Gout, Rheumatism, Spleen, Rickets in Children, Kings-Evil, and all manner of Itchy Malignes, Scabs, Pustules, and other Breaking out in the whole Body: it purifies or cleanses the Blood from all Corruption, prevails against the Green-Sicknes, and admirably opens all manner of obstructions of the Stomach, Lungs, Liver, Spleen, Mesentery, Reins and Womb, provoking the Terms when stoppt, after a singular manner.

XIV. *The Pouder of the Roots.* A Dram and half or 2 Drams of the Pouder of *Monks Rhubarb* mixt with *Ginger* in Pouder a Scruple, and taken falling in a Dish of warm Broth or Poflet Drink, Purges Cholera and Flegm very gently and safely without any the least danger. The Pouder of the Root of the *Bajard Rhubarb* does the same thing, but 4

more effectual, both for inward and outward Difcafes. It is good against a Quinfy, Baltard Quinfy, scrophulous or frumous Tumors in the Neck and other parts, comonly called the Kings-Evil, as also Swellings and Kernels behind the Ears: It gives ease in the Strangury, helps such as are troubled with the Stone, Sand and Gravel, provokes Urine, and is good for such as are troubled with dimness of Sight.

XV. The Volder of the Roots Compound. Take *Roots of Monks or Bastard Rhubarb in fine Powder 2 Drams: Refinous Jallap in fine Powder 2 Scruples: beji Scammony in subtil Powder a Scruple: Cloves in Powder 1 Dram: mix them for 4 Doses for a Man or Woman.* It cures the Scurvy, Dropfy, Gout, Rhumatifm, Jaundice, Kings-Evil, Palfy, Scabs, Itch, and all sorts of Puftules and other breakings out whatsoever. It prevails against Agues, Purges off Choler > Flegm, and watery Humors, cleanses thoroughly the Stomach, and Bowels, and opens all obstru&ions of the Liver, Spleen, Meffery, Reins and Womb.

XVI. The Powder of the Seed. That made of the Seed of *Patience*, cools, astringes or binds, and is of extraordinary use in flopping Fluxes of the Bowels, and in spitting of Blood. The Seed of the *Bastard Rhubarb*, is also manifestly astringent, and is said to cure the Bloody Flux, given in a Glafs of Red Styptic Wine. It eases the gnawing griping pains of the Stomach; and takes away Naufeousness, and loathing of Food: The *Powder* of either of them may be given every Morning fasting, and at Night at Bed time, from a Dram to two Drams, in a Glafs of Red Port, or *Barcelona* Wine.

XVII. The Distilled Water. Drawn from either of the Plants, it is good to cool and allay Mamma tions, cleanses the Face and Skin from external Defcedations or Defilements, and is very profitable to heal running Sores, foul Ulcers, and Scabbiness in what part of the Body foever.

XVIII. Nota. Tho* *Monks Rhubarb* is of the Nature of the *True Rhubarb*, yet the *Bastard Rhubarb* approaches the nearest thereto and is much the strongest and bed of these two -, it has not only the shape and proportion of the *Rhubarb* but the same color both within and without, with very little difference: they agree also as well in Taste and Smell* and it colors the Spittle of a yellow color, when it is chewed in the Mouth, as *Abubarb* does-, and it Purges the Belly after the same gentle manner as the *right Rhubarb* does, only herein it differs, that this must be given in at least the double quantity to that.

C H A P. DXLVIII

Of P E A S E Manured

T H E Names. It is called in *Greek*, *Πισαία*, *J p'uhv *Πισαία*; in *Latine*, *Pisava* & *Pisum Cult at urn*; in *Englisk* *Pease*, and *Manured Pease*.

IL The Kinds. Of Pease there are several sorts, as, 1. *Pisum Cultatai*, *Pisum Hortense*, *Manured Pease*, of which in this Chapter. 2. *Pisum vet deer*, vel *Lathyrus Annuum*, *Annual Chich-Pease*, or *Chichings*, of which we have spoken in *Chap. 126*, foregoing. 3. *nW & *Lv*, *Pisum agreite*, *Pisum Sylvejire*, *Wild Pease* of which in *Chap. 549*. 4. *deer Sativum* & *Sylvejire*, *Chich Pease* Garden and Wild, of which in *Chap. 550*. 5. **? cercula* ^ *Lathyrus*, *Pisum Perenne* ^ *Pease Everlasting* of which in *Chap. 551*. following.

III. The Kinds of the Manured Pease. There are many sorts of the Manured Pease, as, 1. *Early Pease*, or *Yulham Pease*. 2. *The Green Hasting*. 3. *The White Hasting*. 4. *The Sugar Pease*. 5. *The Rouncival*. 6. *The Gray Pease*. 7. *The Spotted Pease*. & *Pease without Skins*. 9. *Tufted*, or *Scotch Pease*. 10. *Pisum rubrum*, **? fum quadrat urn* ^ *Lotus Siliquosus* *Flora rubella*, *tytus tetragonolobus*, *Square Codded Pease*. 11. **? fum cor datum*, *Heart Pease*. Of these Species, be* caufe of their great likenes one to another in their Stalks, Leaves, Flowers, and manner of growing* we shall give you but one Description, saving the tenth and eleventh Kinds, which shall be particularly spoken to.

The General Description

IV. The Roots of all the sorts of Manured Pease are small and Fibrous, and quickly perish after Seed-time. Garden Pease are for the most part y great est, and the best of Kinds, and are sustained with Stakes or Bushes. The Field Pease, are not so managed, because of the almost infinite Labor, be sides Marge, and therefore grow as they naturally please, without any such trouble. They (all of them) spring up with long weak hollow, and brittle (while they are young and green) whitish green Stalks, branched out into many parts, and at every Joint - where it spreads out a Branch, there is one round broad Leaf, encompassing the Stalk about, so that they come as it were through it. The leaves are Winged, made of several f^ ^ Leaves, growing from a middle Rib, of a whitish green color, with Tendrels or Claspers at the ends of the Leaves, by which it takes hold of vohatfever stands next to it. Between the Leaves M^ the Stalks, come forth the Flowers, standing t^ or three together, every one by it self, own several foot Stalk, which are either tidly - or purple, or mixt white and purple, or purple fr blew: The Cods are long, and somewhat round full and bunching out of which some are some lesser, some thick and short, some plain w smooth, others a little crooked at the ends, which are contained several forms of Y&

Number from one to nine inclusive (I never fax* ten:) of which some are rounds others almost cubical; some finally some great: some while, some green\some gray, others Spotted, &c.

V. the tenth, or Square Codded Peafe. Its Root is small and fibrous like the former, and perishes every Tear. It is a pretty Kind of Pulse, and might for the form of the Leaves be very well referred to the Kinds of Lotus or Trefoils, It has three or four small weak Stalks, which spread themselves out into many Branches, having two Stalks of Leaves at every Joint\ and three small soft Leaves standing on a very small Foot Stalky coming from the Joints. The I lowers grow for the most part two together, of a perfect red or crinnon, color5 like in form almost, to the Common Garden Peafe Bloflbm: after which come long^ thick and round Cods, with two Skins or Films^ running all along the Cod, at the "Back or upper file ; and two other such like Films, all along the Belly or under side of the Cody which makes it seem to be four square: in which is contained, round discolored Peafe, something smaller^ and harder than the ordinary Peafe.

VL The eleventh, or Heart Peafe, which some call also, Pifum Veficarium, Bladder Peafe. Cor Indum, and Cor Indicum (because they first came from the Indies.) It has a Root which is very small, Bushy and Stringy, with many Fibres adjoining to it, and perishing every Tear at the first approach of Winter. It rises up and spreads much7 if it has a good Soil to grow in, having fever at slender weak Stalks, which will lye down upon the Ground, and entangle it self with the Claspers which it has, unless it be sustained with Stakes, Bushes or some such like thing, The/e Stalks fend fortify large,

krge, long, thin, and very green Leaves on all fides, upon long foot Stalks, being divided either into three or five-parts, each of which is much rent or cut in on the edges. At the Joints with the Leaves from the middle of the Stalks almost upwards, and at their tops also, come forth several small whitish flowers, Jet together upon a foot Stalk, each confijing of five small Leaves apiece, which being past away, small Bladders succeed in their places, in which are contained the Grains or Peafe: these Bladders grow whitish as they ripen, having Six Ridges, of which three are the more eminent and open into three parts in each whereof lies one round, hard, blackish Seed, of the bigness of a great Pea, spotted on the out side with a mark, much of the form of a Heart, as it is painted on Cards, whence came the Name.

VII. *The Places.* All these several sorts of Peafe grow with us only in Gardens, and the worse sort of them in Manured fields, for the profit of the Husband-Man. The tenth is only Sown in Gardens: and so also the eleventh, being first brought to us put of Italy and other places, being originally (as is supposed) a Plant of Indian growth.

VIII. *The Times,* They are all Sown in the Spring: The first ten Kinds Flower in June, July, and August, and the Grain, or Peafe ripen in the mean Season. The eleventh Flowers in August or September and the Grain or Peafe is ripe in September or October.

IX. *The Qualities.* We speak now of the first nine or ten Kinds of Peafe: they are hot and moist in the first Degree, Aperitive, Absterfive, and Ujretick; Stomattick, Nephritick, and Arthritick; Chylifick; Analeptick and Spermatogene-

in CJ? * S Peci fion. They are peculiar against the Strangury, or stoppage of Urine, Sand, Gra-

vel, Stones and Tartarous Mucilage or Slime in the Reins, Ureters, and Bladder: Breach in Chyle, nourish much, and festoie in tions.

XI. *Hippocrtes Eys,* That Peafe are less windy than Beans, and pass sooner thro' the Belly. And Avilen says, That Peafe in their whole substance are like unto Beans, and are eaten after the same manner, but that they differ in two things, viz. That they are not so windy as Beans, nor altogether of so cleansing a faculty and that they are in a mean between those things which nourish much, and nourish little and which are windy, and not windy.

XII. *The Preparations,* i. An Effence of the Leaves and green Cods. 2. A Meal or flower of the dried Peafe. 3. A Decoction of Peafe. 4. A strong Broth or Pottage. 5. A Cataplasm of Peafe Meal. 6. The Asses of Peafe Straw and Cods. 7. A Distilled Water from Peafe Blossoms, or from the whole Plant, 8. A Volatile Spirit, Oil and Salt? Dialled by Retort from dried Peafe.

The Virtues,

XIII. *The Effence of the Leaves and green Cods.* It is highly Aperitive, Absterfive and Diuretick, opens Obstructions of the Reins, Ureters and Bladder, breaks Gritty Stones, and expels from the Reins and Bladder, Stones, Gravel, Sand, and Slimy Humors in great quantities. Dose 2, 3 or 4 Spoonfuls or more in a Glass of White Port or Lisbon Wine.

XIV. *The Meal or flower of Peafe.* Made into a Pudding with Milk and Eggs, tho' it is Absterfive and Diuretick, yet it nourishes very much, and being much or long eaten it rettores in Consumptions, the Patients Drink being every Day new Milk. Bread made thereof, or Cakes, and eaten while they are new, are also restorative, they very much strengthen the whole Body, provoke Lull and encrease Seed.

XV. *The Decoction of the Peafe either green alone, or with the Cods, or dried.* It is a famous thing against the Strangury and all stoppages of Urine, Stone Gravel, Sand, Slimy Matter, &c. It opens all obstructions of the Urinary parts, expels the obstructing matter, and eases the Pain. Dose 6 or 8 Ounces mixed with Honey.

XVI. *The strong Broth or Pottage.* It is of great nourishment, and if it is made good and strong with Knuckles of Veal, and Legs of Pork, and (trained from the Hulls of the Peafe, and then be eaten as daily Food, it wonderfully restores in Consumptions, cherishes languishing Nature, increases Seed, and provokes Lust extremely. It strengthens the Bowels, and tops all sorts of Lasks or Fluxes: and has such a Power in it as to cure Impotency in the Male Kind, whether it be from a weakness in the Instruments of Generation, or from a defect of Seed. It may be made pleasant and savory with a little Pepper and Salt of an Orange or Limon, and a little Swallow Butter.

XVII. *The Cataplasm of the Meal.* If made with Vinegar, with a little Oil and mixed with a quantity of Milk, or Curdling therein: applied to the Testicles are Swollen, it dissolves the Tumor, and eases the pain. // it mixed with Wine and Tolks of eggs, and applied to weak Joints it strengthens them.

applied-also to fwoIn and watering-Eyes it helps them. *If it is made with Wine, Tolks and Whites of Eggs, Double refined Sugar, and Beef Suet: and then Fryedin a fry ing-Pan, and fo eaten with a little White Sugar and Juice of Oranges,* It good to reltore (such^s as ate Impotent, encrease Seed, and provoke Cuft.

XVIII. *The Afhes of the Straw and, Cods.* Bsing Infused in Ale, -Beer, or Wine, the Infufwn is very Aperitive, and Diuretick-, it opens all Obftruaions of the Reins and Bladder, is good againft Sand, Gravel, Stone and Strangury, and prevails againft the Scurvy, P^oPfy > Jaundice and Gout. *The Afhes made into a Cataplafm with Hogs Lard,* and apply[^] is good againft old Aches or Pains, Sciatica and Gout, whether in the Hands, Arms, Knees, or Feet.

XIX. *Hie DiftiUed Water from the Blqf Joms or whole Flant.* It is a Cofmetkk, or a keautifier of the Face and Skin: it cools, foftens, whitens, and makes fmoother tie Skin, the Face or Skin being often wafht, with ^{*}, and fuffered to dry on. It is alfo good againft Stone, Gravel, Sand and Slime in the Reins and Bladder, and gives eafe in the Strangury. Dole ⁴, ⁶, dr 8 Ounces, sweet-f^{ed} with the Syrup of Violets, Honey, or the like.

XX. *The Volatile Spirit, Oil, and Salt.* They are made exaftly in all refpe&s as thofe of Seans, in Chap, 5J. Seff. 16. aforegoing of this B00L *The Volatile Salt of PeaJe,* is one of the moft Subtil and Volatile Salts, being of the fame ufe with all other Volatile Salts. It prevails againft all Difeafes of the Head, Brain, Nerves, Spleen > Reins, Womb, and Joints: as Apoplexies, Epilepfies, Vertigo's, Megrims, Head-Aches, Lethargy, Cams, Colds, Vapors, Hyfterick Fits, Colicks, Gouts, Rheu-^{matifm} &c. and kills Worms in the Stomach; and Belly. Dofeⁿ is from 7 Grains, -sto 14, in Wine, or any other proper Vehicle, Morning and Night. *The Spirit* has all the fame Virtues arid may be given from 10 Drops to 30 in Wine, Water, &c. *The Oil* is ftronger: It ought to be re&ified after the ufual manner, and is chiefly for outward Applications: you may mix it with *Oil of Ben,* or of *Bit^{te} Almonds,* and anoint the Stomach and Navel fo^r Vapors and Fits of the Mother.

The Virtues of the Heart Peafe.

XXI. *Cordus on Diofcorides* fays, *Thefe Peafe* are a great provoker to Sleep.; even to the Danger ^ Lite, if the quantity given be too large: he J?ys, That he tried this upon himfelf, and found it to be dangerous in provoking Sleep, if taken in too great a 'Dole -, but he alfo %s, it caufes a pleafanter and fweeter Sleep than *Opium* does. *Dodontus* fays, that this Plant is the *Abrong,* or *Abrugi of Seraph,* in his fy«p* 15[^]. where he has thefe Words, *Abrong* in, *fpotted with black and white,* *SisQ ja Grain Maiz.* It has the form Heart upon it in white > and therefore *Ta-* *nontanus* calls it *Cardijpermon.* It is to be available againft taintings, and other W of the Heart, and this is probable t9 be true, for if it has the proper-

ties of, *Opium* in it, to caufe pleafant and fweet Sleep, as *Cerdus* fays, it may well have thofe effects aifo, as to comfort and clear the Heart, and refilt Fainting and Swooning Fits, and other like difaffe&ions of that noble Part. I find not what Dpfe is given of it, That the, induftious Artift is to find out by many Tryals, beginning with a fmali quantity firft, and fo increafing it gradually, till he finds how much[^] will fufficiently do, and may be fafely exhibited.

CHAP. DXLIX.

Of P E A S È Wild.

L 'Tp H E Names. It is called in *Greek* , X nW iM*ejv% *} ulffvv &yejLov: in *Latine; Pifum agréfte & Fifum Sylveftre:* in *Englijh Wild Fecife.*

II. *The Kinds.* Authors have given us feveral forts heteof[^] thofe which we fhall take notice of in this Work, are only thefe following," viz. *J. FiSum Sylveftre commune, Vifum Sylveftre primum.* The firft, or Common Wild Peafe. 2. *Pifum Sylveftre alterutii,* .The fecond, or other Wild Peafe. ^ «%?©, *Ochriis Theophrasti* in his *de caufis Plantarum, Lib. 4- Chap.2. Ervilia Wmij,* in *Lib. 18. Chap.-,* which is now its ufual Name: *Aracm niger Matthioli* (which is erroneous) *Ervilia Sylveftris Dodonai, Ochrr/s Sylveftris, Jive Ervilia Lobelij,* *Cicer ervinum Lugdunenfis, Orchas Parkinoni, Ervilia Flore iff FruUu albo, Lobelij, White winged Wild Peafe. 4. Ervilia altera[^] Blackiffli winged Wild Peafe. 5. Pifum Spontanum Maritimum Anglicum, Englijh Wild Sea Peafe. 6. Pifum f u fymaliud Maritimum Britanicum, The other Englijh Sea Peafe, or Suffolk Peafe. 7.7 Pifum Sylveftre nigrum macuatum Bceticum, Spanifh black fpo^t Wild Peafe.*

thebefcriptiont.

III. *The firft, or Common Wild Peafe. It has a Root which, is gs thick as ones Finger, and long, with many Fi&res adjoining. This Plant does little differ from the Manured, either in its rambling cornered Stalks, or in its broad, ft iff, green Leaves, two always being fet at a Joint, and fix or more lejfer ones, on the Branches which .end in a Uaffer. The Flowers, are white^r many ftanding on a foot Stalk together, which turn into fo many Cods, each of them* much^r smaller than the Manured, and the Seed, Grain[^] or Tulfe within, much lefs alfo, and of no Ple[^] fant Tafte.*

IV. *The fecond, or other Wild Peafe. Its Root abides many Tears, and is much like the firft -, but the Branches of this are fcarcely half a Foot long, with broder, and fhorter Leaves, on them, yet like the former but more pale. The Jods and Peafe likewise differ not much in form, but are much lefs.*

V. *The third, or White winged Wild Peafe Its Root Is fmall and long, with fom Fib^{er} adjoining* which wholly penfeces every Tear. This*

three he it deep 5 the Birds also for the most part devour it all. All this Parkinson supposes to be true, for that he Sowed some of the Seedorveaib in his Garden, but they would never Spring up. However ^ thd this matter of tail may be true-, yet 'tis probable, that if the Seed or Grain had been Sozvn in a Ground or Soil proper thereto, it might have grown, notwithstanding what Parkinson has said.

IX. The sevenih, or Spanish black spotted Wild Peafe. This Kind differs not much neither in its Root 1 (which Perijhes every Tear) Stalks, Branches, Leaves, Flowers nor Cods, from our first fort 0\$ Wild Peafe described in this Chapter, but in many things, ti is like. Tet it is lejjer, and the flowers Are of a pale yellowish. green color: and the Peafe are of a dark color spotted with very black Spots like Velvet.

X. The Places. The first has been found in ttiany places of England. The second, on the Chalky Hills, at Kings-Hay in Kent, nor far from the Thames: there is a larger fort of this second Species, which has been found in some Barrel fields in EJfexi The third and fourth grow with us only in our Gardens, but L^V/fays, grow naturally in Lombardy. The fifth has been found growing near Romney in Kent. The sixth was found growing Anno 1557, being the third Year* of Queen Mary I. between Orford and Atbrough where it grew upon the Beech of the Sea, 11. places where never Grals or Herbage was ever seen to grow, but the neighbouring People thereabouts laïd, that they had obtived, and known them to grow there of a long time before. In that Year there was a great Dearth, so that many were forced to make Bread of Acorns, and the People gathered many Quarters of these Peafe (being in great necessity). to eat them for Food, and keep them from Starving, which at that time might be accounted a great blessing from Heaven. Stow in his Chronicle → and Cambden in his Britania, make mention of these Peafe: but vainly thought that they might first come thither by some Shipwreck. But this is false, for it is a singular Plant fui Generic, specially differing from all the other Kinds: and this is true, from its form and taste: but besides it has been found growing in other places about the Sea Shore (which seems to be natural to it) as at Rye in Kent, at Pernfie in Suffex^ at Gilford in Surry\ over against the Comber*, and at Ingolne Mills in Lincoln-Jhire. The seventh grows in Spain, from whence it has been brought into our Gardens.*

XL The Times. These all Flower, and bear their ripe Fruit with the latter Kind of field Peafe: The sixth Kind Flowers about the end of 7"fy> and the Cods are ripe about the end of Augufi.

XII. The Qualities, Specification, Preparations > and Virtues of these are the same with those of the Manured Kinds. The third and fourth Kinds (according to Galen) are in a mean or middle property between those which nourish much, and little, and which are easie and hard of Digestion, but they are hot and moist, and have a drawing, digesting, cuttings and cleansing Faculty, that they also purge the Liver, Spleen and Reins v cleanse the Skin from Scuff, Morpew, Leprole, Tettars and Ringworms, dissolve hard Tumors in the Cods, uM JL^npoftems, running Sores and putrid Ulersifthe Meal being mixt with Honey: and this j^Jpokerr in General of all the Kinds.

C H A P I D L,

Of P E A S E - C H I C H i

0 K

C I C E R , Garden and Wild.

I. 'T p H E - frames. It is called in Arabick, X Chemps., Hamos., Achames; or Halbamos: in Greek, Ff&rjos, &iziCtirQo\$K<ut\$: in Latin, Cicer: and, in English, Chich Peafe, and Cicers.

II. The Kinds. Of this Plant [here are two Principal Kinds, viz. i. 'E^C/Vflo^V, Cicer fativum, v\$J hortensif, Garden Chich Peafe, or Cicer. 2. ^iC:ifSci dye*®, Cicer Sylvestre, Wild Chich Peafe, <^* Cicer.

III. TZN? Garden Kinds of Cicers. There are several of this Species, as, i. 'E^KSO* mi* Cicer Ariet'mum, White Garden Chich Peafe, Rams Chidies, Rams Peafe, and Rams Cicers. 2. Cicer rubrum, Red Cicer > or Chich Peafe. 3. Cicer nigrum^ Black Cicer, or Chich Peafe. This is Matthiolus his red and black Cicer, but the red in time changes into black-, these three differing only in their colors, will merit but one general Description, which we (hall give you in Seff. V. following.

IV. The Wild Kinds of Cicers. There are eight sorts of the Wild Kind, viz. 1. Cicer Sylvestre Mattholi, Dodonai, Lugdunenjis & Dalechampij* Cicer Sylvestre majus Thalij; Cicer Sylvestre Herbariorum Lobelij; The greater Wild Cicer. 2. Cicer Sylvestre minus, Cicer Sylvestre minimum Thalijh The lesser Wild Cicer. 3. Cicer Moritatum Languinofum, Bauhini \$ The Woolly Mountain Cicer. 4. Cicer Montanum h&vKw Bauhini^ Mountain Cicer without any Stalk. 5. Cicer Sylvestre Triphyllum-, Cicer Sylvestre veriv Lobelij-, Cicer Sylvestre alterum aliorum, Trefoil Wild Cicer. 6. Cicer Sylvestre alterum triphyllum^ Cicer Sylvestre fecundum Dalechampij Lugdunenfe^ The second three Leav'd Wild Cicer. 7. Cicer^ £&Wf five Aracm major Beticumh The greater Spanifh Wild Chichling Peafe. 8. Aracus ?minor Lufitanicus, The lesser Wild Chichling Peafe-

The General Description of the Garden Kinds.

Vi They have a small Root which perijhes every Tear: The Ram or white Chich Peafe, (and so of the others) has Stalks of a, Tard* 4ong^ on which do grow winged Leaves y that is^ many small and almost round Leaves dented about the edges, fet on both sides of a middle Rib. At the Joints come forth one or two Flowers upon Jhort foot Stalks, Peafe fashion, either white or whitif)^ or else purplijb red, lighter or deeper^ according a* the Peafe which follow will be^ which are contained in small thick, and Jhort Tods or Cods, (it which lye one, or two Peafe, more usually) a little pointed at the lower end, and almost round at the Head vet a, little cornered or Jharp. This White Chich Peafe is much used in Spain, so that i, * usually one of their Chief*DiJhh at all * Yeafis.

The Descriptions of the Wild Kinds.

VI. The first, or Greater Wild Cicer. It has hard and woody Root, & to

spreads far about, It has very long winged Leaver jet on the Stalks, composed of many, every or of them being small, and longer than those of the Garden Kind before Described, not dented at all about the edges, and of a faded green color. At the tops of the Stalks, come forth many Tufts of Mowers, thick set together, of a pale, yellowish color, almost white, after which follow rough slumy Cods, in Tufts also, each of them small pointed to the end, within which are contained other firm smooth Husks, which have many small, flat, yellow round Seed, (as Tilius says,) but Lugdunenfe makes the first of Dalechampsius, to have black flat Seed or Grains, and not like to the Manured Cicers, (which some take to be both one, as Dioscorid that of Matthiolus.),

VII. The second, or Lesser Wild Cicer. It is in its Roots, Stalks, Branches, leaves, flowers, Cods, Grains, and manner of growing, is altogether like the former, but in this it only differs, that it is not altogether lesser in the whole, but lesser in every part,

VIII. The third, or Woolly Mountain Cicer. It has upright round Stalks about a Foot high, soft or woolly, spreading themselves forth into small Branches, on which grow winged Leaves, ten or twelve on a side, of a middle Rib, with an odd one at the end, each of which is soft or woolly, and long like unto the Vetches, some broader and some narrower than others. At the tops of the Branches, grow a Spike of rough pale colored Flowers, and the Cods which follow, are some long and woolly, with a crooked Thread at the end containing within them small black Seed.

IX. The fourth, or Mountain Cicer without Stalks. Its Root runs deep into the Earth, if we Rocky Ground on which it grows does not hinder it: from whence spring several hairy foot Stalks of leaves, which contain about twelve or more of a side, something round yet longer than those of the Garden Cicer, their edges being hairy, some of them equally, others unequally set together, some another, with an odd one at the end. The flowers grow near about the Root, being some long and pale, and after them come swollen Cods having two, partitions, full of small yellow Seed like unto those of the Medicas, which are of a Kidney fashion.

X. The fifth, or Trefoil Wild Cicer. It has a long slender Root with some Branches & fibres adjoining; from which rise up Stalks about two Feet high, divided into some Branches spreading abroad, on which are set upon long foot Stalks one above another, leaves divided into three parts like the Wild Trefoil, and each of them larger, bicker and rounder than those of the Garden Cicer, a little dented about the edges. The flowers grow two or three together upon a foot Stalk, at the Joints with the Leaves, they are like the Garden Cicer Flowers, but the Cods that follow are small like unto the Garden Kind, but something flatter, having few small Leaves at their bottoms, within which is much smaller Seed, and more flat, and rather like those of the Cicuta, Chap. 126. foregoing.

XI. The sixth, or The second three Leaved Wild Cicer. It has a thick, long, Branches Root, which is blackish without, and whitish within. The Stalks are full of Branches, like unto Cicers, but three always together, no more. The Flowers are red: the leaves are like unto the other Wild Cicers, hairy, and spotted with red Spots.

XII. The seventh, or Greater Spanish Chickling Pease. It has a Root which is small

Fibrous, and perijhing yearly. It spreads on the Ground[^] with feveral square, hairy[\] and crested Stalks •, sometimes a yard long or 7nore; at the feveral Joints of which) grow many dark green hairy pointed Leaves fet on each fide of a middle Rib, which end in a Claffer, like Lentils, or Vetches. At the foot of the Leaves, come forth Jingle blowers on very fhort foot Stalks, of a dusky[^] whitifh purple color, with decpgr purple Veins therein •, and of a deeper purple at the bottom of the upper heaves, next to the Stalks: which when they are pa ft, there come in their places, fhort, thick, and almoft: foundifb Cods, covered with a jhort hairinefs thereon, within tjoich lyes 3 or 4 round blackifb Peafe, almoft like unto blackifh Velvet, as big as thofe of the Cicercula, but not cornered.*

XIII. *The eighth, or Letter Wild Chichling Peafe. The Root of this perifhes likewife every Tear, as the former does. In its Stalks, Leaves, flowers, Cods, and Grain, it is much like the former, but leffer in all its parts, and nothing hairy. The Flowers are of a pale white (with us in England) or of a whitifh yellow Color. The Cods are fmoother, fmaller, and not hairy, with fmaller, and blackifh colored Peafe within them.*

XIV. *Tfo Places. All the Manured or Garden Cicers, or Chich Peafe, are Sown with us in Gardens, or in Fields, as other Peafe are, not only in England, but in other Foreign Countries, where they are Sown for Food, as in Spain, &c. The firft fix forts of the Wild Kinds, grow upon Hills and in Woods, and fometimes by Hedge fides in Fields. The feventh grows in Spain, and the eighth in Portugal, from whence they are brought to us in Seed, and are Nurft up with us in Gardens.*

XV. *The Times. The Garden Chich Peafe, tho' they are Sown fooner than Peafe, yet they are gathered at the fame time with them, or a little after. The firft fix Wild Cicers, or Chich Peafe, Flower in July and Auguft*, and the Cods or Seed are ripe in Auguft or September. The feventh and eighth Flower with us in the end of July, and the Cods or Peafe are ripe in Tiuguft or September. But ito<?/who firft brought them out of thofe places, viz. Spain and Portugal, their natural places, fays that he gathered their ripe Cods or Peafe in April and May.*

XVI. *The Qualities. Garden Cicers or Chich Peafe are hot and dry in the firft Degree* Incifive, Abfterfive, Diuretick, Nephritick, Hyfterick, Emmenagogick, Chylifick, Analeptick> Galefitogenetick, and Spermatogenetick. The Wild Cicers or Chich Peafe are fo much more powerful than thofe of the Garden, by how much they exceed them fo heat and drynefs, perceived by their (harper and niore bitter Tafte -, whereby, it is manifft that they much more open obftru&ions, provoke Urine, break the Stone, and have all thofe other properties of Inciding, Opening, Digefting and Diffolving, which are attributed to the Garden Kinds, and that both more fpeedily[^] and more certainly. And Pliny fays, that if they be taken too largely, they breed Wind, and loofen the Belly, but not Without fome Pain.*

XVII. *The Specification. They are peculiar^{*} in eafing the Strangury, breaking the Stone in the Reins, expelling Sand, Gravel and Tartarous Matter from the Urinary parts, and provoke the Courts in J?ifflien. They p^{re}vai againft Pleuritick Pain< and Stitches in the Sides, carry off the Drcjaÿ, and Yellow Jaundice by Urine, are Emollipl, and cleanfe the Belly by Stool The white Aam Cicers, or Chich Peafe, are thofe which are ufyed as Meat or Food, they are a little idjr, but are faid to Nourffh more than either]*

Peafe or Beans, for which reafon they are of extraordinary ufe in curing Conjunptions[^] They increafe Milk in Nurfes, and Seed mightily, both in Men and Women, incite Luft powerfully, and cure Barrennefs in both Sexes[^] which things all the Kinds of Cicers do[^] and for which reafons they are commonly given to Stallion Horjes. The White are accounted a Delicacy among the Spaniards[^] and commonly one of their choice Difhes in all their Feaft, as we have before hinted. The other Garden Cicers, but chiefly the Wild Kinds, are moft ufed as Phyfick or Medicine.

XVIII. *The Preparations. You may make therefrom, 1. A Boiled Mefs, of the White Cicers or Chich Peafe. 2. An Effence of the Leaves and green Cods, 5. A Decction of the green Cods. 4. A Meal or Flower of the Grain. 5. Bread and Puddings thereof, if of the white Rams Chich Peafe. 6. A Cataplafm of the Meal or Flower. 7. Afhes of the Straw and Cods: From which a Fixt Salt may be extraSted by Elixivation. 8. A Diftilled Water from the Flowers, or from the green Cods, or from the whole Plant. 9. A Volatile Spirit, Oil[^] and Salt of the dryed Cicers, as you make thofe of Beans in Chap. 55. Sett. 16. aforegoing. 10. A ftrong Broth of the White Cicers, made by Boiling till they break, with Knuckles of Veal, Mutton, Pork, and Beef, &c> and then frained out from the Hulls.*

The Virtues.

XIX. *The Virtues and Ufes of all the aforegoing Preparations are the fame with thofe of Beans in Chap. 55. Se& 10.[^] 18. Chap. 56. Seff 12! ad 17. Chap. 57. Sea. 11. ad 17. And Chap. y48. Seff. 13 ad 20 to all which you are referred for full fatisfac&ion, thefe Cicers or Chich Peafe being altogether of the fame Qualities and Nature.*

XX. *Nota. 1. Galen lays that Cicers are windy Food, yet that they Nourifh more than Beans, provoke Urine more, as alfo encrease Seed They are more cleanfing than Peafe or Beans* and thereby are faid to break the Stone in the Reins.*

XXI. *Nota. 2. There is a Cream to be made of them, by boiling them in Water, which being freely eaten plentifully encreafes Seed in both Sexes, as alfo Milk in Nurfes, it provokes Urine, and gently keeps the Belly foulable.*

XXII. *Nota. 3. The Decction of any of the Cicers in Water, chiefly of the Wild, made with Rofemary, Diofcorides lays is good for the Dropfy and Yellow Jaundice. But tho' the Wild Cicers are faid to be the moft powerful for Medicine, yet the white Ram Cicers or Chich Peafe, are laid more powerfully to encrease Milk and Seed, and provoke Luft. >*

XXIII. *Nota. 4. The Broth Compounded. Take Cicers 5 Ounces; French or HulPd Early 2 Ounces \$ Marfb Mallow Roots 2 Ounces and half*, boil them fufficiently in Chicken Broth, pf this five or fix Ounces may be taken in the Morning falling, againft Pains and Stitches in the Sides, Dropfy, Jaundice, Gout, Rheumatifm, ©V. and thereby the Belly will be gently Purged.*

XXIV. *Nota. 5. Diofcorides fays that Cicers axe hurtful to fuch as h[^]ve Ulcers in their Reins or Bladder-, but I know no reafon for his fo report* ing, unlefs it be from their great abfterfive or cleanfing dualities: however from the Experience I have had of the ufe of them I am of the clear contrary Opinion,*

XXV. Jiota. 6. Plutarch has also this Note. That no Worms breed in Cicers, whereas all other Pukes are subjeft to them-, by which he feems to intimate, that they refift Putridity or Corruption, but he relates this thing upon another account.

CHAP. DLL

Of PEASE Everlafting.'

I. *Lathyrus pratensis** It is called in Greek, *Lathyrus* in Laurie-, *Lathyrus* in Cucircula, & *Cicercula perennis*: in Englifh, Peafe Everlafting.

II. The Kinds. There are but three Species olv ferved of this Plant, viz. J. *Lathyrus pratensis* major, *Cicercula perennis* major *Bauhini*; *Clymeniim Matthioli* ^ *JErrium Sylveftre Fuchfi**, *Ervillum C<:falp'mi* *Pifum Gracorum Tragic Lathyrus Latifolius* -, *Pifum percenne*, Peafe FveralHng the greater. 2. *Lathyrus perenn angujifolius* *, *Orobis Venetus Clufii*, (but Very improperly, for tho' it came from Venice, yet it is no *Orobis*;) Blew upright Peafe Everlafting, Peafe Everlafting narrow Leav'd. ? • *Lathyrus perenn Sylvejlrk Dodonal* Wild Peafe Everlafting,

The Defcriptotis.

III. The frfti or Peafe Everlafting the greater. Its Root is great, black and rugged on the out fide, running down Ground, it is of the

thicknefs fome times of a Mans Arm, and whitifo within, fpreading it felf out into fome Branches, with a few Fibres annexed to them. * This Plant abides long, and grows every Tear greater and greater. It firft J'prings up with many long, flat*, or broad, trailing Branches, or Stalks, winged as it were on both the fides, which muft be fiftaincd; and are diver fly divided in to feveral other findler Branch* es, at the feveral Joints of which, (iandjvco hard and not very broad Leaves, but fomewbafiong and green, with divers Clappers or Tendrels in feveral places with the Leaves, from between the Branches and the Leaves, and at the ends of the Branches. At the Joints towards the top, and at the ends of the Branches, come forth pretty long Stalks, vsitb five or fix or more Peafe like Bloffoms, of a fine pale purplifh red color, very beautiful to behold, and of a very p leaf ant Smell. After which fuceed frndh long, hard Skirfd., roundifh, and zwhitifh Cods, with [mall round blackifh Peafe in them. This is that which Lobel calls *Lathyrus folio Latiore*, and ha* been found growing Wild, in feveral places of our Land.

IV. The fecond, or Blew upright Peafe Everlafting, or Peafe Everlafting narrow Leav'd. Its Root is black, hard or woody, abiding after Seedtime, as the former does, and (hooting afrefh every Tear. # has divers fiender, but upright green Branches* fotne what cornered, two Feet high, or more, having at feveral diftances on both fides of them, certain winged Leaves, fet together upsn long foot Stalks * one againft another, confining of eight Leaves, *, little broadifh in the middle, and pointed, without any odd one at the end. At the Joints towards fix tops, between the Leaves and the Stalks coine* forth many blowers jet together, upon pretty long foot Stalks, of the fafhion of the former Peafe Bloffom, but fomewhat fmailer, • and #f a purplift blew, O* Violet color: After which come fiender or long pointed Pods or Cods, rounder than the aforegoing, in which are contained, fnall, round, grayifh Peafe. This in its durability, form, and manner of growing, differs &t much, but in having fomewhat paler flowers, and in the Leaves thereof, which are narrower than they.

V. The third, or Wild Peafe Everlafting. The Root of this is long, and endures for many Tears. It has longer winged Stalks, and fomething larger Leaves^ but Jhorter Clappers or Tendrels than the laji: The Flowers are of a deep purple: And the Cods are long and fiender, with fnall, hard, round Peafe within them.

VI. The Places. It is faid that they have all OI them been found growing Wild with us, in feveral parts of the Kingdom-, but are ufually Che, rifhed and Nurft up in Gardens for the beauty oi the Flowers.

VII. The Times. They all Flower about the Months of June and July, to the end of A, and the Grain, or Peafe are ripe in fome time afterwards.

VIII. The Vitalities, Specification, and Virtues of thefe, are the fame with those of Peafe, in Chap. 548. aforegoing, to which you are referred. Galen fays, That *Lathyrus* is fubftance much like to *Ervilia*, and *Phafelus*, or Beans\ and that the Country People in his Country, of *Afi.i*, did ufe them as they ufed *Phafeli*? made them into Pottage, as they did *Lent ft* the they are of a thicker Confiftence (hmore

CHAP. DLII.

Of PELLITORY of the Wall

OR,

PARITY.

I. *HE Names.* It is called in *Greeks* $\epsilon\alpha\sigma\mu$, χ $\rho\omega$ (the first *quod foliorum* & *feminum hirfutie vejiibus adhaeret*: the latter, *quod Per dices ealibenter vefcantur*:) in *Latin*, *Helxine*, *Cf Perdidum*. It is also called *Parietaria*, or *Paritaria*, *alib Muralium*, $\epsilon\tau'$ *Herba Muralis* (because it naturally grows upon Walls.) And by some Authors, *Urceolaris*, *Vitrago*, *iff Vitriolaris Herba*. *Galen* and *Paulus Mgineta* said, That in their days (also *Cornelius Celfus*, and *Pliny* out of him) that several did call it *Parthenium*, but this erroneous Name isfo Foreign to the Plant, that ic needs no refutation: in *Englijh* it is called *Pellitory and Paritary of the Wall*

II. *The Kwds.* There are but two peculiar Kinds used in *Phyficke*, viz. i. *Parietaria vulgaris*, *Perdicium commune*, *Helxine vulgarit Helxine major*, *Parietaria major* ^ Our common or greater Pellitory of the Wall, or Greater Paritaria. 2. *torietaria minor*, *Helxine minor*, *Parietaria exigua* *Tragih*. The lesser Paritary, or Pellitory of the

The Descriptions*

Pellitory,)
 of the Wall common.
 Paritary 3

III. *The jirst, or Our Common, or Greater Pellitory* of the Wall. Its Root is fine what logg^a with many small Fibres adjoind thereto^a of a dark reddijh color, and abides all the Winter (albo* the Stalks with their Leaves perijh) and fpr ings up again afrefh every Tear. It rifes up with many brownijh, redL> tender and wfak, clear, and almoft transparent Stalks^a about two feet high. Upon which grow at the feveral Joints, two Leaves, fomething broad and long, like unto thofe of French Mercury, or *Amaranrhus*, called *Flower Gentle*, of a darkgreen color^a which afterwards turn brownijh, andfmooth^a or not at all dented about the edges, which are & little rough and hairy as the Stalks alfo dre. At the Joints with the Leaves, from the middle of the Stalks upwards, where it fpreads it felf out into feveral branches *, come forth many fmall pale purplijh Flowers, in hairy, or fomewhat rough Heads or Husks; after which comes fmall black and rough Seed, which will juick to any Garment or Cloth it fhall touch.

IV. *The fecond, or Lesser Paritary, or Pellitory of the Wall*, Its Root it much like the former, and the Plant grows in like manner as that does, but

Pellitory, }
 OR, } of the Wall fmalh
 Paritary }

not fo great or high-, having tender, redijh₂ rough Stalks, fmailer and fhorter than the other, but with fomething greener Leaves the/eon, yet roug}er, (not ??mch unlike to thofe of *Bafil*) fo that they will ftick to any Cloth, or other thing they touch. The Flowers and Seed differ not much from thofe of the greater, but arefmaller, and the Seed is more like unto *Purflane Seed* (when rubbed out of the Husks,) than the former.

V. *The Places.* The first grows Wild generally throughout all *England*, about the Borders of Fields, and among Rubbifh, and by or on the fides of old Walls, chiefly Stone Wall/, o^the moiff

t. 'HpHE Namts. It is called by the Arabians, Macarcardbd, or Hacbarcharha: in Creek TLT&\$(MM,%nv?SQ&v' in Latine, Ptarmica, & Pyrethrum: in Englifh, Pellitory of Spain, and Sneefewort.

II. The Kinds. There are feveral forts of this Plant, as, I. *Ptarmica vulgarts Parkinsoni*, *Ptarmica Fuchfij*, *Gefneri*, iff *Matthioli*, *Ptarmica Sylveftris* ^ *Germanica Thalij*; *Ptarmica Pratenfis Clufij* *Ptarmica folio Taraconis vel Sternutamentoria Lobelij* \ *Pyrethrum Brumfelfij* ; *Pyrethrum Sylveftre Cordi* ^ *Ptarmica five Draco Sylveftris Dodonti**, *Tan ace turn album vel acutum vil Millefolium Primum Tragic Tarachon Sylveftre vel Aquaticum*, & *Draco Aquaticus Gefneri* ^ *Dracunculus Pratenfis ferrato folio Baubini* ^ Common Field Pellitory or Sneefewort. 2. *Ptarmica Sylveftris Flore pleno*, *Sternutamentoria Flore pleno*, *Pyrethrum Flore pkno Sylveftre*, Common Field Pellitory with a double Flower. 3. n?*>w*M* *Ptarmica vulgaris Officinarum*, *Pyrethrum vulgaris Officinarum*, *Pyrethrum aliorum*, £? *Salivari*** , *Pyrethrum alterum Lugdunenfis*, *Matthioli aliorumque* ^ *Pyrethrum Officinarum Lobelij* & *flore Bellidis*, *Bauhini*, The Common Shop Pellitory of Spain. 4. ^ « ^ , (ob radlcis igneum fervore?n, * ntfp, *Ignis Fire*) *Pyrethrum*, iff *Pyrethrum verum Dioscoridis Matthiolo*, *Pyrethrum alterum Lobelij** *Salivark*, (from its quality of attracting Spittle in the Mouth) *Pyrethrum Dioscoridis Camerario*; *Pyrethrum Umbelliferum*, £? *Vmbelliferum primum*, The true Pellitory of Spaia. 5. *Pyrethrum Umbelliferum aliefum*, *Pyrethrum Gefneri*, tf *Dalecampij*, The other true Pellitory of Spain.

the Defcriptions.

III. The firft, or Common Field Pellitory or Sneefewort. Its Root is long and vbitijh, Jointed at feveral diftances, creeping far about under Ground. It Jhocts forth divers little Stalks a Yard high and more, fspread out into feveral Branches, on which are fet narrow long Leaves pointed at the ends, and finely dented about the edges, [landing one above another up to the tops, where grow many white blowers, in a round Tuft together, fomebing like to thofe of Yarrow or Milfoil-, with <i very fmall yellowifh Thrum in the middle, bordrefrzhwit with very Jhort whitifh Leaves, denLfin at the broad ends, which pajfing away, leaxfr behind them fmall Heads, voitb Chaffy Seed M*rein. Both Leaf and Root are of an hot Marp biting Tafte, like unto the True Pellitory of Spain in Sefh 6» following), and of which it took its Namet

IV. The feconi, or Common Field Pellitory with a double Flower. Its Roots are many long Strings, running here and there in the Ground. It has ftraight and flender Stalks, befet with long and narrow Leaves, fnipt round about the edges, not much unlike the former, and as it were in all points like the firft defcribed Wild Kind, which grows zvith us almoft every where. On the Tops of the Stalks ft and four or five, or more white Flowers, one above another, with a green Leaf at the bottom of the foot Stalk of every one of them, being fmall thick, and very double, with a little yellownef* in the middle of every Flower, like, both for form and color" unto we Flower of the double Featherfew* but /mailer. This Plant has no Smell at all, but is very pieafant to behold^ for its double white Flowers fake.

V. The third, or Common Shpp Pellitory of Spain. Its Root is long, and growing down right, of the bignefs of a Mans Finger or Thumb, growing in our Country, but not half fo great where it grows naturally, with fome Fibres and Branches from the fides thereof, of a very hot, Jharp, and biting Tafte, drawing much Water into the Mouth, after it has been chewed a while. It is a /mall and low Plant, bearing many fine green Leaves, upon its flender Branches, which lean, or lye down upon the Ground, divided into many parts, yet fome-what larger and broader, than Camomil, the Stalks whereof are bigger, and more full of Juice than they, The Flowers grow at the Tops of the Stalks, and are fingle, but much larger than any Camomil Flowers, having a Pale, or Border of many Leaves, white on the upper fide, and reddifh underneath, fet about a middle yellovo Head or Thrum-, but not ftanding fo chfe together joining at the bottom

about *South-fleet*: and is also Nurft up in fundry *Gardens*. The fecond grows only in *Gardens* with us. The third is only Planted with us in *Gardens* and Manured places. The fourth is Native, to the hotter Countries, as, *Spain*^ *Italy*, &c. The fifth grows in fome Mountains in *Germany*, and often among Rocks on which there is but a Cruft *of Earth, fo that the Roots grow in the Chinks and Gutters of the fame: and in *England* thefe two laft grow in *Gardens*.

IX. *The Times*. The two firft Flower in the end *ffume*, or in *July*, and give ripe Seed, not long after. The third Flowers not till *Auguft*, and fometimes fo late, that it gives no ripe Seed before it perifhes, unlefs it is carefully preierved in *Winter*. The fourth and fifth, Flower and Seed in *Auguji* alfo, or towards the end of *Summer*.

X. *The Qualities*. They are all of them hot and dry in the fourth Degree, Aperitive, and Vehemently Attraftive, as alfo by accident Anodyn 5 Cephalick, Neurotick, Hyfterick, Arthritck, and Antifebricitick.

XL *The Specification*. The Roots of thefe Plants, chiefly of the firft, third and fourth, more efpecially of the third and fourth, are peculiar againft the Tooth-ach^ Agues, Catarrhs, Diffillations upon the Eyes, Apoplexies, Epilepfies, Vertigoes, Lethargy, Carus, Megrim, Head-ach, Gout, Sciatica, Numb and Dead Palfie, Colicks, obftruftion of the Terms in Women, &c.

XII. *The Preparations*. 1. A *Liquid Juice of the Leaves* or *Roots of the firft and third*. 2. An *Offence of the fame*. 3. *The dried Leaves or Roots of the fame*. 4. A *Decottion or rather Infufwn of the fame*. 5. A *Powder of the dried Leaves or rather Roots*. 6. A *Cataplafm of the Green Herb or Roots*. 7. An *Ointment or Balfam of Leaves or Roots*. 8. An *Oil of the Roots*. 9. A *Spirituos Tintture of the Roots*. 10. An *Acid Tintture of the fame*. 11. An *Oily TinSure of the fame*. 12. *The dried Roots of the fourth and fifth*. 13. A *Powder of the fame*. 14. An *Infufion of the fame*. 15. An *Oil or Ointment of the fame*. 16. A *Cataplafm*. 17. A *Spirit from the Roots*. 18* A *Spirituos Tktture from the fame*. 19. An *Acid Tintture of them*. 20. An *Oily Tintture*.

*The Virtues**

XIII *The Juice of the Leaves or Roots*^ of the *firft and third*. An Ounce thereof taken in a draught of *Mufcadine*^ or other ftrong Wine, an Hour or two before the Fit of an Ague, and the Skk prefently hid to Sweat upon it, is faid certainly to cure the Patient, at fecond or third time taking it at fartheft.

XIV. *The Effence of the fame*. It has the fame Virtues with the *Juice* aforefaid, being given in the fame manner: befides it warms and comforts the Stomach and other Bowels, gives ^afe in the Colick, and obftru&ions from Wind, and powerfully provokes the Terms in Women^ It alfo facilitates the Birth of a Wdman in Labour: is profita- againft Catarrhs, Apoplexies, Epilepfies, Vertigo's, Lethargy, Carus, Megrim, Head-ach, Gout, Sciatic^, Colick and Palfie, being inwardly taken, an^ outwardly applied to the parts affected.

§Kv. *The dried Leaves or Roots*. Being chewed k Wthe Mouth, they draw down from the Head, Srain, and parts adjacent, much cold Rheum and feous matter, give eafe in the Tooth-ach tho' m--So extream, help againft Catarrhs, and

Rheums in the Eyes, and are profitable againft all cold and raoift Difeafes of the Head and Brain ^ as Lethargy, Carus, Vertigo, Head-ach, Apoplexy; Falling-ficknefs, Palfy^ Convlfions, CV. Being thus chewed they wonderfully purge the Head and Brain from thofe cold Humors, caufing the aforementioned Difeafes, and help to confume thofe fuperfluous Humours falling upon other parts of the Bady, which are the caufes of many other Di- feafes.

XVI. *The Powder of the dried heaves or Roots*. Being taken inwardly, from a Scruple to a Dram, mixt with a little *Syrup* or any other fie Vehicle, it warms a cold and moift Stomach, ftrenghfens it, as alfo the other Bowels, caufes a good Appetite and Digeftion, and gives prefenteafe in the Colick. It provokes the Terms, and caufes eafy Delivery to Women in Travel Snuft up the Noftrils, it caufes Sneezing, by which means it many times eafes the Megrim, Head-ach, and Tooth-ach, and gives relief in Apoplexies, Epilepfies, Lethargy, Carus, Palfy, &c.

XVII. *The Decottion or Infufwn of the fame*. They have all the Virtues of the *Juice* and *Effence*^ but in a much inferior Degree, and therefore may be given Morning and Night, to 3 or four Ounces at a time. They are excellent for Women in Labor* And by Bathing with them outwardly gives eafe in the Gout, and all other pains proceeding from cold and moifture.

XVIII. *The Cataplafm of the Green Leaves or Roots*. Apply ed to the Gout or Sciatica, they give prefent eafe of the pain, and being continued (as the Phyfitian (hall advife) will in fome little time cure the fame. It is alfo good againft any ach or pain in any other part of the Body, caufed by cold and moifture.

XIX. *The Balfam or Ointment*. They have the Virtues of the *Cataplafm*, but not altogether; fo powerful againft the Gout^ but being apply ed they take away black and blew Spots, which come by Blows, Falls, or Bruifes, as alfo all other Defoedations or Blemifhes of the Skin.

XX. *The Oile of the Roots, made by Cottion or Infolation*. Galen fays, That being rubbed on the parts of the Body (I fuppofe he means on the Brest or Stomach and Belly, as alfo on the Back and *Spina Dorfi*) it helps fuch as have the (haking Fits of Agues. It is without doubt, a very warming and comfortable Oil *, and therefore of fingular ufe againft both Numb, and Dead Palfies, Convlfions, Cramps, and other like Pains and Aches.

XXI. *The Spirituous Tintture*. It is a moft fingular thing againft the Colick, Pains of the Stomach > Sicknefs at Heart, Vomiting and Fainting* It has all the Virtues of the *Juice* and *Elffence*^ and may be given in Poflet Drink, Broth, or Wine, Morning, Noon and Ni ght, from 50 to 100 Drops, or more.

XXII. *The Acid Tintture of the Roots*. It radically cures the Plague or Peftilence, and is a moft excellent thing againft all Peftilential, Malign and Burning Fevers, of what kind foever. It ftrenghens and fortifies the Stomach, caufes a good Appetite and Digeftion; jefits Poifon, is good againft Coughs, Colds, Atthma's, and all obftruftions of the Lungs, or the other Vifcera, provokes the Terms in Women, as alfo Urine, and is profitable againft the Strangury, Sand, Gravel, Stone, Cfc. in the Reins, Ureters and Bladder! Dofe fo much as to give the Vehicle a pleafant acidity, and may be taken as often as the Patient Drinks-

XXIII. *The Oily TinUitYe of the fame.* It is prevalent againſt the Strangury, Sand, Gravel, Stone or Tartarous Matter in the Reins and Bladder, opens Obſtructions of the Womb, provokes the Terms, and facilitates the Birth of Women in Labor. It cleanſes, eaſes After-pains, and is profitable againſt the Gout, Colick and Palfie, being inwardly taken, and anointed on the *Spina Dorſi* and other parts affected. Doſe from 12 to 20, 50, or 40 Drops, or more, in a Vehicle proper againſt the Diſeaſe afflicting.

The Virtues of the fourth and fifth Kinds

XXIV. *The Liquid Juice, and Ejſſence of the leaves or Roots of the True Pellitory of Spain.* Have all the ſame dualities and Virtues of the Common, and that of the *Shops*, before declared 5 only with this difference, that as *the True Pellitory of Spain* is more potent and excellent than the Common or that of the *Shops* ſo alſo are theſe Preparations of this Plant, very much tranſcending them in their Effects.

XXV. *The Dried Roots.* Chewed in the Mouth often, it eaſes the Vehement pain of the Teeth proceeding from an afflux of Cold Rheum upon them and ſo uſed, it alſo draws away Rheum from fore Eyes.

XXVI. *The Voider of the Root.* Made into a *Bolus* by mixing it with a little *Mithridate*, or made into an *Eletuary* with *Honey* it is effectual againſt all cold and moiſt Diſeaſes of the Head, Brain, Lungs, Stomach, and other Bowels* It prevails againſt the Apoplexy, Falling Sickneſs, Vertigo, Megrim, Lethargy, Cams, Oblivions of the Lungs, Coughs, Colds, Wheezings, Aſthma's, Colick, &c. Doſe from a Scruple to a Dram, Morning Falling, and at Night at Bed time.

XXVII. *The Infuſion of the Root in Wine.* It has all the Virtues of the former *Infuſion* at *Sea*. 17. aforegoing, but this is much more powerful for all thoſe purpoſes and intentions: If the *Green or Dried Root* is well bruited and Infilled in *Vinegar* and the Mouth Gargled therewith, it preſently gives eaſe in the moſt Violent Tooth-ach: and leſſens the affluxes of Rheum from the Head to the Teeth, Eyes, Ears, Tonſils, Jaws, and other parts.

XXVIII. *The Oil or Ointment of the Root.* They are effectual to warm, or heat, comfort and ſtrengthen any part of the Body, Nerves, Tendons, or Muſcles, afflicted with cold and moiſt Humors, or which are affected with Cramps, Convulſions, Palfy, Gout, Sciatica, or the like. They may be made of the *green Roots* by many repeated *Infolations* or *Boilings* and will be found very profitable againſt the Shaking and Dead Palfies, or any pain or ach proceeding from Cold, as aforeſaid. Being timely uſed, they are laid to prevent a Gangrene when approaching.

XXIX. *The Cataplaſm of the green Roots.* It effectually cures the Gout and Sciatica, if prudently applied and has all the Virtues of the *Cataplaſm of the Roots* of the former Kinds, ſpecified in *Sett*. 18. aforegoing.

XXX. *The Spirit of the Root.* It is Cordial, Anticolick, and Antipeſtilential good againſt Fainting and Swooning Fits, Sickneſs at Heart, Belly-ach, or Gripping of the Guts: It expels Wind out of the Stomach and Bowels, and admirably ſtrengthens the *Stomach*, cauſing a good Appetite and *Diſſolution*. Doſe a Spoonful or more in 3 Glaſs of Wine now and than upon occaſion.

XXXI. *the Spirituous TMure.* It has all the Virtues of the *Spirit*, but Superior to it in efficacy, and may be given from half a Spoonful to a Spoonful in ſome proper Vehicle. It provokes the Terms in Women, facilitates the Birth, brings away the After-birth, and eaſes After-pains. Held for ſome little time in the Mouth, it eaſes the Tooth-ach. And Bathed upon parts affected with the Cramp or Convulſions, it warms and comforts the Nerves and Muſcles, and quickly cures the Diſeaſe.

XXXII. *The Acid tincture of the Root.* It has all the Virtues of the former *Acid Tincture*, at *Sett*. 22. aforegoing but with a more exalted efficacy and power. Held in the Mouth it gives preſent eaſe in the Tooth-ach. It flops Vomiting, and helps a nauſeouſneſs of the Stomach, or Loaming of Food, and is a fingular Diuretick, breaking and diſſolving (ſo much as is in the Power of, a Medicine to do, the Stone, and Gravel in the Reins, Ureters and Bladder. Being given to Children for ſome time in Broth or Water-Gruel, it cures the Rickets, and opens the Lungs, Liver, Spleen, and Reins, by which means the *Morbid Matter* of that Diſeaſe is gradually carried off. Doſe from 20, to 30, 40, or 60 Drops, or w many as may make the Vehicle pleaſantiy Sharp.

XXXIII. *The Oily Tincture of the fame.* It has all the Virtues of the former *Oily Tincture* at *Sett*. 23. aforegoing, but in a more prevalent manner, as being, much more ſtrong and potent in its Operation, it gives admirable and preſent eaſe in the Colick and Strangury; and being very well banded in upon the Hip in the Sciatica, it eaſes the Pain, and in a ſhort time Cures it: given to 40, or 60 Drops (according to Age and other Accidents,) 2 or 3 Hours before the coming of the Fit of the Ague, it in a great meaſure prevents it; and by continuing it in the ſame manner, for ſome few times, it perfectly cures it. Held in the Mouth alſo, it gives preſent eaſe in the Tooth-ach.

Of PENNYROYAL

O R.

P U D D I N G - - G R A S S

I. *Properties Names.* It is called by the
Alnam, and *in*
in *Latine*, *Yulegium*,
in Engliſh, *Vennyroyd*, *z MoFudding-Gras*,
the Welt Parts, about *Exeter*. *Organs.*

II. *The Kinds.* The Six following we
chiefly confider, viz. i. *Fulegium Vulgar*

flos recent is Herb* incanfus Pulices necat odore :) Beaufeit kills Fleas being Burned:) Our Com. mon Pennyroyal. 2. *Pulegium regium vulgare ntajm*, Great Pennyroyal. 3. *Pulegium fur cubi denfts*, Thick or double Pennyroyal. 4- *Pulegium mas Bore albo Plinij*, White Flowered Pennyroyal. §. *Pulegium angustifolium Bauhini Cf Lobelij* § *Pulegium Cervinum Gefneri*^ *Pulegium alterum foliis oblongis Dodona*^ Narrow Leav'd, or Hearts Pennyroyal. 6. *Pulegium foliis Nummulari Bauhini*) Round Lcav'd Pennyroyal.

// grows Wild in our Fields WCommons -, it differs indeed but little from the first, but in its largenejs of its Leaves and Stalks, and in its growing up higher. The Flowers hereof are-purple, and grovo in rundles about the Stalks, as the others do.

V. The third, or Thick or double Pennyroyal. This differs very little from the former, either in Roots, Stalks, Leaves, Flowers, or manner of growⁱⁿ & having that the Leaves are Jotnetping fmaller^ and alfo thicker Jet on the Stalks, and the Branches grow clqfer together.

VL The fourth, or White Flowered Pennyroyal. The Roots creep under the Ground, with a multitude of Fibres: and this Kind grozvs more upright with its Stalks than the former, and Sometimes a foot higher alfo, having Leaves thereon, fet by couples like it rand in fome places, other Smaller Leaves likewife growing with them: The Flowers (as the former) grow in rundles, orwharls, round about the Stalks, at the S^{evera}^ Joints, but are wholly white -, * and J° abide, being transplanted out of the Field, and Planted in Gardens. The Smell and Taste of this Plant, as alfo its Medicinal use, are altogether the S^{ame} w^z*b[^] ^e[^] fⁱft->^{an} & ^{of}^er Kinds, and every way as acceptable.

VII. The fifth, or Narrow LpavM, or Hearts Pennyroyal. This fine and delicate Plant, has creeping Fibrous Roots under Ground, but shoot forth longer Sprouts than the former Kinds, from whence Spring forth many tall, hard, upright Stalks, on which are fet at equal dijlanes, many S^{ma}^ long and narrow Leaves, all along the Branches up to the Tops. The Flowers grow round about the Stalks, at the Joints with the Leaves, at many of the Spaces up towards the height, of a pale purplijh color: and the Smell and Taste hereof is Jlonger and much more pleajing alfo.

VIII. The sixth, or round Leav'd Pennyroyal. It has a small Fibrous creeping Root, which Send[?] up slender Stalks, almost as upright as the last: having the Leaves Set by couples at each Joint, which are S^{ma}^ ^an & round like unto thoSe of Money-wort, or Herb Two-Pence, but much less. The Flowers grow in rundles or rows as the others do, encompassing the Stalks, which are of a pale blewifh colon The Smell of this Plant is much more pleafant than that of the Common fort.

IX* The Places. Tho' all and every one of these Species or Kinds Of Pennyroyal grow with us, in our Gardens, yet feveal of them grow alfo Wild in our Fields. The first is Common in many watery or moift places of our Land, which yet for its moft excellent use is almost every where Nurft up in Gardens. The fecond is found Wild in EJJex, in divers Places of the High way, between London and Colchefter, and thereabouts, and yet more abundantly in other Countries, from whence it is Tranfplanted alfo into Gardens. The third has also been found growing Wild, in many places of England, and like the others Tranfplanted, and made a Garden Plant. The fourth is a Native of Italy, and found growing in feveral places of Piedmont, from whence it has been brought to us. The fifth grows in moift and moorifh Grounds about Mompelier in France, where the Inhabitants fearcely use any of the other Kinds, tho* they have them in great Plenty. The sixth grows in the Gardens at Padua, from whence it has been Tranfplanted to us.

X. The Times. They all Flower from the beginning of June to the end of Auguft, and sometimes later*

XL The Qualities. Pennyroyal is of Wubtil parts as Galen fays: It is Jiot and dry in the third Degree;

The Defections*

III. The first) or Our Common Pennyroyal. its Root is Busky, long and Fibrous, creeping tinder the upper surface of the Earth, from whence spring forth many weak round Stalks, divided into several Branches, rather leaning or lying upon the Ground^ than standing upright. On which are fet

at several Joints, small, roundifh, dark green Leaves. The blowers of that which grows in Gardens, are purpliJJ) for the moft part^ yet fome on that which grows Wild, are white, or more white than purple, fet in rundles about the tops of the branches. The Stalks shoot forth small Fibres or Roots, at the Joints, as it lies upon the Ground, fastning it self therein quickly, and over Spreading any Ground, more especially if it grows in the Shade, or in moift places: and it is encreafed by breaking off the sproutad Stalks, and putting or thruijing them into the Earth.

IV. The second, or Great Pennyroyal. Its Root is like to the former. Its Stalks and Branches rife higher, and creep not upon the Ground fo^ much %t that does. It is greater than that, and abides fo being brought into our Gardens, from abroad^ where

gree, Aperitive, Abfterfive, Carminative, Digeftive, Difcuffive, Diuretick, Incifive, Vulnerary, Cephalick, Neurotick, Stomatick, Splenetick, Nephritick, Hylterick[^] Emmenagogick[^], Sudorifick, Alexipharmick, Analeptick and Spermatogenetick;

XII. *the Specification.* It prevails againft Convulfions, Spafms, Poifon, the Bitings of Serpents, or other Venomous Creatures, Coughs, Colds, Swellings in the Throat, Jaundice, Colick, Obftructions of the Terms, Rickets in Children, Palfie, &c.

XIII. *The Preparations.* You may have therefrom, 1. A *Liquid Juice*. 2. An *Effence*. 3. A *DecoUion* or *Infufion* in Wine. 4. A *fouler*. 5. An *Errhine*. 6. A *BaJ'am*, *Ointment*, or *Oil*. 7. An *EleUiary*. 8. A *Distilled Water*. 9. A *Spirituos Tinture*. 10. An *Acid TinUure*. 11. An *Oily Tintfure*. 12. A *Spirit*. 13. A *Distilled Oil*. 14. *Pot eft at es* or *Powers*. 15. A *Cataplaf?*

The Virtues.

XIV. *The Liquid Juice.* It powerfully digefts, opens, and provokes the Terms in Women, expels the Birth, Dead Child and After-Birth[^] it flops Vomiting, eafesthe pain and gnawing of the Stomach } is profitable againft Convulfions, refills Poifon, and cures fuch as are bitten or Hung by Serpents, Mad-Dogs, Scorpions, or other Venomous Creatures. Dofe 2, 3 or 4, Spoonfuls at a time, Morning, Noon, and Night, in a Glafs of Wine, or other fit Vehicle.

XV. *The Ejjence.* It has all the Virtues of the *Liquid Juice* exalted: is good againft Afthma's, Coughs, Colds, Wheezing, Hoarfenefts, and moll other Difeafes of the Lungs,, caufing an eafy ex- peration (if taken with Honey) it refits Melancholy and caufes Cheerfiilnefs: and drunk with the *Juice of Sivile Oranges, Limons*, or choife *Vinegar*, It is good againft Fainting, and Swooning Fits, Vapors, and fuch like. It helps the Rickets in Children, is good againft the Leprofy,, opens the obftru&ions of the Liver, Pancreas and Mefentery, and eafes the pain of the Spleen. Being drank in choife ftrong Wine, it gives eafe in the Colick, and eafes Aiter-pains of Women ly' ing in. Conftantly taken for fome time, it leffen the Fatnefs and Corpulency of the Body, making the Patient Leaner : yet at the fame time, it much encreafes Seed in both Sexes, and ftrongly provokes Luft. Dofe 2 or 5 Spoonfuls at a time in a Glafs of Wine, Morning and Night.

XVI. *The Decoftion, or Infufion in Wine.* It has all the Virtues of the *Juice* and *Effence*, but nothing near fo powerful. It warms the coldnefs of the Stomach and Womb, and other Vifcera,, helps againft the Swelling and Ha*dnefs of the Womb, cleanfes foul Sores and Ulcers, and mixt with Honey caufes them to Digeft. It is good againft black and blew Eyes, and difcolorings of the Skin, being outwardly applied. If a little *Sal PrunellU* be diffolved in it, and it be held in the Mouth, it eafes the Tooth-ach. It is good againft Faintings, Swoonings, and Hyfterick-Fits, and provokes Urine ftrongly. Ufed as a Gargarifm with Honey, it cures Sores, Cankers, and Ulcers of the Mouth and Throat. Drank pretty plentifully, it is good againft the Strangury, Dropfy, and Jaundice, helps to quicken and clear the Eye, light is prontable againft the Falling-Sicknefs, i. e. n. * * r 2 m of pains of the Head. Dofe 6 Ounces, Morning, Noon, and Night.

XVII. *The Pouder.* It is made of the dried Herb when in Flower. It has all the Virtues of the *Juice*, *Ejjence* and *DecoUion*, but afts not with that Celerity. Dofe Morning and Mighty Corn half a Dram to a Dram in Wine. Mixed with a little Honey and *Turpentine*, and applied to Sores and Ulcers, it digefts and cleanfes them.

XVIII. *The Errhine.* It is thus made *Take Pouder of Tops of Pennyroyal when in flower^ aft Ounce ^ Afarabacca heaves in fine Ponder*, Refinof Scammony in fine Pouder, of each half an Ounce z mix them.* Snufft up the Noftrils Medicinally, it attra&s Humors both thick and thin out of the Head, and clears it effectually, by which means it is profitable againft the Megrim, Head-ach, Lethargy, Carus, Sleepinefs, Dullnefs, Drowfinefs, Apoplexy, Epilepfy, Vertigo, Convulfions, Palfies, and other Difeafes of the Head, Brain and Nerves \$ proceeding from cold and moifture. And if it is taken inwardly twice a Week in the Morning Fasting, from a Scruple to a Dram, or more, according to Age and Strength, it carries off the Morbifick caufe of all the aforementioned Difeafes, and fo the more effectually contributes to their Cure.

XIX. *The Elettuary.* It is made of the *Errbin** with three times its weight of *tioney*: adding wiib- all *Pouder of Bifth-wort Roots*, an equal quantity to the *Scammony*. It is given inwardly from one Dram to threes and has all the Vertues of the *Juice*, *Effence*, and *Errhine* before enumerated: Applied to old running Sores, Fiftula's, and putrid Ulcers, it caufes Digeftion, eafes the pain, prevents their eating and fpreading farther, and very much induces their healing. There is no better Remedy againft Kibed Heels, than to apply the *Dry Pouder of the Errhine* firft, and then over it a Plaifter of this *Elettuary*.

XX. *The Half dm, Ointment, or Oit^ made by Infolation or Boiling.* Applied to fuch as are troubled with the Gout, they quickly eafe the pain: warm the parts, and take away cold griefs of the Joints; They gently draw, digeft alfo, cleanfe, and heal old running Sores, and putrid Ulcers.

XXI. *The Distilled Water.* It has the Virtues of the *Juice*, *Effence*, and *DecoUion*, but in a much Inferior Degree. Mixed with Honey, it is a good Ophthalmick, for Blood-phot, Watering and Sore Eyes: and fo uféd as a Gargle, it heals Sores and Ulcers in the Mouth and Throat: otherwife it may ferve as a Vehicle for conveying the *Juice^* or *Effence*, or other Preparations of the Plant down into the Stomach.

XXII. *The Spirituous Tintture.* It has all the Virtues of the *Juice* and *Effence*, being given Morning and Evening, from i Dram to 2, or ?* in a Glafs of Wine, or fome other convenient Liquid. It eafes the Gnawing of the Stomach, and cures inward Convulfions of the Bowels- Outwardly bathed upon the Head, it eafes the Head-ach: and bathed up6n other parts, it prefently eafes their pain, and alfo reftores the parts troubled with the Cramp. Taken for fourty Days or more together, in *Juice* or *Water of Black Cherries*, it cures the Falling-ficknefs, and is alfo profitable againft the Vertigo, Lethargy, Carus, and other like dull Difeafes of the Head and Brain.

XXIII. *The Acid Tintture.* It admirably reftores the Tone of the Stomach being hiirt* ftopp^s Vomitings deftroys Putridity, and allays the heat of Fevers. It cuts thick and tough Flegm, &* caufes it to be eafily expectorated. It is a foliar Diuretick, and therefore profitable againft the Strangury, Sand, Gravel, Stone, or Tartarou* **Mucilage in the Reins, Ureters and Bladder,**

takes away stoppages of the Stomach and Lungs, and causes easy Breathing, it creates a good Appetite, and a strong Digestion, expelling Wind and Vapors, out of the Stomach and Bowels. It is also profitable against all putrid, non-putrid, malign, and peffilential Fevers, and profligates even the Plague, or Peffilence it self. It may be given in all that the Patient Drinks, whether Ale, Beer, Wine, *QX* Barly-Broth, to a grateful acidity.

XXIV. *The Oily Tincture.* It is good against the Gout, Sciatica, Rheumatick Pains, Cramps, Convulsions, and Palfie, being very well anointed Morning and Evening upon the parts affected, as also (in the case of the Palfie) all along the Back Bone. Taken inwardly it Potently provokes Urine and the Terms in Women, and is good against the Strangury, or any stoppage of Urine from Tartarous, Gravelly or Lapidifcent Concretions. It hastens the Birth of Women in Labor, brings away the Dead Child and After-Birth: and causes a plentiful cleansing afterwards. In the cure of tallies, as well as to be used outwardly, it is to be taken also inwardly, because it not only warms and comforts the Nerves and their Original, but carries off the Morbifick Cause by Urine. Dose from a Scruple to a Dram or two Drams in any proper Vehicle, Morning and Night.

XXV. *The Spirit.* It is a most admirable Cordial, and an excellent reviver of the Spirits Natural, Vital and Animal. It cheers the Heart, comforts Nature, strengthens the Brain and Nerves, and is good against Fainting, Swooning and Hyfterick. It restores the whole Humane Frame, though put into the greatest disorder. It is a singular thing against Convulsions of all Kinds, and absolutely cures them in Children, even when Death seems to stand at the Door. Dose from a Dram to 2, 3, or 4 Drams, in some of the *Dijilled Water*; or rather in a Glass of Wine, 2, 3, or four times a Day, or as often as is needful.

XXVI. *The Dijilled Oil.* Inwardly given, and outwardly applied, it cures Convulsions, the Falling-Sicknefs, Palfy, pains of the Head, Megrin, Vertigo, Lethargy & Cams, Gout, Sciatica, and has, in a word, all the Virtues of the *Juice*, *Essence*, *Tincture* and *Spirit*, but in a much more exalted manner. Dose from 10 Drops to 20, dropt soft into Sugar, and well mixt with it, and then taken in a Glass of Wine, Morning and Evening: as it powerfully provokes Urine and the Terms, lb, when the Birth is near, it causes the Child to be brought forth into the World in a Moment, expels the dead Child and After-birth, and prevents and cures After-pains.

XXVII. *The Potestates or Powers.* They consist of most subtil parts, cut, attenuate, open, dissolve, provoke Urine, break the Concretions of travel and Slime, and expel them, provoke the Terms, facilitate the Birth, whether living or dead, force away the After-Birth, and miraculously ease and take away After-pains. They are Stomack, Cordial, Peccoral, give present ease in the Colick, open obstructions of the Lungs, being very good against Coughs, Colds, Asthma's, Hoarseness, Wheezing and shortness of Breath. They are good in an Inveterate Head-ach, Megrin, Vertigo, Falling-Sicknefs, Apoplexy, Convulsions, Palfy, Cramp, Numbness, Lameness, and weakness of the Nerves, Muscles and Joints, being inwardly taken, and outwardly bathed therewith. They are powerful against all manner of Aches, Pains, Strains, or weakness of any part, as also against an inveterate Gout, Sciatica or Rheumatism, proceeding from a cold and moist. They are an Antidote against Poisons by the bitings of Mad Dogs, Ser-

pents and other Venomous Creatures. They prevail against the Malignity of the Plague, and all other Malign and Peffilential Fevers, as also against Scorbutick Boils, Botches, Scabs, Scurf, Morphew, Spots, Pimples, and other like Symptoms, inwardly taking them every Day for some time, and outwardly bathing therewith Morning and Night. They provoke Sweat powerfully, and are a great Alexipharmick in the French Pox, being daily taken in Ale, Wine, Whey or thin Broth, after the manner of Diet 5 and have performed as much as any *Guajacuw Diet* could do, they being a kind of Specifick against that Disease and its Inveterate and Malign Symptoms. They are said to cure Barrenness in Man or Woman, (if there is not a defect of parts) cleanse, strengthen and fortify the Womb, and are a Specifick for the Diseases of the Genitals. They are prevalent against Catarrhs, and cold Rheums, help defects of the Eye-Sight, cure a Stinking Breath, ease Pains, and soften hard Tumors of the Liver, Spleen, or Mesentery, by bathing those Regions therewith, for they warm, strengthen, and comfort even all the parts of Mans Body. Dose from 30 to 60 or 100 Drops, or more, as the Prudence of the Physician (shall prescribe, and that 2 or 3 times a Day at least (And in case of the *Yrench Pox*, 5 or 6 times a Day) in Ale, or Wine, or Wine and Water mixt, or in some *Syrup* or *Cordial Juleps* and so to be continued for 2 or 3 Weeks, or 2, or 5 Months, as the exigency of the Disease may require outwardly bathe the parts affected with them twice or thrice a day as long as you (shall see need for their use.

XXVIII. *The Cataplasm.* Made of the Green Herb, and applied, it is good against the Gout and Sciatica, Blows, Strains, and other pains of the Joints. It also takes away spots or marks in the Skin; and applied to the Regions of Liver or Spleen, it eases the pains in those parts; and to the Region of the Womb, it helps the swelling and hardness of the Mother. Applied with Vinegar, it causes eating Ulcers to digest, and cleanses such as are filthy or putrid: and it is said to be profitable also against the Leprosy, Morphew, and other like Defections, Applied with *Early Flower*, it heals Burning by Fire, and Scalding with Water. Applied with Vinegar to the Fore-head and Noftrils, it is profitable against Carus, Lethargy, and Epilepsy, giving present relief in the same.

PENNY-WORT WALL, /^Navel-wort, Chap.

CHAP. DLV.

Of P E O N Y.

THE Names. It is called in Arabic% *Yeonina*: in Greek, [*TJaiou*]: (from *Paeon*, a famous Physician in his time) and *TWKV* / j_n *Latine*, *P<zoria*, and *Glycyfide* or *Dulcifide* (from the red Grains in the *Pomgranate* called *Sida*. (It has obtained also many other Greek and Latine Names, as, *Pentorobos* or *Pentoboros* / *rbelwn Hmagogon*, *Pinion*, *Pantbiceraton*, *Meodonion*, *belemon*, *Sdcnogonon* / *Agalopbotis* / *Idaus Ddt*.

Rofa Fatuina, Herba Cafta, Hajia Regia, Rofa Af-nianwi, with fome others -, but *P^onia[^]* is the general Name, which bears away the Bell: in *Englifh Peony*, and *Piony*.

II. *The Kinds*. Tho' there are many Species of this Plant, yet there are but two Principal Kinds, *Diz. Pjohia Mas*, the Male Peony-, and *P^onia Fxmina*, the Female Peony. Of the *Peonia Mas*, or Male Peony, we know but of one only Species, which is thus diftinguihed from the Female. The Leaf of the Male is whole with out any particular divifion, notch, or dent, on the edge, like to thofe of the *Wall-Nut-Tree*, its Roots are long and round, divided into many Branches, fomehing like to the Roots of *Gentian* or *Elecampane*, and not Tuberous at all. *The Female* (of which there are a great many forts) has its Leaves cut in or divided into parts, more or lefs, and has Tuberous Roots or Clogs, like thofe of the *Aphodil*, with many great, thick, round pieces, hanging or growing at the end of fmaller Strings, and all joined to the top of the main Root. From what has been faid, thefe following Kinds are eminent, viz. 1. *Paofia Alas*, the Male Peony, which is a fingular Species, as aiorelaid. 2. *Paonia Fcemina vulgaris Flore fimplici*, the Common Female Peony fingled Flowered. 3. *Paonia Fccmina Vulgaris Flore plcm rubro*, the Common double red Peony. 4. *Paonia fcemina Flore cameo* (implicit the Single blufh Peony. 5. *Pxononia Yccmina Flore pie no albicante*, the Double blufh Peony. 6. *P&onia Fcemina Byzantina Flore fimplici* the Single red Peony of *Conftantinople*, or *Turkifh Peony*. 7. *Paonia ftrvmina Flore fimplici # plcmo Clufij*, *Clufius* his Female fingled and double red Peonies. Authors have fome more Species of *Peonies*, but they leem to me, to be fome of the former Kinds over again, or being abfolute Strangers to us, are totally unknown in our Country.

The Descriptions.

III. *The jirfl, or Male Peony*. Its Roots are great, Thick, and long, fpreading in the Ground, and running down pretty deep. It rifes up with many brown Stalks, on vohich do grow winged Leaves, viz. many fair green, *and fometimes reddifh Leaves, one fet upon another on a Stalk, without a particular Divifion of the Leaf at all The flowers grow at the tops of the Stalks, confifing of Jive or fix broad Leaves, of a fair, purp/ijb, red color, with many yellow Threads in the middle Handing about the Head, which after rifes up to be the Seed Vejfels, divided into two, three, or four rough crooked Pods, like Horns -, which when they are full ripe, open, and turn therfifelves down one edge to another backwards, fnewing within tbeffl divers round black fhining Seed, which are the true Seed, being full and good, and having alfo many fed or crimfon Grains, which are lank and idle, intermixed among the black, as if they were good Seedy which makes them fhew Beautifully.

IV. *The fecond, or Common Female Peony* ⁿ*, gle Flowered. The Root confififj as we faid before* of many thick and fhort tuberous Clogs, falined dt the ends of long Strings, and all from the He^{at}

of the Root, which is" thick and fhort, and T^o of the fame or like jnell with the This Common Female Peony, has many ^{ftill} d with more, ft ore of Leaves on them, than thoj³⁰ Male have: The Leaves alfo are net fo l^o "£" > u divided on the edges or deeply cut in, fo >> e great and deep, others with Jmailer Cuts or /ions, and of a dark or dead ycen color Flowers are of a Strong hendy Smell, end u [mailer than thofe of the Male, and fi wore purple, tending to a ?nurry color, ^ Thrums about the Head in the middle, as the Kind has. The Heads or Horns with Seed in, -re like alfo but fmaller. The Seed, is black ? zefs fhining.

V. The third, or Common double red Peony. The Roots are Tuberos, like unto the former Female. This double Peony, or zvell as the former fingle, is fo frequent in every Garden of Note, thro" every Country, that it is almojl labor in vain i'o deferibe it. It is very like unto the former fingle Female Peony, both in its Stalks and Leaves, but that it grows fomething higher, and the Leaves <ire of a frefher green color. The Flowers grow at ihTrops of the Stalks, and are very large, thick, and double ^ fo fuir, beautiful, great, and double, that no other Flower comes near them; but abide not blouv above 8 or 1 o Days. They are of a Inorc reddiJJ) purple color, than the former Female Kind, and of a fweeter Smell. After the Flowers are paf, the Cods of Seed or Grains follow ^ which Sometimes prove abortive Seed, and fometimes good Seed, which being Sown, bring forth Plants, fame of them bearing fingle Flowers, and fome of them double llowers, as Nature is pleafed to difpofe them.

VI. The fourth, or Single blufh Peony. Its Roots are like the other Female Peonys. Its Stalks are higher, and its Leaves of a paler, or whiter green color than the double Blufh next following, and more white underneath -, fo that it is mavifef, that it is of another Kind, and not, Sprung from the Seed of the double Blufh< as fome have thought •, its Leaves alfo have many Veins, which *re Somewhat difcolored, or differing from the color °f the Leaf thro" which they run. The Flowers are very large and jingle, confining of five Leaves for the nwft part, of a pale jlejh, or blufh color, with an Eye of yellow difperfed or mixed therewith, having many whitjh Threads, upt with yellow Pendants, fianding about the middle Head.

VII. The fifth, <v Double blufh Peony. Its Roots are like unto the former Female Kinds, but fomething longer, and of a brighter color on the out (Ide. This double blufh Peony has not its Stalks fo high as the double Red, but fomething lower and fliffer, bearing fuch like winged Leaves, cut in, or divided here and there in the edges, as all thefe Female Kinds are, but not So large as the Lift. The Flowers are fmaller^ & lefs double by much, than the former double Red, of a faint, Shining, crimfn color at the firft opening, but decaying, or growing paler every Day, fo that after it has flood long, (for this Flower fheds not its heaves in a great while) it will change fomething vohitifl)^ for which reafon fome have ignorantly called it, the double white Peony. The Seed or Grain, which it fone times bears> is like to, the Seed of the former Female Kinds.

VIII. The ftxth, or Single red Peony of Conftantinople, or red Turkih Peony. The Roots of this Kindy have longer Clogs, and not fo fhorty ** thoSe of the ordinary Female Kind, and of a paler color on the out fide. This Plant is very like *n all things unto the double red Peony, but that the Flowers hereof are fingle, and cut large as the laft, and that is larger than either the fingle Female, or the Male Kind. It conjijs of eight leaves, of a deeper red color, than either the fingle double Peonys, and not purplifh at all*, but rather of the color of an ordinary red Tulip. ft and- 177 £ clofe and round together.

IX. The fervent h^ or Clufius his Female fingle and double red Peonys, exfemine Floris pleni ruri vulgar is Nat <?, Cluius fays, That having in Some Tears Seed from the common double Red Peony, (which is not very ufual) he Sowed them, and within 3 Tears he had Plants which bore Flowers, Some Jingle, and Some double, Of the fingle Sorts,

one bore Flowers, for color moft like unto the Mother but was fingle, confijng only of fix Leaves, as th? Ordinary or Common Female does.. Another bore a larger Flower, of eight heaves, whofe color <JJ? of a deeper red. i drawing fomewhdt t&blacknefsi A third bore a double Flower•, as great cut thè Mother Plant ^ or greater, and of the fame color. A fourth ztw like the Mother Plant in heaves, and its Flower was double, but leffer, and not fo thick LeaVesy the color of which was of a deep red, being near the largenefs of the double Blufh, having fome black Veins in thofe heaves which grew in the middle.

X. The Places. All thefe feveral forts of Peonies are originally Natives of Foreign Countries, and have been brought home to us by Travellers, and made Denizons in our Gardens^ where they * have grown and flourifhed fo long, that they are now become Natives of our Land alfo: and we nourili them, as well for the Beauty and Ornament of their Flowers, as for their moft excellent and famed Medical Virtues.

XI. The Times. They all Flower in May*, fome of which Flowers abide but fome few Days, whilft others abide many Weeks.

XII. The Qualities. Peony is temperate in re* fpeft to heat or cold, and dry in the firft Degree, gently Styptick, or Afringent, Abfterfive, Anodyn and Strengthenings Cephalick, Neurotick, Hyfteriek and Emmenagogick.

XIII. The Specification. The Male Peony has been oftentimes (even for many Ages) found a certain Cure for the Epilepfie or Falling-Sicknefs; it alfo provokes the Terms in Women, and is profitable againft the Ephialtes or Night-Mare.

XIV. The Preparations. You may have, i. The frefh or Male green Root. 2. A Juice or Effence of the fame. 3. A Ponder of the fame Male Root. 4. An Infufwn of the faid green Male Root. ?. A Pouder of the black Grains or Seeds. I 6. A Syrup of the Flowers. 7. A Difilled Water from the Flowers or frefh and green Root. Where Note, That all thefe Preparations are fpoken of the Male Kind, that being the only and truly effe&ual Plant for all the purpofes intended^ which yet is much more fcarce or rare than the Plants of the Female Kind: But for want of the Male Species, Phyicians and Apothecaries often ufethe Female; which tho' probably it may be good for the fame purpofes, yet doubtlefs is much weaker in its effects, and therefore cannot be attended with equal SuccesSi

The Virtues.

XV. The frefh or green Root of the Male Kind* It is affirmed by, Galen and others, that a good or large piece of it hung or worn about the Neck of a Child troubled with the Falling-Sicknefs, will cure it* That a Child was freed from that Difeafe, that for eight whole Months had worn it about its Neck -, and then being taken away for tryal of the Matter, the Child fell into the Difeafe again; but having a frefh Root hung about its Neck again, he became afterwards perfectly cured.

XVI. The Juice, or Effence of the Male Roal Either of thefe ate much more available for the cure of the Epilepfie than the Amulet hiing about the Neck: it may be given to Children from one Spoonful to two ^ and to elder Perfons from two to four Spoonfuls, in a Glafs of Jtel Barcelona, or Red Port Wine, Morning and Evening, fome few days before and after the Full Moon i and if if

is given some few Days before and after the Change likewise, it may be so much the better; either of these Preparations, have been found profitable, and more available in elder Persons, than some others, because they have more strength and efficacy with them. They provoke the Terms also in Womankind where they have been stopped, and are effectual for such as have not been sufficiently cleansed after their Labor, and are also troubled with Vapors, or Fits of the Mother. They are profitable also to be given to such as are troubled with the Incubus or Night-Mare, called by Pliny, *Suppreffio Notfurna*, being a Disease which afflicts People in their Sleep, or between Sleeping and Waking, suppressing both Voice and Motion, and in a measure the Breath likewise. It is truly good for such as are troubled with Melancholy, yea, with a deep Melancholy, and affected with Melancholy Dreams.

XVII. The Syder of the Male Root. It may be given from a Dram, to a Dram and half, or two Drams, in a Glass of Red Wine as aforesaid, again! the Epilepsy, *Incubta*, Melancholy, and other Diseases of the Head and Brain, and that Morn'ing and Evening, at the times before directed: but if it is given for cleansing of Women his Child Bed, provoking the Terms, facilitating the Birth, &c. it ought to be given in White Port, or White Lisbon Wine, and that in the largest Dose.

XVIII. The Infusion or Decottion of the green Male Root. The Root is to be taken and washed clean, and then stamped well* and put to Infuse in choise Canary for three or four Days, and then strained out, and so given first and last, a good draught at a time for several Days together, before and after the Full Moon, it is said to cure the Falling-Sickness, especially if there is a due and orderly Preparation of the Body beforehand, with Poffet-Drink made with *Betony*, as the Learned Physician (hall direct) These have all the other Virtues of the Juice w^{AE}ffence, and are likewise available in older Persons, if the Disease (*i. e.* the Epilepsy) be not grown too old and past Cure.

XIX. The Pouder of the black Grains or Seeds of the Male Kind. Given from half a Dram to a Dram and half in Styptick Red Wine, it prevails against the Epilepsy, as the Root aforesaid does, besides it effectually stops Fluxes of the Belly, as Diarrhæas, Dyenterias, Lienterias, and the Hepatick Flux, very much strengthen the Head, Brain and Bowels: it also cures the *Epibialtes* or *Incubus*, and other Distempers of the Brain: *Mathiolus* saith, It is available to restore Speech to such as have lost it.

XX. The Syrup of the Flowers. It has the Virtues of the Juice, Effence, and Infusion, but in a much weaker Degree, and therefore ought to be given from 2 to 4 Spoonfuls, Morning and Night, in a Wine proper for the purpose.

XXI. The Dijilled Water of the flowers or green Roots. It has all the former Virtues, but very much weaker, and therefore may be given from 4 to 8 ounces or more, Sweetned with the Syrup of the flowers¹*, and is used also as a Vehicle to convey some of the former Preparations in.

XXII. Nota. The skilful Botanist and Apothecary is to take care, in seeking after, and choosing the Male Kind, that he be not cheated with that of *Tragus*, which certainly is no *Peony*, but a kind of *Yraxisnell*, or *Bajard Dittany*.

CHAP, DLVL

Of PEPPER, Guinny or Indian

I. THE Names. It is called in the *hdtax* Language, *TM G A S*. *Mondeo*;) in *Latine*, *Officinarum*, *Americans*, *Capficum* & *Piper*. *Infoc* *ricanum*: in *ENGLIA* *Guinny Pepper* and *Indian Pepper*. It is generally thought to be the fruit of him also (*guta* *uths* *Acrimonia* *st*) *Capficum* *Camnum* *Avicennx*; *Piper* *Indicum* or *Brazilianum*, *Piper* *Calcutbium* U[^] and by many *Piper* *Guinea*, as tho' nally from thence, tho' in truth, it these Northern Climates, for but I deny nor, that it grows that I have had the report thereof, *neffes*.

II. The Kinds. There are many Species of this Plant, several of which grow with England- and most, if not all of them, in our Plantations in the *West Indies*, for we (hall rake notice of, and Describe the

1. *Capficum majus vulgattis* oblongum, *Capficum rubrum*, *Tsiliquiftrumniajus Fuchfij*, *Per* *ius* *Maiwli*, Our most Common Guinny with long red Cods.

2. *ereOum mayus*, The great upright Guinny Pepper. 3. *C*pfic** *Vyramidale* Th; lesser upright Spire fashioned Guinny *Cficum* *Pyramidale* *eretium* *exitum* *Stunait* *Guinny* *per*. *J. Capficum Cor datum* greater upright Heart fashioned Guinny

6. *Capficum Cor datum ere Hum minus*, The upright Heart fashioned (uinny pepper. 7. *ficum Cor datum propendens*, The pendulous hanging Heart fashioned Guinny Pepper.

8. *ficum Siliqua Olivaria propendens*, The Olive fashioned Guinny Pepper. 9. *qua Olivaria erecta*, The upright Olive Guinny Pepper. 10. *Capficum longum* *mjus*, The greater long and upright Guinny

er. 11. *Capficum oblongum majus Siliquis* *is*, The greater crooked or Horned Guinny per. 12. *Capficum oblongum minus Siliquic rec* The lesser crooked or Horned Guinny Pepper.

13. *Capficum bifurcata Siliqua*, Forked, or pointed Guinny Pepper. 14. *Opficum rotund minus Erafilianum*, Small round feminy Y 1? *Capficum rotundum majus Jurretum* greater round upright Guinny Pepper.

15. *ficum Siliquarotunda* *Corficum*, The round fashioned Guinny Pepper. 17. *Caps** *lata* *iff* *rugosa*, Broad erumpled coddled Pepper. *H* *Capficum Siltqua fiava* shorter Gold yellow Guinny Pepper, 19. *Siliqua Flava longiore*, The longer Guinny Pepper. 20. *Capficum LauU* *inbjo* Stalk'd Guinny Pepper.

The Defections.

III. The first, *1 Our most Pepper with long red Codas, u

is composed of d great Tuft or Bush of Fibre? or Threads, spreading plentifully in the Ground, and perishing in the Wmtti Season, even in hot, or its Native Countries, after its Fruit yr Cods are ripened-, and with us, upon the first sharp troft it meets faith The Plant it self rises up, with an upright

firm round Stalk, haviig a certain Pith with in it, and in our Country about two Feet high, and not above three in its Native places of Growth; spreading it self out into many Branches on all sides, even from the very bottom*, which divide themfihes again, into other fmaler Branches: at each joint of which come forth two long Leaves upon short feo: Stalks^ fmevohat bigger than thojc of Night-fhade, elfc Very like, with divers Veins- in them> not a, all dented about the edges, and of a very fad green color. The Flowers ft and fever ally at the Joints, with the Leaves; very like unto the Flowers of Night-fhade, confifting mojl ufually of five, yeir fometimes of fix white fmM pointed heaves, ft and- ing open like a Star, with a few yellow Threads in the middle: After which come§ the Fruity (eitheir great or small, long or short, round or fquare, ar *he Kind is-, and flanding either upright or hanging down, as their Flowers JJew them/elves, eitheir v- this or that form, as fhall be fhewed in the following Defcriptions:) In this it is fomewhat great and long, about three Inches in length, thieft^ and round at the Stalk, but [mailer towards the end, which is not very fharp, but roundifb pointed green at the fir ft, but being full ripe, of a very deep crimfon fhining red color on the out fide; which is like a thick Skin, and white on the infide, fmcliiAg toller ably well andfwheet; having manyflai: ytlowifb white Seeds therein, cleaving to cert air| thin Skins within it, which are broader at the upper end, and fmaller at the lower • leaving the end Or point empty, a\$ not reaching fo far*, the whole Husk or Cod, but efppecially the Seed, being

of fo hot and fiery a Tafie, that it enflames and burns the Mouth and Throat vehemently, aftd for a longtime after it has been chewed, with fuch an extremity, almoft to hazard Choaking. The Defcription of this first Kind, is propofed a? S pattern for all the reft following, and by wliich you may frame at large all their Deicriptibns* the chief difference confiding in the form of the Fruit, whether Husks or Cods, as (hall be more demonftrated in every one of them. in their before named order.

IV. The fecond, or Great upright Spire fashioned Guinny Pepper. Thk is much alike, or very tit- le differing from the former. The difference of the Fruit is, that this ftands upright •, is great be* low, and fmaller and fmaller to the point, which h jharper than in the first, elfe it might seem the fame inverted, that is, either that turned upwards, or this turned downwards, of as brave and orient a finning Coral color, as that other is.

V. The third, or Lefler upright Spire fashoned Guinny Pepper. The Fruit of this Kind is leffer by half than the laft, and not fo fharp or small at the end, but fomewhat round: and the grëen heaves alfo are fmaller and narrower. The Stalk like- wife is fmaller, and not fo high. Tfo Flowers of this as of all the reft, which bear their Fruit up* right, (land upright lkewise; which is a certain rule to know, what Fruit will be pendulous, and what upright*

VL The fourth, or the very small or smalleft Pyramidal Guinny Pepper- The Fruit of this is small and grows upright h the Cods being fhort and round, an Inch long at leaft, and of a blackifb red^ before they be thro ripe, but when perfectly ripe, are as red as the reft. This Plant grows taller* fuller of Branches, and more ftored, both with Flowers and Fruit, which make the goodlier profpeft. ThS heaves are no fmaller than thofe of the laft befongoing \$ and of the fame dark green color with the reft.

VII. The fifth, or Greater upright Heart fashi^ oned Guinny Pepper. This Plant grows to be but of a mean height\ not fo high as any of the former t its Leaves are large, but not fo small at the ends* The Fruit is not hanging downwards, but ftanding upright, being fomewhat great, flattifh, and as it were bunched out at the upper end, next unto the Stalk, and fmaler below, fhort and round pointed ybmething refembling the form of a Man's Heart.

VIII. The fixth, or Lefler upright Heart fashi- oned Guinny Pepper. This differs not from the laft, but in the fmallnefs of the Fruit, ftanding alfo upright, and being fmaller by a third-part, or near a half, and fhorter alfo.

IX. The feventh, or Pendulous of hanging Heart fashioned Guinny Pepper- The form of this is fomewhat like to the fifth, or greater upright Heart fashioned Pepper, being near of the fame bignefs, but aHittle more uneven, and not fo round, and*full as red being ripe: itispendulous^ or hang- ing down, not ftanding upright as the other. There is another fort of thefe Pendulous Peppers, (alte- rum minus) differing in nothing from the greater^ but in being fmaller.

X. The eighth, or Hanging Olive fashioned Guinny Pepper. This has fhall, long, and round Cods, fmaler below than above, being very like unto an Olive Plum, of full as red a color being ripe, as any of the reft; and hanging from its foot Stalk downwards.

XL The ninth, or Upright Olive fashioned Guinny Pepper- This differs from the laft but in being greater than it, and in its Fruit ftandine up- right\ and not in any thing elfd

XII. *The tenth, or Greater long and upright Guinny Pepper. This is long and round, yet not like that which carries the form of an Olive Berry, but much longer, and of an equal bignefs all its length, growing alfo upright.*

XIII. *The eleventh, or Greater crooked or Horned Guinny Pepper. This has great large Cods, about five Inches long, fometimes little or nothing crooked at the lower end, which is long and small: end fometimes a little crooked or bended upwards, end fometimes very much.*

XIV. *The twelfth, or Lefler crooked or Horned Guinny Pepper. This differs from the laft in not being half Jo thick or long, and keeping its end bowed or crooked constantly, not varying as that does. Both this and the laft hang down their Cods towards the Earth. And the whole Plant is like wife lefs than the former.*

XV. *The thirteenth, or Forked or double pointed Guinny Pepper. This is very like the Long upright Pepper, and much about the fame form and bignefs, being of an equal Jize almoft all the length thereof: but differs from it in this, that the lower end is parted as it were into two fhort round Points, and is alfo a little fmaller there than upwards i neither in color, nor any thing elfe differing from any of the reft.*

XVI. *The fourteenth, or Small round Guinny Pepper. This grows in the fame manner and form that the firft Kind does, not differing therefrom in anything, but in the Leaves, which being in the fame form, are not fo great and large: and in the Fruit, which in this is fmall and round, ((landing fome forth right, and fome upright, but none pendulous or banging down, each of them upon a long foot Stalk) about the bignefs of a Barberry, but round and nothing fo red, of dark or blackifh red color, enclining to red: and in another fort, almoft black, having fuch like Seed within them, but fmaller. This feldom bears ripe fruit in our Climate. Thofe Plants or Fruit which we have had from the Bermudas where they are Natives, are of ayellowifh red.*

XVII. *The fifteenth, or Greater round upright Guinny Pepper. The chief difference in this, confifts in the form of the Fruit, which grows upright *s the flowers do, being great and round like an Apple, and is the gpeated of all tlx forts which bear round Fruity of an excellent red color when it is ripe, like unto polished Coral.*

XVIII. *The fifteenth, or Round Cherry fafhionM Guinny Pepper. There are two Species of this flam, one which bears fully round Fruit, like unto an Englifh or Flemifh Cherry: the other which has a little point at the end; this being a little bigger than the other, and both of them hanging down,*

XIX. *Thefeventeenth, or Broad crumpled Ccd-ded Guinny Pepper. The Cods of this Kind are fomewhat large, greater above, and fmaller below, fomethiug fiat, alfo, and not round, but crumpled as it were, or fhrunk half together, fmelling withall pretty Sweet.*

XA. *The eighteenth, or Shorter Gold yellow Guinny Pepper. // might be thwught by fome, which fee only the Cods of this Pepper, that it differs from all the reft, in the manner of growing, as well as in the color of the Fruit, but it is notfo. For it has like Leaves, Stalks and Flowers in every part, and only differs in that it bears Cods, very like unto the firft fort here defer ibed at Se&. 3. which is the Common Kind, but that they are fhorter, and ending in a fmaller or /harper point, and of a fair Cold yellow color, not red as all the others before are.*

XXL *TJJS nineteenth, or longer Gold y* i. low Guinny PeppCrf This differs i from*

*the laft, but in the Cods, which are not fo thick as they, but a little fmaller, from the middle thereof and a little longer, leffening very finely unto the pointed end, of as fair a Gold yellow color as the former**

XXII. *The twentieth, or Hairy Stalk'd Guinny Pepper. Its Roots are like to the others: and itgrms up with round green Stalks, fet full of white HairS^M in that differing from all the fowner. At the JointM with the Branches come forth two fuch Leaves, &* the firft Kind here defer ibed has, but larger than they. The Flowers are white, confifting of fat Leaves-like the reft, but larger alfo than any of them. After which come the Cods, which are green, ^{at'f'ih} as all the others are: but of as beautiful am glorious a red as the reft, when they are full ript> They are pretty great and long, ending in a very long point.*

XXIII. *The Places. All thefe Kinds of Pefflir are Natives of the Weft-Indies or America, a\$- Brafil, New-Spain, Mexico, Peru, Florida, Carolina, Virginia, Barbadoes, Bermudas, Jamaica, &* and alfo they have been found growing in Guinny^ and many other parts of the African Continent. From the Weft-Indies they were firft brought to Spain, Portugal, Italy, England, Holland, && are Nurft up in our Gardens, where they thrive and proffer very well, and are now found in almoft all the Provinces of Europe. Cluftus fays, That this kind of Cod Pepper, is not only Planted in Spain and Portugal in feveral places, but alfo in Moravia, for the profit fake they make of the Fruit, which ferves them in all thofe parts, inftead of our Common Eaft-India Pepper.*

XXIV. *The Times. They are commonly Sown about the end of March, or beginning of Aprih in their Native Countrys: They uually Flower about the beginning of Auguft *, and the Fruit or Cods ripen not throughly, that is, they come not to the beauty and perfe&ion oi their Coralline rednefs, until the beginning of Winter-, and fo do abide both with Howers and Fruit, molt of the Winter in thofe hotter Climates: but with us, as foon as the Froft comes they periffi, and therefore muft be Houfed if you will preferve them.*

XXV. *The Qualities. Guinny Pepper is hot and dry in the fourth Degree, Afrtingent, Carnf* native* Anodyn, Diuretick, Neurotjck, Stomaticfc Hyfterick, Emmenagogick and Alexipharmick.*

XXVI. *The Specification. It cures Vomiting, want of Appetite, weaknefs and Indigeltion, the Cholick, expels Wind, and powerfully provoke* the Terms in Women: it facilitates the Birth, &* pels the After-Birth, and is profitable again^ Sand, Gravel, Stone, and Tartarous Slime in ^ Reins, Ureters and Bladder.*

XXVII. *The Preparations. You may fcf^C from the Cods or Fruit, i. A Pickle. 2. A Si#* pie Pouder. 3. A Compound or Artificial Poudtfc*. 4. An Irifufwn, or Vinegar. 5. A Peffary. 6- * Lohoc, or EleQuary. -7. A Balfam* 8. A Ofa⁶, tick. 9. An Emplafier. 1 o. A DecoUion in W*⁶*. 11. The Afhes. 12. A Spirituous Tinture. *⁶ An Acid TinUure. 14. An Oily TinSure.*

The Virtues.

XXVIII. *The Pickle. The Cods are Pickled as Cucumers, French Beans, and other things ox like Nature: being fo pcrferved, they are of extraordinary ufe to ftrengthen and fbrtifie the Stonnacn, flop Vomiting, remove Naufeoufnefs, caufe Appf, tire, and * good Digeftion: they expeU Witf^Jj*

the Stomack and Bowels, and are good againft pains in the Intraills, and the Colick. They are commonly eaten with Meat, as a *Pickled Sallet*.

XXIX. The Compound or Artificial Powder. The Receipt is from *Georgio de Reggio*, who is the chief Author that has wrote amply of thefe *Guinny or Indian Peppers*. *Take of the ripe Cods of any of the forts of Guinny Pepper, (being all in Properties or qualities alike) dry them well, firft by themfelves, and then in an Oven, after the Bread is taken out, put into a Pot or Pipkin with a fufficint quantity of Flower, that they may be fufficiently dried: after which cleanfe them from the Flower, (and from their Stalks if they have any) cut or clip them very fmall, both Husks or Cods, and Seeds within them: and to every Ounce of them put a Pound of fine Wheat Flower, or the fame with which they were dried in the Oven: make them up into Cakes or fmall Loaves, with fo much Leaven, as may be convenient for the quantity: Bake thefe Again as you may do Bread of that fize, and being well Baked, cut it again into mailer parts, and Bake it again that it may be as dry and hard as Sisket: which then beat into fine Powder, and fift it through a fine Searfe or Sieve, to be kept for ufe, or to be ufed inlead of ordinary Pepper, for Broth, Meat or Sauce, or any other purpofe our Common Eaft-India Pepper is ufed for.* In my opinion, half quantity of Flower here prefcribed may be enough; and it may be a quarter of a Pound to an Ounce may be fully enough. It gives a good Savor, and it may be a better Taft and Relifh to Meat or Sauce, than the *Common Pepper*: and is regular good to be ufed with fuch Meats as are Flatulent or Windy, to break and difcufs the Wind both in the Stomack and Bowels, and for fuch whose Bodies abound with Crudities and Moifture. One Scruple of the faid Powder may be taken in a little *Chicken, Mutton, or Veal-Broth, for comforting* and ftrengthening a cold and moift Stomach, to help Digeftion and provoke Appetite.

XXX. The Jimple Powder of the Cods and Seed. *It is made by drying them thoroughly, (not fcorching or burning them) which may be done in a Bakers Oven, after the Bread is out, and repeat ing the drying fo long, till they will beat to Powder in a Mortar.* It has all the Virtues of our *Common black EaJi'India Pepper*, and may be ufed as Spice, in Sauce or otherwife, as that is: It difcuffs and expels Wind, comforts and warms the Stomach, is good againft the Colick, and griping of the Guts, provokes the Terms in Women, facilitates the Birth, and forces away the Dead Child, and After-birth, being alfo prevalent againft Obftuptions of the Reins and Bladder thro' Sand, Gravel, Stones, and Tartarous or Slimy Matter lodged in thofe parts. Dofe 1 Scruple to a Man or Woman, mixt with fome proper Syrup, or with Hony, or other fit Vehicle, Morning and Night, or at time of any faroxyfhi.

XXXI. The Vinegar or Infxion. *It is made by Infuiling it in the beft Dutch Wine Vinegar, 2 Ounces of the Powder fit a Quart of Vinegar. If it is made of the fresh ripe Cods, you may put 5 or 6 Ounce's or more (firft cut fmall) to a Quart of the faid Vinegar.* It is an admirable Stomack, lengthens and fortifies it, provokes Appetite, and caufes a good Digeftion: it may be ufed at Meals, as Sauce with Meats, and fuch other things as require *Pepper and Vinegar*: and upon occafion for the purpofes aforefaid may be ufed or taken in a Glafs of Wine, at Meals or otherwife. Bathed upon the Region of the Spleen very hot, it diffolves the hardnefs, and eafes the pain of that *fife*** Held in the Mouth againft the place

troubled with the Tooth-Ach, it eafes the pain, and preferves them from Rottenneis. Mixt with Red Port Wine, and ufed as a Gargle, helps a fore Throat, and and in a little time heafe it*

XXXII. The Decoftion in Wine. *It has the Virtues of the Vinegar, eafes the Tooth-Ach upon the Spot, and makes an Excellent Gargle for a Sore Mouth and Throat. It immediately gives eafe in the Colick, tops Vomiting, and is profitable for fuch as are troubled with a Quinfe. It is faid to be good for fuch as have a Watery Rupture, outwardly applyed: provokes Urine powerfully, helps againft the Strangury, Sand, Gravel, Scone, &c. Induces the Terms in Women, and daufes speedy delivery to Women in Labor.*

XXXIII. The Cofmetic. *The Pouder and it voith an equal quantity of Levigated Niter, and diffolved in White Wine, or mixed into a Liniment with Oil of Ben and applyed, it takes away Scurff, Morphew, Spots, Freckles red and fiery Pimples and other hot and fharp eruptions of the Skin: The Liniment mixed with a little fharp Wine Vinegar, and applyed, eafes the pains of the Spleen, and diffolves the hardnefs thereof, it alfo difcuffes other cold Tumors* and Oedematous Swellings in the Joints.*

XXXIV. The Lohoch or Eletuary. *It is made by mixing the Jimple Powder with three times its weight of Clarified Hony, or rather with the Syrup of green Ginger. It is good againft Afthma's, Coughs, Colds, Wheezings, Hoarfnefs, fhortnefs of Breath, and other Uke Diftempers of the Breft* and Lungs: it is profitable againft an inveterate of old Cough, helps the falling down of the Palate, and applyed to the Throat inwardly and outwardly, is good againft a Quinfe. Taken for 3 or 4 Days together to the quantity of a Dram or Dram and half, Morning, Noon, and Night, kis laid to expel the Dead Child.*

XXXV. The half an. *It is made by mixing the Powder with Gum Armoniacum, or Galbanum, or Balfam de Capivi, or Baifam de Peru. This laid upon any hard Knots or Kernels, in the Neck, Throat, or any other parts of the Body, it will hinder their growing, and difcufs or refolve them not fuffering them to grow any more.*

XXXVI. The Pejjary. *Take of the Powder 3 parts i 0/Pouder of Gentian 2 parts h Gambogia in Powder 1 part^ mix and make them into a Peffary with Woolly dipping the fame into Decoftion of Colocynthis before ufing it. Being put up the Womb, it induces the Courfes or Terms, eafes the pains of thofe parts \$ and if the time of a Womans Labour is at hand, it haftens it, and even brings away (as it is faid) the Dead Child, and the After-Birth.*

XXXVII. The Emflafler. *Take of the former Powder 2 Ounces ^ Pouder of Tobacco 1 Ounce \$ Frankincenf 4 0#7<?^ Balfam of Peru 3 Ounces ^ Chymical Oils of Saflafra, and of Juniper Berries, of each one Ounce: Mix and make an Emplafter according to Art-, adding Bees Wax fo much as to give it a due confidence. It is good (being prefently applyed) againft thebitings of Mad Dogs, or the biting or flinging of any other Venomous Creature. Ic prevails againft Cramp, Convulfions, or Palfies, or any Trembling, weaknefs, or pain of the Nerves and Tendons, whether in the Joints, Mufcies, <Spina Dor ft, or in any other parts what foe ver. Applyed to the Wrifts, Stomach, and along the Spina Dorft, it cures Agues after an admirable manner fo as that they return no more.*

XXXVIII. The Ajhes of the Cods, and of the whole Plant. *Being rubbed on the Teeth they ekanft them, and make them grow white, ft they*

were black. Infused in White Port Wine, the *Infufwn* provokes Urine powerfully, is good againft the Strangury, stind prevails againft the Dropfy, Jaundice, Scurvy, Gout, as alfo againft Sand, Gravel, and Tartarous Mucilage in the Reins and Bladder.

XXXIX. *The Spirituous TmSurt.* Taken 60 or 80 Drops at a time in a Glafs of Wine, it gives immediate eafe in the Colick: it powerfully provokes the Terms in Women, facilitates the Birth, and expels the After-birth, as alfo the Dead Child. It prevails againft inward Convulfions, and outwardly Bathed along the Back-Bone, as alfo upon the parts affected, it is very beneficial againft the Palfy, reftoring the feeling, eafing the pains if any be, and adding ftrength to the Nerves, Mufcles, Tendons, and parts affected. Drank in Wine, fometimes 30 or 40 Drops at a time, especially falling, it is laid to be good againft a (linking Breath, although of long continuance: and mixed with a little Wine, and held in the Mouth, it gives prefent eafe in the Tooth-Ach.

XL. *The Acid Tinture.* It has all the Virtues of the *Spirituos Tinture*, but much more Stomack; it cleanses the Ventricle, powerfully opens all obftructions of the *Vifcera*, flops Vomiting, takes away Naufeoufnefs, caufes a good Appetite, and a ftrong Digeftion, and therefore is very good for fuch as are falling into, or are indeed in a deep Confumption, becaufe it not only opens all forts of Obftructions as aforefaid, but it caufes a good Chylous Juice to be generated for thenourifhing of all the wafted and confumed parts of the flefhy Subftance.

XLI. *The Oily Tinture.* It is a moft excellent Diuretick, Lithonriptick, and Antipatalyck. In the Strangury, Gravel, Stone, Palfie, inward Convulfions, Cramps, ftoppage of the Terms in Women, &c. It may be given from 15 to 30 Drops in Decottion of Penny-royal, or of Par fly, or in White Port, or Lisbon Wine, or any other fit Vehicle. It brings away both Birth and After-Birth, and admirably eafes After-Pains, bathed upon the Back-Bone and parts affected in a Palfie, as alfo in Cramps, it gives fingular relief.

XLII. *Kotcu Guinny Pepper* is fo fiery hot, and of fo (harp and biting Taft, that it will burn and inflame the Mouth and Throat fo extremely, that it is fcarcely to be endured: if any one (ould chance to eat a Cod of it raw, it would hazard their choaking: yea, being outwardly applyed (freff bruifed) to the Skin, in any place of the Body, it would raife Blisters and exulcerate it, in the fame manner as if it had been Burnt with Fire, or Scalded with Water. The reducing the Cods (when dry) into Pouder, ought to be done with care, the Eyes being cloathed, and the Noftrils being flopped: for the Atoms of the Pouder by flying up to thofe Farts, (if they can come at them) will pierce and attraft, that they will induce a great Flux of Rheum or Humors by thofe parts, and caufe fuch Vehement Sneezings as may do the party concerned much Mifchief: and if they (ould prefs into the Throat, they will caufe fuch fierce Sneezings, Coughings, and Vomiting with all, and with that Vehemency as to caufe Convulfions, not only of the Stomach and Bowels, but Univerfally of the whole Body,

CHAP. DLVII.

Of PEPPER — WALL.

THE Names. It is called in Arabic *Hid' febram*, *Handrachabara*, and *Tilafon* in Greek, *'Aei*»ov*Wo*rfirov: in Latine, *Illecebra minor Lobelij*, *Aizoon acre Cordi**, *Aizoon minus ferdigufus Thalij*-, *Sedum minus caifficum*^ *Chipjh Gramen Tertium Plinij* *Angularia*: *Dallyh J'** *cundum vel tertium Columnj Sempervivum*^ *nimum Lobelij** but *Column** thinks it not fit to be called an *Aizoon*^ or *Sedum*, becaufe they are extremely Cold; whereas this is very hot, even in the fourth Degree, and to this Opinion *^{re} knowing it to be no Specif of the *Sedum*^ but Plant of another Kind- In Englifh it is called, *Wall-Pepper*, *alfo Little Stone-Crip*, *Pricket*, and *Wall Moufe-Tail*.

II. *The Kinds.* Authors make two Species; this Plant, viz. *I. Illecebra minor*, five *Sedum Tertium Diofcoridj*; to which all the Names; the former Sedion belong, Our Common *Wau* Pepper, 2, *Illecebra injipida*, *Aizoon minus IMIJ* & *VermicularU injipida*, *Aizoon .minimum Cofdi** *Infipid*, or *Taftlefs Wall-Pepper*.

The DescriptioKf*

III. *The first, or Our Common Wall-Pepper*. It has a Root which is Creeping and fibrous, like to thofe of the Stone Crops. This Root forth many Stalks, which as they lye upon the Earth take Root again, and fspread far. It is a perennial Plant, and grows much like to fome of the Stone Crops, with very many and fender Stalks round with [mall round Leaves growing very thick] clofe together. At the tops thereof *yellow blowers*, in fmall Tufts. The Taft of this Plant is very hot and Sharp upon the Tongue, which chiefly diftinguifhes it from the *Stone Crops*-, tho' it is alfo diftinguifhed by its form, being fmall and thick fet Leaves.

IV. *Gerard*, describes it thus, its Root thing but Strings. It is a low and little whofe Stalks are fender and Jhort. The Uf about the Stalks Jand very thick; being in growth, full Bodied, /harp pointed, and of Juice. The flowers ft and at the top, are very fmall, of color yellow, and of a biting Taft.

V. *The fecond, or Infipid, or Taftle Pepper.* This has a Root only made of and is in fmall a Plant a the la ft, growing ther like it in Leaf Stalk, and flowers, yellow/h like wife: but it is chiefly diftinguifhed from the former by the Taft; which in thing biting, but utterly infipid or whout

VI. 17., *Places.* The firft grows atoft where in dry and ftony places, and in Crannies of old Walls, and on the tops of It is always green, and therefore was former Authors among the *Sempervives*, or *Leeks*. The fecond grows alfo in the like on Mud or Stone Walls, or among Rubbiin, fandy or gravelly- Places, and oftentimes on fides of old Tiled Houfes, and Pent-Houfes.

VII. *The Times.* They both Flower in the Summer Months, in June and July, and sometimes sooner and the Leaves (if the Season is not very extreame) continue green all the Winter.

VIII. *The Qualities.* The first of these is only used in Physick, and is hot and dry in the fourth Degree, very attractive, sharp and biting: outwardly applied it raises Blisters, and at length exulcerates the part it is applied to.

IX. *The Specification.* It cures the Sciatica and Gout} prevails against the Kings Evil, is Alexipharmick or good against Poyson, and cures Quartans and other Agues of long continuance.

X. *The Preparations.* You may have therefrom, 1. A Liquid Juice. 2. An Elixence, 3. An Infused or Decoded Oil. 4. A balsam. 5. A Cataplasme.

the Virtues.

XI. *The Liquid Juice.* By reason of its hot and attractive qualities, it is (being taken inwardly) Emetick} Being taken with Vinegar, or some other proper Vehicle, it educes thick and tough humors, and other tenacious and viscid humors in the Ventricle, by Vomit: it evacuates also Choleric humors, and thereby cures Quartan Agues, and other Agues inveterate, or of long continuance. And taken in the same manner, it expels any sort of Poison, whether Vegetable, as of the Aconites, or Animal, from the swallowing of any Poisonous Creature 5 but, *Caveat ixi fumpferit* says Parkinson, I suppose because of its heat.

XII. *The Elixence.* It has all the Virtues of the Liquid Juice, being taken in the same manner, or in the same Vehicle: and may either of them be given, from a Spoonful to two Spoonfuls, more or less, according to the Prudence of the Physician.

If the Dole is given in a large quantity of the Vehicle, it will certainly be less dangerous; for also if a good quantity of Poffet drink, or Mutton Broth be Drank after it, if it is found to burn much: it much expels wind, and being given in a small quantity warms and comforts the Stomach, and gives ease in the Colick.

XIII. *The Infused or Decoded Oil.* It eases pains and diffuses Tumors proceeding from cold and moist Humors, and is a very beneficial thing in alleviating pains of the Gout. Anointed upon the Spina Dorfi and parts affixed with the Palfy, it diffuses the Flatulent Humor, and cures that disease, if it is recent: Anointed on the Neck and Throat, it is good against the Quinsy, swellings of the Almonds, and other Distempers of those parts: Anointed on the Piles it cures them.

XIV. *The Balsam.* It is made with Beef Suet Strasburg Turpentine with a little Frankincense. It is a potent thing against the Gout, and all manner of Aches and Pains of the Joints being applied, (universally also being at the same time exhibited:) it is profitable against the Kings Evil, taking away or diffusing Knots and Kernels in the Neck and Throat, before they are broken, or if Ulcerated, digesting, cleansing, and healing them in a short time.

XV. *The Cataplasme.* It is made by beating the Herb up with a little Hogs Lard. Applied to the Hips, it cures the Sciatica, and to Joints affected with the Gout, it eases the Pain and educes the Morbifick Matter, and this it does by drawing Blisters upon the parts affected. And applied to Kernels or Scrophulous Tumors in the Neck and Throat, commonly called the Kings-Evil, it removes or takes them away after a singular manner.

XVI. *Nota.* The second of these is cold and moist in the second Degree, and yet it is thought to be astringent withal. And to stop Fluxes and distillations of Rheum, inward Bleeding, and outward hot eruptions of the Skin, and to heal cancerous and fretting Sores and Ulcers, and is safely to be used, and effectual for all the purposes for which our Common House-Leek is used, its Qualities, Preparations, Virtues and Uses, being much the same, which see Chap. 484. Sell' it 19. and Chap. 48j. Sett. 6. foregoing of this Book.

The CLIMER.

I. Hp HE Names. It is called in Greeks K; because it brings forth its Stalks which creep or climb like those of the Vine: Daphnoiedes, because its Leaves are like those of the Bay-Tm: in Latin, Clematis, &

Vinca

Vinca Pervinca, *Chamadaphne Plinij* -, *Centunculus Plinij*: in English, *Perwinkle* or *Climer*, also *Periwinkle*.

II. Tfo IC/Wji There are three several forts which are common amongst us, viz. 1. *Clematis Daphnoiedes major*, Fiwtf *Pervlnca major* \ *Chamadapbne major*, The greater Perwinkle. 2. *Clematis Dapbnoiedes minor*, *Vinca Pvrvinca minor* (*diverforum color urn*) *Chamadapbne Piinij* ^ *Centunculus Plinij* ^ The leffer Perwinkle, or fingle Perwinkle of divers colors. ?• *Clematis Dapbnoiedes* ^ *Jive Vinca Pervinca Flore duplici purpuero* ^ Perwinkle with double purple Flowers.

The Description of

III. *Toe jirjl*, or Greater Perwinkle. *Its Root confists of a great Bujh of Fibres, which run and fspread themselves much, fastning thefrifelves frongly in the Ground. This greater Perwinkle is fame-thing like to the next, or fmdller Kind, but much larger, yet its Branches creep not in that manner,*

ht (and l??ore upright, or lefs creeping at the leajL. The, Leave* also hereof fit and by couples at the Joints, but they are broader and larger fy, the "half than the next following. The blower, iikewife are larger, conjifting of Jive Leaves, of a blew color, a little deeper than the blew in the leffer Kind. TjJis Plant is far tenderer to keep than th, fmailer Species, arid therefore ought to be Plantct in a warmer place, yet a plpce which js moiyl an Jhady.

IV. *The feconi*, of LelTer Perwinde, which is a *Ime Perwinkle* of divers colors. *Its Rootis m* * *nohJiult bigger thin a Kuffh, bujhing it Jeij*

out, in the Cjrouid, and creeping with its BrM ^ ^ Fibres far about, whereby it quickly takes up ^ f compafs, and is therefore moft ufually P'f* i* > Hedges, where it may have room enough. 10. Jfal' from this KootJfprwg forth many BrencW, m

ing upon the Ground, running far about, and Jhooting out small Fibres at the joints as it runs, taking thereby frefb hold in the Earth, and rooting it felf again in many Places. At the Joints of thefe Branches grow two small dark green fhining Leaves, fomething like Bay Leaves but fmaller & with them come forth alfo the flowers, one at a Joint ftanding upon a tender foot Stalk, being fomething long and follow, parted at the brims or edges, fometimes into four, and fometimes into five Leaves. The Common fort are of a pale blew color, and fome are of a pure white; but fome again are of a dark reddifh purple color, and thefe are thofe which are only planted in Gardens.

V. The third, or Perwinkle with double purple Flowers. Its Root is very Bufby and Fibrous like the former: and this Plant is very much like to the Second lefler Kind juft now deferibed, in all things, except in the Flozver, which is of that dark reddifh purple color, which is in the former fingle lefler Kind, but herein it differs, thait this hath another row of Leaves within the Flotver, fo that from the two rows of Leaves, it came to be called double Perwinkle, but the Leaves of the Flowers of this treleijer than the Leaves of this Jingle Flowered.

VI. The Places. The firft of Great Perwinkle, grows in Spain, Italy, France, and other hot Countries, from fome of which places it has been Tranfplanted to us, and grows only in our Gardens. The fecond or Blew fmaller Perwinkle, grows in many Woods and Orchards, by Hedge fides in many parts of England, fo alfo does the white Kind here and there; but the Single purple, and Double purple or third Species, grow only in our Gardens with us. The fecond Species whether Wild or Garden, is faid to be the Common or Vulgar Kind, and that which is only, or chiefly in Ufe.

VII. The Times. They are faid to Flower ail in March and April, and the Branches remain or abide always green, more efpecially if they grow in moift and fhady places, in which they chiefly delight.

VIII. The Qualities. Perwinkle is hot and dry in the fecond Degree, Aftringent, Emphra&ive, Styptick and Vulnerary.

IX. The Specification. It flops all forts of Fluxes of the Belly, chiefly the Dyfentery or Bloody Flux, as alfo all other Fluxes of Blood, as Spitting or yomiting Blood, Pifling of Blood, and the overflowing of the Terms in Women, and the too abundant Flux of the Loches of Women in Child-bed.

X. The Preparations. You may have therefrom, 1. A Liquid Juice. 2. An Effence. 3. A DecoUion or Infufwn in Red Wine. 4. A Poufcer of the Plant/ j, A Cataplafm of the green Herb,

The Virtues.

XL The Liquid Juice. Two or three Spoonfuls of it taken alone, or in a Glafe of Red Styptick Wine, it flops all Fluxes of the Belly, and Fluxes of what kind foever, and in what part of the Body foever. It is faid never to fail in the Cure of a Bloody Flux, Spitting of Blood, Filling of Blood, or the Terms, but it ought to be taken Morning and Night, till fuch time as the Cure is performed: Inje&ed up the Noftrils, it flops the Haemorrhage there, fo alfo Inje&ed up the Womb with a proper Womb Syringe (as is Ufed as taken inwardly by the Mouth) it confutes more immediately to flop the overflow-

ing of the Courfes, or Loches in Women as aforefaid.

XII. The Effence. It has all the Virtues of the Juice, being ufed in the fame Dofe, and in the fame manner, but is more effectual to the purpofes intended, applied outwardly it flops the bleeding of Green Wounds, and contributes very much to the speedy healing of fimple Wounds or Ulcers, more efpecially, if the Voider of the Herb, be ftrewed pretty thick upon the fame.

XIII. The Decoffion, or Infufwn in Red Wine. It has the Virtues of the Juice and Effence, and may be given Morning and Night to five or fix Ounces. Outwardly, it is Vulnerary and contributes to the speedy healing of Wounds and Ulcers. Ufed as a Gargle to a Sore Mouth or Throat, it cleanfes the fame and quickly heals it.

XIV. The Ponder of the Herb. It has tall the Virtues of the Juice, Effence, and DecoUion or Infufwn, but operates not altogether with that speed they do. Dofe from two Scruples to a Dram or Dram and half, in Styptick Red Wine: outwardly applied to Wounds it flops their Bleeding and ftrewed upon Ulcers, it cleanfes, dries and heals them.

XV. The Cataplafm. Applied to Bleeding Wounds, it prefently flops the Haemorrhage: and to inveterate running Ulcers, it in a fhort time flops the Fluxion.

CHAP. DLIX.

Of the PERU-FLOWER,

O R,

MARVEL or PERU,

THE Names. This Plant is called by the X Indians of Peru, Hachah, and for that reafon fome Authors call it Uachal Indi: It has no Greek Name: but our Modern Authors call it Admirabilii; Mirabilia Peru ana & Peruviana Plant a Admirabilis, Gelfimum vel Jafminum Mexicanum rubrum iff Indicum, Solanum Mexicanum Bauhini; Solanum Odoriferum, Admirabilia Peruviana Clufij: in Englifh it is called, Marvel of Peru, Marvel of Mexico, and Marvel of the World.

II. The Kinds. Authors have deferibed two varieties of this Pfent, viz. 1. Mirabilia Peruviana major, The greater Marvel. 2. Mirabilia Peruviana minor, Solanum Mexicanum Flore parvo, The lefler Marvel, whole Defcriptions follow.

The Defcriptions*

III. The firft or Greater Marvel. It has a Root which is bag and round, greater at the Head and fmaller downwards to the end, like unto a Radifh, fpreading out into two or three or more branches, blackifh on the out fide, and whitifh within. Thefe Roots have often been preferved by Art thri the Winter Seafon, yea for two or three Winters together (for they willperifh if they be left abroad

falling out to be moderate or Kindly, the Plants give no ripe Seed; and so we should be to seek both for Seed to Sow, and Roots to Set or Plant again. The Stalk of this Marvelous Plant is great and thick, thicker than any Marts Thumbs bunched out, or Swelling with a Kind of Knee at every Joint; in some Plants the Stalks will be of a fair green color, and those will bring white or white and red Flowers: and in some a dark green color, which will give yellow flowers. The Stalks and Joints of those, which dill give red and yellow Flowers Spotted, are Jomepohat brownish, but not so red as those which give wholly red Flowers. Upon these Stalks which spread into many Branches, there grow at their joints upon several foot Stalks, fair green leaves, broad at the Stalk, and pointed at the end. At the Joints likewise, towards the upper part of the Branches, at the foot of the Leaves, come forth several small Flowers, upon short foot Stalks, every one being finally long and hollow, from the bottom to the brim, which is broad, spread open, and round, and consists but of one Leaf without division, like unto a Bell-flower, but not cornered at all. These Flowers are of divers colors, and diversely marked and spotted, some being wholly white, without any spot in them for the most part, through all the Flowers of the Plant. So likewise some being yellow, and some wholly red. Some Plants again are mixed and Spotted so variably, either white and red, or purple (except here and there, some may chance to be wholly white or red or purple, among the rest;) or red and yellow through the whole Plant (except a little before, some may chance in this kind, to be either wholly red, or wholly yellow) that you shall scarcely find 2 or 3 flowers in a Hundred, which will be alike spotted and marked, without some diversity and so likewise every Day, as long as they blow, which will be until the Winters or rather Autumns Cold puts a stop to their proneness of Flowering. It has also been often observed, that one side of a Plant will give fairer varieties of Flowers than another, which is most commonly the Eastern, as the more temperate and shadowy side. All those flowers do open for the most part, in the Evening or in the Night time, and so stand blown open, until the next Mornings Sun begins to grow warm upon them, which then closes themselves together, all the brims of the Flowers shrinking into the middle of the long Neck, much like unto the Blew Bind-weed, which in a manner does so close up at the Sun's warm heat. Or else, if the Day is temperate and mild, without any Sunshine upon them, the Flowers will not then close up for the most part of that Day, or until it is towards Night. After the Flowers are past; come several Heads of Seed, that is, but one at a Place, at the Flowers closed before, of the bigness sometimes of a small Pea, but not so round, standing within the green Husks, in which the Flowers grew before; which Seed is a little flat at top, like a Crown or Head, and round below where it is fastened in the Cup; of a black color when it is ripe, but else green all the while it grows on the Stalk: and being ripe, is soon Shaken down with the Wind, or any other light blow.

IV. Gerard has another Description, which being compared with the former, will more lively set forth this admirable Plant: and it is in these following Words. Its Root is thick, and like unto great Kadish, outwardly black, and within white, and sharp in Taste, wherewith is mingled a Superficial Sweetness: it brings forth new Flowers from the joints of the Root, yea even until the joints close, the stalk of the Plant top is not

font) into we jtr, w MM unj »»»w«», until the March following: at which time it may be taken forth out of the Pot, and planted in the Garden: by this means many Plants preserved, as well as by Sowing of Seeds, which Sown Plats will bear Flowers in as ample manner, and in as good time, as these reserved Plants, admirable Flower, called the Marvel of the World, f & c. like unto Basil? Leaves: among a Stalk two Cubits and a half high (two Feet and half) of the thickness of a minna: which Stalk divides it into Branches or Boughs, and those also into Stalk. Its Branches are decked with Leaves growing by couples at the Joints, like the Leaves of Peafecods, green, feijhy, and full of Juice which being rubbed do yield the like smell as Wild Peafecods do, and are also very unfavoury, yet in the latter end they are a Tap, and Sharp smack of Tobacco. The Stalks towards the Top, are garnished with long single Flowers folded as it were into

commonly of two colors f ^ ^ A d H or orderly Jireams, now yellow, or white, having sometimes a little purple color, spotted or fettered, in a most vanabk order mixture. The Crown or held of the in is either pale, red, yellow, or white, in the middle of the hollows of a Ynck or Part far round about with six small Strings or blowers are very sweet and pleasant, Narcissus or White Daffodil, and are and so continue till of the week the next morning, at which time they begin to wither in manner of Bind-weed) especially if the weather is very hot: but the Air being temperate, sometimes remain open the whole Day, themselves only at Night, and so persisting lasting but only one Day, like the True or Hemerocallis. This wonderful variety without cause) bring admiration to all it. Far if the Flowers be gathered, and never at Papers, and compared with those which will Spring and Flourish the next Day, you shall easily perceive, that not one Flower in color, though you should compare which Flower one Day, with another hundred you may gather the next Day; and so the next Day, during the time of their flowering, the Cups and Husks which contain the Flowers, are divided into five pointed, some are green, and as it were consisting of five in is contained one Seed and no more, a blackish Skin, having a blunt point on one Flower grows, but on the other end of the Crown, it is adorned with a Crown. The Seed U as large as a vslwk of it is folded with any

in this Seed is contained a white Kernel, which being bruised, resolves into a very white Pulp like Starch. Thus Gerard.

V. The second, or Leflér Mirrel. The Root of this is like to the former, and answerable to it, in proportion to the rest of the Plant. This Small Marvel of the World, or of Peru, as it is called, * grows in the same manner that the former greater does, but nothing so large, or so high -, having such like Leaves Jet on the Stalks^ but much thicker and rounder : the Flowers like wife being of a red color for the most part, and wade of one Leaf opening into five parts on the Brims, like the ether. They are so small, that the whole Flower of this is scarcely so big, as the one part ordififwn of ^ the greater flower-, and the Seed which follows, is in proportion to the Flower going before it.

VI. An Observation. This larger Plant yields in ^o Gardens^ five or six several Varieties of beautiful Flowers, as, 1. Pure White. 2. Pure Yellow. 3- Pure Red. 4. White and Red Spotted. 5. Red and Yellow Spotted. 6. Purple Spotted. But besides ^{the} ^{fe} ^{the} ^{re} ^{are} ^{some} ^{other} ^{sort} ^s among which was > 7. One of a Pale Purple or Peach color. 8. And a Purple or Peach color Spotted, Ofc all which differences in the color of their Flowers may be discerned by the Leaves of the Plant, and manner of growing, which are all different one from another: and many of them in their Native Countries different from those which we have growing with us in our Gardens-, but concerning them all, the chief difference almost consists in the Flowers

VII. Observation 2. Within a while after the first Frosts have taken the Planes, so that the Leaves wither and fall, dig up the Roots whole, and lay them in a dry Place for three or four Days, that the superfluous moisture on the outside may be exhausted and spent and dry ed away, which done, wrap them up severally, in two or three brown Papers, and lay them by in a Box, Cheit, Tub, or in some other convenient thing or place in the Houfe, all the Winter time, where n^o Wind or moift Air may come to them. And thus you (shall have the Roots preserved, and fit to Plant again the next Spring, which will spring again afrefli the next Year, if you plant them in the beginning of March, as has been often times proved.

VIII. Observation 3. Some have put them up into a Barrel or Firkin of Sand or dry Ashes, which is alib good, if the Sand or Ashes be thro' dry, but if they be any thing moift, or if they give again in Winter, as is usual^ that moisture of Sand or Ashes, will putrifie the Roots, so that they will be nothing worth, when the time shall come that they should be planted.

IX. Observation 4. This is also to be Noted, 3\$ to the sowing of the Seed, that if you would have variable Flowers, and not all of one color, you must chuse it out of such Plants as be variable while they grow, and out of such you must always reserve your Seed: for if the Flowers be ^o ^{*} one entire color, you will have for the most Part from those Seeds, Plants which will bring forth Flowers all of a color, whether they be white, red, or yellow.

X. The Places. These Plants grow naturally ⁿ Peru, Mexico, and other Provinces of the West-Indies, where there is a perpetual Summer, or at the least no cold Frosty Winters : and from some ^o ^{*} those parts the Seed was first brought to Spain^ from whence it has been conveyed to most other Countries in Europe, and particularly into our Gardens in England, having now had it with us, for near this Hundred Years, or more ^ so that now they are almost in every Garden of Note.

XL The Times. The Roots ought to be planted in the middle of March if the Season is temperate and warm-, otherwise in the beginning of April, at which time they are to be taken out of the Papers, or from the Sand, in which they lay Buried, and then placed in that part of the Garden which is warmest, and without shade and a little moift. If you raise them from the Seed, it is to be sown or planted about the middle of April. They bring forth their Flowers from the end of July, and Flower thro' all August and September, to October, or till cold Air and Frosts come, which pull them down, the Seed ripening in the mean Season.

The Virtues,

XII This Plant is esteemed more for its Rarity and Beauty, than for any Virtues it is known to have-, nor have we learnt any thing concerning the use from the Indians, among whom it is a Native: Its exceeding and admirable Beauty, and Sweetness of its Flowers, being the only reasons for which it is Nurft up in our Gardens \$ in which it is indeed a pleasant Ornament. However, Jacobus Antonius Cortufus of Padua says, That he had found out by experience, that the Powder of the Root, taken to two Drams inwardly, in any fit Vehicle, does exceedingly well purge Watery Humors.

CHAP. DLX.

Of PETERS ~ WORT-

OR,

Square JOHNS-WORT.

L n n H £ *Nafoes*. It is called in Greek, ^y X *Antvfv*, \$ *AffKV&fMr** *Afcyron* & *Afcyroides*: *Diofcoridts* faith, it was called also, *CmtiKh** & *'Avf&rcusifiv*, *Hypericon*^ i. e. *Johns-Wort*, ^y ^a ⁿ ³ *Androftmon*, i. e. *Tut fan*, or *Park Leaves*: and *Galen* therefore, accounted it a kind of *Androftmum*, but it is truly neither of these Plants: in *Latine*, it has no other Name than *Afcyrum*, from the *Greeks*: and in *Engliffh*, it is called *Peters** *wort*, or *Johns-wort square Stalked*^ *Johns-wort the greateji*.

IL The Kinds. Authors have nianjr Kinds of this Plant, the three following are eminent, viz. *Afcyrum vulgare*, *Matthioli*, it is, *Andrafamum primum Fuchfiji Hyper icon Dodonai*, in his *French Edition* * *Androf&mm alterum Hirfutum Colum** (and yet he doubted whether he (hould call it *Hypericum*, or *Androftmum*, and laid that it came nearest unto *Afcyrum* ⁵ ^R ² *tho** something differing from

from it, but this miftake of his might be from the differing Soils and Ciime[^] wherein he Taw it grow:) *Anatrofum Hirfutum hauhini* [•], *Hypericon in dumetis nafcens Tragi*, Our common Peters-wort, or iquare Johns-wort. 2. *Afcyrum Supinum villifum palufre, Baubini*; *Afcyrum Supinum %x< &£n Quifih Marfh Peters-wort, or Creeping Marfh Peters-wort*. ? . *m Afcyrum vhidnd Flore Bauhini*, Great Flowred Peters-wort.

Th Defer iptiotJf.

III. *The firft, or Our Common Peters-wort, or Square Johns-wort. It bus a hard and woody-Root, not very thick, running under the upper furface of the Earth, with a great number of fibres fpringing from the fame, and running fir ait down into tbq Earth -y it fend forth new /hoots every Year, and abides a long time, or for many Tears. This is that Peters-Wort which is moft common ibitb us in England, and rifes up with fquare upright Stalks for the moft part, fomething greater and higher than Hypericon, or Johns-wort, but brown in the fame wannr. At every Joint, it has two Leaves, fomething like thofe of Hypericon, but larger, a little roudner pointed, and with very few or no holes to be feen therein, and having fometimes fome fmaller Leaves, rifing from the Bofom of the greater, and fometimes a little hairy withal!, as the Stalks will be. At the tops of the Stalks grow many yellow Star like flowers, with yellow Threads in the middle-very.like unto tbofe ofHypericon., fo that but for the largenefs and height, it is not readily difcerned from Hypericon. The Leaves and Flowers give a bloody Juice, being bruifed between the fingers as that does*, and it has fuch like Seed, and of as Strong and Refinous Smell.*

Note, That by a miftake of the Printer, the true Figure of *Fcters-iwrt* is placed in the Chapter of *Johns-won*, Chap. 405. Pag. 57²- ^b - ^{whic!} ought to be placed here; and this Figured *Johns-wort*, which is put here, ought to be placed there, of which we defire the Reader te take notice, to avoid being miftaken.

IV. *The fecond, or Marfh Peters- wort, or Creeping Marfli Peters-wort. It fprings up with Stales round, molly, and foft, which fiand .not-vpngWy but lean downwards, taking Root at the Joints, having fome what roudner pointed heaves, F¹J!, the Joints, two for the moji part together. - i¹P¹ Flowers are as yellow, and of the fame bigneffas the former, but give not full out fo red a I¹W¹;/, they do% and in thefe particulars confijs the »W¹ difference from the firft, fetting afide alfo the W tural place of its growth.* • fiic

V. *Johnfon upon Gerard, thus defcribes .tn» fecond Species. It fend forth divers round Miry creeping Stalks, which here and there put }<*& new Fibres or Roots, and thefe are fet at certai fpaces, with very round and hairy Laves oj whitifh color, and two at a Joint. And on the top of thefe Stalks, grow a few fmall yellow &?*%£ which confijl of five Leaves apiece. Thefe ^{bia^} feldome fend forth Branches, unlesf it be oneortv at the tops. This (fays he) may well be called I* Englifli, Round S.Peters-wort.*

VI. *The third, or Great Flowered Jeters-worJ This Flam is very much like the th¹t defmoe[^] faving that it has a round brown upright Stalk, ta Feet high at the leafi, withfuch like, but larger Leaves, and round pointed, of a paler green cou on the upper fide, and whiter underneath. I¹ Flowers which put forth at the end of the M«*» of a pale yellow color like the firft, but much larger* withyelloi Threads therein alfo. There is a largen Peters-wort than this, which is faid to grow Candia, which they call Afcyroides Cretica[^] major, but it differs in nothing from this but in TMeia* nefs of its Leaves and Flowers, which are three or four times greater: the which difference may (for all that I know) from the different go^o of the Soils.*

VII. *T;sr Places. The firft grows in Graves and fmall low Woods in feveral place[^] England, as in Kent, Huntington, North and Cambridghires, as alfo near Water in other places. Gerard found it in roan, in Kent, as in a Cops by the then Mr Houfe near South-Fleet. It grows alfo in the North parts of England, efp Landfdale and Craven. The fecond gr the Marines in the Low Countries, and in Boggy Grounds of this Kingdom, as and is truely that Plant which Clujius Aufarium. The rhtel is a Native of t Mountains, and has been Tranfplanted from into our Clime, and is nourifht up in fome Gardens. Yet I have heard fome excellent nifts lay, that they have fometimes met vf upon feveral of the Mountains in Wales.*

VIII. *The Times. They all Flower in and July, and the Seed is ripe in J^v Auguf.*

IX. *The Qualities, Specification, J and Virtues of Feters-wort, are the »«> 22# thofe of Johns-wort, in Chap. 405. Sea. \$ a^o of this Book aforegoing, to which I rerer But Johns wort is laid to be the more ^No fi efficacious to the purpofes intended, and ^ preferred before Feters-wort.* ^ 77*

X. *The Vouier of the Seed of Peters-wort.* Diofiond.es, P/agg, and Galen fay, That if it is taken to the quantity of two Drams at a time in *Mend*, or *homed Water*, that it purges Cholerick Humors, and thereby helps fuch as are troubled with the Sciatica or Hip Gout.

IV, *The second*, or Smaller Pile-wort, or Fifi-
WOIT. I(bat a Root voluich is made up *of many
small Kernels, or Knobs, like Grains of Corn fore
of them being mice or thrice at big and *iw j* " ..
others, of a u>bit:jb color, toib fame fibres *J,Z*
ends of them, This Plant dees fp-call £tl

many

ffidny round pule green Leaves, Jet on weak and trailing Bunches * which lye upon the Ground, and are flat, fsmooth, and fomewhat Joining, and in fome Places (tho* feldcm) marked with black Spots, each Jianding on a long foot Stalk; among which rife up fmall yellow Elowers, (confining of nine or ten fmall narrow Leaves) growing upon /tender foot Stalks, very like unto a Crowfoot flower, to which the Seed alfo is not very unlike, being many fmall ones Jet together upon one Head.

V. There is another fort hereof, which has as it were double Flowers, confining of two rows of Leaves, in all other things not differing from the former, which Camerarius in Horto, only ?nentions.

VI. The Places. They grow in moift Meadows, by common Ways, and Ditch-fides which are wet, and fometimes overflowed with Water, and almoft every where throughout the Kingdom, in Plafhy, and watery Grounds, in the moift corners of Fields, and places which are near the Water fide: and yet they will alfo grow in fomewhat dryer Grounds provided it be in the fhade withal.

VII. The Times. They fpring forth out of the Ground about the middle or latter end of February[^] and Flower and Seed in March and April, and are quite gone in May, fo that they cannot be found, till they fpring up again the next Year.

VIII. The Qualities. They are hot and dry in the firft Degree, and not in the fourth Degree, as Diofcorides and Galen, make theirs to be. They are Attra&ive, moderately Maturarive, otherwiie Difcuffive, Abfterfive, and Vulnerary.

IX. The Specification. Pile-wort is a lingular Cure for the Haemorrhoids or Piles, and the Difcafe called the Struma or Scrophula, vulgarly the Kings-Evil; it foften and diicuffles Wens, and other hard Tumors.

X. The Preparations. You may make therefrom, 1. A Liquid Juice or Effenec of the Leaves and Roots. 2. A Decoilion Of the jams. 3. An Oil, or Ointment. 4. A Halfam. 5- A Qataylafm of the fame,

The Virtues*

XL the Liquid Juice, or Effenec. They are Specificks againft the Scurvy, "Jaundice, Gout, Stone, Gravel, Kings-Evil⁵ and productions o* the Hemorrhoids or Piles, being inwardly taken from 2 to 3, or 4 Spoonfuls, Morning and Nigfo in a Glafs of White Port, or Lisbon Wine* and withall bathing and fomenting the parts affected therewith hot, twice or thrice a Day, for half an Hour together.

XII. 27* Decoffio/r. It has the Virtues of the Juice or E[^]vr, but much weaker in its effe&s ana and operation, and may be given for the lame purpofes, from 4 to 8 Ounces, fweetned with Syrup of Violets, or of Rofes Solutive, Morning &^a N[^]ight. If the Decoffion 1 part, is mixed with the Juice or Effenec 3 parts, and ufed as an Errhine[^], r the Noftrils, it purges and cleanfes the Head ana Brain, from cold and moift Humors which otteat it, and many times prevents an Apoplexy, an[^] Cures the Epileply, Vertigo, Lethargy, and otne Difeafes of like Kind.

XIII. The Oil or Ointment. Anointed 2 or 4 times a Day upon the Haemorrhoids or [^] cures them ^ and is wonderfully beneficial in [^] Cure of the Kings-Evil, and hard Tumors inn[^] parts of the Body, being anointed upon the [^] affected, and Cloths dipt in the fame ap[^] over them.

XIV. The Balfam. If the Piles or Scrophw[^] difpofed to break, it will ripen and break the [^] and afterwards more fully digeft the indig[^] Matter, cleanfe and heal them after an admiffio[^] manner, beyond moft other Medicaments app[^] ated to the Cure of thofe Difeafes.

XV. The Cataplafm of the Green Herb and b[^] It difcufftes and heals firmple Contufions, being [^] plyed whilt they are Recent * is profitable aga[^] an Oedema in the Knee, and either difcuffles [^] ing applyed warm) or maturates, breaks, [^] and heals the Hemorrhoids in a (hort rime, [^] withal gives prefent eafe and relief in the [^] never fo extream. In a recent Scrophula, [^] cuffles the Kernels and Knots, tho' never [^] fo alfo if they be inveterate, if long applye[^] if they tend to fuppuration, it haftens it and or[^] them, after which they may be wafhed with[^] Juice or Effenec, and then cleanfed and n[^] with the Ointment and balfam.

CHAP. DLXH.

O / P I M P E R N E L *

I. nrHE Kames. Some take this Plant [^] the Melocbia of Serapio, but the [^] Male Kind Vore ?hotniceo[^] he calls it in the [^] bian Tongue Xantala[^] and the Yocmina [^] leo, he calls, Cardabella. It is called in [^] 'Avaycf.MU (**> dvd I\$ yakhn idquc ex Gallo P;[^] A [^] fuivio ubi oritur:) in Latine, Anagalli*[^] Englifh Pimpernel. Some Authors call itj. [^] Englijh Gallin* & Morgelina, but thefe are M[^] proper Names of a Species of Alfine or [^] weed- Manellus an old Writer calls it [^] which is extant alfo in Diofcorides,

Barbarous Names, Some call it *Cor chorus*, or *Cor-torus*, supposing it to be the *Corcborm'Jheopbrafi*, *Lib. 2. Chdp. 7** which he accounts *Inter Olera*, among the *Pot Herbs*: and for its bitterness became a Proverb, *Sc#7©" & h&Swu *Corchorus inter Olera*, when we speak of vile or ill Men, who would be accounted of, as among the Good, or deserving of Mankind. But this is not the *Corchorus Plinij*, in *Lib. 15. Chap. 32.* which is the *Melocbia*, or *Olus Judiacum*, the *Jews Mallow*.

II. *The Kinds.* There are several Species of this Plant, as, 1. *Anagallis Mas*, *Anagallis Floribus Phcniceis*, vel *Bore Phxniceo*, the Male Pimpernel, or Pimpernel led Flowered. 2. *Anagallis femina*, *Anagallis Flore Czrulco*, vel *Floribus Caruleis*, the Female Pimpernel, or Pimpernel blew Flowered. 3. *Anagallis Flore purpureo obfolete Qufij*, the dull red, or purple colored Pimpernel. 4. *Anagallis Flore carneo Parkinsoni*, Pimpernel with bluish colored Flowers. 5. *Anagallis Flore fateo* 5 *Anagallis lutea* \ *Numularia Sylvatica* iff *Mas Gefneri* <> *Aljine lutea Lugdunen'is*, Pimpernel yellow Flower'd. 6. *Anagallis tenuifolia Gerardij* *Anagallis tenuifolia Flore Ctruleo* y *Anagallis tenuifolia Monelli Clufio*, Pimpernel narrow Leav'd of Monellus.

'the Descriptions.

HI. *The firfli or Male Pimpernel, or Pimpernel red Flowered.* Its Root is small and Fibrous, perishing every Tear. This Common Pimpernel Springs up with several weak square Stalks, lying on the Ground^ beset all along with two small and clove round Leaves at every Joint, one again/ another very like unto Chick weed, but without foot Stalks, for they do as it were encompass the Stalky in which particular it differs from it. The Flowers stand singly, each by themselves, at the Joints, between them and the Stalks -y consisting of five small round pointed Leaves^ of a fine pale red color

Pimpernel Male, or red Flower'd.

tending to an Orange color, with so many Threads in the middle: in whose places after they are gone, smooth round Heads succeed, like those of Chickweed, in which is contained a small sort of Seed.

IV, Gerard thus describes it. The Male, or red Flowered Pimpernel, (which is like unto Chickweed,) has a Root which corifists offender firings*. The Stalks are four square, trailing here and there upon the Ground^ on which do grow broad Leaves and sharp pointed^ set together by Couples: from the Bofoms whereof do come forth slender tendrels, on which grow small purple Flowers tending to redness, which being past there comes in their places fine round Bullets, like unto Coriander Seed, in which is contained small dufty Seed.

V. The second, or Female, or blew Flowered Pimpernel. This differs not in any particular from the first or Male Kind, but is in all things like unto it, saving only in the color of the Flowers,

Pimpernel Female, or Hew Flower'd.

the former or Male being of a red color, but these or the Female, being of a fair blew color^ in which only the difference consists.

VI. The third, or Dull red, or purple colored Pimpernel. This does likewise in all things resemble the former^ saving that the Flowers of this are of a dull or dark red color, having an Eye or glimpse of purple the fain.

VII. The fourth, or Pinapernel with bluish colored Flowers. This in its Roots^ Stalks^ Leaves^ Flowers, Seed, and manner of growing, is altogether like to those before described^ and only differs from them, in the color of the Flower^ which is of a fair bluish or incarnate color*

VIII. The fifth, or Pimpernel yellow Flower'd. It has a Root which is small and Fibrous, and perishes not every Tear as the others do^ for with the Plant when in Flower, there has been gathered dry Stalks

with

the Heads of Seeds upon them, which have remain'd all the Winter, from the former Tears growing. This Plant grows in like manner as the others do, with many spreading Branches upon the Ground, but they are something greater, and so are the Leaves also, larger than any of the former sorts, but set by couples at the Joints, where the Flowers come forth upon long foot Stalks, like unto the others, but larger, and of a fur yellow color, with pointed Leaves some what like unto Nummularia, with round Heads also, containing the Seed*

IX. Gerard says, Its Root is small and thready, that it has many weak and feeble Branches trailing upon the Ground, be set with Leaves one again to another like the great Chick-weed, and not unlike to Nummularia, or Mony-wort: between which and the Stalks come forth single small tender foot Stalks, each bearing at their top, one single yellow flower, and no more,

X. The sixth, or Pimpernel. It is a low Leav'd of Monellus of Tournay. Its Root is small and thread-like like the others, perishing in the same manner every Year. It grows also in the same manner which the others do, with spreading Branches upon the Ground and Leaves set at the several Joints, which are longer and narrower, and with sharp pointed, something resembling the Leaves of Gratiola or Hedge-Hyffop, not always two at a Joint, but oftentimes three and sometimes more, though not often. At the Joints likewise with the Leaves, stand several Flowers, or in the other sorts, upon small long foot Stalks, made of five small round pointed Leaves, yet something greater than those of the former blew fort, having a circle of a fur purple color in the middle or bottom, which afterwards yield such like round Heads and Seeds.

XI. The Places. The first grows in Plowed Fields, near Path-ways, in Gardens, and Vine-yards, in Meadows and Corn-Fields, almost every where. The second is not so common, yet found in many places, as near Battle by Oxford, and plentifully in Rumney Marsh, at Higham-Ferries, Artilborow, and Raunds in Northamptonshire, and at Beconsfield in Buckinghamshire, Gerard found it also in a Chalky Corn-field in the way from

one Swanie's Houfe of South-Fleet to Long-field Downs. The third only grows in Gardens at Franckford, at Ley den in Holland, and with us. The fourth, Parkinson says, grew of it self, to his own Garden, here in London, and came w every Year of its own sowing. The fifth grows in shady places, as in Hampstead Woody about Ashford at a place called the Park, w&w many places in Kent, especially in Wood-Land. The sixth is a native of Spain, about Cadiz, and John Alone hits, had of it growing in his Garden at Tournay in France, Johnson says also, that he found it growing in Essex, among the Corn at Wrightsbridg, being w then Seat of one Mr. John Wright.

XII. The Times. They are laid to Flower from May to August, and the Seed to ripen and fall in the mean time. They Flower chiefly in the Month of August and in Harvest time, and the Husbandman has an observation of the Weather from the Flowers, and will preface what will follow the next Day after: if the Flowers be close shut up they say that it betokens Rain, and foul Weather; but if they be open and spread abroad, it is the contrary, viz. that the Weather will be fair.

XIII. The Qualities. Pimpernel (Mole) is hot and dry in the first Degree, Winterive, Anodyn, Aperitive, Attractive, (To that Galen Defac. Simp. Mel Lib. 6. says, They are a cleansing faculty, and have an attractive whereby they draw forth Thorns, Splinters, or other like things, which are gotten into the Flesh.) It is emetic, Digestive, Discurfitive, Diuretick, Incarnative and Traumatick or Vulnerary, they are ear diack, Hepatick, Nephritick, Ptarmick, Emfick, gick, Sudorifick, and Alexipharmick.

XIV. The Preparations. It cures the bitings of Serpents, as Vipers, Snakes, Mad-Dogs, and other Venomous creatures: is good against the Strangury, Stone, and Gravel, and heals all Wounds and Ulcers, whether inward or outward, Hops the Flux out of any part, eases pains in the Ears, and prevails against an Ophthalmy, and other weaknesses of the Eyes.

XV. The Preparations. You may have it from, 1. A Liquid Juice. 2. An essence. 3. Decoction. 4. An Errhinc. 5. An Ointment. 6. A Cataplasme. 7. A Distilled Juice. 8. A Spirituous Tincture. 9. An Acid Tincture. 10. An Oily Tincture. 11. An Opibalmick.

The Virtues.

XVI. The Liquid Juice. Applied to Wounds, it conglutinates their Lips and them: to Ulcers, it cleanses them and in the Face for Skin being washed therewith, good to cleanse it from its roughness, ill color, and other deformities thereof, and to make it smooth and clear.

XVII. The Effence. It has all the Virtues of the Liquid Juice, besides which it is serviceable against the Plague or Pestilence, and all Malign and Peittential Fevers, being a times used, and Sweating well upon it. It is prevalent against the bitings of Mad-Dogs, Serpents, or other Venomous Creatures, the sting of Scorpions, Hornets, and other like, gives ease in the Strangury, and removes the stink and itoppage of Urine, and is profitable

againſt inward Wounds and Ulcers, as Ulcers of the Lungs, Reins, and Neck of the Bladder, And applied outwardly to all Green Wounds, which are fimple without Fra&ure or laceration, it quickly confolidates and heals them: it alfo cianfes and heals old, filthy, fretting, and running Ulcers, and fuch as are made by Poilbnous Beafts \$ it cianfes them from their Corruption, refrains their malignant corroding, invalidates their venomous qualities, and drys up their Flux of Humors, and fo jquickly brings them to healing* Fomented on the files it eafes the Pain, and difcuffes them, and dropt into the Ear on the contrary fide, it eafes the Tooth-ach. Dofe 2, 3, or 4 Ounces Morning and Night;

XVIII. *The Decofion in Wine.* Given from 4 to 8 Ounces,, it is a good remedy againſt the Plague and other peftilential Fevers, and Contagious Difeafes, fo as after the taking thereof, as hot as the Patient can well drink it, they ly in their Beds, and Sweat fox two Hours after, whereby the Poifon of the Difeafe will be expelled, this being thus uied for 2 or 3 times. It has all the other Virtues of the *Liquid Juice* and *Ejence* afore fpecified, but ought to be given in a larger Dofe, as is before **Difted**

XIX. *The Errhine.* Take of the *Juice* 4 Ounces, *Scammony in fubtil Powder* 2 Drams, mix them. Snufft up the Noftrils it Purges the Head and Brain * cold^ moift and pituitous Humors ^ gives eafe in the Head-ach, Megrim, and a *CephaUa*, or inveterate periodical Head-ach, and in a little time cures the Vertigo, Lethargy, Cams,* Apoplexy, Epilepfy, Night-Mare, and other like Diftemper of thofe parts-, as alfo defluxions of Rheum into the Eyes, Ears, Nofe, Jaws, Teeth., &N.

XX. *The Ointment or Balfam.* It cures fimple Green Wounds, at a few times dreffing-, and applied to a peftilential Bubo, it ripens and breaks it. Applied to the Gout it eafes the pain \$ and digefts, cianfes, incarnate?, and heals old filthy and running Ulcers *, and Kings-evil Sores, more efpecially if to every 4 Ounces of the *Ointment or Balfam*^ half an Ounce of *Powder of Tobacco*, and 1 Ounce of *Levigated Mercurius dulcis* be added, the Ulcer being cleaned at every dreffing with the *Liquid Juice*, *EJence*^ or *Decofion*, aforegoing.

XXI. *The Cataplafm.* It is attractive, and being applied to any part where there is any Prick, Splinter, Thorn, or the like, it draws it forth: and applied to a fimple Contufion, it difcuffesthe Tumor and cures it.

XXII. *The Dijilled Water.* It is a Cofmetick, and has all the Virtues of the *Liquid Juice*^ being applied according to Art to the Face and Skin: ; but I« am of opinion^ that it is not full out fo effe&ual as the *Juice* or *EJence*: yet it will be *nore powerful if a quarter *part of the *Juice of Limons* be added to it^ and then it will make an excellent *Gargarifm* for a Sore Mouth and Throat, and a good cleaner of the Teeth.

XXIII. *The Spirituous Tinture.* It has all the Virtues of the *Ejence* and *Decofion*, and may be given Morning and Night from 2 Drams to 4, in a Giafs of Wine, or other fit Vehicle, againſt Poifon, Pkgue, and Peftilence, bitings of Mad Dogs, &c. as in *Seff.* XVII. is before hinted. It prevails againſt Convulfions, Fainting and Swoon- *ng Fits, Vapors/and other Diftemper of the Heart, Liver, Spleen, and Womb.

XXIV. *The Acid TmOure.* It is a potent thing againſt the Plague, and all malign and peftilential Fevers, deftroying the Malignity, and extinguifh-¹⁹g almoſt in a moment the preternatural Heat,

It quenches thirft, reftores a *loft* Appetite, caufes good Digeition, opens all manner of obftru&ions of the *Vifcera*, but chiefly of the Lungs, Spleen, and Reins, and is good againſt the bitings of Mad Dogs, ana other Venomous Creatures. Dole Ib many Drops as will make the Vehicle pleafantly fharp, and to be often repeated in the Day time.

XXV. *The Oily TinUure.* It opens all Obftruftions of the Reins and Bladder, powerfully provokes Urine, gives eafe in the Strangury, and expels Sand, Gravel, Stones, and Tartarous Matter from the Reins and Bladder. It gives eafe in the Colick, eipels Wind powerfully, gives relief in Convulfions, provokes the Terms, and is profitable Igainſt the Palfy, being taken inwardly from 20 Drops to 60, in any fit Vehicle, according as Age, Strength and other Accidents will admit: It may be given twice a Day inwardly, and applied outwardly to the parts affe&ed. It alfo cures Wounds and Pun&ures of the Nerves and Tendons, being applied by a Skilful Hand.

XXVI. *The Ophthalmick.* Take of the *Clarified Juice of Pimpernel*^ *Clarified Honey*, ff each equal *partix* in the *Heat of ftd Bath*. Being put into the Eyes Morning and Night, or 3 or 4 times a Day, as the neceffity may require, it is good to clear them from Clouds, Mifts, and Films, which obfucate or hinder the Sight, is profitable againſt an Ophthalmie, helps weeping Eyes, and: cures Ulcers therein, being duly applied.

C H A P . DLXIII

Of P I M P E R N E l. Water and Sea.

I- *HT HE Names.* It is called in *Greeks* 'Am- X >*AA* 8n/^: in *Latine*, *Anagallis Aquatica*: and in *Englijh*, *Water Pimpernel*: The Sea Kind is called in *Greeks* ^VA-^XK^ \$&K<t<m&: in *Latine*, *Anagallis Marhima*^ vel *Marina*: and in *Englijh*, *Sea Pimpernel*.

H. *The Kinds.* There are many forts of *Water Pimpernel*^ as, 1. *Anagallis Aquatica folio fubrotundo non crenato*^ *Anagallis aquatica Lobelij tertia* (this *Guilandinus* thought it fometimes to be *Alifna Diofcoridis*^ and at another time to be *Cochlearia*, but in both was miftaken:) *Anagallis Aquatica folio rot undo non crenato Bauhini*, *Water Pimpernel*, *fobePs* third *Water Pimpernel*. 2. *Anagallis Aquatica anguftifolia*, *Anagallis Aquatica Lobelij quarta*^ (Samolus *Plinij*, *Lib. 25. Chap.u.* as fome think:) *Long Chickweed* *Leav'd Water Pimpernel*, or *LobeVs* fourth *Water Pimpernel*. ?• *Anagallis Aquatica anguftifolia Scutellata Bauhini*^ *Narrow Leav'd Water Pimpernel*. 4. *Anagallis: Aquatica folijs Pulegij Bauhini*, *Sium alterum Tragi*, *Anagallis Aquatica Tragi*, *Small round Leav'd Water Pimpernel*. To thefe might be added the feveral forts of *Brooklimes*, which the *Latines* call *Anagalides Aquatica*^ but thefe becaufe they are better known by the Name of *Brooklime*, we have treated of before, apart, in a Chapter by therofelves, viz. *Chap. 88f* aforego^ ing of this Book- \$. *Anthyllk lemifolia*, *Alfinc Cruciata Marina*^ *Alfines genus Pelagicum* *Unfit*^h *Sea Pimpernel*.

II. Descriptions*

til. tberfi, or Water Pimpernel, which is L^h his third Water Pimpernel. I he Root of this Plant runs or spreads not itjelf abroad, but is a small Bufb of white Fibres, from whence Spring many Smooth, pale green Leaves, fmall at the bottoms and broad

arid round at the ends. The Stalk is round, about a Foot more or lefs high, toithjeveral /mailer leaves thereon, fet one by one up to the top, where it fpreads it felf forth into many branched Spikes of white Flowers.

IV. The Second, or Long Chickweed Leav'd Water Pimpernel, which is LobePs fourth Water Pimpernel. This is a Fibrous Root confifting of a bunch of white Strings much like the Jofner. It is a fmall Plant, and rifes up not aboye half a Foot high, with Several Branches Spreading from a weak fquare Stalk, having two Small Leaves at a Joint, Something like unto the Greater Chickweed, but fome^hat longer. The Flowers are white, confining of four Leaves apiece, flanding on long foot Stalks, after which follow round Heads with /mall Seed in them.

V. The third, or Narrow Leav'd Water Pimpernel. Its Root is reddifh, Fibrous and Creeping. The Stalks, are Smooth, Jheaked, Jointed, and about a foot and half high, having two very narrow and long Leaves at every Joint, pointed qt the ends, without any foot Stalk to them. At every Joint almoft, with the Leaves, come forth fmall upright Branches, winding themfelves one within another, as if they had Clappers, from whence 'pring S^{smaller} foot Stalks, on both fides, which Juftain Small whitifb

purple flowers y like unto thojc of Chickweed, confifting of three Leaves apiece. After vobich come Small flat double Pods much like to a Shield (whence the Latine MameScutellata) being two jet together with a Thread between them; on boihides whereof the Seed lyes.

VI The fourth, or fmall rourid Leav'd Wate\$J Pimpernel. Its Root is white, fibrous and creeping in the Ground, much like to Brooklime. J#. Leaves are >«// and round, like dlmoft unto Pennyroyal, two always at a Joint upon^the &''^ which are four Square, and bear blew Flowers, «* to thofe of the Land Pimpernel.

VII. The fifth, or Sea Pimpernel. Its to* J fomewhat long, (lender, jointed, and deep tl)*J into the Ground, like to Sotdanella. // bos-mun J fmall branches full of Joints, not above «* & * (full high, creeping Several ways, befet with J*)» thick Leaves, of d pie color refewbling Lentitf'-

or rather Alfine minor, the Ufa J The Flowers grow at the top of the Jafhion, of an herby color nke Box, J minus. Itinclofes its Seed, which isjnf J three cornered Husk. All the whole ^ J SaltiJJ>, bitter in Tajlc Mi Jf>«*''L J>»

The Epithite Cruciata is here "ddcdtothj ^ bccaufe the Leaves which grow thick togeul J couples, crofs each other, atrtbaj>(W J Plants which have fquare Stalks, ^tbivq^ at each Joint. And it is Englified, Sea J nd rather than Sea Chickweed, becauji the » J infbape, are liker tbojeof Pimpernel, ^ w any other Plant. And aljo for that the f« J Lobel, hat called another Herb by the^rA J Sea Chickweed.

VIII. The Places. The four firftgrow h J fides, fmall running Brooks, and watery J The firft has been found growing in the n J of Dartford in Kent, alfo between Sj<d J Sandown-Caftle, and in the Ditches on J Sandwich. The fecond grows in many J Waters, and watery Ditches, in feveral J the Kingdom. The third and fourth grow J places, tho' they are not fo common J Natives of G.m.7^ The fifth grows J

South Ifland belonging to Jb V ^ >« ^ Viicl > p ^ / W, and in the Gravel and Sandy J lye low, and againll the J found in the (^ q/ S/ />> near the Water J in Wcfoate-Bay by M^i^m^f. Lie i .

IX. '17* T/* <. They all Flower. ip W ^ th, and ibmetimes in Augufi, a^ B the J ripeSeed the Month after the time or J Flowering as the Br J X. i'''

X. *The Sualities, Specification, Preparations, and Virtues* of the first four, are the same with those of *Brooklime*, in *Ow*>. 88. 5W7. 9- <? 21. to which I refer you. These are something weaker than *Water Creffes*, but are much used in *Diet Drinks* with other things, to purge and clarify the Blood, and *Lympha*, as also the whole Body from those Peccant and Scorbutick Humors which overturn the Health thereof: they are Specificks against the Scurvy, Scrophula, Dropfy, Gout, and Jaundice: and are said to be *Lithonripticks* or Stone Breakers, and cause Sand, Gravel, and Tartarous Mucilage to be expeled by Urine, easing and helping the Strangury: they also provoke Womens Courfes, and expel the Dead Child. A *Cataplasm* made of them, being Fried with *hütter* and *Vinegar*, and applied warm, helps all manner of Tumors or Swellings, and *Anthonfs* Fire also, if it be often renewed.

XL *The Virtues of the Sea Pimpernel*. It is temperate in respect of heat or cold, dryness or moisture* *The Ponder of the Dried Leaves*, being 3ⁿg given from two Drams to half an Ounce, either in its own *Dijilled Water*, or in *Parly* or *Hydropiper Water*, or in *Onion Water* it prevails greatly against the heat and Scalding of the Urine, the Strangury, or difficulty of making Water, and purges the Reins. The same *louder* taken with *Oxymel* or *honed Water*, is good against the *Epilepsy* or *Faliirig-fickness*, being given first in the Morning fasting, and last at Night going to Bed, and so continued for some considerable time.

LEMENTARY, /[^] Bawm, Chap. %%

PINE, /[^]? Pine Tree, *Lib. II. Chap.*

PINKNEEDLE, *see* Cranes-Bill Musked, *Chap*, 16b.

atfo, which consists usually of five Leaves apiece (feldom fix) round pointed, and a little fringed for the middle part about the edges, with some Threads in the middle, either crooked or straight.

Of P I N K S Great and Small

L *TpHE. Names. I know no *Greek* Names

X belonging to these Plants the *Latines* call them *Caryophylli Sylvestres*, or *Cariophylli Nothi*: and in *Englijh*, *Finks* or *Bastard Gilliflowers*.

II. *The Kinds*. There are several sorts of *Pinks*, as, I. *Caryophyllus Hortensis Flore simplicis, vel minor Flore simplicis*, The Garden single pink. II. *Caryophyllus Uortcrfis minor Flore multiplex* The Garden double Pink. III. *Caryophyllus Sylvejis minor*, The Wild Pink. Now each of these three principal Kinds, have several other Species under them., hereafter in this Chapter to be declared.

The Descriptions ^

I. *Caryophylli Hortenses minores Flore simplicis* Single Garden Pinks.

III. *Caryophyllus Hortensis minor fimplex*, The Common single various colored Pink. This in its wanner and form of growing in all its parts, is like to the *Gilliflower* in *Chap*. 318. *aforegoing*, saving only that its leaves are [smaller and shorter in some more or less than in others and so are the Flowers

IV. *Caryophyllus minor albus*, The fingle white Pink. It is the Common white Pink, toith a fingle white Flower of five Leaves finely jagged about edges.

V. *Caryophyllus Plumarius albus orhc rubro five Stellatus*, The fingle white Star Pink. It bears Flowers almoji as deeply jagged in as the following Plumarius, of a fair white color having a Ring or Circle of red, about the bottom of lower part of the Leaves, and are as fvoeet as the Plumarius. This being fown of Seed, does net give the Star of fo bright a red color but becomes more da

VI. *Caryophyllus Plumarius* > Fethered or jagged fingle Pinks. Thefe have fmall woody Roots, and fuch like Stalfo and Leaves as the firfi defer ibed, at Sefr. III. above but fomewhat fljorter and fmailer, or Graf's Uke and of a whit ijh or gray ijh green color. The Flowers Jland in like manner at the tops of the Stalks, in long, round, jlender, green Husks, confining of five Leaves, very much cut in on the edges, and jagged almoji like a Feather of a light red or, bright purple color, with two white Threads (landing in the middle, crooked like a Horn ct the end, and are of a very fvoeet Smell. But there are fome of this fort, which have not thefe two crooked Threads or Horns in the middle, but have in their fie adnmany fmall Thre ads, not crooked at all The Seeds of them are all like to the Seeds of Gilliflowers, or the other Pinks, mZ. Jma/l, black, long, dndflat.

VII. *Caryophyllus Hortenfis minor rubrus* The fingle red Garden Pink. This is like the White aforegoing, but that the Leaves are not fo much jagged, and the Flower is of a pale purpl/JJ color.

VIII. *Caryophyllus minor purpureus*, The fingle purple Pink. This is of a fair purple color, beautiful in its Kind, and almoji like to the purple Gilliflower.

IX. *Caryophyllus minor Carneus*, The Blufh colored Pifik. This has broader and larger Leaves in the Flower \$ than any other Pink, and of a fair blufh or fejh color.

X. *Caryophyllus Plumarius albus*, The white Feathered Pink. Thk ha* the edges of the Flower more finely and deeply cut in than the fonfier, zvithout the Ring or Circle of red at bottom*

XL *Caryophyllus minor purpureus Dilutus*. The light red, or purple colored Pink. This is like the former Feathered Pink, and differs only from it in its color.

XII *Caryophyllus minor Stellatus* The Star Pink. This is a beautiful Flower, finely jagged on the edges, but not fo deep as the former Star Pink and has a fair red Circle at the lower end of the Leaves on the infide.

XIII *Caryophyllus Plumarius albus Aujlriacus*, five fuperba Aujlriaca, The white Feathered Pink of Aujlria. Us Roots are jmall and woody like the others. Its fir (I or lower Leaves are fomewhat broader and greeny than any of the former Pinks, being both for breadth and greennefs more like unto Sweet Johns. The Leaves on the Stajks ere fmailer, (landing by couples at every Joint, at the tops of which Jland fuch like jagged Flowers a* the lajl defcribed, and as large, but more deeply cut in or jagged round about, of a pure white color, end of a moil fragrant fweet Smelly comforting the Spirits and Senfes ajar off.

XIV. *Caryophyllus flumgrius purpureus Aujlriacus*, The purple Feathered Pink of Aujlria. This in its form and manner of growing is altogether like the former, and differs nothing from it but in the color of the Flowers, which in this are of a purpish color, and having the fame fweet Smell. Some have mjaken a Kind of Wild Campion, growing

in our Woods, as by the Path fides in Hornfie Park, and other Places to be this white or purple Anitrian Feathered Pink; But by comparing the Flowers the mi flake will be fufficiently manifefi.

XV. *Caryophyllus fainor re pens fimplex*, The fingle creeping or matted Pink. This is the female jl Pink both for Leaf and Flower of all the other Kinds which are nourifhed in our Gardens, having many fhort and fmall Qraffy green Leaves upon toe Stalks, which as they grow and lyi upon the Ground (not jlandingfo upright as the former) do take Root again whereby it quickly fpreads, and covers a great deal of Ground in a little time. Tffe h'owers are jmall and round, a little fnipt about the edges, whereof fome are white, fome red, fome white Jpojt ted with red, and fome of them redfpotted tx > tw white, all of them fingle Flowers.

XVI. *Caryophyllus minor maculofu**, The ip?CK, led Pink // is a fmall Flower, having JmU fpots of rtd here and there, dijperfed over the Mower.

XVII. Nota. Now here is to be Obfervi That thofe fingle Flowers which are like u Pinks, but do rife from the fowing of the Oran & Tawny, or any other colored Gilliflowerot, earn tion, are not to be accounted of as in this utjj of Finks, but of the Kinds of *Caryophyll m*J*** or Gil'ifldtoers.

XVIII. *Caryophyllus Marinas*, Sea Thrift. Cushion. This our Common Thrift, *TM J *A into mojl zvibich have Gardens, becaufe of its ralufe to Empale or Border Knots and Beds in u dens, for that it abides green Winter ^d. Snmm and that by cutting it will grow thick, and be in what form you plcafe. It has many port andv green Leaves, fmailer than many oj the liiau growing thick together, and fpreading upon Ground. The Stalks are naked of Leaves, high, bearing a fmall Tuft of light, purp blufh colored Flowers, (landing round, anu thruft together.

XIX. *Caryophyllus Mannus major*, Terraneus, Great Thrift, or Great Sea This is a larger or greater Kind than the and of as great beauty and excellency abnoft, ds ##/ of the former Pinks, whether fingle well for that the Leaves are like unto being longer and larger than any Pinks, whit ijh green color, like unto them^ not g long or by couples upon the Stalks, O* A ink Gilliflowers < but Tufting clofe upon the like unto the former Common Thrift. As aljo the Stalks, rijng from among the Leaves, fometimes two jeet high) #re yet fo Jlcriderj weak, that they are fearcely able to bear the Flowers, naked or bare, both of heave! and faving only in one place, where at the Joint Stalk hat *two fnntll and very fhort Lctf rijng upwards, as in all other Gilliflowers afi but growing downwards-, and do bear each of a Tuft or Umbel of fmall purplijh, or blujh Flowers at their tops, jlanding fomethng Sweet Williams, but more roundly together of Flower confjiling of Jive fmall, round, hardijh Leaves, as if they were made of Pap bottom or middle being hollow: They bloy) at once a* the Common Thrift < fre & oin; \irif for the moll part one after another, not P ufually above jour or jive Flowers open time* fo that it is long before the whole W, y Flowers is blown or paf: but yet the hotter #* dryer the time is, thefooner their ti?ne J f ing is over. Its Root is fomewhat great > Jong hard, and not fo much fpreading in t the Roots of Gilliflowers or PiiVs do.

II. Caryophylli Horten/es minor.es* Flore multiplier
Double Garden Pinks.

XX. Caryophyllus Hortenifh minor flore multi-
plici variegato, The Common double various colored
Pink. The form of the whole Plant ami Manner of

its growing is exABy like that at Sett. 3. aforego-
ing, faving that this double Kind is lejfer% and lefs
double than the double Gilliflowers, having its
Leaves a little /nipt or indented about the edges',
with fome Threads in the middle, of divers and
various colors, and of a fragrant fweet Smell.

XXL Caryophyllus Plumarius, albus multiplex,
The double white Pink. This is only with more
Leaves in it, than is in the flngte white Pink, which
wakes the only difference.

XXII: Caryophyllus Plurnarius Multiplex, The
double Feathered or jagged Pink. This in its
Roots, Leaves, Stalks, Flowers, color of the Flower,
*nd Seed, is exatfly like that at Sett. VI. aforego-
ing, without any differerice therefrom, Javing that
the Flowers of this are double.

XXIII. Caryophyllus Hortenifis minor rubens
multiplex, The double red Pink. This is in the
fame manner double as the former, differing iri'flfct
°vly, viz. in its duplicity, from the fingle of the
fame color. .

XXIV. Caryophyllus Hortenifis minor purpureus
multiplex, The double purple Pink. It differs not
from the fingle purple, for color and form of grow-
ing, but only in the doublene/s of the Flowers.

XXV. Caryophyllus Hortenifis ?minor Granadenfis,
The Granado Pink. It differs not from the Gilli-
flower of the fame Name, but in the fnallnefs of
the Leaves and Flowers.

XXVI. Caryophyllus Hortenifis minor cdneus
Multiplex, The double blufh Pink- This is almdft
H gre.it as the Ordinary blutti GiUiflower 5 and

fome have taken it for a Gilliflower; but the green
Leaves are dlmofl a*fnallnas Pinks, for which
Reafon, I rather refer it to the Pink Kind.

XXVII. Caryophyllus Hortenifis minor repens
multiplex, The double matted Pink. This is like
the fingle matted Pink, in its form and manner of
growing, at SeS. 15. aforegoing, not differing in
its Leaf, but in its Flower. The firjl Flowers' are
but once double^ or of two rows of Leaves, of a
fine reddifh color, /potted with Silver fpots; but
thofe which follow are fo thick and double, that
they oftentimes do break the Pod or Husk, and are
not altogether offo deep a red color, but more
pale.

XXVIII. Caryophyllus Plumarius Auftriacus '
'ilbts & purpureus multiplex, The double white
and purple Auftrian Feathered Pinks. , Theft differ
not from the fingle at Sett. \\$. and 14. aforegoing^
neither in its Leaves, Stalks, nor manner of ^grow-
ing, but only in the Flowers, thefe being double^
nd the bejl of the double Kinds.

XXIX. Caryophyllus Plumctrius multiplex maculu
purpurea in jundo , The double Feathered Pink
with a purple fpot in its bottom. This differs not
alfo from that at Sett. 5. aforegoing, but only in thi
duplicity of its Flower.

III. Caryophylli Sylveftres iniiiores, Wild Or Field
Pinks.

^ Caryophyllus arvenfis prolifer, Childing
Pinks. Its Root is fmall, white and hard, perfifhing
every Tear after Seedtime, and raifing itfelf again
by its own fowing, .or elfe, it muft be fown in the
Spring, libasa few pale green, Jhort, blunt*
grajjy Leaves, lying on the Ground for the firjl
Tear, and are the next Tear carried up with the
Stalks, divided into fome Branches, and fet by
couples at the Joints, having a fhort, thick, gray-
ijh green Husk at tfyeir tops, out of which Oioot
forth by degrees, one after another, feven or eight
fmall faint Flowers, /mailer than the /mailed
Garden Pink by much, vohich/cartefy Jhew them-
felves above the brim of the Husk: more Floors
than one, /eldom appear at a time out of the Husk
very rarely two, by reafon of which, they are Ionj
in llowering. After they have done blowing, there
is found in the outward Husk Jo many fever dsmall
long husks, as there were Flowers, each containing
whin them /mall blackifa Seed. Of this Ki'id,
there is One vohiclr has*but one Flower rifing out
of the Husk^ and of a paler reddifh color than the
former.

XXXI. Caryophylli prat en/is nofter major,
Our greater Wild: Field Pink. This grows near
Deptibrd and Redrit^ and in many places of England
Wild, being a /mall Kind of Pink, as it may be
called. It fpreads much oftentimes, and roots again
by the Branched as it grows, with /mall fhort green
Leaves next the Ground, and by couples on the
Stalks, with /mall reddifh Pink like Flowers on the
Tops.

XXXII. Caryophyllus pratensis nofter minor,
Our leffer Wild Field Pink. This is lejjèr than the
former, and grows among the thick Grafs in our
Meadows near London, as towards Totnam Court
and other places adjacent to the /ame. • Its Root il
fo fmall and Thready, that it will not bear Trans-
plánting. Its Stalks are very /lender, on which
arc fet f nailer, fhorter, and greener Leaves, than
on the former. The Flowers alfo are j'mailer and
of a clear fhining red color-, Jometimes but One cf
a Stalk, and/ometimes more, epecially'if ltr. J
under Hedges and buJJjes which may defend it b»
their fhadow*

Vtnks Wild, or Field.

XXXIII. Caryophylli arvensis UmbelhtMs, Wild Pink in Tufts, much resembles impion, having short broad Leaves, somewhat like to Lohel hit Catch-Fk, but of an hoary green color, the like LCJVSS set by couples on them, and at the top several small twotoers^ rising altogether from one joint, and each flouting on a fieri foot StM, composing thereby a ku. Umbel, some of a reddish, others of color,

XXXIV. * us arvensis is, Wild hairy Sea Pink. This grows not like Pinks in long Husks, but more like tea. Small Wild Campion, of a reddish color I aiding to a mitry, Md gives smaller Seed, unlike; cf Pinks.

XXXV. Caryo hut tomentosus, Hoary Sea Pinks, in Rettf is small and (lender r -icd Sulks en the Ground, md dividing themselves into many Branchi r more hng^ en nhkh xre fit Leaves by couples, some of them bread and bug, others more round, ya till if, ry white, take unto the Leaves of Giuphalium Americanum, called white Live Long, or Life E-vtrljtting. The Viewer?, /fijltag, /ixnvc, and round painted. This abides long, and pprtads math upon the Grt.

XXXVI. Caryophyllat ingustifolius fomentosus, Hoary narrow Leav'd Pi^ I Email low Pink fc&reebf 1 !>rg, 77 Branching into t;w or three parts. U vetn n 1 ane leing longer tb.m an. East of 1 n 1 Green Hb fiveLeavt I Green Hb

Chattam by Rbchejier, and in many other places in England. But the great Kind was gathered in Spain by Boel, and the See^hereof sent to us, from whence we have had fpers Plants. However, the Common fmall Thrift has been brought into our Gardens for its exceeding usefulness, being of great Service for the Bordering of Knots, Secds, Banks, Cfc. as we have before hinted.

- XLL The Times. The Garden Tangle and double Pinks, as also, the Wild or Yield^Kinds, and the Gramen Polyanthemum or S^ Thrifts ^ do all Slower before any of the GiHiflovoers, even from May through the whole Summer, till the end of -August^ and sometimes to the middle of September^ or later, if the Weather is warm, or milde and gentle.

XLII. The Qualities^ Specification ^ Preparations and Venues of the Garden Pinks, are much the same with those of the Gilliflower and Qlovegilliflover^ Juux not thought to be foefte&ual as they. Gerard fays, They are not ufed in Phyfick, but in making Garlands and Nofegaies. And that they are good to be put into Vinegar (I fuppofe thole are the deepeft colored) to give it a delightful color, and a pleafant tafte, as Ruelliw Writes. Ew^hfi^ fays. That their Roots are commended ^g^ft the Infe&ion of the Plague *, and that the juice thereof is profitable to walte or diffolve the kstone and to expel it 5 as also to cure fuch as have fte Falling-ficknefs.

- XLIII. As to the Qualities and Virtues of the Wild ox held Kinds, Authors have faid nothing, Sb that we have no farther Obfervations concerning them.

.XLIV. Xeain his Flora Lib. 1. Chap.%%. fays, That finks are of many forts and little efteem, 2nd ferve only to fet on the fides of Borders in Spacious Gardens, and the better fort of them to *nake Pofies of, mixed with Buds of Damask Rofes. Mofl of them are fingle, but there are fome which bear double Flowers (as are before defcribed) and of thofe, they which are called the Feathered Pinks are the belt both for form, color, and fragrancy of Smell, having broad Leaves, deeply cut in and jagged on the edges, of which Kind there is white, light red, bright purple, light and deep fpeckled, and fome with a deeper or paler purple fpot in the middle t and of thefe the belt are the Feathered Pinks of Auftria, and that with the large deep-purple Spot in the bottom.

XLV. Pinks Flower with Rofes in jfune^ and every ordinary Gardner knows how to Plant and difpofe them, as also that vulgar Plant called Thrift, the greater Kind of which bears many Flowers ^n a Head, like the fmailer or common Sonr, -it by reafon of its Flowering by degrees, it is ^ no very great beauty, befides it is a tender riant, aff^s the Vicinity of the Sea, and abides ^ot long in our Gardens.

Plant ago major incana Lobelij & C/ufi;\ & Plantago Salmaticenfis *, Plan* tago media Dodon<ei> Fuch/ij & Gefneri *, but Tabernmontanvs and Turner call it Plantago minor, Great hoary Plantain. 4. Plantago latifolia rofea multiformk, Plantago latifolia exotica Clufii, Plantago latifolia incana fpicU variis Bauhini^ Plantago fpiralis, Plantago Panicula fparfa Lobelij\ Rofe Plantain, Plantain broad Leav'd varioufly formed. ?• Plantago Jinuofa exotica Parkinioni, Plantago Umbilicata latifoliq Lobelij & convoluta uni/olia, Crumpled Plantian, or Exo- tick Plantain.

The Descriptions.

IV. The firft^ or Our Common broad Leav'd Plantain. Its Root is made of many white Strings^ growing fomewhat deep, and taking fo fafl hold in the Ground, that it U not eafie to pull it up. It fprings up with many fair, broad, and almoft round pointed Leaves, with feven Nerves^ or Ribs in every one of them for the mop: part, running all the length of the Leaf, of a fad green color on the upper fide^ and of a more yellowijh green underneath. Among thefe Leaves rife up feveral fmall flender Stalks, about a Foot more or lefs high, not eafie to break, naked or bare of Leaves unto their tops, where each*Stalk bears a fmall lonz round blackijh green Spike or fcaly Head vohofe Blomings or flowers are fmall whitijh Heads% with

crumpled or waved oh tht 'edges-, the farther end i
 <f itjhevoing fomethirig like a Plantain Leaf. The
 bottom of the Leaf hcu on eãch fide thereof, a large
 piece a* it were torn from it^but yet growing to
 it, which are likewife crumpwd and waved, and
 each of them fhewing themfelves in the form of a
 Plantain Leaf, its Tafte alfo being not unlike to
 •Plantain^ that the whole Leaf feems & if divers
 great large Leaves were joined together to make
 one. This Leaf perifhing the firft Tear, ibWe
 rifies tip the next Spring, fevertul Leaves dofe
 together, not formed into one, ds the former,
 but as if divers Leaves were joined together,
 each having a Plantain form, but fomething
 a little rounder, and a little crumpled or wa-
 ved <u the former was. The Stalk rifies up
 in the kiddle of thefe Leaves, about half a
 Tard high, bearing thick and fhort fpiked flat*
 *ifh Heads, with Seed therein, much like to the
 ethers:

IX. *The Places.* The firft grows almoft every
 vwhere in Fields, and in vvaſte and untilled places,
 and in Path ways generally. The fecond grows in
 France, Italy, Carolina, &c. and with us in fome
 Gardens. The third Clufius fays, grows in Spain ^
 I found it growing plentifully in many places of
 the South Carolina: and it has been found grow*
 *g in feveral other colder Climates, as alfo in
 ſome places in England. The fourth, tho' it is
 ^Ued a Strange or Exotick Plantain, in Clufim his
 Country, yet it is found growing Naturally in Eng-
 land, and is thought to rife from the third fort.
 •nd is now brought out of the Fields, and in
 many places Planted in Gardens. The fifth and
 *aft was lent in Seed from Pelliterius of
 Mompeſier to Lobe I, who fowing the Seed, it
 grew with him in his Garden many Years. John-
 fon in Gerard fays that he found the fourth
 Kind growing in fome places in the Ifle of
 Tenet.

X. *The Times.* They ſpring up from the
 beginning of April to the end of September.
 They, are in their Beauty and flourishing
 State, from the end of May to the end
 of Auguſt, their Seed ripening in the in-
 termediate times, and not long after their
 Flowering.

XL *The Qualities.* Plantain is cold and dry in
 the end of the firſt Degree, G^rWfays in the
 fecond Degree. It is dry without biting, and
 cold without benumbing: the Root is ſaid to
 be dry in the fame Degree, but not fo cold as
 the Leaves. The Seed is of Subtil parts, and
 lefs cold yet than the Roots. It is Aperitive,
 Abfterfive, Afrtringent, Anodyn, and Traumatick
 or Vulnery.

K>/ XII. *The Specification.* It cures the [Soar-
 ^VY in a hot habit of Body, Heals the excori-
 ations of the Stomach and other Bowels ^ flops
 Catarrhs, and all forts of "Fluxes in Man or
 Woman. It ſtops alfo all forts of Hemorrhages
 whether Internal or External, the over-
 flowing of the Courſes in Women, Spitting
 2nd Piſſing of Blood, and therefore is of
 Excellent uſe in the Curing of a Phthiſis,
 Or Ulceration of the Lungs. Dioſcorides fays,
 It cures Agues, ſtops Vomiting, and is good
 againſt the Epiiepfy and yellow Jaundice. It
 allays Inflammations of the Eyes, cleanſes
 and heals old Ulcers, whether in the Mouth,
 Throat, or other parts, gives eaſe in the Piles,
 Kills Worms in the Belly, and gives eaſe in
 the Gout, and cures all forts of fimple Green
 Wounds, as alfo old Sores, whether inward or
 N outward.

XIII. *The Preparations.* You may have from
 I theſe Plants, i, A Liquid Juice. 2. An Effence.
 !?. A Decottion. 4. A Tender of the Leaves.
 15. A Pouder of the Root. 6. A Pouder of the
 Seed. 7. A Cofmctick. 8. A Lotion. \$. A Li*
 nirfient. 10. A Catap/afm. 1U A Dijtilted Wa-
 ter. 12. A Diet Drink.

The Virtues;

XIV. *The Liquid Juice.* Being Depurated of
 Clafified, and drank for feveral Days together,
 prevails Wonderfully againſt all Torments and Ex-
 coriation^ of the Guts or Bowels, helps diffillati-
 ons of Rheum upon the Throat, Glands, Lungs%
 fſfc. and ſtops all manner of Fluxes in Man or
 Woman, and the overflowing of the Terms in
 Women. Dofe from '3 to 8 Spoonfuls or more,
 either alone or mixt with fome Styptick red
 Wine.

XV. *The Effence.* It has all the Virtues of the
 Liquid Juice, beſides which it is good to cure
 Spitting of Blood, and all other Bleedings by the
 Mouth, alfo Piſſing Blood, and is profitable to
 help a bloody or tbul Water, occaſioned by any
 Ulcer in the Reins or Bladder, as alfo to flop the;
 free bleeding of Wounds^ it is likewife an eſpecial
 Remedy againſt a Phthiſis or Ulceration of the
 Lungs, and a Vehement Cough ariſing from the
 fame. It is ſaid to be gbod againſt the Falling*
 ficknefs, Dropſie and Jaundice, and opens Ob-
 ſtru&ions of the Liver, Spleen, and Reins.
 It cools Inflammations of the Eyes, and takes
 away the Pin and Web (fo called^ in them.
 Dropt into the Ears, it eaſes their Pains, and re-
 ſtores Hearing much decayed. Dofe from 3 to 6
 Spoonfuls more or lefs, either alone or with
 fome fit Vehicle, Morning and Night, or
 oftener.

XVI. *The Decottion.* It has all the Virtues of the
 Juice and Effence, but ought to be given in a much
 larger Dofe, as to half or three quarters of a
 Pint. The Decottion of the Rents in Wine* (ac-
 cording to Dioſcorides) is good to cure Quotidian,
 Tertian, and Quartan Agues: and this is probable
 enough, for I am apt to believe it* performs that
 Cure, by Vertue of its Natural Stypticity. It may
 be given an hour or two before the Fit.

XVII. *The Pouder of the Leaves.* It has the
 Virtues of the Juice and Effence, yet is not alto-
 gether fo effe&ual as they., in the Dropſy, Epi-
 lepfy and Jaundice: put upon old putrid and run-
 ning Sores, it cleanſes and dries up the moiſture,
 and in fome meaſure incarnates. Taken in Drink
 to a Dram or Dram and half, it is ſaid to kill
 Worms in the gelly; and ftrewed upon old Ulcers
 which have Worms in them, it kills them, moit
 eſpecially if white Wine Vinegar be ſprinkled upoi
 the lame,

XVIII. *The Pouder of the Root.* Given from I
 to 2 Drams, it is ſaid to Cure Agues, to flop Vo-
 miting and Fluxes, and to ftrenghen the Stomach:
 Mixed with equal parts of Pouder of Pellitory of
 Spain, and put into a hollow Tooth, it is ſaid to
 eaſe the pain thereof: put into Wounds and Ulcers;
 it dries and heals them.

XIX. *The Pouder of the Seed.* Taken eVery day
 Morning and Night, from 1 to 1 Drams in any ht
 Vehicle, as in the Yolk of an Egg, Pulp of a Roaſted
 Apple, or in Mithridate, or lotne proper Syrup,
 it is ſaid to heal Ulcers of the Lungs ftôp
 Coughs, and all forts of Fluxes of the Bow^
 els 5 Catarrhs, and helps weaknefs of the Sto-

inach, Indigeftion, and Hops Vomiting, is good againft the Epilepfy, Lethargy, Convulfions, Dropfy, Jaundice, Strangury, and Obftuitions of Liver, Spleen and Reins.

XX. *The Cofmetick.* Take Ejjence of Plantain, Ejjence of Uoujleek, of each 2 Ounces ± Juice of Unions i Ounce \ mix them. It is good againft Burnings and Scaldings* as alfo Inflammations, and all hot pimples and eruptions of the Skin, being bathed therewith twice or thrice a Day.

XXI. *The Lotion.* Take TdecoUion of Plantain 8 Ounces \ Ejjence of Plantain 4 Ounces \$ Alum Watery Tinfure of Madder Roots, of each 2 Ounces-, Honey enough to Sweeten them : mix all well together for a Lotion. It is of great ufe, and has a good effect, for the curing of old or hollow Ulcers, which are difficult to be healed, as alfo for Sores, Cankers, and Ulcers in the Gums, Mouth, Throat, or Nofe, or in the ptivy Parts of Man or Woman-, it cleanfes, dries, and heals them in a lhort time. Fomented alfo upon Tumified Hemorrhoids or Piles, it eafes their Pain, and quickly difcufles them.

XXII. *The Liniment.* It is made with the Juice and Oil of Rofes. Anointed on the Temples and Forehead, it gives eafe in the Head-ach proceeding from heat, and is very profitable for Frantick or Lunatick Perfons, alfo againft the bitings of Serpents, or Mad Dogs: It gives great eafe-(being applyed) in all hot Gouts, whether in Hands or Feet, epecially in the beginning, to cool the heat and reprints the Humors.

XXIII. *The Cataplafm of the Green Herb and Root.* It allays the heat of Inflammations, is profitable againft a hot Gout, cleanfes old and putrid Ulcers, and prevents pains, Tumor, and Inflammations, which are apt to happen in Diflocations, and over-ftaining of the Nerves and Tendons.

XXIV. *The Difilled Water.* Dropt into the Eyes, It eafes their pain and fmarting, and cools them very much being Inflamed-, and is faid to clear the Eyes from Clouds, Films, and other things which obfcure the Sight* A little Alunf and Honey being dijjolvei in it, it is of good ufe for wafhing, cleanfing and healing a fore and ulcerated Mouth or Throat. If Plantain Water 1 part is mixd with Beej Brine 2 parts, it will be good to heal all fpreading Scabs, Scald Heads, Tettars, Ringworms, Scurff, Morphey, Shingles, or other running and fretting Sores.

XXV. *The Diet Drink.* Take Juice of Plantain 3 Quarts •, Juice of Oranges a Pint-, Roots of Burdock 8 Ounces; of Angelica, fbarp pointed Dock, and Parffy, of each 4 Ounces ^ Qorriander and fvoet Fennel Seed, of each 2 Ounces \ Nutmegs thin fliced an Ounce \ Alexandrian Sena 4 Ounces: Aew Ale 10 Quarts ^ put the Juices into the Ale ^ then put all the other Ingredients* > (a* the Roots firft thin fliccd or bruifed, the Seeds bruifed, the Nutmegs and Sena) into a long, clofe Knit Net bag, with a Stone in it, which put alfo into the Ale. Let them work together, and after two or three Days, let the Patient drink of it a Pint at a time Morning and Evening, renewing the Recipe with frcjh Ingredients, at oft as need Jhall require. This is a perfect cure for the Scurvy > and all Scorbutick Taints, and Rheumatick Pains in a hot Conftitutiōi it canfes and purities

the Blood, makes fubtil and fine the *Lympba*, and caufe a due and eafy circulation of ail the Natural Juices of the Body.

CHAP. DLXVL

Of PLANTAIN narrow LeavU

OR,

R I B - W O R T

THE Names. It is called in *Greifo* *neuros*: in Latin, *quinquenervia* (from its having five Ribs), and *flantago* Angupp^q in English, *Narrow Leav'd*, or *Long Leav'd* Plantain, and Ribwort, alib Ribwort tain.

II. 27? K/WJ. There are nine or feveral forts of this Plant, accounted or fome Authors, but the moft of them being to be found in our Climate, in our *West India*, or *American* Plantation; we fhall only Defcribe to you fuch as Natives of our own, which are the tour following, viz. i. *P/tf*^ quinquenervia* *Flantago anguftifoha major*, *Flantago nor Dodona*, *Fuchfij*, *Gefneri*; *Flantago Maithioli* *V Lugdunenfis*; Our common greater Rib-wort, or Rib-wort *Plantago Flantago anguftifolia minor*, *Flantago nervia minor*, *£? longa minor*; Ribwort, or Ribwort Plantain. 3- *anguftifolia Rofea*, *£? multijonhi*. *tor of a prolifera*, *Flantago angufUfoha*, *Flantago quinquenervia Rofea Gerardi*; Rib-wort; or Rofe Rib-wort Plantain. 4- *tago anguftifolia ferrata Uufd*, Rib-wort Ribwort Plantain with dented Leaves.

The Defcriptions.

III. *The firft*, or Our common *fir* Rib-wort, or Ribwort Plantain- arc long, fibrous, or stringy, like *tp^e fj* of the Common broad Leav'd Plantain- which Spring up divers narrow, hairy, dark green Leaves, lying on the with five Kervcs or Ribs for the in every one of them, running from the Leaf to the other, and pointed ^H And from among which rife Wed and fripei Stalks, fomewhat the tops of which grow fuch like Spiked dark green Heads, M in Common Plantain, and Woxaering manner, but greater and Itwrctcr, fuch Seeds at in the former, but of a darker color. This is jound varying in the Heads, for two Heads upon a Stalk, or one lieud into mo parts, or with two or more Heads, growing at the bottom of tu I Heal

IV.

IV. The second, or Letter Ribwort, or Ribwort Plantain. This in its Roots, Leaves, Stalks, Heads, flowers and Seed ^ and in every of its parts, as also in its form of growing, is like #?<? /fo ^r/r^ ^7/*^ described, and differs only in its magnitude, this growing always much finer than that.

V. The third, or Rofe Ribwort, or Rofe Ribwort Plantain. It has a pretty thick long Root, with many Fibres adjoining to it. Its Leaves are like the two former Kinds, so that by its single Leaves it is scarcely to be known from them, before the Stalks with the Heads begin to appear, which when they are full ripe, shew themselves in a variable manner*, some having large or long narrow Leaves set together, somewhat sparsely, imitating a loose or dispersed Role: others having short or green Leaves ^ more compact and closed, making a more comely form of a Rofe, sometimes fully laid ^ Sen, and sometimes more clost, and as it were half closed-, and sometimes out of the middle of the ^ will arise two or three or more short Stalks ^ Prolifera made of many small Leaves set together in the same manner, and sometimes many short spikes set close together in one Head, or separate each by its self. This Kind has scarcely ever been seen to bear Seed, but is increased by flipping or parting the Root, and planting or setting it again.

VI. Johnson in Gerard say, That this Rofe Ribwort has many broad and long Leaves sharp pointed, and of a dark green color, Ribbed with five Nerves or Sinews like the Common Ribwort, *mng which rise up naked Stalks ^ furrowed, chum-

fred, or crested, with certain sharp edges. At the tops whereof grows a great and large Tuft of such like Leaves, as grow next the Ground, making one entire Tuft or Umbel, in shape resembling a Role, (whereof I thought good to give it the Surname) which is from its blower.

VII. The fourth, or Ribwort, or Ribwort Plantain with dented Leaves, Its Root is small ^ long and fibrous like the first Kind. In its Leaves and manner of growing, it is very much like the Second or Lesser Ribwort, but finer, narrower, and harder in handling, being dented about the edges, and so sharp withal, that they may be said to be Yrickles, which has caused some to call it Peregrina Spinosa, the? I think improperly. The spiked Heads grow upon slender Stalks, about half a Foot high, being somewhat open, or differed.

VIII. The Places. The first grows almost every where by Hedge sides, Path way sides, Borders of Fields, and Fertile Meadows. The Second grows likewise in divers Meadows and Fields, and by Path-ways, and is also found growing in Gardens as a Weed. The third is found Wild in several places of this Kingdom, in some places in the North of England, and formerly in a Field near London by Hogsdon, and in many other parts of the Kingdom, from whence for the rarity thereof, it has been Transplanted by some Lovers of Plants, and cultivated up in Gardens. The fourth grows with us only in Gardens, being brought hitherto in Seed from Spain: but I have sometimes found it growing Wild in some parts of Wotda*

IX. The Times. They all Flower and Seed at the same times (viz. in May, June, and July) with the former Broad Leaved Plantain.

X. The Qualities, Specification, Preparations and Venues, of Ribwort Plantain are exactly the same with the former Broad Leaved Plantain - saying that some Authors are of Opinion, that the Ribwort exceeds in Virtue and Efficacy to all the Intentions for which the Broad Leaved is applied.

CHAP. DLXVII

Of PLANTAIN Bucks-horn,

I. Hippocrene Names. It is called in Greek Κορυμβος X (A' Corvino pede quem effigiam folia as Pena says:) In Latine, Coronopus also, but they likewise call it Cornu Cervi, and Cornu Cervinum Herb a Stella, Harexaria, & Sanguinaria. or SanguinalU, (the one from the place of its growing the other from its Qualities, Properties or Efficacy) I think it might be more properly called, Plantago Cervina, Plantago Cornigera, Plantago Cornuata vel Corniculata, a Horned Plantain. - in English Bucks-horn Plantain., and by some, Crox-foot Plantain.

II. The Kinds. We scarcely know any more than two Species of this Plant, viz. 1. dronopli, vulgar* - Cornu Cervinum vulgare, Coronopus Livus Cordi, Gefnen, b' Camerarii' (h... Italy, France, Spain, and other parts of Europe, in Gardens for a Sallet Herb, Stella

called, *Qoronopus Sy he fir is*, because it is also found Wild in several Countries: Our common Bucks-horn Plantain. 2. *Coronopus Infula Prochyta Column**; *Coronopus Sylvestris hirfutio Bauhini*[^] Prickly Bucks-horn Plantain,

The Description.

lit. *The first, or Our Common Bucks-horn Plantain. Its Root U fingle, long', and [small, with several fibres adjoining thereto. If it is Sown or Planted from Seed, it rises up at first with small, long, narrow, hairy, dark, green Leaves, almoji like Grafs, without any division or gash in them-, but those which succeed are gash in, on both sides of the Leaves, into three or four gashes, and pointed at the ends, resembling the Snaggs of a Bucks Horn, from whence it took its Name, And being well grown, these Leaves ly round about the Root upon the*

Ground, in order, one by another j thereby resembling the form of a Star, and therefore called Herba Stella. From among which rise up several Hairy Stalks, about an Hand breadth high, bearing every one of them a small, long, spiky Head, very like unto those of the Common Plantain, having such like mornings and Seed after them. The Smell and taste thereof is very much, or altogether, the

same as the Common and Ribwort Prickly Bucks-horn Plantain. This differs but little from the former-, but

that its Leaves an something larger, broader and thicker, and more hairy or rough. And the dents or jaggs of the Leaves are more. It is prickly. The Stalks and Heads are likewise more rough and hairy. These are the chief differences[^] in all other things, it is like to the former.

V. *The Places,* the first usually grows in dry, sandy Grounds, in Barren Plains and [^]Untilled places, in many parts of England; as in *Tutty Fields, near Wepv'mfier; at Waltham jil%, not far from London, as also upon Black-Heath near Southwark,* and many other like places. In Italy, & ^{<^>} they are wont to Plant it in their Gardens, as a Salty Herb, because they commonly eat it in Salads. The second Grows on Rocks in the Island of Prochyta as *Columna* says: I have had it from *Prochyta* Witneffes, who told me, that they had seen it grow upon some of the Mountains in Wales, and in some Other like Places in England:

VI. *The Times.* They both Flower in [^] June, and July, their Seed ripening in [^] mean Season: and their Leaves abide green in a manner all the Winter.

VII. *The Qualities, Specification, Preparation and Venues of Bucks-horn Plantain, are the very same with those of the Common broad Leadwort, (in Chap. 565. Self. 11. ad2f.)* *^o refer you.

VIII. *Observ. 1. The juice or Plant,* Is laid to be a peculiar remedy against Bitings of Vipers, or other Venomous Beasts, drinking of it either alone, or in a [^] Generous Wine, a Cataplasme of the Green tier being also laid upon the Wound or place [^] ten. It stops also all bleedings and [^] of Blood, whether at Mouth or Nose, by Urine or Stool, cures the Dyfentery, Bloody Flux, and other Fluxes of the Bowe and is profitable as *Paulm Jegineta, Lio-* says, against the Colick. Given inwardly 4 to 8 Spoonfuls at a time in [^] Wine, 3 Hours before the coming of an [^] it cures it; more especially if the Leaves of the Plant be laid to the sides, and [^] will suddenly vanish, as if it had been [^] by Witchcraft.

IX. *Observ. 2. The Decotion in Wine* [^] has the Virtues of the Juice or Effence; [^] cures the sides which, if it is long drank, it cures Strangury, and is profitable for such [^] troubled with Sand, Gravel, Stones, or [^] tarous Matter in the Reins, abating the Inflammation of the Reins, Ureters or adjacent parts, and strengthening them given Morning and Evening for some [^] together, it helps all sorts of Sore [^] caused from a Defluxion of hot, sharp, Salt Rheums, by cooling the parts, abating acrimony of the humbr, and stopping [^] the

X. *Observ. 3. The Root, whether in* [^] may be given from 2 Scruples, [^] in any fit Vehicle Morning and Evening, or the Decotion in Wine, or Infusion in [^] of Wine, have all the Virtues of the Effence and Decotion, as [^] specified, that the Root is thought to be more [^] than the Herb or Leaves, and to be a [^] specifick Remedy for the Colick.

XI. *Observ. 4. The Cataplasme of* [^] Roots with Bay Salt. Applied to both [^] and Bound on pretty hard (yet not too [^] neither) cures Agues admirably, it [^] (tops the Courfe of the Fits, and loon [^] it profligates the Ague, as to complet a [^]

CHAP: DLXVIII

O/ PLANTAIN Water,

I. *J*HE Names. What Greek Name this JL Was called by in Diofcorides or Theophrastus, is uncertain, but in respect to the Latine Name it may be *A\$y6yha<rrw'iwf&vz in Latine, Plantago Aquatica, Arnoglossum Aquatic urn: and in English, Water Plantain.

II. The Kinds. 1. Plantago Aquatica major, Fiftula Paftoris, Barba Sylvana, Our common greater Water Plantain. 2. Plantago minor Aquatica Cafalpini Plantago Aquatica humilis angustifolia Lobelij, The lesser Water Plantain. 3. Plantago Aquatica minor muricata, Damafonium Stellatum Lugdunensis, The lesser Water Plantain > with Calthrope like Seed, Star Water Plantain. 4. Plantago Aquatica minima Clufij; Plantaginella palustris Bauhini, The least Water Plantain.

The Descriptionsi

III. The first or Our common greater Water Plantain. Its Root consists of a great Bujh of many long fibres or Strings set together i which

fends forth severall long thick green hollow Stalks, with large long green Leaves on them, having some Jliczo of Ribs in them, like unto Plantain: but they are much greater, stiffer, and longer, and with sharper ends* From among these rise up severall tall three corneredfyongy Stalks, divided in severall Branches at the Tops, on which fit and a great number of white Flowers, composed of three leaves apiece. After which follow small three cornered green Heads, in which is contained the Seed.

IV. The Jfcond, or The lesser Water Plantain. Its Root consists of many small white Fibres like the former, which fends forth severall long Leaves, six times smaller and narrower than the former, from among which rise up divers bare Stalks a Foot high, bearing a Tuft of many bluish, colored Flowers, consisting of three Leaves apiece like the former, each fit and a long foot Stalky and all rising from one Head, like an Umbel after which follow rough Meads of Seed like to those of the Crowfoot.

V* The third, or Lesser Water Plantain with Calthrope like Seed, Star Water Plantain. Its Root is a bush of long white Fibres or Strings i which fends up severall small arid long Leaves like to those of the Ribwort Plantain, but much smaller and turning themselves backwards. The Stalks are slender and naked, and about half a Foot high or more which bear at their tops several small Tufts of white three leaved flowers which being pulled away, come after them, prickly Heads fitting out with ends like to a Star, in which lies the Seed.

VI. Johnson in Gerard says, That this Plant in its Roots and Leaves is like to our first described, Of also in the Stalk, but much less in each of them, the Stalk being about a Foot high at the top of which stands many pretty Star like skimmy Seed Veffels, containing a yellowish Seed.

VII. The fourth, or The least Water Plantain. Its Roots consists of nothing but a Bush of very fine Fibres or Threads. This Least Water Plantain spreads itself wholly upon the Ground, bringing forth severall small, long and narrow Leaves, fit and lying on very slender foot Stalks, from among which come many slender Stalks lying down on the Ground, being not much above an Inch long, and ending in a small Head, which sending forth small Fibres, comprehends a great space of place, and the Root again, shooting forth other smaller Leaves from among which spring forth five or six small round Buttons (no Flowers having yet been observed on the Plant) standing on very fine Stalks, opening into two parts, shewing very small Seed within them. From among these round Buttons grow also other rows or courses of small Heads bringing forth other smaller Leaves and Buttons than the former.

VIII. The Places. These all grow on the banks of Rivers, in Watery Ditches, Patches, wet Ponds, and other standing Waters. The first grows almost every where in moist places throughout the whole Kingdom. The second and third are more rare, but in the like places, as in a Ditch on this side Margate, in the Isle of Tenet. The third has been found growing in the Ditches on the left Hand of the Highway from Holloway to Highgate, and a little beyond Ilford, in the Way to Rumford - Mr. Goodyer found it also growing upon Hourflow-Heath

, IX. *The Tunes.* They Flower all *June*, and *July*, unto *Augufl*, and the *Seed* is ripe in fome little time after.

X. *The Qualities* > *Specification*, *Preparations* > and *Vertues*, of *Jl'Wr Plantain*, are the fame with thofe of the *Common Plantain*, defcribed in *Chap. 565. Setf* > 11. *mf &ff*- 25. aforegoing, to which I refer you: but it is very rarely ufed in *Phyfick*, the others being more common and more eafy to be had.

CHAP. DLXIX-

Of PLANTAIN Sea.

I. *'Tp/f E Names.* It is called in *Greek*, *'Oti*

X *rw 3y 'Ohkzov*: in *Latine*, *Holoftium*, *O Hololieum*, (for it is Written both ways) alfo *T font ago Marina*: and in *Englijh* ^ *Sea Pl*<>*

J

II. *The Kinds.* There are many Species of this Plant, but thefe five forts are chief, viz.

i. *Plantago Marina vulgaris Lobclij, Lugdunenfis* *tf Gerardi*, Our common Sea Plantain. 2. *hob-*

fieum Salamanticum, Holoftium U'Spanicum, Plantago

anguilifolia albida l'odonti, Plantago hifpanienjis

Plantain Sea Grafs Leav'd great.

VII. *The fifth, or Lesser Grafs Leav'd Sea Plantain.* This in its Roots, Leaves[^] Stalks, Heads, Flowers and Seed differs not much from the former, or Greater Kind[^] but that it is Smaller, and scarcely having any dent on the edges-, it grows also much lower, not exceeding three or four Inches in height, and the Leaves not above two or three Inches at most in length.

VIII. *The Places.* The first grows near the Sea, and upon the Sea Coast, in most places of England, as also upon the Sea Shores of many other Countries. The second and third are Natives of Spain, the greater of which *Clufms* says, he saw by the High-way sides near to *Valentin*[^] but since his time they have been found to be Natives also of our Country, growing at *Baftable* in the *Ijle of Wight*, and in the *Ijles of Jersey* and *Gernsey*. The fourth and fifth Kinds are Natives of Italy, as *Matthiolus* says, and of Germany as *Camcrarius* says, growing by a Lake of Salt Water near *IJebia*: since those times, we find them to be Natives also of our Country, and several Eye Witnesses have affirmed, that both the greater and lesser Sorts grow near the Sea side in the West parts of *B&k* *hd* ; in all the Tracts of the *Mairhes* near *AJ* *hd* ; in *Glocester-shire*; and that they grow upon the Rocks in *Scilly*, *Garnsey*, and the *Ijle of Man*. The first Species has been found growing by the Forts on both sides the Water at *Gravel* *en* at *Erith* near *London*-, at *Lee* in *Effex* \ at *Rye* in *Kent* -, at *West-Oxfer* also-, and at, or near *hd* *hd* *hd*

IX. *The Times.* They Flower towards the end of June, and thro' all June and July, and their Seed ripens in a short time after.

X. *The Qualities, Specification, Preparati* *on* and *Virtues* of *Sea Plantain*[^] are fully

the same with those of the *Common Plantain* in *Chap. 565. Seff. n. ad 25.* to which I refer you.

XL *Observation.* 1. *Gerard* says, That these Herbs have the same Faculties and Virtues which the other *Plantains* have-, and that they are thought to be the best or most efficacious of all the Kinds. And *Parkinson* says, that what has been said of the other *Plantains* may in some sort be justly referred to these* for in their coldness and dryness, and other Properties, wherein the *Plantains* are excellent, these do but little differ, and therefore, That it needs not to repeat the same things here again, which in other places have already been spoken.

XII. *Observ.* 2. Only says *Matthiolus*, That the fourth Kind here mentioned called *Serpentina* the People of *Goritia* in *Italy* where it grows, use it to especial good purpose, against the BitingS of Serpents especially, and of other Venomous Beasts (which *Matthiolus* himself also says, That he had found true by good Experience:) as also to help those that are troubled with the Dropfy, that chiefly which has possessed the whole Body properly called a *Sarcitis* or *Anafarca*.

XIII. *Observ.* 3. *Galen*, *Dioscorides*, and *Pliny*, have proved *Sea Plantain*, to be such an excellent Wound Herb, that it presently closes or shuts up a Wound, tho' it be very great and large. And by the same Authority I speak it (says *Gerard*) That if it be put into a Pot wherein pieces of Flesh are Boiling, it will Soder them together.

C H A P . DLXX.

Of P O L E Y ;

O R,

P O L E Y Mountain.

I. *[~]T^h & Names. It is called in *Greek*, *noxx* *X* (*hie diffinitio propter Canitiam, WOKM enim Canitiam vel Cannm significat*, because it is like to the hoary Hairs of a Mans Head:) in *Latine*, *Folium, of Polium Montanum*: in *Engliffh*, *Poley*, and *Peley Mountain*. Some will have *Polium* to be *Leuccu*, and that *Dioscorides* has twice treated of that Herb under divers Names, for that the Kinds, the reason of their Names, and the Qualities or Faculties do agree. There are two, viz. *Aa*^s*SeWf* which they will have to be *Polium Montanum*, and *Ag*^{jk} *n*^s[^] which is *Polium Hortense*. The Name *Leuccu* is from the whitifli color-, and *Potion* from its Hoariness as is aforefaid, being like to the white Hoariness of a Mans Head.

II. *The Kinds.* Authors have made ten or Kinds of this Plant, but they being most of S Strangers

Strangers in our Climate, nor yet found to be growing in our Tranfmarine Plantations, wefhall only take notice of, and Defcribe the three Species following, viz. \YoliumMdntahumvulgare,* Pciutm Montanum Luteum Lckehy, Ytium TAohiahnm primum Dodonai, Our ordinary of common Fbley. 2. Folium Montatiurit minits, folium Mofitanm primum Mdtthioli, Folium Montanum albufrt, White Poley* ct upright Spanifh Poley Mountain." 3. Polikm Mont ahum LavenduU folio haiahini, Folium Montanum fecundum Matthioli, Folium Montanum feptimum Clufij, Folium recentiorum ftemin* LatoenduU folio Lobelij, Spike or Lavender Leav'd Poley.

it feldom .gives perfctt Seed to be Sotvn. Jet Clufiusffys, That hehadjome Plants raifed from the Seed of this Species j hut they brought forth Wotoers more pale than the Mother Plant, and fome more, white, efpedaily vn the 'outfidt) being pah o'nkt injide.

IV. The fWond, ct White Poley, or Upright Spani(h Poley Mountain. Its Root is hard any wosdy li' & the former. The whole Plant is fmailer than it, and rijes up with many fmall ifefow Branches, [landing more upright than thi firtt or common Kind, and not leaning downwards to the Ground, ihS it grows upright, yet it grows not much higher. On its Staffo nriti Branches are p

*the Defcriptions.

III. I7v firfi , dr Our ordinary or common Poley. Its Root is fomevohat long and hard, with u few Fibres banging thereto. It is a fmall foio Plant, not above a Foot high, having Jeveral white or hoary round and hard Branches, on which are Jet drivers long and fmall hoary Leaves, overlaid a, it were with a yellowifh white Down^ a little dented about the edges, and fomething broader or greater than any of thofe which follow , two always fet together on the Stalks at they grow up: at the tops whereof grow whitifh or hoary yellowifh Heads thrujiing out many fmall pale colored Flowers\ and in fome places more yellow, fianding in hoary Husks. The Seed h fmall and blackifhi The whole Plant fmells fweet, ftrong and quick voithall. The Branches being Slipt, and Jet in the Ground, will grow very well, and by that means be fufficiently enereafed, for in our Climate

many hoary Leaves, fmailer thin thofe a fort, and fome fmall ones together & is iffid little dented about the edges totoards the 0 as hoary, or rather more hoary than it. Jiite tops grow longer and jmailer tfidids, \ lowers, coming forth out of hoary Cups, 'ffAlack' more jpr cad than the following. The Seed \ ijh and fmall^ yet greater than that of the fore defened, tho' the Plant it And the Smell of ttris is more fweet and ac»

The third, or Spike or Lavender It hits a hard woody Root, fprctt out toib ?many fmall YibrCs. from this forth Jeveral weak Branches, on which t: fmall long Leaves, tiw together, one fig < as in both the former, which are Jomch on the tipper fide, and lJVary underneath 7^ like to the Leaves cf Rofemaiy, or f not at allfnipt about the edges. At tve' Branches, come forth many Hovers not Icofely JVread, which are of a white color ing in form from the other, but coining] >/>rayiJb husk, yet net fo very foary as J The Sad a llack like the reft , and the t^

Voley Mountain Lavender
Leavd

b<& a small fveet Smelly not fo pleafant as the former, as fome Authors fay: but Matthiolus fays it fmells well, tb<? not fo pleafant firing as the*ljajl, being of lefs virtue and efficacy than it.

VI. *The Places.* All thefe are Natives of more Southern and warmer Climates, as *Italy, Spain, Candia, &c.* but here they are Nurft up only in *Gardens*, the firft of them being the moft common with us.

VII. *The Times.* They Flower all *June* and *July* to the beginning of *Auguft*, and the Seed ripens in the mean feafon.

VIII. *The Qualities,* foley is hot and dry in the third Degree: Aperitive, Abfterfive, Diuretick, Vulnerary, Cardiack, and Alexipharmick. The moft or greater Kind is moft in ufe.

IX. *The Specification.* It is profitable againft the Jaundice, Dropfy, Spleen, Bitings of Venous Creatures, Poifon, Strangury, obftructions of the Courfes} cures Green Wounds, as aifo old kores and putrid Ulcers, cleaning, drying and healing them-

X. *The Preparations.* You may have there-
1. A Juice or Ejjence. 2. A Decoftion.
3. A Powder. 4. A Cataplafm. 5. A Spirituous
6. An Acid Tincture. 7. An Oily

The Virtues.

XL *The Juice or Ejjence.* They are good for uch as are bitten or ftung with any Venomous feature ^ and is profitable againft the Dropfy <> Jaundice, Hypochondriack Mdancholy, and Pain,

Tumor or Swelling of the Spleen. They provoke the Terms in Wömen,, give eafe in the Strangury, provoke Urine, and force away Sand, Gravel, Stones or Tartarous Matter from the Reins and Bladder. Dofe from 3 Spoonfuls to 6 or more, Morning and Night, in a Glaſs of white Lisbon Wine. If they are given in too great a Dofe they are apt to trouble the Stomach a little, and ibmetimes (if the Stomach is very foul) to caufe Vomiting. If the Lips of Cuts or Wounds be waffled with them, they caufe Confolidation, and a fudden healing.

XII. *The Decoſion in Wine.* It has all the Virtues of the Juice and Ejjence^ but not altogether fo efficacious, and therefore ought to be given in greater Quantity. It opens all obftructions of the Viſcera, as of the Stomach, Lungs, Liver, Spleen, Meſentery, Reins and Womb, thereby carrying off the recrements of thoſe parts by Urine, and curing the Scufvy, Rheumatifm, Cachexy, and other like Difeaſes. Ufed as a Lotion^ it is profitable for the cure of Green Wounds^ and it cleanſes, dries and heals alfo old running Sores, and filthy putrid Ulcers,

XIII. *The Powder of the Leaves and Heads.* It has the Virtues of the Juice, Ejjence and Yecottioii, and may be given Morning and Evening, from half a Dram to two Drams, in a Glaſs of white Port, or Lisbon Wine, or a Spoonful or two of Syrup of Violets, or Clovegillflowers. Strewed upon old putrid Sores and Ulcers, it Hops the flux of Humors, cleanſes, dries, and heals them. Tho' the firft or greater Kind is moft ufed with us, yet it is the Powder of the leffer Kind, (which is the more bitter in Taſte, and the more (harp or quick upon the Tongue) which is put into Mithridate and Venice Treacle, and other Antidotes or Counter Poifons, and is indeed of greateſt Virtue.

XIV- *The Cataplafm made of the greetf Herb.* Applied to great Cuts or Wounds, it quickly Conglutinates and heals them,-and this the greater Kind does beſt perform.

XV. *The Spirituous TinQitre.* It very much comforts and ſtrengthens the Stomach, Bowels and Womb, give preſent eafe in the Colick' and is profitable againft Convulſions whether in old or young: It refiſts Poifon and is good againft the bitings of Mad Dogs, Vipers, and other Venomous Creatures. Dofe from 1 Dram to 2, Morning and Evening in a Glaſs of Wine.

XVI. *The Acid Tincture.* It opens all manner of Obftructions of the Bowels, of what kind foever, ſtrengthens and fortifies the Stomach, creates an Appetite, and caufes a good Digeſtion. It is a potent Remedy againft the Scurvy, and refiſts the malignity of the Plague or Peſtilence, as alfo the Spotted Fever, Purples, and all other Malign Fevers, more uſually happening to younger People, where there is a high and exalted Temperament of the Blood. Dofe %o or 40 Drops at a time, in all that the Patient drinks,

XVII. *The Oily Tincture** It is an Anti-colicky and a potent Diuretick, giving preſent eafe in the Stone and Strangury: It expels Sand, Gravel, Stones if they be ſmall, and Tartarous Mucilage from the Reins, Ureters and Bidder. It provokes the Terms Women, facilitates the Birth, and gives eafe Labor: it alfo caufes a due cleaning afterwards, and either preſents or cures Aftet-pains, which are fo very troubleſom to ſome Women, that they exceed the Vehemency of the Labor it felt

Taken also daily. Morning and Night inwardly in Wine, and the Back Bone being also anointed therewith twice a Day, as also the other parts -aftcaca Un a Palfy, it has \yx\ found by good Experience to Core thair as also Numb-fednets Trembling of the Limbs, and ct^r Palytkk Diiatetio>s of the Naves. It helps Lamcnds, gives caie in the Gout tho" ver fo extrotn, prevails againtt the Sciatica, and is a powerful Remedy againtt Rheu-nariims. Doll' from i> to 30, 40, or 6 0 Drops at a time, Morning and Night in any fit Vehicle.

CHAP. DLXXI.

Of POLYPODY.

It is called by the Aru-bums, bishfra, iis Sfapia has it: by Avicen, Dtbert, and Bmdeig: hy others Albugo and Be\$ Greek, n>K>tdliar, (£ pL.Ly. porua-eh • ides: or a i., jiofis acetbuik, ftu cirrhk Pa/yforxm, fays fli/y:) in Latixf, Polypodwm, ijf YriuitU (qwfj parvA l>!rx •>) if Vilnlarh Hcrba: in EngW, Volipdy: fome call it Will firn, and Oak ier/t) (according to their places of growth) but then they ought to add another Epithire to it, and make it Great, as, Great Oaki^crn^ because there are (mailer which arc properly fo called, as you may fee in Cfwp. 560, ^foregoing, of which tht Polypody is no Species.

II. The Kixdt. We make thiee particular Species hereof, tho' the two firft differ not much, one from another, but in their place of growth, and thtie arc, 1. Polypodium% (and (b it h called by all Authors,) P dium Murmurs, Wall Volvpody, or Polypody of the Wall. 1. Polypodium num^ vd quermum, Polypody of the Oak. 3. Polypo-dium alterums Polypodium minus, The iV Polypody.

The Description?

111. The pji or Polypody of trie Wall. its Root is long, not a Finger thick, creeping a flops 1 on mbich are Jiv/J certain litle Buttons, like thofe Pits and Dems which appear in the Tails of Cuttle Fiflw vat a certain sweetneft, vuitb a '£<\$ Jijj t/ibat harfli. The Leaves of this P might be thought to be like thofe of Male Fein, but that thofe are far teffer, and not nkk1 <it all on the edges. Theft do freftnily fpring up from the R«*f, being cut in on both the edges, -vitb many deep gtfhet, even to the middle Rib. On the xpper fide they .ire fsmooth: on the under fide they are lightly Pauderred, at it tvere with dufly Marks. Tbu .kind of Fern (for it is a Species of the Fern's) wants not only Sftit ani timers, hut Stal.it affe.

Volypody of the Wall.

IV. The fceonl, •• Its Root u „».. * «K " flcpe , or creeping Under the "rr~fo of the Earth, or matter it grows <Wjv^ ifh on the mftie, and gngmfh «!f, a certain • jvaeufli berfkiefis tn the !;•

Polypody of the Oak.

with certain rough Knags or Excrefcencie's on each fide thereof, having alfo rich moiffines, or yellow hairinefs upon it, and fome fibres underneath it, by which it is nourifhed. It is a fmall Herb, and confifls of nothing but Roots and Leaves, having neither Stalk, nor Viewers, nor Seed, as many fmall narrow Leaves, cut in, to the very middle Rib, ftanding on each fide the Stalk, each being larger below, and fynaller up to the top, very like unto the Ofmand Fern, not having any dents, or Notches on the edges, as the Male Fern ha*, of a fad green color on the upper fide, and fsmooth*, but fomewhat rough on the under fide, by reafon of certain yellowijh fpots, which are thereon.

V. This Polypody of the Oak, Gerard thus deferibes. The Root has many Strings fajined to it, one folded within another, of a mean bignefs, yd fweet in Tajie ^ which fend forth here and there new Sprouts or Springs, whereby it increafes, This Polypody is much like that of the Wall (before deferibed) yet the Leaves of it are more finely cut, fsmooth on the upper fide, of a pale green color, together with their Stalks and middle Ribs : but on the nether fide, it is rough like thofe of Fern. This Fern grows alfo imthout Stalks, and continues always without Seed.

VI. The third, or Smaller Polypody. This differs not from either of the former before deferibed, neither in its Root, or Leaf, or Marks on the underfidè of the Leaves, but only that the Root is Smaller^ and flenderer, and the Leaves alfo not fo long and large. This fnallnefs, as I fuppofe, may rife more from the place where it grows, than from the diverfity of Kind: for altho\ in fome places, the Leaves may feem to be a little waved on the edges, yet in refpeU to the general growth of the Vlant, it is but accidental.

VII. The Places. The firft grows tipdrt old Mud Walls, as alfo in Mofsy, Stony, and Gravelly places, near unto Woods, and where it has moft mellow and moft Earth to fpring and live in: alfo upon old Stone Walls, and the tops of Houfes: it is likewife found in the borders of Fields, efpecially under Trees and Thorns, and now and then in Woods: in fome places it grows rank, and With a broader Leaf * in others not fo rank, and with a narrower Leaf. The fecond grows upon old rotten Trunks or Stumps of Trees, as of Oak, Beech, Uafle, Willow, and feveral other forts of Wood, and in the Woods under them \ that which grows upon the Bodies of old Oaks, is preferred before the reft; but inftead of this, moft do ufe that Itfhich grows under the Oak, and for all that I know, it may do nearly as well. The third or "Smaller Polypody grows where the plact is hard and dry, or in barren places, where fcarcely any other thing will grow or thrive.

VIII. The Times. By reafon it is greeu all the Year, and bearing neither Flower, nor Seed as it is thought, it may be gathered for ufe at any time *, Fet it fend forth young green Leaves only in the Spring.

IX-* Tlie Qualities. It is hot and dry in the firft Degree, and as Galen fays, without any biting Property: Aperitive, Abfterfive, Anodyn, Splenetic, Arthritick, and Cathartick.

X. The Specification. It purges Melancholy, Choler, and tough Flegm: is good againft Agues, Gout in Hands or Feet-, hardnefs, pain and tumor of the Spleen > Colick, Stitches in the Sides, Wind, Coughs > fhortneis.of Breath, Wheezing > Hoarfnefs, 0V,

XL The Preparations. The Root is only, or jhieftly in Ufe-, and you may make therefrom, i. A Simple Decottion in Wine or Water. 2. A Com* pound Decottion in Wine or Water. \$. A Pouder thereof 4. A Cataplafm. 5. A Dijilled Water, not only from th'e Roots but from the Leave} alfo*

The Virtues.

XII. the Simple Decottion in Wine or Mead, or in Barly Broth, or Chicken Broth, or in Honeyed Water. If it is made with other opening and mollifying things, it is of good ufe to purge the Belly; to Digeft tough and thick Humors, ind purge Phlegm, whether thick or thirty even from the Joints : and by ufing this Decottion for a confiderable time, fome who have been troubled with Pains and Tumors in their Hands, Kitees* Feet and Joints, have been wholly cured of the fame. It purges off alfo, Colerick and Melancho* ly Humors, is good againft Pains and Tumors of the Spleen, and profitable for fuch as have been long troubled with Quartan Agues, efpecially if the Decottion is made in Whey, Mead or Lhickeri Broth, with Epithimum, Beets, Mallows, and ar± fly Roots. It is profitable alfo againft Prickings and Stitches in the Side, as alfo againft the Colick, tho' inveterate, but then it ought to be taken for at pretty long time, and Seed of Ahife, Coriander^ Cafawaies., and Fennel, with Ginger ought to be added. It is a fafe and gentle Medicine, free from danger, and that brings no trouble to the Stomach, fit for all Seafons and Perfdns, which daily Experience has confirmed. It may be given from art Ounce to an Ounce and half or two Ounces in i Decottion, for one Dofe 5 which may be given in the Morning Falling , with due Obfervation, as in other gentle Purges.

XIII The Compound DecoUion in Wine, Water, Barly Broth, Chikeh Broth, Whey, Mead, of Honeyed Water. Take Polypody cleaned and Bruifed, from half an Ounce to an Ounce or fomething more: Alexandrian Sena from a Dram to 2 Drams* Anifeeds, Carawaies, Coriander Seed, Sweet Fennel Seed^ Ginger, nil bruifed, of each a Dram: Cloves Jlit a Scruple: Wine, Water^ or Broth, &c. a fufficient quantity, Boil gently .with a fimmering Heat, for almoji half an Hour, then (train out thro' a Flannel Bag, which Dulcifie with Syrup of Violets, or of Citron Peels, for one Dofe. It admirably Purges Melancholy, opens the Spleen and expels the malign Hypochondriack Humor: it prevails againft Frenfies, and radically cures the moft profound Madnefs, whether it be raging or otherwife, provided it be ufed alternately with Opiates, as with my Laudanum Volatile, Laudanum Specificum, or my Gutu Vt&, &c. But the purging with this Decoftion ought to be repeated 6, 8, or 10 times, or more, as the exigency, or neceffity of the Difeafe may require. It carries off the Caufe of the Colick, as alfo of the Gout, gives relief in Obftru&ions of the Spleen, Afthmas, Coughs, Colds, Hoarfnefs , fhortneis of Breath, Wheezing , Qfc_m And being continued for fome time, is an excellent thing for the speedy profligating of Agues: and has all the Virtues of the Simple Decoffion, with great advantage, becaufe it more powerfully carries off the Motbifick Matter, or offending Humor,

XIV. The Pouder of the Root. Being taken in the Morning Kttiflg, from a Dram to 2 Drams in a Glafs of Mead, or Honeyed Water, it moves the^Belly . and Works gently, and is profitable againft ail the Difeafes, for which the Simple or

Compound Decottions are given ^ tho' I think the latter of them to be the better Medicine, becauie Polypody of its self is a very weak Purge, and fo Weak, that in fome Conftitutions it will not work at all

XV. *The Cataplafm. It is made of the frejh Roots beat fmall and mixt ivith Honey -, or of the Pouder thereof mixed with Honey. Being^ apply-edto Diflocations, it Strengthens and Confirms the Joints, Tendons, &c. Applied to the Polyp t/s of the Nofe, (which fometime grows fo big as to flop the Noltri] up) it is laid to cure it* It cures alfo thofe Clifts or Chaps, which fometime happen between the Fingers of the Hands, or Toes of the Feet, as alfo thofe coming in the very Fundament*

XVI. *The Dijilled Water, from both Roots and Leaves. It is much commended for the Cure of the Quartan Ague, being taken many Days together -, as alfo againft Melancholy, or fearful or troublefome Dreams. If it be dulcified with Sugar Candy, it is good againft all the difaffe&ions of the Lungs, as Afthma's, Coughs, Colds, (hortnefs of Breath, Hoarfnefs, Wheezing, and Catarrhs, or thin Difillations of Rheum upon the Lungs, which oftentimes caufes a Confumption, as an Atrophia, and Confumption of the Lungs. If a Vixt Salt be made of the Herb or Root by Incineration, and It be added to the Dijilled Water, it makes it more efficacious or powerful to all the purpofes and intentions aforementioned.*

XVII. *Nota. It is creditably reported, that if the Decottion of the Roots made with Wine, or the Roots themfelves, be given to Hogs, that it will preferve them from the Murrain, by purging away the poifonous, deleterious or malign Humor, which caufes it.*

CHAP. DLXXII

Of POND - WEED .

OS,

RIVER - WORT ,

OR,

WATER - SPIKE .

THE Names. It is called in Greek $\rho\omicron\mu\pi\omicron\mu$ (*quafi Fluminibus vicina:*) and $\rho\omicron\mu\pi\omicron\mu$ (*quafi Spicata Fontalis.*) In Latine, *Potamogeton, Fontalis* <> iff *Spicata*. In Englifh, *Pond-weed, River voort, and Water Spike.*

II. *The Kinds.* Authors give us many Kinds of this Plant, but we fhall defcribe only the four following, as being thofe which are found growing in our Country, viz. 1. *Potamogeton latifolium majus vulgare* ^ *Fontalis la^jfoia major vulgare* **i Our common greater broad Leav'd Pond-weed. 2. *Potamogeton latifolium minus vulgare*, *tornahs latifolium* m_nOr *vulgaritly Spicata latifolia*

minor Lobelij; The teller broad Leav'd Pond-weed, *Potamogeton Anguifolium majus, Fontalis lovgefolia major* h The greater long or narrow Leav a Pond-weed. 4. *Potamogeton longifolium* *Potamogeton jolik longk acutk; Yontalis minor, Potamogeton alterum Dodonti* * 1**
long LeavM Pond-weed, or Long fharp Leav Pondweed.

The Defcriptiotis,

III. *The firft, or Our common greater broad LeavM Pond-weed. Its Root creeps toq mV: in the Mud, with feveral Joints and Tups of bres at them, by which they are f^af^{net}]%, of place of growing. It rifes up with fever al JM, >-ound Stalks ^ full of Joints and Branches, W^a*

Pond-weed broad Leav d gre^

broad round pointed dark green Leavs, Ribs in them like Plantain, fet fingly a and lying flat on the top of the Water. \$ tops of the Staks and Branches, usually (> *% #* dom at the lower Joints) come forth of bluf? colored Vlowers upo ; like unto thofe of Arfmart or W, after they are paf, come Chajfie tidn'uig within them blackifh hard Seed.*

IV. *The fecond, or Letter broad LeavM Pond-weed. Tbi\$ differs not much from the j^a p^ but that it is Icijer, being the third Species j^a ^ donseus his Potamogeton. Its Root ts and thoroughly faftned, as the other is- forth into many flender and round Steins, are divided or fspread out into feveral es. The Leaves are pretty broad* long < *% < *% pointed, with Ribs running along the W Leaf, but they are much lefs than *beflj* fitmer Kind. Out of the Bofomi of the ^ra/ka^ dV^*

Leaves* certain little Stalks spring forth, which bear several small white Mossy Flowers-, which turn into plain and round Seeds not much unlike to the Common Tare or Vetch.

V. The third, or Greater long or narrow Leav'd Pondweed. Its Root is long, jointed, and Fibrous. It has also longer, narrower, and sharper pointed Leaves, than those last described, having the Veins running from the middle Hip, to the sides of the Leaves, AS in a Willow Leaf, which they somewhat resemble. At the Tops of the Stalks, grow reddish Spikes or Ears, like those in the first described, in some more whitish in others of fair bluish color.

VI. The fourth, or Lesser long Leav'd Pond-weed, or Long sharp Leav'd Pond-weed. It has a pretty thick Root (considering the magnitude of the Plant) which is long and full of Joints, with many small Fibres at each Joint, which Root runs along under the surface of the Mud, and creeping in the bottom of the Water. From the Joints of this Root spring thin slender, jointed, and long, Stalks, smaller below, and larger above, having upon them, and springing from their various Joints, and ends of their Stalks or Branches, long, narrow, and very stiff sharp pointed Leaves. The flowers grow in a reddish Spike, like those in the first Described.

VII. The Places. These Plants grow in Standing Waters, Pools, Ponds, and Watery Ditches, almost every where in our Land: The two first are the most frequent to be met with, the two latter are more rare, and to be seen but in few places with us.

VIII. The Times. Gerard says, They Flower in June and July: But Parkinson says, That they show their Flowers in the end of August, seldom sooner.

IX. The Qualities. Pond-weed is cold and dry in the first Degree, and Galen says, it cools and binds as Knot-Grass does, but is of a thicker Effence. It is Afringent, Anodyn, Cofmetick, Vulnerary, and Arthritick.

X. The Specification. It stops Fluxes, eases the Belly-ach, is good for Anthony's Fire, allways Inflammations, gives present ease in the Gout and heals old running Sores and Ulcers.

XI. The Preparations. You may make therefrom, 1. A Liquid Juice or Effence. 2. A Decoction. 3. A Powder of the Leaves and Heads. 4. An Ointment. 5. A Cataplasm.

The Virtues.

XII. The Liquid Juice or Effence. Given to two Spoonfuls, Morning and Evening in a Styptick Red Wine, it eases gripings, and stops all sorts of Fluxes of the Bowels: and being Bathed therewith, it is good to help Itches, Ulcers, old running Sores, and corroding Cankers. It allays Inflammations, Anthony's Fire, and is good against Freckles, Tanning, Sunburning, Pimples and heat of the Face.

XIII. The Decoction in Wine. It has all the former Virtues, but may be taken inwardly, to 6 or 8 Ounces it is a very good Gargarism for a sore Mouth or Throat, cleanses, dries and heals Ulcers, &c. But Made with Water, It is better for to cool Inflammations, allay the heat in Anthony's Fire, &c.

XIV. The Powder of the Leaves and Heads. It has all the Virtues of the Juice and Effence, a Dram at a time being given inwardly Morning and Night in some Styptick Red Wine. Outwardly being strewd upon old running Sores and Ulcers, it is said to stop the Fluxion, cleanse, dry, and heal them, and this it more effectually does, if it is mixed with an equal weight of the Powder of common black Rofin.

XV. The Ointment. It is cooling and Anodyn and is good against Inflammations of all sorts, running Sores and old Ulcers in the Legs, discharges Pimples and other breakings out in the Face and Skin,

XVI. The Cataplasm made of the Leaves or Heads and Roots. Being made by boiling them with Oil and Vinegar, and applied to places pained with the Gout, it gives present ease: and made with Honey and Vinegar, and applied, it heals old running Sores and foul Ulcers in the Legs or other parts; made of the Root alone, it is said to dissolve Knots and Kernels in the Neck, and other places of the Body.

CHAP. DLXXIII.

Of POPPY Garden.

THE Names. It is called in Greek Μαλιν in Latine, Papaver: and in English Poppy.

II. The Kinds. There are four principal Species of this Plant, viz. I. WKW Siug* \$ K«mvrE,u{nav «!*&h**Mv<Qiofcoridis, in Arabic, Thaybav & Cafcbass Papaver Hortense, vel fativum* Ga5«i Poppy, of which in this Chapter. 2. M' ^ I V' Papaver Rhxas vel erratjeum, vel Sylvestre\ vel

Rubrum, The Wild Poppy, of which in Chap. 574. g. $\text{Amm K} < \text{E} \% 7 \text{jm} \text{, Almacharam, Arabice * , Papdver Comic ulat urn, vel Corniltum, The Horned Poppy, Of which in Chap. 57 \% . 4. MM}^* > \text{ * f } \wedge \text{ i P}^* / \text{w- tor Spumcum, Spattling Poppy, of which in Chap. 576. following.}$

III. *The Kinds of the Garden Species.* There are many forts of this Species, but the following are chief, viz. 1. *M&WMI^W, Papaver album fativum simplex, The fingle white Garden Poppy.* 2. *Papaver nigrum fativum fimplex, The fingle black Garden Poppy.* 3. *Papaver rubrum fativum Jimplex, Papaver Flore rubro, vel rubente fativum fimplex^ The fingle red Garden Poppy.* 4. *Papaver album multiplex, The double white Garden Poppy.* 5. *Papaver rubescens multiplex, The double red or bluh Poppy.* 6. *Papaver nigrum multiplex, five purpureum multiplex, The double rruiry or purple Poppy.* 7. *Papaver Rhxas flore multiplid The double red or Corn Poppy,* 8. *Papaver Spinofum, The Thorny Popp^*

'the Descriptionsi

IV. *The Jirfi, or Single white Garden Poppy.* It has a Root which is white and woody, which perishes as soon as it has given ripe Seed. It springs up fir ft with four or five whitish green Leaves, lying upon the Ground, which rise with the Stalk, encompassing if at their bottoms, and are very large, as well broad as long, much rent or torn in on the edges, and dented alfp be fides. The Stalk, which for the moft part is but one, and fome-

times three, or four Yeetj or more high, has sometimes no Branches at the top, bi* uually but two or three, which are the moft; each of which bears one Head, wrapped or folded in a thin Filme or Skm, which bows down before it is ready to blow?

and then rifing and being broken, the flower which was folded wit) in it, fpreads it felf open, and confiffs of four very Urge white round heaves, with many whitijh round Threads in the middle, fet about a fmall round green Chaplet or Head, having a Crown, or Star-like Cover on its lop, which Head growing ripe, becomes as great as a large Apple. Bellonius fays, That in Natolia, (where they make Opium) the Heads are fo large, that they toil/hold half a Pint. In thefe Heads are contained great numbers of white fmall round Seed, in feveral Partitions or Divifwms, next unto the Shell, the^ ddle thereof remaining hollow and empty. This keeps clofe, and opens not at top under the C^ as all the black Kinds for the mojl part do, the whole Plant, Stalks Leaves and Heads, mif they are fresh, young, and green, yield a MK^ or milky Juice when they are broken, which i^oy^* up again in the Title, which manufactures the Str^ aloft to Vomiting, and by a pong beaq/ Smell, which being condenfate it called either Up^ um or Meconium. Of this white Kind, therein another in all things like unto it, but that tW, towers, and efpeccaly the Heads of Seed, are ** fo great by the half, and for the moft part has more Branches upon the Stalks, its Seed is as mite as tlx other, and full as large or great.

V. *The fecond, or Single black Garden Poppy.* Its Root is like to the former, and there is but litw difference to be fcen between this and that, tetitu^

comes to flowering^ for that the flowers of fomewhat lefs, and of a blackish purple color, out any purple Spots in the bottom of the in the next. The Heads of Seed are co^ma^ fort fo large, as the fecond fort of white Ones mentioned, and opens it felf a little, round the top, under the Qrcwv fo thit the Seed &^y

very black, will full out, if the Head, thereof be turned, downzwards.

VL The third, or Single red Garden Poppy. This Poppy has various Species, with respekt to the Variable colors of the flowers, yet they differ not from the former, but only something in the Leaves, these being leffer and in some crumpled, and cut in or jagged on the edges; but in the jagged edges also of some of the flowers, and espe daily in the colors of the flower and Seed: for the flowers of some of them will be very red-, of others paler*, some of a Rose color \$ others of a murry coloh,

father deeper, or paler*, yet all of them have a deeper Spot, somewhat large, in the bottom of every Leaf. And dt the flower varies, so does the Seed also ^ for the Rose and pale colored flower brings gray or A(h colored Seeds the reddish and deep murry, not so pale Seed, but more inclining to black. The Seeds of all these Kinds^ the white as well as the black or gray, if they be juffered to Jhed, willspring up again the next Tear, and bear every Kind, its own color of flower and Seed, without the leaft degeneration or varying of their forms or appearances, unless by meer accident.

VII. The fourth > or Double white Garden Poppy. Its Root is hard, wood.%, long, and perishing every Tear, and must be new Sown every Spring, if they do not spring up of their own Sowing, which if they do, the flowers are seldom so fair \$ and double, as they which are Sown in the Spring. It has divers broad and long whitish green heaves: giving Milk, (as all the rest of the Plant above Ground does, wherefoever it is broken or cut.) These Leaves are very much rent or torn on the edges or fides, and notched or indented be fides, encompassing dt their bottoms^ a hard^ round, brittle^ whitish green Stalky Branched towards the top^ each Branch bearing one fair, large, great flower, which before it breaks out^ U contained within a thin Skn, and being blown open^ ii very thick of heaves,

and very double, fomething jagged at the ends, and of a whitish color. In the middle of which Rands a round Head or Bowl, with a Jfriped Crown or Cover on its Head, very like a Star, compaffed about with some Threads; in, which, when it is ripe is contained, in feverjil Cells or Partitions, small^ round, white Seed. The zvhole Plant is of Jfrong heady fnclL

VIII. The fifth, or Double red or blufh Poppy. This Kind of double Poppy, differs not in any other thing from the former, but only in the color of the flowers, zvhich are of a bright red, tending to a blufh color s parted, and jlriped in many plages with white, and exceedingly more jagged than the former, almoji like a feather at the ends, the bottoms of all the Leaves being vohite. The Seed hereof is white a-f the former, which, is not fo in any other Poppy, which bears not \a full white flower.

IX. The sixth, Doublp murry or purple Poppy. This Kind varies both in flowers and Seed -, alth<? neither in Leaves, or any other thing from the first. The flowers are thick and double, and jagged at the ends, in some wore, in some lejs^

either red, or blufh, % or purptijh red, more or lefs *, or of a fad murry, or tawney color; with brown, or black, or tawney Buttons* The Seed is either of d grayijh blew color, or (as in ome Plants) more blackijb.

X. The feverith, Double red, or double Com Poppy. This double Poppy is like to the Wild or Field Poppy, which if well known to all. It has longer, narrower, and more jagged green Leaves than the former

former Kinds ^ the Stalks are more hairy, and the lower of a deep yellowish red color. Now it differs nothing from the Corn Poppy^ but in the duplicity of the flower, which is very thick and double, but not full out so large as the former. This rises from Seed in the like manner as they do, and is to be preferred.

XI. The eighth, or Thorny Poppy. Its Root is small and spreading, dying every Year. It rises up at first with three or more whitish green Leaves lying on the Ground, streaked with white Veins, which growing greater, are long, smooth, and not hairy, something long and broad, and softly rent or torn on the edges, but not to the middle, having many Corners or Dents as it were about them, at which many sharp Prickles or Thorns, not having any white Streaks or Veins on the under side, but in the white milky Veins, are like to that which we call Our Ladys Thistle, and on the under side are more whitish, with some small Prickles, along the middle Rib and Veins, encompassing the Stalk at their bottoms, which Stalk rises sometimes two or three feet high, spreading itself forth into several Branches, with the like but lesser Leaves on them, and bearing at every of the Tops one small Head, enclosed in a rough Skin or Film^ like as the Poppies have, which opening, shews forth a small yellow Flower, consisting usually of five Leaves, yet sometimes having but four, and sometimes again six, with a small, long, green, prickly Head in the middle, tipped at the top with a red Spot, which quickly wears away, and with many yellow Threads standing about it. After the flower is past, (for it continues but a while) the Head grows ripe, having five or six Ribs from the top to the bottom, and so likewise between the Ribs, armed with very small, but cruel sharp short Prickles, in which is enclosed, rough round black Seed, twice as large as any Poppy Seed. Every part of the Plant yields a yellow Juice.

XII. The Places. The first three, or four single flowered Kinds grow not Wild in any place, that I know of, but are Planted and Nurture up in Enclosures, for the general good they do to Mankind. The Native place of the four double Kinds are unknown, but we have had them for a long time in our Gardens, and it is said that they came first from Constantinople, or out of Turkey. The eighth or Thorny Poppy^ has been found growing in Florida, and other parts of the West Indies, from whence the Seed was first brought to us.

XIII. The Times. The first 7 or 8 Garden Kinds, do all Flower from the beginning of June, until the middle or end of July, according as the Season may be, but if they spring up, of their own Sowing, they may Flower somewhat the earlier, viz. in May, or end thereof: and their Heads of Seed are commonly ripe in July or August. The Thorny Kind seldom Flowers before Midsummer, and the Seed is ripe in August, it is to be sown in Autumn, else it scarcely springs up.

XIV. The Qualities. Poppy is hot and dry in the second Degree, or rather in the third: Astringent, Anodyne, Narcotick, Cephaick, Splenetick, Arthritic, Antispasmodick, Sudorific, and Anticathartic.

XV. The Specification. Poppy (in its several Preparations) is effectual for the Cure of Asthma's, Coughs, Colds, Consumptions, Pleurifies, Pains and Stitches in the Sides, Spleen, Womb, Reins, and Bladder, Vapors, Hysterick Fits, Colick, Gripping of the Guts, Stone and Gravel in the Urinary

Fluxes of Blood, by the Nose, Mouth, (as Spitting and Vomiting Blood) Secret parts (as Pitting Blood, overflowing of the Terms, &c.) of Fundament, (as the Haemorrhoids, Bloody Flux, &c.) bleeding of Green Wounds, Fluxes of Humors to Wounds, old Sores, Ulcers, Fiftula's, Joints, or any other parts, ©V. Gouts in Arms, Hands, Fingers, Hips, Knees, Ankles, Feet, Toes, Rheumatisms, &c.

XVI. The Preparations. They are almost innumerable, these following, as most Material, we (shall Entreat of in their Order, viz. 1. A Universal Juice of the Leaves, Bowers, and Heads. 2. & Essence of the same. 3. A Decoction of Leaves and green Heads. 4. A Decoction of the black Seed. 5. A Decoction of the Shells of the Heads. 6. A Powder of the Seed. 7. An Emulsion of Seed. 8. An Oil of the Seed by Expression. 9. Syrupus de Papavere magis compositus. 10. Syrupus Papaveris albi & nigri minus compositus. 11. Syrupus Karcotia. 12. Syrupus de Siccatione Siftum of Juice of Poppies. 13. Diacodium quidam aliud. 14. Diacodium Crocawm. 15. Diacodium Montani. 16. Varn folidum. 17. Diacordium. 18. Perficum. 19. Philonium Romanum. 20. Philonium Magistrale. 21. Philonium Taracenevum. 22. Oil by Infusion. 23. An Ointment. 24. Cataplasm. 25. White Poppy Watery. 26. Blistering Poppy Water. 27. Spirit of White Poppies. 28. Medium, The Injunctive Juice. 29. The Tears of the Poppy Heads. 30. Elixir of Opium. 31. Pulvis Opium. 32. Tinura Opium. 33. Simple Tinure of Opium. 34. Tinura Opium Paracelsi. 35. Tintura Opium Schenckii. 36. Spiritus Opium. 37. Laudanum of Helmont. 38. Laudanum Uelmontii. 39. Laudanum Specificum Paracelsi & aliud ejusdem. 40. Laudanum Londinense. 41. Nephthes Opium. 42. Requies Nicolai. 43. Benaeae Londinensis Salmomana. 44. Our Specifick Laudanum. 45. Our Volatile Laudanum. 46. Our Cathartic Laudanum. 47. Our Gutta Vita. 48. Opiatum Hartmanni. 49. Pulu de Capite de Styrace, Opiate Pills of Storax. 50. Trauma florum of Caput Papaveris, Opium.

The Virtues.

XVII. The Liquid Juice. It is Measured in any Part of the Body, giving present ease in any Part of the Body, by bathing the parts afflicted therewith warm, two or three times a Day, and bathing the Head, Forehead, Temples therewith, it eases the Head-ache, causes Sleep and Relieves the same it does, the Rose Cake be dipped therein, and so bound on the Forehead, and it cures Catarrhs, and Fluxes of Rheum tending up on the Eye, Nose, Palate, Tonfils, Jaws, Teeth, &c. Aplyed upon Ignis facer or Antimony Fire, the inflammation, eases the pain, diffuses the mor, and quickly cures the Disease, more especially if it be mixed with a little White Vinegar.

XVIII. The Essence. It has all the Virtues of the Liquid Juice above named, the being dropt into the Eyes, or bathed on the Forehead, Temples, and Eye Lids, it cools the inflammation, Stops the Flux of Humors, eases the Pain, and strengthens the weakened parts.

parts affixed with the Gout being well bathed therewith, and Linnen Cloth fix or eight times double being dipt therein and applyed, keafes the pain, cools the Inflammation, if any be, Hops 1 the Flux of Humors to the part, and in a fhort time Cures it. Held in the Mouth, it Cures the Tooth-ach upon the Spot. Bathed upon fore, hard, inflamed and pained Breasts, it softens, cools, and eafes their pain almoft in a Moment.

XXIX. *The DecoUion of the Leaves and green Heads.* It has all the Virtues of the Juice and Ejence, but nothing near lb powerful. Given inwardly 3 or 4 Spoonfuls at a time, more or lefs, it is found to flop Catarrhs, and Vehement Coughs, give reft and eafe, and caufe Sleep, and prevail againft pains of the Stone and Gravel, to flop Fluxes of the Belly, and overflowing of the Terms.

XX. *The DecoUion of the black Seed in Wine.* Being drank, it eafes inward pains of the Bowels, ftops all Fluxes of the Belly, as Diarrhea, Dyfenteria, Lienteria, and Hepatick Flux, asalfo the overflowing of the Courfes in Women: and outwardly bathed upon any place pained with the Gout, or Defluxion of Humors, it eales the pain and repercufls the Humor: held in the Mouth, 2nd repeated for fome time, it has been found to give eafe and relief in the Tooth-ach.

XXI. *The Decoftion of the Shells of the Heads in Water.* The Empty Shells of the Poppy-Heads, are ufually Boiled in Water* the DecoUion of which is given to 2, 3 or 4 Ounces to procure Reft and Sleep, fo alfo if the Head and Temples be bathed therewith warm, for fome confiderable time.

XXII. *The Pouder of the Seed.* Diofcorides, Galen, and others write that the Seed is familiarly eaten in Bread* and made into Cakes, and eaten with pleafure. And Matthiolus with feveral others have obferved, that in our Days the White Poppy Seed is Sown in Italy and other places, and muck ufed * yea, and the Black Poppy Seed alfo, which they all agree, is fironger in Operation, and only Medicinable, or only to be ufed in Phyfick for the Cure of Difcafes: This Black Poppy Seed Matthiolus fays, that the Inhabitants about Trent, do Sozv in their Fields, end Grounds, among Beans and other Pulfe, which they familiarly Eat, being made up with Wheat Flower into Cakes, the Seed being cajl into the fame and fo kneaded together, and yet he fays, they are not at all the more Sleepy or Droufy, than thofe who Eat none of them. As alfo, That in Stiria, and the Upper Auftria, the Inhabitants do Eat the Exprefled Oil out of the Black Seed, familiarly in their Meats inftead of Sallet Oil, and find no inconveniency or drowfinefs to come upon them thereby. And hereby he fays, That he fhok off the Fears of the danger of Poppy, which his Wife Rafters had, by their grave Admonitions feafoned him withall in former times.* The Pouder of the Seed, whether of the White or Black Poppy, being given from 10 Grains to a Scruple, or half a Dram, Recording to the Age, and ftrength of the Patient, *n any proper Syrup, is good to flop Fluxes of the Ullly, and eafe the pains of the Spleen* asalfo to procure Reft and Sleep, being given at Bed-time, fhofe it had no fuch operation being eaten made up into Bread or Cakes* becaufe (as I fuppofe) it might fo taken, want of its due Dofe.

XXIII. *The Emulfwn of the Seed.* Matthiolus %s, That the Emulfwn, or Milk of the Seed, (I fuppofe: of either White or BlackPoppy) made With Barly Water, he had oftenimes given, and in #«tt quantity, in the hot Fits of Agues, and in

Burning Fevers, both to affwage Thirft and procure Reft: and no doubt, it has a good Property in it, to procure Reft, and Sleep.

XXIV. *The Oil of the Seed by Expreffion.* Thir Oil we have (hewn before, in Self. 22. The Peo- pie of Aujiria and Stiria, Eat, as others Eat Sallet Oil, and therefore without doubt, it can have nodangerous effects. It is good againft Hogrnfnefs, Wheezing, and loifs of Voice, being taken inwardly* and ib taken mixt with Syrup of Clove-gilliflowers, of Citron Peels, or of Violets, it prevails againft vehement Coughing, and fhortnefs of Breath, Afthma's, Vfc. outwardly anointed upon any part, it cools Inflammations, eafes pain, and takes away rednefs and Pimples in the Face and Skin.

XXV. *Syrupus de Papavere 'magi*, compofitus:* Syrup of Poppies the greater Gompoftion. Take the Heads of White and Black Poppies, with their Seed, whilft green, of each 6 Ounces-, Maiden-hair 15 Ounces-, Jujubes A° 50* Lett ice Seeds 5; Ounces * Seeds of Mallows and Quinces (tyed up in a Rag) of each a Dram and half-, fair Water a Gallon * Boil all according to Art, and jlrain out* to three Pounds of which, put Clarified,* or double Refined Sugar 2 Founds, and make a Syrup according to Art. It is good againft Coughs, Catarrhs, Phthificks, Confumptions, all forts of Fluxes, Pleurifies, eafes all manner of pains, giving Reft and Sleep. Dofe from 1. Ounce to 2.

XXVI. *Syrupus Papaverk albi iŷ nigri minus compofitus,* Syrup of Poppies the leffer Competition. Take Heads of White and Black Poppies, whilft both are green^ of each 6 Ounces-, Seeds of Lett ice and Violets, of each 1 Ounce-, fair Water a Gallon * Boil them till the Virtue is out of the Heads, then Jirain out-, qjid with double Refined Sugar 4 Pounds, make a Syrup. The Virtues of this are the fame with the former, and it may be given in the fame Dofe: It is an excellent thing againft p^jns and flitches of the Sides, pains of the Spleen, and Grippings of the Guts.

XXVII. *Syrupus Karcoticus Gregorij Horfij,* Horfius his Syrup eafing Pain. Take Syrup of Corn Poppies 16 Ounces-, Laudanum Opiatum a Dram-, DiJJblve the Laudanum in White Poppy Water 8 Ounces-, and mix them well together. It has ail the Virtues of the former Syrups of Poppies, and gives preient eafe in the Colick, Gout, and Stone: but it is moft commonly ufed in Vehement and ftrong Pains of the Head, for which purpofe, it was often ufed by the Author thereof, being powerful for that intention: Dofe from half an Ounce, to one Ounc^ or Ounce and half.

XXVIII. *Syrupus de Meconio five Diacodium Liquidum,* Syrup of Meconium, or of Condensed Juice of Poppies. Take Heads of White Poppies, gathered juft after the flowers are fallen off, and kept three Days apart, 8 Ounces: Heads of Black Poppies voith the Seeds gathered in like manner 6 Ounces -, Spring Water a Gallon: digefti 24 Hours, then boil a little with a funnering Heat, and gently prefs out the Juice, which afterwards boil to 3 Pints * and with 2 Pounds of double Refined Sugar, make a Syrup according to Art. It is Hypnotick, Narcotick and Pe&oral, good againft Difcafes of the Breft, Lungs, and Bowels, Coughs, Colds, Hoarfnefs, Afthma, Colick, Pleurify, Confumptions, and ftops all forts of Fluxes of the Bowels and the overflowing of the Terms in Women! Dofe 1 Ounce more or lefs, according to Age and other accidents.

XXIX. *Diacodium Liquidum aliud, feu Syrupus Htmoptoicus,* Another Liquid Diacodium, or Syrup of Poppies. Take Heads and Seeds of White and

Blefc Poppies, w6ll^ £/w#, 0/ £tt7; 8 Ounces; Spanifh Juice of Liquorke bruifed 2 Ounces and balf far Spring Water a Gallon*, extrali the *Tincture out of the juice^ in a warm Balnzo, in 48 liours>> let it co:1 and fettle well \ then decant the Hear, and put it to the Poppy Heads, boil with c fimmering Heat, then prefs out the Juice\ evaporate again till it comes to about 2 quarts, and with 1 Pounds of double Refined Sugar, boil it 1& the Conficiency of a Syrup. It gives eafe in pains, and caufes Kelt and Sleep^ it itops Vomiting, and all manner of Fluxes of the Belly, or Fluxes of Humors, Catarrhs, Coughs, Spkting and Piffing Blood, &c. It gives eafe in the Colick, Gout and Stone, and prevails againlt Afthmas, Pleurifies, pains and Stitches in the Sides, ©V. Dole 1 Ounce in any proper Vehicle.

XXX. *Diacodium Crocatum Mynjichti*, Diacodium with Saffron. Take white Poppy Heads, with the Seeds, vchilji green, N° 2T^ bat fr/gS, Dates, Sebeflens, of each N° 12 -, Pulp of Sweet Carobs, Liquorice rapped of each 3 Ounces-, Seeds of Cotton, of Althxa, of Quinces, of each half an Ounce, flowers of Mallows, of Kapweed, of Violets^ of each a Dram-, boil all in a fufficient quantity of Spring Water, and ftrain out -, to the Jlrained Liquor add white Sugar Qaridy a half part, and make by boiling a very thick Syrup, towards the end of which add Syrup of the Juice of Corn Poppy flowers. Syrup of Jujubes, of each 2 Ounces-, Ext raft of Englifh Saffron a Scruple \$ mix and bait all to the thicknefs of Honey, aromatizing it with Gallia Mofcata. It is an excellent thing in all hot Catarrhs, where the Humor is thin, fharp, and Salt, in a Vehement and continual Cough, it is a Secret. It thickens Rheum, caufes Expe&toration, quenches Thirft, mitigates the #extremity of heat and burning, cools and moiftens, and gives Reft and Sleep. It is prevalent againlt the molt acute fains, chiefly thofe of the Reins and, Bowels, as Stone, Gravel, Colick, and Gripings of the Guts-, It gives eafe in the Pleurify, and Baftard Pleurifie^ and is profitable againlt all Choleric Fiiixes and other Fluxes of the Belly. Dofe from a Spoonful to two Spoonfuls or more.

XXXI. *Diacodium Montani*, Mont anus his Syrup Of Poppies. Take green heads of White Poppies with the Seed, N° 20 *, Pulp of ripe Carobs 3 Ounces-, Althta Roots, or rather Myrtle Berries. Liquorice rapped, of each 2 Ounces, fountain Water > 6 Quarts-, mix and boil the Water away till it co?nes to 3 tints, then ftrain out by Expreffion, and ftrain again, and with Sugdr of Rofes 1 Pound, boil it to the thicknefs of a Syrup, or of AVa Honey. It has all the Virtues of the former, yet by fome not thought lb powerful: however ir i very profitable in all thin, and (harp Rheums, an< other Difeafes of the Liings, and affera Arteria: it takes away the vehemency of Coughing, an< caufes Reft-, tor which effects it was highly celebrated by Mont anus. I have here Subftituted Myrtle Berries, inftead of Althxa Roots, becauft, the former make the Preparation more fragrant and grateful, and I judge the Myrtle Berries to be full as efficacious.

XXXII. *Diacodium Solidum five Tabulatum*, Diacodium Solid or made into Lozenges. Tak white Poppy Heads, meanly ripe, and newly gathered, N° 20, fleep them in Spring Water warmed, Pints, the next Day boil till the Virtue is out, the ftrain out the Liquor, and with a fufficient quantity of fine Sugar boil again according to Art, t fuch a Conficiency an it may be made up into Lozenges. This Diacodium thickens and flops Catarrhs, helps Coughs, roughnefs and forenefs of the Wind-

Pipe, caufes Reft and Sleep, and eafes all forts of Pains; you may carry thefe Losenges in a Box in your Pocket, and Eat them as you fee occaion.

XXXIII. *Diacodium*, Confection of Scordium. Take Scordium an Ounce-, Cinnamon, Caffia Ugne*^o Miltany of Oeet, Tormentil, Biftort, Gentian, uai-anum, Gum Arabick, Earth of Lemnos, Storax alamita, of each half an Ounce, fine Bole an Ouncg indhalf; Long Pepper, Ginger, of each 2 ^ranu-pium, Sorrel Seeds, of each a Dram and MJI Jar i/ied Honey 2 Pounds and a half; Sugar of M^e* a Founds Canary 8 Ounces-, mix and make ^ EleBuary according to Art. It is an excellent thing againlt Plague, Poifon, Bi tings of Serpents and of Mad Dogs, and all malign tevers: it Lop& Loofnefs, and all forts of Fluxes of the Belly, vomiting, Catarrhs, deMtions of Rheum and Cough*, is good againlt Watchings, all manner of Pains in n?oart of the Body, and the Whites in Women t ftrenghens the Heart, revives the Spirits, regre-nes the natural Powers, gives relief in Pleunue^ md rettores in Confumytions. To Infants an Children you may latey give from 10 Grains to a Scruple j to elder Perfons from half a Dram w 2 Drams, or mote as the neceffity may require.

XXXIV. *Yhilonium PerficuHt*, a Verfie# Con* left caufing Reft and Sleep. Take white while Henbane Seed, of each 4 Ounces-, Terra Lemma, of each 2 Ounces; Blood Storice, pared, Saffron, of each 1 Ounce-, Qafioreuvl, p^u, an Spicknard, fyrethrum, Pearls, Amber, ZedO ary, Elecampane, Troches Ramich, of each 1 Dram, and 12 Grains; Camphir 24 Grains-, beji tioty °J Rofes the triple weight of all, viz. 47 Ounces; M? and make an Eletuary according to Art. Ot t^u is Compoftion the one thirtieth part is Opium. It flops the Flux of the Terms, the Whites, He^r morrhoids, Catarrhs, Bloody Flux, and all other Fluxes of the Bowels, Coughs, and Huxes OI Rheum upon any part, it prevents Mifcarriag^ and eales all manner of Pains in what part of if Body foever, as Colick, Pains, and Stitches of the Sides, Pleurifies, Spleen, C&. In the AuguJU Di/penfatory, there is added, Euphorhum and Dromcum of each in fine Ponder, 1 Ounce and 4* Grains, which are here left out Mefue was W Author of it.

XXXV. *Philomum Romanum*, a Roman caufing Reft and Sleep. Take white white Henbane Seeds, of each 4 Ounces; Ounces; Caffia, Lignea, Cinnamon, of each 1 and half and 8 Grains -, Parjly Seed 6 Dp 20 Grains; Seeds of Macedonian Parjly, of and if Daiicifs half an Ounce and 30 Saffron ? Drams 12 Grains; Indian Sp^u; Pyrei'brum, Zedoary, of each 1 Dram and 16 Myrrh, Cajhr, of each 6 Drams and 1 S Clarified Hony, the triple weight of all, v 4 Ounces and a half ahnofi; mix and make an & ary according to Art. Of this Compoftion, is purely Opium. Vn this is left out alfo, t>^e^ is pared Euphorbium 6 Drams and 1 Scruple, given in the Stone, Strangury, Spleen, griping jof the Guts, alt forts ot, Gouts, Rheumatifms, Coughs, Afthra's, vc *

XXXVI. *Philomum Magiilrale*, the Mag Conf e& caufing Reft. Take Opium prepared^ queous Ext rait of Opium 4 Ounces-, Benjamin, Mummy, of each half an Ounce; with Spirit of a fufficient quantity, dijjolve and make an V The Opium in this will be about 1, 0^{ne} part of the Prefcript It has all the Virtues of two former, or of any prepared Laudanum, w ther Solid or Liquid. The two former, m

Philonium Perficum, and *Romanum*, may be given from a Scruple to a Dram: th'a *Philonium Magi-Jirale*, may be given from a Grain, to 3, 4, or 6 $\frac{1}{2}$ according to Age[^] and other Accidents. <

XXXVII. *Philonium Taraccnje Galen*, *Oalens* Confea eafing Pain. Take Extract of Opi&to a Pound*, white Pepper, Henbane Seeds, of each 2 Pounds; Saffron half a Pound\ *Euphorbia**, *Pyrethrum*, *Indian Spicknard*, of each in fine louder an ounce and half; Honey the triple weighty of all, vie. aivojliZPounds: mix, and make an Electuary according to Art. It has all the Virtues of the *Pbilonium Perficum* & *Romanum*, aforegoing* and may be given from a Scruple to a Dram* the *Opww* be given from a Scruple to a f. h. C. S. being * a twenty fourth part of the Composition. It is indeed a most Excellent thing, to ease all manner of intolerable Pains in any part of the Body, chiefly of Stomach, Pleura, Spleen Guts, Reins, Womb, Joints, &c. It helps in Sufcations, Fits* Stone, Gravel, Heat and Scalding at the Urine, Coughs, Colds, &V.

XXXVIII. *The Oil by Infufwn or Infolation, or Soiling*. It k made either of the flowersⁿ, or of the green Heads and Seed-, or of the Leaves and Stalks: But that made with the *Green Heads* is the most efficacious. It cools Inflammations, repercules a Flux of Humors, it abates the Milk and Pains in Womens Breasts-, gives ease in Rheumatism, Gout and Sciatica * prevails againfl: Leprosy, Morpew and Scurf, and eases the pain of the Head, being well anointed upon the grieved parts twice a Day.

XXXIX. *The Ointment of the green Poppy Heads and Seed*. It has all the Virtues of the Oil in the last Seanon, and may be applied to *Cancers* Which are breeding in Womens Breasts, or in any other parts-, it qualifies the Humor[^] eases the Pain, and if proper Internals be given in the mean time, may be^o extraordinary Service for that purpose: what we (ould propofe to be taken inwardly in this ease is our *Laudanum Catharticum*, the Description of which you have in *Sett*. LXII. follow-

In * XL. *The Cataplasm*. It is made of the green Beads and Seed, and for want of them of the green leaves. Applied to the Fore-head and Temples[^] it gives present ease in the Megrim or Head-ach - and is profitably applied to the Crown of the Head, (being first Shaved) in a Delirium Frenzy, or Madness. And it gives present ease being applied to the Spleen or Region of the Womb, or to places pained with the Gout, Rheumatism, &V. It cools Inflammations, and hinders the Flux of Humors to any part,

XLI. *Difilled Water of white Poppies*. It is cooling, and very profitable againft violent Burning Fevers, to be drank *ad libitum*, being first acuated with *Spirit of Sulphur*, and then a little dulcified with double Refined Sugar: h makes also a good Vehicle, for convey in * other Preparations of *Poppies* \Jg\ whether *Diacodiates*, *Elettua-* as, or *haudana*. It is profitable also againft Deliriums and Frenzies, also Inflammations in any Part of the Body > whether inward or outward. And gives Rest to weary Bodies, and pleafant Sleep.

XLII. *Difilled Water of black Poppies*. It is rawn from either the Flowers, green Leaves, or Seen Heads and Seed. It has the Virtues and Uses of the former: mixed with White Wine Vinegar, and the Forehead and Temples bathed therewith, it eases the Megrim and Head-ach, and causes Rest and Sleep -, and is a peculiar thing to both with for the curing of *Ignis Sacer*, or *Ant-* Fire.

XLIII. *Spirit of white Poppies*. It is made either of the Flowers³ or of the green Heads and Seed, or of the Whole Plant, as the *Spirit of Cork Poppies* is made. The Virtues is also to give ease in the Colick, and to alleviate pains in any part of the Body. It gives ease in the Stone and Gravel; and is profitable againft After-pains of Women in Child-Bed, and with a great deal of pleasure induces Sleep. But these things it does more powerfully, if you make a Tinture of the blowers with the fame. Dofe from half a Dram to $\frac{1}{2}$ Drams plus-minw.

XLIV. *Meconium*, or the Infuffate Juice of Poppies. It is made of the Expreffed Juice of the green Heads and Seed of the white, or black Poppy, or both of them; or of the Expreffed Juice of the whole Plant. This is put into a proper Glass Body, and the Poppy Waters afore named are drawn off from it in Bxleo, or a gentle Sand heat, till the Magma comes to the consistency of Honey, or of an Extratt for making Pills, according as it H 16 be used. This Magma is *Meconiu*?n. If it is of the consistency of Honey, it is then fit to be made into an Ointment or soft Emplafier, which being Anointed all over the top of the Head, (it being first Shaved) cures Frenzies and Madness it self[^] tho⁵ never fo extream: if applied to the Sciatica or places pained with Gout or Rheumatism[^] it eases the pain, and Cures them. That which is brought to the thickness of an Extratt, must be prepared as *Opium* is (declared in *Sett*. 46 and 47 following,) before it can be used inwardly, and then it will have the Virtues and Effeete of *Opium*, tho not altogether fo powerful.

XLV. *Opium*, The Tears of Poppy Heads. It is made only in hot Climates, in China, India, Asia major, Turkey, and other Eastern Countries: The *Thebean Opium* is accounted the best of all, and after that the *Indian*.[^] *Parkin/on* % s, that he has gathered some of it from the green Poppy Heads (landing in the Garden, and but half grown ripe here in England. The several Heads are slit cut, or Wounded with a Knife, in two or three places obliquely, towards the lower parts of the Head, which then yield a Milky bitter Juice, at first coming forth, which is gathered gradually every Day with some convenient Instrument in a proper Vefel; this being dried in the Sun, (but not at the tire; becomes that *Opium*, which is brought to us, and which we use, and by its gradual drying turns to the color we see it of. The Question now is, out of which Kind of Poppy, *Opium* is extracted, whether out of the Heads of the black *T. r. %* or out of the Heads of the white Poppy > *^* or fays, that it flows from the Heads of the *great Poppy* \ and this he seems to have from *Dioscorides*, for *Matthiolus* in his Epitome, has these Words, *Opium autem, quod e Papaverum nigrorum Capitib/ls paratur, magis refrigerat, infuffat, ficcatque*. And *Matthiolus* in his Comment, appears to be of the same opinion, for speaking of the black Poppy[^] he fays, *Ceterum ex incifis Papaverum Capitib/ls opos, five Succus manat, qui in Opium vocatum addenfatur, ut fcite doc ui[^] Dioscor ides*. But *Parkin/on* will have it to be the Tears flowing only from the white Poppy. The Milky Juice (lays he) gathered from the Heads only of the great white Poppy, growing in the East Countries of Asia Major towards India, &c. is the true and best *Opium* that is, or should be used in Medicines. And our Learned *Willis* was of this opinion-, for speaking of *Opium*, and *Diacodium*, &V. he fays, *I jjoaf/ not need in this place to deferibe the white PODDV out of which these are made, nor the Extraction of the Opiate Juice*. Now by reason of this

ty of Opinions among these Learned and Great Men, shall we certainly determine, and by what means (shall we find out the Truth? *Angelus* a Wife and Learned Man seems to determine it for us, *Anatom. Ejfe/itarum Vegetabilium*, 6. Cap. % *Opium (dixit ilk) nihil aliud est, quam laffeus, & acris ille fuccus, ex Papaveris dbi & nigri capitibus, expreffis, & infpiffatus, ifque apud Turca* latiffimk Nato/uf & aliorum Pro-virtiarum campis, [iudio excultus, frequenti in ufu, MaJJach diUus, ad nos defertur.* From these Words I am apt to believe, that it is indifferently extracted from both the Species.

XLVI. *Extrallum Opii*, the Extra& of Opium. It is done several ways. i. *The Extration with fair Water.* Take Turkey Opium what quantity you please, suppose a Pound, dissolve it in Spring Water 2 Quarts over a gentle Fire, then let it settle 24 Hours, and decant the clear Tincture -, add more Water and over a gentle heat extract again and let it settle as before, and decant the Tincture again which put to the former: Repeat this Work of extracting, so long as the Jboxes will yield any Tincture: these Tinctures being all put together, evaporate either in Balneo, or a Sand heat, to the consistency of a thick Extract fit for Pills, or almost to dryness^ which Magma, keep for use. If to the Tinctures before evaporation you add Spirit of Wine Vinegar, }*or 4 Ounces, or Oils of Salt, Sulphur, or Vitriol 2 or 3 Ounces, mixing them well together, and then evaporate the Extract: will be so much the better, and be all so corrected into the bargain. 2. *Angelus Sala*, makes an Extract of Opium thus. Moistens Opium in slices with Vinegar, and dry it, till it will powder with your Fingers, which Powder dissolve in Vinegar, of Roses in a Sand heat: Strain out and abstract, dissolve it again in Rectified Essence of Elder, Clarify it with Whites of Eggs, and infuse to a consistency fit for Pills. This Sweats powerfully- m 3. *Extraffum Opii ^uercetani.* Cut the Opium into slices, and dry them with a moderate heat in Sand (avoiding the Fumes) till it will rub into Powder with your Fingers, so will the stinking Sulphur (in which is the Narcotick and Poisonous force) be gone: dissolve this Powder in Juice of Limonsj or Lime Juice, or in Spirit of Vinegar and abstract to a consistency fit for Pills. 4. *Extrattum Opii Crollianum.* Dissolve the Opium in Hyflp Water and extract the Tincture, as in the first way, which abstract to the thickness of Honey dissolve this in Spirit of Wine, and extract a Tincture again, which abstract to a consistency fit for Pills. 5. *Extraffum Opii Hartmanni.* Tincture of Opium made by drying at the Fire, from which extract a Tincture with Juice of Limons, or pure Wine Vinegar, so long till they will be no longer Tinged; digest these Tinged Liquors 10 Days, decant the clear, and abstract: to 2 due thickness. By these ways of-Extraction the Opium is purified or cleaned, prepared and made fit for other Compositions, and sufficiently corrected for general Use.

XLVII. *Pulvis Opii*, the Powder of Opium. Take either of the former ExtraUs, dry them b) the Fire (being cut into thin slices) and gradually increase the ficity till the Mass will reduce into a subtil Powder, which fearse and keep for use: so is the Opium prepared and made fit for any Preparation of Compound Poudersy Eletuaries, Pills, Laudana^ or TinUyes, which the Artit (shall think fit, will have occasion for. Out of this Simple Powder of Opium thus prepared, you may make *Pulvis Opii*, *Optima*, after this manner: *Xatooft tot fimpk Powder % Ounces; salt of Tar-*

rar Vitriolatc, or Sulphurate 15 Ounces^ mix them add, Chymical Oils of Angelica, Cloves, Limons, Oranges, and Savin, of each 1 Drams -, mix the Oils first together by themselves, and then mix them with the Powder, which Aerp in a Flint Gfofe Bottle (having a pretty wide Mouthy with a ground Glafs Stopper) close Jiopt for use. It is a most admirable thing to ease all manner of Pains whatsoever, in any part of the Body, whether intern^ or external, stop Fluxes of Humors, ease Omghs, helps Aithma's, and resolve Pleurifies. And for this reason it is peculiarly good against the Stone Gravel, pain and heat in making Water, the Colicky Megrim, Head-ach, Gout, Rheumatism, Venereal Nofburnal Pains, and other Diseases akin to them. Dose from 1 Grain to 3, 4, 6, or 8, according to Age and other Accidents ^ beginning with a final Dose, and so encreasing the Dose gradually, as need requires.*

XLVIII. *Tinffura Opij fimple*, simple Tincture of Opium. Take Extract of Opium (at Sect. 4* 12 Ounces", Spirit of Wine ac anted with Spirit or Oil of Sulphur a Gallon: mix, dissolve, digest in * Bolt-head well fiop for 8 or 10 Days, then decant the clear Tincture for Use. Or thus, Take Extract of Opiu?n 12 Ounces, }*over Cloves Sulphurated a Gallon-, mix, dissolve, digest, for 10 Days, and decant the clear Tincture for Use. Or thus from Margrave, Take Extract of Opium 12 Ounces Spirit of Wine Vinegar a Gallon, or a sufficient quantity: mix, dissolve, and digest, for 10 Day^ or till the Tincture becomes clear, which decant, and keep it close fiop for Use. Being thus prepared, it is fit to make other Compositions of -, and an Acid Menstruum is rather to be chosen than one that is not, because it not only corrects the Opium, but also prevents its making the Stomach Sick whereby the Tincture becomes not only the more Friendly to the Stomach and other Bowels, but also to the thiversal Body in general. Dose is from 10 to 20 or 30 Drops or more every Night at Bed time in a Glafs of Canary, or other fit Vehicle* It admirably induces Sleep, and gives ease in all manner of tormenting and excoriating Pains in what part of the Body soever. It (tops the Flit, and motion of all sorts of Humors in any part of the Body, partly by thickning the Matter, and partly by contringing or (hutting up the Mouths of the Vessels. It induces a gentle Sweating, after a very excellent and easy manner, gives ease in Pleurify, and the most exquisite Colick, and is profitable against Catarrhs, Coughs, Colds, Hoarseness* Wheezing, Asthma's and other Distempers of the parts, proceeding from thin, flowing, acrid, flippant and Salt Humors. It gives ease in the Sciatica, Gout, and Rheumatism, and is an approved thing against all sorts of Fevers or Agues, and in a short time puts a stop to the Current of the Veins. Outwardly also applied, it is a finguk* Anodyn, and eases all sorts of pains, the part being bathed therewith, and double Cloths dipt therein being applied or laid over.

XLIX. *Tinffura Opij compofita*, Compound Tincture of Opium. Take Thebian Opium a Pound cut it into bits, and dissolve it in fair Water, in * boiling Balneo, digest afterwards in a gentle heat for 7 Days to extract the aqueous Tincture, and nil all the hves have perfectly subsided, decant the clear Tincture, and to the Vceces put more Juice repeating the same Work, till they will no more color the Water, which then cast away. These Tinctures evaporate in a gentle Balneo or Sand heat or draw off the aqueous parts in a Glafs Alembick (which Water keep for an Opiatick Vehicle) till the bottom becomes as thick as Nitrum.

or an Extraff. Then add thereto choice Lime Juice, choice Canary, pure Spirit of Wine, of each a Pint and half: Pouder of Cloves 1 Ounces: Cochinele, Saffron, Winters Cinnamon, of each 1 Ounce: Cam* pbir half an Ounce diffolved in Oil of Oranges 2 Drams* or fo reduced to a Pap: mix all and digeft for a Month, in a very gentle Sand heat, (baking[^] the Glaſs once or twice a Day: then let it Jiand in a cool place, till it is poſſibly ſettled, and decant the clear Tinfure, keeping it a Glaſs cloſe ft opt for Uſe. The Power and Vertue of this Medicine, flies like Lightning thro' the whole Body, for it is no ſooner received into the Stomach, but it preſently refreſhes the Spirits, cheers the Heart, and gives eaſe and relief in any pain, in what part of the Body foever. Nor is this Preparation ſubjeft to thoſe ill effeas, which ſome other Opiates retain, becauſe it is freed from the Malign Sulphur of the Concreets, which the Water, in its firſt dilſolution will never reſolve, for which reaſon it is much pleaſanter than many other Preparations of Opium. It ſilently and ſoftly as it were, appeaſes pain in any part of the Body from Head to Foot, allays Grief, procures a quietneſs of Mind, and cauſes pleaſant Reſt and Sleep, reſtoring Nature to its Priftine Sure, and repairing the decayed Strength. It is of ſuch an atnicade, and Kind Nature, that ſcarce any Cordial ſhould be given without ſome few Drops of it for thereby, the Cordial it felt is exalted and made more Cordial. It gives eaſe after an admirable manner, both in Stone and Gout, cures Rheumatifms, and alleviates After-pains of Women in Child-Bed, giving them reſt and eaſe. It is a Specifick in the Gout, and all raging pains in the Joints, Nerves, Sides, and Bowels, being inwardly taken, and outwardly bathed upon the parts affected. It givps eaſe in an Exquiſite Pleuriſy in half an Hours time: flops Catarrhs and Coughs to a miracle, >as alſo all iorts of Bleeding, as ſpitting Blood, vomiting Blood, piſſing Blood, Bloody-flux and Hepatick Flux, Flux of the Courſes, and the extream bleeding of Wounds: It is an excellent thing againſt Wind, Indigeſtion, Colick, and other Diſtempers of the Bowels, proceeding from cold and ſharp Humors. It gives relief in Aſthma's, ſhortneſs of Breath, Hoarſneſs, Wheeſing, and the Phthiſick, or Ulceration of the Lungs-, and diſſolves the Tartar or Viſcous Flegm, which flicks to the Lungs, Stomach and Guts, and is the cauſe of Tortions, pricking or Jharp Pains: It does indeed extinguish in all Ages and Sexes, the acrimonys, ſharpneſs, and anguiſh of Diſeaſes, giving relief after a miraculous manner, and this ſometimes after all hopes are paſt. You may give of it from 10, to 20, 30, or 40 Drops, or more, according to Age and other Circumſtances, in Wine, as Canary, or in Beer, Ale, or other Liquors, every Night going to Bed.

L. *Tinfſura Opij Paracelſi Diaphoretica*, Paracelſus his Sweating Tin&ure* of Opium. Take of one of the former Extraffs of Opium 12 Ounces ^ Tartariz'd Spirit of Wine a Gallon •, Saffron, Cochinele, of each 2 Ounces, digeft and make a very froth Tinfſure, which decant from the Faces \$ to iſk Tincture add of the Tinfſura Diaphoretica Paracelſi in our Pharmacopeia Londinenſis, Lib. 4. Chap. 7. Seft. 25. 2 Gallons: mix, ſcgeft, circulate fur a Month, and keep the Tinfſure for Uſe. It is a moſt admirable thing to cauſe Sweating, and you will find it as good a Sudorifick, as is ordinarily to be met with,, expelling Tartarous Diſeaſes, *^s the Scurvy, Dropſy, Jaundice, Gout, Rheumatifm, and Pox. It melts Icy and Refinous Humors, expelling Wind in any part. And by its Balmick Tincture, it reſiſſo putriſfa&wn, expelling the malig-

nity of the Mealies, Small Pox, Poifon, and Plague it felt*. It may be given from 20 Drops, to 40, 60, or more, without any danger, in any Vehicle the Phyſitian (hall lee fit.

L.I. *Tinfſura Opij Scheferi*. 5V/; ^r his Tin&ure of Opium. Take Thebian Opium, (dried as Quercetan adviſes) or, ſome of the former Extraffs of Opium 12 Ounces-, reſſified Spirit of Wine 1 Gallon, acuated with Oil of Vitriol 12 Ounces •, Engliſh Saffron, Species Diambra, Aromatic urn Kofat urn of each 7 Ounces-, Ambergrife 6 Drams: Inſuſe all in a Glaſs Matrass cloſe ft opt for 29 Days, then decant the clear, filter and it keep for Uſe. It is a moſt admirable Soporifick, eaſes all pains in a Moment, performing the ſame in a moſt admirable manner, and all that the molt excellent Laudanum can do. Dole from 10, or 12 Drops, to 20^ 30, or more, accprding to Age and other Circumſtances.

LIL *Spiritus Opij*, Spirit of Opium* Take choice Thebian Opium a Pound cut into bits, and diſſolve it in a ſufficient quantity of fair Water[^] ſo much as may extraſſ all the Tinfſure of it, and till it will yield no more colon, what remains- which will not diſſolve in the Water caſt away, and let the Tinfſure ſettle till it is perfectly clear which decant \$ and caſt thoſe F<eces alſo away: to this Tinfſure add an equal quantity of Spirit of Wine\$ digeft 24 Hours, and then in a Glaſs Alembick draw off all the Spirit, and continue the diſtillation till what comes over taſtes Soweriſh: draw off the remaining part of the Water (which is a thing of no Uſe) till the Magma becomes as thick as new Honey 5 Cohobate the Spirit upon the Magma, and diſtill as before, which Work of Cohobation repeat four time[^] drawing it off at laſt till an Extraff is left at bottom, of a confiſtence ſit for Pills[^] this Spirit thus drawn off, is Spirit of Opium: The Extratt & bottom may ſerve to make Laudanum of. There is alſo another way to make Spiritus Opij which is done by Fermentation, after this manner. Take Thebian Opium a Pound, diſſolve it by gentle Boiling in a Gallon of Rain Water-, then decant or ſtrain[^] and caſt the t'ces away: To this add amber Gallon of fair Rain Water, in which diſſolve Brown Sugar 6 Poundr, and a good large Leven, and with agentle heat, being about Blood warm., cauſe the* to ferment for ſome Day*, till all the Liquor becomes of a Vinous Smell: Then put all into a Copper Vefica, with its Head, Serpentine and Receiver[^] and diſtill or dram off 8 or 9 Pounds of Spirit, which keep for Spirit of Opium. Then changing the Receiver, draw off the Water till it begins to Taſte foever, this keep for Poppy Water. Afterwards putting more Water to the Magma, waſh it all out of the Still, and evaporate it away, till an Extratt remains of a confiſtency for Pills, which may be reſerved, to be put into ſome Opiate Preparation* There are ſeveral other ways alſo of making Spirit of Opium, which you may ſee at large in the Second Edition, of Our Pharmacopeia Bateana ^ Lib. 1. Chap. 2 Se&.\$8. which ſee at yourleifure. Theſe Spirits are much pleaſanter than either Tinfſure or Extratt of Opium, which contain the Body of the Concreat. Spirit of Opium never makes the Stomach ſick as ſome other Preparations do, nor yet diſturbs the Head, otherw'iſe than it is poſſible as much Spirit of Wine may do, which is a conſiderable advantage in its Operation. And altho' it is not altogether ſo ſtrong and forcible as are Tintures, Extraffs, or Laudana, yet it operates with much more ſpeed and ſafety than they poſſibly can. For they fly like Lightning through the whole Body, and give eaſe and relict; not only to the Spirits, but to the Uaiverful Body almoſt

in a Moment. This *Spirit* suppres not the Excretion of Excrements, nor Hops the Passages of Urine[^] it benumbs not, nor enervates. the Limbs, nor changes the natural complexion of the Skin to paleness, nor causes cold Sweats, (shortness of Breath, nor stupification of the Animal or Vical Faculties * but it has all the good effects which are attributed to the most excellent *Laudanum*, tho* not with the self same strength and force: it appeases all perturbations of the Mind, and intestine and Violent Commotions of the Body, as Disquietings, and the Rage, Fury and Madness of *xhtArchais* (the principal director of the Spirit of Life) restoring again Peace and Concord, Rest, and Ease to the whole Man, and all the faculties of the Body. So that after it has softly and silently (as it were) appeased the Pain, and allayed the Grief, it procures a quiet and pleasant Rest and Sleep, restoring Nature to its pristine State, and repairing its decayed Strength; whereby unthought of Health comes on, with a violent Career, and takes possession of its ancient Habitation, exterminating in all Ages and Sexes, the Roots of bitterness, and the Seminalities of Pain and Diseases. This *Spirit* is of such a kind and amicable Nature, that scarcely any Cordial should be given without it; and it may be given from half a Dram, to T, 2, or 3 Drams, yea to half an Ounce, according as the Age, Strength, Condition, and Necessity of the Sick, and other Accidents will admit of.

LIII. *Laudanum Liquidum Helmontij*, *Helmonti* his Liquid Laudanum, according to *Joel Lange** lot. Take *Thebaian Opium* cut finally a Founds Juice of ripe Quinces newly drawn 10 Pints, Salt of Tartar 1 Ounce, digest all 2 Days in a very gentle Sand heat, or till you see Bubbles appear above the Liquor, which is a sign that fermentation is at Hand 5 then add thereto fine Sugar in Ponder 4 Ounces > and use a moderate heat to advance the fermentation; so will the Opium rise, and totally dissolve. At the top of the Liquor, will be a filthy, impure and Scummy part which remains. At bottom will be an impure and Earthy part. And in the middle will be, a pure, and transparent Liquor, a* red a* a Rubie, which separate, filterate, and keep for Use. This is the True Laudanum of Helmont from Langelot, and may be given a gut. 6 ad 15, 20, or 30, in any proper Vehicle, as Canary, &c. But if you please you may inspissate the Tincture to the consistency of an Extract fit for Pills, and either keep it in that Form, or dissolve it again in pure Rectified Spirit of Wine, which being Filtered, is to be digested for a Month, to ripen it and bring it to periesion; then inspissate again, to the consistency of an Extract. From this, the said Langelot promises wonderful things, in all cases where Laudanum is to be used, giving at a time not above a quarter, or half a Grain, or at most a Grain. This small Dose is imputed to the union and close binding up of the Particles of the Opium, first dilated by Fermentation, and then reduced or consolidated again by bringing the Matter to the Form of an Extract. This Laudanum induces Rest, allays the Harshness of Humors, and stops their motion. It fortifies Nature, and parts of the Body affixed, corroborates all the Bowels, cherishes the Natural Heat, restores the Retentive Faculty debilitated, stops all Fluxes of Blood in Man or Woman, as the overflowing of the Terms, and all sorts of Fluxes of the Belly, Catarrhs, and other thin and corroding Defluxions, either upon the Eyes, Ears, Teeth, Throat, Lungs, Stomach Joints, or any other part external or internal. It eases all pains of the Head, arising from attenuated Humors, taken inwardly, or applied to

the Fore-head and Temples. It discharges and expels Wind; and takes away noises in the Ears. It eases the Tooth-ach, stops Vomiting, and all other violent Purgations and Fermentations of the Humors. It gives ease in the Disease Cholera, and the Wind Colick, and in all griping pains of the Bowels in Man or Woman, given as well as by the Mouth, by Clystet. It is a powerful Remedy against the Stone, Gravel and Tartarous Matter in the Urinary parts. It not only allays the Fermentation of the Humors, but abates their Acrimony after due Purgation. It cures & Gohorrhoea (Univerfalsbeing premised) and strengthens the Spermatick Vessels. It cures all sorts of Gouts and Rheumatism, and is prevalent against all pains in any Age or sex? arising from what cause bever, especially after general Remedies, or previous Evacuations.

LIV. Another Prescription of *Helmonts Liquidum Laudanum*. Take Juice of Quinces a Gallon, w^h put into a Yermen^t't^{wn} with Ale left, with this extract a deep red Tincture from Thebaian Opium 1 Pound, which strain and Aromatize, then draw <# one half of the Liquor in Balneo, and keep the remaining part for Use. It has the Virtues of all other Laudanums, and is given with a happy success in Dyfenterick affections, and is esteemed by many Physicians, the most safe of any Laudanum. Dose a gut. 8, ad 20, 30, or more (according to Age and other Accidents) in Canary or other Vehicle at Bed time. There is yet another preparation of *Helmonts Liquidum Laudanum*, the you may see in *Our Praxis Medica*, upon Sydenhants *Vroceffus Integri*. Ub. 2. Chap. 24. lately emitted into the World 5 to which we refer you.

LV. *Laudanum Specificum Paracelsi*, his Specifick Anodyn. Take *Thebaian Opium* extracted a Pound, Ponders or Extract of Cinnamon, Cloves, Saffron, of each half a Pound; Juices of Sower Oranges and fiances, of each 3 quarters of a Pound: mix, and digest with a gentle heat for a Month, or till the mixture is dissolved, strain out by pressing, and abstract to the consistency of a Extract for Pills, then add Ambergrise in fine Powder an Ounce and half; Musk in fine Powder 3 Drams? Magistries of Coral and Pearl, of each 1 Ounce i mix and digest a while, then add of the quintessence of Gold 1 Ounce-, mix, and com pleat the Specifick Anodyn of Paracelsus. In this leaves out the Tincture of Gold, and some proper Salt-, we rather advise to add in part thereof, an Ounce of pure Oil of Cinnamon as is extra Sed in the East-Indies. There is another Recipe of the *Laudanum Paracelsi* given us by some Authors, which is the following. Take 1/2 trail of Thebaian Opium a Pound*. Inspissate of Henbane, Species of Diambrt 'C? Diamofchi, 1 o Ounces; Mummy 2 Ounces, Salts of Pearl and Coral, of each an Ounce and half; Liquor of wit Amber extracted with Ale 001 of Wine, Bone of a Stags Heart, Bezoar Stone, Unicorns Horn, Aurum Potabile, of each an Ounce and Musk 3 Drams -, & Ambergrise 2 Ounces and half-, or for want of Ambergrise Potabile, you may add of the Chymical Oil of ynamon and Clves, of each half an Ounce-, mix well*, and digest again for a Month, and so keep for Use. It eases all manner of Pains in a Moment, stops all sorts of Fluxes of the Bowels Catarrhs, Coughs, overflowing of the Terms and Whites in Women, stops Bleeding, &c. And is Specifick in the Pleurisy, Colick, Hyfterick Griping? of the Guts, Gout, Rheumatism, Rheumatism, OV. and has all the Virtues of Tinctura Opij Simplex and Composita, and that 01 Paracelsus, as alib of the *Laudanum Helmonti* a

SeS. 48, 49, 50, and 52, foregoing. Dofe * £/ 1, ad 6, either in a Pill, or diffolved in any proper Vehicle.

LVI. *Laudanum Londinenfe*, The L*^{wfo}* Laudanum. *Take Tbebaian Opium extracted, a Pounds Extra ff of Englijh Saffron a Pound and half: Extrail of Calhreum 2 Ounces-, pong TinUure of Species Diambrit, made with Spirit of Wine, bajf a Pounds Ambergrife, Musk, of each ? Scruples; Oil of Nutmegs 160 Drops, or 3 Drams: mtx them perfectly together, and evaporate in Balnco, or a Sand hedt, to a due Confistency.* It is a moft excellent Compofition, and has all the Virtues of the *Laudanum Paracelfi* in the former Sethon, and may be given in the fame manner and Dofe, every Night at Bed-time.

LVII. *Nepenthes Opium*, A Confett againft Sorrow and Sadnefs. *Take Tinfure of Opium (firji prepared with Spirit of Vinegar, then with Spirit of Wine,) ExtraU of Saffron made with Spirit of Wine, of each a Pound \$ Salts of Coral and Pearl, of each hdlf a Pound-, Tinfure of Species Diambra a Pound*, Ambergrife, 2 Ounces-, mix, and by the gentle heat of a Bath, evaporate to * confistency fit for Pills.* The Virtues are the fame with the two former, fave that this more chears the Heart and Spirits, caufes Gladnefs, and drives away Melancholy. Dofe a gr. 2, ad 6, or 8.

LVIII. *Requies Nicolai*; *Nicholas* his Confer caufing Reft and Sleep. *Take redRofes Ex^gulated, blew Violets, of each 4 Ounces-, Thefoan Opium (diffolved in Wine) Seeds of white Henbane, of white and black Poppies, of Endive, of ^urflane*) of Lett ice, of Pfy Ilium, Roots of Mandrake, Spodium, Gum Tragacanth, of each an Ounce^ Nutmegs, Cinnamon, Ginger, red* white^ and yellow Sanders, of each 2 Ounces \$ fine Sugar three times the weight of them all, viz. 93 Ounces, which diffolve in Rofe Water, into a Syrup of the thicknefs of ffoney: mix and make an Eleluary according to Art.* In this Compofition the *Opium* is about $\frac{1}{100}$ or $\frac{1}{150}$ Hundred fifty fixth part of the Whole. It has all the Virtues of the *Philonium Ferficum*, and *Romanum*, and may be given from 2 Scruples to 2 or 3 Drams in any proper Vehicle, as occasion and the reafon of the thing may require.

LIX. *Theriaca Londinenfis nova, vel Salmoniana*, Our new London Treacle. *Take Extrattof Opium a Pound*, Solid ExtraQs of Juice of Liquorice, of Elecampane Root, of Gentian > of Zedoary and of Bay Berries, Juice of Alkermes of each 4 Ounces j which diffohe in Jo much Spirit of Wine, a* to make them of the Thicknefs of a foft ExtraU. Take Saffron, Contrayerva, Indian Spicknard, Vir* ginian Snake Root, (Jinger, Myrrh, Cochinele, Bezoar Stone, each of them made a part into fubtil Pouder, Salts of Coral and Pearl made with Oil of Salt, Volatile Sal Armoniack in fine Pouder^ being ground with a little Spirit of Wine, of each 4 Ounces ^ Angelus Miner alis^ Panacea aurea, of each 2 Drams ^ Bezoar Animal, Bezoar Minerale, Bezoar Solare, of each 4 Ounces-, Camphir ^{ms}(f a Pound*, Chymical Oils of Carraways, Cloves, Juniper, Rofemary, Sajfafras, Wormwood, of each 2 Ounces*, Clarified Honey 14 Pounds: mix and ^m<ike an Eleffuary according to Art. It has all the Virtues of the molt jexalted *Laudanum*, Whether of thofe at SeS. 48, 49, 50, and 55, ^foregoing, or thofe at SeS. 60, 61, and 62, following. The proportion of the *Opium* to the reft ff the Ingredients is $\frac{4}{1}$ or one of twenty one parts. So that the Dofe may be from half a Scruple to ^a Scruple, half a Dram, 2 Scruples or more, according to Age, Strength, and other Accidents. ^{lt} ftops the nwft Vehement Coughs, Catarrhs,*

and Fluxes of all kinds -, is excellent againft Gouts^ Rheumatifms, Colicks, Agues, Phthificks, Affhma's, all Fluxes of Blood upwards or downwards, Bitings of Serpents, Vipers, Mad-Dogs, or other Venomous Bealts *, takes away all mann^r of Pains falmolt in a Moment) in what part of the Body foever, and gives pleafant Kelt and Sleep;

LX. *Laudanum Volatile Xqftrum*, Our Cordial Pills or Volatile Laudanum, *"lake Ext raft of the be ft Tbebaian Opium a Pound-, of the be/ Mithridate or Venice Treacle 6 Ounces-, Camphir 10 Ounces, made into fine Pouder with a little Spirit of Wine-, Ext raffs of Contrayerva, Indian Spicknard, Virginian Snake Root, Zedoary, Winters Cinnamon, Cloves, Saffron, Caftoreum, of each an Ounce; Volatile Salts of Mans Skull, of Harts Horn, of Sal Armoniack, of Vipers, of Amber, and of Tartar, of each 6 Drams: Chymical Oite of Cloves, Cinnamon, Limons, Sweet Marjoram^ Nutmegs, Oranges, Rofemary, Sajfafras, Savin, Wormwood, of each 2 Drams -, being all well mixt together, digeji in a very gentle, or rather only warm Sand beat for a Month *, then add Oriental Bezoar Levigated, Bezoar Mineral, Cochinele, Sain of Coral and Pearls, of each a like quantity, fd much, as may bring it to a confistency for Pills, which keep dofe in Wooden, or Silver Boxes wit) Screws for Ufe.* It is one of the belt Anodyns in the World, eafing all manner of Pains in a Moment, in any part of the Body inward or outward, k is prevalent againft all forts of Fits and Paffions of the Heart, as Palpitation, Trembling, Swooning, oppreffion of Wind, Fits of the Mother, Convulfions^ Vertigo, Frenfie, Delirium* Madnefs, Megrin, Head-ach, C?c. It caufes pleafant Reft and Sleeps flops all forts of Catarrhs, Coughs, and diffillations of Rheum, upon any Member or part-, is good againft Colds, Wheezing, Hoarfnefs, Affhma, forenefs of the Throat, Ulcers of the Lungs, It eafes Pains of the Teeth prefently, and is admirable againft the Gout, Rheumatifm* Sciatica, and French Difeafe, being an effectual Alexipharmick and Sudorifick. It is good againft fputting of Blood, piffing of Blood, and the Bloody Flux, and all other Fluxes of the Bowels, as alfo all other Sorenefses and Bruifes, Pleurifies, Pains and Stitches of the Sides, h it flops the Whites and the overflowing of the Terms in Women *, and in-fallibly cures Agues of all forts, being given in a Glafe of Canary, about 3 Hours before the coming of the Fit* Dofe from 1 Grain to 4, according to the Age and other Accidents of the Patient. The proportion of the *Opium* to the reft of the Ingredients is $\frac{1}{6}$ or as one to Six.

LXL *Laudanum Specificum noftrum*, Our Specifick Laudanum. *Take Ext rail of Tbebaian Opium a found-, Oil of Sulphur 3 Ounces*, mix them well together *, to which add, Oil of Nutmegs by Expreflion 1 Pound*, Anodyn Sulphur of Mars 6 Ounces 5 Bezoar Mineral, Pouders of Campbir, Cloves., Catechu^ Winters Cinnamon, Indian Spicknard] Jejfuits Bark, Saffron, Virginian Snake Root, Cochinele, of each 3 Ounces-, Salts of Coral and Pearly of each 2 Ounces 5 Chy771 Ical Oils of Amber, Anifeeds, Cloves, Rofemary \$ ^vormtvro'd, of each 5 Drams: Mithridate a fufficient quantity, to make it into a Mafs for Pills. The Proportion of *Opium* here is more than ^ and lefs than on# fixth part, fo that it may well be given from 2 Grains, to 4* 6, or 8 Grains according to the Age and Condition of the Patient, and that every Night at Bod-time. It comforts the Stomach and Bowels, and is found by Experience, to be admirable againft all Fluxes of the Belly, Vomiting, and Sicknefs at Sjomach-Bleeding at Noie, overflowing of th^T% _{ms} in*

Women,

Women, spitting and pitting of Blood, vehement Coughs, Colds, Catarrhs, and other defluxions of Humors. It comforts the Vilcera \$ and all the Internal Members. It is of Wonderful power against the Scurvy, Dropfy., Jaundice, Gout, Rheumatifm, Vapors/Fits of the Mother, and other like Difeafes of the Womb-, and prevails also against all kinds of Agues and Fevers, intermitting, remitting* continual, continent, putrid, or Malign ; and is given even in the Plagueit self, and in all sorts of Epidemick Difeafes, as Meafles, Small Pox, £?.. It gives ease in all vehement Pains, of what kind, and in what part of the Body foever; It prevails against the Stone, Gravel, &c. in the Urinary parts *, is a fingular thing against Asthma, Pleurilies, and a Phthifis or Consumption of the Lungs. It cheers the Heart, revives the Vital and Animal Spirits, restores the Faculties, strengthens Nature, and causes pleafant Rest and Sleep. And it is a Secret in curing a *Gonorrhœa* in Men, and a Running in Women, Univerfals having been pre-mixed.

LXII. *Laudanum Catharticum nostrum*, our Purging Laudanum. Take Extraits of Thebaian Opium 1 Pound*, Extraits of Aloes, made with simple Fennel or Angelica Water 7 Pounds, Native Cinna-bar Levigated 2 Pounds; Refinous scammony in fine Powder, 1 Pound; Camphir, Ginger, of each in fine Powder half a Pound; Oils of Angelica, Cloves, and Wormwood, of each 2 Ounces: mix and make a *Mals* for Pills. It Purges very well, more than treble the quantity of Aloes would do, without the Opium, and Purging without Pain, easesatt manner of Pains in any part of the Body: the Belly being bound, it will Purge or gently loosen it, according to the largeness or smallness of the Dose given, The Virtues of this Medicine are to be admired, never enough to be praised. It strengthens the whole Man admirably, and is commended for corroborating the more Noble Bowels; but above all for correcting of corrupt and evil Humors, and its very sweetly purging the Body, which it does by a very safe and pleafant Operation. I have cured by this Medicine alone indurated Cancers tho' of some Years standing, where they have not been broken or ulcerated; for since nothing can stand at a stay, but what does not encrease, must necessarily decrease fo, since this Medicine hinders the *Pabulum* of the Cancer, it must in time decrease, and as it were pine away, and this it does by flopping the Fluxion of the Humor to the part^ and carrying it off another way. It eases the Cough, is good against Asthma's, and stops thin Catarrhs: it induces Rest and Sleep, and prevails against Quotidian, Tertian, and Quartan Agues, being given some Hours before the Fit. Dose from half a Scruple to a Scruple, or half a Dram at Bed-time, according to Age and other Circumstances. The Proportion of the Opium here is !y or as one to twelve.

LXIII. *Gutta Vita Xofir**, Our Cordial Drops. Take Extraits of Opium, made as before directed, 16 Ounces; which dissolve in TinSure of Salt of Tartar 8 Quarts; or in Pozvers of Ann/eds, Angelica, Carr'awaies, Cloves, Rosemary, of each 2 hearts; the Menstruum being first impregnated with the strong Tinctures of Saffron, Cochinele, Cloves, Winters Cinnamon, Nutmegs, Virginian Snake Root, Zedoary, of each 2 Ounces; all of the in (the Saffron except ed)\reduced into fine Powder; Castoreum (freed from Skins and flat) in fine Powder 4 Ounces; The Opium being dissolved in the said lincture, digest for a Month, flaking the Bottle Veil once a Day h let it then settle till it is per/ettlyjwe, and decant off the clear TmUurc into <m>

ther Glafe Bottle, to which add Narcotick Sulphur of Vitriol 5 Ounces*, Camphir half a Pound: mix and dissolve, and digest 10 Days; and fo keep it dose ft opt for V/e. It has all the Virtues of any of the former Tinctures of Opium, or of any of the Philoniums or of any the most exalted Laudanum, which we have discoursed of before at large: and is much better to be given to such, who cannot swallow Bolm\ or Pills, This being to be given only in Drops at Bed-time in a Glais of Canary, or fair Water, or other Vehicle, the Patient best likes, as White Wine and Sugar, Mace Ale Broth, Poflet Drink, or a little Syrup. If it is taken for a Cough, which is troublesome in the Day time, or for a deep Consumption, or for prevention of any Illness, it may be taken in the Morning Falling, in the design'd Vehicle. The Dose is to be regulated according to the Age of the Sick, and other Circumstances. To a Child of a Month, Quarter, half Year, or Year old, you may g^{wc} from 4 Drops to 10. From a Year to 2, 3, 4> or 5 Years old, you may give from 10 to 16 Drops*. And to elder Persons from 6 Years of Age to 12, or 14, you may give from 16 to 24 Drops. From 14 Years of Age, to 20, 30, 40, 60, or 80 Years old and upwards, you may give from 24 Drops to 40, 50, or 60 Drops at a time, which in ordinary cases may be the highest Dose. But in all Persons, Ages, and Sexes, it will be better to begin with a smaller Dole first, and fo to encrease it every Day, gradually till it comes to the highest. ^ It is safely be given to Women with Child, being a excellent thing to prevent Miscarriage.

LXIV. *Laudanum Opiatum Hartmann'hHar.* his Laudanum. Take of any of the former Extracts of Ksyutma Pound, Saltsaff Conal and Pr each half a Pound, Extract of Saffron, made the Spirit of Wine a quarter of a Pounds TMx mil together, and then add to them O'of i Ounce -, mix them well again, and keep it in a Silver Box very close, for V/e. It has all the Virtues of any of the other Laudana. The Op* here is t or as four to five, to the rest of ingredients, and therefore it may be given from a Grain, to 1, 2, or 3 Grains, as the Physician shall advise, beginning with a small Dole and fo gradually increasing it.

LXV. *Pilule de Cynoglojfo*, Opiate Pills. Hounds-Tongue. Take Roots of Hounds-dryed, white Henbane Seed, Opium prepared each a Pound; Myrrh in fine Powder a and half; Olibanum in fine Powder, a PoUt & a quarter; Saffron, Castoreum Storax Cahstia each a quarter of a Pound arid half a quarter the Roots of Hounds Tongue and Henbane Seeds Powder ed together, but the Myrrh, Saffron >> a Olibanum, each by them/elves; the Opium being small, dissolve to the thicknes of an Extract of Ro/e Water; then add the bonders; and vsi of Stvcha* make a jtyals for Pills. They are vented to stop Catarrhs, Coughs, Asthma's, of Fluxes of the Bowels, the overflowing Terms, and the Whites in Women. They are good against a Phthifis or ulceration of the restore in Consumptions, and are profitable against Pleurifies, Pains and Stitches in the Sides, and Gripping of the Guts, and all other inter-Pains whatsoever, as of the Spleen, S Reitis, Bladder, from the Stone, &c and j pleafant Rest and Sleep. The Proportion or Opiurp in this Composition is 4 as one to tenth part of the whole- So that the Dole n be from 5 Grains to 10, 20, or 30.

Opiate pills Olibanvnt, Tike Storax Cialam'ita

Inpiffate Juice of Liquorice, Ext raft of Opium, or "Opium prepared, of e&ch a Pounds Saffron a quat-er of a Pounds with Syrup of zobire Poppies make 4 Mafs for Pills according to Art. The Virtues of these Pills are the lame with the laft, and have the fame force and effets, With any of the Laud*na before defcribed and declared, and maybe given for thofe purpofes in the fame manner. The Proportion of the Opium in this Composition *s 4 as one to fix, or a fixth part of the whole, and therefore the Dofe may be *gr. 3. ad 12. or 18. and the larger Dofe may be exhibited in vehement Catarrhs, violent Coughs, and inveterate Fluxes of the Belly, Gout, Rheumatifms, &c.

LXVIL Extrattum florum & Cavatum Papaveris, or German Opium." Take the Heads of Poppies when they begin to flower, bruife them, and digefl in Balneo, with Hy drome I, Metheglin, or Canary, for 1% or 20 Days, till the Liquor is y&y red; then ft rain forth the juice or Liquor by ftrong Prefling: abftratt in Balneo till a Gummy Magma or Substance remains, which being put into cold Water will be forthwith congealed. This is German Opium no ways Sophifticated, which may fe made ufe of inftead of the True Opium>

An APPENDIX to, Se8. XLVI, and XLVII.

LXVIII. Some confound Opium with Meconium^ out erroneoufly: for Meconium, as Diofcd'rides, ** 4 chap. 6Si Testifies, is an Expreffed Juice from the Poppy, which is Inpiffated which according to Fred. Hoffman, is thus Prepared. *Pat aver urn Vafcula cum foliis t undent es torculari extrimunt^ mox in Mortario teretes papillosfor-nant, vocaturque illud Meconium. Cafper Hoffman de Medicamentis Officinalibus, lib. 2. chap. 169. te&. 9. has it thus, Hoc cut em, (ymmm* *) in\$ KnKovos) tot a Plant a contufa p expreffa. But guer-etanus in his Pharmacopeia Reft it ut a, chap. 2J, ttiakes it after this manner: *Recipe Caputum Papaverum* (which bears the red Flowers, I fiippefe he means our *Black Poppy Heads*) *q. v. contunde in Mortario inarmoreo, affunde Vinum generofum ad Quorum digitorum eminentiam: digere in Balneo per aliquot dies, ut incipiat rubelcere, exime Cf ufpiffa. Lemery fays, That Opium is a Tear, *hich diftills of it felf, or by Incifion from the £W# of Poppies, and this in Greece, as alfo in the *^ngdom of Cambaia, and the Territories of Grand ytiro in Egypt, and that there are three forts of the Blacky the White^and the yellowy which the Inhabitants of thofe Countries do keep for their °Wn Ufe, and only fend us Meconium, which is J^thing elfe but the Juice of the Poppy Heads, ^rawn by Expreffion, and then thickned, and wrapt i^P in Leaves to Export it the better: but I hope ^onfiute Lernery will give me leave to believe as I think fit of the latter part of his**

LXX. Opium, fays Schroder, is, Lachryma, a which Diftills from the Heads of the Poppies, gently cut, when they begin to grow ripe, of this Opium, there are three forts. 1. *White*, which comes from Cairo in Egypt, and this is to be the Thebaian Opium, which we call *key Opium*, and is accounted the belt. *Schroder* *^p>^ the *Cabaifan Opium* is the choifeft, and it is heavy, and thick, and burns with a j p not black, of a Poppy like Smell, but JJ?^ger, of the color of Aloes when broken, and is to be diftillved. That which the Turks daily *Kc from half a Dram to a Dram, which they

call *Maflac*, is of a Lyon tauny color, but, we have icarceiy any of that. *Lemery* fays, that the *Opium* which comes from *Thebes*, or *elfe*. *Frohi Grand Cairo*, is accounted the beft, which is blackifh, inflatable, bitter to the Taite, a little acrimonious* of a ftupifactive and fomking difagrecable Smelh 2. *Black and hard*, which comes from *Aden*, a Country of *Arabia*, not far from the *Red Sea*, and is brotght from *Alexandria* and *SyHa*. 3. *Of a reddifh yel/ozb color and fofter, which comes from Cambaja and Decan, and this is the Eaft India Opium*, and comes from thence, and other parts adjacent thereto, and is in touch ufe with us at this Day. But the *Turky* or *Thebaian Opium* is the moft valuable, and that only which is to bechofen.

LXX. *tioy Opium is made, Dio/corides* in the place before cited, has told us, as alfo, *Pliny lib. 20. chap. 24. Bellonius lib. 3. chap. 15. and Jacobus Bontius in Notti dd Garciam, with many other Modern Authors* Fred. Hoffman*, in his Notes upon *Schroder* has it thus, *Capita Papaveris recentia grandia immatura tamen, & fucco turgida^ mane poji Ror em foils difperfum Cultello in After ifci forma leviter incidunt, unde liquor latteus, continuo emanans iffidentidem concrefcens digit0 in Conchulam fubjeSum abfiergiturt idque tamdiu Con* tinuatur dum Vulnus liquorum plorat, £f exnoviter incifis recentes Lachryma coalefcunt. It is called in India, and alfo in Afia, by a corrupt Name, viz. *Ofium*, alfo *Afwn*, *Omjium* and *Amfian*^ but in many Compoftions, as in *Tberiac Andromachi*^ We find *lm* w**>vor*, and *Cafp. Hoffman* fays, *OTICV vfamot indifferenter eft velimov, vel pw*^Swz illudque quidem fieri Capitibus Papaverk incijs, & fucco inde Stillante excepto. Opium is laid to be adulterated with the Juice of Glaucium, which is of a yellow color (and is thought to be the Juice of the Thorney Poppy before defcribed:) but this Cheat is eafily to be difcovered^ for if the Opium is diffolved in fair Water, it Will color it yellow* by reafon of the yellow mixture***

LXXL But yet the Grand Queftion returns to be refolved, *£x quo Papavere fit Opium?* We have already faid fomewhat to it in what has gone before-, to which we add, that according to *Pliny* and *Avicenna*, it is gathered from the Heads of *U Black Poppy*, being Cut *Wj d. B fjt* *£f, yq wuu India ex Bellonio £? Garzia Conftat? atque apud Diofcoridem fit ex Nigro & Sylveftri: Sedin Afia (Author eft Pena) bodieque ex utroque fieri. Yet Fred. Hoffman* in his Annotations upon *Schroders Dipenfatory* fays, *Hoc (Maflac, vel Opium) nihil aliud eft quam Succus exfudans ex Capi^ tibus Papaveris albi incifis in Vigore Conjiituti fuo Balfamicoiff Crescente Luna ColleSus-, formantur inde Pi/ul^ a Drachma femk, ad Drachm am unam^ effetus hujus eft pro Conftitutionum vel Temperamentorum diver fitate, Cfc. From what has been laid before, and what here, it is manifelt that Opium is made from the *Black Poppy Heads*^ and fometimes from the *JVbite*5 and fometimes promifcioufly from both.*

CHAP. DLXXIV.

Of POPPY Wild.

Nantes. It is called in Greek, fHac in Ldtine, Papavtr Rbxai um, velSyhejlre-, and vaEnglijb, Wild

IPiTte Xi>&. It is of two principal Species, viz. i. FapmrxSyfoejtre vertfm, which is alfocal- kd Pa/wow JoV/z*, £5" AJfciitMf erratic^ Red Poppy, Corn Poppy, and Corn Role. 2. *JW<>», £ «M argmat vel oculorum nubeculat tolt; and of this there are ieveral Kinds» the chief of which are i. Argemone Capitulo retpx&iore, Argemone, & Areemonid, as Pliny B. aj. Tmp- ?• has it, Um Common round Headed Baftard Poppy, aid all Modern Writers agfee, that this is the Argmone of Dioforides.' it is also called Argmone Gipitulo torulU camdato Lobehj; Argemcm Capitub Ere- viore. 2. Argemsrx Capitub bribere UKI,J b Bmbiai: Argem Lw>S Htaded Baitird Poppy. 3. Argmone lutea^ Argemme Cimbri- Bntamca to Lrfrijf, tecauff found out by /,t)W growing in IWCT.' Ydlow Wild Baltard Poppy of H^>xx.

Head*, which when it is ripe, is something Jhort round, and rough with some Crejts thereon, and a little round Head or Cover, but not a Crown or Star at its top, like the other Poppies 3 in which is contained such like /mall blackish Seed as in the Corn Poppy heads, but larger.

V. The second of the Bastard Kinds, or Long Headed Bastard Poppy. This is in its Root, Leaves, Stalks, Branches, F/ovoers, Seed, and manner of growing, and indeed in all things, like the

first Saftard Kind, fating that the Heads of this are longer than thofe of the laft^ fmailer below, than above\ and having a little round Head or Caver at the top, but no Crown, and is rdugh and hard bke it, and in this conjifis all the difference.

VI. The third of the Bastard Kinds, which is, jw Yellow Wild Bastard Poppy of Wales. Its Root i* long and brdwnifh on the out fide, Spreading out into fome Branches, with many small wres adjoining to them, which perifh not every &ar a* the other forts do. This Yellow Poppy i* many winged large fspread Reaves lying uport the Ground*, that it, many heaves fet together on e*ch fide of a middle Rib, each divided Leaf being fomevohat deeply cut ify in fome places of the edges, more than others, arid of a deep, but fair green color. Froto among thefe Léaves, rife up feveral branched Stalks, about 2 Feet high, having fome fach Leaves thereof*, but fmailer, and fet atfeveral diftances. At the tops of the Stalks and Branches grow fair, yellow, and pretty targe Mowers, conjjuing each of four round Leaves a face, with many yellow Threads in the middle, ftanding about a long green Head, which when the flower it fallen, and the Head ripe, it then larger than the former long headed Bastard Kind, and in like manner/mailer at the bottom, and larger at the

top, with a fmall Head or Topping thereon, containing within, much JiHall black Seed, lying within fever d Cells, in the fame manner as in other Poppies.

VII. The Places. The Corn Poppy is plentifully enough to be found in almoft all Corn-fields throughout all England, as alfo on Banks and Ditch-fides, and under Hedges thro* mott parts of the Kingdom. The firft and fecond of the Bastard Kinds are often found, as well in Cornfields, as by the Way-fides* in Scmerfet-Jhire and Kent, and other Counties of this Land, and in the Corners and Borders of Fields, and by the Hedges and High* way fides, going from London to Bath. Gerard fays, that he and Label, found them growing in the next Field to South-fleet in Kent: and Johnfort in Gerard fays, that he found them both growing in Chelfey Fields, as alfo in thofe belonging to Ham-nerfmith, in all which places I my felf have alfb often found them. The fhort or round Headed one has a Flower of a more Elegant color, but is not found fo plentifully as the other long Headed one. The third grows in many Places in Wales, in Valties and Fields, at the Feet of Hills, and by Water fideSj about a Mile from a fmall Village called Abbar*, and in the midway from Denbigh to Gut-der*, as alfo nere a Wooden Bridge, which gives paffage over the River Dee, to a fmall Village called Balam, which is in North-Wales \$ and in going up the Hill which leads to Bangor, as alfo near Anglefey in the way leading to the Houfe formerly Sir John Gzbirfs.

VIII. The Times. The firft Flowers from May all the Summer Months, and the three laft \$K>ut the end of June and in July, and the Seed is *fpe in AuguftiQi not long after Flowerings in foibe places earlier^ and in fame Places later.

IX. The Qualities, they are all of them of the Nature of the Garden Poppy, to which I refer you,

X. The Specification. The Corn Poppy has the lame Specifick Virtues widi the Garden Poppies. The Bastard Kinds cool, are profitable againft Inflammationsof the Eyes, the Bloody Flux, obitru&ions of the Spleen, and the bitings or ftings of Venomous Creatures. They heal Green Wounds, alfo old*Sores, Cankets and Ruining Fiftula's, help againft the Quinfie,, give eafe in Gout and Rheumatifms, confume Warts^ and take away-black and blew Spots, ot difcolorings of the Skin; They are profitable againft Sore Eyes, and are good to take away Clouds, Mifts, Films,,or Skins, which grow over them, and hinder the Sight.

XL The Preparations. From the Corn Poppy. You may make i. A Juice, and Effence. 2. A DecoBion* ?. An Oil or Ointment, 4. A Cataplafm. 5. A Difilled Water from the whole Plant. 6. A Difilled Water from the I lowers. 7. Spirit us Pgfaverh erratici, Spirit of Corn Poppies. 8. Spirit us Rhtadus Crapuldris, The Surfeit Spirit of Poppies. 9. TinUure of Corn Poppy Flowers. 10. Another TinUure of the fame\ 11. Syrup of Corn Poppy Flowers> 12. Another Syrup of the fame.

The Virtues

XlIi the Juice or Effence. Thejr& Anodyn- and being bathed warm upon any part of the Body give preient eafe -, bathed on the Head Fore head and Temples, they eale the Megrim and Head^ach and caufe Reft and Sleep- They allay InfiamS ons, and prevail againft Anthonies

alleviate the (harp and fiery Heat of Burnings and Scaldings."

XIIL *The Dicotioli of the Green Heads and Seed.* It has all the Virtues of the juice and Effence, besides which, given inwardly it cools the heat of Fevers, is profitable against Deliriums and Frenzies, eases pains and Hitches of the Sides, and prevails against the Colick * dropt into the Eyes, it is good against Inflammations therein, Blood-rot, vehement Pains, and detluxions of hot and sharp Humors. Dose from 2 to six Spoonfuls, sweetned with Syrup of Violets, or White Sugari

XIV* *The Oil or Ointment.* It is singular against the Gout in Hands, Arms, Legs and Feet. The Head and Temples anointed therewith, it eases the Megrim and Head-ach, and procures Rest and Sleep. It is good against Delirium or Frenzy * and is profitable to cool and allay Inflammations in what part of the Body forever.

XV. *The CataplastiL* It is made of the *Green Heads and Seed*, and for want of them of the *Seed.* It has in outward Application all the Virtues of the juice, Effence, Oil and Ointment t Applied to the Fore-head and Temples it gives ease in the Megrim and Head-ach. Applied to the Crown of the Head (being first Shaved) it is profitable against Dot&gfc, and perturbation of the Senies. Applied to any part, it represses, and repercusses the Flux of Humors, especially to the Joints, easing all manner of pains whatsoever

XVI. *The Distilled Water out of the Green Heads and Seed, and indeed from the whole Plant.* It is refreshing and cooling, and very profitable, being taken inwardly against burning Fevers, more especially if it is acuated with a few Drops of Spirit of Salt, or Sulphur, and then dulcified with Double refined Sugar: and makes a good Vehicle for conveying other Medicines, (especially Opiates) down into the Body: it gives Rest and Ease to weary Bodies, and causes pleasant Sleep. It quenches the heat, and allays the fury of Antho-nies Fire, by cooling and suppressing the Humor. Dropt into the Eyes, it prevails also against an Ophthalmia or Intamation in them, and stops the Flux of the Humor.

XVII. *The Distilled Water from the Powers.* It is a singular good thing for the cure of the Pleuritic, and all sorts of pains and fitches in the Side. It is an excellent thing to give Rest and Ease to Women in Child-Bed, after due cleansing, and to give pleasant Sleep. It is held also to be of good life against Surfeits* to drink it Evening and Morning, more especially if it is sweetned with the Syrup of the flowers. Parlungon says, It is more cooling in quality than any other Poppy, (his credo) and therefore cannot but be as effectual in hot Agues, Frenzies, and other Inflammations either inward or outward.

XVIII. *Spiritus Papaveris erratic^* The Spirit of Corn Poppies. Take Wild or Corn Poppy flowers 6 Pounds, reSified Spirit of Wine 16 Pounds, mix, digest a Week, and then distill in a Glafs Alembick in Balneo to drinefs. Affuse this distilled Liquor upon as many more of the same Flowers, digest again Days and distill before: this distilled Spirit affuse again a third time upon fresh flowers, and if you so please a fourth time, distilling each time to drinefs; daily, in a gentle Balneo, draw off three parts of the Liquor, which keep as a Spirit of Poppies fimplicie. 2. Or thus. Take French Corn Poppy Flowers 20 Pounds-, White Port Wine 16 Pounds 5 mix, and with Sugary or 4 Pound, and a large Leven dissolved in the Wine, cause a fermentation, till the whole becomes somewhat Acid, then distill in Balneo to drinefs, Affuse the Liquor upon 10 Pounds more of fresh Flowers, extra ft

blowers, digest 3 JD^r5 and distill in like manner to drinefs. Then in a gentle balneo, draw off the one half of the Liquor > which keep for Spirit of Corn Poppy flowers. If you continue the distillation to drinefs in the same Balneo, you may keep the Liquor for Aqua Papaveris, or reserve it for making more Spirit with. If you would have a Spirit from the whole Plant, you may proceed with it in the same manner, as with the Flowers, by either of the former ways, or otherwise you may make it after this manner. Take Corn Popper the whole Plant when in Flowering, as much as please, bruise it well in a Marble Mortar; add Rain Water 4 times the quantity in weight ^Mif in every Gallon of Water a Pound of brown Sugar mix well, and cause them to ferment to a fit Acidity. Then distill in a Copper Vefica TirPd wikt, in a proper heat, drawing off the first quarter part of the humidity for Spirit of Poppies: and hat, the remaining part for Poppy Water: which keep for use, or reserve for making new Spirit of Poppy. Any of these Spirits are excellent against the Colick and to alleviate pains in any part of the Body. They give ease in the Stone, and are profitable against After-pains of Women in Child-Bed, and with a great deal of pleasure induce Sleep. These things they will do more powerfully, if you make a Tincture of the Flowers with the same. They have in a Word, the Virtues of Spirit? * OM* in Sc8. Ul, of the former Chapter, but not altogether so powerful. Dose from half a Dram, 3 Drams, plus-minm.

XIX. *Spirit us Rhmdm Crapuhrim,* The Spirit of Floppies, Take Corn 'ta^flowers gathered a megs I Ounce Ambergrise 4 Grains-, WP Wine 2 Pounds; dice ft according To Jit^ fijiou * ind keep it for U^f Dose from 4 Drams, to 4 Ounces, at the Hours of Steep* or in the Morning Surfeiting. It is a Specifick also in a

The Spirit of Wine here intended is only common Spirit of Wine or Brandy, for otherwise the VO could not be so large as we have here given it. It is not only excellent against Surfeiting and Drunkenness, as also the Pleuritic, but against all manner of pains and fitches in the Sides, Brett and Stomach, the Colick and gripings of the Guts, pains in Back, Reins and Bladder, but indeed against any manner of Pains in what part of the Body soever. It gently provokes Sweat, dissolves coagulated Blood, and gives relief against the strongest Agues. It may be given either alone sweetned with White Sugar, or in Wine or Aqua Latt'rs chiefly at Night going to Bed.

XX. *Tincture of Corn Poppy* & totters., Corn Poppy Bowers fresh gathered a Pound: of Corn Poppy Ylowers, choice Canary Or Wine, of each 2-Pounds: Winters Cinnamon fine Powder 1 Ounces: Cychinele in fine choice English Saffron, of each half an Ounce and make a Tincture according to It has all the Virtues and Excellencies of all the parts of the Flowers, at Sett. XIX and XX, being: besides which it is an excellent and a potent expeller of Wind, and therefore against Fainting and Swooning Fits, Sickneis Heart, &c. Dose from half an Ounce to an Ounce or more in a Glafs of Angelica Water, well scified with white Sugar.

XXI. *Tinctura Papaveris c* another Tincture of the same from Take Corn Poppy Flowers 2 Ounces, sprinkle with Spirit of Virol a Dram: wen ivity Distilled Water. from 4 Ounces of fresh Flowers, extra ft * Rubicund Tincture > filter,

filter, and add thereto, Syrup of the Juice of Corn Poppy Flowers Vitriolated 8 Ounces: mix and keep them for Use. It is excellent in all thin and (harp defluxions of Rheum upon the Lungs, and *Aspera Arteria*: It causes Rest and Sleep, cures Coughs, Hoarseness, and Wheezings, eases the Phthifick *, is good against Pleurifies, pains and fitsches in the Sides *, eases all sorts of Dolours and Grievs, abates Inflammations > provokes Sweating, and stops the Bloody Flux, as also the Terms and Whites in Women. Dose 2 Ounces alone, or with some other proper Vehicle.

XXII. *Syrupus (He Papaver e erratic0, five Rubro, Syrup of Corn Poppies. Take Corn Poppy Flowers 2 Pounds *, warm Spring Water 4 Pounds: (ieep or wjufe, and the next Day strain it -, repeat the Infusion with new Flowers, strain again, and with its equal weight of Sugar, boil it into a Syrup in haUneo. It is excellent to cool and abate the heat of Fevers, eases all sorts of Pains,, causes Rest and Sleep, abates the violence of pleurifies, Colicks, Violent pains of the Stone, and stops all sorts of Fluxes of the Belly, as Diarrhea, Dyfenteria, Lienteria, Hepatic Fluxes, as also the Terms and Whites in Women. Dose from one Spoonful to 2 or 3, either alone, or in some proper Vehicle.*

XXIII. *Syrupus Hemoptoicus, feu Diacodium liquidum Papaveris erratici* , another Syrup of Corn Poppies. *Take Heads and Seeds of the Wild or Corn Poppy Number 20. Juice of Spanish Liquorice an Ounce ^ bruise the Heads and Sted, and siep fyem in Rain Water 8 Pints, for 4 Hours*, and then dissolve in it the Spanish Juice-, boil gently in Balneo to 6 Pints: strain leisurely thro* a Flannel Bag, vnd with white Sugar 12 Pound make a Syrup. It gives ease in Pains, and causes Rest and Sleep *, it stops Vomiting, helps in the Colick -, is good against a Loosness and all other Fluxes of the Belly, as also Fluxes of Humors to any part-, prevails against Asthma's, Coughs, Colds, Phthificks, spitting and pissing Blood, gives ease in the Stone, Gravel and Strangury, as also in the Gout, and all other Pains wherefoever. Dose from half an Ounce to an Ounce, Ounce and half or more, as occasion requires.*

the Bastard Wild POPPY.

XXIV. *The Qualities.* It is hot and dry in the third Degree, Absterfive, Anodyn, Vulnerary, Arthritick and Alexipharmick.

XXV. *The Specification.* It prevails against dimness of Sight, Bloody Flux, the Poyson of Venomous Beasts, obstructions of the Spleen, Quinsy, Belly-ach, Gout, Cramps', Convulsions and the like: It is said to cure Warts also, Green Wounds, old Sores, running Ulcers and Fistula's.

XXVI. *The Preparations.* You have therefrom, * 1. *The Green Leaves.* 2. *A Juice.* 3. *An Efficence.* 4. *An Infusion in Water.* 5. *A Decoction in Wine.* * 6. *An Ointment.* 7. *A Cataplasm**

The Virtues.

XXVII. *the Green Leaves.* Being oftentimes in * t>ay, and for several Days together, rubbed upon Warts, they consume them, and take them away: the same they do to Corns, more especially, if they being first gathered, are also bound thereto, Morning and Night

XXVIII. *The Liquid Juice.* Dropt into the Eyes, it takes away Milts, Clouds, and Films, which hinder the Sight, also Inflammations and Heat, and cures the Disease of the Eye called *Argema* (from which the Herb took its Name) which is the *Haw* in the Eye: the Malady, when it happens on the black of the Eye, it appears white *, and contrariwise, when it tails on the white of the Eye, it appears blackish, or of another color. Bathed also on Warts it consumes them.

XXIX. *The Efficence, of the Leaves and Roots.* Given to 2 Drams or more in Ale, Beer, or Wine, it is good against the Gripping of the Guts. Taken in Sherry, Canary, or other strong Wine, it powerfully expels Poison: it opens obstructions of the Spleen, and eases the pains thereof: and is good against the bitings or flinging of Serpents, Mad-Dogs, Hornets, Scorpions, or other Venomous Creatures* *The, Efficence* inwardly taken, and a *Cataplasm of the Leaves* being outwardly applied: and taken in Red Port Wine, is good against the Bloody Flux.

XXX. *The Infusion in Water or Wine.* It prevails powerfully against the Gripping of the Guts, a *Diarrhea*, or Loosness, and other Fluxes of the Bowels: and is said to give ease in the pains of the Hypochonders.

XXXI. *The Hecotiort in Wine.* Bathed upon places black and blew, or otherwise discolored by Blows, Falls, *Cfc.* whether on the Face, Eyes, or other parts, it quickly restores them to their rectitude. It is good against the Bloody Flux: and is a present Remedy against the Itching or biting of any Creature.

XXXII. *The Ointment, made with Oil^ Wax and Turpentine.* It heals any simple Green Wound, running Sore, or old Ulcer * and being applied to Joints pained with the Gout, it eases the pain, and in a little time cures the Disease. It is good also against Cramps > Convulsions, and other like Diseases of the Nerves.

XXXIII. *The Cataplasm of Leaves and Heads.* It heals Cankers, old Ulcers, running Fistula's, consumes and takes away Warts-, cures recent Contusions, as also discolorings of the Skin. And being made with Wine Vinegar, it cures the Quinsy being applied to the Throat and eases the Gout, and takes it away being applied to the place agrieved.

CHAP. DLXXV.

Of POPPY Horned-

I. *The Names.* It is called in the Arabick, *X Alndeharam*: in Greek, *Maly KA&vvr.* in Latine, *Papaver Corniculatum & Cornutum* (a *figliuarum effigie Corniculorum ?noio inflexa*, because the Pods are crooked like a Cornet or Horn) *Ptixy* and others say it was also called *Pnolittomi.* *e!* *Marinum-*, and of some *Papaver Sylvestre-*, in English it is called the *Horned Poppy.*

II. *The Kinds.* Of the *Horned Poppy* we make two Principal Kinds, *viz.* I. *^hmvue^nvu Papaver Corniculatum ^verum*, The true Horned Poppy. H. *MnxwpweswicoBo^ Papaver Corniculatum nothum?* The Bastard Horned Poppy.

III. *The particular Kinds.* Of the I. Species there are three following, *viz.* 1. *Papaver former*

Corniculatum luteum, The yellow Horned Poppy, and Sea Poppy. Many Authors have thought that *Glaucium* was made hereof, as *Diofcoridus* himself says, and as *Pliny* likewise thought: But *Diofcorides* in describing *Glaucium*, does not lay it is the Juice of Horned Poppy, but it is the Juice of an Herb, that has Leaves something like unto those of the Horned Poppy, but fatter or thicker, and yielding a yellow Juice: so that being but like to it, it cannot be the same thing. 2. *Papaver Corniculatum rubrum*, The Red Horned Poppy. 3. *Papaver Corniculatum violaceo*, The blew or Violet colored Horned Poppy. This the Spaniards call *Rofetta*, and some *Am a polos Morados*, because the Flowers give a juice like Mulberries. Of the II. Species, there are the two following sorts, viz. 4. *TTAKOCV^'mi?w>* in Latine, *Hypecoum*, and *Hypopheum* \ *Hypecoum legit'wium Clufij & Bauhini*, The Bastard Horned Poppy or *Hypecoum Diofcoridh*. 5. *Hypecoum alter urn**, *Hypecoi altera Species Bauhini*, The second Kind of Bastard Horned Poppy. Some Authors will have these Bastard Species to be a sort of *Cuminum Sylvestre*, and call each of them, *Cuminum filiquofum*, (if *Cuminum Sylvestre filiquofum*, but I think very improperly, for they are not in the least akin, to any of the Species of *Cumin*, but rather a sort of *Wild Poppies*, as is very manifest both from their Poppy like Smell and Qualities.

The Description*

IV. *Tbcjirft*, or Yellow Horned Poppy, or Sea Poppy. Its Root is white, long, and tough, spreading it self out several ways, and enduring many Tears, the Plant keeping its Leaves alfo all the Winter.

it has many long, and some what large, whitish, or hoary Leaves, lying upon the Ground, very much cut in or torn on the edges, and something rough or hairy \ from among which rise up several round Stalks leaning down, rather than standing upright, some what hairy also, spreading forth into several Branches, and bearing a large blow, at the top of every one of them, consisting of four Leaves, of a delicate pale yellow color, with a few Threads in the middle, standing about a small crooked Pointel, which in time grows to be a long, round Pod, six Inches or more long, with a small Head or Button, as it were, at the end thereof, & which is contained, small blackish round Seed, way part of this Plant, being cut or broken, sends out a yellow Juice, and of a bitter Taste.

V. The second, or Red Horned Poppy. Root is long and slender, perishing every year, raising it self again from its own Sowing, or emitting it self every year in the Spring. fewer, lesser, and more jagged Leaves than the former, nothing so whitish, but of a dull green color, something hairy also. The Stalks are slender and lower, bearing flowers at the tops of them.

like the other, consisting of four Leaves, but much smaller, and of a pale reddish color. In the first part of the Summer they are found, after which come several like crooked or horned Poppies, but smaller than the former, containing few small blackish Seed within them. The Plant when cut or broken yields a yellow Juice, as in other docs.

VI. Johnfon in Gerard, gives us another Horned Poppy, which he calls, *Papaver Corniculatum nigrum*, or Red horned Poppy. This he says is much like the last, but according to Cluitt is rather a twenty that differs from the last in differing Species. Leaves are with many deep green spots in them, like as Kocket has, but are [moth, and white]

hair: and the color of the Eoieers are of a pale yellowish red: both which accidents Clufius fays happen to the former, towards the latter end of Summer.

VII. The third, or Blew, or Violet colored Horned Poppy. Its Root is long and small with a few Fibres adjoining to it, and perijlles every Tear. This grows much lower, and with smaller Leaves, very much, and finely cut in, or rather divided into many parts, of a fad green color. The Stalks are low and slender, something hairy, rising not much above a foot, or foot and half high at most, with small flowers at their tops, like unto the second Kind for form > viz. confisting of four Leaves, but of a fair deep purple color, almost like unto a Violet: after which come small, slender, and jointed Pods, not above a lingers length, in which lies such like blackish Seed but smaller.

VIII. The fourth, * Baftard Horned Poppy, or true Hypecoum Diofcorides. Its Root is small and little Stringy, perishing every Tear, at the first approach of Winter, and is very hardly made to spring again but by sowing its Seed in Autumn. This small * Plant has divers long Leaves lying on the Ground, very much divided, and cut into many parts, of a pale or whitish green color, so like unto Fumitory in the color of the Leaves, as also somewhat near it, in the many divisions and parts thereof, that it will soon deceive one that does but slightly view it* but is smaller and thinner, and more gentle in Handling, yet is larger in Spain, as Clufius fays, than that which grows, with us. In the middle of these Leaves rises up a Stalky sometime two, with some heaves thereon, which divide or spread cut towards the top into several Branches: at the tops of which stand small yellow Flowers, confisting of six Leaves, two whereof are larger than the rest, and stand opposite to one another, the others being very small and scarcely discerned, till the Stalk is fully blown open. After which spring out long, crooked, flat, Dusky Horns, or Cods, full of Joints, somewhat like unto the Husks or Horns of the Scorpioides Matthioli, but greater and longer in the several Joints of which by several square yellowish Seed, very difficult to be taken forth or separated from the Husk or Skins. The Plant has a Poppy like Smell, and of an unpleasent Taste.

IX. The fifth, or Second Kind of Baftard Horned Poppy. The Plant is very like unto the former, but that the Leaves thereof are not so broad, nor long, but more finely divided, something like unto the Sefeli or Hartwort of Marleilles, or Wild Chervil: The Stalks are starchy, full of Leaves and Branches, which fend forth yellow flowers, made of five pointed Leaves*, which being past away, long Cods come in their places, which stand not upright, but hang down, nor are crooked like the former, but straight, and jointed, containing greater yellow Seed, not much unlike to those of Galega or Goats Rue.

X. The Places. The first or Sea Poppy, grows upon the Sands and Banks of the Sea, and Naturally by the Sea side as well beyond Seas as on the Coasts of our own Country in many Places. Gerard fays he found it growing near unto Rye in Kent, in the Marsh of Sheppyznti Thanet, at Lee in Essex, and Harwich, and at Whitestable, and in many other places on the English Shore. It is a pleasant Plant, and is now planted in Gardens, for its beautiful Aspect, as well as for its Virtues. The second and third are Natives of Spain, Aujiria, and Bohemia, Angelus Palca, and Bartijflomeus a Vrbe Veterum say, that the second grows in the Kingdoms of Arragon and Castile in Spain? in the fields and near Common High-ways* but with us

they both Flourish only in Gardens. The fourth and fifth grow in Provence in France, in the way to Arks and Mompelier, and other places in that Kingdom: as also in divers places in Spain, as Lupus fays: but with us they are only found growing in Gardens.

XL. The Times. The first Flowers from May all the Summer long to the beginning of September and its Seed ripens in the mean time. The second Flowers seldom before July, and gives ripe Seed every Year, if the Season proves temperate and kindly, otherwise not. The third, as it late before it springs up, so it comes late in the Year to Flowering, for which reason it rarely gives ripe Seed with us. The fourth and fifth Flower about the end of June, and in July, and the Seed is ripe in August in some places earlier, and in others later.

XII. The Qualities, Specification, Preparations, and Virtues of the two last, viz., the Hypecoa, are much the same with those of the Corn Poppy in the last Chapter, so that nothing more need be laid of them here.

Of the True Horned Poppy.

XIII. The Qualities of the Horned Poppy, It is said to be hot and dry in the third Degree. And is Able to give, Aperitive, Diuretick and Vulnerary: Hepatick, Nephritic, and Cathartick.

XIV. The Specification. It prevails against the Strangury, Obstruction of the Spleen, heals Green Wounds, and old rotten Sores and Ulcers, and by its Cathartick Quality eases the Pains of the Sciatica.

XV. The Preparations. You may make, 1. A Liquid Juice or Effence. 2. A Decoction of the Root. 3. A Powder of the Seed. 4. An Oil of the Leaves and Flowers. 5. A Liniment of the same* 6. An Ointment 7. A Cataplasm.

The Virtues*

XVI. The Liquid Juice or Effence. Given to 2 or 3 Spoonfuls (if the Juice, being first clarified) in a Glass of Port Wine, it provokes Urine, cleanses the Reins and Bladder, and carries off the Morbifick matter of the Gout, Rheumatism, Stone, &c.

XVII. The Decoction of the Root in Water. Being boiled to the consumption of the one half, and then (strained out and Drank, it opens the Obstructions of the Liver and Reins, and gives ease in the pains of the Sciatica, and admirably provokes Urine, giving ease in the Strangury.

XVIII. The Poultice of the Seed. Being given from the quantity of 2 Scruples to 2 Drams, viz. about a Spoonful at a time in Mead or Honied Water, it is said gently to purge the Body.

XIX. The Oil of the Leaves and flowers made by Infolation, or Occlusion* It is good to clear the Eyeight, and to clear away Spots and Films upon them, for which purpose it is also used to the Eyes of Cattel.

XX. The Liniment of the Leaves and Flowers. It is made of their Juice mixed with Honey and Orbus Meal, with an addition of Oil of Hypeon: cleanses foul and virulent Ulcers, and that so powerfully, that Galen advises, that it should not be applied unto those Sores or Ulcers, which are already cleansed, lest it should consume the quick Flesh alia It takes away also by the strength and

torce of its Abfterfive quality, even thole Cruiſ which grow upon Ulcers, by neglect or ill looking after*

XXI. The Ointment. It k made of the Leave and Flowers, by boiling cr Infuſiſg in Oil of Hy pen con, adding after Exprejſion, Turpentine a quartet part ^ Wax y Frankincenſe, of each an eighth part louder of Tobacco a tenth part. It has all the Virtues of the Liniment ^ cleanſes putrid Sores old Ulcers, and running Fiſtula's powerfully, and heals ſimple Green Wounds, after an admiabl manner.

XXII. Cataplaſm of the Leaves and Flow- ers. Being applied to filthy putrid Sores, rotten Ulcers and running Fiſtula's, it JAbſterges them wonderfully, and diſpoſes them to incar- nation or healing.

C H A P . DLXXVI.

Of P O P P Y Spading.

i. THE Names. It has no Greek Name that we know of: but is called in- latine, Papaver Spumeum: in Engliſh, Spatſing
fb?u?the or T?y F:W> becaufe of trarinw
of the Kind
of no I w m not determin. It is a ſingular Plant of the Kind, and ought rather to be accounted a Kind of Lychnis, (as moſt Herbariſts think it to be:) It is called by X F?n hehen album (dHferendng it
* * * * * *abra Dodonai, V tnuſ-
Lobeltj each of which is called
Ot zehen, rub.um.) tho' neither of
is i he:ttUe hehen album, or rubrum
of the f?b?TM?i Sauhinus calls it ^ Lych-
of the Seed!

The Deſcriptiott*

III. Its Roots is white, and ſpreads it ſelf abroad in the Eſrth abiding many Tears. It is a Jmall low Herb, having divers weak tender Stalks, full of Joints, about half a Yard or two Feet m height or length, they uſually king up- on the ground ^ on which grow many pale whittjb green Leaves, two always ſet together one againſt another at the Joints: having many times upon the Leaves, but more often about ^ Joints of the Stalks, a certain white frothy

Spittle. At the tops of the Jtalks grow many
TS, n?her* eſy one oa a p?y i° &
t Stalk, hanging down their Heads, which are
compoſed of Jive Jmall whin-Leaves a

IV. The Places. It grows generally throught- out England in many places and paſtures, and Hedgſides, by ſome it ^ is much valued, and there- fore planted alſo in Gardens.

V. The Times. It Flowers almoſt from the beginning of June till the end of July and ſometimes later 5 and the ſeed ripens in the meari ſeaſon. And as the Root abides all the Winter ^ ſo alſo do ſome of the Leaves ke# green all that ſeaſon.

VI. The Qualities. It is hot and dry in tW ſecond degree. Aperitive Abſterfive, Cephalic*, Cathartick and Emetick.

VII. The Specification. It is peculiar for d» cure of the Epilepſy or Falling hcknefs, and 0* ther cold and moiſt diſeaſes of the Brain.

VIII. The Preparations. The Pouder of tw Seed is only in uſe*

The Virtues.

IX. It may be given from a dram to W° drams, in Mead or Honied water: it cauſes vo- miting, and purges downwards Pituitous or fiegmy humors, and is ſpecially good for the Cure of the Falling Sickneis, and other Cold and moiſt diſeaſes of Head and Brain.

POTATO-Canada : ſee Hartſhock Jeruſalem? Chap. 34c."

C H A P . DLXXVII

Of P O T A T O ,
Spaniff ³ Virginian; and Engliff.

I. *Tp H E Names. It has no Greek Name, X, that we know of: but it is called by our Modern Authors *Battata*, *Bat tat as*, *Amotes*, *Camotes*, *Ignanes*, # *Inhames*^ and by the *Indians*, *Fapas*, *Ptf/w*, and *P^* - we in *Engliff* call it* *Potato*, and *PO* -

II. Tfo? K/WJ. There are three several Species of this Plant, which are almost as different one from another, as they are every one of them different from the *Jerufakm* *tfartichoke*. 1. The firft is *Battatas*, five *Pap-t*^a* *Hifpaniarum*, The Spaniff Potato, because it grows not only in *Spain*, but in all the *Spaniff Weft-Indies* -D as alfo every where almost in our *Weti-India* Plantations. 2. *Pappcti vel Battata Virjyniana*, The Virginian Potato, which grows wild not only in *Virginia*, but almost every where thro' the whole Continent of *Florida*. 3. *Pappa feu Bait at a Anghcana feu tiiberniana*, The Engliff or Iriff Potato, which grows in vatt plenty in many of our *Engliff Gardens*, fo that now the Roots are fold by *Buffiels* in our *London* Markets.

the Defcription*

III. The firft, or Spaniff Potato. It has many firm and fweet Roots, which being boiled, baked, or Roajied, are of a pieajant fweet Tajie, exceeding in delicioufnefs any other Root vohatfoever: it is in fhape and form fomewhat like to *Afphodil* Root, tuberous, knobby, and from two to eight or ten Inches in length, more or lefs, with an anfwerable thicknefs\ much greater than *Afphodil* Roots, and larger at one end than at another: fome forts of them are longer, others rounder and thicker*₅ fome of them of a white color, fome of a yellow color, others of a pale brown, and fonte of a kind of red- *Jb color-, and of a white % or yellowoifh white within, the whole Root being of one Jolid, comtaft, or uniform Subjiance,*without any Heart or Pith in the middle, as *Carrots* and *Parfneps* *ve; many of them fpringing and growing at it were from one Head, from the Head of *befe Roots fpring up many long Branches, which by reafon of their weight and weaknefs tannot fiand of themfelves, but trail on the Ground, a Tard or Tard and half in length. Y more, on which are fet at^ feveral diftances, "road, and in a manner triangular, or three cornered Leaves, not very much unlike to thofe of *Ivy*, foft in feeling to, and of a dark green color^ the two fides whereof are btml and ro*nd as to the middle part thereof, but point- Cl* at the exdy and, growing pr\$ty clofe to-

IV. The ifecond, or Virginian Potato. The Root of this is nothing like the former neither in form, magnitude, color\ nor tafie, nor refembles it in dny thing but the folid, co^att, uniform Subjhnce thereof. The Roots ar^ffmall, fome about the bignefs of *Wall-Nuts*, green and all, fome leffer by much, and others greater. fome of them abnofi round, fome oval, fome of a long round^ and almoji pointed at each end, fomefmoother, others knobby, all of them being tuberoufs, of a dirty brown whitifh color on the out fide, and white within.", not of atleafant fweet Tajie, a* the Spaniff are, but rather of a *Ylatulenh** or infipid Tajie, which yet being boiled, baked, or roafid-, and eaten with *Butter*, *Salt*? *Vinegar*, and a little *Sugar*, are moji admirable Food, and not much inferior to thofe of the Spaniff Kind, (both forts of them, as alfo the Engliff following, being very ?nealy when they are dreft, for which reafon they require a great deal of *Butter*.) It has many weak and fomewhat flexible Branches, leaning a little downwards, or eafily horn down with the *Wind* or other things, be fet with many *Winged* Leaves, of a dark grayifh green color, whereof divers are fmailer, and fome

greater than others. The flowers grow many together upon a long Stalk, coming forth from between the Leaves and the great Stalks, every one severally, upon a short foot Stalk, somewhat like to the Flowers of Tobacco for the form, being one whole Leaf, six cornered at the brims, but some thing larger, and of a pale blew (7) purple color, or pale Dove color, and in some almost white, with famed Threads in the middle, funding about a thick Golf yellow Point at the tip with green at the end. After the Bowers are past, there comes up in their places small round Berries or Fruit, as large as a Damson, or Bully, green at the first and some thing whitish afterwards, with many white Seeds therein like to Night-hade, from the likeness of which Buihinus upon Matthiolus calls it Solanum tuberosum eculentum.

V. *The third, or English, or Irish Potato.* This is a roundish tuberous Root sometimes smooth, sometimes knobby, of various magnitudes from the smallness of a Filbert, to bigger than a large tip doubled; it is plid, compact, and of one uniform Substance, white within, and reddish without, having a Cuticula or Scarf Skin, over the principal Skin, not sweet in Taste, like those of the Spanish Kind, but of a more flatulent or infipid Taste which being thoroughly boiled, baked or roasted, are made like the others. They are dispersed under the Ground by many small Threads or Strings, from the Head of the Root, and one from another, each encreasing in its tuberous bulk, in its situation or place where it lyes, without running deeper into the Ground, as long Roots usually do.

VI. *The Places.* The first grow in Spain and Portugal and in the West-Indies, as well among the English and Dutch in our Plantations as among the Spaniards, who plant them universally for Food. The second grow plentifully in Virginia and through all Honda. The third are only sown up in Gardens in England and Ireland, where they flourish and come to perfection, prodigiously encreasing to a vast plenty.

VII. *The Times.* The first bear their green leaves all the Summer, which perish with the Scalks at the first approach of Winter, or any great Frost. The second thrust forth their Leaves in the beginning of May, the Flowers bud forth in August and the Roots are fit for Food in September. The last their Roots come to perfection towards the latter end of Autumn, and encrease in largeness and goodness, being a good provision for food, through the whole Winter.

VIII. *The Qualities.* The Leaves of Potato are manifestly hot and dry, in the beginning of the second Degree, as manifestly appear by the Taste. But the Root is temperate in respect to heat or cold, dryness and moisture: They are moderate in acidity, Duretick, Somatick, Quillick, Analeptick, and Spermatogenetick.

IX. *The Specification.* They nourish the whole Body, restore in Consumptions, and provoke Luft.

X. *The Preparations.* You may have the Root from, 1. The boiled, baked, or roasted Root. 2. The Broth. 3. Sanguis, Tm Blood.

The Virtues.

XL *The Prepared Roots.* They stop Fluxes of the Bowels, nourish much, and restore in a pining Consumption: Being boiled, baked, or rolled, they are eaten with good Butter, Salt, Juice of Oranges or Limons and double refined Sugar, as

common Food: they encrease Seed and provoke Luit, causing Fruitfulness in both Sexes: and stop all sorts of Fluxes of the Belly.

All. *The Broth of the Roots.* They are boiled first in fair Water then taken out and peeled, afterwards put into the same Water again, until boiled till the broth becomes as thick, as very thick Cream, or thin Hafty Pudding: some mix an equal quantity of Milk with it, and so make Broth: others after they are peeled, instead of putting them into the Waters they were boiled in, boil them only in Milk, till they are dissolved as aforeaid, the Broth is made plain with five parts of Salt and double refined Sugar, and so eaten will the Virtues of the Roots eaten in Simplicia, or pining Consumption, but also in a sore or Ulceration of the Lungs.

XIII. *Sanguis, or The Blood of Potato.* is made as the Blood of Satyrion, Parsneps, Somfrey, and other the like Roots. It may be made in a Spoonful or two, Morning, Noon, and Evening in a Glais of choice, Canary, Tent, or other good Wines. It restores in Consumptions of all Kinds, nourishes to the Heart, is good against Impotency in Men and weakness in Women, and has all the other Virtues both the Prepared Roots and Broth,

PRICKET, or Stone Crop, Chap.

CHAP. DLXXVIII.

OF PRICK-MADAM

I. *The H E Kames.* It is called in Latin, *Sedum Yermiclare*, illecebra and in Eæli/b) Prick Madam, (being a Kind of small Houfeleek, or Stone Crop.)

II. *The Kinds.* There are several Spates of it, as, 1. *'A<>:f CWMMfrjii 0'L*pv@-g* *borefcens*, Tree Prick-Madam. 2. *tih bcLnyeQ&S) Vermicularis Yruticofi* by Prick-Madam, or the lesser Tree. 3. *Sedum minus He mat odes; fe, nperviviffl primum frodonxi - Sedum minus mas huchjii cularts five illecebra major vulgaris*, The greater Prick-Madam. 4. *Sempervivum flrf. fr. r* vum Lobelij; Sedum minus sextus Clufij h miculari* five illecebra minor*, Aizoon. 5. *Thalijh* The lesser Prick-Madam, or finally Crop.

The Description:

III. *The first or Tree Prick-Madam.* are long, twody, and spreading in the year this Plant rises up to be five or six feet high. I have sometimes observed it, when it is planted in a good Soil, and is plentiful with Branches, from the bottom to the top, and is small, long, and round green without any Tail, very like to those of the Houfeleek, called Stone Crop, (but the latter has a kind of Saltish Taste) yet less and

"The flowers grow at the tops of the Branches, smaller than the next which follows, and of a pale yellow color. The Branches hereof flipped and put into the Ground, will quickly take Root and grow.

IV. The second, or Shrubby Plick-Madam, or leilër Tree Prick-Madam. Its Root is hard and woody nor does this Plant grow so high as the former, not being much above a foot high. It is full of Branches, and catered with an Aih colored Bark, as limber and as pliant as the juncker. The Leaves hereof are somewhat greater and larger than the other, of a more Salt iib Tajle, and of a darker green. The flowers grow at the tops of the Branches, and are larger than those of the jürji, but fewer, and of a yellowish color.

V. The third, or Common greater Prick-Madam. Its Roots are very small and creeping in the Ground, and send forth Stalks with Leaves here and there all about. This Common greater Prick-Madam, (which some call also Common greater Stone Crop) grows upon the Ground with divers trailing Branches, set with many thick, fat, and joinewhat round (whitish?) or yellowish green Leaves, a little pointed at the edges. The flowers grow at the tops of the branches, many set together, yet somewhat loojely, and not in a thick Tuft or Qujier as the Orpines, which are of a yellowish color.

VI. The fourth, or Lesser Prick-Madam, or Small Stone Crop. Its Root is creeping, in like manner as the former, or Common greater Prick-Madam, and shoots it forth in divers places, and is of a pale yellow color. The leaves are somewhat longer, and are set upon short foot Stalks, not much above an Hand breadth long, which are somewhat thick, but more flat, and of a more Styptick Tajh. The flowers are of a paler yellow color, and greater than the former, but arising in parted Tufts in the same manner. It looses both Leaves and Stalk in Winter.

VII. The Places. The first and second grow by the Sea side, and farther off likewise, where they will have good brackish Taste, as well as when

grows near the Sea. The third grows many times in Gardens, and in other Places upon Stone Walls, and tops of Floufes, almost every where. The fourth grows among Rubbilh, and in the Borders of Fields open to the Sun, also on Mud, or on Stone Walls, and on other Sandy and Gravelly Places, and often times upon the sides of old tiled Houfes and Penthouses in many parts of the Kingdom.

VIII. The Times. The first and second Flower in Align, or very late with us: The third and fourth Flower in June and July, and sometimes sooner.

IX. The Qualities. They are cold in the third Degree, and dry in the first. Absterfive, Anodyn, liepercuffive, and Vulnerary.

X. The Specification. It is good against the most Pains, Aches, Strangury, scalding and heat of Urine, Stone, Gravel, burning Fevers, Head-ach, Bleeding, at Nose, Incarnations, Erysipelas, Pimples, Shingles, Tettars, Ringworms, and other breakings out: as also stops Fluxes of Humors to any part, and is good to heal fretting Sores, old Ulcers, Cankers, Burnings and Scaldings, with Fire, Water, or other things. It is said to waite away Warts and Corns, and to free the Skin from Scurff, Morpew, and other defilements and deformities thereof.

XI. The Preparations. You may have therefrom, 1. The green Leaves. 2. A Liquid Juice. 3. A Syrup. 4. A Poffet. 5. An Oil or Ointment. 6. A Cataplaim. 7. A Dijiilled Water.

The Virtues.

XII. The green Leaves. Rubbed upon the Teeth and Gums, is good against the Scurvy in them, so also being laid between the Lips and Gums all Night for a Week or Fortnight or more. Rubbed also upon Warts or Corns it causes them to waite away.

It is good against the bitings, or Venomous Beasts. It is profitable also against Anthomes Fire Shingles, Tettars, Ringworms, scurff, Morpew, Tannedness, Sunburning, Yellowness, and other deformities of the Skin, being bathed upon the Places, and double Cloths dipt in the same, being also applyed over.

XIII. The Juice. It is good against Inflammation of Stomach and Lungs, Burning Fevers, and the hot Fits of Ague being given a Spoonful or two, or more at a time, in a Glass of the Dijiilled Water.

XIV. The Poffet Drink made of the Juice: It has the Virtues of the Syrupy being taken in the same manner: and is good to cool and heal raw and galled places in Children, the parts being bathed therewith, and then afterwards anointed with the Oil or Ointment.

XV. The Oil or Ointment. They cool Inflammations in any part. It is good against Shingles, Burnings and Scaldings.

Scaldings with Fire, Water, Oil, or other things, as also Cankers, running Sores, fretting Ulcers, Pimples, Leprosy, and other like Breakings out of the Skin. They give ease in the Gout, and all other pains proceeding from heat, and hot Scalding or iharp Humors, in what part of the Body foever: and have all the Virtues of the *Liquid Juice* as to outward applications. Anointed on the Fore-Head, Temples, and Crown of the Head, it eases the Head-ach, Megrim, and allays the diitempered heat of the Brain.

XVII. *The Cataplasm*. Applied to Inflammations, simple Contusions or Bruises, *Anihon's* Fire, or other hot and fiery eruptions in the Skin, it alleviates the heat, and cures them, fo also applied in the Gout it gives ease to the part, and applied to the Crown of the Head and Temples it is good against Frenzies, Deliriums, and Madnes, eases the pains of thole parts, and cools and allays the preternatural heat of the fame and has indeed all the Virtues of the *Juice*, *OH* and *Ointment* as to external Applications.

XVIII. *The DiWiled Water*. Drank Inwardly, it has all the Virtues of the *Juice* and *Syrup*, tho' not altogether fo powerful, it quenches Thirst, allays inward Heats and Intiamations, and abates the ihatpnes of Humors in the Stomach. Outwardly, it has all the Virtues of the *juice*, *Oil* and *Ointment*, and in especial is an incomparable thing against an *Erysipelcu*, and all External Heats, Pimples, erupiois of the Skin, and other decedations and deformities thereof. The *DJilled Water*, or the *Juice*, being bathed on any place flung with Nettles, Bees, or Wafps, or bitten with any Venomous Creature, itpielently gives ease, and takes away the pain thereof.

CHAP - DLXXIX.

Of PRIMROSE.

I. *THE Names*. It is called in *Latine*, *Primula veris* (for I know no *Greek* Name it has) which Name I suppose it has obtained, because it is one of the first of those Plants which Flower in the *Springy* also, *Alifna Sylvarum Columnis*: and in *Engliffh*, *Primrose*.

II. *The Kinds*. The *Primrose* is said to be a Species of *Herba Paralyfis*, or *Cozv/lip*: and of this Species there are two principal Kinds, viz. I. *Primula Veris*, or *Primrose*, ippecially fo called, of which we (hall treat in this Chapter. II. *Primula Veris pachypkyllos Lugdunenfs*, *Auricula Urfi*, The Bears Ear *Primrose*, of which we (hall treat, God willing in the next Chapter following.

III. *The Kinds of the Primrose specially fo called*. Of this there are these following Species, viz. i. *Primula veris flore albo*, The iingle white *Primrose*. 2. *Primula veris flore vinde funfnci*, The iingle green *Primrose*. # *Primula veris Flore viridante & albo fimplici*; The iingle green and white *Primrose*. 4. *Primula verk ilore viridi duplici*, The double green *Primrose*. 5. *Primula veris Hesketi ilore multiplaci Jeparatim Divifo*, Heskets double *Primrose*. 6. *Primula Hortenfs ilore pie no vulgarH*, The common' double Garden *Primrose*. 7- *Primula verk minor ilore duplici*, The fmall double *Primrose*. 8. *Primula veris Turcica ilore purpureo Tradefcami*, The *Turky purple Primrose*. 9. *Primula verk flore cbermefino Turcica*, The

Turky crimion Primrose. ' 10. *Primula verk rubrn*. The red *Primrose*. 11. *Primula verk rlibra*, The fair red *Primrose*. 12. *Primula veris Phoenice*^ The scarlet *Primrose*. n. *Primula veris flore geminato rubro*, The red *Primrose* Hofe in Hofe. 14. *Primula veris rubra flore duplici*, The double ted *Primrose*,

The Descriptions*

IV. *The firfi^ or Single white Primrose*. # #f a long, firingy, fibrous and bufhy Root, from we Head of which rife up n/any Leaves, almoji u^ a clufler, which are fomct'mies 2, 3, or ^\ c long, and fometimes 1 or 2 broad, rough, full^ Veins^ and unevenly waved about the edges, narrow

at the bottom, and fro??i thence gradually encr^l in breadth till they come to their full breadth ^ the top, after which, they prcfently grow -n&^ro and end in a fomthing obtufe point, from &^n these Leaves fpring up fever al fmall' whitiff J^ Stalks, about 33, 44, or 5 thicknefs in the height, \$ tops of which the flowers grow in a fmall whit iff) Husk, and of a pale or iwittihyellow^ having five roundiff Leaves dented about the of their edges, and of a pleafant foeet coio There is another Kind hereof, which is fotnt smaller, and bears Milk white flowers, any/hew of yellownefs in them, which are W^ L brought into Gardens for their rarity, and dffr from thofe juft now defcribed, either in Root, Leaf, or any thing elfc, but having thofe yew Spots fmaller, and not fo deep, a* in the otw Wild Kinds,

V. *The feconi, or fingle green Primrose*. has its Leaves very like unto the Greater *Primrose*, but fmaller, end of a Judder greened

The Flowers JJ) and fever ally upon long foot Stalks, as the first Single Kind does, but larger than they, and more laid open, of the fame, or very near the fame yellowish green color that the Husk is of, so that at first opening, the Husk and the Flower seem to make but one double green Flower, which afterwards separating themselves, the single Flower grows out of the Husk and spreads itself open, much more than any other Single Primrose does, growing in the end to be of a paler green color. ^

VI. If a third, or Single green and white Primrose. The Leaves of this differ in a manner, nothing from the former, neither does the Flower; but only in this, that out of the larger yellowish green Husks, which contain the Flowers of the former, there comes forth, out of the middle of each of them, either a small piece of a whitish floweret else a larger, sometimes making up a whole Flower like an ordinary Primrose.

VII. The fourth, or Double green Primrose. This Plant is in its Leaves, so like the former Green Kinds, that the one cannot be known from the other, until it come to Flower, and then it bears upon every Stalk a double green Flower, of a little deeper green color, than the Flower of the former Single Kind, consisting but of two rows of round Leaves most usually, and both of them of an equal height above the Husk, abiding a pretty time in shadow, especially if it stands in a shady place, or where the Sun can come but a little to it.

VIII. The fifth, or Heskett double Primrose. It is very like unto the double small Primrose, as well in Root, as in Leaf, and Magnitude, the Stalk not rising much higher than it, but bearing Flowers in a far different manner. For this bears not only single Flowers upon several Stalks, but sometimes two or three single Flowers upon one Stalk, and also at the same time a bigger Stalk, and something higher, having one green Husk at top thereof, sometimes broken on the one side, and sometimes whole, in the middle whereof stands sometimes, divers single Flowers thrust together, every Flower to be seen in its proper form. And sometimes there appears with some whole Flowers, others which are but parts of Flowers, as if the Flowers were broken in pieces, and thrust into one Husk the Leaves of the Flowers (being of a white or pale Primrose color, but a little deeper) seldom rising above the height of the very Husk itself, and sometimes, as I have observed in this Plant, it will have upon the same Stalk, which bears such Flowers, several here described, a small Flower or two, making the Stalk seem Branched into many Flowers, by which it is manifest, that it will diversify itself into many forms, not abiding constant in any one, as the other Kinds do.

IX. The sixth, or Common double Garden Primrose. The Leaves of this are very large, and like unto the Single Kind, but very much larger, because of its cultivation in Gardens. The Flowers do not rise so high, and every one fever ally, upon long slender foot Stalks, as the Single Kinds do, in greenish Husks, of a pale greenish color, like unto the Field Primrose; but very thick and double, and having the same sweet Smell with them.

X. The seventh, or Small double Primrose. This is in Root, Leaf, and Flower, altogether like unto the last Double Primrose, but that it is smaller in every respect, for the Flower rises not above 2 or 5 Fingers high, and but twice double, that is? with two rows of Leaves, yet of the very same Primrose color which the former is of. ^

XI. The eighth, or Tui kv purple Primrose. I » *
* Leaves of this are so like the other Primroses, that they can very hardly be distinguished until the

Flowers appear: but the chief difference in the Leaves is, that they are somewhat longer, rounder pointed, and a little reddish at the very bottom of the Leaves. The Flowers are as large as any other Primrose, err rather larger, made of five Leaves like unto the last, but of a delicate Violet purple color, the bottoms of them yellow, circled as it were with a deep Saffron like yellow, which adds a greater grace thereto: in other things it is like to the Common, or Ordinary Primroses.

XII. The ninth, or Turkey crimson Primrose. This differs but little from the last, neither in its Leaves, Stalks, Flowers, magnitude, and form of growing, nor indeed in any thing, except in the color of the Flowers, which in this is crimson, as in the other it is purple.

XIII. The tenth, or Red Primrose. This is of a newer date than any of the former, but more variety, and greater variety than the former. In Roots, Leaves and fashion, it differs not from the Common single Field Primrose, only the tops of the Roots, and bottoms of the Stalks are of a reddish color, but the great difference is in the colors of the Flowers, there being of them, almost twenty diversity of reds, some deeper, and others lighter, from blood red, to a pale pink color, some are of a bleuish rose color, [deeper and paler, some of a Brick color, some of a Dove color, others of the color of an old Buff Coat, and some Hair color, all which Kinds have been raised from Seeds, as also, I believe more excellent Kinds following.

XIV. The eleventh, or Fair red Primrose. It is a pleasant Flower, of a most beautiful, rich, shining, Velvet, red color, with a yellow Star in the bottom, tu in all the rest.

XV. The twelfth, or Scarlet Primrose. It is a Flower of very great esteem, and of a bright scarlet color, and more rare than any of the former Kinds.

XVI. The thirteenth, or Red Primrose of Hofe in Hole. It has many Stalks, if growing from one Root, each of which bears a flower, and has Hofe in Hofe upon every Stalk, that is two Flowers ingeminated, one standing within the other, in some bigger, and of a deeper red color, in others lesser and paler. Of this Kind Mr. Rea says, he had raised six several diversities, differing from each other, either in size, fashion, or color.

XVII. The fourteenth, or Double red Primrose. This is the rarest of all the Kinds. The Flower is said to be almost as large, thick and double, as the Common pale yellow Kind, and of a fair red color. For the sake of this Flower, much Seed has been sown, in hopes to have obtained it.

XVIII. The Places. The first three Kinds have been found growing Wild in most places of this Kingdom. The eighth and ninth came to us out of Turkey, but now all the various Kinds here treated of, are found to grow in Gardens, and are nurtured up by the diligent lovers of Flowers. The English Kinds are hardy and prosper in any place, which is not too hot, or too much in the Sun. The Red Kinds are planted, sowed, and ordered in the same manner as we do Bears Ears. Yet if sowed in a Bed of good Earth, towards the end of September, they will come up in the Spring, and soon come to bear Flowers. H-Jskcfs Primrose grows in Clapdale Wood, 3 Miles from Settlement in Lorkshire.

XIX. The Times. Primroses Flower generally very early in the Spring, and sometimes, again in Autumn. Some Flower earlier, some later, and some in the midst of Winter, as they are defended from Cold and Frost, and the mildness of the Winter will admit. The Common double Primrose

t lowers in April: the Common [ingle and ra/ K/WJ in March: and many of them will begin in September^ and continue bearing Flowers all Winter unless checked by hard Weather.

XX. The g&alities^ Specification Preparations^ and Virtues of *primrofes*, are the fame wMh thole of *CowJlips*, in O;p. 157. SV# 18. ^32, aforegoing, to which we refer you.

XXI. An Obfervation. The Juice of *Fr'mrofe* Roots. Being Snuff up the Nofe> or gently Syringed up With a fmall Syringe, it purges the Head and Brain of cold, moid, and pituitous Humors, which affil: the Original of the Nerves, and caufe Apoplexies, Epilepfies, Vertigo's, Megrim, Head-ach, Carus, Lethargy, Coovulfions, Palfies, Rheumatifms, and other Difeafe^ of like Kind. I cured a Man who had four Fits of an Appoplxy, by the ufe of this Errhine 5 and a little Youth of an Epilepfy, by the ufe of it feven or eight times, and taking the *Ponder of the Root* alfo inwardly: I cured an Ancient Gentlewoman of a Lethargy therewith 5 and two other Young Gentlewomen, one of a Megrim > the other of an inveterate Head-ach.

XXII. Another Obfervation. The *Ponder of the Roots*. Given to a Dram and half, or more, it purges the Head, Brain, and Stomach, of cold, moift and putrid Humors -, and is prevalent againit all the Difeafes for which the *Errhine* or *Juke* is exhibited. It purges Choler and Flegm very well. WithioDofes of this *Ponder* I cured a middle Aged Woman of the Palfy: and with much the like number of Dofes, I cured a Man of 50 Years old, of the Gout, proper Topicks being alfo in the mean tealon applied*

XXIII. A third Obfervation. The Decottion of the Roots in Wine. It is good againft the Stone in the Reins and Bladder, and heals inward Wounds and Bruifes, and bathed upon weak Joints: it ftrengthens them* The Decottion of the Leaves and Flowers in Wine, being drank, it is good againft Afthma's, Coughs, Colds, Hoarlenefs, Wheelings, (hortnefs of Breath, and all other Difeafes of the Brett and Lungs -) and is faid to draw any Thorn or Splinter out of the Flefh,

· C H A P . DLXXX.

Of PRIMROSE Bears Ear.

Vulgarly called

A U R I C U L A .

{ . n r ^ H E isames. This Plant knows no i r s -
X ent Greek Name -5 but it is, called by *Lugdunenfis*, *Vrimule veris wtyjwhh't* (from the thiGknefs of the Leaves) *The thick Leavd Primrdife*. It is alfo called *Sanicula Alpina Bauhini tif Qcjneri*^ for they will have it to be a Species of the *Sanicles* *, however it is a very good Wound Herb: by others; *Sanicula altera*^ ?*aralytica* *Alvina*, *The Alpine ot Mountain Cow flip*, Hecaufe it is certainly of the Family of the *Coie/lips*: but now in our time it is moftly called *Auricula Urfc* and we in *EngliJJ*) call it> *the Bears Ear Yrimrofc* 0 alfo *Bears Ear*^ and *Auricula* (without any other addition,) which is the molt Common and ufual Name*

II. *The Kinds*. We have already treated^ of of thefe *Auricula's unte* the Title of *Bears bar*, in *Chap. 59.* aforegoing, where we have given you a compleat Deicription of the thiee principal Kinds, which may ierve for all the feveral individual Species of *Auricula*. But they being properly *Primrofes*, and this being the place, in which they ought to be methodically treated of, we final for the fake of *Flonjis*, and all Lovers of the *Flower Garden*, expatiate our Difcourfe, apq more largely (hew you a great many of the Individuals, which for brevity fake we before omitted. We (hall treat of them, with refpect to their colors, which are chiefly, i. *Purple and Bleit*. 2. &<* or *Scarlet*., 3. *Tellm or Buff*. 4. *White*. In each or which we (hall fhew you fo many fine and delicate Species or Individuals, as may be iufficient to blocK a *thrifts Garden*, who from their Seeds, being managed according to the following directions, may raife many new Varieties. The number of the^various forts being many, we fhall not give you neijr Names here, but put them to each Plant, in I order, as it is treated of

The Defcriptions.

I. Purples and Blew*.

III. 1. *Auricula Urji* ¶hre ptrrpureo
pie Bears Ear. Its Root is compofed of many
Strings Springing from the main long *1
is very like wa'Cowflip, or Primroe
it is in all the other parti befides. From
of this Root firing up many ^
thing long and fsmooth, narrow po
theLefto the >nMle, and broad
to the end, being round pointed and

or indented about the edges. In the middle of these Leaves, and sometimes at the sides also, do spring round green Stalks four or five fingers high, bearing at their tops, many Flowers, the Buds whereof, before they be blown, are of a deep purple color, and being open, are of a bright, but deep purple, usually called a Murrey color, consisting of five Leaves a piece, cut in, or indented at the end, as it were into two, with a whitish ring or circle at the bottom of each Flower, which stand in small green Cups: in which after the Flowers are fallen, are contained very small Heads, not rising to the height of the Cups, bearing a small Prick or Point at the top of them, in which is small blackish Seed.

IV. 2. Auricula Vrfi purpurea abfque orbe, The Murrey Auricula without Eyes. This is another of the former Kind, whose Leaf is for me what kfs, at the end also the Flower, but of the same color, and sometimes something redder, tending to a scarlet, without any circle at the bottom of the Flower: but in nothing else, differing from it.

V. 3. Auricula Vrfi Florepurpureo cfruleo, The Violet purple colored Bears Ears, The Leaves of this are something mealy and large, and the blowers hereof are of a paler or blewer purple than the first, something tending to a blue.

VI. 4. Auricula Vrfi Florepapureo eximio, The beautiful purple Auricula. It is a strong Plant with large Leaves, having a big tall Stalk, bearing great Truffs of many fair, fine, rich, purple flowers, with Snow white Eyes, which will not wither with Rain, as some do, but abide white to the last.

VII. 5. Auricula purpurea pulcherrima, A fine purple Bears Ear. This is like the former in all the parts, but that the great Head of Flowers stands more erect, and is of a deeper purple color, with broader white Eyes.

VIII. 6. Auricula purpurea alia, Another purple Bears Ear. It is a very good Flower, fair and large, many on one Stalk, of a lighter purple than any of the former, with fair white Eyes. There is another of this kind, something like this in color, but brighter, and bearing more Flowers, with large round white Eyes.

IX. 7. Auricula purpurea bona, The good purple Bears Ear. It is an excellent good Flower, and bears a great Truff of rich shining purple Flowers, with very large white Eyes.

X. 8. Auricula purpurea colore albo radiata, The purple striped Auricula. It is small in all its parts, but a weak low Stalk, bearing a purple flower, striped with white. And of this sort is a color there is one which bears double Flowers.

XL 9. Auricula Flore Caruleo folio Boraginis, The Borage leaved Auricula. It is brought into the Kindred of the Auriculæ only for the form of the Flowers sake. It has a Root which is long and brownish, with many small Yibes annexed to it. It has several rough broad, hairy leaves, spread on the Ground, like to those of Boiage for the roughness, but much leiser, the Leaves hereof being something rent in some places on the edges. From among these Leaves rise up one Stalk, but sometimes two or more Stalks, which are brown and hairy, five or six Inches high or thereabouts; each bearing at the top three or four Flowers a piece, consisting of five Leaves, which are large and sharp pointed, of a fair rich blue, or bright azure color, with some small yellow threads in the middle, standing in small green Cups. This Plant at it is tender, and impatient of our cold Winters, and therefore requires to be planted in a Pot, that it may be kept in Winter.

XIL io. Auricula Vrfi Flore purpureo duplici vtrio, The various double purple Flower'd Auricula. This purple Flowered his its Flowers but once more double than the single but is various in its purple color.

XIIL. li. Auricula Vrfi Flore Qskjino, The azure or Sky blew Bears Ears. This has its Leaves broader, and of a dusky yellowish green color, the Flowers being of a bluish color, tending to a purple.

XIV. i W Auricula Vrfi Flore cfruleo diluto, The pale blue Auricula. It is something like unto the last in its green Leaves: but the Flowers are of a paler blue color.

XV. 13. Auricula Vrfi Flore purpureo rubro vario, The fair Collier, or Violet purple colored Auricula. It has a pale greenish Leaf, without dents, and somewhat a large Flower of a delicate Violet purple color, something faded, but very lively.

XVI. 14. Auricula Vrfi Flore purpureo caruleo folio irxano. The purple blue Auricula, with a mealy Leaf. The Flower is of a purple blue color with a white bottom, and a mealy Leaf.

II. Reds, Crimfon mid Scarlet.

XVII. 15. Auricula Vrfi Flore rubro fat uro orbe luteo, Deep, or blood red Auricula, with a yellow Eye. It has small and long green Leaves, nothing mealy, but snipt about the edges, in the middle of the Leaves forwards to the ends. The Flowers hereof are of a deep red color, tending to a Blood red, with a deep yellow circle, or rather bottom in the middle.

XXVIII. 16* Auricula Vrfi Flore rubro fat uro abfque orbe, The deep, or Blood red Auricula without an Eye. This is another Kind, having small and long green mealy Leaves, a mailer than any that have mealy Leaves. The Flowers are of the same deep red color with the last defended, but without any Eye or circle at bottom, of any other color whatsoever.

XIX. 17. Auricula Vrfi Flore ohfoleto matno, The Spanish bluish Auricula. This Great Auricula, but as large Leaves as any other of this Kindred whatsoever, and whynish or mealy withal! something snipt about the edges, as many others of them are. The blowers stand at the top of a strong and tall Stalk, larger than any of the others, being of a dusky bluish color, rejerxbH/ig the hlujh of a Spaniard, whose tawny Skin cannot manifestly pure and bluish, as the English can, for which reason it is called the Spanish bluish.

XX. 18. Auricula Vrfi Flore rubello, Scarlet or light red Auricula, or Bears Ear. The Leaves of this Kind are iftry like the Leaves of the first purple Kind, but that they are not so thick, of a little paler green color, and little or nothing snipt about the edges. The Flowers are of a bright, but pale reddish color, not half so deep as the two, with white Eyes or circles in their bottoms, in other things it differs not from others.

XXI. 19. Auricula Vrfi colore Rofco, The Rose colored Auricula or Bears Ear. The Leaf of this is almoji as large as any of the former, and a little five Leaves, which are large and sharp pointed, of a fair rich blue, or bright azure color, with some small yellow threads in the middle, standing in small green Cups.

XXII. 20. Auricula Vrfi Imperials, The Imperial Auricula or Bears Ear. It might be reckoned, with the Purples, but rather a dark or dead

it has small Leaves and a Short Stalk, but bears many fair flowers close fit together, of a dark red or purple color, that with out much terror it may be called black, with fair Snow white Eyes.

XXIII. 21. Auricula Vrfi Uperatof. Vocda, The Emperol. It is like the lad, only a little bigger in all its parts, but of a dead or black a red color, with fair white Eyes. This hat been lately raised from Seed.

XXIV. 22. Auricula Vrfi Vlore ruWd five Cocciated, The red or Scarlet Auricula. This is of divers forty it has large Leaves, a strong upright Stalk bearing a great Trufs of fine fear let Flowers, with Snow white Eyes.

XXV. 23. Auricula Vrfi Vlore Sanguineo : The Blood red colored Auricula. It is of two sorts, 1. Flore Sanguineo fatur* which is of deep crimfon Velvet color. 2. Flore Sanguineo diluto, or fair bright Crimfon. It has Leaves of middle size more green than mealy, and Flowers of a bright crimfon color, larger than the deep Blood red following.

XXVI. 24. Auricula Vrfi Wore Sanguined fatrato, The Crimfon, or deep Blood red Auricula. It has a yellowish green Leaf something small and long with a few dents on the edges. The flowers are of a deep Blood red color with a yellow Eye, and but a few upon a Stalk.

XXVII. 25. Auricula Vrfi Bore Cameo colore Variegato, The various Fleth colored Auricula. Of this Fleth and blufh colored Auricula there are vdtious sorts, some Paler, some deeper, more or less beautiful by much than others, and with such wonderful variety of colors, not easily to be expressed, which arise almost every Tear from the Seed. There are divers other sorts of Reds inclining to Scarlet, Crimfon, Carnation, Rote colors, and Blujhes, some redder, some yellower than others, some with large flowers, and many on a Stalk, with white or pale yellow Eyes, for many of which new invented Names have been imposed, not worth our Kemembring here.

XXVIII. 26. Auricula Vrfi vericolor prima, five Flore rubelcente, The Prime or Chiet variegated blufh Auricula or Bears Ear. Its Leaves are as large, and mealy as the third or Greater yellow or Straw colored Auricula, at Sett. 31. following, from among which rises up a Stalk about 4 or 5 Inches high, bearing from 6 to 12 or more fair Flowers, something larger than the Smaller yellow Auricula, having the ground of the Flower of a dark or dun yellow color, shadowed over a little, with a few of light purple, which makes a kind of blufh color, the edges of the Flower being tipped with a little deeper shew of that purple color, the bottoms of the Flowers being wholly yellow, without any Eye or Circle, and is of very great beauty, making an admirable variable colored Auricula.

III. Yellows, Buff, and Tawney.

XXIX. 27. Auricula Vrfi maxima lutea Flore Eleganti, The greatest fair yellow Auricula or Bears Ear with Eyes. It has many fair and large thick leaves, something mealy or hoary upon the greens, being larger than any other Kind, except the Spanish Blufh, at Sett. 19. foregoing, and the next Yellow following, smooth about the edges, and without any indenting at all. The Stalk is large, round, and not higher than in some others of the former, but bearing many more Flowers thereon than any other Kind, many times to the number

of thirty, fit anting for round and dose together, that they seem to make a Nojégay alone, and oftentimes join with others, but that the Leaves are shorter and rounder, yet with a notch in the middle like the rest, of a fair yellow color, neither very pale nor deep, with a white Eye or Circle at the bottom, about the middle of every flower. WMCP. gives it the greater grace. The Seed is of a bluish brown color like unto others, but contained in greater round Heads than any other, with a joint point of flicking in the middle. Its Root is greater and thicker than any other, with long Strings or Fibres but greater than any of the former.

XXX. 2b. Auricula Vrfi major luteafehoi* cavo* The greater yellow Auricula, or Bears Ear. Its Leaves are larger, and more hoary or mealy than the lesser, or any other of these Kinds. The Flowers are not so many, but longer and not so close together, but of a deeper yellow color without a Joint Eye, or Circle in them.

XXXI. 29. Auricula Vrfi major Fhre. The great Straw colored Auricula, or Bears Ear. This has almost as mealy Leaves as the lesser, nothing so large. The Flowers are of a fair yellow color, with an Eye or white Circle at their bottom. These three last have no shew or shadow of any other color in any part of the edge, as follows, which follow have.

XXXII. 30. Auricula Vrfi minor. The lesser Straw colored Auricula. Its Leaves are little mealy withal. The Flowers are yellow, than the last, and it bears almost as many upon a Stalk, as the first Great yellow.

XXXIII. 31. Auricula Vrfi minor. The lesser yellow Auricula, or Bears Ear, its Leaves are nothing so large, as either of the three lesser yellow Kinds, but rather of the bigness of the White Kind, at Sett. 43. Its Leaves are little larger, thicker and longer than it, under the greens a small shew of mealy, something snipt about the edges. The Flowers of a pale yellow color, with a small white Eye at bottom in them. The Seed and Roots are white in the Eye.

XXXIV. 32. Auricula Vrfi Flore flavo. The deep yellow Auricula, or Bears Ear. Its Leaves are something larger than the lesser, of a yellowish green color, without any mealy lines on the edges, but smooth about the edges. The Flowers are not larger but longer, and open so fully as the former, but of a deep yellow color, or Cowflip color, without any shew of other colors than yellow in them.

XXXV. 33. Auricula Vrfi minor Flore j. The tawny Auricula, or Bears Ear. Its Leaves are shew of mealy lines in its Leaves, than is to be seen in the Second Kind, at Sett. 4. foregoing, the snipt or indented at the ends like that, there are many, of the same fashion with those, smaller, each of which is of a deep Murrey, or Tawney color when it is blown, as the Buds above named are before they are blown, with an Eye or white Circle at bottom, which is in the middle below the Circle.

XXXVI. 34. Auricula Vrfi Crinis. Hair colored Auricula. Its Leaves are longer and larger, snipt also about the edges, in the same manner, from the middle of the Leaf. The Flower is full of fine light brown, or browner. The edges of the Flower have a

Shadow of a light purple or bluish about them, but, Leaves, of a little darker green color. The Stalk more on the out side than on the inside. Of this and Flowers are like wife leffer than the former Species there are divers sorts.

XXXVII. 37. Auricula Urfi verficolor lutea, Bud, or Flower, but is pure mite, not differing in other things from the rest.

The yellow variable Bears Ear, or Auricula. Its Leaves are green and something like to the Deep yellow; itt Sect 34. aforegoing, but something of a frejher green, nwrching and smaller, snipt also 'bout the edges towards the ends, ds many of those before are. The Flowers are of a fair yellow color, much laid open •, when they are full blown, that *bey seem almoji flat •, dasht about the edges onfy-i with purple, being more yellow in the bottom than in any other part.

XXXVIII. 36. Auricula Urfi verficolor lutecente viride Fldre The Variable yellow green Auricula, or Bears Ear. Its Leaves are green ^ like to those lajl described, and snipt in like about the edges; but in this it differs, that its Leaves do not turn or fold themselves a little backwards, -The Flowers are of a yellowish i'een color, more clofed than the former, having furplijh edges, especially after they have flood blown some time^ and have little or none at the first opening, nor yet any Eyes or circles at all in them.

XXXIX. 37. Auricula Urfi Flore luteo eximio, The Noble yellow Flowered Auricula. It bears the large ft Flower and biggest Trufs, of the deepeji yellow color having white Eyes. Of this Species there are some whose Flowers are of a buff color, yellow and some dunner than others, which are in good Eijleem. There is also one, which on a short Stalk bears four or five double Flowers, with three rows of Leaves in each Flower.

XL. 38. Auricula Urfi verficolor luteo, The triable yellow Auricula. Its Ground h yellow ^ * it is so diverfijtd or varied with other colors, impoffible to be expreffed in Words ^ and they are fo that some Authors have Jaid * they are numerous.

XLI. 39. Auricula Urfi Flore luteo Fufco, The Leather Coat Auricula, or Bears Ear. It is of two Kinds, the greater and leffer, and deeper and j paler, one than other. They have all large mealy Leaves^ yet not fo much as in the Greatelt yellow \$ but yet it seems that they are produced from thence, they come fo near to it, Of thi fort is the Sham* my colored.

XLII. 40. Auricula Urfi Flore timotiaco, The Limon colored Auricula, or Bears Ear. It is of a delicate pale yellow color ^ and of a middle Jize, both for Leaf and timer. Of tbt other fort of plain yellows, there are a very gretd number^ impoffible to be dijtinguifhed.

IV. Whites.

XLIII. 41. Auricula Urfi major \$ lore atbo, the great white Auricula, or Bears Ear. Its Root is the Purple Kind, as all or most of the rest are, Or not much differing. It has many fair whitish i?en Leaves some what paler than the heavens of J of the Kinds of Auriculae, and a little snipt wout the ends, as many others are. From among these Leaves rise up Stalks four Or five Inches high, ar'wg at the top many Flowers, like unto the Small yellow Auriculae, at S^ft. 33- a f^re S^g, of a pale ^otijb color, tending to yellow at the first opening of the Flower- which after 2 or 3 days, change into a fair white color, and so continue all the while n blowers.

t ^ 42- Auricula Urfi minor Flore albo, The white Auricula, or Bears Ear. It has smaller

XLV. 43. Auricula Urfi Flore Nheo^ The Snow white Auricula, or Bears Ear; The Flowers are of a pure Snow white color, but smaller than those in Sect. 4. above % otherwise in all other things they a^gnuch alike.

XLVI. 44. Auricula Urfi Flore albido veliPdli-do, The whitish Auricula, or White mixt with a pale bluish. Of these there are various Kinds according to the differing mixture of the red with the white, the white most predominating.

XLVII. 45. Auricula Urfi Flore alh'o Lac Virgineum, & Lac Virginia ditto, The Milk white Auricula 5 called also, Virgins Milk^ which is accounted the best among the Whites. It has large mealy Leaves, a tall strong Stalk, with a great Trufs of Milk white Flowers, with Snow white Eyes, which placed among the Purples sets off, and adds to their glory. There are many perfectly white, and many Milk whites; but not many of better eft eon than the Yellows.

XLVIII. 46. Auricula Urfi Flore multiptici dldb The double Milk white Auricula, or Bears Ear. The Leaves are like the former, The Stalk bears but one Flower orr its top but it is very double, and like the Common double Primrose.

XLIX. The I?aces. These goodly Plants grow Naturally on Mountains* especially on the Alps in divers places, for which reason some call them Primulo verii Alpina: some of them have been found also on the ?yren<ean Mountains * but that Kind with the Borage Leaf has been found on the Moifhtains in Spain^ and on the Pyrentarif next to Spain. From which places they have been transferr'd to us, into our Gardens, and into almost all the Gardens of Europe^ where they thrive acU mirably well.

L. The Times. They all Flower from the beginning of April to the beginning of May, and the Seed is ripe 5n the end of June or beginning of July. And sometimes they will Flower again in the end of August, or beginning of September, if the Season prove temperate, moist and rainy; but those Flowers which come then, are neither so fair j nor so many on one Stalk, as those which come in the Spring.

DireBions fir Planting them,

LI. The best fort of Auricula are fet in Pots, which they well deserve, the Pots are to be filled almost half full with sifted Neats Dung, the rest with good Sandy Earth, well mixed with sifted Dung. About the end of August fet the Plants therein, and not too deep, for the Roots will be apt enough to run downwards. Place these Pots in the Sun all the Winter, and with Glaffes defend them from over much wet, but Houfe them not, they will do better in the open Air. In the Spring, when they rise to Flower, remove them into a place more shady •, and after the Flowers are past (except those you leave for Seed) you may difpose them in some shady place out of the way % to make room for Pots with Oilliflowers.

LII. But if you Plant them in the Earth at large, and not in Pots, let it be in some place & littk (shaded from the scorching heat of the Sun?) the Soil being first made very Rich, if (tiff, with Sand and store of well rotted Neats or Cows Dung *

and in this lee the Roots be Set, a Foot afunder (for they fspread wide^ and will not thrive if they Want room.) The beft way of Planting them, is, Open a wide Hole, leaving or raifing a little Hill in the middle thereof, then to fet the Root thereon, and fspread the Fibres round about it-, laftly, to cover them with Earth, and fo to Water them. After the middle of *Auguft*, every other Year, take them up, and then mend or^rich the Soil Where they grow, with lifted Neat Jp Cows Dung •, and having flipped or parted the Roots, and cut off the Fibres which are too long, fet them in the fame place again. By this means you will not fail to have them thrive, and bear (tore of Flowers. But if you let them ftand too long unremoved, or in poor or ftiff Ground, you muft expect a crop of Flowers accordingly.

LIII. *The raifing variety of them frdm Seed^ is d Secret^ with which few are well acquainted^ and it ii to be performed with Something more than cofnmon diligence^ by the following method.* When the Flowers are pall and the Sralks bsgin to grow yellow, you may obferve in the top of the little round Seed Veffel, a fmail hole, and then you may be fure, that the Seed is almoft ripe, and which if you do hot carefully look to, will all of it fall before you are aware. So foon therefore, as you perceive it to be ready, cut down the Stalks, and keep the tops upright, for if you turn them downwards all the beft Seeds will fall out. Then bind them up in Bundles or Handfuls, and place them upright, to the Glafs of fome South Window, where (by the warmth of the Sun) they will harden, and be much the better.

LIV. About the end of *Auguft*, or beginning of *September*, prepare fome fquare Box or Boxes, according to your ftore of Seeds-, let them be <?%t 10 Inches deep, and of what breadth you pleafe, with fome holes in the bottom to let out the Water, which fill three parts full with fine Sandy fitted Earth, one half whereof let be well rotted Neats Dung, which well mingled together, and laid fmooth with your Trowel, lay thereon a Fingers thicknefs of fine fitted *Willow* Earth, or for want thereof, of dried Cow Dung beaten fmall, mixed with a little good Earth and fitted, and fow your Seeds thereon, mixt with Wood Afhes, which by their color will direft you to fow them the more fuitably: fow them not too thin, for all will not come up ^ and if they do, they may eafily be removed to another place.

LV. The Seeds being thus fow'd, cover them half a Finger thick with the fame Earth, you put next under them, which prefß down lightly, and let them remain in the Sun and Air, till they begin to come up, which will be about *April* next, and then they muft be removed into the Shade, and often gently Watred. As foon as they are grown to any confiderable bignefs, take fome of them up where they are too thick, and fet them prefently in fome Bed prepared for that purpofe, eight Inches afunder, where they may remain, till they come to bear Flowers. And thofe you leave in the Box, may be Tranfplanted in the end of *Auguft*^ after the fame manner, and fo the Box will be ready again to fow more Seeds in. Some of them will bear the *Spring* following, others about *Auguft* the Year after they were lowed-, and the reft, the *Spring* then next following, provided the Earth you fet them in be rich apd good, otherwife you will fail of your expectation.

LVI. Some think that the beft time to fow the Seed in, is, in the beginning of *Osobe*,\ others st the end of *February*: but having tryed all thofe beafons, it has been found that the end of *Auguft* or beginning of *September*, are the beft times for

what purpofe; for the Seeds are fo fmall, tfcitff they be kept any time out of Ground, they wiu dye and become unprofitable. You are alfo to obferve, that you fave the Seed of the choicelt anq beft Flowers, for from thence muft come all your Expectations. Such Flowers as you diflike, p; their Seed away, it is not worth faying-, by Jn* means having the beft Seed, fowing it in due time, and that alfo in prepared Earth, and then i«; fonably removing them, into their deftinatedpH** you may reafonably exped not only a great varieß of admirable Plants, but even ail that you can ae fire to refult from the fame.

LVII. *The Qualities, Specification, fr-* and *Virtues of Bears Ears, ait the &meW* fpe&s with thole of *Primrofes* and *Covaffi* if you pleafe, you may fee at large, in Sell. 8. ad %%. and Cup. 157. &# I⁸. ilfo, in Chap. 579. Se3. 21. ad 2?. aforegoing, ill which places we refer you, it being repeat the fame things over and over again.

Of PURPLE - W O H T,

O Ry

PURPLE - GRASS .

THE Names. This Plant has 00 Name that I know of: but it is *Latinc, gieadr:folium fufcum-, GramenP Lotus quadrifolia; and in Englifh, fw or Purple-Grafs.*

II. T^ iC^if. Authors make it a ^ the *Trefoils*, as 0//)^ *Bauhine* in his P ' J ^ 4 calls it *Qiadrifoliumhortenfe album*, as *hz,ten* Pena call it *uadrifolium phxum Mff*, or *vel hcrtorum*; which • is *Four 'Leav'd u faftp our Purple-Grafs*, and is a fingular Plant? J nens.

The Descriptions.

III. // i^r ^ li?^ *fringy Root, »M7y l ^ < and knobs, buds or protiffit it were fpringing from them: from this^ feveral creeping Branches, which fspread iv. on the Ground, having at their ends f. even like thofe of Tiefoil, it has for the mo^ Leaves (whence the Name Qmdrifolium/ times but three, and fome times five, a* feven, (Foliis quaternis, quinis, *) tenis donatur, dixit BauhinusJ thefeLe^ a fad green color, with a fhadow of daft t \$*

caſt over the M, (Whence tdiſe alſo our Engliſh Name Purple-Grafs.) The Flowers are in form like the other Meadow Trefoils; and of a white or ſohitiſb color.

IV. Gerard deſcribes it thus. *This Kind of Three Leav'd Grafs, vr rather Foar Leav'd, ha Leaves like unto the Common Trefoil, ſaying that they are leiſer* and vſ d brown purpliſh color, known by the Name of Purple-Wort, or Purple Grafs, vſooſe flowers are in Jhape like unto the Meadow Trefoil, but of a dujiy overworn color tending to whiteneſs; the which does oftentimes degenerate, ſometimes into three Leaves, ſometime into five, and alſo into ſeven ^ and yet the Plant of its own Nature has but four Leaves and no more; but Johnſon in Gerard, ſt ems not to admit it r have white flowers: for that the Plant with white flowers, he could never find had more than three Leaves upon a Stalk.*

V. To this we may add, *Trifolium pratense minus purpureum*, Small Meadow Purple-Grafs, w Purple Trefoil. *Its Root is ſlender, white, and woody, which ſends up ſmalb hard Stalks about a foot high, full of Branches, bearing on forte three Leaves, and on ſome other Branches and Joints, four ſmall Leaves, like a Lotus. The Flowers grow nany together, at the tops of the Sprigs, being very ſmall, and in a looſe Head, of a purpliſh red color.*

VI. *The Places.* The firſt grows only in Gardens, and is ſcarcely ever leen any where elſe, for the Wild which is thought by ſome to be the true Purple-Grafs, is not it. The ſecond grows *with us only in Fields and Meadows^ in moſt places of this Kingdom.

VII. *The Times.* They both Flower in the Summer Months, viz. in July and Auguſt, and their is ripe not long after*

VIII. *The Qualities.* Purple-Grafs is temperate in reſpeſ to heat or cold, and dry, in the fifth Degree, Aftririgent, Stomack, Cardiack, Antifebritick and Alexipharmick.

IX. *The Specification.* It is generally given through the Kingdom for the cure, of the Purple Fever, or the Purples (as it is commoly called) in Children, as alſo in elder People.

X. *The Preparations.* You may have theſe from, 1. *A Liquid Juice.* 2. *An Eſſence.* 3. *A Decoction in ^ſne or Water.*

The Virtue.*

XL *The Liquid Juice.* Given to 4 Spoonfuls more or leſs, it prevails againſt all ſorts of Burning Fevers, more eſpecially againſt that called the Purple Fever. Dropt into the Eyes it repreſſes or ſtops a Flux of Rheum into them, and cures Redneſs or Inſlamations, and Blood-hot.

XII. *the Eſſence.* Drank inwardly to 3, or 4, or more Spoonfuls, it is good againſt the bitings of Vipers, or of any other poiſonous ſerpent, waſhing the place bitten with the ſame. It Speedily alſo cures Green Wounds, they being daily once or twice a day waſh'd therewith, uſed Clyſterwiſe, it is good againſt Fluxes of the Bowels, ſtrengthens the Guts, and prevails againſt a Tenafmſts, or continual provocation or deſire to go to Stool: and is profitable to ſtop the Whites in Women.

XIII. *The Decoction in Wine or Water.* It has been given with good ſucceſs againſt the Purple Fever, commonly called the Purples in Children, and alſo in elder People; and has indeed all the Virtues of the Liquid Juice and Eſſence, but much weaker, and therefore ought to be given in a larger Doſe, as from a quarter of a Pint to half a Pint.

CHAP. DLXXXII.

Of PURSLANE Garden and Wild

I. *HP HE Names.* It is called *ihArxbick, Bakld X ancha, and Bachele alhanica: in Greek, by Dioſcorides, 'toſ&jwvi* Andrachne: and by Theophrastus; 'A.IV^y, j^drachne: in Latine, Portulaca: and in Ehgliſh, Purflane.*

II. *The Kinds.* There are two Principal Species of this Plant, viz. I. *Poriulaca terreha, bel ierrigem*, The Land Purflane, of which in this Chapter. II. *VortulacaHyddtica*, Sea or Water Purflane, of Which in the next Chapter.

III. *The Varieties of the Land Kinds; Theſe are, I. Poriulaca Hortenjis*, The Garden Purflane* which is, i. *Portulaca Uortenſis viridis community* Our common Green Purflane. 2. *Portulaca Hortenſis aurea*, Golden Leav'd Purflane. II. *Portulaca Sylvejris*, Wild Purflane, which is, 3. *Portulaca a dgrejiis major-*, *Portulaca Sylvejris major** *Portulaca minor, Camerarij & Gefneri, Portulaca Anguſtilifolia Bauhini iff C<efalpini; Cepaa Qordi for Cordis upon Dioſcorides ſays that Ccpxa is no other than Portulaca Sylvejris*, The greater Wild Purflane. 4. *Portulaca agreſtis minor; Portulaca Sylvejris minor, Portulaca exigua Camerarij, Portulaca arvenſu Bauhini*, The ſmaller or leaſt Wild Purflane.

cumbers Melons and Pompions; whereon, alter thole have been taken away, they many times fow their *Purlane Seed*, where if it is much watered, the warmth of the Dung, and the Water together, makes it grow great and large, and continues it in that State, if it be fometimes cut, till *Winter*.
 r The third grows many times in our *Gardens*, without any previous help of ours. And in molt of our Plantations, in *New England, New Tor/, New Jerfie, Mary-Land, Penfilvama, Virginia, North and South Carolina*, when they ly void. It will fpontaneoufly come up, and over fspread many Acres of Ground, even in one *Spring*, and in thole places where never any has grown from the beginning of the World to that time, and this it does in almoft all our Fallow Plantations, thro' the whole Continent of *Florida*, which confidering it does fo univerfally do it, and that in fuch vaft quantities, 2s fometimes almoft to cover a Plantation it is'a Remark worthy the taking notice of. The fourth, *Camerarius in Horto Medico*, fays, that he found it growing about *Lipfwick**, and I have been informed by ibme, that they found it growing Wild, in fome of the Northern Counties of *England*.

X. *The Times*. They may be all Sown in *March* or *April*, and they fpring up in *May*, and are freffi and green in *May* and *June*, they are fit for Salleting in *July*, and fo continue all *Auguft*, and fometimes to the end of *September*, if the Seafon is favourable and warm, even till the colds nips them, and caufes them to perifh.

XL *The Qualities*. All thefe forts of *Purlane* are cold in the third degree -, and the two *Garden Kinds* moift in the fecond Degree, but the *Wild Kinds* moift only in the firft Degree. They are Abfterfive, Cofmretick, Diuretick, Emollient, Relaxive, Repercuflive, Nephritick, Hylterick, and Galaftogenetick.

XII. *The Specification*. *Purlane* is good againft Burning Fevers, hot and cholerick Fluxes of the Bowels, Catarrhs, want of Sleep, *Gonorhcea* in Men, and Whites in Women, as alfo the overflowing of the Courfes. It cools the Blood, gives eafe in the Strangury, and takes away the heat and fcalding of the Urine. Abates Luft, extinguifhes the Seed, flops Vomiting, as alfo defluxions of hot, fait, and fcalding Humors into the Eyes.

XIII. *The Preparations*. You may have therefrom, 1. A Sallet. 2. A Liquid Juice. 3. An *Infpijate Juice*. 4. ^{An} *Ejjnce*. 5. A Syrup. 6. An Oil or Ointment. 7. A *Cataplafm*. 8. A *Dijilled Water*. 9. A *Powder of the Seed*. 10. A *Collyrium*,

The Virtues.

XIV. *The Sallet*. It is made of the green Leaves and very young Stalks, with Salt, Sugar, Vinegar and Oil. It is good to cool and attemperate the Blood and *Lympha*, is grateful to hot and fainting Stomachs and is profitable for fuch as have the Falling-Sicknefs. The *Wild Purlane* is ufed beyond Seas, and in our Plantations in *Florida*, as familiarly in Sallets and Meats, as the firft *Garden Kinds* and with all the fame good effects, faving that it is not altogether fo moift, and therefore the more fit to (top ibme forts of Fluxes.

XV. *The Liquid Juice*. It is good againft the burning Fits of Agues and Cholerick Fluxes of the Belly, and is profitable againft the Whites aif Reds in Women, as alfo a *Gonorrhcea* in Men: it flops Catarrhs, eafes pains of tho Head proceed-

ing from Heat, and caufes Sleep and Reft, and is of good ufe for fuch as are in [^]*Delirium* or Frenzy. It is prevalent againft putragicus Luft, extinguifhes, at leaft diminifhes the Seed; and being overmuch ufed abolifhes the Natural power of Procreation. It is good to ftay Vomiting, and fweetned with a little white Sugar, is good againft an old and dry Cough, Afthma, and fiortnefs of Breath. It quenches vehement Thirft, and heals Ulcers of the Lungs, It is goocjclfo againft Incarnations and Ulcers of the Secret parts in Man or Woman, and gallings of thole parts: and ufed with Hony, it heals excoriations, and even Ulcers of the Bowels, and *Anus*^ and obliterates a *Tenafmus*, tho' of ibme Weeks (landing. Dofe from 2 to 4 Spoonfuls brmore> Morning and Night,

XVI. *The Infpijate Juice*. *Caherarius* fays* That the thickned Juice, Made up into Pills with *Pouders of Gum Tragacanth*, and *Gum Arabic*^ and taken ffrom a Dram to two Drams, Morning and Evening) prevails much, in helping fuch as make a bloody Urine, or pifs Blood.

XVII. *The Effence*. It has all the Virtues of the *Liquid and Infpijate Juices*, excepting, that it does not fo powerfully fupprefs Luft, or Exanimate the Seed. But it more powerfully heals excoriations of the Bowels, *Anus*, Lungs, and other inward parts. Outwardly appiyed it gives eafes in the Gout, and foftens the hardnefs of the Nerves. It is good for Womens f A oln and pained Breafts, and other Tumors caufed by heat and Inflammation. It is good againft the bitings of Serpents or other poifonous Creatures, and to draw forth the Poifon, being bathed upon * the part- Appiyed to the Navels of Children which ftick forth, it helps them-, it is good alfo for fore Mouths and fore Gums, which are much fswollen, and to fatten loofe Teeth, and take awiy their pain, when they feem to be on edge as it were, after the eating of fower things. Dofe from 2 to 4 Spoonfuls.

XVIII. *The Syrup*. If made with Honey of the Juice, it not only prevails againft Coughs, Colds, Afthma's, but is alfo prevalent againft a Phthifis, or Ulceration of the Lungs, and has all the other Virtues of the Juice and *Effence*, being given from 2 to 4 Spoonfuls, Morning and Night.

XIX. *The Oil or Ointment*. They cool Inflammations, heal galling in the Groin and Secret parts, give eafe in the HeacUach, Gout, and other pains proceeding from heat, and [difcufs] Pufhes, Wheals, Pimples, and other like hot and fiery Eruptions in the Skin. They are alfo good 3-gainil Burnings and Scaldings, and Womens hard, tumified and inflamed Breafts ^ as alfo the ftings and bitings of Hornets, Wafps, Bees, Serpents, and other venomous Creatures.

XX. *The Cataplafm of the Green Herb*. It is prevalent againft *Anthony's Fire*, Gout Sciatica, (trained Nerves if Inflamed, Pimples, Tettars, Ringworms, Shingles, and other hot breakings out of the Skin. Made with Vinegar, a little Linfeed Oil, and Powder of Nut Galls, and appiyed, it takes away pains and creeks in the Neck, and other parts 5 and difculfes and heals fimple Contulions in the Mufcular-parts.

XXI *The-Diftilled Water from the whole Plant*. It has all the Virtues of the Juice, *Effence*, and Syrup, but nothing near fo effectual, and therefore may be given in a double or treble Dolè, or ufed as a Vehicle to Convey other Preparations in being fweetned with double Refined Sugar. It prevails againlt *Anthony's Fire*-, beautifies the Face and Skin, and allays the Inflammations of the Eyes,

XXII. *The Powder of the Seed, or Seed bruifed.* It is faid to be more effectual than the *Herb*, even for all the purpofes afore named-, it is of lingular good ufe to cool the heat and {harpnefs of Urine, to fupprefs Luit, and No&urnal Pollutions, and even to extinguiſh the Seed, and abolifh the inclination to Venery. Given to Children which have Worms, it is faid to kill and expel them. *The Decoſion of the Seed being bruifed, in Wine,* performs likewife the fame things. An<| the Seed of the *Wild Yurflane*, is more commended for killing of Worms, than the Seed of the other. Dofe from a Dram to t Drams in any proper Vehicle.

XXIII. *The Qollyrium. Takè Clarified Juice of J!urflane 2 Ounces -, of the Biflilled Water 3 Ounces - of com?non Spirit of Wine or Brandy 4 Ounces - , Hony 1 Ounce ^ mix, diffolve, firain out, and let it fettle for 12 Days, then decant the pur eft part, and keep it for Ufe.* It cools Infiations of the Eyes, dries up hot and fait Rheums, heals Sores and Ulcers in them, and cures moft Difeafes happening to them, removing Miſts, Clouds, and Films, and very much clearing the Sight.

C H A P . DLXXXIII.

Of PURSLANE Sea and Water.

LHPHE Names. It is called by the Arabj-
I ans, *Molochia*: in Greek, "Au't:" and in *Lathe*, *Halimus*, and *Portulaca Marina*. The *Water Furflane* is called in *Greeks* and in *Latine*, *Portulaca Aquatica*.

II. *The Kinds.* There are feveral Species of the *Sea Purflane* to be found in Authors, but omitting thoſe which grow not in *England*, or ſome of our Foreign Plantations, we (hall only treat of theſe two following, viz. 1. "& **?&> *Hatimus*, *Portulaca marina noſtras*, Our *Sea Purflane*. It is called *Halimus*, becauſe of its faltiſh Taſte, which is as much as if you ſhould call it *Salt-wort*, JBut *Solimm* calls it, "A A ^, *Alimos* without the iifpirate, and ſays that us Na_me is derived from its effeCts, or operation, which is *to prevent Hunger*, for ſays *Solimi*ſy the People in *Candia* tell us, that that Day they eat thereof, they ſhall not be Hungry, but be free from defiring Food. 2. *Halimw tenuifoliits*, *Halimm anguſtifolim procumbens* ^ *Mahmus minor*, *Jfortulaca Marina inca'na m'no* The leſſer *Sea Purflane*, or *Sea Purflane* leſs white than the former, v 'tof&yj* 'iwfez* *Portulaca Aquatica* ^ *Alfine paluſtris minor folio oblongo Bauhini*, *Portulaca vel Andrachne paluſtris*, ^ *Water Purflane*.

The Defections*

III. *The firſt, or Our Sea Purflane.* It has a *Root* which is ſomething woody, with feveral long *Strings* joined thereto^ and abides with the *Leaves* on the *Branches* all the *Winter*. It has feveral hoary and grayiſh *Stalks*, ſomewhat *Woody*, about a foot or more long^ lying for the mo ft part upon the *Earth*, bearing thereon many finally thick^ fat and long *Leaves*, of a whitifh green color, fet without order, at ſome *Joints* more, at ſeme leſs, *Branching* forth here and there, and bearing at the tops many long *Sprigs*, or fpiked *Stalks*, fa round about

with greeniſh purple Eoaxrs, which turn in
flut, ibin Seeds, like unto thoſe of Sea An.

IV. Theſe ^ Winter <^
woody and perennial, or

the former. This Sea Purflne ha* very flender, like toeak and fomewbat hoary white Stalks, about 2 Feet long, scarce able to Jiand upright, but for the moft part do fall down, and ly upon the Ground, the Leaves which grow on them, being Jet much in the fame manner, viz. without order, fomething narrower and [onetimes longer, but not altogether fo hoary white. The Flowers are much like the firft Kind before described, but of a more greenifh] color, growing at the tops of the Stalks[^] and afterwards yield fuch like Seed as they, but Jomewhat lefs.

V. Gerard describes the fecond Kind after this taanner. Its Leaves are like the former, but not vtogeilm? fo white, yet they are Jomewhat longer and narrower, not much unlike to the Leaves of the Olive Tree. The flender Branches are not above a Cubit or Cubit and halflong, and commonly ly fpread upon the Ground. And the Flowers are of a deep overworn Herb) color, after which follow Seed, like thofe of the firft but fmailer. Ramos plures a radice fundit (dixit Matrhiofus in Diofcoridem) lentos & obfequiofos, foliis Oliva: pinguioribus, albicantibusque, falfo fapore, Semen profert racemofum in Caulium fummitatibus.

VI. The third, or Water Purflane. Its Root con-Ofs of nothing but a parcel of fine Fibres or Threads. Its manner of growing k fomething like the Chickweeds, efppecially the Water Chickweeds* It is but a fmall Plant, but-ha* many trailing fquare Branches, which take Root almoft every where, as they fpread-, but not fo thüick fet with Leaves

as the Chickweeds are. Its Leaves are fomething long, narrow, and round pointed, of a pale yellowifh green color, two always growing at a Joint-, the flowers are [small and white, fet together in long Clusters, on Small foot Stalks, with very fmall round Seed following them, in little round Seed Veffels.

VII. The Places. The two firft grow in Salt Marfhes, and by the Sea fide, in many parts of the World. The firft grows in the Salt Marines and by the Sea Coaft in many parts of England, as in Kent; In the Marfhes by the Sea fide going over the Kings-ferry unto the Ifle of Sheppy, going to Shoreland Houfe, and by the Ditch fides of the fame Martfr. it grows alfo plentifully in the ifle of Thanet, as you go from Margate to Sandwich, and in many other places along the Coaft. The fecond grows upon the Sea Coafts of Spain, and other hot Countries: Cluftus fays it grows about Lisbon in Portugal. With us it only grows in Gardens. Dodonaus fays, it grows in the Maritime places of Flanders, Holland[^] and Zeland, and other

like Sandy places. The Water Purflane grows in or near Water, and Watery Ditches and Grounds in many parts of England.

VIII. The Times. They Flower in July and Auguft, and the Seed is ripe in Auguft or September, or not long after the time of Flowering.

IX: The Qualities. Thefe Plants are temperate in refpect to heat or cold, and moift in the firft Degree: Abfterfive, Afringent, Anodyn, Gala&ogenetick and Spermatogenetick.

X. The Specification. Sea Purflane expels or difcufles Wind, gives eafe in the Colick, ftrenthens the Bowels, and is profitable againft Cramps and Convulfions.

XL The Preparations. You may have from the SeaPurflane, 1. A Sallet. 2. The Leaves Pickled. 3. The Juice or Effence. 4. A Decottion in Wine. 5. A Pouder of the Root.

the Virtues.

XII. The Sallet. Parkinson fays, it is ufed to be eaten as other Sallet Herbs, for that it much pleafes the Palate, having a little afringent rellilh withal. The Leaves Diofcorides fays, are boiled, and then eaten asa.boiled Sallet: folia, Diofcorides ait, iecoquantur ciborum gratia.

XIII. The Pickle, folia autem in Belgio veluti Cappares Sale aut-Muria condiuntur, 8CC. The Leaves are preferved with Salt or Pickle, in Holland and other parts of the Low Countries, as Capers are, to be ferved up at Mens Tables, and Eaten in their ftead, having a plealant and grateful tafte.

XIV. The Juice or Effence. They expel Wind in the Stomach and Belly, give eafe in the Colick, almoft upon the Spot, loofen the Belly firft, and then afterwards Bind, flop Fluxes and ftrenthens the Bowels. They are good againft Ruptures, prevail againft Cramps and inward Convulfions 5 caufe plenty of Milk in Nurfes Breafths; and very much encreafe Seed, and Vigor. Dofe 1, 2, 3, or 4 Spoonfuls, Morning and Night, in a Glafs of Generous Wine.

XV. The Recottion in Wine. It has all the Virtues of the Juice and Effence, but as it is weaker fo it ought to be given in a double or treble Dofe.

XVI. The Pouder of the Root. Given to a Dram in Mead ox Honied Water, it is good againft Ruptures, Convulfions, and torments of the Guts, as Dicfcorides fays: but we find the Leaves to have the lame effects.

I *T* H E Names. It 'li called in ... X 'Petpaw: in Latine, Raphanus, & Raphattus Hortensis: and in Englifh, Radifh and Garden Radifh, or Reddifh. Ctlws Eijs, that Marcellus Empericus calls the Seed of Rdlifh, Bacanon, which is alfo found in A. My rep [us, lib. i. <w#>. 255. but Qomarim reads ir, Cue anon.

II. Tfe KvWi. Of Radijbes there are three Generic^ Species, w.s. i. P*V*w *»*«* Ra~fjbanus Hortensis, Garden Radifh. 2, T*Vm TMAvii> Raphanm Syheflris, Wild Radifh. 3. Raphanus Ruflicanus, Horfe Radifh: of all which in order.

III. Tfo Garden Kinds. They are various, as, 1. Raphanus fativus community Our common Garden Radifh. 2. Raphanus fativus minor> The leffer Garden Radifh. 3. Raphanus Orbiculatm, The round Radifh. 4. Raphnnus. niger, Rjphanm Pyriformis, The Pear fashioned, or Black Radifh.

The Description.

IV. Tlje firfo or Our common Garden Radifh. Its Root it long, white within, ani oj a reddifh purple color on the out fide towards the top oj l>, and of ajharp biting Tap, yet jome are lejs fharp and biting and of a more pie of ant Tafte. It has long Leaves unevenly gaffA on both fides.- the Stalks

rife up to the height of three or four feet, bearing many purplifl> Flowers at top, made of four Leaves tpiece, which turn into thick fhort Pods, in which ire contained round Seed, larger than Turnep or Cole-wort Seed, and of a pale reddifh color.

V. Gerard delcribes it thus. Its Root is gr°J°> long and white, both within and without, and oj fharp Tafte. It/ends forth great and large Leaves^ green, rough, cut in on both fides with deep g^JP^s^ not unlike to the Garden Turnep, but greater. The Stalk is round and part ad into many Branches? out of which fpring fnany Flowers of a light pj*Pj* color, made of four little Leaves\ and when theyK pafi, there come in their places, fharp pointed Lw^i puft or blown up towards the Stalk, faM^J^ f jpongeous Sub fiance, wherein is contained the See? of a light brown color, fomewhat greater than to Seeds of Turneps or Cole-worts.

VI. The fecend, or Small Garden Radifh. Jt^ Root is fmall, long, white both within and wttw.* except a /mall part of it, towards its top, wbtw^ of d reddifh color. Its Leaves are exalUy Jf** former, faving thai they are fmailer and >^nore^ tie in Handling. The Stalk is about a

having fome Branches from the middle t^P^ like the other, on the tops of which grow theV^l. Jt^ very like them alfo. The Seed Is /maier and fo fharp in Tafte.

VII. The third, or Round Radifh. Its Ro*>^ alwoft Orbicular, and jirm, nothing watenifLa^ the Common Kadifh, but more plea^ant in JJ^ and whohfomer, not /o apt to rife in the Stow^ as the othersauc,oor<A^theGarden^a^ Its Leaves are likk the hGarden Turnep. fjU^ vung rvhiih fpring up a round and /^(oli)^ dividing it /elf towards the top into two Branches, on which grow /mall purpHh

confiding of our Leaves apiece: hich b'Wjfc j, it ... there comes in place fmall Lods, puji 1% or <***" ed out, in two, and fonetime's in three places, full of a foft fpongy Subliance like to the Common warden Radifin in ... contained the Seed, Something fmatter than Cole-wort Seed, but 0j an hotter Tafte.

VIII. The fourth, or Pear-fafhioned, or Black Radiih. Its Root vs formed like a Pear, or Long Turnep, black without and white within, of a pm and j olid Substance-, its Tafte u ??***"& " biting the Tongue like the other Kinds of Kadiin, but more ... It grows to be four, five, or fix

et high, of a bright reUifh color. The Leaves deeply cut in or jagged on the edges, like thofe of the Turnep, and fomething rough withal. The fixiers conift of four Leaves apiece^ of a light Carnation, or Ylefh color. And the Seed is contained in fmall bunched Cods like the former.

IX. Parkin/on fays, That this Pear-fafhion'd Radifh, has a Root which is blackijh on the out fide^ and white within*, great and round at the Head, ending Jhorter than a Radfth, and longer than a Turnep, fo that it is almoft Pear-fafhion'd, of a frmer and harder Subfiance than our Common RadiOL but no lefs Shaip and biting, and fomewhat strong withal. The Leaves are fomewhat fmaller <*> with deeper gafhes. The flowers and Seed are alfo like the others but fmaller. It has been obferv'd alfo, that fome of thk Seed, being fown again, produced Roots, whereof fome have been black, (but thar* of the Roots is beft.) It powerfully opens obftruaions of the Stomach Lungs, Liver, Spleen, Reins, and Womb: refifts the Scurvy, Dropfy, and Gout, is good againft Afthma's, Coughs Colds, Hoarfnefs, Wheezing and (hort* refs of Breath: rdjfe the putridity of the Blood, Hypochondnack Melancholy: gives eafe in the

There is Raphanm pytiformi/minor, a leffer kind of black Radifh ...

Conc. Kind Places. All thefe Kinds of Radijhes are generally fown in Gardens, where they require a loofe Ground; which has been long Manured, and it fomewhat Fat. They proffer well in Sandy Ground alfo, where they are not lb Subject to Worms as in other Grounds.

XII. The Times. Thefe Kinds of Radijhes are felt to be fown after the middle of June, viz. in June or July; for being fovtm betimes in the Springs they yield not their Roots fo kindly not profitably, for that they then quickly run up to Stalk and Seed^ whereas otherwife they do not run up to Flower and Seed, till the next Spring* They may be fown 10 Months running in the Year* yet of all thofe times, in June and July are the beft Seafons.

XIII. black Radijhes are rhoft ufed in Winter^ (yet fome, in their natural and not forc'd Grounds, have their Roots good, the moft part of the Summer,) and therefore they blight tb be lbVvn after Midfommer; for if they fhould be fown earlier, there would be no Root, but they would like the others, prefently run up to Stalk and Seed. They are very profitable againft Stone and Gravel.

XIV. The Qualities. Radifh is hot and dty in the third Degree, Aperitive, Abfterfive, Carminative, Colmetick, Digeftive, Diuretick, Incifive, Cephhalick, Pectoral, Nephritick, Emmenagogick, and Lithontiptick:

XV. The Specification. The Root is moftly ufed, after that the Seed, and in the laft place the Leaves. They are peculiar for the Cure of Strangury, or pain, heat and ftoppage of Urine, by reafoil of Tarcarus Slime, or any other Matter impa&ed in the Reins, Jpketers and Bladder, are peculiar for provoking of Urine, as alfo of the Courfes in Women, and to expel Sand, Gravel, and the Stone from the Urinary parts. To cure the Cough, Afthma, Phthifis, and other Difeales of the Lungs* ...

- 1. A Decction of the Juice. 2. An Ejfence of the fame. 3. A Decction or Infufion. 4. A Syrup of the Juice. 5. A Ca* taplafm of the Root. 6. The Seed. 7. A Ca* taplafm of the Root. 8. A Diftilled Water of the Herb and Root. 9. A Spirit from Root, Herb and Seed.

The I rtues,

XVII. The Sallet of .toe Roots and tender Tops They are Eaten raw, either with Salt and Bread and Butter, or with Meat: They ftrengthen the Stomach and caufe Digeftion, and are very Diuretick: but are apt with fome to rife in the Stomach, yet are great Enemies to Scurvy, Dropfy, Jaundice, and Gout ul cold Conftitutions.

XVIII. The Liquid Juice of the Roots or Leaves^ opens obftruaions of the Stomach Lungs, Liver, Spleen, Reins, and Womb: refifts the Scurvy, Dropfy, and Gout, is good againft Afthma's, Coughs Colds, Hoarfnefs, Wheezing and (hort* refs of Breath: rdjfe the putridity of the Blood, Hypochondnack Melancholy: gives eafe in the

parts, and provokes the Terms in Women where they are Hop. Dose from *i*, to *j*, or 4 Spoonfuls in White Port Wine, or the *Difilled Water* hereof, Morning and Night: and fo taken it kills Worms.

XIX. *The EJence of the fame.* It has all the Virtues of the "*Liquid Juice*, and may be given in the fame manner, from 1 Spoonful to 3, according to Age, &c. A It comforts a cold and raw Stomach, caufes Appetite and a good Digettionj expels Wind, and is good againft the Colick, &V. Given to 4 or 5 Spoonfuls, 2 or 3 Hours before the coming of the Fit of a Quartan Ague, it caufes in fome Vomiting, in others Sweating, and fo thereby alters the courfe of the Ague and cures it.

XX. *The Decottion or Infufwn.* They provoke Urine powerfully, expelling Sand, Gravel, and Tartarous Matter out of the Reins and Bladder. The Root may be fliced thin, and laid to Infufe all Night in Rhenifh Wine, or in White Port, or Lisbon Wines, and drank in the Morning Falling, and fo to be continued for fome Days.

XXI. *The Syrup of the Juice.* It u^r made by difolving double Refined Sugar, or Clarified Honey in the Juice, in Balneo •, and fome add to it Vinegar. It is good againft Afthma's, Coughs, Colds, Phtifis, and all other Difeafes of the Lungs. It is good againft an old Cough, and makes thin, thick and grofs Flegm, caufing it to be eafily expe&orated: it is of good ufe in pains of the Reins, Bladder and Stone, provokes Urine much, and fo carries off the Jaundice, and has all the Virtues of the Juice, *EJence*, *DecoSion* and *Infufwn* aforegoing.

XXII. *The Seed.* It may be given to a Dram, or two, bruifed or made up into an *Electuary* with Clarified Honey or *OxymeL* It Kills Worms in Children being drank, and provok[^]Urine. It is laid to caufe Vomiting fometimes, epecially vⁱ weak Stomacks.

XXIII. *The Cataplafm of the Root.* Being bruifed and laid to the place grieved with the Gout, Sciatica, or other like pains, or to the hard and painful Swellings, it wonderfully gives eafe to them and helps them. If the *Cataplafm* is made mtb a mixture of *Orobus Meal* and *Wine Vinegar*, and applyed to the Belly, it kills Worms therein. And fo made, if it is applyed to other places, it takes away all black and blew fpots, and other blemiflies of the Skin.

XXIV. *The Dijilled Water from Root and Herb.* It has all the Virtues of *Juice*, *EJence*, *Decottion*, *Infufwn*, and * *Syrup*, but in a much lower Degree, and therefore ought to be given in a much larger Dofe. Ufed as a *Cojmetick*, it is a great beautifier of the Skin, more epecially if *Pulp* of *Coloquintida* be Infused therein.

XXV. *Tlje Spirit from Root, Seed, &c* It is made altogether as you make *Spirit of Scurvy-Grafs*, *Crejjes*, &c. It is a potent Remedy againft the Scurvy, Colick, weaknefs of the Stomach, and Indigeftion in a cold habit of Body: and has indeed all the Virtues of *Juice*, *Ejence*, *Infufwn*, and *Syrupy* and may be given from 15 to 30, or 4c. Drops, in Ale, Beer, Wine, or other proper Vehicle, Morning, Noon and Night, and in Ibrae cafes iour or five times a Day*

CHAP. DLXXXV.

Of RADISH Wild.

I. **T**H E Names. It is called in *Latine*, *Raphantfs Sylvefris*: and in *Englif* * *t Radijh*.

II. *The Kinds.* Of the Wild \$ two Sorts, viz. I. *P*fa.vi: &yu<**; *RapW* which is called alfo, *Armoracia l'uchfin album Tabenutmtani* •, *Rapiftrum Eruca foliis Lobe It j*, The Field Wild • *Pdw< Wee*, *Rapbanus Aquaticus vel Water Radifli*: and this twofold, viz. * *Aquaticus vel Paluftris primus^ Radicula w ^ Dodonti t*, *Raphanus Aquaticus in P^oJ, Qffarianias divffus Bauhiriy Rapbanus Sylvejw* # j^ rum Aquaticus Lobetij; Rapbanus ophrafii, Baubino •, Sifymbrum Sytoefir' <- J ?* Our common Water Radilh. ?• R ^ * * ! j£et> icus alter haubini ~, *Rapiftrum Aquaticum namontani & Gerardi^* The other or iconu Radilh of *Baubinn*.

The

III. *The firft, or Field Wild* It *Root which ts about a Fingers' p without and within, and of afiarp and It has a Jhorter narrower Leaf than the Radilh, and more deeply cut or jagged,*

like the Leaves of Rocket, but much greater. The Stalks are slender and rough, about 3 feet high, divided towards the top into many Branches. The Mowers are small and white. And the Cod (in which is contained the Seed) is long, slender, and jointed.

IV. The second, or Water Radish. Its Root is very long, and of near a fingers thickness, which runs jar up and down, here and there through the Mud. Jhoot'wg forth a great 711 any Fibres, and in many places, as also several heaves under Water. It rises up in the Water with slender weak and bending Stalks, yielding to and fro; on which grow at every Joint, a long and somewhat broad leaf, very deeply indented, or cut in on the edges into the middle Rib. At the top of the Stalk, comes forth a small Tuft of yellow flowers, consisting of four leaves apiece. After which follow small and almost round Pods, with round Seed in them.

V. Gerard describes this Water Radish thus. Opt is long, Jet at sundry spaces, with small fibres or Threads like the Rowel of a Spur, hot and turning in Taste, more than any of the Garden Radishes. It has long and broad leaves deeply indented, or cut in even to the middle Rib. The Stalk is long and weak, and leans this way and that way, being not able to stand upright, without a prop, inasmuch, that you shall never find it, not when it is very young, but leaning down upon the Mud or Mire where it grows. The flowers grow at the top, made of four small yellow Leaves.

VI. The third, or Second Water Radish, (which is the *Rapistrum Aquaticum Tabernaemontani & Gerardi.*) It has a long tough white Root, a fingers thickness or more, running and spreading itself much, not deep into the Ground, but under the Crust thereof, having at certain distances most where, small bunches of fibres or Strings proceeding from it, which have long leaves springing from them. This grows more upright than the first, for that it seldom grows in Ponds or Ditches of Water, as the other does, but on the edge, or near Watery Ditches, or other standing Waters. Its main Stalk or Stalks grow to be sometimes three Yeaer or more high, on which grow many long leaves, much torn, or cut in, on both edges. At the tops of the Stalks grow large Tufts of whitish or purplish flowers, which being past away, leave in their places, short Pods containing the Seed which is small, and not round as the former.

VII. The Places. The first grows upon the Borders of Banks, and Ditches cast up, and in the Borders of Fields. The second never grows but in Water, or Brooks, or by Ditches and standing Waters, and by Rivers sides, or where store of Water is continually. The third grows near the Water side, and sometimes in small watery Ditches, where there may be some little Water, and almost dry.

VIII. The Times. They all Flower in June and July and the Seed is ripe in August, in or about a Month after the time of Flowering.

IX. The Qualities, Specification, Preparations, and Virtues, are the same with those of the Garden Radish foregoing, (except being used as they are for a Sallet -) and therefore I refer you to the former Chapter. Parkinson says, that the Water Radishes are somewhat hot in the Mouth, but the first of them more than the other, and therefore thinks that they may be used instead of Horfe Radish, to warm a cold Stomach, and to help both to provoke Urine, and to expel Wind: For which purpose the Seed is more effectual than the Herb and the Root of more force than the Seed.

C H A P . DLXXXVL

Of R A D I S H Horfe.

THE Names. It was unknown unto the Greeks, and therefore has no proper Greek Name: but it may well enough be called *T* w* in *hatine*, *Hipporaphanus*, *Raphanus Rusticanus hobelij*, *Raphanus magnus* in *Horfe Radij*.

II. The Kinds. It is the third Generick Species of Radishes, and Plant a *jingularis sui Generis* a singular Herb of its own Kind. This cannot be the *Raphanus Sylvestris Diofcoridis*, because the Root of that is small, and the Leaves tender and fit to be eaten for a Sallet, which the Leaves of this are not. But *Tragus* will have it to be the *Armoracia Plinij*: it is the *Raphanus major*, *Radicula magna podon*, *Armoracia*, *aut Raphanus major Brunfelsij*, *Tragi*, & *Gefnen*; *Thlappi magni* *tij majus Cordt & honkeri* *Raphanus ruficanus Thlappi alterum Diofcoridis* (Lib. 2. Chap. 13.) *Bauhno*: and the very thing which we in England call *Horfe Radish*, and by some is called *Mountain Radish*, and in the North of England, *Green Radish* and *Red Cole*.

The Description.

III. Its Root is great and long, white and rugged shooting 1 up divers Heads of leaves which may be parted or divided for Increase, but it does not creep within the Ground, nor run above Ground, but for the most part runs deep into the Earth. The first leaves which rise up before Winter, are about a foot and half long, narrower, and very much cut in or torn about the edges into many parts, of a dark green color, with a great Rib in the middle: but after these have been up a while, others follow which are greater, rougher, broader and longer whole, and not divided as the first, but only something roundly dented about the edges. The Stalk when it bears flowers (which it does but seldom) is great rising up with some few lesser leaves thereon, till it is 3 or 4 feet high spreading at the top into many small Branches of whitish flowers, made of 4 Leaves apiece: after which come small Pods like those of the Lesser Shepherds Purse, but seldom with any Seed in them.

IV. Gerard describes it thus. The Root is long and thick, white of color, in Taste sharp, and very much biting the Tongue like to Mustard. It brings forth great leaves, long, broad, sharp pointed, and snipt about the edges, of a deep green color, like those of the Great Garden Dock, called of some Patience, or Monks Rhubarb, but longer and rougher. The Stalk is slender and brittle, bearing at the top all white flowers: which being past, there follow small Cods, in which is contained the Seed.

V. The Places. Gerard says, he has found it growing Wild in several places, as at *Namptwich* in *Cheshire*, in the place called the *Mi In-Eye*: as also at *Hogsden* near *London*, in the Field next to a Farm House leading to *Kings-land*, where it flourished for a long time afterwards. But for the most part it is planted and grows in Gardens and delights in moist and shady Places,

VI. *The Times.* Gerard lays that it Flowers for the most part in *April* or *May*, and the Seed is ripe in *August*, but that it is rare or feldom to be seen ^ and that *Petrus Placentius* has wrote, that it brings forth no Seed at all. *FarAinfon* says, that it Flowers but feldom, but when it does, it is in *July*.

VII. *The Qualities.* It is, (*viz.* the Root) hot and dry in the third Degree. Aperitive, Digestive, Absterfive, Attractive, Carminative, Cofmetick, Diuretick, Cephalick, Neurotick, Stomatick, Pe&oral, Hepatick, Splenetick, Nephritick, Hyfterick, Ptarmick, and Alexipharmick.

VIII. *The Specification.* It is prevalent againft the Strangury, and stoppage of urine by Stone, Gravel, Sand, or Tartarous Humors lodged in the Urinary parts: it is good againft Asthma's, Coughs, *Phthifis* and other Difeases of the Lungs \$ open Obstructions of Liver, Spleen and Womb, and provokes the Terms in Women. It cures the Scurvy, Dropfy, Gout, and Quartan Agues, kills Worms in Children: and outwardly applied eases pains of the Gout, Sciatica, Liver, Spleen, and Reins, being applied upon the parts affe&ed.

IX. *The Preparations.* You may have therefrom, 1. A *Sawce.* 2. A *Liquid Juice.* 3. An *Effence.* 4. An *Infufion* 5. A *Lohoch.* 6. A *Cataplasm.* 7. A *Diftilled Water.* 8. A *Spirit.*

The Virtues.

X. *The Sawce.* It is made of the Root scraped very thin, and eaten with Salt and Vinegar, either alone with Meat, or mixt with other *Salleting.* Tho' some Perfons cannot away with it, yet it is grateful to many Stomachs, and by ftrengthening the Vifcera, it caufes a good Appetite and Digestion, prevents breeding of Wind, and eases Gripings in the Bowels, being a peculiar Enemy to the Scurvy.

XI. *The Liquid Juice of the Root.* Being given in Drink, it is held to be very effectual for the cure of the Scurvy -, and fo given, it kills alfo Worms in Children; A *Cataplasm of the Root* being alfo laid upon the Belly.

XII. *The Effence of the Root.* It has all the Virtues of the *Juice*, besides which, it gives ease in the Strangury, and eases pains in the Reins, Ureters and Bladder; is profitable againft the Stone, provokes Urine, and expels Sand, Gravel, and Tartarous Matter from the Urinary parts. It is a good Remedy in strong Bodies againft Asthma's, Coughs, Colds, *Phthifis*, and other like Difeases. It provokes the Terms in Women -, and being given some Hours before the coming of the fit of a Quartan Ague, it alters its Courfe, and many times cures it. Given alfo to a Woman in Childbed, it brings away the After-Birth, and caufes due Cleanfing. Dose from one Spoonful to two, or more in Wine, or some other proper Vehicle.

XIII. *The Infusion in Wine.* It has all the Virtues of the *Juice* and *Effence*, but must be given in a larger quantity, as from 2 to 4 or 6 Spoonfuls, Morning, Noon, and Night. It is good againft the Colick, Strangury, pain, heat, and difficulty of making Water.

XIV. *The Lohoch.* It is made of the *Juice* with the addition of *Vinegar* and *Honey*, and then boiling them to a due Consistency. It has all the Virtues of *Juice*, *Effence*, and *Infusion*, but is peculiarly good againft Asthmas, Coughs, Colds,

Phthifis, Hoarfnefs, Wheezing, fhortnefs of Breath, want of Appetite, Cfy

XV. *The Cataplasm's* made with the Root scraped fine and thin, &c. Applied to any place pained, or grieved with the Gout, Sciatica, iwelings and pains of the Pleura, Liver, or Spleen, it gives wonderful ease and Relief The Leave? boiled soft in Wine and a little *Oil Olive* added to them, and fo made into a *Cataplasm*, and apply'd to the Regions of the Liver and Spleen, it mollifies the hard Swellings thereof, and takes away the pain: and applied to the bottom of the Belly: it gives help and relief in the Strangury.

XVI. *The Distilled Water from the*Roots, as also from the Herb.* It is profitable for all the purposes aforefaid, being dulcified with fine white Sugar, and taken inwardly from a quarter of a Pint to half a Pint, Morning and Night- The *Water* Dropt into the Eyes, is said to clear the Sight: and if two parts of it be mixt with one part of the *Juice* or *Effence*, and the Face or Skin be waft therewith, and fuffered to dry on, it will (if used for some confidence time) dear the fame from Spots, Tannings, Sunburnings, Pimples, Scurff, Morpew, and other Defilements thereof.

XVII. *The Spirit of Horfe Radifb Roots.* It is made altogether as the *Spirits of Creffes, Scurvy-Grafs*, >c. And taken in the same manner as they are taken, it cures the Scurvy absolutely in a cory habit of Body: caufes a good Appetite and Digestion, warms, comforts, and strengthens the Stomach-, invigorates and depurates^ the Blood, ana *Limpha*, and caufes a due Circulation of the lame through all the Veffels, and every part of the Body, It is profitable againft Rheumatifms, t*, Gout, Dropfy, Jaundice, and all obstructions* > * the Vifcera. Dole 20 or 30 Drops or mJre in Ale, Beer, or Wine, 2, 3, or 4 times a Day.

CHAP. DLXXXVII

Of RAG - WORT.

⋄ ⋄

JAMES - WORT,

I. ^nTHE Names. It was unknown to the X *Greeks*: the *Latines* call it *Jacobita*, an& *Uerbajacobi*, *Flos Jacobi* V *Jacobta*: in *Englsh* *Rag-wort*, and *James-wort*: thought by some to D^ a Species of *Groundel.*

II. *The Kinds.* Authors make near a dozen Kinds of this Plant-, but the five following are the most ufualwith us, viz. 1. *Jacobaa vulgar** ^rj; *Jacobaa Senetio* Lobe Itjh *Flos vel herb a* l^ *Majorps*, vel *Jacobaa communh* \ Our Com^ll * *Rag-wort.* 1. *Jacobaa vulgari** minor'-, *Flos J^c.* minor h Our Lefler Rag-wort. 3. *Jacobaa M^arinZ* *Cineraria vulgarit* *Cineraria DoJonfi* -, *Artm^ J^* *Marina Alpini*, Our common Sea R^aS^*w q^r^t^f *Jacobea marina alt era, feu minor* *, *Cineraria i>* //; h *Cineraria alter a*, The leffer Sea Rag-wort, V *Jacobaa Maritima lausolia Baijhini* ^ *Oner an** // *folia bauhini*, Broad Leaved Sea Rag-wort.

The Decriptions.

III. The fir ft, or Our common Rag-wort. Its Root is made up many fibres, fomegreater, others leffer, by which it is firmly fajined into the Ground, and abides many Tears. This Greater common Rag-wort, has 771 any large and long dark green winged Leaves lying on the Ground, very much rent and

torn on the fides into many pieces even to the middle Rib. From among which rifes up fometimes but one, and fometimes two or three fquare or ere fled blackifh or brownifh Stalks, three or four feet hig^ fometimes Branched, bearing divers fuch like Leaves upon them up to the tops, at feveral diftances, where it branches it ftif forth, each Branch bearing yellow Flowers, confifting of divers Leaves, fet a* a Yale or Border, with a dark yellow Thrumb in the middle, which do abide a great while: but in the end growing full ripe, are turned into Down, and with a fmall blackifh gray Seed, carried away with the Wind.

IV. The fecond, or Our letter Rag-wort. This in its Roots, Stalks, Leaves, Flowers, form and manner of growing is very like the precedent: fo that many who do not well view it, do over-pafs it, a* judging it the fame with the former*, but the chief differences are thefe, it ufes ally rifes in Stalks not fo high, nor is the Plant in the whole fo great >, the Leaves are not fo finely jagged, nor of fo fad a green color, but rather fomewhat whitifh, foft and woolly, and the Flowers are commonly paler yet in many of them are much alike.

V. The third, or Our common Sea Rag-wort Its Root is long and more woody than the others, with feveral fmall Fibres adjoining to it-, it bait bard crefted Stalks about two Feet high, all hoary & white, on which grow hoary white Leaves^ much

much jagged, or cut into many parts, yet each part of them broader than any of our Wild Rag-worts, and fomewhat ftiff, but yet foft in handling. The tops of the Stalks are furnifhed with divers Flowers^ whofe Cups or Husks are hoary as the reft of the Plant isy but the Flower it felf U of a pale yellow color, with a brownifh Thrum in the middle, which T T h w i t n i with the Seedls carried aw

VI. The fourth, or Left Sea Rag-wort, Its Root vfone thing great and Woody like the other ft grows leffer and lower than the former, yet the Leaves are longer, and much divided, or cut into many other jagged Leaves, each jag being rounder pointed than in the former, of a grayifh or Afh green color above, and very white underneath The Flowers are many which grow at the tops of the bar* woody hoary white Stalks which are fometimes three or four teet high, and Branched. Thefe FloZZ are Jmailer, and of a dun or darker yellow than the, other, and the middle Thrum alfo broJner which abide in Flower two whole Months at lead before they fall away and then at laft, they turn into Down, as the others do.

VII. The fifth, or Broad Leav'd Sea Rag-wort. Its Root is long, and thicker than any of the former, withfome few Fibres retaining to it, from whence fpning up round Stalks, about a Foot ani half high very hoary and woolly, fspread out into divers Branches, the lower Leaves whereof are fomewhat round and jagged as a Cole-wort, each part beinz a* it were waved about the edges, and each Leaf being about four Inches broad, and (together with its foot Stalk) about a Foot long, of a dark green color on the upper fide, and of a hoary white underneath and foft in handling. The blowers grow at the tops of the Branches upon longer and Jlenderer foot Stalks, whofe Cups or Husks are hoary, and the Flowers themselves greater, and paler, than in the former forts, the middle Tlorum being of a Gold yellow color, which after they are ripe, are turned into Downe, and with the Seed blown away with the

VIII. The Places. The two firft grow WiM in Paltures and untilled Grounds in many nbri c this Kingdom, and oftentimes both together in Field, more epecially in Fields or Ground, are fomerhing moift, and chiefly Borders of Fields. The thirft cofts, not & from the Sea,

py and Tenet, and along the Kentish shore in many places. The fourth grows, as Dodonæus says, by the Sea side in Zealand[^] also on the Mediterranean Sea shore of Italy. And I have heard some diligent Herbarists here, say, that they had found it growing on the Southern shores of this Island towards the West of England. The last grows by the Sea side as Bauhinus says, but where is not declared.

IX. *The Times.* They all Flower in June, July and August; and the Seed is ripe not long after, at which time it is carried away by the Wind, with the Down.

X. *The Qualities.* Rag-wort is hot and dry in the second Degree, Absterfive, Afringent, Anodyn, and Vulnerary.

XL *The Specification.* It cures Green Wounds, old Sores, running Ulcers, Fillula's, Catarrhs, De-fluxions into the Eyes, Nose, & V. Quinfey, Scia-tica, Gout, Kings-Evil.

XII. *The Preparations.* You may have therefrom, 1. A Liquid Juice or Effence. 2. A Decoction. 3- An Ointment. 4. A Ballam* 5. A Cataplasim.

The Virtues.

XIII. *The Liquid Juice or Effence.* By gargling and walking the Throat and Mouth therewith, they cleanse and heal Sores and Ulcers therein. And are good against Swellings, hardness, and Apoftemation in the parts; and therefore are said to be profitable against the Quinfey and Struma, or Kings Evil. Drank in a Glass of Wine about 3 or 4 Spoonfuls at a time, they are profitable against Catarrhs[^] and De-fluxions of Rheum into the Eyes, Nose, Mouth, Throat, and other parts. They are singular good to heal Green Wounds, and cleanse old Ulcers, and filthy running Sores, as Well in the Privy parts, as in other parts of the Body; and inwardly taken they cure inward Wounds and Ulcers in the Stomach; Lungs, Reins, Bladder and Womb. And outwardly injected into hollow Ulcers and Fiftula's, they cleanse, and induce their healing.

XIV. *The Decoction in Wine or Water.* It has all the Virtues of the Juice and Effence, and may be used in the same manner to all those intentions, but when given Inwardly, it Ought to be given in a much larger Dose, as to 4 or 6 Ounces, adding to every Dose about half an Ounce of Common Spirit of Wine.

XV. *The Ointment.* After it is made of the Juice, or Green Juice, according to the usual manner, you ought to add to every pound thereof 3 Ounces or something more, of pure fine Powder of Tobacco Leaves. It heals Green Wounds, and cleanses and heals filthy running Sores, old Ulcers and Fiftula's, not suffering them to spread farther. It gives ease also in; pains which happen both in the Muscular and Nervous parts,

XVI. *The Ballam.* It has all the Virtues of the Ointment[^] and being mixed within eighth part of White Precipitate, it more admirably cleanses old putrid running Sores and Ulcers, more especially those of the Kings Evil, which Disease it potently refills, and cures the Ulcers thereof after an admirable manner. It is good against pains of the Nervous parts, and gives ease in the Gout and P^j (a) being applied thereto.

XVII. *The Cataplasim.* It is made of the bruised Herb boiled with Hogs Lard and Beef Suet mixt in

equal quantities, adding thereto a little Frankincense and Myrridate. It eases pains in any part, chiefly those of the Gout, is good against Simple Contusions, and cleanses old putrid running Sores,

CHAR DLXXXVIII, Of RAMPION.

I. *THE Names.* We know no Greek Name for this Plant: but it is called in Latine, *Rapuntium*, and *Rapunculus*: It is called by Gefner, *Dodontus* and others, *Rapum Sylvestre*, tho' it is not at all like *Rapum* or the Turnep, but in the edibleness of the Root: in English, *Rampion*.

II. *The Kinds.* Authors give us many Species of this, the following are most usual with us, viz. 1. *Rapunculus efculentis vulgaris Rapuntium parvum*, *Rapunculus minor Matthioli*, *Camerarij*, *Dodonxi*, *aliorumque*; *Rapunculum vulgare Tragici*, *PesLocustidit*, *Avicennæ* Our common Garden Rampions. 2. *Rapunculus Spicatus Alopecuroides*, *Rapunculum Sylvestre Tragicum Rapum Sylvestre majus* & *Rapunculum Alopecuron Dodonæi*. *Rapuntium majus Alopecuroides Comofo Ylore Lobelij*, *Rapunculus Alopecuroides ipica longa Clusij*, *Rapunculus Sylvestris spicatus Thalij* *Rapunculus Nemorosus primus Tabernmontani* *Rapuntium majus Gerardi* 5 Great Rampion, or Long Foxtail Rampion. 3. *Rapunculus Nemorosus Tabernmontani*, *Gerardi*, & *Parkinsoni*, *Rapunculus Campanulatus Nerij folio tertius Thalij*, Our Wood Rampion. 4. *Rapunculus Nemorosus Ylore magno minor* *Rapuntium five Erinus llore magno Columns*, Wood Rampions with great Flowers. 5. *Rapunculus Corniculatus Montanus Gerardi* Our Mountain horned Rampions* 6. *Rapunculus Sylvestris Flore ex purpureo* (*landicante Tabernmontani* *Campanula minor alba et purpurea Gerardi*, Our Wild Heath Rampion. 7. *Rapunculus Creticus Bauhini* *Pyramidali altior* *Petromantic** 5 Candy Rampions.

The Descriptions.

III. *The first, or Our common Garden Rampion.* Its Root is small and white and gives Milk being broken as all the rest of the Plant does, shooteth out two or three Branches, each of an equal bigness which is sweet in Taste, and therefore much used to be eaten. It is usually Nurst up in Gardens, and is accounted a lesser Kind than many of the others which grow Wild and lying upon the Ground with several small and long round pointed pale green Leaves, before it sends up its Stalks, which spread out with divers such Leaves thereon but smaller to the top where break forth several small pale purplish Mowers, ending in five points, like unto the Throat-worts but much smaller, having also such like Heads, with small brownish Seed therein.

IV. *The second, or Great Rampion, or Long Foxtail Rampion,* Its Root is white greater than the

former, but as full of Milk, and as Jweet, and fit to be eaten as it, especially when it is boiled, and after fit ewe d with Butter. The lower Leaves of this Rampion are somevobat broad and round, yet ending in a sharp point, a little dented or waved about the edges, of a dark green color, in some places spotted with black Spots, and standing upon long small foot Stalks -, but those which grow upon the Stalks are something longer and narrower, sparingly fet here and there, leaving the top, bare, where grows a small spiked Head or Bush of Flowers, almost in fashion of a foxtail (whence came the Name) at the first of a darkish green color, for so we the Husks of the flowers which break out of them, being long and small, like unto Horns, bigger below, and smaller above, ending in four, and sometimes in five points, of a blewish purple color, in some paler, in others deeper, and in some of a white color: which being past there appear in their places small round Heads, a little cornered, with brownish Seed, therein.

V. The third, or Our Wood Rampion. Its Root is white and long, but not so tender as the former, the lowest Leaves are something long and dented about the edges, yet not so long as the next, which are very long also, standing upon short Stalks, with fewer smaller ones at the Joints with them. The flowers are like the other Rampions, of a pale Ratchet color.

VI. The fourth, or Wood Rampions with greater Flowers. Its Root is somewhat thick, and of a whitish color inclining to red, full of Milk and finest being as fit to be eaten, and more desired than any other. Its Leaves are small, somewhat long, and round at the ends; the others which follow, and grow after them upon the Stalks are narrower and longer, and pointed also, the Flowers are longer than others, and of a dusky purplish color, with purple Veins in them, many standing together, like in to the ordinary Rampions, and of the same fashion with five points, but of a deeper color.

VII. The fifth, or Our Mountain Horned Rampion. Its Root grows after an unusual manner for Jirfi or lowennoft is a Root like to that of a Rampion but tenderer-, and from the top of that, comes forth as it were another Root or two, (as it were Root upon Root) being much smaller than the lower Root, especially where they are joined to the under Root: and all these have small fibres or Strings proceeding from them. The Leaves which first grow up are smooth, and almost like those of a Rampion, yet rounder, and made somewhat after the form of a Violet Leaf, but nothing so big. At the bottom of the Stalk come forth seven or eight long narrow Leaves, dented about the edges and sharp pointed: and upon the rest of the Stalk grow also three or four narrow sharp pointed Leaves, not much unlike those at bottom of the Stalk, but narrower and lesser. The flowers are of a purple color, and grow at the top in an Umbel or Tuft, and shaped almost like a Chymical Vessel, which we call a Retort, being big, large, or swollen out of their bottoms, and so becoming smaller towards their tops. But afterwards they part themselves into five parts or slender Strings, with Threads in the middle: which decaying, they are succeeded by little Cups, ending in five little pointels, in which is contained a small little Seed.

VIII. The sixth, or Our Wild Heath Rampion. Its Root is small with some fibres adjoining to it. Its Ground Leaves are small and roundish, almost like unto a Violet, but rounder and dented about the edges-, from among which rise up weak slender Stalks, about two feet high, which have very few Leaves thereon, or none at all-, each Stalk or Branch having at its top one flower only, of a purple or white color as any of the for Trier, and almost as large.

IX. The seventh, or Candy Rampion. Its Root is great and white, parted into many Branches, yielding Milk even as the Leaves and Stalks also do, and abides many Tears, altho the Leaves and Stalks perish every Tear, fresh springing up before Winter again, but with us it requires to be a little defended in Winter time as aforesaid. The first Leaves which spring up from the Seed of this Cretick or Candy Rampion, are round, like unto Violet Leaves, little or nothing dented about the edges, which so abide the first Tear -, but those which rise afterwards with the Stalks, are much different from them, being much cut in, and deeper into several parts, set on both sides of the middle Rib, the end being long est, all of them dented, of a dark green color on the upper side, and oftentimes reddish underneath, from among which rise up several Crested Stalks two or three feet high, bearing such like Leaves on the ends as below, but smaller from the middle to the tops, furnished abundantly with many small reddish purple flowers, and sometimes with white flowers, growing one above another in a long Spike, very like unto the Spiked Rampion, but somewhat longer, and more divided or dented in at the corners, and each part turning it self a little back again. After which come very small brownish Seed in Heads, both of them like unto the other Rampions. This Pena in his Mons Baldus, and Honorius Bellus in his first Epistle to Clufius, calls Petromarula feu Laffuca petrxia Cretica.

X. The Places. The first is always Nurft up in Gardens, and sometimes the second, both of which are also found growing Wild in England, the Roots being eaten in Sallets, and also eaten boiled. The seventh grows with us only in Gardens, but requires to be a little defended in the Winter with us. The third grows in Woods in many places of England, The fourth grows also Wild in Fields sides

and in Woods. The fifth Gerard fjs, that he received Seeds and Roots thereof from Mr. Goodyer, who found it growing plentifully Wild in the enclosed Chalky Hill Grounds by Mupal Durban near Petersfield in Hampshire and that being Planted in Gardens, its Flowers become much longer and fairer. The sixth grows Wild also in many places in this Kingdom.

XI. *The Times.* They Flower in May[±] June and July[^] yea even all the Summer long, and last long even to the cold of Autumn, which causes them to decay.

XII. *The Qualities.* The Roots of these Rawports are only used, and are temperate in respect to heat or cold, dryness or moisture, are Absterfive, Cofmetick, Stomack, Analeptick and Gallegenetick, or encreasers of Milk in Nurfs Breasts*

XIII. *The Specification.* The Roots encrease appetite, cause good digestion, are Absterfive, and Cofmetick, clearing the Skin from deformities, and restore in ConsumptionSi

XIV. *The Preparations.* You may have therefrom. 1. A Sal let. 2. A Decofion. 3. A Qatarplafm. 4. A Dijilled Water from the Roots and whole Plant.

the Virtues

XV. *The Sallet.* The Roots of all the *Umpions*, if they be of any greatness, are used for Sallets, either Cold, with Salt, Vinegar, Oil, and Pepper⁵ being cut and sliced thin. Or being boiled, or stewed in Butter, or Oil, and so eaten with Salt, Vinegar and Pepper[^] either way, or any way, they are familiar to the Stomach, stir up the Appetite, and cause Digestion, and so cause Milk in Nurfs Breasts, and by reason of their Temperate and Analeptick, or Nutritive Qualities, they encrease Blood and Fleh, and so restore in Consumptions.

XVI. *The Decofion.* It may be made in Wine, Milk, or Water. It is said to be good against Inflammations of the Mouth, Throat and Almonds, and other diseases happening to those parts, in like manner* as the *Throat-Worts* ate.

XVII. *The Cataplafm.* The Roots beaten small and mixed with Meal or Flower of *Lupines* or rather of *Orobis*, cleanses the Skin, from Scuff, Morpew, Pimples, Spots, Marks, and other like Defecations or Discolorings.

XVIII. *The Dijilled Water of Roots and the whole Plant.* It has all the Virtues of the *Cataplafm*, and makes the Face and Skin, very fine, beautiful and clear. Drank constantly by Nurfs, either alone, or mixt with Milk or Whey, and a little sweetned with double Refined Sugar, it encreases Milk in their Breasts, and is good against a Pining Consumption, as also for Ulcers of the Lungs.

Rape Seed "Plant.

Small rough Pods, with j* & ! round Seed * them.

VII. Gerard thus describes this Kind. Wild Rape, or Cole-wort has long broad WA

Rape Seed Vlant.

not unlike to the Tame or Garden Cole-wort, but Idler, a* is all the rest of the Plant. The » of it, own Nature Wild, and therefore not Aurji up for food: fat it is Sown and Husbanded in whole fields for the Seed Jake, b whieb the Owners oftentimes get great Gam.

VIII The Places. The two first are Natives of hal', Spain, and some places of Germany: from some of which places Seed has been lent to us, and they are become Natives in many of our Gardens. The third grows Wild on many Ditch bank sides, toh in the Up-lands and near the Sea side: but now for the profit Jake which is made of the Seed, (by extraaion of its Oil, by the help of Oil Mills, built on purpofc for that use) whole Fields are sometimes sown therewith, as we but even now hinted.

IX. The Times. They all Flower when other Coleworts do, viz. about the middle or end of July, and the Seed is ripe in the middle or end of Jiugust

X. The Qualities, Specification, Preparations, Virtues and Uses of these Plants, are the same with those of the Garden Cole-wort in Chap. 143. Set). 7. qd. 22. so that no more need be said of them in this place: laving that the Wild Rape, or Rape Seed Plant, is seldom or never used either as Food or Sallet but is chiefly produced for the Oil of its Seed.

XI Observation 1. The Seed of the Rape-Cole, or Cole-Rape. If it is grossly bruised and boiled a little in Meat or Fleb Broth, it is a present Remedy for the Colick: The Seed and Broth being taken together, easing them who are troubled therewith, of all Griping Pains, and gives ease also to those who are troubled with the Stone in the

XII Observ. 2. An Eleuary of the Pulp of the boiled Stalks. If the lurneb part of the Stalk, is boiled or baked till it is soft, you are to take the Pulp thereof, and with a little Honey and Almond-Milk, to make a Lohoch, or soft EleSuary. This taken now and then upon a Knives point, is very profitable for stirtnefs of Breath, and such as are entering into a consumption of the Lungs.

XIII. Ojero. 3. Gerard says, that there is nothing Wrote of the Faculties of these Rape-Coles, or Cole-Rapes-, but he says they are accounted for dainty Food, contending with the Cabbage in goodness, and pleafant Taste.

XIV. Observ. 4. Not taking notice of the Mechanick Uses for which Rape Seed Oil is had In Estimation: its Medical Use is for easing of Pains in any part of the Body; by anointing the parts affected well therewith, and applying Cloths dipt in it over the same. It is Anodyn, Relaxative, and gives ease in the Gout, Cramp, and helps sttrunk Sinews, if not of too long continuance. It eases Pains of the Spleen, Reins and Womb, being outwardly apply'd, and inwardly taken to the quantity of a Spoonful or two at * time.

C H A P . DXCL

Of R A S P - B E R R Y Plant :

O R,

H I N D & - B E R R Y .

I. H E Names. It is called in Greek, X iJWst: in Latine, Rubus ldeca: in English, Rasp-Berry, and Hinde-Berry.

II. The Kinds. We shall describe five several Varieties, viz. 1. Rubus ldeca vulgaris vel Hortensis, Our common Garden Rasp-Berry. 2. Rubus Montana* Odoratm, The sweet Mountain Rasp-Berry. 3. Rubus Tricoccus, Our common Field Dew-Berry. 4. Rubus Sax at i Ik Alpinus, The Stony, Rock Rasp-Berry. 5. Cham monts Anglica, Our Knot-Berry.

The Descriptions.

III. The first, or Our common Rasp-Berry. Its Root creeps under Ground very far, and Jhoots up again in many places, much increafing thereby* It is of two sorts, viz. one bearing red Berries^ the other white; but otherwise they differ not in their form or manner of growing, either as to the

whole pufb, or ai to the Leaf, Flower or Berry but only in the color of the Fruit, and a little in the Taste thereof, the white Rasp-Berry being a litti, more pleafant than the red. The Rasp-Berry Baffn has tender whitijb Stems, with reddijh Jmalt ricks

like

like Hairs set round them, espec tally' at the first when they are young: but when they grow old they become more woody and firm, without any show of Thorn's or Prickles upon them, and have only a little hairiness covering them. The Leaves are somewhat rough or rugged, and wrinkled

Standing three or five upon a Stalk, Something like unto Roses, but greater and of a grayer green color. The Flowers are small, made of five whitish round Leaves, with a dash as it were of bluish cast over them, many flaring together, yet every one upon its own Stalk, at the tops of the Branches. After which come up small Berries, something bigger than the Common small red Straw-Berry, with a kind of downiness cast over them, of a pleasant acid Taste, having a kind of peculiar flavor of their own.

IV. The Sweet Mountain Raspberry-Berry. Its Root creeps and spreads much under Ground, as the other does. It has several long Stalks rising up from the Root, without any Thorns on them, but set thick with soft Hairs, having on them broad and large Leaves without order, growing upon long hairy foot Stalks, divided into five parts, almost to the middle Rib, and sometimes but into three, each part a little dented about the edges, of a very sweet Smell, but falling in Winter. The Flowers are something like the Eglantine, of a diluted purplish Violet color, with several yellow Threads in the middle, standing at the tops of the Branches: after which come the Fruit, very like to the former, and reddish, having much the Raspberry-Taste.

V. The third, or Our common Field Dew-Berry. Its Root creeps under Ground more than the last, and has slender weak Branches like that, but more often lying down, than rising up, with a few sharp Prickles thereon. The Leaves are three or four together, more Separate on the

Branches, yet almost as large, and Standing on long foot Stalks. The Flowers are white and small. The Berries usually hit of three parts or bunchings out, each having but one Grain or Seed in it, and all making but one Berry, yet sometimes they may have five or six of those Grape like bunchings out, being of a sweet and pleasant Taste.

VI. The fourth, or The Stony, or Rock Raspberry-Berry. Its Root creeps all about, and shoots forth several Branches from the Joints as they creep. It is but a low Plant, and is more of the Raspberry-Kind, than of the Bramble. It has several flannel-like, twiggy hairy Branches, little more than a foot, scarcely half a Turd high, without any Thorns or Prickles at all on them, the leaves are set here and there, on the Stalks, and fit and on long foot Stalks, being rough, and three always joined together, dented about the edges, and of a very fleshy, or harsh binding Taste. The Flowers stand at the tops of the Branches, three or four together consisting of four or five Leaves a-piece, of a pale, or whitish Rose color, which afterwards turn into small Fruit, composed of three or four, five, or more small Grape like Bunchings out, larger than either in the Bramble, or Garden Raspberry-Berry. The whole Berry is of a reddish color when it is ripe, and almost transparent, full of a most pleasant acid sweet Juice, very grateful to the Palate, having in each of its Bunchings out, a small white rough Grain, or Seed.

VII. The fifth, or Oar Knot-Berry. Its Root creeps much and far, Shooting forth small Fibres at the knotty Joints, by which it is joined in the Ground, and from whence spring tip divers new Shoots or Stalks. It rises up with flannel-like brownish Stalks, Scarcely exceeding a Foot in height, unless the Soil be very good, set with four or five large Leaves, one above another, at several Joints, each of them divided into five parts, and each of them somewhat deeply jagged, and dented also round the edges, rough and as it were crumpled, each upon a long foot Stalk, which at the Joints have two small pieces like Ears growing thereto. Each Stalk being furnished at top, with one flower consisting of five round pointed Leaves, of a dark purple color. Being past away, there follows a large Berry, hard to a Mulberry, consisting of many Grains, set together, of a reddish color when it is ripe, and of a sweet acid Taste.

VIII. The Places. The first grows generally with us in Gardens throughout the Kingdom. Gerard says, that it grew not Wild that he saw of, except in a Field by a Village in Lancashire called Harwood, not far from Blackburne among the Bushes of a Cawsey near to Wiflertoft two Miles from Nantwich in Cheshire. I have formerly found it to grow Wild also, in some parts of the tens in Cambridgeshire, not far from a Town called Chartres. The second grows on higher Grounds in divers places. The third grows in many places in the North of England, as, Cheshire, Lancashire, and Yorkshire, and in Cambridgeshire, in many of the Plowed Fields, in Arable Land in several places. The fourth grows in Stoney and Rocky places in the IJJe of Tent, and other places in Kent, it grows also in Wiltshire and Northamptonshire. The fifth grows on the high Hills in Lancashire, it loves open Snowy Hills, and Mountains, and grows plentifully upon Ingjborough Hills in Lancashire aforesaid, which is thought to be the highest in England; as also upon Tendle Hills in Yorkshire, which is another nearly as high as the former and other like places.

IX. *The Times.* They all Flower about the latter end of *May*, thro' ail *June* and *July* *, and the Berries are ripe in *Auguft* and *September*,

X. *The Qualities.* The Roots, Stalks, Leaves, Flowers, and unripe Fruit are cold and drying in the firli Degree, Auringent, and Scyptick, Vulnerary, and Alexipharmick.

XI. *The Specification.* They ftop Fluxes of the Belly, and bleeding in the inward parts-, are good againft the overflowing of the Courfes in Women; they cure Sores and Ulcers of the Throat, Mouth and other parts, are profitable againft the bitings of Serpents, and cure the, *Stomacace*, or Scurvy, being ufed according to Art, for ibme confiderable time.

XII. *The Preparations.* You may have herefrom, 1. A *Liquid Juice of the Roots, Stalks and Leaves.* 2. A *Liquid and Infpiffate Juice of the green or unripe Berries.* 3. A *Decottion of the Roots, Ltaves, flowers and unripe Berries.* 4. *Aide coition of the dry el unripe Berries.* 5. *The ripe Berries.* 6. A *Conferve of the Flowers.* 7. A *Conferve of the unripe Berries.* 8. A *Conferve pf the ripe Berries.* 9. A *Syruff of the Juice of the ripe Berries.* 10. A *Wine of the ripe Berries.* 11. A *Pouder of the Roots and Leaves.* 12. A *Di-filled Walter from the whole Plant and unripe Berries.* 13. A *Vinous Spirit from the Berries.*

The Virtues.

XIII. *The Liquid Juice of Roots, Leaves and Stalks.* Taken to 3 or 4 Spoonfuls at a time in any convenient Vehicle, as Red Wine, &c. it ftops all forts of Fluxes of the Bowels, Fluxes of the Womb, and defluxions of Humors to any Sore, Ulcer, or other part of the Body •, it is excellent againft Catarrhs, and mixed with Honey, or *Syrup of the Berries ripe or unripe*, it is good againft Sores and Ulcers of the Throat, Mouth, and Secret parts -, and is alfb very profitable to the fpeedy healing of Green Wounds.

XIV. *The Liquid and Infpiffate Juice of the green or unripe Berries.* They have both of them all the Virtues of the former *Juice*, but much more effectual to all thofe Intentions. The *Liquid Juice* may be given Morning and Eventog from 1 Spoonful to 2, in a Glafs of Red *Port Wine*, or other proper Vehicle. The *Infpiffate Juice* may be given from a Dram to two Drams or more, diffolved in the *Decottion of the Leaves*, or in Red *Styptick Wine*, and then fweetned with the *Syrup of the ripe Berries*. They are both good againft the heat and Inflammation of the Throat, Almonds, and Mouth, flop Spitting of Blood, and all forts of Fluxes of Blood wherefoever. And mixt with Honey are good to heal Sore Eyes.

XV. *The Decottion of the Roots, Stalks, Leaves, blowers and unripe Berries, in Wine or Water.* & has all the Virtues of the former *Liquid and Infpiffate Juices*, but muft be given in greater quantity, as to 4 or 6 Ounces or more Morning and Night, mixed with *Syrup of Mulberries*, Or *Syrup of ripe or unripe Raff-berries*, it makes an extraordinary Gargle for a fore Throat and Mouth, takes off the force of the hot Inflammation, and in a little time caufes a healing; and being ub (wallowed doyn, it cools and represses inward Fevers.

XVI. *The-Decottion of the dried unripe Berries.* ** has the Virtues of the former *Decottion* and of *fc Juices*, and may betaken in the fame Dofe of the *Decottion*, either alone fweetned with the *Syrup*

of the *Berries*, or mixt with lbme proper *Wine*. It is good againft the Poifon of Scorpions, Serpents and other Venomous Beasts, being both inwardly taken in *Wine*, and outwardly fomented upon the part folding hot, or as hot as it can be endured, for fome confiderable time.

XVII. *The ripe Berries.* They are eaten raw* and fo they cool, abate the heat of the moft violent Fevers, even of the *Peftilential* > attemperate the *Stomach*, and refreffi, and clear the *Spirits** and are of extraordinary benefit, to be plentifully eaten by fuch as are troubled with the *Stomacace* or *Scurvy*, viz. the *Stomach Difeaie* > for they cool, cleanfe, and ftrengthen the *Stomach*, and reftore its healthful Tone, and withali re&ify the Difcrafy of the *Blood* and *Juices*.

XVIII. *The Conferve of the Flowers.* It is *Styptick* or *Binding*, and of fingular good ufe againft all forts of Fluxes of the Bowels in Man or Woman, taken to the quantity of a *Cheft-Nut* Morning and Night.

XIX. *The Conferve of the unripe Berries.* It has all the Virtues of both the *Liquid Juices* and *Infpiffate Juice* aforegoing, and may be taken Morning and Evening, upon a *Knives* pointy to the quantity of a *Cheft-Nut*. It is very cooling and grateful to the *Stomach*, and Itops *Vomiting*.

XX. *The Conferve of the ripe Berries.* It is not fo great an *Astringent* as the former -, but is of good ufe to cool and ftrengthen the *Stomach*, refift the *Scurvy*, and to take off the preternatural heat of Fevers, and caufe a good *Appetite*.

XXI. *The Syrup of the Juice of the ripe Berries.* It is pleafant and grateful, effectual to cool a hot *Stomach*, and to quicken and, refteff fuch as are overcome with *Sicknefs* at *Heart* and *Faintings* ^ It refills the *Scurvy* in a hot *Conftitution*, and is very *Cordial*.

XXII. *The Wine of the ripe Berries.* It is made of the *Juice* by a *Natural Fermentation*, as the *Wine of Grapes* are made. And when by Age and keeping it becomes fine, it is a noble *Cordial*, and as much comforts the *Spirits* as other *Wine* does. *Parkinfon* fays, that it is generally held at leaft by many, that the *Red Wine* which is ufually Sold by the *Vintners* is made of *Raff-Berries*. As to the truth of this I can fay nothing : but this I can fay, that the *Vintners* need not be beholden to the *Raff-Berry* for *Red Wine*, for that there is a *Red Grape* which yeilds a *Blood red Juice*, of as deep a *Red*, as any thing can be imagined to be.

XXIII. *The Pouter of the Roots and Leaves.* It is *Styptick*, but of a thin Subftance, for which reafon, (experience having alfo confirmed the fame) it is faid to waft away the *Stone* in the *Reins* \$ and alfo to break the *Stone* and drive forth *Gravel* and *Sand* out of the *Reins* and gladder: and itrewed on old Sores and running *Ulcers*, yea tho' *Cancerous*, it is laid wonderfully to help and heal them.

XXIV. *The DiWted Water from the whole Plant and unripe Berries.* It is of extraordinary ufe in cooling the *Body*, and abating preternatural heat. If it is taken (fyeing impregnated with a few drop > of *Spirit of Sulphur*.) it takes away the heat % and extinguifhes the malignity of ail *Burning* and *Malign Fevers*, yea of the *Peftilence* it felf. And fo uled it adtresses the *Juences* Thirft, and fupports the *Spirits* againft *Fainting*, *Swooning*, and other like accidents of the *Vitals*.

XXV. *The Spirit.* It is *Distilled* off from the *Wine made of the Berries* in an *Alembick*,

exactly in the same manner as you make Spirit of Wine. If it is well done, it is full as strong and as good as Spirit of Wine, and as pure: and when it has Age upon it is scarcely to be known from true Spirit of Wine. It serves to all the same uses which Spirit of Wine does, both in Chymistry and Physick, and is full as good and as Cordial, being taken as a Dram.

CHAP. DXCII.

Of RATTLE-GRASS Red

OR

Red LOUSE-WORT.

I. THE Names. It is called in Greek, *Scilla*, *SnLat'me*, *Pedicularis*, and *Fifiularia*, also *Crista Galli*, or *GaUnacea rubra*: in English, *Rattle-Grass*, *Red Rattle Grass*, *Red Cocks-Comb*, and *Red Loufe-wrt*.

II. The Kinds. There are three Species hereof, viz. **I.** *Pedicularis pratensis rubra vulgaris*, *Crista Galli alt era*, five Phthirion-, Our Common red Rattle. **2.** *Pedicularis major montana*, *Pedicularis Alpina filicis folio major Bauhini*, *AleUorolophus major Clusij*, The greater Mountain Rattle-Grass, or greater Red Cocks-Comb. **3.** *Pedicularis montana minor*, *Pedicularis Alpina filicis folio minor Bauhini*; *AleUorolophus minor Clusij*, The lesser Mountain red Rattle-Grass, with yellow Flowers, called generally *Cocks-Comb*, and under that Title we have already treated of it in Chap. 142 foregoing, to which you are referred.

The Descriptions.

III. The first, or Our Common red Rattle. Its Root consists of two or three small whitish Strings

with some Fibres adjoining to them. It has few or no reddish hollow Stalks, which are joined to the Root, rising up from the Root, lying for the most part on the Ground, yet some growing upright, with many small reddish greenish Leaves on both sides of the middle Rib, finely dented about the edges. The Flowers are of a fine purplish red Color, like small gaping Hoods; after which come flat blackish Seeds in small Husks, which lying loose herein, mix Rattle by shaking, whence came its Name.

IV. The Second, or Greater Mountain Kattif-grass, or Greater Red Cocks-Comb. Its Root is long, thick, and black. It rises up near half a furlong high, with a thick crested hollow Stalk, something thick, with long Stalks of winged Leaves made after the manner of Ferns, notched about two edges, one above another. The Flowers are of a red color, but of a whitish color, growing in long Spikes, after which follow broader Leaves containing therein flat Seed much like to wort.

V. The third, or Lesser Mountain red Grass. Its Root is long and white, of the thickness of one's Finger, with several smaller ones joining to it. This smaller kind grows much taller than the last, and with fewer Leaves on the stem, which are slender, but hollow also like unto the flowers likewise are slender and of a red color. The flowers likewise are slender and of a red color. The Hulks which follow, are greater than the first, with long beaks at their ends, having cornered beaks within them.

VI. The Plaees. They grow the first in Meadows, the second and third in our Mountainous and Hilly Grounds, in some parts of this Land; and are rather a Plague and Annoyance to the Land, than of any good use to Cattle. The first delights in moist and low Meadows, where it increases and becomes common to the Grass. Gerard says the first is in May and June.

VII. The Times. Parkinson says, they are in June, and sometimes till the first degree of Astringent, and Vulnerary.

IX. The Specification. It heals the Bloody Fluxes, stops the overflowing of the Courses in Women, or any other Flux of Blood; stops all other Riots of the Bowels, as also any Flux of Humors, old running Sore, Ulcer or Fittula, and is serviceable for the speedy healing them.

X. The Preparations. You may make a Liquid ST. A Liquid Juice of the Plant. Or a Poudre of the same in rough or Styptick Red Ume Poudre of the Seed, and Leaves.

Its Virtues

XI. The Liquid Juice, mixed with equal parts of Red Styptick Wine, Morning and Night, it stops the overflowing of the Courses in Women, and all other Fluxes of the Blood, also Catarrhs or Fluxes of Rheum into the Mouth and Throat, and all sorts of Fluxes of the Urine upon the Joints and other parts, and thinning the Urine, is serviceable upon old running Sores, Ulcers, Fittulas, causing them speedily to heal, more especially if they be daily washed with the same Juice mixed with an eighth part of Common Spirit of Wine, or Brandy, inwardly also as a

cures Spitting of Blood, Vomiting of Blood, Piffing of Blood, and other inward Bleedings, and after due cleaning, heals Ulcers of the Bowels.

XII. *The Becoliwn in Red Styptick Wine.* It has all the Virtues of the Juice aforegoing, but much weaker, and therefore ought to be used in larger quantities, as from a quarter to half a Pint Morning Noon and Night, a little sweetned with double Refined Sugar. Sweetned with Honey, and used as a *Gargajm*, it is an excellent thing to cure Inflammations, Sores, and Ulcers in the Almonds, Throat, Mouth, Tongue and Gums, &c. being used 3, 4, or 6 times a Day. And fo used also as a *Waffi* for running Sores, or as an Injection for hollow Ulcers and Fittula's, ic cleanses, incarnates, and causes a speedy healing. It is an excellent thing also for an Injection in a Virulent *Conorrhoea*, Univerfals being premixed, and cure the Virulent sunning in Women.

XIII. *The Pouder of the Leaves and Seed.* Being taken inwardly to a Dram in Red Wine, it flops all Fluxes of the Bowels, even the Bloody Flux, and all other inward Fluxes of Blood: and outwardly applied to any old running Sore or Ulcer, it very much dries up the Humor, flops the Fluxion, and induces a speedy healing.

CHAP. DXCIL

Of REED-BURRS

OR,

SEDSGE.

I, T* *H E Names.* It is called in Arabick ?

X *Safarheramon* : in Greek, *^Tnt^yLviov*: (*fasciola* : quod ex eo fascU fierent.) Also *£P/cW*, *Xiphidion*, *Gladiolus*, *enficulum*, (because it is Sword like, and double edged:) forie think it to be *Bt7i>^*, *Butomos Theophrasti*, *qua est Herba palustris, acutam habens aciem fecanfque*: in Latine, *Sparganium*, and *Xiphidion* ^ which is the *Platanaria Dodon&i* £f *Thaliy*, because the Burrs of it are like to those of the *Plane Tree* : But *Lonicerus* calls it *fyrex*, which to me seems the more proper Name: in *Englilh*, *Burr-Reed*, *Sheer-Grafs*, *Syoord-Grafs*, *Burr-weed*, *Sedge*, which last, is the proper *Englilh* Name.

II. *The Kinds.* There are several forts of it, the three following are chief, viz, 1. *Car ex ^amofa*, * *Sparganium Ramofum*, *Platanaria Dodonti & Thafij*, *Butomos Theophrasti Ruellio* iff • *Anguilara^ Xiphidion Diofcoridis*, Our Sedge, or *Burr-Reed Branched*. 2. *Carex non Ramofum*, *Sparganium majus non Ramofum* •, *Sparganium alter urn hobelij* * *Platanaria alt era Dodon <zi*, *Sedje* Or * *Burr-Reed not Branched*. 3. *Sparganium majus*  *Virginianum*, The great Branched *Burr-Reed* of Virginia.

The Defe 

HI. *The firft, or Our Sedge, or Burr-Reed Stanchd.* Its Root is Bushy, confiding of a great number of Strings and small Fibres. It ha* larger-, broader and rougher heaves than those of the Cats-

Tail, or Reed-Mace, yet a little or in some small measure three square a* it were^ like them, and sharp both on the edges and at the points, from among which rises up a rough round Stalky 2 or 5 Feet hig^ with the like, but kjer Leaves on them; dividing or branching it self towards the top into several parts, bearing on them several small green Burrs, which are not rough at the first, but growing ripe, are hard and prickly, some what resembling the rough Burrs of the *Platanus*, or *Plane-Tree*, with a Leaf at each Joint tip to the top.

IV. *The second, or |pdge, or Burr Reed not Branched.* The Root of this is in all respects like to that of the former. It grows up also in like manner, but with Leaves somewhat broader than those, and a single lower Stalk not Branched at all^ but bearing the like Balls or Burrs, yet something softer, endnot+fo prickly, with a Leaf at every one of them likewise.

V. *The third, or Great Branched Sedge, or Burr Reed of Virginia.* Its Root is somewhat knobby at the Head, with several fibres or Strings thereat. It has only 2 or 3 very long and somewhat broad pale green Leaves rising from the Root, and in the midst of them a ft rang round Stalk, without any Leaves thereon-, but Branching it self forth near the top into many round and somewhat prickly Burrs, of the bigness of a Wall-Nut, without any show of flowers appearing thereon.

VI. *The FLices.* They usually grow in Marshes, Watery Ditches, Ponds, and in Rivers Salt and Fresh Waters, or by their sides: the two first in several parts of this Land : The third in *Virginia*, *Maryland*, *New-England*, *New-Tork*, *Carolina*, and other parts of *Florida** The two first grow plentifully*

tifuUy in the Fenny Grounds of *Lincolnshire*, and such like places:

VII. *The Times*. They are green all the *Spring* and *Summer*, and bring forth their Burrs or Seedy Knots in *Augujh*

VIII. *The Qualities*. They are cold dry 4n the first Degree, and Alëxipharmick, or refisters of Poifon.

IX. *The Specification*. Authors have fa id no more of the Virtues of these Plants, but that they are good againft the Poifon of Serpents.

X. *The Preparations*. There is only A *Decoffion of the Root, or of the Burrs in Wine*.

The Virtues.

XL *The Decoffion*. The Root beiflg made into a *Decollion in Wine* (for fo I lüppofe *Diofcorides* is to be understood, *Datur radix ex vino, contra Serpentium Venena:*) is good againft the Poifon of Serpents. But *Gerard* fays, that the Knobs or rough Burrs of these Plants boiled in Wine, are good againft the Bitings of Venomous Beasts, if the *Decoffion* is either drank, or the Wound wafhed therewith.

CHAP. DXCIV.

Of REED, Common.

I¹T¹#£¹ *Names*. It is called in *Arabick*, I *Cafab*: in *Greek*, KáAax@: in *Latine*, *Calamus*, *Harundo*, iff *Arundo*: in *Engliffh*, *Reed*.

II. *The Kinds*. We (hall not here enumerate the vast numbers or Species of Reeds, which grow in moft parts of the World, but thofe only which grow in *England*, and our Plantations beyond Sea, in the *West Indies*, and these are the three following, viz. I. *Yhragmatis Dodondi & Ruellij*, *Arundo Vallaris Lobelij*, *Harundo vel Arundo Vallatoria*, *Arundo Paluftris Matthioli*, *Arundo vel Calamus Vulgaris*, Our common Pool Reed. 2. *Harundo vel Arundo multifida Atiglha* -, Our Engliffh Finger Reed. 3. *Arundo Donax*, Cane Reed; *Calamus vel Arundo Cypria Dodonai*; *Calamus Italicus majors Arunda It alien major Cane rarior*; *Arundo major Uifpanica* -, *Calamus vel Arundo major Car oliniana, vellloridiana*, The *Carolina*, Or *West-Indian Cane Reed*. This without doubt may be the fame *Cane Reed* which grows in the *Eaji-Indies*, which by reafon of the Clime, grows both taller and greater, fo that they ferve instead of Wood or Timber to make their little Houfes, Hovils, or Huts of, and to cover them-

The Descriptions*

III. *The fir ft, or Our common Pool Reed*. Its Root is vohite^ hard^ round, long, and with many knobbed Joints, running a loop, but not deej and/hooting up Stalks from divers of the Joints. loefe Stalks are manifold, great, round, and hollow, and full of Joints, not diftant very far one from another, and run up to a confidcrable height, M *o 4, 5, or 6 F^r high, or more, but higher in

some places than in others, with long and f^om^ what broad hard green Leaves at each oj^ Joints, Jharp on both edges, and j^ encompajjing the Stalk, at their bottoms; ing a long, and broad f^read, fofi, Pannicle at top, tvhofc Chaffy, or Downy, o^.. flies away with the Wind. The whole Stalk a^ and penfhes every Tear, but is ujually cut < before Winter, when as it it grown white, tojt for fcveral Mechanick ufes.

IV. *The fecond, or pur Engtiffh Finger K^*£ Its Root, form, magnitude and manner of &^ ing, it much like the, former-, its diffl^em^ from that is only in the Leaves, which a^ each of them half a Tard long, and w^o^ three Inches broad, with feveral great &^ or Veins running along them, and parted l^ the ends into three or four parts, fomthing u^A> unto our Finger Harts-Tongue.*

V. *The third, or Carolina or West-India C^nj Reed, called alfo Spaniffh Cane or Refd. in its Root, Stalk, Leaf, and manner of &^ ing, differs not j Pom the firft defer ibed^*^ only in its greatnefs, the Canes or Stalk^ ing harder-> thicker, and rifing much fome times to eight, ten or twelve Itet hi& cording to the goodnefs or richnefs of the more or hfs; whoj Joints are farther 4^ afunder than in our Common Pool Leaves are like wife much larger, and longer, having alfo a very much Pannicle at top, Tbefe'-Rtt&s or Canes, of feveral thickeffes, fome of them balj Inch thick or leffer, and fome three <^ of an Inch thick'. These arc without d&^*W^ fame with thofe Reeds or Canes which gr^ the Ealt-Indies, called Cane-Reed, where grow much greater, thicker> and taller are of fuch a Subjtance as to ferve th^fn*

their titlè Houfes or Hutts ofⁿ which greatnefs of their growthⁿ I am perfwadedⁿ comes only from the Heat j Soil, and Nature of the Clime where they grow.

VI. *The Places.* All thefe Reeds delight to grow in moift and Watery places, and Grounds apt to be overflown with Water, as in Watery Ponds and Ditches, by foft or flow running Rivers fides, and almoft every where, through all the Fen Country. The firft two grow in Englandⁿ the Pool Reed almoft every where. The fecond is more rare > but has been ifound growing only in England. The third is the *Arundo Domeftica Matthioli*, the *Arundo Donax*, vel *Cypria Dodonti*, "*Lobelij*" and the *Italica major Camerarij*, fo that It is one and the fame fort which grows in Carolinaⁿ Florida, Virginiaⁿ Italyⁿ Spainⁿ Cyprus, Turkey, in all which Countries it is to be found growing plentifully, alrho⁷ in one Country it may grow much greater, and larger, thicker, ftronger and higher than it does in another, which \s according to the Soil and Clime, as I have before intimated. <*

VII. *The Times.* Thefe all Head and Seed, and the Stalks or Reeds come to their perfection of growth and hardnefs about the end of Septemberⁿ <r in *OUober*ⁿ but are more Seafoned if cut down lfi *Oftober*, or *November*.

VIII. *The Qualities.* They are as *Galen* fays, hot and dry in the fecond Degree: Abfterfive, Attra&UTE, and Cofmetick.

IX. *The Specification.* They are good againft Intamations, to heal Scald or Scabby Heads, take away Scurff, Morphew, and Dandriff, and to help againft the falling of the Hair.

X. *The Preparations.* You may have there-
 1. A DecoⁿSion of Roots and Leaves

in Water or Wine. 2. A Cataplafm of Roots and Leaves. 5. The Afhes of the Roots. and the Plant.

The VⁿHrtues.

XL *The Decocion of Roots and green Leaves in Wine or Water.* That made with Wine is beftⁿ but for the Poorer fort of People it may be made with Water: bathed as hot as it can be endured upon Infijimations, it cools and abates them. Mixed with Honey and ufed as a *Gargarifm*, it healsⁿ Sores and Ulcers in the Throat, Mouth and Gums: applied as a *Lotion* to old running Sores and putrid Ulcers in the Secret parts, or other places, it cleanfes them, in fome meafure flops the Fluxion, and induces the healing. Ufed as a *Clyjhr*, mixt with a quarter part of *Spirit of Wine*ⁿ it is good againft a *Diarrhai*, or Loofenefs, and a *pyfenteria* or Bloody Flux, epecially if it is often repeated.

XII. *The Cataplafm of Roots and green Leaves.* It is made by beating them in a Mortar, adding thereto a little ftrong *Wine Vinegar*. Applied it cools and eafes hot and (harp Incarnations in any part. It eafes the pain, comforts and ftrengthens Joints which have been Luxated, eales pains in the Loins, and cures *Anthonies Fire*.

XIII. *The AlJes . of Roots and the whole Plant,* Mixed with ftrong *White Wine Vinegar* and applied, it is profitable againft Scald or Scabby Heads, Scurff, Morphew, Dandriff, Pimples, Breakings out, and Difcolorngs of the Skin: And prevents the *Alopecia*ⁿ or falling of the Hair,

C H A P# DXCV,

Of RHEUB ARB True and Baftard

I. /ⁿ Tⁿpif£ Names. It is Called in *Greek*, 'P*2 JL and aftnoll by all Nations *Rba*, and' *khabarbarum*, and fo it is called in *Latine*: % and in *Englijh*, *Rheubarb*.

II. *The Kinds.* There are feveral Sorts of *Rheubarb*ⁿ as, 1. *Rbabarbarum Verum*ⁿ The True *Rheubarb*, or True Indian or China *Rheubarb*. 2ⁿ *Rhaponticum verum*, The true Turkey *Rheubarb** or *Rheubarb of Pont us*. 3. *Rba nothum Rhabarbarum fpurium* *, *Pfeudo Rha* ⁿ *Hippolapdthum rotundifolium vulgare*ⁿ Our Baftard *Rheubarb*. To thefe you may add, 4. *Rhaponticum folia EnuUatiore*ⁿ *Rha capitatum Lobelij*, The broad Elecampane leav'd Turkey *Rheubarb*. 5. *Rhaponticum Anguftifohum*, *Rba capitatum Angufiijdlium* The narrow Elecampane Leav'd *Rheubarb*. 6 Tⁿh J:

another

is called *khabarbarum Monadicum*, *Tatientia*, and *Patientia hortensis*, *Lapathum fatium*, Garden Patience, or Monks-Rheubarb: of which we have already Discourfed at large in Chap. 547. aforegoing.

III. Whence the Name might come, or be derived. The Original Name is *Rha*, which Name it took as is supposed from the River *Rha*, now said to be called *Volga in Pont us*, where the true Root did grow. But whence came the Name *Rhabarbarum*? Why, some will tell us it came from *Bdrb&ry*, as the Name expresses, 2nd they argue thus, because that which comes from other places is denominated by the place from whence it comes, as *Rhaponticum*, *Rhaturcicurti*, *Rhathracicum*, *Rhafenicum*, vel *Rhafenticum*, which is *Rhain&icum* for *Mefues* says, that *Scenicum*, or *Sceniticum*, is all one with *Indicum*. But these Discourses are far from Truth, because that neither in *Barbary* it self, nor in the Country of the *Troglodites*, from whence it has been said to be brought into *Barbary*, did ever any *Rheubarb* yet grow. And that the Merchants of our Times Trading into those parts, can hear of no *Rheubarb* growing in those Countries now: moreover the *Scenit** are not a People of *India*, but of *Arabia Deferta*, where no Spices or Drugs ever grew. Some again will have it come from *Barbarum* a City of *India*, above the River *Indus*, and that *Rha-Indicum*, and *Rha Barbarum* are all one. But this may be doubtful, and as far from the Truth as the former Opinion: The most probable Judgement can be made is this, that the *Greeks* and *Romans* accounted, and called all other Nations but themselves, who were not Civiliz'd with their Breeding and Discipline, *Barbarous*, or *Barbarians*: (alluding to those untractable People, Inhabiting the Coast and Country of *Barbary*) and this Root or Drug, bdr!£ brought from far, and from an uncultivated People, scarcely known to them, they might join to the Name *Rha*, the Epithet *barbarum*, and so make up the Word *Rhabarbarum*, which in process of time became the most usual and known Name, through all the Habitable World.

The Descriptions.

IV. The first, or True Rheubarb, or True Indian or China Rheubarb. Root of this Plant, which is *Tuberous*, and in time grows to be very great, has several great spreading Branches, of a dark brownish or reddish color on the outside, with a pale yellow thin Skin under it, which covers the inner Substance of the Root: This Rind and under Skin, being pared away, the Root appears of a fresh and lively color, with Flesh colored Veins running through it. This Root is carefully dried, either in the Sun, or before a gentle Fire, or in the heat of a Stove, and with this Caution or Observation, that every piece be kept from touching one another, as it is done in *India* or *China*, where they put them upon Strings, that they may not touch, and so dry them apart in the Sun; and this is that True Indian Rheubarb which is brought to us by the Merchants, and Sold in our Druggists Shops. This Root when not very old, holds its color, clmoji a* well a* when it is fresh, and gives a yellow TinUure to the Spittle, when it is chewed in the Mouth. When the Winter is past, this Root (in the place where it grows) sends forth young Sprouts, which at their first appearance out of the Ground, have green, round, brownish heads,

rising up from the middle or sides of the Root, which open into Jundry Leaves, one after another, very much crumpled or foiled together at the first, and afterwards spread themselves abroad and become smooth, very large, waved on the edges, and almost round, each -Lenj fiand in gon.

Khealarb China and Engli

Stalk, of the thickness of a Mans Thumb, if they are grown to their full bigness: most of stalks are two Foot or more in length, (especially if the Plant grows in any good and moist Ground). mean the length of the foot Stalk upon which the stalk grows. The stalks are about two Foot or more in length; the breadth thereof is two feet likewise being measured from edge to edge in the broadest place, being of a pale or dark green color, and thicker in Sub ft 4 than the Bastard Rheubarb in Sett. VII. following it is of a fine tart fowerish Taste, much more pleasant, than either our Garden or Wood Sorrel. among these Leaves rises up sometimes, (but not every Year) a strong thick Stalk, not growing so high as Patience, or Monks Rheubarb, with waved round Leaves <u grow below but frud at every Joint up to the top; and among the flowers (which are white) spreads forth it self several Branches, contrary to the manner of the Bastard Rheubarb following, or of any other the Docks. The Flowers consist of five or six white Leaves apiece, hardly to be discerned from the white Threads which are in the middle, seeming to be all Threads: After the Flowers are past away there comes in several brownish Husks the Seed, which is of a brownish color, and triangular or tetrahedral like unto other Docks, but larger, by which it may appear plainly, that the True Indian or China Rheubarb is only a Species of Dock.

V. Query. It may well be demanded of me, why I should place Rheubarb, among our English fine?

fiace it is fo apparently an Indian Drug ? To this I Anfwer. The' reafon why I have plac'd it in the Claffis of English Herbs, is, becauie k has already grown in England, where it has been known to proper and flourifh: And therefore' I placed it here, to encourage our Country Men to continue the propagation thereof: and if poffible k flould not arrive to the height of its p^rettioris in our Clime, and therefore may be thought nor to be altogether fo ftrong and effe&ual, yet it has been found by Experience to anfwer all the lame ends, being ufed only in fomewhat a greater quantity: befides it may be Planted and propagated in all or moft of our Plantations in the *West-Indies*, where, the Climates being more agreeable to its Native place, it may in fome ihort time be brought forth in perfe&ion, and fo be of a publick Service to our Nation. Our *Parkin/on* was the Man in whose Garden this *Rheubarb* once grew, and therefore what he has faid of it, we will give you in his own Words* *I have (lays he) a kind of round Leaved Dock growing in my Garden, which wa^s fent me from beyond S^sa, by a worthy Gentleman, Dr. Lifter[^] one of the Kings [?]byficians, with the Title Rhaponticum verum, which fir^st grew with me, before it was ever jeen or known eljewhere in England, which by prooj I have Jound to be fo like to the True Rheubarb, or Rhapondcum, both for form and color, that I dare fay it is the very True Rheubarb, our Climate making it only lefs ftrong in Working, lefs heavy, and lefs bitter in Tafte. For this has great and thick Roots, and as diverJly difcolored with tle/h colored Veins, a* the True Indian Rheubarb, which I have tojloevo to any who are defirous to fee and know it: ani alfo other fmdler branches of Roots fpreading from the main great Root, which f mailer Branches may well be compared to the Rhaponticum which Merchants bring tts, and which appear to be longer and Jlenderer, than (the Great Tuberos) Rheubarb, but of the fame color. This our English Rheubarb being tririd, by taking away its Rind and Skin under it, as you do the China or Indian, appears with of lively and a* frejh a color, with Flejh colored Veins running ihrd it, that the choifeji China Rheubarb cannot excel it: and if it is dryed carefully as it ought, by the gentle heat of a Fire, or in a warm Oven (bccauje we want the heat of the Sun to do it) and each piece kept one from another, it will hold its color almoft as well when dried, M when it n Jrefn, and give a yellow Tintture to the Spittle when chewed, thd* not fo very yellow, nor with fo much bitternefs and ajiriaton, a* the True Indian Root does. I have divers Tears taken up thefe Roots, and dryed them carefully, and they have been Jfrewed to the Befi and mo(i Skilful, who have approved of them, and divers of our Phyficians have oftentimes ufed them, with many other, Perfons, to very goodpurpofe. Thus J*arkin/on.*

VI. *The fecond, or True Turkey Rheubarb, or Rheubarb of Pontus. The form of the Root is fomewhat great, round, and long withal, for the moft part, (yet there are fmailer and Jhorter pieces, as well <u greater which come together:) whose color on the out fide is not all alike, no more than the Subfiance within: for dilf fome is better colored, and founder than others, like beft is firm, and fomewhat heavy, not fpongy and light, and fomewhat brown, but frejh on the out fide, without many blackijh spots (which are fufpicious places, where, often times being broken, it a found rotten, or corrupted and naught •, I fay many[^] becaufe the beji pieces have fometimes this fault in them,) but they do not run far inwards, yet if they Jhould, the ref^t of the piece [?]night be excellent good> and not to be*

rcfufed, the bad being to be cut away, as not fit to be ufed -, the found parts being repleat with Flejh colored Veins running through it, bitienfh in Tafle, and a little Aromatick in its Smell (if it be not old) and caufing the Spittle to be yellow, being a little chewed in the Mouth. Now thefe are the very Properties which belong to the True Cbinefe

or Indian Rheubarb, as may appear by the former Defcription -, fo that we need not feek for a *new* Plant to take this *Pentick Rheubarb* from, nor describe any other Species, than what we have done before at *Sett. 4.* above, for any Perfon of common Reafon and Ingenuity may eafily fee; that is the former (before defcribed in *Sc3. 4.*) is the *True Indian* or *China fort*, fo alfo they may as eafily perceive that this *Pontick Rheubarb* (the true fort, not the falfe Kind, which is Counterfeited with the *Great Centofy Roots*) is but only the greater Ramifications of the true *China* or *Indian*, cut otF from the lame, and fo Dryed and Sold alone, as another Species oi *Rheubarb*. *Thefe Realbns thus ottered ought to excite our People, to make the Trial, by Planting it in other hotter Climates, as in our Plantations in the *West-Indies*, where I doubt not, but it would turn to a very good Account.

VII. *The third, or Our Baftard Rheubarb. Its Root grows greater than that of Patience Rheubarb, with many Branches, or great Strings adjoining; yellow on the out fide, and fomewhat of a pale yeh low within, with fome difcolored Veins therein, like to thofe of the True Indian Rheubarb, firft defcribed but much lefs than it, cfpecially when it is dry, which then ha* quite loft its frejh color, which the Jaid True Indian conftantly holds in its perfe&ion from this Root fpring up divers large, round, thin yellowimjh green heaves, a little waved about the edges, each one (landing on a reafonable thick and long biowmfh foot Stalk, from among which nes up a pretty big Stalk about two ten high[^] xmith tome Jacob Leaves thereon as grow below, but (mall^{er} at the top whereof Hand in a long Spike, many fmall browmjh blowers, which turn into hard triangular*

or tetraheirical Seed, of a fbining brown color, like unto that of the Garden Dock, Patience, or Monks Rheubarb.

VIII. *The fourth, or Broad Elecampane Leav'd Turkey Rheubarb.* Its Root is something long and thick, blackish on the out side, and of a deadish color on the inside, more loofe and spongy than either any Dock or Great Centory, which Centory Root has in former times been used by the Apothecaries for Rhaponticum. from this Root rises up several Leaves, something large and long (yet nothing so large as the Leaves of Elecampane) greenish on the upper side, and grayish or vfoite and woody underneath, like therein to the Leaves of Elecampane, every one standing upon its own Stalk, broadest at the bottom, and pointed at the end, and dented, or rather waved about the edges, from among which rises up a reasonable large round Stalk about half a lard or two feet high, bearing at the top thereof, one great Scaly Head, confisting of very broad and loofe or open brown Scales *, at the first shew representing a small Hartichoke Head, but that the Scales do not stand close together, but are much more open and loofe, espedally after the flower is past ^ which stands in the middle, composed of many blewish red, or purple Threads or Thrums, very beautiful to behold. After which comes blackish Seed, long and round, very like unto the Seed of a Jacea, or that of the Great Centory, but a little longer, and not altogether so thick.

IX. *The fifth, or Narrow Elecampane Leav'd Rheubarb.* The Root of this U almost exactly like to the last described, there being but small difference between this Ylant and that, but only in the Leaves, which are a little narrower and longer than those,

being as green above, *and as hoary white underneath as they are, and a little unevenly waved off the edges. The Head and Flowers are alike also, but only a little larger, so that it is very likely that the chief cause of the difference between them arises from the Soil, or places of their growth* These two last Plants cannot properly be accounted Rheubarbs, because their form admits them not, but are rather to be referred to the Jacejs, Knapweeds, or *Centaureum majus*, the Great Centory, for the likenels both to their Flowers and Seed, the Scales of their Heads being somewhat different: Yet by reason of the Names which they have obtained, and of the Custom or Use, which for the Names sake has placed them with the Rheubarbs * we thought good to comply also, that we might not be singular from all other Authors.

X. *The Places.* The first and second, which are Natives of India, as China, Indostan, as also of Pontus, have grown and flourished in Our English Gardens, and without doubt are possible to be promoted in all our West-India Plantations. The third grows with us in our Gardens also, as likewise the fourth and fifth, which are Natives of Turkey: it is probable that the two last, which the Turks call *Rhaponticum*, is used by them for the True Kind, altho' in truth they are not in the least akin to Rheubarbs for which reason some Authors have called them by the Name *Centaureum Helenij folio*, and by that Name *ParKinson* says he received the Seeds from beyond Sea.

XI. *The Times.* They all Flower about the beginning or middle of June, and the Seed is ripe in July. The Roots are to be dried, and then may be kept all the Year 5 but they are not to be taken up before the Stalk and Leaves are quite withered and gone, and that is not until about the middle or end of October, for if they be taken up a little before the Leaves do spring, or when they are sprung up, the Roots will not have had good a color, but look as if they were dead of decay'd things.

XII. *The Qualities.* They are hot and dry in the second Degree, Aperitive, Absterfive, Afringent, Digestive, Traumatick, Stomatick, Hepatick, Splenetick, Hysterick, and Cathartick.

XIII. *The Specification.* Indian Tontick and Bastard Rheubarb, are peculiar against the Colicky Griplings of the Guts, and all sorts of Fluxes or the Bowels, more especially the Bloody and Hepatick Flux: they purge Choler and Flegm, and are profitable against the Kings-evil, Jaundice, Scurvy, Gout, Dropfies, and Agues. They cure Spitting and Piffing of Blood, the Running of the Reins in Men, and the Whites, and overflowing of the Terms in Women, and are of singular use in the cure of old running Sores, hollow and putrid Ulcers, Fittula's, Scabs, and other breakings out in the Fleh and Skin, from Salt and Acrimonious Humors: they open all obstructions of the Liver and Spleen, and ease the pains and gnawings of the Stomach.

XIV. *The Preparations.* You may make therefrom, 1. A Liquid Juice of the Green Leaves and Roots. 2. A Decotion of the Green Leavgs* or Roots. 3. A Pceder of the Seed. 4. An W^m fwn or Dccoffin of the Dried Roots. 5. A TinUurC of Rheubarb. 6. An Extraft. 7. A foudcr. 8. A Syrup Compound. 9. A Diet Drink. 10. A Garganfm with Vinegar and Honey. 11. A Vipl^m led Water from the Green Leaves and Root. * * Pills of Rhubarb. 13. An Oil by Infolation or Dr^m collion.

The Virtues.

XV. the Liquid Juice of the green Leaves and Roots. It opens the obstruitions of the Liver, Spleen, and Reins-, carrysoff the (harp' fatt, and acrimonious Humors which caufe Scabs, futes, Itch, running Sores, Scurff, Morpew- Pimples, and other like defamations of the Flefh and Skin, being inwardly taken from one Spoonful to two, three, or four; every Morning and Night, and outwardly applied to the parts affected* during all the Spring and Fall of the Year.

XVI. The Decoction of the Green Leaves or Roots made in mite Wine, or in Whey, It has all the Virtues of the Liquid Juice, but mult be given in double or trebble quantity, you may correct it by adding towards the end of the Decoction a little Indian Spicknard, or some choice Ginger very thinly diced. If it is done for External uses, the Decoction or Infusion may be made in White Wine Vinegar, and sweetned with Honey. And so it becomes an effectual Remedy to cleanse and heal old running Sores, and other breakings out in the Skin. Dropt into the Ears it takes away their Pains- Gargled in the Mouth, it is said to ease the Tooth-ach, and being drank it cures the Jaundice.

XVII. The Pouder of the Seed. Given to a Dram in rough Red Wine, Morning and Night, it flops all forts of Fluxes of the Bowels, chiefly the Bloody Flux: it eases also the Gnawings and Gripings of the Stomach, strenghtens it, and takes away the loathing of Meat.

XVIII. The Decoction or Infusion of the Dryed Roots, in Whey, or White Port Wine. Take Rheubarb which thinly sliced 2 Ounces: Clarified Whey, or rather White Lisbon Wine 3 Pints: Infuse in a fitmerinz heat, or a Sand heat for 8 Hours close covered: then decant the Infusion and dulcify it with Honey for 8 Doses. If it is made in Clarified Whey, it ought to be boiled half an Hour, then Brained out and sweetned with Honey as aforeaid. If a little Cream of Tartar be added in the Infusion or Boiling* it will make the Medicament Worth the better. It is an Excellenc thing to purge Cholera and Flegm, and cleanse the Stomach and Bowels* and is profitable againft Affhma's, Coughs, Colds, Wheezings, obstruitions of the Lungs, Liver, Spleen, and Reins: and is profitable againft the Dropie, Jaundice, Gout, Scurvy, Kings-Evil, and other Distempers of those Parts-, it cleanseth the Stomach, Bowels and Reins, is good againft Agues, provokes Urine, and clears the Eye Sight. There is a Compound Infusion, which is thus made. Take Rhubarb very thin Sliced 2 Ounces*, which Infuse in Rote Water*, ExtraVs of Sena and Carthamus Seeds of each half an Ounce; Syrup of Role, Solutive 8 Ounces \ Cinamon Water 2 Ounces, mix them for 7 or 8 Doses. It has all the Virtues of the Simple Infusion, but Works something brisker.

XIX. The Tincture of Rheubarb Take the best Rheubarb thin sliced well bruised, of each 2 Ounces x Raisin of St. John's 60, Anniseeds bruised 1 Ounce, Sugar Candy 6 Ounces-, Spirit of Wine 1 Pound-, mix, digest according to Art, and strain it out for Use. Dose 2, 3, or 4 Spoonfuls in the Morning againft the Cholick, and Griping of the Guts, which it wondrously Cures. If it be digested 8 or 10 Days in amende Sand heat, making the Glass 2 or 3 times a Day, and then letting it settle, the clear is to be decanted, and kept ma-

ettle close stop for life. It Purges gently, and dissolve and expels Acrid and Tartarous Humors adhering to the Tunicles of the Viscera, which causes violent Pains and Gripings^ for which it is indeed a Specifick *, and one of the Choicest things in Nature againft all the Weaknesses and Distempers of the Bowels, especially if accompanied with sinfull dejections. It is of singular use to Purge such as are troubled with any simple Gonorrhoea^ Weeping or Gleet, as also the Whites in Women, Uniyersally being premised. For tho' it Purges yet it is but gently, and so strenghtens admirably, and flops all forts of Fluxes as Diarrhea's, Dyfentend's, Lienteria\ to a wonder.

XX. Tinctura Rhabarbari Abfinthiata, Wormwood Tincture of Rheubarb. Take Rheubarb very thin sliced, or grossly bruised 4 Ounces, Wormwood Water Compound a quart -, mix in a Bolt Head^ digest in a gentle Sand heat for 14 Days, (baking the Bottle once a Day, then being settled and Fine, decant the clear Tincture and keep it for use. You may also for want of the Wormwood Water, make it with choik Cinnamon Water, or any other Cordial Water^ which may answer the Intention of the Medicine, It has both a Purging and an Afringent Property, for it Purges gently Cholera, Flegm, and clammy tartarous Humors, which cause the Cholick and Gripings of the Guts, from the Stomach and Bowels. Besides which it has a Cordial and Strengthening Virtue, and is especially good for the Stomach, Heart, Liver and Spleen, and is good againft Fainting and Swooning Fits, and Sicknes at Heart. It opens obstruitions of Liver and Spleen, cures the Jaundice, and all forts of Fluxes of the Bowels, as also the Hepatic* Flux, from its Afringent Property. And indeed I know it to be a Specifick in the most Vehement Fluxes of the Bowels, and will do that fin those cases) which a Thousand other Medicines will not do*. I have cured Cholicks and Vehement Gripings of the Bowels with it, of several Months standing, and that after all other Medicines I had used, had failed. You may use it thus. Take of this Tincture an Ounce; White Lisbon Wine in which a few heaves of Sena have been Infused 4 Ounces *, Syrup of Damask Roses half an Ounce *, mix for a Dose. The Body being sufficiently cleaned, if you would stop a Flux therewith, and strenghten the parts, give it thus. Take of this Tincture, of Tincture of Catechu, Syrup of Red Poppies, of each half an Ounce; Cinnamon Water, Black Cherry Water, of each an Ounce and half mix for a Dose. And let the Sick take the Tincture in Drops all the Day long, in any thing they Drink, about 40 or 50 Drops at a time. In a little time it will so alter and corroborate the Bowels, and the whole habit of the Body, that the Patient will think himself to be almost a new Man.

XXI. Extratum Rhabarbari, Extract of Rheubarb. Take Rheubarb thin Sliced, or rather in gross Pouder 8 Ounces *, Cinnamon, in gross Pouder 1 Ounce; Rhenish Wine 2 Quarts-, Spirit of Wine a Pint *, Juice of Limons a quarter of a Pint ^ mix, digest 30 days in a gentle Sand heat shaking the Bottle 2 or 3 times a day ^ let it settle and decant the clear, which Abfir all in Balneo to the consilency of an Extract (reserving the Spirit drawt off for other uses,) to every Ounce of the Extract add Chymical Oil of Orange Peels, a Scruple, and keep it close covered for use. Dose from a Scruple to half a Dram, or a Dram, in the Morning, fasting. It expels Cholera, Flegm, and Melancholy from Stomach and Bowels, opens obstruitions of Liver, Spleen, and Reins, is good againft the Rickets in Children, Scabs, running Sores, Jaundice.

dice, Green-ficknefs, and all kinds of Fluxes of the Bowels, having all the *Virtues* of the *Tinflure* aforegoing.

XXII. *The Ponder.* It is made of the dried Root beaten and fear fed, adding to every Ounce thereof, a quarter of an Ounce of Anmfeeds in fine Ponder. Dose from half a Dram to a Dram, or more, according to Age and Strength, in any convenient Vehicle, as in a Glais of White Wine. It is an excellent thing againft the Kings-Evil, Belly-ach, and to Purge Choler and Flegm, cleanse the Stomach and Bowels, and to open obftructions of the Inwards. It is profitable againit Scurvy, Gout, Dropfy, Agues, and Jaundice, and pricking pains of the *Pleura* or Sides.

XXIII. *The Compound Powder.* Take fine Powder of Rheubarb 2 Ounces, White Rofin in fine Powder an Ounce ami half-, Cremor Tartari in fine Powder half an Ounce, mix them. It diflblves clotted Blood in the Stomach, Bowels, Reins or Bladder, or in any other parts caufed by any Fall or Bruife, potently flops Fluxes of the Bowels, cleanses the Reins and frengthens them, and is very effectual to flop a *Gonorrhosa*, or running of the Reins, as alfo the Whites in Women. Dose from a Dram to 2 Drams in the Morning fatting in any fit Vehicle.

XXIV. *Syrupus de Rhabarbaro compojitus.* Syrup of Rheubarb Compound. Take Rheubarb Very thin fliced, Sena, of each 3 Ounces 1 Violet flowers 1 Hindfuls; Cinnamon half an Ounce -, Ginger 2 Drams-, Waters of Beton, Bug of, Cichory (or rather Angelica) of each 3, Pints mix and digejl in Balneo or a Sand heat all Night, the next Morning firain out, and with double refined Sugar 4 Founts, make a Syrup by boiling; adding when all is done Syrup of Rnfes Solutive, 8 or 12 Ounces, mixing them well together. It gently cleanses the Stomach and Bowels of Choler, Flegm, and Melancholy, allays the heat of Inflammations, (tops hot Rheums, and (harp Fluxes of the Bowels, by leaving a binding quality behind it. Dole 2 or 3 Ounces in Clarified Whey, or a weak Infufion of Sena in White Wine.

XXV. *The Diet Drink.* Take of Cboifc Rhu- barb very thin fliced, 8 Ounces h Alexandrian Sena 4 Ounces h Yellow of Orange Peels, Horfe Radifh Roots fctaped thin, of each 6 Ounces h Coriander Seeds, Muftard Seed bruifed, of each 3 Ounces ^ Juices of Scurvy Grafs, Garden Creffes and Angelica, of each a Pint*, New Ale 3 Gallons, put the Juices into the Ale, and after them, the ether Ingredients, in a Net-bag with a fione in it h after 3 dqs the Patient may drink of it. h carries off (harp Humors which caufe the Colick, Gout, Jaundice, Scurvy and Rheumatick pains, provokes Urine, and evacuates Hydropick Humors. Dose a Pint Morning and Evening.

XXVI. *The Gargarifm.* Take Becoffion or Infufion of Rheubarb made with White Port Wine a Quart h White Wine Vinegar, Spirit of Wine of each half a Pint, Rheubarb very thin fliced 4 Ounces, Madder Tgots in grofs Pouder 3 Ounces, Roch Alum 1 Ounce, mix and digeft in a gentle Sand heat for 24 Hours*, then add Honey 6 Ounces h digeft again 24 Hours \$ prefs out the Juice and keep it for Ufe. It cures all forts of Sores, Cankers, and putrid Ulcers in the Throat, Almonds, Mouth, Tongue and Gums, they being wafht or gargled therewith 2 or 3 times a day. It cleanses alto and heals Ulcers in the Secrets or other parts h hly applied.

XXVII. *The Distilled Water from the Green Leaves and Root.* It is ufed to allay or cool

Inflamations, and to heal or dry up Scabs, and foul Ulcerous Sores in any part of the Body.

XXVIII. *Pills of Rheubarb.* Take fine Powder of Rheubarb 8 Ounces; Scammony in fine Powder 3 Ounces, Cremor Tartari in fine Powder 2 Ounces ^ Chio Turpentine enough to make all up ^ into Pills. Dose from half a Dram to a Dram or Dram and half They cleanse the Reins and Bowels, carry off (harp Humors, cure the Scurvy, Gout, Dropfy, Jaundice, Strangury, kheimatifm and Kings-Evil, and are prevalent againft a Recent *Gonorrhoea* in Men, and Whites in Women.

XXIX. *The Infolated or Decoded Oil of Rheubarb.* It heals Ulcers which happen in the Eyes and Eye-lids, difcuffes Inflammations and Strumous fwellings in the Neck, Throat and other Parts, and takes away black and flow Marks, or other difcolorings of the Skin.

XXX. *Nota.* The *Baftard Rheubarb* has the fame Virtues with the *China Rheubarb*, but not full out fo strong and effectual, and is fed in all thefe feveral ways or fortif. The *Englifh Rheubarb* (which is the *China* growing in England) has likewife all the fame Virtues, but muft be ufed in double Dose in the mean ftaton it is the *China*, or *Indian* which we chiefly ufe. The two laft are no *Rheubarbs*, but of the nature and qualities of the *Great Cenory*, to which we refer you.

CHAP. DXCVL

Of K I C E .

كزبان Kane*. It is called in Arabic *I X* *Arz* and *Arzi*: in Greek, <V^- in *Arz* tinc, *Oryza*: and in Englifh, *Rice*.

II. *The Kinds.* *G Jen* accounts *Rice*, inter le *mina* points quarn inter *Cere alia*, ashedid *Panick*, but I can fee no Reason for it, nor any manner of growing, and *Qtulies* are every ib different. It is a fingular Plant of its Kind, but may be denominated, or receive, Epithite from the Country in which it is produced.

The Descriptions.

III. *Its Root is BuJjy*, compofed of many Striyi* and fibres, which perifties every Tear, as the Root of other Grains do. It rifts up will a floe Stalk than Wheat, about a Tardhigh, with ever Joints, and a large thick heaf at each of the like unto the Reed. At the top it bears a fpread out into very many Branches, which has Blooms of a purplifh with the Seed or Grain growiing on them, e in a hard fraked and yellowifh brown tit with an Awne at the end of every one of the which Grain being Hulvd, is very white, blunt at both ends. and nearly as large as thojt of Wheat.

IV. Gerard describes it thus, from its growing in his Garden. *The Rice which (says he) did grow in my Garden, had Leaves fojt and GraJJy like Barly. The Slower did not Jhew iffelf with me, by reason of the Injury and Unfeafonableneffs of the Tear. Theophrastus fays, if has a Flower of a purple color. But fays* my Author, Rice has Leaves like unto thofe of Quitch-Grafs, or Barly. And a fmall Straw or Stem full of Joints, like to other Corn: at the top thereof grows a Bufh or Tuft, garnifhed wih round Knobs like fmall long round Goofe-Berries, in which the Seed or Grain is contained, every one of which has at its end one fmall, long, rough Awne or Beard adjoined to-it, like that of Barly.*

V. *The Vlaces.* Strabo reports that Rice grew in Water in the Territories of *Hattiria*, and near *Babylon*-, in *Sufium*, and in the lower parts of *Syria*. Where it grew to be near fix Foot high, and bore plenty of Seed or Grain. It grows' now, not only in thofe Countries, but alfo in the *Fortunate Ilands*, or *Azores*, and in *Italy* and *Spain*, from whence great quantities have been brought to us, huld, and prepared, as we now Buy it ^ it prospers beft in Fenny, Wet, Moift and Waterf places, which are often overflowed with Water: But it is thought that the Original, thereof came firft to thofe parrs ^f the World, out of the *Eaft-Indies*, where it is their chiefest, if not only *Corn* they Live upon; kut it has not been found there only, but through ^U ^*Ethiopia* and *Africa*, from whence it was bought into *Syria*, *JtgyPt*, *Italy*, *Spain*, &c. ^hereev^r it has been yet Sown. It Loves only to 8'ow in moift Grounds as aforefaid, and fuch as may ke overflowed with Water in the *Summer* time, *d let out again. It is now Spwn in *Carolina*, and become one of the great producs of the Country; I have feen it grow, and flourifh there, With a vaft increafe, it being abfolutely the beft

Rice which grows upon the whole Earth, as being the weightieft, large ft, cleancft and whiteft, vvhichhis been yet feen in the "Habitable World.

VI. *The Times.* It is Sown in the *Spring* in the *EajbIndies*, as *Eratofanes* fays, and that in a fhowery and wet time. It is a *Summer Corn*, and is Yearly Sown, and is Reaped or Mowed down, in the middle or end of *Autumn* with us. In feveral places in the *Eaft-Indies* it is Sown twice a Year* and probably it may admit of the fame in *Carolina*, or the *Weff-Indies*, in which laft place its goodnels is manifeft by its- weight, largeneffs, and whiteneffs, as I laid before, where it is Hull'd, as *French-Barly* and *Oat-Meal* are Hull'd, Cfc.

VII. *Not a.* In *Germany*, there is a fmaller Kind grows, which they call *Oryza Germanica*, and which *Cordus* on *Diofcorides* fays, is called *Schwaden* -, being indeed a kind of *Rice*, but leffer, having the fame Taft and life, and the fame form of growing and proportion, in its Stalks, Leaves, and *Juba*, or *Tuir*, growing in Marfliy, or Plafliy and Watery places, as the former larger Kind does. This *tiernolaus*, *Ruellius*, and fome others would have vo be the *Uordeum Gahiticum ColumelU*^ which is a miftake, for that is neither more nor lefs than our *Common Barly*.

VIII. *The Qualities.* It is temperate in refpect to heat or cold, and dry in the firft Degree: Affringent, Repercuffive, and Spermatogenetick.

IX. *The Specification.* It (tops Fluxes of the Bowels, and reftores in Confumptions.

X. *The Preparations.* You may have therefrom, 1. A *Broth*. 2. A *Milk*. 3. A *Pudding*. 4. *Sanguis*, or the *Blood thereof* 5. A *Cataplafm*.

The Virtues.

XI. *The Broth.* It is made either with fimple *Water*, or with *Mutton Broth*. It nourishes much, reftores a weakned and decayed Body, but binds not the Body as that made with *Milk*.

XII. *The Milk.* It is an excellent thing for < flopping all forts of Fluxes of the Belly, and reftoring fuch as are labouring under a Confumption, efppecially, where there is an Ulcer of the Lungs. The beft way of making it is to boil it foft firft in *Milk*, till it is in a manner perfectly dijolved and becomes a thick *Pap*>; and then to mix it and make it thinner with *Milk* warm from the *Cow*, and fo to Drink or Eat, a Quart or Pint of it Morning and Evening.

XIII. *The Pudding.* It is made with *Rice*, foaked all Night in *Milk*, and then boiled till dijolved, after zvwhich, with *Eggs*, *Sugar*, *Raifons* and *Nutmeg* grated, it is made into a *Pudding*, either "by baking or baiting. This as alfo the *Broth* and *Milk*, nourifh much, ftrengthen fuch as are weak, reitore fuch as are Confumptive, increafe Seed, and makes the feeble Vigorous.

XIV. *The Blood of Rice.* It has all the Virtues of the *Broth*, *Milk*, and *Pudding*-, and is made as you make the *Blood of Satyr ion*, *Potatoes*, *Parfneps*, *Comfrey*, &c. Dofe 2 Spoonfuls, or more, Morning; Noon, and Night, in a Glafs of Generous *Wine*.

XV; *The Cataplafm.* It is made of the *Meat* or *Flower of Rice* boiled with *Milk* to the Confiftency of a *Pultirt*: or it may be made of the whole *Rice* boiled to foftneffs in the *Milk*, and then to a confiftency, adding to it a little *Barly Flower*. It is used to be applied to Tumors, to repel Humors

flowing

flowing to 'ifo to W omens Bieafts, to re-
percuiss the M .by the Inflatimton; and
this it will belt do, if ii is made of Water 01

Rubus occidentalis (L.) Greene
 This is the most common of the
 wild roses of the Pacific coast.
 It is a bushy perennial, with
 the leaves deeply lobed, and
 the flowers white or pinkish.
 The fruit is a red, fleshy
 berry, which is eaten by
 the Indians. It is also used
 for medicinal purposes.

The first part of this chapter describes the various herbs found in England, including their uses and properties. It begins with a list of herbs and their characteristics, such as their taste and the ailments they treat.

The second part of the chapter discusses the cultivation and preparation of these herbs. It provides instructions on how to grow them in different climates and how to process them for medicinal purposes.

The third part of the chapter contains several recipes for medicinal preparations, such as decoctions, syrups, and pills. Each recipe is accompanied by a list of ingredients and detailed instructions for their preparation and use.

The fourth part of the chapter describes the various uses of these herbs in different parts of the body, such as the head, chest, and stomach. It provides specific advice on how to apply these herbs to treat various ailments.

The fifth part of the chapter discusses the uses of these herbs in different seasons and climates. It provides advice on how to adjust the dosage and preparation of these herbs based on the weather and the patient's condition.

The sixth part of the chapter contains several recipes for medicinal preparations, such as decoctions, syrups, and pills. Each recipe is accompanied by a list of ingredients and detailed instructions for their preparation and use.

[Faint, illegible text in the left column of the page, likely bleed-through from the reverse side.]

[Faint, illegible text in the right column of the page, likely bleed-through from the reverse side.]

The first part of this chapter describes the various herbs that are used in the English kitchen. It begins with a list of the most common herbs, such as parsley, dill, and chives, and then goes on to describe the uses of each. The author also discusses the importance of growing herbs in the garden, and provides advice on how to care for them. The text is written in a simple, straightforward style, and is easy to read. It is a valuable resource for anyone who is interested in growing herbs or using them in their cooking.

The second part of this chapter describes the various herbs that are used in the English garden. It begins with a list of the most common herbs, such as lavender, rosemary, and thyme, and then goes on to describe the uses of each. The author also discusses the importance of growing herbs in the garden, and provides advice on how to care for them. The text is written in a simple, straightforward style, and is easy to read. It is a valuable resource for anyone who is interested in growing herbs or using them in their garden.

eni. Branches, many fet together, which arc /mall and fiwt, of a dead purpith color, turning Wan with (landing; and change into fmall, black, and almoft round pointed Cods, in which are contained 4 or y fmall blackifh Grains or Pulfe..

VI. The thirdj or the true great Hatchet Vetch, or Sickle-wort, its Root is /mull, fmfhing every Tear. It grows not above a foot high, t>iti > divers winged Le&irs growing on its Stalks, which are fo weak, ufnot nt fland upright. Each of the Leaves it /mJfl, not vtry long, and round at the end. At the tip are many fmall yellow'fywers, (Mathtolus fay si reddifh, in which he VIM mifiaken:) After tabfch, come as many long, flat, thin, reddifh, /mail crooked pointed Cods, containing flat and reddifh Grains ; fo lying in them, that they may be difterned thro\ the Cod ; the ahele Cod being compar- ed in Form to a Hatchet.

VII. The fourth, or lefler Hatchet Vetch. Its is like the former, and perifhes Tearly xnith Jit form and manner of growings it is much to the former, but fomething leffer; yet not) lower, if it groat in any good Ground. The wwers grow many together, of a pale yellow color, dfter them erne /mall crooked Cods bowed Jmoft together, or much like to a Horfe-Shooe; n which iyc pale brotxn Grains, not fully round, «/(quire and leffer.

Vetch Hatchet Greater,

O R,

Shkle-Wort Greater.

VIII. The fiFth, or greater Horfe Shooe Vetch. Its Root b flender, 3 or 4 Inches hng, with feveral libres or Strings adjoining, while and hard, and lives many lears. it hat divers fmall winged Leaves, fa on fmall weak Stalks, leaning, or rather lying upon theGraund, each Lt,ifbeing/malt, fbort, a /tith lungifh, almo/t round pointed, of a whitifhgreen color. At the Joints with the Le<ves, come forth fingle Flowers, viz. one at a place, on a very fhort toelftalk, being Jtmil cad yellow -, after which, follow a hng flat Cod, a little bowed, and cut or divided on the Concave or inner edge, into 4, y, or 6 Dhifions, each being cut in round, fomething like the Letter C. or like an Horfe Shooed whence it took its Kame ; in which lye fo many Grains, as there are /paces between the Cbafms or Cuts, which are/mall, longifh and crooked.

IX. Thefkth, or lefler Horfe-Shooe Vetch. Thit in its Roots, St'-lks, Branches, Leaves, Vlotacs Cods, and manner efgrowing, is very tike to the former or greater km, but leffer by the half, the Stalks being not above three or four Incheslong, and lying chfe upon the Ground, and is of a little 'whi- ter color than it.

X. The fet-enth, or greater Birds-foot Vetch. Ithju a long, flender, fringy Root, running deep into the Karth, It w a fmall Vetch, (tho' greater than the next) not growing above a Span, or 8 or \$ Inches- high, with many Branches fpre.id on the Ground fet with many Wings of/mall Leaves;- in manner of the lafl Vetches, but much/mailer. The Wotvers grow upon the Branches, many fnalt ones /ct lit a Tuft or Head together, of a pale yellow color, which afterwards turn into fo many /mall jointed Cody voillrefembling the Claws of Sird, %ou)hen 'e f <± tht

the Name-) in which are contained many Jmall round Grams.

XL Theeightr^orldTer Birds-Toot Vetch. Ttism its Roots, Stalks, Leaves, b^ateers, Cods, and manner of growing, is lie the former, but Ujjer in all its parts, and growing wish its Branches and Leaves in a more handfern manner, ir. i^hich is ait the dif- ference,

XII. The ninth, or Kiorted Birds-F^t Vetch. Th/ b/u in in Rw/j many/nail ahite Knots or Kerneh among its fibres; etbenstft in its Sulks, Winged Leaves, blower jf Qi.h, and manner of growing, it a like to th-greater Birds-foot. Jo-Sing tl blowers are of a pale tabiti/h red color; the Cods diflinli by Joints, and the voisok Plant fcm-ihins Urger.

XIJI. The tenth, or our common Kidney tftclr Its Root is Jong, bUchfhon the cutfide, wbn, parted many/mi's mte iar ^ermoi adjoining to them h is \ final! OBSERVATIONS.

IX. i. If you would make a Vineyard in out cold and moist Climate, chuse a wholefome, dry, and warm peice of Ground, iheltet'd with a Hill from the North-Weft, North, and North-Eaft Winds, and open to the South-Eaft, South, and South-Welt Sun-, let the Earth be welt dig'd, deep, broken final], and cleared from the Roots of Weeds in Summer-time, before *Michaelmas*, then in fair open Weather in *December*, plant your Rooted Vines, of three or four Years old, in even (trait Ranks, about 6 Feet afunder, very (hallow, yet fo that their Roors be covered; and between every Rank of Vines, let there be a Path of 4 Feet broad, that you may eafily pats between the Rank?.

X. 2- **Thefirft** Year after this Planting, do not prune them too much, but let a Stake clofe by each Root, of about 4 Feet high, to which foftly tie the Hrongeft Shout, and let the other Branches fall down as they will; and in *April* following, or beginning or *May*, juft as they bud forthLeaves, bow the tops of each Vine Arch-wile to the next Stake, and there tye it fo as it may not flip away ••, and from this howed Branch, will come out new Shoots, which will produce Grapes which will hang down to the Earth, and thofe will be the **Iweeteft** which will be neareft the Ground.

XI. 3. This is all which is to be done to them untill Pruning time, which is from the latter end or *January*, till the latter end of *February*, and then you muft cut away this Branch which was ryed the Lilt Year to the Stake, and Arched down, even as low as the loweftEye, butoneot two at the molt -, and then tie up another of the ftrongett Branches from theStock, in (teadoi"the former, Pruning away all the other Branches within an **Eye** or two of their bottoms ; for the fewer Branches you leave to the Root, the moie Grapes you will have the Year following.

XII. 4. The Ground in your Vineyard muft be digged up every Year, tho'not deep, both between each Vine, andalfo the Paths between each Rank ; and freh Mouid out of the Paths, is to be thrown to their Roots, and fo all laid fmooth again, and clear from We^s every Spring, the Weeds inSummer muft be Howed up often * for the barer the Earth is kept, the better will your Vines thrive, and the larger and better will be your Grapes; but the Earth about the Vine-Roots muft notbeltirred in Summer, nor in their time of Bearing.

XIII. 5. The Elder the Vineyard grows, the deeper it fhould be digg'd, and turn'd up yearly, and forTvery old rotten Dung or Allies fhould then in februiiry or *March*, yearly, or every other Yeif, be mixt with the Natural Earth, but too mach Dung, (dpecially if it'be new) is not good, ami Aflies are much better than Dung. The Elder your Vines ate, if they be Healthy and Sound, the larger and **better** Grapes will they bring forth ; but when you find them to decay, you mlt let young ones in their (tead.

XIV. &• To increafe your Stock, or (tore of Vines, you muft either lay the new Branches in the Earth, or elfe plant Cuttings, both ways they will be apt to take Root, and in a Year or two, will be ready to Transplant, and difpofe as you haveocallion; and whilft they Hand unremoved, thefe new Plants muft be yearly Pruned at the fame time with the Stocks, **otethro** the whole Month of *Yebrunry*, and after the fame manner.

XV 7 And therefore to get new Roots either to Plant your Vineyard af firft, ot to fupply the

Stocks as they decay, you muft take rhe;n from rhoe produced by the former method of Lams or Cuttings, which were partly covered with Earth, that thsy might take Root in Winter, which in about two 01 three Years time will he well Rooted, fo as they *my* be removed: Or you may take Suckers from the old Vines or Stocks, which may anfwer the end rull as well.

XVI. 8. But if you will raife a Nurfejr from the Cuttings of Vine Branches, let them be the Cuttings of that Years growth, which Plant in a Nurfery a-parr, of good rich Mould : any Cuttings almoit will grow, but the largdi and itrongeti Branches of that Year afford the **beft**: Theft; Cuttings muft beabout a Foot, or Foot and half long, contifting of four or five joints or Eyes at moil, whereof two muft be rhrult into the Earth, and one or two left above Ground: Thefe Cuttings mult Jtand in the Nurferies 2 or ! Years to get good Roots, and then they may tie Planted in the Vineyard. TheCuttings from Branches which bare well the fame Year, and were not much ihaded from the Sun are belt.

XVII. 9. Vines proffer beft in a dry, gravelly, or ftoey Earth •, Clay or any fiiff or wet Soil, is diiagreeable to their Nature, and a rich black overdung'd Earth, will caufe them to (hoot too much into Wood, and to bear but lew Grapes, and thofe commonly *Morbide*, thatisrl.it. or ill ihaptd, and not well tatted. Generally all Vines aJfettanEaft-eily and South Sun, but proffer not upon a Weft or North Wall; and they ought to be defended with high Hills or Trees, from cold North-Welt North, and North-Eaft Winds.

XVIII. 10. Every Winter the Earth about tht; Roots muft be opened, and fome good old well rotted Dung or Ames mult be added to the Earth, and well mixed therewith, (as isbtforehinted) and foapplyed to the Roots of the Vines, which being Planted under good Walls, and welt fread, and Nailed thereto, will bear in muft Yearsg«od'tore or Grapes. The time of' Pruning them, *we* have told you before, but fome begin that work at the latter end of *tiember*, for ilic new Shoots only bear Grapes j therefore in Cutting of ths Branches an Eye or two mult be Jett to (hoot out new Branches again; for if' you cut dole to the old Wood tew or no Branches from thence will fucced • So* that in Cutting or Pruning of Vines, the Rules for Pruning order fruit Trees mult not be followed ; lorthofearetohecutoffdofetoa Bud; but Vines muft hecur about the middle, between two Buds.

XIX. 11. A Fertile Soil is tttctft for fome Vines, viz. fiich as bring forth thong Bodied and Jat Wines, which is every black Earth, that is not vtry clofe nor clammy as *Yloremim* fays : *G>h*(~*melk* advifes to have regard to the kind or nature of the Vine, to plant it in a Soil atgeeable to the Earth of the Gauntry where it was a Native. A poor and lean Vine may be Planted in a Fat and Fruitful Soil ihat is fb of its own Nature, but yet not too Fat. A ftrong and Fruitful Vine may be Planted in a leaner or moreSteril Ground. A large and ipreading Vine, may be Planted in a more cloie and compact Eath. A Vineof lew Branches, may be Planted in a more loofe but Fruitful Soil, But fays *Ceivmefia*, the Vine delights not to grow in a Soil too much Dung'd, let the Dung be of what kind foever. ButMould mixed with lbmeShavinas of Horn, being dtfpoied about the Roots, wjllcaulu the Vine to become vcty Fruitful.

XX. 12. A late *brunch* Author fays^ that tho' fome are oi Opinion that Vines (hould be Pruned ^{Vet he fi)S the *are} **infiftW. ? rt** ^{now} dually Pruned in *March* -, and that if » Vine be

not Pruned, the Grapes will not be large nor well tatted, and btfides, thai it will not be of any long Lite. That all the d&id and udefs Branches art; to be cut off: That the beft Bunches (hooting out the largett Stems, are to be cut off to 4. Eyes, and the other Branches lower, or beneath them, to i Eyes : That in Pruning, an Inch of Wood is Co be left above the Eye, at the upper end of the Branch: That the Cut mud be made Hoping on the contrary fide to the Eye, for fear of prejudicing it -, for when the Sap is in motion, the Vine weeps very much ; fo that it the Slope were on tli; Eye fklc, it would in a manna be drowned by the Tears: And that the Vine be dif-budded and tyed up in *Aidy, June* and *July*, that the Gripes rny thrive, and grow perfectly ripe. That the lower Branches are Pruned, to two Eyes, that they may give us two other good Branches, which may be hi to be Pruned the Year following, whereby you may re-trench the Branch before Pruned to 4 Eyes, with all the reft (hooting from it. That theft; 2 new Branches fpringing from the faid lower Branch, are to be fo raised, that 4 Eyes may be left to the hieft Branch thereat, ind 3 Eyes only ro the lower of the fame. But it the firft faid lower Branch gives but one Branch, that is then to be Pruned to 2 Eyes ; it it gives no Branch, then you go to the upper Branch which had a, Eyes left, which if it has 4 Branches, you mutt cut off the two higher Branches, and Prune the two lower, leaving 4 Hyes to the higher oS the two, and two Eyes to the lower.

XXI *IT.* But fiuce we fearcely ever Plant Vineyards in *England*, hut pUce our Vines againt Walls, you mult dig a Tioncli about 1 Foot and halt broad, and prepare your Layers or Cuttings, which may have each 7, Eyes apiece; cut off a fmall pan of the Fihres, and lay your Layers in the Trench 2 Feet afunder, ibit rhe Lattice may the iboner be formed -, after which, lay on fome Dung, till the Trench be quite tilled up, fo wilt the Vines (hoot out admirably : If the Earth be hot, Cow dung is the mottrwoper, butif that can't be had, thentake Hoife-Dung which is welland perfectly rotten, and diicharged of its heat: But in a wet and cold Ground, Hotfe-dung half rotten will do better than the other, which being of a cold Naiure, Cow-dung will not ib well agree.

XXII. 14. Our Vines in *England*, begin to put forth their Leaves about the end of *April*, and are in t lower about the latter end of *June*; not very long after it will be good to Hop the Branch fome diihnce from the Flowers, that the Gripes coming on, may have the more Nouriflimem, and the Sap not drawn away from them, or fpent upon other ufelefs parrs.

XXIU. 15. In the end of *Augtft*, cut away fuch Branches and Leaves as keep the Sun from the Grapes, fo will they riperuthe better, and fome early kinds will be throughly ripe 'm*Septem- brr*, others in *QUo*ber -, but it often happens, that fuch as are late ripe, are fpoiled by Frofts, unlefs they be well defended with a Tilt, efpecijly in the 'Kight, from Sunfct, till the Sun is nearly an Hour high; and if it is a trofty Seafon, all the day long.

XXIV. 16. Befides the Vines we have enumerated, there are more than an hundred forts of others, to which we can give no Names, and many of which arevery good kinds; but we in this place arc to confider which of them will grow beft with us in *England*, which are 1. *Tin- duffer Grape*, or *fmall Black Grape*, which is firft ripe with us, which are thick let on the Bunches, and when ripe, !>Uik and well rafted. 2. *The White Alfdi*

Alipc, which has large Bunches, and has Grapes, fweet and good, and ripening well fears, z. *The Rei Mufcaine Grape*, as ari iht White, but requires the moft Sunny pi • it ripens not fieri; lb well as the former. 3. *The Vonniack Grape*, whi ch is a whi l e. fw*ti Musky Grape, but in fome cold Seafoos, come not to perli-frion here. j. *The Rttift>!* of *llv p^ Grape*, which is large, red and good, warm place ripens reafbn^bly well. 6. 7. *Vine*, or *KCK England*, or *Canada Grape*, is a White Grape, ripens with the Lift, and bur. hinely fee oa the Bunches. To ihefc we may aflj; 7. *The Burla Grape*, which is rhe largeli braj« we have, but are very fowre, ant! ripen net ivit us, except by accident, as having an exream tie Siafon. The Bunches are gTear, and the G:api> large and white, whereby they make an adm]»^{DI} (how on a Wall. Our chief ure of this Grape, rs ro make Verjuice of it, which is very etcliero- If by chance in a very hot Year, it comes to i nefc, theGrapesareiaidroheplejQnt. H many other forts of good Grapes, which may grow admirably well in our Country, cerning which you may confah the *Vincron*"

XXV. 17. *The Juke of the unripe theGrecksc*aU'O(ifaxt«: the Latines. 1 and *Agrefla* : but we in Engliffti, *Virpaet*. flouert of the Wild Vine are called 'Oirwh: "1,* tine, *Oemmtbe*, and *KM Vmi*, (in former lra* much in life, but now wholly negleSed.) *Grapes dried in ike Sun>* are called *Lv*!'*ffti *Fitful* Sete, faffimti* and *A Buncht>j G>^* dried% is called in Greek, £«»fc: in Lacine, L *Bijft*, and *Pajjuld*. The Virtues.

XXIX. *The Juice of the Leaves and Tendrils.* It is Cooling, Drying, Afringent and Healing. Mixt with Honey, it makes a good Lotion for a sore Mouth or Throat, or Sores in the Privy parts, to wash, gargle, and bath therewith, it also stops Vomiting, Fluxes, Spitting of Blood, and Womens Courfes.

XXX. *The Decoction of the same.* If a little Roch Alum be dissolved in it, and it be then sweetened with Honey, it has all the former Virtues of the Juice; but drank (without the mixture of the Alum and Honey) it is of good use against Fevers.

XXXI. *The Tears of the line.* These are droppings of the Branches of the Vine, when cut out of due time, or too late in the Spring; drank, it is good either to dissolve a gritty Stone in the Reins or bladder, or to expel and drive out Sinds, Tartarous matter, Gravel, and frall Stones out of those parts, and possibly it may be more effectual in this case, if ^{be} ^{taken} ^{when} sweetened with Honey • for that Honey has not only a power of Dissolving and Cleansing, but also of making the Passages smooth and slippery.

XXXH. *The Lye made of the Afhes of Vinebrancha.* It is very effectual against the Gravel

and Stone in the Reins, being drunk either (imply of) it itself, or mixt with White Port Wine. The Lye mixed with a little Vinegar, and diluted with Beer, allays Inflammations and pains, and consumes Warts of the *Anus* or *Fundament*, eases the Pains thereof, and dissolves the Piles, and other Tumors. The said Lye is good to wash places out of Joint, or burnt with Fire, and mixt with *Juice of Rue and Vinegar*, it is good against the swelling of the Spleen, and helps Frictions and Gallings in any place. And mixed with Wine, it is good against *Anthomes* Fire.

XXXIII. *The Afhes of Vine Branches.* Made into an Ointment with Hogs Lard, it is good against hard Tumors, dearies Fistulas and hollow Ulcers, and heals them; helps Pains, Cramps and flinking of the Nerves. If they are mixed with Oil, and applied, it dissolves Simple Contusions, cures the Bitings of Mad Dogs, and the Wounds of Scorpions. And made into a Cataplasm with *Nitre and Vinegar*, and applied, it consumes or wales Wens, and other Excrecences of the Flesh.

XXXIV. *The Ointment of the Afhes.* Take milk Castin'd Vine Afhes 4 Ounces, Sal Aitre in fine Powder 1 Ounce; Tobacco in fine Powder half an Ounce in Golden Colored Palm-Oil, (not Olive, or inclining to be Rank) 12 Ounces; Oil of Khodium 3 Drams: The Palm Oil being melted in the heat of a Bath, put in the other Ingredients and mix them well together. It dissolves hard Tumors, and dissolves even Callous hardneses in the Nerves and Joints, and is profitable against Gouts, Sciatica's, simple Contusions, old Sores, Ulcers, Fittub's, Tettars, Ring-Worms, *Hittes*, *Impetigo*, Worms in the Face and Skin, and other like rebellious Maladies.

XXXV. *The Lotion or Wash.* Take of the Juice of the Leaves 6 Ounces; Red Port Wine 4 Ounces, Honey 4 Ounces, mix and make a Lotion. It is good to Wash and Gargle, and heal Sore and Ulcerated Mouths and Throats, and also to clear and heal Ulcers in other parts. Put into the Eyes, it stops DeHuxions, clears the Sight, and heals Sores and Ulcers therein.

XXXVI. *The Grapes.* The fresh gathered full ripe Grapes being eaten, strengthen the Stomach, refresh the Vital Powers, cause a good Appetite, and cool in Fevers: Those of a Blood-red Juice, are said to Hop Spitting of Blood, and other inward Bleedings, because of their Styptic quality; but almost all sorts of Grapes, if eaten in too great a plenty, are apt to cause Fluxes, and to do other Prejudices to the Body, not easily to be retrieved; whereas moderately eaten, they are otherwise a singular advantage to it.

XXXVII. *The Verjuice.* It is a Juice pressed out of any unripe Grapes, but more especially of that kind of Grape which will not ripen with us, being a very fair large Grape, and making very large Bunches. It is called *Omphacium* also *Succum Omphacium*. It is a pleasing sort of tart Juice, fit to be used in Broths, Meats and Sawces, to acuate and strengthen the Appetite, also to resist Vomiting, and to refresh and accelerate the fainting Spirits. Made into a *Syrup with White Sugar* it is very grateful to the Stomach, quenches Thirst, and extinguishes the heat of Fevers. Mixt with Honey, and used as a Lotion or Gargle, it cures Sores and Ulcers in the Mouth and Throat, &c.

XXXVIII. *The Muil, or Kea Wine.* U is pleasing to the Palate, but not so wholesome as that which has Age upon it, and is very tinct. Several sorts of Muil are apt to loosen the Belly, but particularly *AVto Canary*, creates Obstructions

in the Reins, and many times uutes a Strangury, or a kind of ftnppage and hait of Urine : But according to the Variety of Grapes, and the Climates and Soils in which they grow. Rich are the *J*afities of the *Maff* \ tome are Laxative, fbme Afringent, fome Styptick, &c. and according to ihofe Qualities 01 Properties, varieties of Prepititions may be made of them.

XXXIX. *Rob*, or *Sapa*, Syrup of *A*, (tJ), or New Wine. Take Wine newly prefl frm *Crapes*, While or Red, bail it over a gmtic R <, or rather in BJDSO, to the tbitknfs ef Honey. It is or' ufe for queafie and ill Stomachs, lor Faintings, Vomitings, and want of Appetite; it is allo good for Sores and Ulcers in the Gums, Mouth and Throat, becuufe it is not only Ahterfive and Healing, bur alfo repreffes the Flux of Humors, baring i Styptick quality in it, (hut is more or left Styptick, according to the kind and Qualities of the Giape it is prdi from ;) you may take it Morning, Noon and Night, as much as i Walnut at a time, aione by it felf, to ftengthen the Stomach, provoke Appetite, &c. This you are allb to Note, That in what fivMcaL Author fo ever you rcid *Rob* or *Sapa*, without any oier Epithite, out fimply Written, without any relation of what it mould be made, that this *Rob* or *Sapa*, is the thing which is always intended.

XL. *Wine tormented or PerfeUed*. All Wines whatloever ftengthen the Stomach, cheat the Heart, tevive the Spirits, and exhilerare whole Nature; Strong Wines Urengren moll, but many of them are heady, and being drank in too great a meafure, are apt toentime the Blood and Spirits, and caufe Fevers. Weak Wines deanfe much, and that by Urine, but being too plentifully drank, are ape to catifc Kheurrmilms, Gouts, tfe. The middle fort of Wines (being very fine) are wholfomelt, and fittell for out Bodies. All forts of *fremb* Wines breed Gouts, Rhcumatifms, Sand, Gravel, Stone, and Tararous humors in the Urinary pirts. All Styptick Red Wines, as *Alkant*, *Barabar*, &c. ftup the over-great Flux of **Urine**, and Ste prevalent againft i *Diabetes*. Choice Canary, us *Palm* and \&d *Pert* Wines, \&f *Lisbon* Wines, *W* Bed *Florence* Wines, and l'uth other like itrong and Gwnetous Wines, are great Cordials, and ought to be choien when uled in Cordial Com poll tions, becuufe they add Lite and Spirit to the Medicament, and make it more Grureful to the Stomach and other Bowels.

XL1. *Brundy*, or *Common Spirit of Wine*, hit made vj ueii Itimcmrd, and jometimts of *Priest* Wines, in a *Copper y<:jica* Tinned within, v>nh if; *Head iind Refrigeratory*, or *Worm*, drawing it off ft) long, till it becomet of fuch a *CetiJSJency* at to be but jtif} *Proof*, which may be again rcBtfied in *Balneo*, ifyw fo phafe. This Spirit being old, when the Fire is as it wiireout of it, is much better than when new drawn; and then a fmall Dram being tiken of ic now and then by it fdf, (or mived with white Sugar, or fame Syrup, as fome will have it) is a finguhr Cordial, a Ifrengiheircr of the Stomach, a reviver of the Spirits, a chearcr of the Hear, an exciter of Natural h<>t, and a caucroft Digellion; warming of the Body, and a quickner of the Circulation of the Blood. With this is nude *Black-berry*, ot *Bramble-berry Brandy*, *Mai-berry B-jndy*, *Rafpberry Brandy*, *Morella Cbeny-Bramh*, *Black Cherry Brandy*, 8tc. and wirh it feveral *Tinturci* are drawn out of particular *Simples*, as from *Catechu*, *Ochinelc*, *Saffrnn*, *Sic*. much better than can be done with the belt rectified Spirit of Wine.

XL11. *Sp:r:tu; K/ti*, Spirit of Wine. *mad** jrom *brandy*, by *DtfljJiatiott* in a *Vefica*, *wiibii* Head *Tuni'd* Kelt within, to tti proper *Wnrm* and *Re:eivrr*; com *Work tilt i ** and *futtl* parts are 4' (which you may hnovo by the *Tajte*; J it may be fever a I times reilificim *Balnco*, ifr.<<<8 off the half, third, or *foxnh parti*, tilt the Spirit is high, and no Humidity remain tchich will t"ift- Where Note, rhic the *Orifice oi tin* covert with a lour fold thin Paper, or *thlcfUOffij* the Spirituous pans *mil* only p^netr-ut, and^TW Watery tall back again. It is a lingu! *urn* 10 make *ExtrtSt*, *TmSurcs* d *B/imvim* and performs many other Admirable things "> Cnymiltiy, as all Learned Phycicians abununjity know.

XLIII. *Pbibfepbick Spirit of Wine*. *Tiff Fare* *loners of Sa* *Armoniack*, wSal *Armoniack* / ^ or thrice *Sublimed* from *common Suit*, 4 *Y"UFL* affufe thereon the *beji AUholiz'd Spirit* 4 »m or Spirit „J *Wine ptrfelth deftegmjted*, or *tW ** fl Uled* from *Salt of Tartar* till it is free from *MX*** fo much, u to over tnp it 3 or 4. inches \$ being^iil ^ *Glafs rial clofe jbpt* with *Wax*, let it ft n a *Blood warm Ingejlion*, 14 or so, or [that the Spirit of *Wme* may fully imbibe, *mtJ* ^ impregnated with the *tire* or *Sulphur* of *fW* *Armoniack*, to wll, *mib* its *Volatile ParttcU's* *Salt*; which keep for ufe. But *Kirkringius* "nV" fes, after this, to *DifU!* off the Spirit l<>* lf remaining *Salt*, *Cohobring* and *Dijjillng* % ' c *Spirit* three times. This *Philofophick tip* ^ Wine, is a *AXenfruggm* vattly beyond the ^r Simple retlifed Spirit, for extracting *JH* '?'. Vegetable or Mineral *VnSures*, nuking of *Potefiates*^Uc. One of its utes is to *Blood-red Tinfute* from the *Ghfs* of , and from o;her *Mmtrat ajwj* Metalick Bodies, is not much unlike, and poffibly not interior ^ that or *B-i/il Saltmines*, mentioned in our *Lend. lib. I. cap. 9. foil, 11. 1<>v* thofe *Virtues*. It is profitably ufe^d " X ~-~& tiims, *Gout*, *Stew*, *Jaundice*, *Droplie*, and ^ inward *OLIWions* : *Tfaej* ihat pWte i^ . u l g may poffibly give me I for *communca* e the *Svcict* trie of diis moll Excellent Spirit; 1^f tew Drops (from is, to 10 or 40,) may l>^8 l in a *Glafs* of *Generous Wine*.

XLIV. *Raifons* or *Dried Grapes*. T Grarefu! to the Stomach, Itrengthen the good againtl *Coughs*, *Culds*, *Catarrhs*, / *Wheangi*, and reitoie in *Conlimptions*, otten eaten alone, or every Morning and with choice Old *Cixjhire Cheefe*, and *Wb't* *Bifeake*^ by which way of eating them, tbi^01 oid and inveterate Fluxes of the Bowels, » tifie as it were the whole Body: The *D Raifons* havea little *Tartnefs* in them, and are v^A pleaffing to the Stomach : The *Malaga R> "j^ltj* alfo of fingular good ule -, but the *Kaifonr* " Sun exced all others for all the purperts mentioned.

XLV. *Money of Raifons*. *Mel* ---fjm Take *Raifons* of t!v *Sun ftonei*^ and *brwjrl* * 1 *Marble Mortar*, 2 *Pounds*; warm *Water* 6 *re*** infufe 24 *Hours*, then boil in *Baineo* to tP* jumptiw of the half, and prtfs out the lfti jirongly, which with *Clarified Itianey* 4 ?**"; (0 a half, boil to its due *Confifitney*: If infiead 9 ^ *Wmer*, you take *Canary*, *Malaga* or *leth* *Medicine* wilt be fo much the better. * choice thing againft *Alibma's*, *C*Ids*, << ^ *Ciurrhs*, *Coirlumpions*, *Hoarfneii*, ^ and other like *Diicafe* of the *Britit* and

Alcldc Paffulit Nompokum, or a Compound Honey of Raifons, is thus made. Take Jukes of Male Peony Roots, of Liquorice, of Bamm, of Hartsfengue, of tſyfibp, of each an Ounce; of the Pulp of Raifons made with Malaga Wine or Canary, a Pound i Double Refined Sugar a Pound and d quarter; mix them, and boil to a Qnſtflency. It has all the former Virtues, beſides which, it is peculiar lot Children againſt Convulſions, the Falling Sickneſſes, Chin-cough, and the Rickets.

X y f. *Decoſton of Grape, or Raifon Stones.* It is good to flop Fluxes of Blood in any pair, as Bleeding at Note, Spitting and Vomiting Blood, inward Bleedings, Bloody flux, and Pilling of Blood. It (tops alt forts of Fluxes of the **Bdly**, ſtrengthens the Stomach, and prevails againſt a **Diabetes**.

XLVII. *Th\$ Ponder of the Grape or Raifon Storm-* It has all the former Virtues, and may be given from Haifa Dram to a Dram in a little Money of Raifons, and then waſht down with a Draught of the *DeeoBion of the Stones*. The Powder outwardly applied, is a good Styptick in (topping of Blood).

XLVIII. *Acetum, Vinegar.* How our Diſtillers make Vinegar, we have taught at large in our *Doron Medkum, lib. i. cap. 24. fcS. 36.* ſo that it would be A3 urn agere, to repeat that again here. But tor fuch as cannot go that way to work, for want of Neceſſaries, it may be done another way, after the following manner. Make a Paſſe of Wlytit Meal and White Wine[^] aiding to every Pound and half thereof half an Ounce of dried Salt, reduced in a very hot Mortar to a fine Powder, let ail be wrought very well together, and lye in Dgfi ²⁴ 4 Hours, then make it all out into little Loaves, which Bake itt an Oven with a ſſſt beat: Take theſe Loaves and ſieep them in the ſtrongeſt Wine Vinegar, (in every Gallon of which, 4 Ounces or more of fine Poudf red Salt is added,) with which make a P; >fle again, and mike into little Loaves, and Bake a* before. Tlyis Work ſo often repeat, till the Loaves will be no more dtſſolved in the Vinegar, or rather receive no more Acidity from it; which done, put a ſufficent quantity of this Bread, into 4, 6, or 10 Gallons, or what Quantity you pleaſe of Strong Wine, (eſpeially fuch of it at it prick, or begins to grow acid) and it will in a very ſhort time be converted into good Vinegar. Vinegar if it is good, and very acute or Ihaip, is an excellent Stomack, and therefore it is almoſt always an Ingredient in the moſt excellent Sawces. It is a molt fingubr thing to quench Thirir, alii to the heat of the molt violent Fevers, reſilt Poiloi - , and is generally an Ingredient in moſt Liquid Compoſitions againſt the Spotted Fever, Malign Fevers, Meaſles, Small Pox, and the Plague or Peltence it felt; and all foits of Contagious Infections, and Pſtilentiat Difeaſes. It is Styptick, and good toftop all forts of Fluxes of Blood, whether inward or outward.

XUX. *Spirit of Vinegar.* Spiritus Aceti, Acetum Diſtillatum, 1. Take of the bejt Wine Vinegar, put it into a QUfs Still, and with a gentle tire in Bulneo Mjria., or in Aſhes, drtw off the YUgm without laſſe, which teill be near a quarter part -, change the Receiver, and force ever the Spirit- If the Spirit is for Phyſical uſes, you muſt take heed of Burning, left your Preparation Jmell of the ſeme. If it is for a, Meraiine u/e, draw tiff the ſtſegm in Baſſco, and in Sand Diſtill violently[^] till a red Spirit aſcenis, and all be come over. It Otthus, accotding to CiolTa.us. Take 6S&ans of Vinegar, end DijtH tn a lukewarm BalneoM. till but one Qrtar remains; then in Sand or Aſtes,

draw off the remainder to drynejs, 1. • or three times upon the facet. III. Or thus, which is yet itrouger. 1/ſfpij.ite Vivegar 10 the thickiujt of ihney, au&fet it m Gyſtaffſſe, mbich OySalt purijie, by diffatviitg them 1. tie Vingar, and QySallize again; \like the ft Qyflu.'s, and make them into Balls with Belt; an drhtthe Spirit thro" a Retort, which vſtr reUſie[^] Jo toi/lit br ticry anJOrtoJivr. IV. Spiritus Aceii Seruierti. Take fitccs of Diſtilltd Vtm[^]sr, t akiaie them dry\ add to the fame Spirit ij Vuitſgor, end dra&j it off again in Sand, Lobobatiſjg fa often ſill all its common er fixt Sjlt aſcend with the Spirit. This is Radicated or A!kdftz>d Vinegar. V. Or thus, lake ſiect or Lees of V'inczar, ſijſiUitt a Vefieatory with its Refrigeratory, jo will you have a fiery Spirit, which will diſohe' Metals Stones and Minerals. VI. Spitius Acti Terebmtiuarus, it is main of Vinegar and Turpentine[^] Dijſtilling them is a Retort, then ſeparating the Oil tin! Spirit from the IVegm, or Water. VII. Dr. AnthonieV Spirit of Vinegar, wich which he made his Aurum Porabite. Get three er four Ghjs Stills, wbieB will hold a Gallon or raw apeice, and about 6 Gallons of the jirongeſt Red Wine Vinegar, (Vinegar of White Wine or Claret, Kill be tea weak) made of Red Wine, or of Canary, or Majcadine. Put the Vinegar into the Stills, and frt as nuny a going at the Balneum will hold, (which Balneum Might to k t too i-eet and a half Square, to hvid m-utyGhfis.-; take a Pint of that W)kh runs firj), and put it away at weak, and not Jit for u/e; then Dilrill the re\ to drynefs: Waſb the Stills with a little of the Yh-gm or fir/i run/ting: Diſtil again, ri.vi put emay theſirſt Pint ^ this Work repeat four or Jive times; ſo of a Gallon of Vinegar, you will have three Pints of Spirit -, and of your Jix Gallons' nearly IO Pints. If your Spirit is yet too weak, you muſt Diſtil it oftner; this Spirit keep in a Glaſs cloſe ſuſt with a Glu/s Stopple. For a Quart of this Menſtrua, Bijhop Billon gave Dr. Anthony Thirty Shilling!. VIII. Radicaie, Spirit of Vinegar, according to Mirg[^]rave, Take Spirit of Vinegar, or the former Radicated Vinegar, and Diſtil it a new from Sil Armoniack, fa will it be much more potent. Spirit of Vinegar attenuates, incides, dirculPes, reſepies, cools, andlus allthe Properties of Vinegar, but much more intenſe and ftong. It is uſed as a Mcnſtruum to perform Chymiral Extractions with. 'Pie Tereqinthinatedor Radicated Vinegar, is for the diſtblution of Srones of all forts, chiefly of Gems or Pretious S;ones, of which Crullius and Hartman nuke much mention; and it is uſed by P[^]Jfc/ywagainttDireaſes of the Stone, by giving ic in a proper or SpudficK Vehicle. Theſe Authors Qy, that it will diſtblive Flints and other Stones, without any Previous Calcination, and is alſo profitable for, mmy other uſes: Now if if Ms a Power of Diſtblving fuch hard Sublbnces without Calcination, it mult certainly luvé much more power to do the **Cfine**, after liich a Preparatory Operation of tie Fire. Dr. Antltenies Spirit of Vinegar, may without doubt have alt the fame Virtues and uſes with ortier Spirits, hut what he applied it to, was chiefly to make his Aknjhuum, with which he prepared his Aurum Patabile, rhat Medicine ſo much lam'd throughout aimolt the whole World.

L. *Wine Artificial.* Take Malaga Raſfins freed from their Stalks an hundred'Wright, fair Rain-Water 3-3 Gallons; put the boiling Water upon the Uifvns, ſtirring them well together, which let ſiaml 4S Hours or more, till the Water bat dr[^]ton forth ail the Swteteſſes and Stre'igth cut of the Ra[^]* fvs; then dr&K off theiVmer ft em the bruit into*

Wooden vat, where In it (land till it begr:s to ferment; Barrel it vp, keeping it upon the Ises till the Yermataion h ever, and the Wtneis obfoluely line, tobich then msy if you Jo phñjr, be Bottled up. This is not interior in Strength to any fvmw Wine, and much more pleatant, drinking a grtat (kal more Acute and Brisk. It has the Virtues or other frong Wines, and mry be drunk ordinarily as other Wines. Uyou pleafc, you may alter its White or ttle color, and make it ofa Red color, by putting into ic Alkanet-Roots, which will give it a Glorious Ked, and thereby mak'; it* much more taking to fome lore of People. When MaUgaRaifons are Cheap, orattheordinary Price, this Wine will (your Labour being fet alide)Icarcelly ifand you in Three Pence a Quart.

LI. Uippocrai, or Spiced Wine, Vinrnn Hippocratikum, I. Dr. Bates Hippocras. Take Ginger, Cloves, of each one Ounce, Cinnamon, Nutmegs, fteach too Ounces; Stunifo Wine or Canary, fix Quart*- , double refined Sugar 7 Pounds and a half, mixt with New Milk a Quitrt and half a Pint % let them fi.md 24 ilvuyi^ ilxn firain off, to which add one Limott thin flieed, and ttej tender Sprigs of Rosentaryj often palling u thrd Hippocrates's Sleeve, till it becomes char. I>ofe 3 or 4 Onnces in Languors or Paintings.]], The common Hippocras of the Shops. Take Ginger 3 Drams, Cloves, Nutmeg^ of each 1 Warns, Mace two Setup!, Pepper, Cardamoms of each a

; Cinntmen 6 Drams, Marjh- Mallow Seed, one O.vice: Canary, cr White Lisbon, or pure Red Port Wing 6 Quarts : Let all the hgredicnt be brmfed, and put into a thin Milk Cloth bag, mtb a Snne in it to make it fink, then put in the Wine, and hi all infufe for a Quarter of a Tear, then dram it off, and Bottle it up. Where Note, that fome boil the Spices in the Wine, which t heyfweeten with Double Refined Sugar, and then let it fifs thri a Hippocras Bag, Bottling it up afterward* I But if you twuld have this, or any other Liquor purely clear, you mufi ufe a Tripp/e Hippocras Bag, made of White Coiton or Flannel 1 Jo ahaf fctt p.-fs the firft Big will flay in the feconi, tniwhat paffts the fecond, tail/ Iiop in the third and laft :

*ler them fir, thai the Point or toner i>f the one may hang in the Mouth of the other, and the Corner or Point of the third and taf}, in the l&outh of the Cup or Veffel to receive the Wine. 111. Hippooas Extremporanec. Hippocras msde in an Inltanr.. Take white Tcpper a Dram, Cloves an Ounce, Nutmegs, Mace, Ginger, of each two Ounces-, Cinnamon B Ounces, Spins of Wine three Pints: the Ingredients being all fuffitientlybruifed, mix with the Spirit, and dtgefi 14 days cfofe flopt in a cold place, fidking the Veffel twice a day, tfeti prfts cut the Tinliure very hard: To the Magma orixcLS, dffuje frejh Spirit of Wine a Pint and a half, mix, digefi, andfbake as btfont for 14 other days, then prefs out the Tinliure very hard; put this Inner Tin&ure to the former, mix them, and let them fettle for a.or ~j days, then decant the clear, andfilter it thro" brownPapcr, which keep for ufe. Take of your intended Wine you will make your Hippocras of a Quart, of the aforefaid TinUure three large Spoonfuls, more or left, (as you would have it in Strength) mix them together, and you will have good Hippocras in a Moment. Where Note, That if the IVme be of it jelf harjh, it ought to be aferehmd Dulcified with Double Refined Sugar, by which it Kill be madir more grateful to ti>e Palate ; and then letting it ft and till ti is Pure and fine, it may be Bottled up. Dr. Bates ftySj that if you add White Pepper halt a Dram, Recipe, it will make the Compofirion more

v«JiitUI to the Stomach; ana tor Inch as love Perfumes, he frys you may add hall an Ounce ot of Musk Seed. Ml tibefe fveral Preparations are very Cordial, frengthen and fortify the Heart and Stomach, fupport the Animal an Powers, recreate the Spirits, dry up Hum and retrefh the Body over wtared with much Labour : They caufe Appetite and a good Digeftion, are good againft Fainting and Swooning, a TM* mirably expel Wind, wneier in ihe Sronadl tr Bowels, which trouble them with fowrc Belching^ Heart burnings, firipings, Colicks, and thelike.

LII. Gum of the Vine. The Gum which IU " our of the Vine of it fclf, (ticking to the Bag (which it emits in hot Climates, hut very rarely in ours) being taken from half a Dram to a UtiSi, difflTOD in White Pott, or Lisbon Wine, is « good u(e in the Strangury, and to expel l>n > Gravel, and Tarurous. Mucilage out of the uflnary PaffTages: Being bathed on theSkm, ir i^> away Scurtt; Morphew, Scabs, Tecrars, K^S t, and luch like Dftbrmities rhereot i asaf] the Leprous Scurf, if the places be fir It v: ?1^ with a Dilution of Nitre in Water or the WTM be diflwd in the faid Nitrated Water, and v> ufed. When the Green Branches of rhe Vine aw burnt, a Gummy Water will drop from their this heing laved, will perform the fame thi the aforefaid Gum, having one and the taint ure and Qualities. Thty fay, being mixed Oil and Liled, it willukeaway Hair, s Wares; this, tho' I know nothing ot by yet I much doubt it, becaule of its fife, a: multifipid Qualities.

LIII. Mae Lees. From the Lees of W Volatile Salt of Tartar may-be Diftilled, c traced alter this manner. Take Lees of dried with a gentle tore, put them ate « Earthen or Ckjt Retort, fo as to fill it "^^ third parts Jull. Pur it into a R ffffiff^" tr race, with a large Receiver: make at firjl * (mall tire, fo as to heat the Cornuie by * that the infipid flegm my be drawn fortin. Fumes or Vapors begin to arife, (rup^)' "•" out of the Receiver, and join it to the A* * V Retort again, Luting it well. Encreafe tbc*#** Degrees, till the Recipient is filled mtb &>" Clouds, continue the lire at that height, tiu'^ Recipient begins to cool, then incre<>ie the m ft the height, which continue Jo long till no m Vapors will afeend. Tie Vjfel being grow" «J* unlute the Receiver, and shake it well &\$),,, caufe the Volatile Salt which flicks to,t, i^H. the bottom. Then put all into a Bo/t-bcad *% long Neck, fitted with a proper head and a }*> Receiver, vibich Lute well m the Joints- £* y/ nto a Sand heat, with afoft orfmall hire, /" w~j he Volatile Sale afife, and flick to the head^1" jop of the Bolt-head. Take off this Head, aJfr, ply another in Us ftead, gather your Salt, ana JLi tt up immediately, for otherwife it mil diffofve into Liquor: Continue now the tire- continually gather up the Salt as you fe* j* When no more will anfe, you may utjlwz-tjrg. Siuamity t>f Liquor, and tl?en put out tne * ^ This Liquor it a quantity of ilegm, jot^m^ fome Volatile Salt, and may be called Spirit of Tartar, having the fame Virtues^ the Salt, and may be given from 8 Drops <? ' >fi ,i,ty proper Vehicle. You may alfb make tb* tile Salt ot Tartat after this manner. TaAt^ Lees what quantity you pleafe, Jepurate by u trig, and preffing the Wine contained in them, this Wine draw a very Subtil, Volatile, wwf^, nable Spirit, which refervi. The Magma

•tt, which will after.d next to this Vote,
 tile Sal' Where Note, that the Ref'tifiedLSpirit
 of Wine; is not abfolutely neceflary in this Work;
 but there is this in it, that by embracing Tome
 part of the Acid of the Lees, and taking it along
 with it in its Diftillation, it frees the Volatile Salt,
 fo is that you will have it in greater quantity,
 than otherwise without it. In thefe Operations,
 the Acid Subftance of the Juice of the Grape,
 unites it felt with a great part of the Volanle^lr,
 to make the Compofcion of the Tartar: Whence
 it is that Tirtrr yields not fomuch Vdattk•Salt
 as the Xoih Lett at the Ivotom of the Cask do,
 which mightily abound in a Volatile Salt, and a
 ISarJi Spirit. And henceic is, that the Vo-
 latifSst e/ltirtar,feHaoreeafiW, and more plenti-
 fully drawn from the Lees, than from the more
 Solid, and Stony Tartar The Virtues. This
 VoJik Salt ofT.:n.ir ii fold to punfie the whole
 Mats of Blood, both by Sweat and Urine, and
 fometimes by Stool, whereby the Mifs of Putre-
 taave llumors and Matter is carried otr. It is
 eood againft the Palfie, Apoplexy, Epilepfy, Le-
 tharf, and other like Difeafes of Head, Bratu
 and Nerves-, jtfifts all intermitting Fevers, chiefly
 Tertians and Quartans, opens all Obtruaions of
 Stomach, Liver, Spleen, Mefentery Gall, Reins
 and Womb-, cures Cachexies, Droplies, jaundice,
 Scurvy and othei ftubborn Difeafes. Dofe from
 10 Grains ro a Scruple, in any fit Vehicle. ACa-
 taplafm of Wine Lees. It is made by mixing them
 with Rye flower or Meal, till they come to a Con-
 Jijency. Being applyed, it is accounted an excel-
 len' Uling to e-ate the pains of the Gout.

LIV. Tartjr or Argol. It is that hard part of
 trie Lees of Wine, which mooting it felt to the
 fides of the Cask, flicks to the fame and becomes
 hard almoll like a Stone. That which is taken
 frr.m Rheniffi, and other White Wines, rs rhe belt
 tobc prepared into Medicines: Butthe RedTirtar,
 which proceeds from Red Wines, as it yields no-
 thinenear ib much Salt, fo it is much inferior to
 the Former, but ferns well enough feft««, in
 fixinr- their Colors, and for GollSimths to boil
 their Silver in to whiten it. T)>c White Tarter is
 many times given unprepared, being reduced into
 a Fine and Subtil Pouder, from 2 Drams to half
 an Ounce, in half a Pint or more ot boiling hot
 Water-Giud It purges the Bowels, and cleanses
 them, as alto ihe Urinary parrs, of Slimy and
 Watery Humors, and is profitable againft Cachex-
 ies Dopfies, Obftuaions of the Reins, Bladder
 and Womb, be. But this Crude unprepared Tar.

tar is feldom given, For that the PurifiedT<irtar,
 as alib the Cream of Tartar, is common enough
 to be had, and at an carle price : Purified Tartar
 is thus made. Take pure white Cryjfal/ine Tartar
 i o Pounds, heat it into fine Ponder, and dijfrw
 it in 6 Gallons of boiling Spring Water, and conti-
 nue the boiling till it is dijfdved; then frefently
 jirairt !)ot thro' an Httprocas B/E - The drained
 Liquor continually fir round with a Wooden Slice,
 till it is cold, then'let it reft, and.in 2 or J hours
 after, the pure fine Tartar will fin A to the bottom
 of the Vcjicl, in form of an impalpable and fhining
 white PouJer, vtbtb « Tartar Purified, and is
 equal with either Cream or Cryftals of Tartar.
 The Virtues, Dofe and Ufe is as the former, and
 the fame with Cream or Cryftah of Tartar nest
 following. See our Sep/qjunt, or Druggifls.
 Shop, lib. 2. cap. 10.

LV. Cream and Cryftah of Tartar. Hiffohc
 vnhji quantity of White Tartar you pleafe, in a large
 qx.ir.tity of boiling Water, wbbdvne, ptfs it thro'
 an Hippocras Bag, into a large Earthen V(fl(l^ or
 Bill Glafs undetneath: Evaporate about half away,
 and fit it to Ctytallize for 2 or ^ dayt, (faving
 what fmms a top, as well at the Cryjials ;) Eva-
 por.ue again half avmy, and Jet it to Cryftallisc,
 Joing this folong ti/you have gotten all the Tartar.
 What fwms on the top it called Cremor Tartati,
 The Cream of Tartar; and that which fhoots on
 the fides and bottom, is catted the Ciyifate of Tartar.
 Where Note, that in diffolving and boiling the
 Turur in the Water, it ought EO be done rather
 in an Farthen Pot, than in an Iron one, left it
 Ihould draw a Tincture from rhe lion. V?e Vir-
 rittes of both theft; Preparations ate one and the
 lame, and the fame with the Purified Tartar in
 the former Setho/t, being Aperitive, Purgative,
 good for CacheEiical, Hydropical and Afthmatick
 tWbns; and excellent ugalnit Tertian and Quar-
 tan Agues. The Dole is from 2 Drams to half an
 Ouoce, more or left, which being reduced to very
 fine Pouder, ought to be given in the Vehicle boil-
 ing hot, that it may diflbtve therein, and not tall
 to the bottom.

LVI Tartar Emetiek. Take Cream or Cryftah
 of Tartar in fine Pouder, Crocus Metallorum in
 Subtil Pouder, of each 4 Ounces, nix them, and
 ditfolve in boiling Water, then filter, and evaporate
 to drynefs. It is the belt of all Emeticks, Operat-
 ing with much Gentleneff and Safety, Purging
 both upwards and downwards, and may be given
 from gr. ij. to viij. It may be given in hot
 Water-Gruel, or in fome Conferve or Kieftuary,
 or the Pulp of a roasted Apple, wafhing it down
 with a little warm Poflec-Drink, or Water-Gruel.
 It is good againft Frenzy, Madnefs, Carus, Le-
 thargy, F.pilepfy, Vertigo, Melancholy, Sicknels
 and Wind in the Stomacj, pains of the Sides,
 Jaundice, Dropiie, Gout, Rhetimatiffm, Putrid
 and Malign Fevers, Tertian and Quartan Agues;
 invertebrate Obftu&ions of Liver, Spleen, Reins,
 Womb and Mefentery •, and is profitable againft a Dyfen-
 tery, and rhe malignity of the Plague or Peftiience
 it left; Emetic^ Tartar may be made by ieveral
 other Preftripts, as you may fee more at large in
 our Seplefium, or Druggijs Shop, lib. 2. cap. 10.
 feti, IS, & id. and in OurPharm.Bateana,lib. 1.
 cap. 10. JeU. 48. ro which we refer you.

LVH. Spirit of Tartar. Take White Tartar
 in Pouder as much as you pleafe, put it into,; large
 Earthen Retort Luted all aver, jo large as that n
 may not fill it above half or -} parts full, which
 place in a dofe Furnace of Reverberation •. flake
 firft a gentle tire, which continue fo hng tillnearly

LXIL Oleum Tarteri per deliquium: SrL
 Tarrar by Diflblution. Put pure Salt of T>TM
 upon a Polift Marble, which place jnelvitg tr
 Cellar, over an Earthen Glased Pot or P<i>>i
 broad Glajs Veffcl, in a mufi Cellar, jo «"
 Z Salt dijtblve into an Oil, and fall down ***Veg
 Receiver. Or put it into a Hippocras Bag^ ar.
 hang up in a moijs Cellar, with a Clap, or E f'.
 Glafs'd Receiver under Ir, to receive the dnpf*
 Oil, which filter and b.viperate to a CottfipTM
 But if you would have immediately Oil of ^TM
 per deliquium, then put one Ounce of ?TM
 white Salt of Tartar, into two Ounces of? ^
 and it wilt alt diflolve into Liquor, which >J)
 pteafe, you may hiter thro" brown Paper, eMTM
 for ufe. k has all the Virtues of theSjlc,
 may bo given trom half a Dram to a Dram>
 any proper Liquor.

LXIII. Sal Tartan foliatum j Foliated Sa>
 Tartar. Ta&e Pure Salt of Tartar at much tt)

pitcafe, put it into a largt Glaft Cucurbit, and gently pour on it as fiiwh Spirit of Vinegar as the Salt an fuck up, fo that they may befofiated with eaet other, and no Effervefoeny at all remains, fo will the Work be done at once: Some part of we
 ^Humidity of the Spirit, evaporate by* gentle SanJ
 Inheat, fo mllabl.uk jubjUnce remain at bottom of
 ^theGlafo. Being cold, diffolve.it in good Spirit of
 Wme, mter thro* brown Paper, and in a Cla/s
 Cucurbit in a Sand heat, Evaporate to drynefs.
 Dijolve again in Spirit of Wine, Filler*!/? and
 Evaporate as before. V>h Work repeat, till the
 Salt is white dry, and in dijlinS Leaves at bottom
 of the reflet. It is of fingular ufe to purihe or
 cleane the whole Mais of Blond and Humors,
 and ro refblve and carry off all manner oi Tartarous
 Mucilage, (which isthecaufeot many Uiornick
 and rebellious Difeafes,) whether in the Vif-
 eera, or any other parts of rbe body. Ir keeps
 the Belly Ibiubl-, and purges by Urine all the
 Filth of the Reins, Ure:ers and Bladder. Dole
 from io Grains to 20, in Broth, or some other
 proper Vehicle. - ! . ; . -

LXIV. *CremorTartari Solubilif -iSdabk* Cream
 of Tartar. Take Cream of Tartar, diffolve it in a
 Sufficient quantity of tcarm or boiling^ Waite-, then
 in Oil of Tartar per deliquiumj till the
 Ebullition ceafes, after which Evaporate tbo humi-
 dity to dry/aft. It will readily diffolve in any
 ivjrm Broth, Gruel, or Liqaor, and may be given
 from half a Dram to a Dram. Ic gently looits
 the Belly, abates the heat of Fevcts, itrengthens
 the Stomach, and opens Obfruttions.

LXV *Soluble Emetick Tartar.* Take of the
 former Soluble Cremor Tartari, Crocus Metailo-
 rum levigated, of each two Ounces; Spring Water
 three Pitts, digcjl a Week, or in a gentle Sand
 hem often Jhaking the Clafs; then boil gently for
 an hour or more, after which Filtrate, and Evapo-
 rate 10 drynefs. This has all the Virtues of the
 former Emetick Tartar, but is more fit for ufe in
 many Paridits, becaufe it will readily Aiffolve in
 any cold.Liquor* and may be given in the Gme
 manner and dofe..

LXVI. *Sal Tartari Vitriolatum* ; Salt of Tartar
 VittioEated- Take of the aforefaid Oil of Tartar
 per deliquium, a Pound, more or left; dropuponit
 Spirit (or Oil) of Vitriol or Sulphur, fo much till it
 makesnonoijt; when the Ebullition ceatf, Evapo-
 rate with a gentle heat to drynefs. It purges very
 well in one or two Dnms, with much eale, and
 cteanles the Body admirably. It kills Worms in
 Children, being given from 10 Grains to a Scuple
 or more, in warm Broth or Cirucl: It cleanies and
 (lengthens the Stomach, cuts and diflblves tough
 and clammy humors in the Vifcera -, ciufe-s a good
 Apperite and Digeftion, quenches Thirtt, and ex-
 tinKuiibes the heat of the molt burning and ma-
 lien Fevers; diflblves Tartar in the Body, and
 opens all manne of Obftiuftions-, it provokes the
 Terms, and is good against the Rickets in Cb.il.
 dren and Green Sicknefs in Virgins ; and is laid
 to cure alfo Tertian and Quartan Agues.

LXVII. *Sal Tartari Volatile-*, Volatile Salt of
 Tartar. Take white Tartar Calrin'd to blacknefs,
 or rather fommat more, viz. till it is grey, three
 Pounds • p"t >* mo a &reat iroa ^ol_> U pQ" e!
 put fair Water, fo much as to over-top it an Inch or

 for Vernu-nations; fiill (Irezcng in more Ponder of
 Crude Tartar, not too much at a time, left the Ebu-
 lition (hould runwer the fide t of the firfr!. When
 you fee the Ebullition irafet, you mult ceafe to
 jireui in any more Crude Pstatder of Tartar. Pur
 this whale matter into a very large Irpn Gv/ttd, toitb
 a very long Keck, which cover with itt, head and
 Receiver.- Lute toeil ike Junctures, and Dilfii in
 a Sand heat, jirfi with a very gem Ic tue, (apply-
 ing continually cold wet Cloths about the UoxrJ,
 to Jtcp a hale the boiling of the waite) at lafi
 augment the tire, fo will the Folanlc Sail afend-
 The Difilled Liquor refiify again, at much us is
 fijfor the Separation of the Salt, ishichyoit will have
 in Wbiusejs and Purity. TILS Volatilization is
 maclb by Te.iibn of she tei mentation, made by mix-
 ing ol Crude Tartar with the fixed bait of Tariat,
 whereby a peruft Separation or the Salt is made,
 fas well from the Calcin'd as Crude pans) and fo
 Volatiliz'd; that after Diiiillation t:ere is not to
 be tuund in the faces any Salt at all, either Vota-
 tileorFixed. Buc there isanothrtwayot'ruking
 this Volatile Salt of Tartar, from the pure fixed
 Salt thus ; Take pure fine Salt of Tartar s Pounds,
 of the black difilled Oil of Tartar a Pound, mix
 them well together, and put them into a G.'jfs lic-
 lort, which Jiop very clo/e^ and place ii in a gentle
 Sand heal for 6 Months -, then open the Mouth,
 and fix thereto a large Receiver well Luted, and
 place it in a Sand beat. Dijfil with a gradual
 Fire,fo mill a great quantity of Volatile Salt come
 forth, /melting like Urne, but while and Cryftat'
 line, of a very penetrating Smell, with a Liquor
 tifo, which contains in it a fmall quantity of she
 fome Salt and a little Oil, almoft as penetrating as
 jhe white Crystalline Salt. In thisPrepatation, by
 reafon oi the long Digeftion, there is a ltrecc
 Fermentation between the Difilltd Oil and the
 Fixed Salt; and tho' the faid Oil contains much
 Volatile Salt, yet rhe Volatile Salt here afcending
 proceeds chiefly from the; Fixed Salt of Tartar it
 felf, which in this Operation quitting its Chains
 immediately becomes Volatile, and manUefts ir
 Jclr with all the Properties and Qualities of a Vo-
 latile Salt. The reafon is, becaufe the Volatile
 Salt here afcending, is in a very great quantity,
 and much more than the weight of the Oil, and
 the Faces remaining (which are only a black Oily
 Coal) weigh very much le(s than the Salt if Tartar
 made ufe of The Virtues, Ufesand Doiesoitthis
 Volatile Salt, prepared by either of thefe ways,
 are fully and exatly the fame, with Volatile Salt
 extra&ed from ihe Lees of Wine, at Secf. LIII,
 aforegoing.

LXVIII. *Liquor of Tartar.* TakeCalcin'dTar-
 iar, andCommonSalt, of each a Pound; fair Water
 a Quarts -, mix, and digejt in a gentle Sand heat
 for a W&k, firrmg it every day ; ftrain, and add
 thereto pure^WhiteTartar in fine Pouder, a Pound;
 digejt itt a moderate Sand heat for a Month ; then
 ftrain out thro' a Hippocras Bag, and ajterwards
 filter thejirained out Liquor thro' a brown Paper
 and keep it for ufe. It will gently purge tha
 Belly of Vifcous and Watery humois, being given
 from one Spoonful to two, (moreorlef's) in Broth,
 Gruel, or Rhenifh Wine and Mead. It excellen-
 tly opens all Obtructions oi' Liver, Spleen, Mefert-
 tery, Reins and Womb, provokes Urine, anddean-
 fes the Urinary parisj isgoodagjintMelancholv
 the Scurvy, Dropfie, Jaundice, Gour, ObfrucSi*
 ons of the Terms, Vapors and Giddinels of the
 Head, GreenSicknefs, cSV.

LXXIX. *f* *of* *f* *Tartar Cap* *mod.* *ExirsSa*
fine rebite Salt e>J Tartar jrem the Caput Mottu-

tf litur, *jr Sefi*. LVH. WLVIII. *ofa-egnwg*,
vibkb mix with the Jaid l'rgm, Spirit and Oil:
digeft in Balneo, in a e&ft Veffel, lilt the Salt h
dijfofod; then xzjie Ba/t tberrofwith dry Cfay,
and diftil them by Retort, in a naked Fire-, and ail
the Salt mill come over with the Spirit and Oil,
perfectly united to the Spirit. from tobith fparate
the tat id Oil according 10 Art. It has all the Virt-
ues of the former Spirit of Tartar (at Soft. LVII.
above.) exalted, and thetore is much more pow-
erful, but may be given in the lame Dofe, and
after the fame manner.

LXXX. *Diatejjaro/t*, *Punch*, or a Mixture of
four things. *Take choke Brandy, juir Water, of*
each a fguart •, pure Lime Juice a Putt -r, Double
Refitfd Sugar a Pound; mix altogether^ and fir
the Mixture till the Sugar it M diffolved. For a
Conclufion to the Fruit of the line, or the Juice
of the Grape, we thought it fitting to add this
wonderful Reviving Cordial, ihis CharmingLiquor
of Confolation, which gives tdit-t to the Miiirable,
removes Grief, chears the Sorrowful, elevates the
Deiefted, gives admirable fjtUration to the
Difcomented, and a plenary Rcleafe to the Slave,
*of what Kindred or Nation fo (.vet i making **etm***
one teem happy to himfelf, who has the free
Liberty of drinking it plentifully, and oft as he
thinks it convenient. It truly cheats the Heart,
revives the Spirits, Irrengchens Univerfal Nature,
and makes the Patient Pk-afant and Sprightly, if
moderately taken. I know it to be a true Refto-
rative, and ro have Cured fuch as have been in
deep Conrumprions, by drinking it every Day for
about ?, 6, or 7 Months together, half a Pint
every Morning fafting, eating with it a White
Ship Bbker, toaftcd, and fbaked in the fame;
half a Pint half an Hour before Dinner, half a
Pint about <; in the Afrernoorij and half a Pint at
going to Bed. This Quantiry may do weli enough
tor Men, but the VemdeSex, may (ifthey pleafc)
a little diminilri the Dofe, as their Keafon and
Experience (hall dirctt them.

femble the longer fort of Crowfoot Leaves, ^{an} an Anemone Le. if] but thoſe which I fan <utfLe<r thered with my own Hands, mere jagged, and fha-
 ped more like a Vervain-Leaf, fttifitii "Jtti the w kr. EctKetx rteſe Efeves riſe up fevrrai fmalſt Sttilfa, with like Leaves, but hffer upon tlym, twhkb grow Ujfer and tcjfer up to their tops, vihic have Ffaaers #, ><?# tbrm, ef*p*U fwp/s evAr, v?rf like is form 11 our cemmon Garden kinds, but n t fa deep Jkaded, but Jemc of them of a pale Purph, and fonts of a mhitijb yelleta, and fame of it <efc lafi with a little redd'ifimeſs towards the Kttom ef their Leaves ; fonte of tbcfc flowers had a very fair:i or Languid Swell of our cmnoti GiiiV:~i Yi-
 otters, and others had m Smell at till: The- Stllii bore alfo round Heads or Se.eJ Piffrrh, (which contained the Seed) like to the Seed Veffek .N Violets.

VII. The Places. The firſt, and f<cond grow in Gardens •, the third Wild in Fietds mid Wbodt, under Hsdge Sides-, the fourth grows wild in warm Climates, as Spain, It;il\ Greece, Afu, Kc. but with us in Gardens -, the fifth grows Wild in ieveral pans of Avierica. I found it growing plentifully in South Carolina, in the Woods not tat from Charles Town.

IX. The Times. They all Flower in March, and if the Seaſon is mild, ſometimes earlier. The Double Violets Flower later than the Single, and hold their Flowers longer ; and fcme of them have been obſerved to Flower again in Autumn, if the Weather be temperate and mild.

X- Obſervat. The Culture of the Single Garden fietet, is what eieiy body knows, which delights it ielf in fhady places, and fuch as are Jealt expoſed to the Sun. The Double Violet grows in any fort of Ground, upon the edges oi Borders in Gardens, which when it blows, its Flower is very agreeable to both Eye and Smell; To make it tltive, it ought to be Re-planEed every three Years, and fo kept clear irons Weeds, rvhich is all the trouble it requires.

XI. The Qualities. Garden Violets while freſh and green, are cold and moilt in the firſt degree, Aperitive, and gently Abterfive, or opening the Bowels by Purging.

XII. T} >e Specification. Violets cool the heac of Fevers, allay Inſiamattons in the Throat and Lungs, are profitable in the beginning of a Quint's and Pleuriſie, and are laid to help the Falling-Sickneis in Children.

XIII. The Preparations. You may have therefrom, 1. A Juice both of the Leaves and blowers. 2. An Infuſion of the Flowers. 3- A Syrup of The ilotaers. 4. A Ponder cf the Leaves. •. APonder of the blowers. 6. A Ponder of the Seed. 7. ACataplaſm of the Leaves, *s alfo of the Flowers of the White Violet. 8. A Julep. 9. Oil of Violets.

The Virtues.

XIV. The Juices. 1. Of the Leaves. It cools any heat or diftemperature of the Body, whether inward or ourward ; abates Inſlamations itt the Eyes, alfo in the Womb, and in the Fundament, by being uſed as a Topick. And being drank to 2, 3, or 4 Ounces, it gently opens and putges the Bowels, and is good againit Quirifies aodrJamfits. 2. Juiee of the Viewers. It has the lame Virtues, and is good againit the Pliurifie and Obſtructions of the Lungs, hot and fliarp Rheums, hoarfneis and wheezing.

XV. *The Infuswn of the irlorcerf, fresh or dry* I: h;is all the former Virtue, but not full out fit effectual, and therefore may be drank to half Pint or more. Being made pleafant with tL Syrup of Violets, and (harp with a little Oil of Sulphur, it isan excellent Gargle fur a fore Throat, is profitable again!* a Quinfie and Pleurifie, and cures the molt malignnc burning Fever.

XVI. *The Syrup of the Viewers.* It is mad i. With the Juice of the Flowers thus, *'lah Juice of the Viewers of Violets a \$>uttrt; doable refined Sugar 4 Peunds, mix and melt in the heat of a Baih without boiling,* h cools, moitens, allays the heat of Fevers, quenches Thirft, comforts the Stomach, chears the Heart, and reQfts Putreraftion. Dofe from one to two Ounces, given to four Ounces, u purges Choler admirably, a. *U'ub an Infufion in Water. Take fresh Hewers if Violets a Found, fair Water boiling hat a Quart; Jlop them cife up in a Gla's Malrafs or Vefica forma day, then ffraim out by preffing \ in the /trained Liquor two Founds, dijjblVif of fioub/ir Refined Sugar, four Founds, by the bet if d Bath, and taking off the Scum, make it into a Syrup wilwut Boiling.* It hasalj the former Virtues, but lei's powerful, and therefore may he given in double the quantity. Either of thefe Syrups will be much moreeffe&nal in hot, burning* malign and peftilemial Severe, it (hey bs made a little Acid (when given) with fome iew Drops of the Spirits or Oils if Sulphur or Vitriol^ by which they will bemsJtof a Claret Wine color, and of a fine rart Reliff, p!« Pabte, and fo more potent in cooling all rmur.il beats, and quenching ThirS, EJV.

XVII. *TJK F^ider of tit Leaves.* Taken to 3 Dram in Veal Broth, or White Wine Muird, it and purges die Body

SCSSHSS

XVIII. *The Powder of the PurpUViolet F/owen.* Jiiven to a Dram as the former, it has the fame Virtues and Effects, but Purges not ahogctber (b In&igly : It U alfo faid io be good agjintt the Quinhe, and the Falling Sicknds in Children, ef pttiaUy in the hegimmg of the Difeale.

XIX. *The Ponder of the Seel* It is good againft the Stinging of Scorpions, is Pector.il and good againft Fevers, Qjiinifies, Pleurifios, and Epikpiy i heat and tcalding of Urine, and all pains in che Reins and Back, the Strangury, or OHTm tt ons of the Urinary parts. Dole one Dram in anir convenient Dmrrick, and cooling Vehicle.

XX. *The Qataplafm.* It is made of the green Learn, being fryed with Yolks of Kiggs. It being appWed, eales pains, and diftulTes Swellings in the tmid-imenr, and in a fhorc time is faid to cure TL M:Ki e with Oii *fty", Kdtfcuffes rnmorsj abates Inflammations in any part, andeuius pains; of the Head caufed ihro' want of Sleep.

XXI. *Mfum rtolarum,* Julep of Violets. *ll « wuh of the Water or htfufwn of Violet Ylowers and Sugar, a Found rf Double Refined Sugar to two Quart, of the Water or Infufwn.* The Virtues are the fame with the Syrup, and may be ufed to alltbefime pupj^fe and intentions,

AXH. *Oleum VuUama.* Oil of Violets. *Take lurfite Violet Homers, tebieb brui/e M a Stone mortar atib a woen Pefile, \Quaeesl, Oil Om-pbacmejcvsraltimeswi/hed, 3 Pounds, mix. ani expofe them m a Ghfs clofejht, to hot Sun for a We-eA, JbrAing them every day •, then boil them gentry in a R.tb, prr/i them out, and put ixfrtb tHew crSi dving m l,ke manner, which repeat a third t,me and keep ,be Oil upon three Pounds vf Juice-rj I wlett, Jbutug then, tether twice a day for a Month at /raj). h is CooLing Jrd, Mofiffing,*

Opening and Ancdyn, good againlt In Phlegmon^ burning Fevers, Tleaid . and Airopbks -, it al'j ejfc pains of the Brdt and Lungs.

C H A P. DCCXXVI.

0/VIOLETS Com and Domes.

LTT* UE ftwer. Tk>' thefe are propel/ 1 Violets, nor in the lctit o! kin to th yet fince Cuftom has obtain'd that they ihovii he io called, we were obliged to rank them in OJW oi the Alphabet, and in this place where fOi R O " hnd them. The firft l luppole was unknown » the Ancient Greeks and Ltunc;. zn& thtreif^A ^ have no Greek, nor Ancient Latine Nam- J? them. The firft is called in Latine, Kola " " w VhU Segettm; Catyephiilm Segctim; in En Corn Jfiolrr, or Vmm Uoking • Glafa by Ge The lecond is called in Latine, Viola AUra and in Engliff), Dantei Violet.

II. *The Kinds,* qfthefirft or Corn there are two forts, viz. 1. *Viola arvenfc* Λ>don<ii, *Viola pentsgoma major* Tabernm<Mf*smj> if *Viola. Scgctum major-*, *Onobrycbis C Cnttpff^* arvenfis *Lugduncsfii*, The greater Coin »-o*! 1- *Viola arvenfis minor*, *Vtola Segeiitm >nti>^0)** The ldFer Corn Violet

The Descriptions.

Firjl, Of the CORN-VIOLETS.

IV. The firft, or *Viola Segetum major*, *penragonia major*, *Speculum Veneris* majus, *Greater Corn Violet.* *Its Root is /mail, tld snd Annual, abkb fends fortb feverd , weak, trailing Stalks lying on the Ground, and subdivided from every Joint into Bi fi> j'l, ntfully, that one Plant growing in a Garden, vcould hardly be covered by a V " " • • the Branches are thck fer for. tvith /small and /omewhat long (lightly denied, or rather waved en the c^-- at every Leaf from the middle of the St.il* f uards, comes fortb a timer, of the fcg*>d^ V £ ro-Pextr, Jo (that five hundred fatten mil be Jeen oprn a once, which it indeed a*

<£.!) fet in a fine pointed green Husk, of a fair purplish blew color, made of one whole Leaf plaited into fwe round painted ends, white at the

Violet Corn Greater.

ttmn, to'th a white Pointel in the middle, cking up every Night, and opening in the Day rime only; the Seed is small and yellow, and contained in small long Heads.

V. The fecond, or *Viola Segctum minor*, *Speculum Veneris minus*, Codded or finaH Corn Violet. Its Root is small and Annual, also not much unlike the former, which fends up Stales more upright, like unto the little Cencory, with fewer Branches, more harjb or rough also in handling. The Leaves are like unto the former, but something left. At every Joint almost, come forth two or three Flowers, fianiing at the ends of long Cads, like JW/O Lyfimachia Stliquofoa, of the fame fashion and color at the former, but so small as fix Eye of a little Bird, never rifing above the Husk it Jiands in; end not but in the heat of the day to be feen, which then only lays it self open. The Seed is small and yellow also as the former.

* VI. *The Places.* The first grows in Corn-fields, between Greenbith and Dartfirdm Kent; as also in the Corn-fields about Lilly, a Town in the furtherrooft parts of Hartfordshire, towards Bedford. -, and for its plealant Apeft, is also brought into, and Planted in Gardens. The fecond is found about Hatfield, in hartfordfbire, and in several other places of this Land, Parkinson fays, it is much more frequent than the other.

VII. *The Times.* They both Hower in June and July, even to the end of Auguf, the Seed ripening in the mean time.

Secondly, Of the DAMES-VIOLETS.

VIII. The first, or Common Single FloiverJ Dames Violets. Its Root is wholly nmpofed of Strings or Fibres, which abide many Years, jeniisg vp fresh Stalks every Tear, the Lemcs abiding all the Winter. Us Leaves are broadrr, greener, and harper pointed than the Stack GiliihVwers, and a little indented about the edges. The Stlit is about tvisticct high, bearingitur.ygreen Leaves upon them, jsmaller than theft at the bittern, and branched at the top, bearing many Wooers in fashon much like to thsfe of Steck-G ill (Mowers, conjifing of four Leaves in like memeri, but not

Violet Dames, Single Common.

fo large, of a faint purplish colorin fame, and in others white, having a pretty fwcet Smell, especially towards Nigft, (whence came as fs fuppofed the frame Hepperis.) but in the Day time little or none all, After the flowers are pa/, come small, long, and round Pods, in which are contained two rows of small and long black Seed.

IX. The fecond, or Hungarian Dames Violets. hs Root is fibrous, and its Leaves very like fix fanner, but fmcoier and thicker, and net at all cut in or indented about the edges. The flowers are like the former also, but of a dull pale color, turning themfelves, and feldom lying plain open, having many Purple Veins and Streaks, running tbrf the Leaves of the Viewers, of little or no Smell in the Day time, but of J very facet Scent in the Evening and Morning. The Seed is like also, but a little browner,

X. The third, or DoubtcWhueDamesViolets. It grows not fo great in any part thereof, nor fo high at the Single does, extent in the JKJKWX, which

being vrry thick of Leaver, of a pure abite-
 >lor, and many jlanding in >: (Suffer, Jmccter, iljo
 !. I n i h e G i rden S i ngl e Kind, and hag tr abiding,
 caufe i to lobe had in fme efleem. its Leeoes are
 Something leffer, anJ of a frefber green color, Rule
 or n-thing Jgipfi about the edges, and more tender;
 but its branches art more plentiful, ani mere
 €d(ie is be ffpit to be Planted again, than tbsfe of
 the Single Kind, bat gives n»Sted, at manyoiher
 Double Flomer'd Plants do in like manner. It is
 alfo more tender to be kept in Winter time than the
 Single Kind.

XL Toe fourth, or Double Purple Dimes
 Violets. Tffefe differ little or nothing from the
 former, faving in the coh of the Flowert, which
 in this H ofdjine p.ile Purplifb color, and not full
 our fo double a* they, nor jo many cluttering is-
 get her.

XII. The Places. They all grow in Gardens
 for Ornament fake in a great meafure -, and the
 two Double Kinds in many Gardens in the Weft
 parts of Kng.'ani.

Xm. The Times. They all Flower in May,
 June, and July chiefly; and the Whue Double
 longeft in Flower, if it grows not too much in
 the Sun.

XIV. AJ to the Qualitiu^ Specification, Prepa-
 rations it/id Virtues of thdi; Cera and Dames Via-
 kts^ Aurhoisarctorallyiilent *, nor have we lea rn'd
 any thing of them by Experience : yet we did not
 think it fit dtat they fhouki want a place in this
 Oar Herbal. Since the molt General thrifts, and
 all Lovers of Flowers, ibr their Beauty lake, al-
 low them a room in their Gardens.

CHAP. DCCXXVII.

O/ V I P E R S Grafs.

i. **T**HE Kjmes. It has no Arabick nor Greek
 Names that we know of, nor any Ancient
 Latin Name, being a Plant of modern invention,
 and therefore is called by our modern Phyliciaiis,
Serpentarij, *Viperaria*, *viperina*, (from its Virtues
 in curing the Bitings of that Serpent) and *Scorzo-
 fitra*, (from the *Spasutit*^ being equivalent to
Kiperoriu) and in Englith *VipersGrafs*, and alfo
Scorzonera.

II. *TlicKintis*. Authors make 7,8 or 9 kinds, but
 moft of them being perfeft Strangers to us, and
 nor ro be feen in *England* in Ages^ we fhall only
 difcourfe here of fuch as arc Planred and Nurlt
 up in our Gardens, which arc the ibur following,
 viz. 1. *Scorzonera*, *Jeu VipcrariaStiifpanica* ma-
 yor, The Grearer Spaniiah Vipers Grafs. 3. *Scn-
 zoner a minor Pannonich purpurea*, Hungarian Pur-
 ple Flower'd Vipers Grals. ?. *Scorzonera major*
Ptnnamta buifitu. The Greater Hungarian broad
 leav'd Vipers Grafs, i. *Scorxoncra minima radice*
tuberofo Hifpanica, The finalleii Spaniiah Vipers
 Grafs with a Tuberofo Root.

The Defcriptiotis.

DL The firft, or Greater Spfnifh Vipers Grafs.
 Its Rwf it long, thick and round, brittle and black,
 with a certain roughneft on the outfide, but very
 white witbin, yielding when broken, a ftulky U

quor, at every other part of ibe Plant doet I
 yet the IXtxt more than any other part; and
 it abides many Tears without decay. It batjrjra,
 long l.e.rvcs, not broad, nor yet very aiirruSti^{IVTM}
 and crumpled on tbt eigrs, and fomcumct unevenly
 indented cr waved on the edges, of a bleixift &^{1c1n}
 color. From among which, njet up one Stalk, and
 no more for the moj) part, two Feet high, or there-
 abouts, paving here and there fame narrower kn-
 Leaves therevtt than ihcfc below. The top of tot
 Stalk branches it Jc/f forth into other parts, every
 one bearing a long jcaly Head, from out of the top
 whereof, rifes a fair, large, double favr, P)*
 pale yellow color, much like tothcWmcrc of Yellow
 Goats Bend, but a link left; tobich being P»J£
 the Seed comes, being long, vbtitiff and^{rou^}
 ctoted in much Down, and among them many « « r
 long fmooth Seeds, which are limber ani j»^{ft}
 lefs, but are all carried away with the Win*

IV. The fecond, or Purple Hungarian
 Grafs. Us Root it like tte former, and it
 long and narrow Leaves, of the fame breadth great-
 ly more with the former. The brach rifes up to be
 about a foot and half high, with a few juch
 Leaves, but Jberter thereon, fprcadmg out
 top into 2 or % parts, bearing on each of them
 Flower f*Jhion'd like the former, and P»J£^{of}
 the like fcaly Knob or Head, but of * «/l
 purple color, and not fully fo large, TMict> . nj
 the fmeetefl Smell of any of the Species, crW*
 of Vipers-Giafs, not much inferior to the ntoft^{dc n}
 cate Perfume.

V. The third, or Greateft Hungarian V
 Leav'd Vipers-Grafs. Its Root « long and £^{e^}

Vipers Grafs } *Flower'd*

time in the Garden together.

VI The fourth, or fimleft Spamlh Vipeis-
Gtafs' with a Tukrole Roor. Its Root it at thick
a; three Vingert or more, but fiorter than the oilier
Kinds, lubcrefe at the end, bUckijh without^ and
ubhtfh within, yielding but little Milk when it it
broken, but abidct the Winter almoft as wellas any
of the former. It has divers Leaves very Jmall
and narrow, lying o» the Ground, fome Roots gt-
ine fmoPth Leaves, and others crumpled or wa-
ZUZ the edges. | V * - \$ or Stfstrt very
(mall, fearcely rifing butt a loot b,gb, bearing a
lone U>tI faty H*d* * * andi and f *
Jfcjillm Mover, in ubicb grtm /matter black
Seeds, andenehfid in M lefir Down than in
any of the others.

VII. The fixes. The Native places of thefe
PEants' are declared in their Tides or Names, but
now they are made Free Denizons of our Country,
and are found nurft up, and growing in many of
our Gardens.

VIII. T/v Times. They all Flower from the
btginning of May, and their Seed is ripe before
the end of Jtmti, after which, the Stalks wither
and dye away, new Springing from the Root again
before Winter.

IX- The Qualities. They are temperate in re-
pfehf of heat or cold, drinei'sormoifturei Cordial
or Caidiack, and Aleiipharmick, or leCfteis of

X. T)K Specification. As they are faid to
ttingthen the Heart and Vital Spirits, fo alio Mo-
nardus lays they area Counter Poiibn, and harebeen
found 10 cure the bitings of Vipers, or other like
Venomous Sarpems.

XI The preparations. 1. The Boiled, Roalled,
or Baked Roots. 2. The Liquid Juice. 3. An
OMmlmick. 4. A Condite or Prefirvc. y. A
filled Water.

The Virtues.

XII The Boiled, Rifled, or Bdked Roots. They
are fweet in Taft, almoft like a Parfnep, and may
he eaten in the fame manner, without doubt they
chear the Hearn, ftingthen the Animal Spirits,
and reftorein Confumpcions.

Xtll The Liquid jfince. According to Alonar-
dW it is a rood Cordial and Counter-Poifon and
£ not o4 nap, 01 cute the hiring of the Viper
Sue <f any other Wbnoos Creatuie, it is good

again it Burning and Conragious Fevers, MIK! indu-
ces Sweating, thereby expelling thro' the Pores,
Peflilentia Infektion. It is good againft Paffions
and Tremblings of the Heart, SadnefejMeiaicholy,
and Swooning Kits. It opens Obftruftions of Li-
ver, Spleen, TVleientety 3tid Womb, provokes ihe
Courfes, is good againft Hyfterick Fits, and other
Dilafteflions of the Womb, and prevails againft
theHcad-achj Vertigo, and other Difeafcs of the
Head and Brain *, lengthening after an admirable
manner, the Animal and Vital Powers. This
Juice may be taken not only from the Roots, but
al To from the LeavtS and the whole Plant.

XIV. The Ophbalm'tck. Take of the Clarfu-1
Juice a Pint, Clarified Honey tmoOunces, mixani.
dijjolve. Dropped into the Lyes, it isgooiagainlt
Inflamaion and Blood-htot, takes away Clouds,
Spots and Blemidies in them, and heais them it
Sore or Ulcerated, ftrengthening the Sight withal.

XV. The Condited or Pre/ervcd Root. They
are pSeatant to be eaten as a Sweer Meat, not in-
ferior to Eringo Koois, and may have in fome
fmall meafure the Virtues of the Liquid Juice.

XVI. T)X Dtjilkd Water. Authors give it the
Virtues of the Liquid Juice, but I am confident it
is nothing near lo itrong 01 effeftual 5 but they
give itagainftbot., burning and malign Fevers,
and the Infektion of ihe Plague, and all Ions of Con-
tagious, Infectiousand PettHential Difeafes, Faint-
ings, Swoonings, and other PalTions of the Heart.

CHAP. DCCXXXVIII.

Of the V I R G I N I A Creeper.

OR,

CLIMER.

I.n p HE Names. It is a Plant of Noval In-
X vention, beingbrought tous from Virginia,
and other parts of the Weft-Indies; and therefore
has no Ancient Greek or Latin Name; but it is
called in Latin by our Modems, VitU Virginiensis^
or rather Hedera Virginiana, and in Englifli, the
Virginia Creeper, or Climer.

11. The Kinds, Parkinfa makes two forts
hereof, viz. The Five Leaved Creeper, and the
Three Leaved Creeper. Mr. Rea, in his Pomenl
pug. 227. makes but one Species; but for Satis-
faction feke, we will give you all that they hjve
both laid.

The Defcriptions.

III. Thefirft, orHederaQuinquefoliaVirginiana,
Five Leav'd Creeper. Us Root fpreads here and
there under the Ground, not very deep : It it a
flender Vine, Ivy, or Plant, tall and climbing,
and rifes out of the Earth with feveral Stems,
none much bigger than a Mans Thumb, but mjny
lefs. Front whence Jhoot forth many long uie,ik
Branches, not able te flafii upright, unlefs they
be Jujained; yet Planted next to a Wall or high
Pales, Poles, Trees or the like, the Branches at
feveral diftartes of the Leaves, will Jhoot forth
Jmall fhort Tendrels, not twining them/elves a-
bout any thing, but ending in four, Jive, fix, or

more short, and something broad Claws, which will flick to, and fajien like a hand with fingers, fo clofe thereunto, that if full'd off, or forced away from the Wall, or thing it flicks to, it will bring part of the Wall, Bricks, Stone, Board, or other matter it h joined to, away taith it : By **these** Clam it flays it Jelf, and Jo fixes it jelf, as io climb up to the top of the high/ft Climney of any tioufe, or to the very top of the higkefl Tree, bang Planted agamfl them. The L-eaves are crumpled, or rather folded together, at the firfl coming out, and very red, which alter in growing large, and are very fair, latge and green, divided into 4, 5, 6 or 7 Leaves, ftanding together upon a fmall Yootflalk, fet without Order on the Branches ; at the ends whereof, a* alfo fomelimes at other places, come forth divers Jhort Tufts or Buds for Flowers -, but in our cold Climate, we fcarcely ever fee them open themfelvrs, to fhew what manner of flower they would be, or what manner of fruit they would follow them.

IV. The fecond, or Hedera Virginians Trifolia, is a three Leaved Creeper. The Roots of this Plant do Jhoot under Ground, and find forth young woody Stalks, of which feme Kill fland upright, others lye down, end take Riot again as they fpread, as alfo in any Wail they Hand nigh to, like unto our Barren Ivy. The Leaves are broad and three always Jet together upon a long footflalk.

At the Joints toith the Leaves, come forth pale flowers, in a loofe Tuft or duller, which turn into pale yellow Berries, with fmall bard round colored Seed, in a dry wrinkled Skin or busk, without any motjlure at all in them. Thk Plant yields a white JntIA, without any Tajle, being broken in any part thereof, which after it h:u continu'd a while, will change to be tu black a* Ink, and therefore held Jit to color Hair, Leather^ or any other things.

V. Mr. fiw's fingiikr Defcription of the Virginia Qimer, is riis. Its Roots run on the top of the Ground, and by cutting fome of them from the Stock, and turning up the ends, new Plants may be raifed. It rifet up with divers fmall Stems, divided into many long weak Branches, which fet agamfl a Wall, will faflen thereunto, with Small Claws like unto a Birds-toot, and climb to the top of a tall On'mney. The Leaves at firfl are red and irumpled, but aftenoards fair and green, divided into 5, 6, or more Leaves, flanding together upon a fmall footflalk, fet' without order. The Ylowert with us appear only in Bud, but never are feen to open.

VI. Tfx Places. They grow in Virginia, and in her Cold parts of America, from whence they have been Tranplanted to us, with whom they thrive well, being Planted in Our Gardens againft high Stone, or Brick Walls, or the fides of very high Houfes.

VII. The Times. The particular rimes of their Flowering, our Authors have not Oblerv'd, but it is in the Summer Months.

VIII. Nothing has been Obferved as to their Qualities, Specification, Preparations and Virtues, and therefore we are Silent concerning of them ; however, being a very Beautiful Ornament, we thought not (it to over-pals them.

C H A P . DCCXXXIX.

Of V I R G I N I A Silk-Grafts.

I. T H E Names. It is a Plant of Noval Invention, and therefore no Primary Name can be given for it, but onluch as have been alciibed to it by Modem Authors, by whom it is called *Fcripfodi Pirgima* Mt and in Eaglifo *Virginia Silk*, and *Silk Gr*<

U. The Kinds. Mr. fcw gives us the Dsliip tion of but one forr, bur *Parkin/on* of nv 1. *Periploca reffa*, vel *major Virginian*^ T*? Greater Virginia Silk-Grals- % *Periplota ntana minor*, The Lcfler Virginia Silk-Griis- Gerard will have it to be a kind of *Afckpi** * *Stallowwort*, but then he might have called it *AJelepia** *Lallans*, becaufe this is Milky, or ha* a Milky Juice, whereas the true *Afclcpio** has no juch thing. *Alpintis dc Plant* /Egypt, cap. 2*-

calls *Apoeynum Syriacum*, *Paleflinum V JEffpUf* earn : There, fome will have to he this *Silk-Grafts*, bur this they cannot be-, for either of them is^a *Irutex* or *Shrub*, whereas this is not, but loot* its Leaves and Stalks, they dying down to 'f Ground every Year. Again, the Milk of thole Plants is *Cauflick*, as *Alpintx* and *Bella* &> whereas the Milk of our *Virginia Sdk-Grcfs* is not. Alfo the Cods of thofe of *Npinus*%, *Beli*&> and *Qufim*, are nearly fraigh t, whereas thofe of *cat Silk-Grafts* are crooked, almott Like Hooks, and yet they grow perfectly upright.

The Defcriptiofis-

HI. Mr. Reas Defcription, which I take to be of the Greater kind, is this. *Virginian Silk* »^a *Plant more r.fpeQcd for being a Stranger, IP*** for the Beauty of its llowers: Its Root a big, l?#S mduihite, running far under Ground, and Jf^S' itg Up again in many places, it rifes up with out or more round Stalk, almoft four ftet high, ft' '*, feveral Joints with two long, broad, veined, roW* pointed green Leaves. At the top of the Std out of a Skinny tioufe, comet forth a great Tuft 4 blowers, to the number of thirty or forty, hauling down on long Vootflalks, each flower conjifli^ of Jive fmall hollow Leaves, of a pale purpltb^{(0~} tar. neither fair nor plcafant. After they <*** paf, come kng crooked. Cods, ftanding uprw^ containing Jlat brown Seeds, wrapped Kthitt^ great deal of fine jfoft whitijh brown Silk. I take to be *Parkin/on's* Greater Virginia Silk.

IV. The thirt, or *Parkin/on's* Greater Virgi Silk-Grals. Its Root « long and white, of the H' nejs of a Mans thumb\ running under Ground IX' ry f.;r, and Jhoot ing up in divers places, tb* Heads being Jet full of fml! white Grumes # Knots, yielding forth many Branches or Stalks, if it (lands any time in a place, b rifes up alith eR< or more flrong and round Stalks, ? ff, feet high on which are fet at the feveral joints, two f*** long and broad Leaves, round pointed, with m&ty Veins therein, growing clofe to the Stem, teithe*^l any footflalk. At the tops of the Stalks, and fi**' tims at the joints with the Leaves, tenses jertb 4

great Bitjl> of blowers, out of a thin Skin, to^ the number of 20, fometimes of %o or 40, ever/one Mpon a long Yootflalk, hanging down their Meads for the moji part, efppecially thofe which are outwardmoft, each Handing within a Husk of green Leaves turned to the Stalkward, like to the Virginia Lyfimachia Flower, and eadh of them eonfifling of five fmall Leaves, of a pale fyrplijh color on the upper fide, and of a pale yellowijl> Purple underneath, both fides of eadh Leaf being at it were folded together, making them jeem bottom and pointed, with a few fhort Chives in the middle : After which, come long and crooked Cods, flanding upright and fharp pointed in which are contained flat brownifb Seed, difperfed-h lying within a great diat of Sne loft and whitih brown Silk, very like unto Cods, Seed, and Silk of Alecpias or Swallow-wort but that the Cods are greater, more crooked, and harder alfo in the onward Shell- Tim fo Beautifula Plant, (at Parkinon calls it) even the whole Plant, Leaves and Stalks being broken, yields a pale Milk.

V. The fecond, or Petiploca virgbiana minor, five Apocynum Virginianum minus, or leffer Virginia Silk-Grafs. This creeps not with its Roots in the Ground, like the former, but from many long fibres /hoots forth a round brown Stalk about half a Tori high, having at each Joint a pair of long narrow Leaves, and at top fuch a large Tuft of flowers a* in the firft , but of a deeper Purple color, which have^ a certain clamminefs on them, that wli detain Flies, or other light things which happen to fall thereon ; after which, come long and/traif Cods, (net Crooked like the Greater fort) with fill brown Seed lying therein, in a white kind of Silk or Down, like unto Afclepias or Swallow-wort.- Tjm yields a Milky Sap or June like the other, which fome think to be danferous, JW Experience has deelarid no fuch thing I and therefore mull be left to a farther Scrutiny, by Tryals hereafter to be made,

VI. The Places. They both are Natives of Virginia, and othet places of the Wefi-Indies, whure they grow abundantly.' They have been often raifed by Seeds which have come from thence, and alcho' rte Stalks dye to the Ground every Winter, yet the Root is oflong continuance, and will fend forth new at the Spring, efppecially if the place where it grows be covered with Horfe-Dung in the Winter, to defend it from theFrotts.

VII. The Times. They Flower in July, but not every Year, and their Silk and Seeds are ripe in AxguJI, but it Jearcely ever brings forth its Cods with us, by reafon of the coldnefs oFour Climate.

VIII. *Obfervat.* Gerard fays, (off the larger Species) that the Cods are itufted full of a molt pure Silk, of a (Timing white color, among which Silk is the Seed. Thefe Cods are not only full of Silk but every Nerve 01 Sinew, wherewith the Leaves are Ribbed, are likewife molt pure Silk, as alfo the Peelings of the Stems, Stalks, or Branches which come from them, even as Flax or Hemp* fro™ tuoir Stalks. 'Tis admirable ro think, how God has Bleffed thofe Countries with a Subftantial matter (which they daily tread under Foot) by which they may be both well and Honourably Cloathed, and which is fufficient to Annarel or Cloath many Kingdoms, if carefully Manured and Manuraured. But Parktnfon fajs concerning it, That he knows there is another Plant growing in Vt>g*mit, called Silk-Grafs, Which is much differing from this,

IX At to its %?alhin, Specification, Preparations 'and Virtues, Authors have faid nothing, nor

do we lay any thing concerning the fame. The NJ rives make Ropw and Cords of it, but nothing elfe, being much itronger than either Hemp or Silk •, but was it ManuFaEtured as it might be, it would make Super-fine Qoarhing of all forts, much exceeding any thing made of Flax, Hemp, or Cotton, and poffibly not much inferior (if any thing at all) to what is made of the fined and belt Silk.

Cuckoo - Point.

The Names. It is called in Arabick *Jannwaad Sara*, in Greek *andia Latine Arum* : Ibme call it *Pes Vituli* from the Form of its Leaf; and fome from the Figure of its Peftle, in the middle"of the Hofe, call it *SacerdotU Penit* and *Cams Pruptu* .- fome all it *Dracontea minor* and *Serpeetaria miner*, but we in Engliffh call it *Wake-Robin* and *Cuckoo-Point*, or *Starch-Wort*.

II. *The Kindt.* There are many Species of-it, bur only two which are frequent with us, vis. 1. *Aram vulgare nan Mucuhrum*, Our common Wake-Robin without Spots. 2. *Arum vulgare Maculatam*, Our Common Spotted Wake-Robin. Some will have *Ariftrum*, or *Frien-Ccnle* to be a kiad of *Wake-Robin*, and call it *hooded Waki-Robin*, but of this we have already treated in its proper place,

The Descriptions.

HI. The firft, 01 Common Wake-Robin without Spots, lit Root it Tuberos, and about the big-nffs ff a Walnut Green and all, if it grows im good Ground, is brown without, and white within, very Succulent, with fome Pibrow additions to it. If cheaed between the Teeth, it hat a vehement Heat, and Burning fharpnefs with it, almoft beyond exprefjh, fo that if ab'tt of it, not fo big a* a fmall Bean, Jboitid be Chewed in the Mouth but for a Minute, it would fo inflame the Mouth, Tongue and Throat, that poffibty the Inflammation would fcarcely be allayed in 48 Hours \$ and I have known fame who out of Wantonnefs, have Qievid it, who have (by reafon ofit Violence) been in danger of their Lives, nor in more than a Weeks time could recover thcmfclve*: And yet thh k mamfeji by daily Experience, that the dried Root (tho" it stay be as hot as Pepper) it void 0/all thefe Dangerous Accidemt. III Juice, or fine Poud-er, hat a very frangt Ckmminefs in it, fhiffhiing hinnen or any other thing on which it is laid, no left than Starch; and informer dtys, when the

making p^j our Ordinary Starch, which is made if Whcit-flower, W-JS not kam.su, or in jrcquent * /c, the RMT« hereof were ujed to Starch their Liinen, would j<> Sting and Chap the Skin p^j the Servants hands that ujed it, that they could fcarcely get them /mootb and mivle, by the next time of ufng again. It jhooti firth j, 4, or 5 Leaves at moft from one Root, one if whichit jomthting large

Wake-Robin not Spotted ± Or Greater.

and •<"/\$, broad at the bottom next the Stalk, and pried like unto a Wild Sonel Leaf but ending in a Point, without Dent or Cut on tie edges, of a fad green color, each fianding upon a thick round Stalk, ofan Hand Breadth or more. Among which, (after tbt^y have been up two or three Months, and begin to wither,) rrfes up a bare Naked rwndwhit-ttffh green Stalk, fomcithng spotted and firaked mtb Furple, like the Stalk of Dragons, which I grates fomewbat higher than the Leaves; at the I top vkereof /lands a long hollow Hofe or Husk, clo/e at the bottom, but open front the middle upwards, ending in a Point. • In the middle of vsb'ttb, grow o fmalⁱ long Peffe or Pointel, /mailer at the bottom thr, at the tob, of a dark Pitrp/ijh color, tu iht Hife or Husk is on the infide, tho* green without •, nhich after* it has/o remained for fome time, the Ho/e or Husk decays with its Pejll/e, and the toot or bottom thereof grotns to be a /mall long Bunch cf Berries, green at the trft, and each of them uben they are ripe, of a y/lfoaifb red color, of the bigneft cf a Hafle-Nut Kernel, whith abide thereon almoji till Winter. In the time when ibis Plant bears its Ben id, its Boot (which is Tuberos and fome-«"«/ hng, not growing dawn right, but for the moft prt^t lying along; its Ltavet jhcotixg forth at lit bigger end,) it fomtvbat jkrivctled and

ioafe, another being grown under sr; and firm, with manyfibres or jhangwg thereto, which in the beginning '7 ** Tear, when the Leaves begin to ffrifty ^{re(1)}S,* ken, yields a Milky Sapor Juice, which is viol-hot and biting, The whole Flam has the ^ fkarp and biting Tafle, v</xmently pricAtVI

Wake-Robin not Spotted Or Greater.

&

ing, and inflaming the Ttfl«* "P⁰* ^J Jfc thereof, tebich violent Heat continues agrea* without any diminution or ateranon.

Wake-Robin Spotted, or

IV. The second, or Spotted Wake-Robin. This in its Root, Stalks, Leaves, Co% Fruit and manner #f growing, differs nothing from the former, Jiving that both Roots and Leaves are more violently sharp and biting; and that the Leaves hereof are somevohat harder in feeling, Jharper pointed, and have some blackisb Spots thereon, like the Spotted Arfmart, vobich for the mofi part, abide is the Summer longer green than thefts of the Jirjt do.

V The Places. They grow frequently in many parts of England, in Woods, and near unto Ditches, and by Ditch-fides under Hedges, in lhadowy

*The Times. The Leaves appear prefendy after Winter, early in the Spring, and continue but to the middlo of Summer, or some IimtUirae loneer. The Pclije fhews it felf out of its Hofe or Husk in June, appearing before the Leaves tall away whilft they areyet in Withering; undwhen they are S^{ome}-> ^{the Bunc! or clu^eE U!} Berries, viz. its Fruit, becomes ripe towards the end of July, or maugufi.

VII. The Qualities. It is hot and dry in the fourth degree, Aperitive, Abfterfive, Diutetick and Digeftive, Pefitora), Cardiackand Hyfterick, And-atthmatick, Emmenagogick, and Atephurmick.

VIII. The Specification. It is prevalent againft Afthma's, Coughs, Colds, OblhutYions of Lungs, Liver, Spleen, Mefentery, Reins and Womb, provokes the Terms and After-birth, is good againft Difury and Strangury, gives eafc in the Piles, and is a potent remedy againft the Plague or Peitilence, and Poifon.

IX. The Preparations. You may have therefrom, i- Tjff Green Leaves. 2. A Juice of Herb or Berries. ;. A Juice of the Root. 4. A DecoUion in Water. 7. A Milk. 6. A Powder of Roots, Berries of Leaves. 7. An Oil. 8. A Gz-taphni. <?• A Difilled Water. 10. TfoFcecola r Starch.

The Virtues.

X. Tim Green Leaves. Being bruifed and laid upon any place pained with Sciatica or Gout, ir draws out the Morbifick matter, and eafes the pain: And applyed to the Bitings of Mad Dogs, Vipers, or Plague Sores, it draws out the Poion and Malignity, and fecures the Patient from Danger.

XI. The Juice of the Herb or Berries. Taken to the quantity of a Spoonful in any fit Vehicle, it prevails againft both Poifon and Plague; and if a little Vinegar or Juke ofLimons be added to it, it lbmewhat allays the fliarp hitting Tafte thereof: The Juke of the Berries given in White Wine, provokes the Terms in Women, provokes Urine, and prevails againft Difury and Strangury, brings away the After-birth, and deanfes effectually after Child bearing; and taken w^{ih}Sheeps MilA, it heals inwatd Ulcers of the Bowels.

XII- The Juice of the Roar, It has all the Virtues of the Juice of the Herb, butismuchltronger, and therefore muft be given with Caution; mixt with fome other proper Vehicle, it cleanfesall manner of rotten filthy Ulcers in what pan of the Body fover, and heals the tinkling Ulcers in the Wiluils, called Ozena and the Polipw.

XIII. Tfe DecoSion of the Herb, Root or Berrks, in Water. It has all the Virtues of the Juices, but very much later, and may be given to half a Pint at a time. Dropt into the Eyes, ir cleanfes them from any Film or Skin, Clouds, Milts, or other things which obfufcate the Sight; is good againft an Ophthalmia, helps their watering and rednefs, and when by chance they become black and blew.

XIV. The JHili IrismadebyboiSingThe Root therein: fr lias all th; Virtues of Juice and Dr- cdtion, and is good to heal inrerfui Ul:sr>: Do); % or 4 Spoonfuls or more.

XV. Th Ponder nf Roots, Berries or Leave*. Taken to a Dram, it is a moft preterit and certain Kcmedy agsinit the Plague, Poifon, aM the bitlhgs of Serpents or Mad Dogs; The Cimt taken mixed w^{ih} Clarified Ho/vy, jr Sugar, (iniorm of an frAttfuary) is admirably good againft Afthma's, Coughs, Colds, Hoarfencis, Wheeling, and fbepn. nelsofBreath: It is Sromatick, expels Wind, IiT gets, and Abfterges the Stomach, Lungs, un3 order Bowels, from tough Salt Flegm; and has 3II the other Virtues of both Juices and Decottion: Ic provokes Urine and the Terms, and admirably cl<nfes after Delivery.

XVI. The Oil of Roots, Berries, or Leaves. Anointed on pained places icgives ea% and is good againft the Palfic: Dropt into the Ears, it eales their pain, and helps againft Deathis j gives eafe a lib in the Piles or Hemorrhoids, and is profitable againft the Falling down of the Fundament,

XVII. The Cataplafk. The Root mixeti with Bean-blower into a Pultife, and applyed to the Throat or Jaws which, are Inflamed, helps them. The SoDls or Berries made into a Pultife with Ox-Dung, and applyed, gives eafe in the pains of the Sciaica and Gout.

XVIII. The DiftUUi Water cf toon or Leuvef, or both. Ic is good for all the purpofes aforefaid. An Ounce or more taken at a time, is faid to cure Ruptures, and to prevail againft the Lich. If the freff Roots are bruifed, and difilled with Milk, they yield a moft excellent Water to cleanfe the Skin from Scurf, Morpew, Freckles, Spots, or any other Defilements whatfoever.

XIX. The Foccula or Starch, It is made 1. Of the Pouier of the Dryed Root. 2. from the Green Root, at you make the Fcecula of Brioay Roots, Befides its ufe for Starching of Linnen, it has all the former Virtues of the Fonder, and may be given to a Dram in any proper Vehicle.

XX. A Caution. By reafon of the Vehemency of the Green Root, its Juice ought to be ufed very cautiously, and only to be adminiftred by a Wile Hand. The Poudei is an hundred timesmore fate.

CHAP. DCCXXXI.

Of WALL-FLOWERS Single and Double.

\ T"* HE Nantes. This Plant is called by the J. Arabians Keiri, or Cbeiri, in Creek, Aixvtic* x#*«A(: in Latin, *Leucoium Luteum* t and in Englifh Wall-flower.

II. Vie Kinds. There are two fpecial forts of Wall-Flowers, viz. 1. The Single Kind. 2. The Double Flouered. Of the Single Kind, we have, 1. Keiri, five, *Leucoium luteum fimphx vulgare* OurCommon Single Wall-Flower. 1. Keiri, five^ *Leucoium luteum Jimplex majrv*, The Great Single^ Wall-Flower. 3. Keiri fmilex fiore alho, The iWhite Single Wall-Flower.

III. Oi the Double Kind," we have, 1. Kein five *Leucoium Luteum jlore pleno vulgare* Our Common Double Wall-Flower. 1. Keiri Jive, *Leucoium Luteum Jlore pleno alter urn*. Pale Double Wall-Flower, a. Keiri, five, *Lrucvium Luteum majus ftort pleno ferrugineo*, The Douhle

t&iddifli yellow Wall-Flower. 4. Keiri, five *Leu-*
coium Lute urn flare elf no maximum, The Gicateft
Double Yellow Wall-Flower.

*The Dtfcriptions**

IV. The firft, oi «ui Common Single Wall-
Flower. *Its Root is white, bard, and fibrous, has*
/everaljmll, narrow, tcng^ and dirk green Leaves,
/ft without order, upon round, wkitijh woody Stjilks.

Wall-Flower Single, *Common.*

which hear at the tops many Single yellow flatten
one above another, each of them having four
Leaves apiece, and a very /meet Smell: After
tuftieb, com long Pods, containing reddijb Seed.*

V. The fecond, or Great Single Wall-Flower.
Its Root it lite the former, and tuill pfrijb in
Winter, if not defended from hard b'rojls. Us
'Leaves at vscil ar blowers^ are much larger than
the former. Tie Letvet are of a darktr^ and
of a Jhwing green color, and the blowers of a
very derp Gold yellow color, and commonly at
broad at a Half-Crown piece of Silver. The
Spike cr top t>f flovsert it alfo nutty longer, and
it abides much longer in Flowering, and is much
faeeter in its Scent or Smell. The Pojt for
Seed are thicker and (hortrr, with a fnall point
at the enA. Tf>is Plant is /lower in fpreading
it felf one into branches, and rxore lender to be
preferved^ and is increafed by Planting its Branch
es, being ilipt off.

VI. The third, OI White Single Wall-Flower.
It has a Ro«t like the jormer, and its Leaves are
<it green as the Great kind, but nothing Jo Urge.
The blowers fljnd tit tbt top, tut not in (o long a
Spike, but rather in a Tuft, and each Vtovaer is
compofid of», Leaves, of a white color mu much
hrgrt than the Common Kind, but of a Beaker
Smell. The Pods are not fo grtti at thofe of the
former greater one. -Tbit is more eafie to be pro-
pagatcd or increafed, but reqmres /one tort in
defending it from the Cold "j Winter.

Wall-Flower Single, *Great.*

Belonging to SECT. V.

VII. The firft of the Double Kind, fOurC^J-
mon Double Wall - Flo,ver. *T)n* " " u y foil*
Leaves and Stalks^ are very like »^o

Wall-Flower Double *Commtn.*

Single Kind, *faymg thai the Leaves hereof are not of jo deep a green color. The flowers jiaud m the top t-f the Stalks, one above another, M it toere a long Spike, which flower by degrees, the lowejl firjl, and fo upwards, by which means it is a long time in Flowering, the flowers being very Double, of a Gold yellow color, and*

VIII. The second, or Pale Double Wall-Flower. *The Flowers in this jiaud not Spike Fajbion as the former, but more open fspread, and do all cf them blow open almoft at one time, and. not by degrees as the others do. They ore of a paler yellow color, and differ in nothing elfe, fa-v'wg that the green Leaves hereof are alfo of a*

hethiid, or Double reddifh yellow Wall-Flower. Us Lava are a/ green, and almcjl <u Urge as the Great Single Yellow kind, or full ai big as the Leaves of the White Wall-flower. The Sawn a>e not much larger than the ordinary, but are of a darker yellow color than the Great Single hind^ and of a mere brgomifo or red color on the underfids of the Leaves, being at it were firipcd.

X. Thiefourth, orGreateftDoubleyellowWall-Flower. *It* Leaves ere as green and as large, if not larger than tbofe of the Great Single kind. The flowers are alfo of the fame deep Gold yellow color, but much larger than any of the former Double lands, and as fweet in fmelling to, At any oi them.*

XI. *The Places.* The firftgtowsuponoldbtoie and Brick-Walls, Mid fidesot very old Stone-Buildings, in many places through the whole Kingdom j but has of late been brought into, and Planted in Gardens, where the other fix kinds are alfo kept and Nurftup.

XII. *The Times.* All the Single Kinds do Flower often in ihii end of Autumn, and if the Winter is mild, ail the Winter long; but efpecially in the Months or^r February, March and April, even till the hear or^r the Spring Hops them. The Double Kinds Flower lbmetimes^ery eirly, andfometimes very late in the Year, but do not continue Flowering in that manner the Year throughout.

OBSERVATIONS.

XIII. 1. *As to the Single Flowers.* Their Seed lbould be Sown in September, in the Earth juft as you rind it, without any previous Preparation; for it is the Nature of this Flower to grow upon Walls, and even amongst Rubbith.

XIV. 2. When they are Cultivated, more Cais is to be taken of them, that they may ferve as Ornaments in a Garden, for Borders of Beds and Flats, where they look very agreeably.

XV. 3. Having managed them as you do Flowets for Tranplantation, as foon as you think them thong enough to change their places, put them m one that agrees with them, and Water them daily, to bcilirate their taking Root

XVI. 4- Be alfo very mindful to clear them of Weeds; for this, as well as the Double Flower^ being Vivacious Planes, they will then grow to you^r liim&tton; the reft of their Culture is to be done as in the Double flower.

XVII. S• *Of the Double Flower you muji oe more drefuU and it is to be multiplied by Layers, or by Slips: If by Layers, chufe the belt, and lay them in the Ear* J and tbur ^ md* noc rife too faft, drive a Hook down upon them, aud let*

the Earth upon your Layers, be at the Ground in which they are laid.

XVIII. 6. Then Water them daily, that they may the better take Root, and iooner fatten them^r, felves in the Earth, and Jet them be laid as i'oon as they have loft their Eloweis, viz. in the end of May, or beginning of June; and leave them till September or Qtlober, at which time take them up, and put them either in Open Ground, or in Pots.

XIX. 7. If you place them in Borders of Plors, &c. the Garden Earth will do well enough- but if in Pots, rake two thirds of Sifted Kitchen-Garden Earth, and one third of Mould, with which (being mixed) rill your Pots, putting your Layers into it according to Art.

XX. 8. And iince thefe Flowers are apt to be injured by Cold, you mutt Houfe your Pots in time, left the Earth fliould Freeze and break your Pots, and fo hurt your Plants: But as for thofein the Open Grounds, you have no farther care to take of them, for they will always bear the Weather.

XXI. 9. If you multiply them by Slips, let them not be kept dry, that they may be Noutiied (b as to extend their Fibrous Roots round about to attraft the nourilhiug Sap, or Juice of the Earth.

XXII. 10. Let your Slips be well chofen, and put into Pots or Pans filled with Sifted Garden-Earth, with fomeMould thinly fspread upon ir, into which fee your Slips half their length •, put the Earth gently down upon them with your hand, to help to fatten them the fboner* Water them, and put them in a fhaJy place till they begin to fpring, after which, remove rhem into die Sun.

XXIII. 11. *Let* them be Planted at the fime time you do the Layers, and when they have taken good Root, let them be Tranplanted into the places you defign for them, not forgetting to Water and Weed them, as often as occadon requires it

XXIV. *The Qualities.* They are hot and dry in the firft degree, Abfterfive, Refolutive, Vulnerary, of thin parts, Neirotick, Hytterick, andEmmenagogick.

XXV. *The Specification.* They heal Wounds, provoke the Terms, expel the Dead Child, and are good againft Agues, Apoplexies and Palfies.

XXVI. *The Preparations.* 1. A Juice from the Heads of Flowers. 2. A DecoQiu of the Heads of flowers in Wine. 3. A Dcceffion of the Roots in Vinegar. 4. A Gargarifm. j. An Ophthalmick. 6. A Pouder of the Seed. 7. Oleum Cheirinum, five Keirinum, Oil of the Flowers. 8. A Bath to Sit in. 9. A Cataplafm. 10. A Dijlilled Water. 11. A Conferve of the Flowers.

the Virtues.

XXVII. *The Juice from the Heads of the Flowers.* It provokes the Terms in Women, expels the Dead Child, and forces away the After-birth -, opens Obfructions of Liver, Spleen and Reins • cleanfes the Stomach, Bowels and Womb, and is good againft Vapors, Paralytick and Apople&ick tits. Dofe 3 or 4 Spoonfuls in Wine, or the Di-jilled Water, or other fit Vehicle; mixt with Spirit of Wine, it cleanfes Wounds and Ulcers, and hails rhem.

XXVIII. *The DeeoSion of-the Heads of Flowers <n Wine.* If it is made ftrong, ir has all the former Virtues of the Juice, and therefore ought not to be taken of Women with Child, for fen of^r caufi/g Milcarriage. Dofe half a Pint at a time. It fltengtens the whole Bffdy, or any Member of it

grown

grown looft and weak, by reafon of Paralytick and Con vu Hive Dirtempers.

XXIX. *The Decollion of the Roots in Vinegar.* Being taken inwardly in the *Dijlilfd Water*, and alfo outwardly applyed, it foteens the hardnels of the Liver, Spleen, Mefentery and Womb.

XXX. *The Gargarifi*.* Take of the Juice 6 Ounces, of the Difilted Water 3 Ounces, Roch-Alum 7, 1)rams. Spirit of Wine: an Ounce and half-, Honey 2 Ounces-, mix and diffolve. It cleanfes and heals Ulcers and Sores of the Mouth, Gums and Throat, and other parts of the Body, the parts being daily Gargariz'd or walht therewith warm.

XXXI. *The Opblbalmick.* Take of the Juice 4 Ounces-, Spirit of Wine or Brandy, 1 Ounces-^ Honey an Ounce and half%, firing TinQure of Aloes Succorrina, half an Ounce; mix and diffolve. Drop: into the Eyes it clanfes them from Clouds, Miffs, and other things which obfhcate the Sight-, heals Sores and Ulcers in the Eyes, jtrengthens them, and flops a Flux of Rheum falling into then.

XXXII. *The ?ostier of the Stel* It may be given to a Dnm in any proper Vehicle. It has all the Virtues of the Juice and Dccoftion, and may be ufed Morning and Night, as long as need requires. It has been given with Succelsagainst the Kickers in Children.

XXXIII. *The Oil of the Flowers.* It is DiP ulfive and Anodyn, gives eafe in pains of the Ireit, Reins, Joints, Nerves, Efc and is a very good thing against the Gout.

XXXIV. *The Bath.* It is made of the whole Plant when in Flower, boil'd in fair Water with a proportional quantity of *Genoa Soap*. It is good for Women to Sit in, who have a Itoppage of their Courfes, or are not well cleanfed after Delivery, becaufe it induces the Terms, and cleanfes the Womb of putrid Kecremens.

XXXV. *The Citiapiafm.* h is made of the Heads of Ihwers beaten in a Mortar, adding fome Salt. Bound hard to the Writts, it is ufed as a Kennedy to cure Agues. Bui if made by boiling the fame in Vinegar, with the addition of Barley Yhwcer, and then applyed warm to places pained with the Gour, it gives eafe in the pain, difcufes the Tumor, cures the Difeafe, and admirably itrengthens the part.

XXXVI. *The Difii/led Water from the Heads of Ylowxrt.* It has the Virtues of the Juice and Decoftion, but nothing near lb efficacious: mixt with a quarter part of Spirit of Wine^ and dulcified with white Sugar, it is fa id to deanfe the Blood, comfort the inward part, eafe pain, and caufe (jheatfulnefs.

XXXVII. *The Conferve of the Flowers.* It is given to the quantity of a large Chefnut or Wallnut, Morning, Noon and Night, against Convulsive and Paialytick Diftempers, and AWeaknefs of the Mefentery, Womb, and other Bowels.

CHAP. DCCXXXII-

O/WHEAT, Bark and Cor.

THE Names. The rrlt of thefe is g^ 1 ly taken to be the Tfiw ^J^JU which Gaza Tranflates *Trionum* •, but fome pui difference between this *Eryfimum* and ^{TM^Ei} calling this *b.ryfimum Cereale*. It is alfo &^ier Greek by fome T_w^r. • in Latin ^{by Matthiolus and Lugduntjjs,} *Sarapnitum*: Dvd&Mut calls it *legopyrum*, l& pyrum and *Tragotnicum*: *Iragus* alls it *Ory* feterim*; but *Clufius* and *Taberntmontans*^v *mum Cereale*; and in Englilh *Bud-Wheat*. .. •

II. The Kinds. This Plant is Six^*lff# J" Getterk, and therefore not being manitoWi admit but of one Denomination.

The Defctiptionf.

III. The Root of Buck-Wheat is ^f^J^, thready, and riles up with feveral round, «, (j brittle, reddifh Stalks, a Yard or more ^&ly with divers Leaves^ each by it jelf on " ^ flall which it broad and round, and bifi /-^ the b*ttom, (mall and pointed at the endt >^, ^ what re/embliwg an hy-l-ai, but fofter >^ j ling. At the top of the Stalks corfi • fofJf ,... Clufters ofjmall White Yhixeri, which to mall Triangular blackijh Seed, ('Jery^mo^ ulch the fame ufe of other Eatable Grains) not ^

unlike to a Beach-Nut, but very much Itijer, which contains a white Pulp within.

IV. Gerd describes it after this manner. Its Root is f mall and thready, which fends up a round fat State, fomembat creffeⁱ fmoob and reddijh,

Wheat Buck.

Wheat Buck.

fpreadout into mdny Arm or Branches, Twhhh grow/moth ^M !*^o *£^o • Jbape Hke to Ivy-Leaves, or one of the

or not much unlike to **Bail!**. (whence ~~Tritium~~ nus & s Name of Ocyumum Cereale.) *The Vlmaert* are "fUttl white, and clufter'd togetfx in one b more Tufts at Umbels, jfcgbtty d&Oit over hfri and there with a light Carnation color. *TJie Seed* is of a dark blckijf color^ a.id Triaitgitliir, like the Seed of Bhck Bindwssl, which is ufed (in places where it gro-xs plentifully) in times of Scarcity to make Bread of, or to be mixed with oiixr Corn for that pxrpole.

V. *The Places.* It is thought to IK firft brought out of Africa but now is gemallY Sown in tnoft of our *Kortherx Gumries*, where tor t lie Uleand Profit is made of it, whole Fields are Sown therewith. It profperswellin any Ground, be it never G> dry or rarren, and is many times Sown, to lerve as it were inftead of a Duning. It quickly comes up, and is foon ripe, and is very common about *Nampt&uh* in *Qhejbire*, where they Sow it as well for Food for their Cattel and Poultry, as for the ufe of making Bread aforefaid It grows likewifc in *Lancajbire*, and in fome oi' the Southern parts of England, *mEjjex, Kent* and *Middkfex*.

VI. *The Times.* It is Sown in April, and beginning of Moy, and will be ripe in Auguft following.

VII. *The Qualities.* It is hot and dry in the firft degree, Abfterfive and Nutritive, but Nourifhes leg thaji Whear, Rye, Oats or Barley; but more than Millet or Panick: And Bread which is made of the Meal thereof, is eafie of Digettion, and foon pafies through the Stomach and Belly; for which realty it becomes veiy deiniing to the Bowels.

VIII. *The Spec'fkdtion.* It keeps the Body open, and prevenrs the growing too tlefby or Fat, but is 3 little Flarulent or Windy. *

IX. *The Preparations.* The Meal of it for Mans ufe, is by the Country People in *Germany^ Italy*, and fome other places, made into Bread, Cakes, Puddings and the like, which are pleafint enough to eat.

The Virtues.

X. *Bread, Cakes, Fudditgs^* Etc. made hereof, make thofe People very Strong, and able tor Labour, who daily feed on them. *Tlje Pultage* thereof provokes Urine, increafes Milk loofens the Belly j and being eaten mixt with Wine (as you do *flummy*;) it is good againft Melancholy. The whole Grain, as alfi> the Meal, is uled generally to Fatten Cattel and Poultry of all forts, and it is obferved, that they are quickly made **Fat** therewith •, and fo Fat, that if they be not KillM in 3 floirt time after, they will Dye of themselves, being Suffocated therewith.

Of COW-WHEAT.

XI. *The Names.* It is called in Greek K^{arr}. ipm and ~~A~~ ⁱⁿ ~~the~~ ^{the} ~~lib~~ ^{lib} ~~8~~ ⁸ cap. j. and *Da/Diddei*, lib. 4. cap. 17. in *LzttmTriticuafaccium* v&Bovinum: *CrettogonumLobeftj'*. *MikmpyrumCamerarij*, *Qauhwit&Tiinlij* 1 *Milium Syivaticum Tragi-*, and in English *Cow-Wheat*.

XII- *The Kinds.* There are many kinds of this Plant, bar moft of them are abiolutely Strangers with us, fo that we (hall only take notice of two the moft common, viz. i. *Crattgomtrnviltgare Lobelij* j

be,) j Satureia lute* Dolafampij -, Mi/mm &./>,-

CHAP. DCCXXXIII.

Of W H E A T Common;
Red, White, Grey.

TP HE Names. It is called by the Arabia**
X tienta, and siencha, in Greek n**J ^
(irumentumA h'ruendo:) in Latin Tnti^p
(quod tritum ex Spkis fit, vt dial Varro:) all
Siligo, which is the Name of the fineft and mo"
pure Wheat; and in Englim Whcjt.

XL The Kinds. Wheat if we refpeft the E<<
only, is either Naked and not Bearded j or BeJt?->
ed; bur if we rdpeft the color chiefly, it' ?
threefold, vis. l.Trkktemiriflirnbri, vel
rubris, Red Wheat, tvbich is accounted the
and bvlr of all Wheat, and this is twofold, v'f
either arifii fikttJL with Bearded Ears -, or J'
tkum muticum, Triticum ruhum fpxci mitid, ot

Wheat Naked without Beard or Awns, 2. *Triticum album*, *Triticum unguis a/bis* •, *Silrga*, White Wheat j and this is also twofold, viz. *Trir'at album Arifis Munitum* vel *Arijis Spkatts*, White Wheat with Bearded Eats, or Ears with Awns ^ or *Triticum album muticum* •, *Siligo*, vtl *Triticum album Spica mutica*, or WliEe Wheat without Beard or Awns, and these white Wheats some think to be as fine a Grain as the former, and some will have them to be the finest and best Wheat of all; without doubt the difference in Goodness between them is so little as not to be discerned. 3. *Triticum Gri/eum*, vel *Cinertum*, *Triticum Crifeum arifis munitum*, and this is that which I take to be the *Zch*, or *Zia Zea* of the Ancients, which they called *Spelta* or *Spelt-Corn* -, and *Adorcum* also *Ador*, which the Ancient Romans made to be a kind of bar, or *Bread-Corn*, being a counterfort of Wheat: This with us, is generally through the Nation called *Gray Wheat*, and is a very good and profitable sort of Grain, tho' not so absolutely fine as the *Stoimer Red and White Wheats*. To these I add, 4. *Triticum Spica multipliu*, *Triticum ranofum*, the Branched, or manifold Eated Wheat, which *Tabernimontanus* calls *Triticum Tiphinum Spica multip'ae't*, which for a 11 that know may be a Species of the *Typha*, or *Tipba Cereat* or *Bodontus*., their Descriptions are notably alike.

the Description.

III. The first, or Red Wheat, Its Root is very fibrous, and towards its Head as it is jointed,

Wheat Red or White, Bearded.

from when it is ripe 3, 4, A TMrt or left Stalks v>itb fair long and green Qrafs-hke Leaves, and

as the Stalks grow up higher, at every Joint on Leaf, and at the joint!) Joint usually comes forth the long Ear, or Spiked U.; iJ, one true Stem, without any Branches, which while the Head lies upright, blooming first yellow Aglets, which when it is ripe, a little bows down or bends its Head, by reason of its weight, which is set with two double rows of Grain or Corn, within several Chiffy 1

Wheat White or Red, not Bearded.

or Husks, which when it is cleaned from them, it is of a firm compact Substance, which is of a Dun reddish color •, and the whole bar is of a kind of reddish color when it is perfectly ripe; which is either Bearded with Awns, or not Bearded, but plain and smooth, that being all the difference, which yet makes no Difference in the Goodness of the Corn.

IV. The second, or White Wheat. This in its Roots, Leaves, Stalks, Ears, Viewers, Corn, Magnitude, and manner of growing, differs nothing from the former or Red Wheat, but only in the color, the Stalks and Ears being whiter, and the Grain or Corn of a clear yellowish white color. It is also twofold, viz. either Bearded with Awns, or plain and smooth without Awns, in like manner as the Red Kind. Some, and the Generality of Farmers, maintain the Red Wheat to be the finest and best Wheat, and to make the sweetest and whiter Bread: Whilst others again maintain this White Wheat to be the chiefest of all, and to make truly the Best and Whiter Bread. I indeed know them both very well and have

tried them, and have seen many made of the fine Flour of them both, yet I will say, by all that I could observe, that I could find no difference between the Sweetest. Whiteness and Goodness of the one and the other; but that the one appeared as good as the other, and

Wheat White Bearded.

tehlmut doubt, the difference is little or none -, or if there be any, it would puzzle the Wifeft of Men to find on vibkb fide the Whiteft and bcfi lū ffdi

V. 1 he third, or Gray Wheat. This in its Rcots, Stalks, and m<tnncr ofgrouting, is Me the but the Srnli h larger and floitger,]»gher,

Whc&t Gray i'Zea, or Spelt Corn.

nd rj a brown color, and the Head or Ear i s much larger, of a brown color alfo, teitb }»'>' Sides or Rrnas of Grains or Corn, fo that it f o be four fqitare^ which it contained m rowa tiuskt^ all wbieb are Armed with To that the whole mikes a large Bearded Ear-, <M'

Wheat Gray, or Greek Wbeti>

the color tftlt Grain within, is also j f oftheRsd Wheat, but much prier, theOrmtt being much of the fame faflnon, but ^*w/>f; £ fuller and forger. The Meal or Flower oj «£j makes admirable good White Bread, Cakes, S^ it is fcarcely Jo White as the offxrt, nor Sweet.

VI. Tbe'fourth, or Branched, or manifold W* Wheat. This in its external form cf Kf Leaves and StMt. h much like the Red V

the Red Wheat, faviirg tba the Ear cf this »& feveral other /mailer Ears, at 2, 4, 6, or >!!C K growing out of the fides thereof. This f^iJi aSpeaes e/Dodonxus's Tiph, or TriticumIF num, which by the Decription thereof, can 0* other than our Bearded Red Wheat. It IS. Defferred. Tiph a rifts up with a fngle **" An- Stilk or Straw, the Ear is leng and t* fturdcA with longy hard, flatty Awns, JF^ff clofely fet together, and the Grain is i^na .} light, but hard, and of a redder color ib^n e^ V^% at, enclpded in dnyers Cheff; HukS- * Icems 10 me to be Our Red Meat before V* Imbed.

VII. Some may Objcft againft me, That Gray Wheat is nor, nor can be the Zen, 01 ^F of the Ancient Greeks and Ramans, beca^1^ they, that ZM, Spelt a, or Greek-Wheat^ r^a ^Jr Naked, without Beard or Awns, to (ot which, they bring ths Teltinaonie* of

r, Gerard, laef arid Iragm;) whereas our
 y Wheat has a Bearded or Awned Far; to which
 I anfwer, that *Lugduncifis* has Defcribed and fet
 forth his *Zea* with a Bearded Bar; and *Metbiolm*
 has given us his *Spelta* with Awns, or a Bearded
 Ear alib: 'Tis true that *Tfoxopbrafut*, from whom
 the *Zea* or *Spelitt* is taken, in his Defcription has
 laid nothing of the Awns or Beard of the Ear;
 tut let us take all the reft of his peicription, as it
 is in his *Hijorie Plarttarum*, lib.[^] 8. cap. 9. and
 compare it with *Camerarim* and *Tragus*^their *Zea*
Spita mutica, or any others wh» maintain the
 fame, and you will find that they are none of
 ipbrahmt Plant.- Thar oiTlxopbraflvt is thus
 bribed, it' R^{"" arima}>'< orbufiy-, andfiron-
 • ftfneil in the Ground, out of which they draw
 uch Nourijhincnt, and it rifes up teitb many ftrong,
 jointed, and high Stalks, with Leaves on them xtoft
 like to Wheat \ the Ear is plentiful in Corn or
 Grain which are enclodj in many Chaffy Husks,
 being the lightcfl of others, and not fo eafily beaten
 out as out of other Wheat; and is very pleafint
 to every one. Now letting alide the Anns of the
 Ear, which are here omitted, Our Gray Wheat is
 the molt like it of any thing in the World, and
 if that be not the *Zt*& or *Speha* of the Ancients,
 I can find no other Grain in the World to which
 it will, or can agree. As for *Qamerarius* and *Tra-*
gm, their *Zea* or *Speha*, can be none of this of
Tbeophrafl its-, for theirs has no fuch Bitthy Root,
 no fuch ftrong nor tall Stalks, nor yet to many
 growing from one and the fame Root; And as the
 Stalks of theirs are low, and fewer, fo the Ears
 are fmaller, and not orderly fet in Rows; by all
 which it is evident, that they had no true Know-
 ledge of *Zea*, or *Greek Wheat*, which is without
 doubt, what we call *Cray Wheat* here in England.

VIII- *The Places*. All thefe Grains are not on-
 ly Sown almoft in all Counties through all the
 Iflands of *Great Britain*, but alfo in moft parrs
 of the Habitable World. 'Tis true, that not long
 lince they were Strangers in *America*, but fince our
Engtifh have Planted and Inhabited almoft all iht
 Ealtetn Coaft or *Florida*, from the North of *Nova-*
Scoria, to the South of *Carolina*, they have been
 made Dentzons of thofe Countries, and arc now
 become Natives of the fame, and prolpw with the
 fame increafe and goodnels, which they have here
 with us.

IX. *The Times*. They are Sowed afterHarveft
 in *Autumn*, before *Winter*, and tho' they prelentty
 Spring up, are fo hardy as as to endure the (harp-
 eft Seafons, and the Ears come to their ripeneffs in
July and *Augufi* following.

X. *The Qualities*. All thefe forts of Wheat
 are temperate in TefpeEt of heat or cold, drinels
 or moifture, are Altriiigent, Vulnerary and Nu-

XI-¹ ib* *Specification*. They flop Fluxes of the
 Bowels, Nourifh much, and reftorc in deep Con-
 fumptions.

XU- *The Preparations*. iou may have there-
 from, r. Pollen & Silrgo, *Meal and Flower*.

frumenty.

The Virtues.

XIII. *Pollen Sc-Siligo, Meal and Flower*. Tho'
 iligo be the Name of the fineft and bett Whear,
 and of the *White Wheat* in particular; yet *Siligo* with
 them did alfo fignify the pureft and fineft *Wiugi*^
 Flower. Thefe are of uie to make *Bread*, *Coxes*,
Puddings, *Pultage*, *Panada*, *Flummary*, *Starch*,
Levea, *Wafers*, *Oelly*, *Cataplafm*, &c. Outwardly
 applied to Simple Wounds newly made, in a
 large quantity, it prefentty (tops the Flux of Blood,
 and a Spoonful of them mixed with a Glafs of
 fair Water, and fwallowed down, is good againft
 Heart-burnings, and Acidities of the Stomach.

XIV. *i'ult,lgc*. It is called *Alien*, *b *Aiendo*,
 from *Nourifling*, and fo all *Latin* Authors have
 Tranflated *Chondrus*, which is taken to berhemolt
 excellent *Ytttage* ujed in thofe Ancient rimes: If
 made of *Milk* only, or *Milk* and *Water*, it is pro-
 perly a *thick Milk*; if of *Water* only, it is *Pvf-*
tage. It is good to fhengthen the Stomach and
 Bowels -, it nouiflies very well, and Itops Fluxes
 of the Belly.

XV. *Bread and Cakes*. Tbefc are as it were the
 Staff" of Life; fot with *Bread* and *Water* alone, a
 Man may live many Years. If the *Pafte* be Fer-
 mented with *Leven* o' *Tej*], the *Bread* o' *Cakej*,
 will be much more wholelbm, and more eafie of
 digelHon -, and with *Bread*, the *Panada* or *Pap*
 for Children, and new Bom Infants is made, and
 for them it is better to be made with *Water*, than
 with *Milk*, becaufe then it is not *Stuffing*. If
 eaten dry, or alone, it abforbs the Watery humor
 in the Stomach and Bowels, and is prevalent againft
 Fluxes of the Belly.

XVI. *Puddings*. They have the Virtues of *Bread*,
 are good againft Weakneffes and Fluxes of the
 Bowels, and if madewith *Milk* and *Eggs*, ftrengh-
 ten much, and reftore in deep Confumptions, be-
 ing alfo very eafie of Digeftion! If they are made
 of pure *White Bread*, they will be yec pleafanter,
 lighter of Digeftion, more Nourifhing, and better
 for the Stomach -, by reafon the *Bread* is a Fer-
 mented Subftance.

XVII. *Panada, or Pap*. It ismadewith *Water*,
Milk and *Water*, and fometimes with *Milk* alone,
 of the pureft and fined *White Bread*, and chiefly
 for Infans and Children, and fuch Elder People as
 have been long Sick, and have fuch weak Stomachs
 as that they can fcarcely digeft any thing. It is
 eafie of digeftion, nouifhes much, and may be
 made very grateful to the Stomach, by rhe additi-
 on of *White Sugar*, *Wine*, *Juice of Oranges*, as the
 Sick likes beft, and may mott *quadmre* with the
 nature of the Difeafe.

XVIII. *Far*, or *Boiled Wlieat*. I know *Far* has
 been thought to be a peculiar Grain, or a mixture
 of feveral kinds of Corn among the Ancients;
 but what particular Corn, OI Corns k Iliould be,
 I krtow no Author has determined. Bui *Arch-*
genes in *Mtius*, gives us the Artificial matter, *vis*.
The Wheat is fteeped a while in Wate> and being
taken from thence, it put into a Mortar, where it
is ekanfed from the husks, by gentle beating with
a wooden Pefile afterwards it is laid in the Sun,
and then rubbed with the Hands tilt it is fully
eleanfcd; which done, it is broken a tittle grofsly,
and being dried, is kept for ufe, to be Boiled upon
occafion in Water. *Ptirkinfon* is of opinion, that
 this well refembles our *Boiled Wheat*, which, #
 ter it it freed from t^e lluskas jufl now declared^
 it it boilid in *Water* till it brcaJtr, and become^

pretty thick, which Country People white it « for, do put into Wooden Dijhes^ and fo bring it to London, to be Sold in the Markets, by the Name of Diih-Wheat and Bowl-Wheat.

XIX. *Tragus, or flummery.* It is made of the ^iefi (f the Flower, mixed with fair Water in a due proportion, and Eoil'd up to fuch a ibicknefs, as being cold, it will cut with a Knife i which whiljl V** is put mitt fmall, flat, white Earthen Dijhes, in which it it kept till it is eaten. They commonly mix with it at Fating, Wine and Sugar, and fo it cbears the Heart, revives the Spirits, comforts Nature, andrettores in Confumprions. Some that ate great Rovers of Milk, ule that initead of the Wine.

XX. *Amylum, White Starch.* Ittsmadeofthe fineit Flower of the Wheat, by the means of fair Water. Made into a *Lahech* with Honey, it is good againft Coughs, Colds, Rheums, and Spitting of Blood, and cauias an eafie exoe&oration of Flegm.

XXj. *Fermenrum, Leven.* It is made of fome Palte or Duugh of the Bread jiier Fermentation, and being made up into a round flat Ball, it is kept in a heap of Table or Bay-tuft powdered, till n grows fowre, which you may know both by the Smell and Talte. It has a power to draw and digilt that which is far off; and therefore U good to be put into *Drawing Cctaplajms*^ to caufe Suppauation<jiTumors. Appiyed to placesafMled with the Gour, it in a fhort time eaias the pain: It is good alio againft Warts, and hard Knots or Kermis m the Flefh, beingapplyedwitMbmsSilr.

XXII. *Mauls.* It is made altogether in the firme manner as you make the *Mault of Barley, the Wooer of it being mixed with Turpentine, Honey, and the Tolk of an Egg,* makes a good lltgUtiue •-, mixed with Ammoniacum, Leven, and a little Vinegar, it difcuffes and fohens hard Tumors •, but its chief uie is tor making that fort of .. Drink called *Mum*.

XXIII. *Swea-Mrai Wafers.* They are Sold at i^t CsnfeSiuners, made up into finall white Rouls. Being ejten, they fingularly gratifie the Stomach, and it:engthen it, itop Fluxes of the Bowds, and reitorc in Consumptions. As they are made of the ourtlt and linett Howcr, with a imall addition of Milk, Eggs and Sugar, fo put into Water and .. they cure the Bloody tlux, and are good .. Kuptores in Children.

XXIV. *The Gely.* It is made iff the former *Waji-rs* bailed in a fufficient quantity of Water, u> the Conjiit-ncy of a Gely; or it may be made of the *Diib - Wheat,* at Sef. XVIII by adding a tittle Water to it, and *Draining* it very hot thro' a *Cbeefc Cloth.* It is good againft Spitting of Blood, Coughs, Colds, Hoarienels and the like, being diily eaten.

XXV. *Sanj>uk feu ExtraSunt Tritiei,* Blood ot **Whew.** It is made as yjo make the *Sunguk Sityriona, Confolid* majoris, Potatoes, Parftieps, &c.* It is an admirable thing to cheat the Hem, revive the Spiiris, refieth the Bowels, comfort Nature, rettnrein Conliimptions, and recreate Languilhing Nature. The fineit White Bread is belt ro make it of!

XXVI. *The CofmeticK* Take of the Flower i, Ounees, Honey t Ounce, Vinegar a Quart; boil them gently together, fo long till the Flower will not eajily Jcttie. h is laid ro be good againft ft, Morpbew, Sun-burning, Tanning, Freckles,

11. *The Bal/am.* Take Turpentine i Ounces -, leAsiff three Eggs, mixthem till the Turpentine » perfeffly Aiffoivcd in the fc/Ar, thtn sdd

Hirney, Balfam ^/Feiu, of each two Ounces j J Wheat Hover enough to give it the Confijlemy y Balfam. It is Digftive, Abiierlive and HeaOnfe I good Vulneroy in all Simple Green Wouu*? Plague Sores, running putiid Sores, and Olu Ulcers.

XXVII. *The Oil by Expretfen,* It is Prefid j in an Almond i>refs out oj the wbrfi WfcM. between two thick Iran or Copper Plates, being heat very hot. It heals all inveterate King-worms; Taiars, Scabs, *Herpes,* to. on the Face or Ciitu, or other parts of the Body, being laid on wann* and hereby fays *Galen,* we have known many to be Cured. *Matthblus* commeiids the &me to be put bto hollow Ulcers to heal them. The lime is alfo uild lor Chaps in the Hands or Feet, by raicao of Cold, as alto to make a rugged Skin finooth.

XXIX. *The aiaplafm.* It may be made of «* *Leven abnc, mixed wiib a little Vinegar;* being appiyed, it is good againit the Gout, and the naia Tumors in Womctii Btealts. A *CaUphfa mm ofKew* What Chevied in the Month, appiyed toa place birten by a mad Dog, cures it. A *CMploj® of Brad* made with red Rose-U'ater, appiyed to the Eyes which are hot. red, and inrhmed, orate Blood-fliot, hcili: ihem. 4 *Cataplafm* made Oj Bread tried in a trying-Pun, trnth Wine Vintgor, **bcieg** appiyed very hot for an Hour at a time, tot 12 or 14 Days together, to Kings-Evil Kernels in Neck and Throat, is faid perfttly to diflol^{ve} and cure them. A *Cataplafm* made rf *Wheat-Nh^<1* with juke of henbane, being appiyed, will "Op a Ftux of Humors to the Joints. A *Catiphfi* ?l Wheat Meal* Boil'd in ymegar, Icing applied, <v>" help the ConrratVion of the Nerves, or MnnKin& of the Sinews, as *Pliny* fays. A *Caaplafm* of tt» Bran, with a little flower, made by Boiling it W the jharpefl Wine yinegar, being applycd, Ottcia and difcufTes the Swellings of Womens BreaW 5 and appiyed prefently 10 the Biting of a viper, draws tbnh the Poifon.

XXX. *'Be Clyjier.* It is made by foiling tbt Braa (not too near Sifted) in the Broth made Oj « *Sleeps Head and Gathers •,* which being exhiburf, does open and cle^ne the Body of fharp and ciuae Humors, and to eafe the Griping pam ot tn» Bowels i and all this it will more eflentially &° if to every Pint thereof, you add four Ounces of Brown Sugar, and a little Salt.

XXXI. *Mum, or very Strong Drink.* .. made in the fame manner a* you make very Strong Beer of Barley Mault. It comforts t"e Stomach and Bowels, ihengthens the Back, ana is a Reiterative ro fiich as are in a Pining a"': Languifhing Condition, fortifying all the Natutai Faculties or the Miaocofm.

XXXII. *The Spirit.* It is drawn off from OH or Stale Mum in an Akmbiek, m the very ft"* manner at you draw off the Maulted S²W³, % Barley; or as you draw Spirit of Wine. Untf it be very carefully drawn, it will not tafte ve J pleafanly, by reafon it is apt to beloaded wiw *Empyreum** -, bnt if it is drawn neat and cle3°i is nude fo by ReSificiuon, it will anfweral¹^ ends of *Spirit <f Wine,* and perform the thines.

J9KX1U. *irumety, O1 frumenty,* it i .. from .. an old Name ibf Wheat .. It is aade oj Boiled Wheat, v&icb is that which i' Sold in Wooden Dijbes or fowls, in the M London, and called *Dijb Wheat* (at Sect aforegoing,) by Boiling it up Kith a fyficiext i my cl Milk, 10 make a Puitnge thereof tf " thtcknefr. Ir is Stomatick, ftrengihEtishe fo ttops Fluxes, and reftoraiivc in Confumptions.

CHAP - DCCXXXIV.

O/WHEAT Indian:

%

MAIZE.

I. T⁻¹ ti E Kami. We know no G«A* Name for it i but it is called in Latin, *frumemxm Tunicum*, Turkey Wheat; *Frumittum Indicum aliquorum* & *MUivm Indicum maximum*: in *inglijb, TurfoWbs**. Indian Wheat, Indian Corn, and Matte, as the *Wcft-Indians* call it. J ..

II. The Kinds. We have but One Species thereof but fomemay account them Two, tyreaion of their Magnitude, which I lake to be rather from the Nature of the Soil s a rich Soil affording a very laree fort; whereas a poor Soil gives you only a Dwarf kind of Plant: But there is a great Variety in the Colors of the Ears, fome being all White, ibme all Yellow, fome all Red, and Tome Blew. And again, fome Ears have Grains of alt thofeCo; lors at once; but this difference, we account makes no differing Species of the Plant.

the Defcptions.

f ill. Its Root « Thick and Bujhy, full of graft Tibrts or Strings, from rnlxnce fpring up fiveral ftrong and tall Stalks, fix or eight feet high, ai thick as a Girls Wrijl, if it grows in any rank Ground, full of great joints, with a white Spongy Pith inthe middle. Tbc Leaves are long, twice OJ

WheatIndian: Or, Maize.

lane as thofe of Millet. At the Tops come forth Ffe» n in leather-like Sprigs, bending doton- j like as the Tops of Millet, which are either

White, Yellow, Red or Blew, as the Grains in the Ears will prime. T)efe blowers full atway without any thing of an Ear Jucceeding them: Bur tabilft this i'voax'ring is, come forth the Ears at the Jdntx of the Stalks with the Leaves, from which in two or three of the lower Joints up^ towards th flops of the Stalks, One at a Joint, which have many leaves enclojng them, and are fmallefi at the Top, toithn fmall long Bufb cj Hairs or Threads^ hanging doyifi, at the Ends -, which uicn they are Ripe, are to hi gathered. The Leaves enclojng the Ear being taken awtry, the Head or Ear appears, much like to a long Cylinder {not a Cane} fit teeth 6, 8, or 10 rows of Grains^ at large altoft as Teafe, erdtfdm(~ times larger-^ not fully round, but flat on the fides tob'ich jtiin one to another^ orderly and very dofily fet togctly;r, of the fame Colcr on the em fide as the Bloomings were', viz. either White, llellotv, Red or Blew enly, or ojfomc or all cfibofc Colors together ± the vshote Gram k hard and brink, its external Husk being very hard atmoji like a Shell, but its inward Pulp, when grovmd into Meal or Mower, almofi as white as Snow •, wljkb Grains when Chewed, arefomewhat dry, and not clammy in the Alouch, as our Wheat it.

IV. The Places, h is Cud to grow ia Turfy and that it was h'tft brought from thence: It is true, that it is now uiviverOthY Planted almct all over the JVeJi Indies -, but ic is certain, that it was not an aborigine of ihofe Countries; but was fitli: carried thither by Europeans. It rtquirdl to be Planted in a rich and fat Ground, as Millet doesj for apoor lean Soil, makes butapoorfoitof Corn. It has been Planted in our Gardens in England, and in very hot Summershas come to perfection with us.

V. The Times. It is Sown in the Spring, in March and April-, and the Grain is for the raoft part ripe in/^ and dugft.

VI. The Qualities. It is Temperate in refpect to Heat or Cold, and dry in the fiutt Degree, Abterfive, and very nourishing.

VII. The Specification. It cleanfcs the Stomach, wels, Reins, and Urinary Patfaggs ofTarnrous yucilagcj uifomuch, thait it is laid to be very eleftual to hinder the breeding of the Stone. It alfo nourilhes well, with a thin and Abfterfive Nutrimnt, and reltotes in Confumptions.

VIU. The Preparations. Inthe Wfji Indies there s made thereof, 1. The toiled Grain or Maize, i. ?u'tage. 3. Homine. 4. Bread, Cakes, Puddings. % . Parched Cam. 6. ACaiaplafm. 7. The ht/le Grain.

the Virtues,

IX. The boiled Grain or Maize. The Corn is firji fieeped a little in warm iVater, then beaten in a wooden Mortar with a wooden Pefile^ till all the external harjt Hull » beaten off; then it is boiled in Water till theGrain is perfeilly /oft and barft in the boiling, and becomes almofi like to our boiled Di/h W^eat, They Eat it beingfeafoned ivith Salt, by mixing with it Butter, ot Milk, Cream or Wine, and Sugar, it admirably nourifhes and ilrengthens, and makes the Country Man able to go thro^l Labour and Bufinefs.

X. Pultage. Tie Grain if freed from the external hard Hull as afore fold: then being dried iti the Sun, it is growitd in a Mill to Me'il, which being Sifted, and boiled in Wa^cr >till it is foft, is yet more boiled, till it becomes of the confiftance of a thin iJtjfly tudding. It is Eaten as tte former boiled Grain, with Butter, Salt, Milk, Cteam^ot Wine and Sugar, and has the fame Eft'etls in Wu- riling and ihengthening thefe that Eat it.

XI. Homtne.

XL. Hemine. This answers to the *Frumenty*, made of our boiled Wheat. *If they take either of the former boiled Maize, or of the Putage, what quantity they please: to which they add a sufficient quantity of Milk, which being boiled, may make it of the thicknes of our English Frumenty; and fame put in fo much Milk as to make it a little thinner, according a: every one likes.* They generally Use it, being made Savoty with Salt and Eruer, and ibme put Sugat to it. It has all the former Virtues and Effects, betides it cleanses the Bowels, and always keeps them Soluble, at leall from being Costive.

XH. Bread, Cater, Puddings. They are made by the Mower, with Water or Milk. This Bread whilit New, is wonderful Sweet, beyond any that can be made of *European Wheat*, but being Stale, it eas iomehing harfli, and more unptealing: After one is used to it, it is then Eaten with a Gratefullness to the Stomach. Somemake the Bread, five with half *Flower of Maize*, and half *Ylower of Wflxat*; and fbme add to the *Yloxaer of Maize*, *F. ddo Ro-jtt boiled soft*, which makes the Bread keep moiff a good while.

XIII. Parched Corn. This whether it be of the dried Corn, or before it is ripe, is much eaten by the *Indians*, becaufe of its easie Preparation, and is exceeding Gratefullnes to the Palate.

XIV. The Cattapiafm, 'tie fbmr mixed with *Levrn*, prnl brought to a Cvnfiflency with Oil of the Seeds *Ricinus* or *Palma Chrifti*, or *frejh Butter*; bting applyed, isfaidto ripen Apoltems.

XV. The whole Grain. It is given to Cows, Oxen, Hories, Hogs, Poultry, ifc. to Nouiifh and make them Strong, and alfo to Fatten them.

C H A P . DCCXXXV.

Oj WHITLOW - GRASS :

OR,

N A I L - W O K T.

1. 'Tp W E' Names. It is called in Greek $\mu\alpha\lambda\alpha\kappa\alpha$ - $\alpha\lambda\upsilon\sigma\alpha$: in Latin *Paronychia* -, and in English *Whitlow-Urafs*, or *Kail-Wort*.

W. Yhc Kinds. There are 1. *Paronychia vulgaris Dodcnai*, *Paronychia com munis folio Alfmis Lobelij*, *Lugdunenfis*, *V? Cameranj* •, *shlafpios minima ipecict Thali* \ *Myrfor it alter* species Lugiiitenfis*; *BttrJa Pafloris teculo oblongo Baubwi*; Our Common Whitlow-Grili. 2. *Paronychia folio rutaceo Ijibelij* -, *Paronychia folijs incijit*, *Paronychia aitra Dodonai*; *Paronychia tertia Tabernmontani* \ Jagged, oi Rue like Whitlow-Grafs. ; *Paronychi* mahr -7 Pitofella Siliquata major I haln*; *Aizoon Tele phi un Delcchampij Lt/du** venf\ The Greater Whitlow-Grafs. 4. *Paronychia alter* minor*, *Pihfella Si/iauata minor Thali*; *Paro/ychij altera jolius Ah-aeri Gefneri* •. The Less Whitlow-Grafs.

the Defcripthns.

III. The first, or our Common Whitlow-Grafs. Its San eonfift of a bunch of small fibres; fon whence proceed many jmM and long Leaves lying next to the Ground, fomewhitt like to thoft pfChickweed, but fomethmg longer and whiter -

Whitlow-Grafs Common.

Whitlow-Grafs Common,

from among which, several slender naked not above 4, 5, or 6 Inches high, bearing white Mowers one above another, exceeding after which, come from flat Pouches, Icfjrr any of Thlafpi; W which it contained very Seed, of a (harp Tajle.

IV. The second, or Jagged, or Rue-like Whitlow-Grafs. 1st Root Unnull and Ysbroia In/i former, which sends forth some pale or reddish green heaves, cut in the edges into 2^{cr} small parts, almost in fashion like to the W&* if Rue 5 from among which, grow up divers *

Whitlow -Grals Jagged.

molt naked Stalks, each Spread out into feveral Branches, ail of which, have at every Joint, one fingk but Smaller Leaf much Me the farmer -, which Stalks towards the tops, bend a fitte dnwn-thirds with fomic while Flowers at the tops, greater TJfo foimer, and Husks which Md the Seed, which is greater alfo.

V The third, or Greater Whitlow-Grals. TBK from a small iibrous Root, bat very many Leaves fpringm l«**, and lying »n the Ground in a round Compafs, one by another, about 3 Inches lone, and an inch brci.l <\$tfcg, rough, hairy, of a dark, green color, and .1 huh dented about the edges, growing on Jb&rt l'ooiftalft; from the middle of which, rife up one or two, rarefy three, fmall round naked Stalks, with few, or rather no Leaves thereon, fo, aeek as jearcetsf to fiand upright, but bending downwards; at their tops cmc forth feveral fmall white Flowers, after which, come /mall long Pods, containing fmall redJifk Seed, but netting fo hot or Jharp at the Seed of the jirji.

VI. The fourth, or Letter Whitlow-Grals. // bat a Root which is fmall, hard and woody, the Plant is /mailer than the former, having divers heaves lying on the Ground, Irffer than the Greater aforegoing, like unto the leffer Mouie-Ear, called CltS-Fooc, but not fo hoary, yet a little hairy, of a ye/lowiff) green color y from among which, irow up feveral fmall, firait, and crefled Stalks, 6 Inches or more high, branching forth at the topi, tehere cvmc farth feveral white Mowers, after which fdiom very flender long Pods, like thole cf Flixweed, full of /mall reddifl> Seed, cu fkarp and hot in Tafa a* Creffes.

VII Vfe Places. The two firfl are often found to grow upon Btick and Stone Walls, and upon old Tiled Houfes which are come to na# much

Much upon t'lem i and foretimes they are found growing upon the fhadwy and dry fides of Walls. The two laft are found growing upon open Hills, and other like.

VIII. The fomtimes in January ^Ubruary, v & er be mild, for about the end or wS die Weather begins co grow warm, April

they dye away, and are no more to be ften al the Year after.

iX. The Qualities. They are all of them hot and Jry in the third or fourth degreej Atiru&ive ami Sunpurative.

X. The Preparations. You may make, 1. A Qal/am or Ointment of the whole Herb. s. A Catnplafm thereof.

'the Virtues.

XI. TV Bdlfam, Ointment or Cataplafm, are applied to rhofo Apofteras at the Fingers ends, called felons, and by the Roois of the Nails called Whitlows, which it is did they effeftually cure.

C H A P . DCCXXXVI.

Of WHORTLE-BERRIES.

OR,

BILLBERRIES Heath and Uarjh.

THE Names. ItiscalleiinGreek" *IKP« in Latine Viti* Ida; i. e. ex rte Ida quam vacant Phalacras \$ Vitis Idtta Theopbrsji: in Latine Vaccinia, Vacciniitm t?ruttx •, and in Englifh Wlwrts, Whortle-Berries, and Bilberries.

II. The Kindt. Authors make 9 or 10 Species of them, or more j we fhall dtferibe thofe only which are molt known and. common to us, which are the four following, viz. 1. Myrtifvs txigutm Lugdunnfis, Matthioli, f? Tragi ^ (but certainly it is no Myrtle, nor Species of a Myrtle.) Vitis Idaa vulgaris baccis ftigris, Camerarij, Oufij, Cf Gefneri s (but it is not the Vitis Idsa which bears Currant, tor that Noble Vine grows not on fo high, or Snowy Mountains, but in the Plains and Open Hills, being a Cultivated Vine.) Vaccinia, nigra, Dodonst £? Lcbelij ; BagoLt primum genus Cafalpini-, Our Common Black Whorts or Bilberries. 2. VitisUe* rubra (by all Writers thereof) Vitis ld*a folijs buxeis Uufij, Radix Iddn fruBa rubro Angular*, (as he called, the other Radix Idea frud/i nigra :) Radix Idna Dioftoridis Lugdunenfi -, and Vaccinia rubm by almoft all Authors -, Our Red Wborts, or Bilberries witt Box-leaves. ?• Vitis idaatcrthCittfij; Jlyrtomalis, Petramcin, Pyrus Ccrvina, Pyrajier Ida Gefneri, Sweet Whorts or Bilberries. 4. Vacant pulufhia Dodonti £? Lobelij ; Acinnaria falufiris Gefneri in hortis ; Oxycoccum Qcrdi Vitis ldt<i palupris Bauhini ; Vitis lita tertia Cttfij ; Vaccinium pa/ufire-, Marft IVhorts, or Bilberries.

Ike ViefcRIPTIONS.

HI. The rlift, or Our Common Black Whorts, or Bilberries Its Root grows a/lope underGround, (hooting forth in feveralplaces as it rues. It is a fmall Su(h, which creeps as it were upon the Ground, fcaret rifing a \oot and half high, feveral fmall durkgretm Leaves, Jit on tlx BrMthes, vehieb it /preadt abroad en both

but

VI. The fourth, or Marfh-Whorti, or Btlberlies. *lit Root is long and white, running a/lope under the Harih, and not dozen right; whence spring up severall flendzr brmznifh Branches, like unto Strings, fiercely exceeding a foot in length, jmrctptng upon the Ground, befit with many /mall WLCJVCS like unto thole of Thyme, at certain dijan-tty green on the upperfide, and oftentimes hoary underneath. The Flowers come forth at the tops, growing upon long threddy Vootfialks, eonjt/ing of five rcdidjh Leaves, with an Vmbone or Pomle in the middle, which tarn into round reidjtjh Berries, having a fowrijh Aft'ingent Tafle.*

VII. *The Places.* The firft grows on many Heaths, and in Woods, and on Baren Hilly places in many parts of England. ' It lias been found on *iampfieitd-Heaij\ Vincbley-Common*, and *St. Johns Wood*, not far from London. It prolpers beft in a Lean Baren Soil, and in Untill'd Woody places; and are now and then found on high Hills fubjeft to the Wind, and upon Mountains. They grow in many other parrs of England, as on the Hills in *Qiefnre*, called *Broxen-Wlh*, near *Beefflon-Cajlle*; and feveral other places. Thefecond in the North-parts of this Land, as *viLancafhire* and *Torkjhire%* on the HiHs in *Lane&fhire*, upon *Pendlc-tills*; and in *WefimoreUnd*, at *Crosby Ravenfaiaith*, &c. The third grows as *Label* fays, on every Hill in *Provence*; and fome lay they have found it growing in the Southern part of our Ifland. The fourth grows only in Moorifh places, which are often covered over with Mofs\ in Bogs, Watery and Fenny places, efppecially in *Chefnre* and *Staffordjhire*, where it is found in great plenty.

VIII. *The Times.* The hrft three Flower in *March* and *Aprils* and fomctimes in *May*, and the Fruit of the Black is ripe in *Jane mi July*, but of the other two later. Tie *Marjb* kind Flower in *July* and their Fruit is ripe in *Auguft*.

IX. *The Qualities.* The Berries of them all are cold and dry in the fecond degree, Aftingent, and Anri-Emmena gog ick.

X. *~T}c Specification.* The Juice of the Berries flop Womens Courfes, and all forts of Bleedings; and are good againft all Fluxes of the Belly. It quenches Thirft, ftops Vomiting, extingsi[hes the heat of Burning Fevers; ftops Coughs; and is good againft a *Phihifir*, and other Difeafes of the Lungs.

XI. *The T reparations.* You may have, t. *The ripe Berries.* 2. *A Rob, or Syrup of their Juice.* 3. *A Confervc.* 4. *A Purple Blea Dye.* 5. *A Crimfon color or Dye.*

the Virtues.

XII. *The ripe Btrncs.* The Black Whorts are eaten in the Countries where they grow, with Cream or Milk, and fometimes with Wine, as we eat *Strawberries*, and lo they cool and refrefh the Sromach, ftop Vomiting, allay the hear of Choler, and hind the Belly.

XIII. *Tbefab, or Syrup.* They are good againft the Heat of burning Fevers, cool a hoc Stomacfc and Liver, refirtVojnitmgandNaufeou&es, quench Thirft, are goodagainft the Bloody-Flux and flop all other Fluxes or the Belly, as alfo Cholenck Vlures in particular; and are good to cure all inward Fluxes of Blood, as Spitting and Vomiting Blood, PimnB Blood, Bloody Stools, or Hepacck Flux, the overflowing of the Loches, as alfo of the Terms in Women, &c. and arc profitable for fiaK troubled with an old Cough, and Ob

Itruffions of the Lungs; and are faid to be gool agatnil: a *Phthifi't*, or an Qlceration of that Bowel.

XIV. *The Conferoe of the Berries.* It has all the Virtues of the Rob and Syrup, and may be given Morning, Noon and Night, to the quantity of a large Cheltnur.

XV. *The Purple colored Dye.* Tr#»5rfiw> that the Country People take a Pot full of the Juice of the blick Berries flr/iUffed, inu which they put 4 Spoonfuls of gmd Wine Vinegar, in Ounce of A/uw, and a quarter of an Ounce of Copper Filings, or Votings, or Scales of Copper: which they boil altogether, and make a Dye thereof, into this Dye or Liqueur, they put Cloth, Wool, Thread, Yarn, £?V. letting them lye in it fora good while which afterwards they take out and dry, and then wafh them with cold Water, fo will they have a *Turky Blew color* ^ and if they would liave itdeeper, _ they put into it an *Ounce of broken Gault*. Allb with rhe *Juke of the Berries*, Painters color Cards, Paper, Maps of Countries, of a Purple blew color, putting theretoIbme *Alum and Gauls*, by which they make it lighter or deeper, as they pleale.

XVI. *The Crimfon Dye.* U is made of the Juice of the Red Whorcle-berry, by adding thereto a little Alum. The Juice «f thelcSed Whortte-benies, when of an excellent red color, and the Berries are full of Juice, is of fo Orient and Beauiriiril a Purple to Limne withal, that *Indian Lacca* is not to be compared to it; efppecially when this Juice is prepared with Alum according to Arr, as I my felf (lays my Author) have proved by Experience. s

CHAP. DCCXXXVII.

O/WILLIAMS and JOHNS

Sweet, Garden and Wild.

T^{^£} *Nam*, The? have nokno_w "I Greek Name, but are called by this general Name in Latin, *Armerius*: Of tome *Superba*, and *CarW'* phitlm Syheflrtt -. In Englifli, faeet *Williams* and *wfeet Johns*.

II. *The Kinds.* They are eithet *Latifoliut*, broad Leav'd, which are called *Sweet Williams*-, or *Anguftfolius*, narrow Leav'd, which are called *Sweet Johns*. Of thefe there are theft following Varieties, vis. 1. *Armerius latifolius (implex Ifare albo*, fingle white Sweet Williams, a. *Armerius lattifohus /implex Jiore rubro*, fingle red Sweet Williams. 5. *ArmeAus latifoliut Jintplex verjicofor*, five *Variegatus*, fingle fpeckled Sweet Williams, or London Pride. 4. *Armerius Uttfoliut /implex fiore rubro faturo holafericeo*, fingle deep red, OE Murry colored Sweer Williams, or Vetver Williams. 5- *Armerius latifoliut fiore rubro multiplici*, double red Sweet Williams. 6. *Armertus AngufUfoliusrubensftrnplex*, fingle redSweet Johns, or fingle red narrow leav'd Sweet Williams. 7. *Armerius ctnguftifolius albut Jimplex*, fingle white Sweet Joiins, ot narrow leav'd white Sweet Williams. 8. *Armerius anguftifeliut duple*, double Sweet Johns, or double narrow leav'd S<eet Williams. Gerard fays, that doubttds Sweet Williams are 1 kind of wild Gillirlower.

The Dsjcriptotts.

III. The first « fingle whiu: Swcei Williams. Uro/S a //W/ Effeww ROD*, //s/£ «> wan/ l«<? trailing or weak SlaJxi, with Leaves lying on the Ground^s broader (that) thafe of the Sweet Johns, t>j ufrej!) green color, the L'jves not being Brown at all-, at the tops of the Stalks or Branches, are tufts (>f Jingle vshitt Fiowrt, grewafg pretty thick aadtlofe together, and in goad numbers, having manyjmall pointed Leaves among them.

IV. The second, or fingle red Sweet Williams. They all of them Jspread into m<i/y trailing Branches, icith long bread Leaves lying upon the Ground, in the fame manner that the Stoeet Johns following do. The chief differences between them are, that these

Williams Sweet Red.

have broader and darker green Leaves, fomewhat broixmfh, especially towards tfo points; and that the lloaers Hand thicker and defer, and a great many more » number together in the head vr Tuft, having fmatt pointed Leaves among them, but with prickles unbuttful. The color of tlx Mower is of deep red, wlfout any mixture or fpot at all.

V. The third, or fingle ipckled Swutt Williams, or London Pride. He Rwu arefome kng and jome fmell and thready, running under the uppermit cruft of the Earth. The/r fpottedlVil'iKs are very like the former red Williams, in their farm endman/ier'pf growing, having tjeaves as broad am brown, /onetimes at they; The Viewers ftand at thick or thicker, clujiennng together, but of very variable colors j for Jome blowers ail/be of a fine delayed Red, with a few marks or fspots upon them, others will be full fpeckled or/prinkled, with tebit} or Stiver fpoti, cireleaije about the middle of th.

lowers • Anifiimc mil ban. manyJpicks e> difperfed upon them. All theft rimers flow at one time, but Jome nil I be flowering. others are decaying • Jo that abiding long in (bar ?ride, they become Homers of fame value and re- fpecl. The Seed x blade, as u all the reft, and nf to be. diftinguijhed one hind from another,

VI. The fourth, or fingle deep iccl. or Mury color'd Sweet Williams, <s Vdvet William, Leaves of thU feem to be a little larger, and Johtts a little redder than the former; hit i« I lower color'd the chief difference, which Us deep red or Merry VuVU color, like unto Vet ff of lbal cefor, without any Jpots, but/meothand}} at Velvet in handling, having an tye or Circle >* the middle at the bottom of the Leaves.

VII. The fifth, or double red Siveer Williams- Thk double kind differs nothing from the M^{le} kind, ef the fame color (atScEt. IV. aforegoing)^{^nl} in the duplicity, or doub/enejs of the blowers, »^{i:f} are with law rows of Leaves in every ilover.

VIII. The fob, or fingle red Sweet Johns, « Jingle red narrow Leav'd Sweet Williams. '» Root is difperfed feverai ways, with ma/,} j^a Fibres adjoining to it. Its Leaves are brow* Jborter and greener, than any of the OiUiifi but ntrramtr than the Sweet Williams ajort bed, Jet by pairs at tfe Jomtt of the Stalks, are Jborter than mofi ef the Gil/ifiemer s, or and not above a foot and a h&lff high. At *TM i*^ whereof grout runny jntall flowers, Hie unto j* iJinksbitt Rending clofer together, and in J^horV^a boje or husks, conjifting of S Leaves, Jmaller mofi of the Tinki, and more deeply tigged «**£:, Williams-, of a red color in the middle, and V>D»

Johns White and Red JouHe-

belonging to the

at the edges, having but a faint smell, and not all flowering at once, but by degrees. The Seed is black, something like that of the Seed of Pinks.

¹ IX. The fevemh, or single white Sweet Johns, or single white narrow Leav'd Sweet Williams. This differs not in any thing from the former, but only that its Leaves do never change bnswnjb, and that the Flower it of a fair white color, without any mixture.

X. The Eighth, or double Sweet Johns or double narrow Leav'd Sweet Williams. These double Johns are both of the red kind, and of the white kind, and in their form and manner of growing, are exactly like the single red and white kinds, there being no difference between them, but in the duplicity of the blowers, some confining of two rows of Leaves, and some of three, the edges of which Leaves of the Flowers are not so deeply jagged, as are the single kinds.

XI. The Places. These grow wild to the mountain in Italy, and other warmer Climates; but they are only raised up in Gardens with OS, for their Beautiful variety.

XII. The Times. They flourish or bring forth their Flowers in April or May, before the Gilliflowers and Pinks, and bear their Flowers a great part of the Summer, their Seed being ripe in June and July. They are hardy Plants, and will endure the extremity of our Coldest Winters.

XIII. Nota. From the sowing of their Seed many pretty Varieties are raised, but every slip of them sown in the Spring will grow and abide the Winter. The Velvet Williams, and the Double Johns are worthy the respect of the greatest Ladies, who are Lovers of Flowers. They who have room enough, and are pleased with, may by sowing their Seeds, have great and fine Diversities, even of double Flowers.

XIV. As to their Qualities, specifications, Preparations, or Virtues, Authors have said nothing, and having Experimented nothing concerning them, we are silent. Their great use with us in England is, to entertain them as an Ornament to our Gardens, for their Variety and Beauty sake.

WILLIAMS Wild:

OR,

CROW-FLOWER.

XV. The Names. It is called in Latin, *Armeria Armeria*, *Armoraria Sylvestris*, *Armeria prima Dodonai*, *Tunica*, *Cariophyllus minor Sylvestris foliis latioribus*, *Flos Cuculi*, *Flos Cornicis*: In English, Wild Williams Crow-Flowers, and Marsh Gilliflowers.

XVI. The Kinds. Gerard says there are three Species of the Gilliflowers, or of the Sweet Williams, and are taken by some to be the true *Flos Cuculi*, but seems to be a kind of Wild Ginger. Of these we have, 1. *Flos Cuculi*, or Crow-Flower. 2. The Female Wild William, or Crow-Flower. 3. The Double Wild William, or

Crow-Flower.

The Descriptions.

XVII. The Firrill, or Male Wild William or Firrill Flower, its Stalks of 9, 10, or 12, hollow. The Leaves are broad and bluntly pointed, very rough and hairy. The Vents are at the tops of

the Stalks many in one Tuft, jointy and (nipped on the Edges, leiser than the former) but well recommended Sweet Gilliflowers light Red 9 > S. trilet color.

WILLIAMS Wild :

OR,

Creto-Vktoer.

XVIII. The Second, or Female Wild William, or Crow-Flower. It differs not from the former Male, but in its Magnitude this being smaller, and the Flowers more finely jagged, like the feathered Pinks, of which it is said to be a kind.

XIX. The Third, or Double Wild Williams, or Crow-Flower. This differs nothing from the first Crow-Flower, saving that that it is double flowered, having many fair double Flowers.

XX. The Places. They grow all about in Meadows and Pastures, and in low fruitful Grounds: but the double kind has been brought into Gardens, where it grows very fair and pleasant, I suppose from the goodness of the Soil.

XXI. The Times. They begin to flower in May, and continue flowering till towards the latter end of June.

XXII. Of their Virtues. Authors are silent; they only serve as Ornaments for Gardens, Walks, Houfts, and other places.

C H A P . DCCXXXVIII

Of WIND - FLOWERS :

OR,

ANEMONES.

T^H_{IS} *Nanti*. This Plant is called in Greek *idn*, **m* <*jk* eufi*, *quafi herbii Vent!* • in Latin *Ancmtne* L alfo *tfwfa* *Ve#ti*%, and Mr *r#y7/i*; and in Englifh we call them *Anemones* and *Wini-tloaert*.

We have already in Ow». 17. and 14. of this Work abreg' ing, briefly difcourfwl of the *Garden and Wild Kinds* of this Plant, nor then intending to make this our Herbal a *WoriUgium* •, but a tierwards upon iecond Thoughts, confiderinR how acceptable it might be to *tionlrgifis*, to *Yelfont of \$vality*, *Gentlemen jnd Ladia*, wliofe Giriofity might lead them that way, and were vtry inclinable and Induttrious in improving thetfnel ves in the *Knowledge end Culture of Flowers*, we then refoved to m;ike it as ufeft) to them as we could 5 and therefore in all the following Ditcouries, where we have treated of *timers*, we have been very careful to give the Curious and Indultrious that way, it' not a plenary Satisfaction ; yet fuch an *Inin* duSion to the Knowledge and Culture of!*>em, as we hope may gra title all the Lovers or' rhofo admirabti: Curioficies. And fo in order ro the lam^ Refolutioas, feeing we had been fo brief in the laid *Chap. ijt. and. 14.* under the Tide of *Anemones*, we dull now plentitully fupply here, what we were deteftive in there.

II. *The Kinds*. There are 1. *Tlx Wild Kinds*, of whic.^we have already treated in *Chap. 14.* and *Chrp. 54*}. aibregging, of which we lliall fay no more. 1. *The Garden cr Manured Kinds*, of which we (hall trea: mote fully in this Chapter, and they are, 1. *Antmant latifeUa flore Jrmp/iei*, Broad Leav'd Anemone Single Flower d. 2. *Anemone htifalia flore multiphd, five Jlore plena*, Broad Leav'd Anemonedoubk b'lower'd. 3. *Anemone tenuijolia flore fimpliri*, Narrow Leav'd Anemone Single Klower'd. 4. *Anemone tenuijolia flore duplid, vel jL/e pleno*, Narrow Leav'd Anemone double FlowerM; of all which in order. Ot each of thefe principal kinds, there are a great number of Varieties, too many to be fpecifitid in this *heSion*; and thercfote avoiding that uouble here, we will give you their feveral and various, or piirjcular Appellations in Courfe, as they fhall be Delitbed.

The Defcriptions.

I. Of Broad Leav'd Single ANEMONES.

1 ^U I'. ; " *AnemoneMifoliQ Jlore ftmplet* i Broad Leav'd Anemones with Single Flowers. Us Root is tuberous, with ibme Fibres adjoining to it. Its ttownsaiteU Single, iridi one icw otleans,)nd 3 hauy Head in the middle, of a color differing tomt that of the Leaves. It is of divers torts and

colors, fome bigger, others letter, fome taller,,o thtrs lower, and the Flowers are of divers ReTM, Puiples, Scarlets, dttper or paler, wen to *Bim* or *Peach* color, white, Silver, or *Aft* color -, iorr:

Wind-Flower *Garden Single*.

of the heft forts of which, are kept by *tlmfi* fi* their Seed fake, from whence many dtverimts are raifed, and lbme Double flowers as well as Single; and of differing colors, as well plain jstlnped. In all theft Single Flowers, and fome of thofe !< " Double, than the Double kinds, the Head in trie middle, after the Flowers are fallen, grows bigg« and full of Down, in which the Seed is cndoe«> which muft be careriuily gathered as foon as u ' * ripe, elfe it will be all blown away with trie Wind. Thefe Single kinds are to be Sown and ordered after the lame manner as thole with the narrow Leaves.

IV. 2. *Anemone latifolia flore htico j7mp^{rc}, Hortenfis* •. The Garden broad Leav'd Single y«* low *Anemone*, or Wind-Flower. Its Root grow* downward into the Ground, diverfly fpreaw¹¹ⁿ Branches here and there, of a brownifli yellow on the outfide, and whitthf within, fo brittle ^{LA} can hardly be touch'd without breaking. I^l *? divers broad roundLeaves, fomewhat divided, an indnted withal on the edges, brownifli at the t" riling out of the Ground, and almolt foldedJ^f^ cher; and after, of a fad green on the uppe⁵, and reddifh underneath. Among which, rift ^U p fmall flender Stalks, befet at their middle *W two or three Leaves, more cut and divided thofe below, with fmall yeUowftowers at tops, conlifing of ten or twelve Leaves « having a tew yellow Threads in the middle, ing round <t lhull green Head, which in time g^l ing ripe, contains fmall flat Seed, enclofca ibtt Wooll or Downj which is cafily blown with the Wind.

V. 3. *Anemone latifolia Purpurea Stella!* a, five *Papavaraea flore simplici* -, The broad Leaved Single Purple Star *AnemaiKy* or Wind-Flower. Its tuberous Root is bhckifh on the oufide, and white within, knobby, with many Fibres growing from k. Its firft Leaves, which always fpring up before Winter, (if the Root be not kept too long out of the Ground,) are fomething like the Leaves of *Saniile*, or *Self-Heal*-, but the rdt which follow, are more deeply cut in or Jagged. Among which, rife op divers round Stalks, befet with jagged Leaves, (as all orhet *Anemones* are,) above which Leaves, the Stalks rife up about 2 or ? Inches, bearing one Flower a piece, compofed of 12 Leaves or more, narrow and pointed, ofableak Purple, or whitifh Afhcolor, fomewhat fhining on the outfide, and of a fine Purple color tending to a Murry, on the infide, with many blackifh blew Threads 01 Thrums in the middle of the Flower, fet about a Head, in which grows [he Seed, which is fmall and black, inclofed in fort VVooll or Down, which flies away with the Wind, carrying ihe Seed with it, if not carefully gathered.

VI. 4. *Anemone latifolia flore purpurea Stelhu attera fimplici*; another broad Leav'd Jingle Star Flower'd Purple Anemone or VVind-Hower. This differs not from the former in Leaf or Flower, faving that this is of a more pale, or dull color on the outfide, and of a paler purple color on the infide.

VII. J. *Anemone latifolia Viola purpurea fiore fimplici* i broad Leav'd Gugte Violet colored Anemone or Wind-Flower. This has but 8 Leaves, (as many of them which follow have) and is of a Violet Purple color, whence its Name; Of the 3 laft forts, there ate fome which differ only in having white bottoms, fbme fmaller andfomeurger.

VIII. 6. *Anemone latifolia flare fimplici, purpurea Jfriata*; Broad Leav'd fingle, purple, ftriped Anemone, or Wind - Flower. The Purple is the lame with the former, but a little paler, tending more to rednefs, whose Flowers have many white Lines and Stripes thro' the Leaves.

IX. 7. *Anemone latifolia flore fimplici Carnea v'roaciffima* } Broad Leav'd fingle Flowefd, ftefli blufti colored Wind-Flower. Its green Leaves are fomething larger, and fo is the Flyver likewifc, confuting of ^Leaves, and fometimes of more, of the color of *Carnation Silk*, fometimes pale, and fometimes deeper, with a whitifh Circle about the bottom of the Leaves, which Circle in fome is larger, and more to be ften than in others, when the blower lays it felt open with the heat of the Sun, having blewifh Threads in the middle. This may be called the *Carnation Anemone*, or Wind-Flower.

X. 8. *Anemone latifolia flore fimplid Perjici Violaeea*; The broad LeavM Gredelinecolor'd fingle Wind-Flower. This Gredline color is between a Peach color and a Violet.

XL 9. *Anemone lattfolia flore fimplici Cochinnelle* •, Broad Leav'd fingle Cochirtcle Wind-Flower. This is of a fine reddifh Violet, or Purple, or Cochinele color.

XII-¹⁰ - *Anemone latifolia flore fimplici Car-Sinalit*: Broad Leav'd fingle Flower'd Cardinal Wind-Flower. It is of a rich Crimfon red color. There is another fort of it which is deeper, called *Sanguine^ otjBlood red Anemone*, but it is nor of fo lively a color: And another called *Crameftna*, called the *Crimfon Anemone*., which is of an ordinary Crimfon coloi.

XIII. ii- *Anemone latifolia fiore fimplici Cccinca* •, Broad Leav'd fingle Stamel colored Wind-Flower This is neai unto a Scarlet color.

XIV. 12. *Anemone latifolia flore fimplici incarnata*; Broad Leav'd fingle incarnate Wind-Flower. It is of 3 fine delay'd red, or Flefli color. There is another called *Incarnate Hifpaniea*, or Spanifh Incarnate Wind-Flower, which is of a lively Flefh color, fhadowed with yellow: And another called *Rubefccni*, or *Blufh Anemone*, of a fair whitifli red.

XV. 15. *Anemone latifolia flore fimplici MifchattelU Jfriata* •, Broad Leav'd fingle Nurrncg Wind-Flower. This confifli of 8 Leaves of a dark whitifh color, thiped all over with Veins of a rim; Jufh color, the bottoms being white.

XVI. 14. *Anemone latifolia fiore fimplici Enfumata* v Broad Leav'd fingle, fmo^ky Wicd-Flower. It is of a pale whitifh color, tending to gray and is called *Monh Gray Wini-flower*.

XVII. ij. *Anemoneletifotufiore SmpUci five Favo mijar* H The greater Peacock Wind-Flower, or greater fingle Orange Tawney *Amman?* Its Leaf is fomewhat broader than many, or mofl of the *Anemones*, coming near unto the Leaf of the *Great double Orange eolo^d Anemone*, colliding of 8 large or broad Leaves, very near unto the lame Orange color which is in the Double Flower, but fomewhat deeper. There is alfo *Pavo minor*%, or *Jefltr Orange Tawney Anemone*, whose Flower is leffer.

XVIII. *Kola*. There are befidis thefe expreffed, fo great Varieties of mixt colors in the Flowers of this *Broad Leav'd Single kind*, arifing every Veal from Sowing of the Seed of fome of the choicest for that purpofe, that it is admirable to observe as well in the great Variety of Simple colors, where there is but one only, as in the mixture of two or three colors in one Flower, befides the diverfity of the bottoms of the Flowers, fome having white or yellowifh bottoms, fome having none and yet both of the fame color or colors; and likewife in the Thrums or Threads in the middle. But the moft admirable Beauty is in the *Double Flotcn*, which arife from the Seed of the other *Single ones*, fome having two or three rows of Leaves in their Flowers; and fome as thick of Leaves as a *Double Marigold*, or *Double Crow foot*, and of the tame feveral colors as are in the *Single Flowers*-, fo that it would be almoft impoffible ro exprefs them all feverally, fome falling out to be Double in one Year, which may prove lefs Double or Single in another; yet very many abiding contently Double as at firft.

II. Of Broad Leav'd Double Floweret ANEMONES.

XIX. 1. *Anemone latifolia maxima verftcolor vulgaris, Anemone Cbalcedonica maxima verftcolor*. The common broad Leav'd double variable Anemone or Wind-flower, or giateft double Wnid-flower of *Confiantinople*, by fome called *iheSpaniJh Marigold*. Its Root is tuberous, large and rhick, of a blackifh color on the outfide and yellowifh within, not (hooting out any long (ender Roots as others do. It fprints up before Winter, with broader and greener Leaves than any of the former kinds, not fo much divided or cm in on the edges, yet ib cut in, as that the edges are folding, fiddom lying fmooth and plain, of a frfhs. green color than many which follow, and a little liard in handling, and therefore called by fome Hard-Leaf: From among thefe Leaves rile up one or two Stalks (feldom more from one Root) having form; Leaves as bout their middles jagged (as all the *Anemones* have)

have) eid>Sralk tearing at is top one large Ylower j
apiece, which is large and double > conifiting of
many narrow, long, fharp pointed Leaves, the
outmolt or which, aie broaddt and greenifli at firft,
butafterwards reddifh, with fome ftripesot'Orange
Tawncy ; the middle Leaves within thefc are
fraaller, and of a red color, OI of an Orange
Tawrsey i ihe innermolt being fmalleft, are wholly
of the lame color, but turned form;whai inward,
covering the Head or Burton, which is dual in the
midit or the Flowers of molt of this kind; thefe
having no Thrums or Threads in the middle as the
toimer have, nor bearing any Seed-

XX. 2. *Anemone hifjeha Cbalcedonkt ahera,*
five Pn-ja major flare duplki. The great broad
Leav'd double Orange Tawney Wind-flower. The
Root ot'this is like the tbimer, and its large Leaves
are fo like the lair, that one can hardly diftinguifli
themaliinder: The Staik alfo hasftch like Leaves
upon it, beating at the top a fair large Flower,
confining of many Leaves, fee in two or three ot
large round pointed Leaves, of a light Scarlet Orange
Tawney color. Theib Leaves lGnd not fo thick
or double as the former, feeming to be but one
thick row, of many fmall long Leaves, of an ex-
cellent Oimfon color, wherein fome yellow is
mixed, which makes that coior we call an Orange
Tawny. The bottoms of the Leaves ate red, with
a whirifh Circle ^ the thrummy Hejd in the middle,
being befct with many dirk blackiUi Hairs or
Threads. This Flower and the former, are molt
common, and belt known of all the forts of double
broad Leav'd Anemones.

XXI. 3. *Anemone ltnfoliafiore plena tocciaeovari-*
egau Anemone Cypar'iffia: The broad Leav'd double
Anemone, with a Scarlet Flower; the double Cy-
prus Anempne or Wind-flower. Its Root differs
not from either of the former, and has Leaves very
like rhe latt double Anemone, but not altogether
fo large •, the Flower confits of fmaller Leaves, and
of color very neai unto the laft Double Orange Ane-
mone, but thicker of Leaves, full as double as the
firft, altho' not fo great a Flower, without any
head in the middle, or thrums about it, as in the
latt. Mr. tiea fays, that the Stalk is tall, and that
it bears a gallant large double Flower, of a rich
Scarlet color, and every Leaf thereof finely ltriped
and variegated with white; and that it far fur-
pafles any of the former.

XXII. 4. *Anemone lot-i'folia Caeumetn Margin!*
five Perfica: The broad Leav'd double Perfian
Wind-flower. It came out of *Ptrfia* to *Cenflan-*
taiopte, and from thence to us. In its Root and
Leaf, it is vtry like to the former double Anemo-
nes j only the blower hereof, is rather like unto the
fctond great double Orange colored Anemone, at
Sett. XX. above, ufually called *Pavo m*jer fiore*
plena, being cempofed. of three rows of Leaves,
the ouiermtiU row confuting of 10 or 12 larger
Leaves (and thole more inward, leffer and more
in number, but all of them variably marked, with
white, red, and yellow, having their botiomswHITE.
But intlead ci' a middle Head with Thrums about
ir, as ihe other has •, this has a few narrow Leaves,
of a deep yellow color in the middle, the Flower
Handing upright.

XXIII. j. *Anemone htijoliajlore luteo duplici 1*
The broad I eav'd double yellow Wind-Bower. Its
Rooi is Tuberosus, and like the Root of the fingle,
and his Fuch broad rtund Leaves as the fingle, but
fonaewhat larger or ranker. The Stalks ate befct
with taigei Leaves, moredeeply cut in on the edges.
TheJlowws are of a more pale yellow, with fome
purplifh Veins on the outfide; and a little round
poiniol i but tt<y ate all on the infide of a fair

yellow color, confilting of two rows of Leaves, <
which the innermolt is rhe narrower, with a lmji
green Head in the middle, encompp3(Ted with yellow
Threads, as in the fingle. This has little or n>
Smell, and fprings up and flowers later than the
fingle kind.

XXIV. 6. *Anemone latijelia five plena Coca-*
mo: The broad Leav'd double Scarlet colored
Wind-flower. The Leaves are green, but firm"*
than thofe ot'*Favo major*, at Sett. XX. the Flower
is thick and double, confiding of many wuntt
pointed narrow long Leaves, which are wholly <
rich Scarlet color. There is *Comnea Jiera*; a"
nother of this fort of double Scarlet Flowers, trie
Leaves whereof are narrow, (harp poinred, and o
a light Scarlet color. And this is that fort,
is called *Super-Rick* There is alfo another
bean double Flowers, almoft as large as the
which are of rhe color oiMmium^ ciRedL

XXV. 7. *Anemone UtjfoSd fiore flens*
The broad Leav'd double red Wind-flower,
dirk green Leaves, and a fmall double
Flower, confining of many narrow Leaves. *"
of this kind there is another like unto it, only, <"
Leaves of the Flowers arc tipt, and a little edg<
with white.

XXVI. 8. *Anemone htifolh fore P¹TM*2"?^*
reo variegata: The btoad Leav'd double pi"
variegated Wind-flower. It differs from the
following, chiefly in Koblenefs OI the
which is very targe, thick, and double, of an
cellent reddifh Purple color | and every Leal r>"
of, lifted about with white.

XXVII. 9. *Anemone htifolk M^e*
purro: The broad Leav'd double Pur,
Mower. It has broader Leaves than the 7*L
going, and of a brownifh green color. TM <; £ " V
is fomerhirg larger, and & Leaves thereof no' TM
numerous, %m loader, of a Murry Purple: c o g
There are divers forti like unto this, which^oniy
differ in the color of the flowers;
deeper, fome lighter, and fome of a pa e
which by long (tanking before they rail,
leem white.

XXVIII. K. *Am mone W f j " Mf*
verier a: The broad Leav'd d<We.
lor'd Wind-tilfcer. This is almct like to th
at Sett. XIX. aforegoing i but lefler whole How
ers are very thick and double, feme being white, o
whitifh, Tome purple, deeper or paler, iome or
blufh or Hejh color, and fome ot a / e d ^ < W I
tending to Scarlet, or Camation, w< nrevera, othrt
varieties not eafy to be Named, which all of them
continue conltant in their feveral appearances <
colors.

III. Of Narrow LeavM Single ANEMONES.

XXIX. The *Simile narrow Leav'd*
are of greater rarety, varity and cteem,
Latifolhs. Formerly we had but few ot
Howets, and fuch as were little worrh, but n
of late Years we are become Matters of a ^AV-
Varieiy of them, admirable in their kinds, or
vers colors, plain, edged, Iltriped olmarkfd, K' >
Scartot, Purpter, Whites^ Peach hbr'd, ^
Ur'd Jimpie and variegated with White.
fome others raifed from the Seeds of rhefe,
produce gallant Double Flowers of feveral
asRrrf, *Starlet Purpfe^c.* both plain and ftii.
which have more refembled the Flowers of
Double LetifoHft, than thofe with narrow v ?

ihefe confuting of many fomthing broad Leaves, having no Bruth or Thrum of Leaves, but a firull Head or Burton in the middle, fome having but two rows of Leaves, fome three, and fomefo thick and double, that the Head in the middle is not to befeen, until the Flowers fait. And yet theft kinds, (efpecially the thinner ibrts) perfeft their Seeds, from whence many fine Flowers may be produced. Thefe are called *Hermaphrodites*; for that they partake of both kinds, as hairing the Roots and Leaves of the Narrow, and the flowers of the *Broad Leav'd Anemones*.

XXX. In the handling and ordering or the rater forts of ihefe excellent Flowers, fome particular care is to be taken -, for if the Soil, Scituation, Time, and *Modus* of Planting and taking up, be not exactly obferved, the Flowers will neither be fair, nor will the Roots proper and increafe \$ but on the contrary rot and confume; more efpecially all the bed Double kinds with ninow Leaves-, but the ordinary, and rhofo with Single Flowers, ate more hardy-

XXXJ. t. *Anemone tenaifolia flore fimpha vulgaris* -, The Common Narrow Leav'd Single Wind-Flower. Irs Root is much bigger than the Double kind, and apter to incieife, and the green Leaves ate larger, ranker, ami more in number than in the Double kinds. The Stalks are rail, and bear plentifully fair large blufh colored Flowets, commonly confiting of one row of broad Leaves, with a hairy Head or Button in the middle; which after the Flowets are pair, grow big and long, yielding ftore of (mall flat brown Semi, involved in Down.

XXXII. 2. *Anemone angufifolia, jive Geramfolia tdrulea fine jtmpliei*: Narrow LeavM blew Jingle FlowerM Anemone or Wind-Flower. The Root is blackifh without, and extends it felf in long tuberous pieces, fomewhaclike rothofe of the *Broad Anemones*. It fprings not out of the Ground, till the great Winter Froth be pa ft, *vis.* about the middle of *Vtbruary*, when thin cut Leaves come iorrh, fomewhat brownifh at their rlft appearing -% bur afterwards fpread out into winged green Leaves, fomthing broader than the ref which follow, divided into three parts, and each parr into three Leaves, eveiy one cue in about the edges, one Handing againft another upon a long llender Foot-felk, and the end-Leaf by it felf Among thefe, rife up two or three green Stalks, garnithed with fuch like thin Leaves as are fet at the bottom, from above which rife the Flowers, but upon one Stalk, confiting of 14 or 1J fmall pale watcher, or blew Leaves, leflerrhan any of the Single Kinds which follow, which encompafs many whitift Threads, and a fmall green Head in the middle, fomthing like the Head of the *Wild Crowfoot*^ in which is contained fuch like Seed.

XXXIII. ?- *Anemone angufifolia flore finsplta alba*- Narrow Leav'd white Single Flower Anemone. This is a Species of the latt defcribed, but with this difference, That the Leaves of this are not brown at their firft riling, but green; and that the Flowers in this are white, in that blew.

XXXIV. 4. *Anemone mtgustifoliti purpurej vulgarh* v The common narrow Leav'd Single Purple Wind-Fbwe^ Its Root is fmaUer, and more fneading evy way into (mall, long, fiat, Tuberos parts, thanany other kinds of *Single or Double Anemones*. This is one of the moft common Wind-Flowers, and therefore teift regarded -, n has many winged Leaves tending upon feveral Stalks cut and divided into divers Leaves, much tite unto the Leaves of a *Carrot*. Among which, rfe up Sulks with fome Leaves thereon, (as is

ufual to the whole Family of the *Anemones*, *Wild and M.ixuredJ* at the tops of which ftand the Flowers, confiting of fix Leaves commonly, • but fomtimes they will have 7 or 8, beieg wry large, and of a perfect Purple Violer color, vay fair and lively. The middle Head has many black-ifti Thrums or Threads about it •, but I never heard that it was ever found to bear Stied.

XXXV. j. *Anemone angxflijolid fore Jtmptiici*^ *Carnea pallida*: Narrow Leav'd Single, pale Bluih colored VVind-Flower. This in its ltoorand Leaf is like the former, but the FLOWLT is nothing fo large, but is whitifh tending to a Blufh color, and of a deeper Blufh towards the bottom of the Flower, with blackrfh blew Thrums in the middle, never being obferved to give Seed.

XXX VI. 6. *Anemone ttHnifaia (lore Jixtptici, Carnea virida wigu'ibufque albk*: Narrow Leav'd Single lively Blufh colored Wind-Flower, with whiw bottoms. This is like the laft in Leaf anJ Flower, but that the Flower of this is larger, and Its Nails or bottoms are white.

XXXVII. 7. *Anemone angujUfolia flore fimptki, albavemsfurpuris*: Narrow Leav'd Single white Anemone, with Purple Veins. This isa leffer Flower than the other, and beieg white, has Purple colored Veins and Stripes running through evtryLeaf.

XXXVIII. 8. *Anemone tenu'ijol'u Qocanta fimplexi* thin Leav'd Jingle Scarlet Anemone. Its Root is tuberous, but confiting of thicker pieces, fomewhat like unto the Roots of the *broad LeafA. Anemonei*, but fbmewbat btown, and not fb black, moft like unto the Root of the *Double Surfo Anemone*. The Leaves are fomthing like unto the former, but a little broader, and not fo finely cut and divided; the Flower confilh of *fix*. reafonable Urge Leaves, of an excellent bright Red or Scarlet color: the bottoms of the Leaves are large and white, and the Thrums or Threads in the middle, of a blacktflti Purple color.

XXXIX. 9- *Anemone lemtifelia simplex Coccinea abfyue unguibus*; Narrow, or thin Leav'd fingle Scarlet colored Wind-Flower. This is very near to the color of the laftdefcribed, and without any white bottom in its Leaves.

XL. 10. *Anemone tem'tfolia simplex flare Hockferkeo*.- thin Leav'd fingle Crimfon Velvet Wind-flower. This has as large a Flower as any of the Single Kinds, and is of an Orient deep red Crimfon Velvet color.

XLI. 11. *Anemone tenuifolia Jimphx flare Sanguinea*; thin Leav'd fingle Blood red Wind-Flower. This is of a deeper red color than the former, to wit of a deep Blood red. And there is *Jlore rubrafundo lutej*, another fort of the Same Blood red, with a yellow bottom.

XLII. w. *Anemone tenu'ifoliii/implex Coccinea diluitor*; thin Leav'd fingle bright Crimbn colored Wind-Flower. Its Flower has fome Leaves round pointed, and others fharp pointed -, and it is of a perfect Crimfon color, fome lighter or more diluted, fome more red than others.

XLIII. 13. *Anemone tenuifolia fimplex <ilb& Stuminibus furepureis*; thin Leav'd fingle white Flower'd Anemone. Irs Flower is pure white, with blewifh Purple Thrums in the middle. And there is one of this kind *Jlore alba Vi'nii Cornets*, which has Huff Veins running through every one of its white Leaves, Alfo another white Flowefd, *unguibus furepureis*, which has the bottoms of all its white Leaves of a purple color.

XLIV. 14. *Anemone tenvifolia fimplex flore CarnitHifpamcai* Thin Lejv'd fingle Spanifh blufh VVind-Flower. This has a r<J great Flower, of a kind

kind of dead, dull, or fallen bluish color, but yet pleacim, with fewiffl Thrums oi Threads in the middle.

XLV. 1J, *Asemone tenuifolm fimpkx purpurnfentz*, thin Leav'd fingle pule Purple colored VVind-Flower. This confits of many fmall narrow Leaves, of a pjle Purple or Bluifh color on the outside, and ibmewhat deeper on the infide.

XLVi. 16. *Anemone tenuifolU fmpkx tacic Yami fiorum* \ thin Leav'd Jingle Apple Flower'd Anemone. This in its Root and Leaf is like unto the firft *Scarlet Anemone*, but its Flower confits of feven large Leaves, without any bottoms, of a whitecolor, having edges, and fome large Strips alfo of a Carnation or Fleth COIOE to be feen in them, marked fomewhat like an Apple Bloflbm, and thereupon it is called in Lathe, *Anemone tenuioia [implex alba iujlar facie Pomu thrum,*

IV. Thin or narrow htavd double flow trd ANEMONES.

XLVII. i. *Anemone tenrnfolia jiore plena rubro vulgrk*: Common narrow Leav'd double red Wind-flower. Its Roots are thick and tuberous, fomething rdoubling finjll Kates <A GingeT, of a yellowivih brown color, and neiher 16 big nor 16 black, as thole of the other kind wrth broad Leaves. It has many winged Leaves, divided into many and fevetal Brandies, each Leaf being cut and parted into many divifions, fmall, and more divided than thofe of Partly, and fome of them like thole of a Carrot, Among which rifes up one, two, or more Stalks, according to the bignefs of the Root, with fome finall green Leaves about the middle of each of liem, and bearing at the top, one great double Hoiver, cuiifitingof 6or7, and fomeumes of more, brojd outer Leaves, of a deep red color, having in the middle a large Thiwin of finall] Leaves, of a lighter and much paler red color. Out of the middle of which, comes many larger and broadet Leaves, of a lighter red rhan the outward Leaves, and deeper than tholl ol the Thrum, which warmed by the Sun, Ipread themfelves over it.

XLVIIL 2. *Anemone tenuifalid jiore Cacritico pteno vul'ir'ii* • Common narrow Leav'd double Scarlet Wi_{rit}]ficwer. Its Root is tuberous and i thick, very like to the Root of iingle Scarlet Anemone: And i:s Leaves are very like to the fame, but not fo fmall cut and divided, as that with the purple Mower. The Flower when it firft opens it ielt, confiltsof 6, and fometimesof 7 or 8 broad Leaves, of a deep red, or excellent Scarlet color, ilie middle bead being thick clofed, apdof a greenilh color, which after the Mower has Hood blown fome time, does gather colors, and opens it felf into many (mall Leaves, very thick, of a more **I**ale red color, and more *Snaul* lfte than the eaves.

XLIX. 5. *Anemone/uuifoliafiorepknoverftcokr*: The narrow L&iv'd double variable Wind-flower, or double Apple-bloflbm. It is in all things like the rirll (*m* Sect. 47.) but only in the color of the Bowers, which in this, will be of a i'luff color, the tops of the Leaves aliTv>tt white, and the bottoms Peach color. And Tome-lime^, the Hower will be red like the firft, but ttitped and variegated, with pale bluff, almoft white, and fometimes without any marking at all. All thefe divrittics ate found in this one kirted, all proceeding from one Root.

L. 4. *Anemone tenuifolia jiore Cocdmo fe?'' ro plena*: The Double Qmation Velvet Wind-Mower. Its Flower is of a deep Orange Tawney Crimlbn, near unto the color of the outer Leaves of [heNvffct or *African AhrigoM*, and not differing from the next following in any thing elfe.

LI. j. *Anemone telmifolia jiore Coccineplexo varirgitfii'*: the Parti-colored Douhle Cirofon Wind-Flower. This varies not neither in its Koot, Leaf; or rbrm of its Flower, from the fecond at (*Scf*. XLVUIO but in the color, in that this will have fometimes the outer broad Leaves parti-colored, with whicifti 01 bluff colored gear Streaks in the red Leaves both infide and outside; as aljo divers of the middle or inner Leaves, frriped in the fame manner. Its Root, gives lairer Flowers in fome Years than in others; and fometimes gives Flowers all red again.

LI I. 6. *Anemone tentifoHn Ekgant'wr fiff plena rubro*. Narrow Leav'd more Elegant Double red Wind-Flower. Its Root is as great and tftcK as that of the *Common Red*, but (tatter, and more fpreading than it. It has narrower and more divided Leaves than any of the former; the Static is taller, and the outer Leaves of the Flower more u' number, and (harper pointed, of a good Crimwi color j the Thrum in the middle is of a pale <dj out of whofemiddle comes orhct Leaves, urge ana fpteadng themfelves almdt c'uite over the Flower, of a deeper color than the Thrum. Many times iwo Flowers will be joined together on one Stalk, which happens more frequently than in any other.

LIII. 7. *Anemone tenuifolia jiore plena l<''** rubente*: The Greater Double Bluifh Wind-Flower. There is almoft no difference in the Roots 01 Leaves of this, from the *Common Double Scarlet Anemone*, (at *SdL* XLVIU.) raving that the Leaves hereot are a little broader and feem to be of a little trefter green color. The Flowex of this is as large almoft, and as double -7 and the inner Leaves likewise almoft as large as they, being of a whitiff or rldh color at their firft opening; but afterwards become of a mod lively bluff color: the bottoms of the Leaves abiding of a deeper bluff; and with tong Handing, the tops oi' the Leaves will turn almoft white again.

LIV. 8. *Anemone tenuifohafiorepleno Cocanee*. Narrow leav'd double Scarlet Anemone, or Wind-Flower. This is like that at *Sell*. LII. above, but that the Stalks grow not fo high, and the Flowers are fomeshing fmalleT, which are thick and double, and of an excellent rich Scarlet color, ufually called the *Incardine de Spain*.

LV. 9. *Anemone unuifali & jiore plena CeeclnM variegaia coma albejetnte*: Narrow leav'd double Scarlet variegated Wind-Flower, with a whitiff middle or thrum. This is in all things like the laft, but only in the colot of the Flower, which i" this is of the fame Scarlet color, bu; finely frriped and marked with white; and the Thrum feeming to be almoftall white. Sometimesalfo, thebroo-er Leaves will come out of the middle thereof, 01 a bright Scarlet ftrtped with white, like unto the outer leaves.

LVl. 10. *Anemone tenuifolia jiore ptens tffl & ScarUto*: Narrow leav'd double Scarlet thirumeo Wind-flower. This differs iiom the hit, in that the outer leaves hereof are white, aid the Thrum isoraScarletcolor

LVII. it. *Anemone tem'ifolia fiort plena, dS^ hacara*: Narrow leav'd double VVind-Hower, called Nacara. This is like unto tte Scalei; thving that the Flower is of a deeper and yellower Scarlet color, refembling that of the letter *irt-ncK*

or African Mangold, bur not fodeep: the Thrum is inclining to an Orange color-

LVUI. <2. *Anemone fiore pkr.o Sttlpbureo t* Narrow leav'd double Sulphur colored Wind-flower. This differs from the laff, in that the outer leaves of the Flower arc of a pale: greenifh yellow, or trimftone-like color; and the Thrum more green.

MX. ij. *Anemone unuijolia flare plena vtn-dame* : Narrow leav'd double green Wind-flower. This is like the hit, favuig that the outer leaves arc of a greenilh Orange tawney color, and the middle Thrum of a vellovviili green.

LX. 14. *Anemone tenufoha fiore p''*'»*'»* major- Greater narrow leav'd double white Wind-flower! ThisdiffifeislUtle either in the green leaves, or faftiort of the Flower, from the former; being as large and double as any of them, and or a Milk white color.

LXI 15- *Anemone icmnjolia fiore plena moo mixim'd* : the Greacitl Narrow leav'd double white Wind-flower. This in fj(hion is like the tuft, but much larger, and fairer, and of a pure white color.

LXfl. '£• *Anemone tetiuijolia fiore plena 4&0 'uinort* The leffer narrow leav'd double white Wind-Flower. It bears a fmall double Snow white Flower, hiving fix outer leaves, and a thnum in the middle made tf fmall hairy leaves, Handing even at the top, as if they had been dipt with a mir ofSciflars,

LXIII 17. *Anemone tmttfofta fiereplem alb'i-eante* • Narrow leav'd double bluffi Wind-flower. This differs very Little from the laft, but only in the color of the Flower ; tor they are both much about the lame bigncfs; the middle Thrum like-wjgg D>eilg as fmall and morr, and as even above, as if it was them fo-, only iheHoweratfirliopening js almoft white ; bur afterwards the ouer leaves have a more flew of bluffh in them, and the middle part a little deep:r than they.

LXIV. 18. *AtemirK tcnmfol'ia fiore plena purpureo Viohceo* . * Narrow leav'd double Purple Wind flower. This double Purple Anemone, is of the lame kindred with tire Double Scarlet, at Self XLVIII. aforegoing, having the fame form and'doubknfs of the Flower, confuting but of fix or feven leaves at the moft (in our Country, tho' in the hotter Climates, it has io, 12, or more as large lam) for the outer Border, and as large fmall leaves for the inner and middle alio, and almoft as double, hut of a deep Purple, tending to a V violet color 1 the outer leaves being not io deep as the inner. Irs Root and Leaf comes near to the Single Purple Anemone before delcribed, but iis Roor (breadr not ibmuch.

P

LXv. 1?' *Anemone tenuifcl'itt fiore plena purpurco Ctruico*: Nanow Leav'd double blew Wind-Flower This differs not in any thing from the foimer double Purple; but only that this Flower is paler, and more tending to a blew color.

f XVI 10. *Anemone tenutjalm fiore plena OtombiM* • Narrow leav'd double bluffh Columbine WinKwer. It has a larger Flower than any of the former, the outer Leaves being long and broad: rt. Thrum is compoied of fhort narrow Leaves,

FKrrh S Tuft of longer and broader Leaves, which f> over the Flower, almoft to

SU a Huto «SBh « ^ like « that which in the Flowers Columbines, whence came

the Name.

LXVII. 21. *Anemone variegata fiore plena Rofeo*: Narrow leav'd double look colored Wind-flower. It has fmaller Flowers than the laft, but very thick and double, of a more lively color, like very thick and double, of a more lively color, like that of a new blown Damask Rofe. It differs in

nothing from the Columbine Anemone, at SsSt. 66. above, but only in the Flower, which is ibmething fmaller, and not fo ihick and double as that is; this being of a reddifh color, near to the color of a pale red Rofe, or of a deep colored Damask.

LXVIIIf. 22. *Anemone tenuijolin fiore plena Rofeo variegata* : Narrow leav'd double variegated Kofe colored Wind-flower. This differs trom* the Jaft only in this, that the Flowers hereof are fripped and variegated with white, fpecially in the outward Leaves.

LXIX. 23. *AnemonetenuifoliafioreplenoGirm-o yivaajjimo* : Narrow leav'd double Carnation Wind-flower. This in its Root, Leaf and Flower, comes nearie to the former double white Anemone, atSeft.^2, above: in refpeEc to the magnitude and duplicity of the Flower; and in the finalnefs of die middle Thrums, and theii evennets at the Tops: it is not fo brge and great 3 Flower as the Double Purple, at Sea. 6d, either in irs inner or outer Leaves, bur yet it is very fair, thick and double, and of a molt lively Carnation Silk color, vtry deep both the outer Leave*, and middle Thrums ; and withal fo bright, that as well as ti delights the Mind of the beholder, foit fills it with'a kinfl of amazement, by reafon of ics excellent appearance: Yet by long Handing in the Sun, it grows paler, and fo pafles away, as do all the other Beauties of*this kind.

LXX. 24. *Anemone tenuifolia fiore plena rubante maculate*; Narrow leav'd double fpotted bluffi colored Wind-flower. It rifes up with a ull Stalk bearing a large Flower: the outer Leaves whereof are almoft white, marked with fmall reddifh ipots and marks, efpecially on the outer fide. The Thrum is large and thick, compofed of many long narrow, lhaip pointed Leaves, ot a reddifh or Peach color, powdered with fmall fpecks of a deeper red color. This is called by thofe ivho brought it out of Wanders, *The PerfeffCourtical'i*.

LXXI. 27. *Anemonetenuijoliafiorerabrofufta plena coma Amarantina* ; Narrow leav'd double purple Velvet Flower. It is in all things like to thi; double Carnation, at Seft. 69. above, but p^mething larger. The difference confifts chiefly in the color of the Flower; which in thisis of a deep or fad Crimfon red color, for the outer Leaves; and of a deep purple Velvet color in the middle Thrums, refembling the color of the leffer *Amarantibus purpureut*, or purple Flower-Gen tie, (from whence it took its Name:) which middle Thrum is as fine and fmall, and as even at its top, as the double white or Carnation Anemones, at Sect. 62. and 6?. aforegoing.

LXXII. 26. *Anemone tenuifolh fiore pkno tricolor* : Narrow leav'd double three colored Velvet Wind-flower. Ttis is very like thelaftdefcribed} fjving, that in the middle of the purple Thrums, there comes forth a tuft of Threads or Leaves, of a more light Crimfon color.

LXXIII. 27. *Anemone tenuifolia fiore plena purpureo* -. Narrow leav'd double purple Wind-flower. It comes up with green Leaves commonly before Winter, and many times with Flowers; and therefore for the prevention of fuch fbrwardneft, the Roots are to be kept out of the Ground, and not to be fet till *November*, which caufes them to bear the fairer Flowers in the Spring following, which will be very large, thick, and double, of a lad dark Violet purple color.

LXXIV. 28. *Anemone Tesuifalia fiort plena LavenduU eolore*: Narrow leav'd double Lavender colored Wind-flower. It is in all things like the lilt, but the Flower is letter, and of a pate heavjr

blew color, like unto the Flowers of *Lavender*: there is also another *d* this fort, which is striped with white, especially the outer Leaves of the Flower.

LXXV. 27. *Anemone tenaifolia flore* \sqrt{w} \triangleright *Cerulea*: Narrow leav'd double Wind-flower. It is in its iartior or form like the *Jalf*, differing only in the color of the Flower, which in this, is of a fire bright blew color, more delightful to the eye than any of the *Purple Anemones*.

LXXVI. 50. *Anemone tenuifolia flore plena* *i'urpureo*: Narrow leav'd double Wind-flower, with a Purple Thrum. This differs chiefly from the other Purples in the color of the Flower, the outer leaves of this being white, and the Fluff or Thrum, of a beautiful Purple: this Flower by reason of its excellency, is called *The Perfect in Beamy*.

LXXVII. 31. *Anemone untifolia flore plena coma Ambrantina*: Narrow leav'd double Wind-flower with 3 dark Purpl Thrum, called *Amarant*. It has broad green leaves as the *nic* common Red, (*at* *Seff*. XLVtl.) and the Flower is of the fame color, the outer leaves of such red color, and the middle Thrum of a dark Murry Purple color, like the Flower of the lesser *Ai'uranthui Purpureiti*, and therefore wiled the *k-rurj'm Anemone*. Sometimes there will come a Tuft of bright red saves out of the middle of the Purple Thrum, and then some have called such Flowers *Amrntus tricolor*, as if it were a d'tinct Kind, which in some Years happens in most Flowers, and in other Years few or none.

LXXVIII. 32. *Anemone tenuifolia flori pkno coma Amaraminavanegdia*: Narrow leav'd double variegated *Amarant* Wind-flower. This is in all things like the lair, save only the outer leaves, and those which come out of the middle of the Purple Thrum, are variegated with white, much clearer in some Years than in others. There are two sorts of this flower, one from *iinders*, another from *Paris*, the latter being the better, as more constantly marked, and more distinct than the

LXXIX. 21. *Anemone tenuifolia flore plena* $j \gg w^{\wedge} fw/t/ - ; iV$ Narrow leav'd double Wind-flower of five colors. It is like the *Amarant*, but that the Stalk is taller, and the Flower larger: the outer leaves are red, the Thrum of a deep Murry Purple, out of whose middle comes one or two rows of leaves, of a light Crimbln color toward the ends half way, and the rest a pale yellow; in the middle or these leaves, comes forth a small Tuft of flower knots, of a pale Silver color. This is an uncertain Rower, and does not often come well.

LXXX. 74. *Anemone tenuifolia flore firmi Perpertig itigefami*: Narrow leav'd double dark Purple Wind-flower. It has fair large Flowers, of a dark Purplish color, finely striped with white; its Roots are tender, and apt to perish, unless the Soil be very agreeable, as all the other *Karrow Leav'ti jhijhd Anemones* are.

Btides the Thirty Four, Mr. R^c has given us brief Notices of Distinction of half a Hundred more, called by particular Names, and that in an Alphabetical Order, which that you might not want the Knowledge of; we (hall here exhibit them 10 you in the following Eighteen *SeSions*.

LXXXI. *Alboaeif*; white, with a little Carnation in the bottoms of the Leaves and Thrum. *Albertine*, or *Fafs Scala*, Fklli color with Carnation. *Angelica*, white Leaves, and a pale greenish Thrum. *Afian*, white and Carnation Leaves, with a Scarlet and white Thrum. *Afrea*, white and Carnation, *Augujime*, white and Carnation Leaves, with a Scarlet Thrum.

LXXXII. *Bouloioife*: white leaves with Carnation bottoms; the Thrum white Carnation and I morj. *Briote* white and Carnation leav Thrum all Carnation, *Bugle*, it is an ill mixt with Carnation.

LXXXIII. *Candwte*: Gray leaves with Carnation bottoms, and Thrum Carnation up greenish Hair color. *Cazcruten*, the leaves Ciini[^] lbn, bordered with a yellow Brimilone color, the Thrum deep Scarlet. *Qelefine*, the white, and the Thrum white ripe with *J Cefide*, the leaves white and Carnation, Rose color, *au'ta*, it consists of Blulli, $\ll r^{icw}$ color and Carnation.

LXXXIV. *toamafine*: Camaiio; While perfectly marked. *Dorifaene*, the Carnation and white, and the Thrum color.

LXXXV. *Extravagant*: Its Leaf is * with white, red and green colors \pm its T. ing of a *Ibange* form.

LXXXVI. *Gabriel*: It has white b \ll I Thrum green, mixed with White a; *Gallipoh* of *Tholouzc* % the whole i Scarlet and White. *Gayetane*, the first Fi aic white and Purple, the latter Dove color \ll Ptiach.

LXXXVII. *Herejje* - Its leaves are of a DrOf fon color, fomedmts marked with white, and tu Tiirum is Scarlet.

LXXXVIII. *Jolivet*, the leaves are *arc* *Fleflit*[^] and *Crimfon*, and the Thrum of a *lirick* *coiw* $7 \ll / \ll JW$, the leaves are of a Bluh or Flefl and Carnation, and the Thrum reddish. *ft* the leaves are a Carnation and White, and Thrum Camarion color only-

LXXXIX. *Limfinc*, it is very much *ib* the *Extravagant*, at *Sett*. LXXXV. ing. *Lidnoife*, the outer leaves and the within, are of a whitish Gray, with Dove bottoms -, and the Thrum is Dove color green.

XC *Ahtuane*, the leaves are Limon color, with Carnation bottoms. *Miidsre*[^] the leaves are a deep Suxkt with white bottoms. *Methnt*[^] leaves are all of a dirty Gray, mixt with Carnation. *Mcresque*, the Flower isal mixt with Carnation. *Moretie*, the leaves are a Bluh or Flelh color, and thy Thrum * hite with red.

XC1. *Natalia*, the leaves are Carnation White, and the Thrum the fame. *TCt* *ire* & leaves are of a Crimfon color, and the Crimbln and almost black.

XCII. *Oriental*, its leaves are of an urni[^] color, viz. a blew Gray, much like *tht*: *talot* f our *Common Slates* with which they cover Houfcs-

XCIII. *Parifien*, It has white leaves with \ll S bottoms, and the Thrum is *Limon* color, *v. d'cy* at last is almost white, *Parmefj*[^] its l \ll *v. ei* white with red bottoms, and the Thrum is a t[^] rure of Rose color, Carnation, and light Hair color- *Picord* or *Juno*, the Flower is all white, Veach color. *Provinfallce*, the whole throughout is Green and Peach color.

XCIV. *Quetri Color*, in *Amorinshe* ... is of three sorts, viz. 1. One with Crimbln leave* striped with White, and its Thrum a fid Murtf with a red Tuft in the middle. 2. One with W>J" lbn kaves, a fid Murry Thrum, and a Scat[^] Tuk tip with white. 3. One with white mixt with lbme Crimfon, its Thrum Murty, ³ [g Tufi in the middle Carnation. 4. One with Oimlbn leaves with striped with whin-, Murty, and Oic Tuft Carnation,

XCV. *Regale*, the whole, both Leaves and Thrum, are a well mark'd Flower with Crimfon and White.

XCKJ. *Saint Charlet*, the Leaves are of an ill or poor flthite, with red bottoms, *Seata* its Leaves are also of a dirty white, and its Thrum Scarlet-*Scrmoneita*. the whole flower is ail Scarlet and a pale ycllorf. S«ri*w, its Leaves are a pale *Ifobel-In*, clouded with Blufh or Flefh color, and the Thrum is a light Green To clouded.

XCVI. *TijtUhi* The whole Flower is cF a faded mixed with a little Hair color. *rynvife*; The whole Flower, both its Leaves and Thrum are White, but the bottoms of the Leaves are Carnation.

XCVII. *ViQorim* Its Leaves are of a Blufhor color mixt with Carnirion; and its Thrum Hair color and Carnation. These *Anemones*, with many others not here named, are all fine *Narrow Leaved Double Vowcn*, notably differing from each other, and thrive very well in our Gardens.

Belides all these, many more Varieties may be produced by the Sowing the Seed of some of the best Single ones, not possible to be accounted for, of which any one may make Tryals at pleasure; what we have further to do, is to shew the manner and way of Sowing and Planting them, and the managing and ordering them to the best advantage.

^CULTURE.

I. Of the Preparing the Earth.

XCIX. In the managing of the rarer sorts of these Beautiful Flowers, very great Care is to be taken, that the Soil or Earth, Scituation or Place, Time or Season, and the way and manner of their Planting and taking up, be exactly observed; otherwise your Flowers will neither be fair, nor the Roots prosper and increase, but rather rot and confume away; especially all the best *Double Kinds* of the *Texuifolia's*; the ordinary Flowers, and Single Flower'd, are more hardy.

C. The Soil is then first to be considered, which must be Fat and Rich, and not too light; a Rich Sandy Loam Earth is said to be best, in which some Meats and Sheeps Dung, with a little Lime has been tempered, and lain long on a heap, and often turn'd over, to that the Dung be fully rotted, and well mixed with the Earth which being first Sifted thro' a Wier Sieve or Skreen, you may then make a Bed thereof half a Yard deep at least. In some place which is not in too hot a Sun, but a little shaded.

C. Or, make five equal Heaps of yellow Sand three others as large of Kitchen Garden Earth, and four others of Bed-Mould well mellowed; then mix them altogether with a Shovel; make as much of this Earth as you (shall have occasion for, which let be a Year old before you use it, during which time, pass it once every Month thro' a Skreen, that it may thereby be thoroughly mixed and perfected, left its too subtil parts (which might hurt the Beauty of your Flowers) mould be retained, which by this means will in some measure vanish.

CII. But if you cannot well stay so long as a Year for the well fitting your Earth or Mould, you may then provide the Earth as in the former *Sel'lon*, and after a Months time use it for the first time; but then you ought always to have a good quantity more of it in reserve, ready prepared as before, a Year before hand. The more this

Earth passes thro' the Skreen, the lighter it will be, and more agreeable to the Nature of *Anemones*.

CIII. Before this Artificial or made Earth be laid upon the Natural Soil of your Garden, the Ground ought to be before-hand prepared. If the Fjnl of your Garden be naturally light and Tandy, or Gravelly, you need do no more but dig it up, and cover it about half a Foot thick with this your Artificial Mould; but if your Garden Ground is Wet or Moist, (both which are Inimical to these Flowers) you must dig the Bed you design for these Flowers, and take out about a Foot and half depth of the Earth, and then fill up the hollow Capacity rheieo with a Compound of half Sand and half Artificial Mould; in which you (shall Plant your *Anemones* as shall anon be directed.

CIV. Instead of Mould, you may make your Beds of rotten Herbs, Leaves and the like, which mixed as is before directed, and palt several times thro' the Skreen, will make a *Qimpoff* or Earth, as fit for *Anemones* as can be desired, which you may lay upon your *Hcrfipurtjtenls* of Beds, after it has been well Sifted or Skreen'd.

II. Of the Turns of Wanting of ANEMONES,

CV. The best Season for Planting *Anemones* is from the middle of *September* to the middle of *October*, but if you have a mind to have them in Flower a great part of the Year, you must Plant them in *March* and *April*, but you are not to expect such fair Productions from these last as from the first, where the Sap has had a primary advantage.

CVI. And this seems to be *Parkin/ox's* Secret, to teach us how we may order *Anemones*, that after all others are commonly past, we may have them in Flower for 2 or 3 Months longer than they are otherwise to be seen. The ordinary time (says he) to Plant *Anemones*, is in *August*, which will have Flowers, some per chance before Winter, but most commonly in *February*, *March* and *April*, few or none of them abiding until *May*, but if you will keep some Roots out of the Ground implanted, until *teoriMry*, *Mwcb* and *Aprils* Planting time at one time, some at another, you will have them bear Flowers according to their Planting.

CVH. Those (says he) which you Plant in *February*, will Flower about the middle or end of *May* and so the rest accordingly after that manner. And thus you may have the pleasure of those Plants out of their Natural Seasons, which is not permitted to be enjoyed in any other Flower that I know of, Nature being not so prone to be furthered by Art in other Plants as in this.

CVIII. But this to be observed, that when you keep your Roots out of the Ground for this purpose, that you must be very careful in laying them up and preserving them, that you keep them neither too dry nor too moist, that they may neither spout nor rot, and then in Planting them, that you set them not in too open or Sunny a Place, but where they may be a little shaded.

CIX. The *Latifolia's* are generally Planted earliest or first, as in *August* and in *September*. The *AngitfiffoUa's* or *Tenuifolia's* are ever Planted after them, later in the Year, being kept out of the Ground (in some proper dry place) till the end of *October*, and the Purples a Month longer, and then set in the same manner as the others. The *LatiMA* 01 Broad Leav'd, will come up before Winter. The *AnguMoM* or *TemafrSfs*, the Nar

row LeavU, about the end of *February* or sooner, if the Winter is mild, otherwise in *AWW?* or *April*. li the Seifbn is dry, they ought to be Watered, which will caufe them to thrive much the better, and to bear the fairer Flowers.

III. Of the manner of Planting ANEMONES.

CX. The Beds or other pches being prepared, and made even and fsmooth w'nh the Rake; take a Cord, and extending it long-ways, diaw a Rill, or little hollow Line or Gutter, from one end of the Red to the other: This done, extend your Cord, and do in like rmoner again, a fecond, third, and a fourth time, or more, according co the brearh of your Bed, ar j Inches diftance, (Mr. Rrj frys 4 or 6 Inches) afunder from acb other,-

CXI. This done, take up your Cord again, and place ir in like manner, to draw Rills or Gutters crofs all theft Beds from one end to the other, and all of them equally at the aforenamed diftance, « S, 6, or 8 Inches, by which means you will form A regular ohlong Paralleltogrsm_s in which, either in the middle of each Square[^] or in the points where the Lines cro& one another, yonare to Plant your Anemone Roots, which being at an equaiditanceci they will when they come to blow give you a fingui n pleasure, which will arife from rheir great variety, of colors, and their regular order of Planting.

CXII. When you are a going to Plant the ^{Koots} make ^{3 nt} e foe every ⁰¹ e of them with your Finger, or an Iron made for that purpofe •, which let not be above 3 Inches deep in the tiround, and place the Root always upon the lar-Rct frleofit, with the Hit downwards, to the end that the *Yabutum*, or nourifhing Juice, may rife directly into the Root, to tjufe "it to fpring, fo as to anfwer your FxpeEtations.

CXIII. Or as Mr. RCJ fays, put the Root into the hole with thar fide of it upwards[^] where you perceive fmall Emirtencies to put forth Leaves. The *Leiffoli Ji* and *An£ufijftlia* or *Tfnvijotiit* are all of them to be handled In the lime manner, only differing in ihv Times of their Setting or ^g:g, as we have (hewn in Sc3. 109. afbregoujg

CXIV. Anemones are not Planted in open Grounds, but they are fometimes put into Pots, one or two or more Roots into each Pot. (according to the mignltudffof the Pot) and this becaulc, that if any of the Roots (hould chance to tail, there may be found in thefe Pots wherewithal to fill up the vacancies.

CXV. Tliis failure (if any *be*) will be perceived about three Wedcs after you have put your Roots into ihu Ground, and which does not always proceed from 3 corrupted Root; bur fometimes is uccalloned by the *£.ulum* or Sap's not rifing lb kindly as it ought: You are ever to look ibr fiich a Root in left dian a Month[^] and you will fbmetimes rind Uiem in your Pots alfo, as well as in your Beds.

CXVI. The Flower* inquire to be Planted in an open place, anilyno means in a (hady; becanfe, fending forth a great many fibrous Threads or Suing*, and large inrts of Leaves, they would be apt to fpend thtmilives too much, if fo placed; and fo caulflaweaknelciu their Stems, and hazard theg proving Abortive, or oihervilc to yield hue a very few Flower*. And the Stalk being thus

render, would certainty be killed by the CoW, which they would be too fufceptible of in th' or elfe be broken with the Wind, which would <6 a great damage to the Root it Ilf.

CXVII. If the Autumn be dty, you care ro Water them well: but contrarjwife, ^J "• £ Rains very rriich, you muft then defend them lrot> W too much motltute, (whial agrees nOLw 1 with skreens'of Straw. iTheyJBrrbe waff from the Month of *lebriihry*, to the times; or il Flowering, which how much, or how often it is to be done, experience only. niJtMU >¹⁰¹

CXVIII. Tho' Cold is no mctraffrlDiy to the; yet when it happens ro be very feverq^e rHA ought to be covered with long dry Du-nc or 1 Straw: and your Pots ought to be alfo\aiU Placed, whe'e they may be moft fei Weather.

CXIX. Then again when the W< mild, you may uncover them; but witha muft be fure to cover them again, it it ehj be Cold again. In fum, your prudence and experience muft excite your "nduftry, MA dif^ when, how often, and long, you muft bellow uu* trouble upon them.

CXX. If at any Seafon of Plaming or SettiDg your Roots, you put a little Willow Earth " and over the Roots, it will caufe them ft put forth Fibres; and thereby make them able abide or endue the Winter. Yet in Froft and E Weather, it will be good.to cover them which are fprung up (as afbrefaid)with Mats orPeale =>c<<" which you may take off for two or three hour* every other day, f if lair, and the Sun (Junes, an< there be no nipping North, NorthEalt, or fctwaidg Winds) to give them Air, and prevent MouW'nc^ (whicli is apt to happen to them, and) whicri r-been the rain and deftruction of many a Plant, from which you might have expctted ve admirable Flowers.

IV. Of ChHfwg Plants for Seed-

CXXI. There is fome Ipecial choice to made of luch Flowers whole Seed is fitteft > taken: of the *Laiifotia's*, the double Oran^ Tawny Seed being Sown, yield many pltalant varieties -, but the Purples, Reds, or Crimilms, r " thtr *Lafifo/iiPi* or *Tenmfelia%* yield fmall 01 varieties, but fuch chiefly as draw neareft Original, tho' it may chance that fome may •# a little deeper or lighter than others.

CXXII. But the light colors ate tlufc, are to bechofen for this pwpofo, asWhite, Aih-color, Blufli or Carnation, light Orange, i or parti-colored, fingle or double, (if they Seed, as ioroerimes riefy do; Tnefe are wioioe Seed you are carefully to garher, t" not before it is throughly ripe, which you may by the head.

CXXIII. For when the Seed with its nets begins to rife a little of it felt at the end, it muft then be quickly gathered, I" (" - Wind carry it alt away. After it is thus caretw^{1*} faved, it mult be laid to dry for a Week or 1 which, then being gently tubbed!with a !i<l and or Eanh, it will cauk the Seed to be fom^{er} ftparated, altlio' notthroughly, (trill)

CXXIV. If then remains any WooUruds in pull it afunder as well as you can, that they be perfectly Ieparat<l; foemdefe this be tt will be impoffible to Sow them ifl¹⁰ i

due order, which the Nature and Quality of this Plant requires.

CXXV. For the raising of new Varieties of *Anemone** from Seed choice must be made of the **Boms** (is Mr- Ru &js) as Uirly*s » meof tV D « W LtffifiA bringSceds, therichelt Scarlek paleft Purples, Pink colored, White and Sky

ire the belt
VI. But in the Single *Anguft.foiui*, or OTfirw'si there is more choice* as Red and ts with deep white edges, all that are vanelated or tripced with White; and in theie, the d S S I Velvet Purples are the best: But above all others, those which have 2 « i Rows of Leaves, and that excellen: *Single Velvet Blew*, are thieflj to be preferM.

CXXVU. In fhorr, to have good beed, you oueht to pitch upon *Single Anemone*: which have Ill-one Stalks, and proportioned, in height to the lareenefs oi the flower, and which have long and round Leaves, for-thtil; kinds of Flowers never degenerate: and therefore it may be in a manner certain, that if Nature, the Seafon, and the Soil favour us, they will give us a produce of wry fine Flowers.

V. Of Sowing the Seed.

CXXVIII. The Seeds of these Flowers will be ready to be gathered in AUy, which must be done as the Down rifics, else they will be all blown away • and hiving gathered all your Seed, dried I cleared them from their Down, as diteftej at J, CXXIII. above, or by mixing with them a Sufficient quantity of dry fine Sifted Earth, and in a Bowl, Trey or Bafon, ftiring and mixing them with your Fingers fo long, till none of the white Down appears -, you ate then (not to ftay till *Aitgufl* as Tome Fi-wfc Gardiners diieft,) but to Sow them about a Month after as *Parki/ion idvi&S*, 01 not exceeding 6 Weeks, or the middle of *July* at molt, as Mr. *Rta* fcys.

CXXIX. Then be furc the Earth in which you Sow] them be good, and finely Sifted, and lee the Ground be mads into Beds as before directed, or puc into Boxes or Pots, it you defign them: This Ground must not be a too ftiff Clay, nor too light 2 Sand 5 but if not fie for the purpose, it must be prepared, and may be compounded thus. *The Clay Earth is to-be mixed with Brook Sand and Pearl Sand, ind good fresh fat Earth, taken from next under the Turf of fsnx god Pafiture^ vfah with some eld Neats Dung met/ rotted to Earth, and some Lime, are to be tcell mixed together, and being dry, to be often Sifted or Skrcen'd wer, that The Mould may be made very fine.*

CXXX With this Mould thus prepared, you may make Beds, &c. as aforefiid, u pon which you are to Sow your Ssed reafonably thin, and not too thick; (fo alfo in Boxes or Pots,) lee the rop of the Bed, #* be firft made very plain and Gnooch, then your Swd being Sown upon the fame, gently ftrew or Sift over them, some fine good froth Mould, covering them about an Inch thick at molt for the firft time.

CXXXL About a Month after their iirtbring-ine up flie^ 01 Sift over them again another Inch (h-ckifis of fine Earth •, and in the mean time, if the Weather proves dry, you must Water them aently and often, but not to overglut them with moiSture. And thus doing, you will have them - up before Winter, and grow pretty frong, i abide the (harp Seafon in this their fo ten- *Age s efpeciaUy if you take a little care to co-

ver fkeff loofely with some Fearn, Stia) Straw, Hay or the iVe, which must nor Ij-cclode upon them, nor yet too tar o&, being laid ovc: hem upon Sticks.

CXXXII. But in your Sowing the Seed, tlio' you arenot to Sow them too thick, yec'you ought not to err on the other Hand neither, in Sowing them too thin, becaute ni:iy of them may n carry, and neve* Spring up, which bcin^ covered as afore&id, about an Inch thick with tine Sifted rich Earth, and fo to be farther ordered as in the former *SeJfion*, will not fail to anfwer your Expe&tations.

CXXXUI. Some in Sowing the S*e4, io it after this manner, (the Bed being before hand piepared) they take the Seed and pur it into a Leather Bag, and clofing up the whole, fo as'only-three Fingers may enter in, you may prelj the Bag with one Hand, and Jerk, or a liule (hake it with Viz other, fo will the Seed fpring out, iifuch 3 manner as it ought co he Sown, moving the Bag up and down over the Bed, both long ways and crofs ways, :hateach part may have its (hare of Seed.

CXXXIV. Which done, and fii)e Earth being Sifted over it as aforefaid, immediately ftrew the whole Bed thinly over with long Straw, and forthwith Water it with a Watering-Pot, which let be pretty • confiderable, but afterwards lefs^ becaufe roo grear a Quantity of Water would tot the Seed, and To to rally deftroj it.

CXXXV. After 1; or 26 days, take off this thin ftrewed Straw. It may be the Ssed may begin ro fprout in that fpace of time, or fooner: but if they fhoot not for \$ 01 6 Weeks gtne, be not concern'd, for they may yet grow well

CXXXVI. The *French* Gard'mers fay, that if the Seed be well Sown, and great care be taken in Cultivating it, that you will not tail of Flowers in *Mareh* following, or in *April* at farhest; becaufe in *June*, when the Stalks begin to wither, and their Roots are difplanced, the Bed where they are is to be digg'd thro* three Inches deep, and the Earth as foon as it is call up, to be laid upon a Linnen Cloth or Canvafe, till fuch rime irs the hole be dug, which is then to be crumbled, and lifted, 01 feate'd on a hollow Bed, till fuch time as there remains above Ground only the *Fangs* of these young Anemones, which are then called Peas, becaufe they referable that Pulfe in form and magnitude.

CXXXVII. *Firkiftfontevs*, the Seed being thus ordered, that the Plants will bear Rowers the fc cond Year after Sowing -, and moft or all of them the third Year, if the place where you Sow them be not annoy'd with Smoak of Breweis, Dyers. Malt Kilns, 01 other inconveniencies, which if they be, rtiev will never thrive well.

CXXXVIU. Mr. *Sea* in his *Eora*, page. 128. fays, that some report: that they have had Anemones bear Flowers the next Year, and others, the fecond Year after Sowing. But I (lays he) can expeft few or none that are good before the third Year, and many will not bear until the fourth Year. But the agrecablsnefs and goodnels of the Earth and Air, for bringing them Forwards is moft confiderable •, therefore you ought to be fare to make it as rich (for the kind) and as good as you can, taking heed cf not putting or mixing with the Mould too much Dung.

CXXXIX. These *Pejfe* aforenamed, at *SeS*. %/f. above, being gathered, are to be carried and kept in a dry place, as carefully as poffibly may be till *September* ntxx, when (new Beds being made for Tiaming Antmony RootsJ they ate 10

Keptanred, after [the method before prefcri-

CLX. This way of *Multiplying Anemones*, is as it were a Nurfery, where Nature from fingle Flowers which were Sown, gives double ones, according as (he is pleafed to Aft. When the favourable chance does fo happen, you ought to fet ? mar* of diftinction on fuch as deferve it i to the end, that in the third Year when you take them up, you may put them in Beds by themfelves.

Vi. Of the taking up the Roots.

CXLI. *farkinfon* fiys, that the next Spring after Sowing, you may if you will remove them; buthealfb lays, that it is better to flay' till *Auguft*, and then make the Kemove, when you may fet them in order by Rows, with fufficienrdiftanceone from another, as is before diiefted; where they may abide until you fee wkii manner of Flower each Plant will have, which you may afterwards better difpofe of jeording to your Mind.

CXLII. As to the *Anemones* nifed from the Planting of their Roots, if they like their Entertainment grow Strong, bear fair Howerson tall Stalks, and profpr well, you may ibrbe3r to take up their Roots until the end of *June* or *July*-. But on ihe contrary, it' the green Leaves are rcw, the Stalks fliorr, and the Howers finall, it is a manifet (ign of their di/like, and that the Soil is too cold and poor, or die too hot and rank, which is far more dangeroifc.

CXLIII. In this cafe, they muft be taken up as foon as the green Leaves turn yellow.

mmmm

....., you aim twifume away, efpecially if any ftore ol Rain fhould fall upon them.

CXLIV. In taking up their Roots, you muft rake care that they be not broken, efpecially the *LatifbHa's*; which muft not be divided nor broken, until they part of themfelves. The *Anguftifo/ia* or *Texutfwfs*, may be broken or parted with kfs prejudice; but the wholei they are kept, the betrr they will thrive.

CXLV. And tho' the Times mentioned in fotne of the former Seftions, be belt for planting or fetting thefi; Roots, of both kinds O1 the mote excellent and rare of thefe Flowers, yet the more ordinary kinds, may be kept out of the Ground till the end at *February*, which fom; do. to caufe them to flower late, after the other finer and rarer kinds are gone.

CXLVI. In this cafe, it will be good to fteep thete long kept Roots 34 hours in warm Water, before you Plant or Set them: and then to Plant them with focne Willow £mh under and over them, and in a more (liady place than ordinary -, becaufe the heat of the Sun, in the time of thar flowering, will much ditninih thtir beautiful appearance.

CXLVQ. If then you have two Beds ftoed wirh choice varieties ni *Anemones*, let the latter which are Set, be more fhady than the tirtf^ and fo gradually as they are later in Planting; and then if the aforementioned Rules be oblerved, you will be fure to have admirable Flowers in pan of *March*^ and all *April*, and the greattt part of *My*; uniefs your Garden ftand in Tome Smoaky

or ill nated place, where neither *An* nor *Induftry* can make them profper j uniefs they be Set, in a hot Bed, as fome in and about *London* commonly do.

VII. Of the Choice of *VUms md* Flowers.

CXLVIII. The Beauty of this Flower con in its largenefs, roundnefs, and fine colors, to wl m the double kind add its duplicity comdlea* e;pe5!ally wi(h i« great Leaves, exceeding a little the bignefs of its Tuft: and the extremities of its «rgeit Uaves are round, as well as thole of its

r v i f a h k t o u g i t t o ^ l a r g e a n d n o t M B o w
CXLIX. That is a fine Plant whofe Stem is proportioned in height to the largenei of its flower, and is ftrong enough to bear ic up without biding r alfo when its Leaves are curl'd, its Tuttlow and bufliy, repreftenting a kind of *Cu-P^o i* and withal has a great many Stalks or

CL. Its Poiite! in the middle ought to appear a Lttle, and be as it were upon a level, with teavesof the Flower, of an indifferent thicknefs, ror it is too thick it is a defect, and it ought to be alfo of fomething a different color from the great Leaves and the Tuft.

CLI. There are fome *Anemones* which are apt to (hoot up into height, fo that inftead of Flowers, they only produce Leaves; and this comes from having fuch a great number of produaions on every fide, which draw away the fucculent and nutritive Juices and Salt of the Earth. This great abundance of Leaves you muft reftiuy, by clearing the Plants of fuch as are fuperriuous, whereby the reft of the Plant receiving fo much the more of that fucculent Nutriment, will make it the better to produce its Flowers.

CLII. If the *Anemones* (hould grow mouldy at that part of the Root from which they (hoot, (which is their Oldeft part) give them a fillip with your Finger on that part, and if they found hollow, or have little holes therein* then you may take a Knife and pare away that decayed p3rt to the quick, fmoother the place where you make the Incifion, lor fear that if any hokfhould remain, fome of the tumidity may lurk behind, which may make the Root fall into the fime Dif-eafe again; which when the decayed part is cut quite away, new Roots will fhoot forth, which will give you Flowers in great abundance.

CLIII. In doing this work, many Roots O1 fegments of Roots you may cut off; theie you ought not to throw away, but to Re-plant them again i for many times chofe off cuts being Keplanted, will admirably revive, grow ftrong, and bear very good Flowers.

CUV. But in the Roots where you have made the Incifion, fo foon as ever they are dry, y^{ou} muft rub them in the wounded place with a mixture of melted Kofin and Wax, which being well hxed on them, will hinder them from farther corrupting.

CLV. And as it is to be oblerv'd, that the Seed only or chiefly of the *Single Anemone*** bring forth Double ones* lb the *Double Anemonei* feldoro or never multiply, but by the Fangs of their Roots, which are conflant fa their produQion, and never found to degenerate.

CLVI. We have given you the Names of the principal kinds of above foufcore various fops of k ^ 7 s v a t m t l s P ^ o l c, there are a hundred other forts, with Names in, pored up O11 them,

tban, which indeed can fignyf yew little to in-fer here, being given them purely from Whinrfie, Fancy, and Fantafricalnels, many of which, when the Flowers Die, their Names Die with them: for which reafen we forbear, thinking it diffident what is already find, and that we have givon you enough Signs and Manifefto's todifcover and know all fiich, as you are to fet a good value and ettimation upon.

CLVII. What remains, has relation to their Qualities Specification., preparations and Virtues; bur they being'die fame with rhe moft vulgar and Qmmn Anemones, of which we ittve treat

XIII. ar IV. afoijioing, we (hall "iy no mote in ibis pbee, but will rufrr ym lit her.

CHAP. DCCXXXIX

O/WINTER-GRHEN,

It was unknown to theGreeh; and is called by the Latmes Pyroh (k foliorum Pyri arborii, etiam finiihtudine:) from its likenefc to the Leavesand Flowers alfo of the Peat-Tree; in nglitii, Winter-Green.

11. T» Kinds. Authors have mjde many Spe- of this Plant, moft of which ate perfeEt Strangers to us, we (hall only takt notice of theib two, vis. 1. PyroU nofiros vuigar'is; Pyrola vulgator: Our common Winttr-Gceen. 2. fyroLa Euzep.tii Alfines jbrc -7 terbti TrientalU Cordi; AlfineAtpinaSchtcntyddij-, Aljnanthemos Tbalij, 1. e. Alfines Yk.: European Winter-Green with  Flowers.

Winter-Green,

the DcfcRIPTIONI.

IH. The Firft, or OUT Common Wint'jr-Green. Its Hoot U /ender, fnall, creeping^ cerspaS OJ many fma!l Fibres, or thready Strings -, jn \ ihoot forth 1 or 8, or 9 Lr^vr.; ll/mhdig on d'ton? foot Stalk, which ttre'a/mvj1 IU broad'M long a nunA pointed^ of a/ad green crio>\ bard in hund-ing\ and feme thing like to a Pa;r-'tree Is \ij , nee the Jsame) or at Jome will have it tike to tbe/mallLriivrs ofWild Beets, whence comet forth for ihb mcji pun bat one (but fmetbnei tcca) (lender tot'ak Stalks, yet jlartring upright, bearing at t)ye Top many lwalf vtbite F&tvt/v, fwelling as Jeet as thwfe of the Lily Conv.ili'y. laid open like a Star, confifing of 5 round pointed Leave*, mhb mmy yeftomiJbTbreadt in :h' middle about a green head, and a long file with them, which in time grom to be the Seed Vejfei. which when it is ripe, is quinquangulsir, or five Jfded, toib a Jm-iUpoint at it, in which is contained Seed as fmall as duji it fclf.

IV. The Second, or Winter-Green with Chickweed Flowers. Its Root is*made of 111 any fmill Ft-bret, proceeding from a futali'raynd head. H rifes up with one or more, flrait round Stalks^ 6, lyor 8 inches high, tlmojr bare of Leaves for a fface next to the Root 5 or at moji with but 2 or 3 very fmall Leaves, fct one a little above another : but at the top thereof grotos 5, 6, 7, or 8 Leaves, fomeibing long, and pointed at their ends, fame-thing like to a Pear Tree Leaf, but longer and nut jo round 5 being many of them tin Inch jind half long or more, tende>\ jmeoth, green, having one middle Rib, with divers Veins in the Leaf finely dented about the edges: from among which Leaves, rife up weak foot Stalks, rather than Stalks, about ? inches long, fufmning 3 or 4 flowers, each by it ftlf wade cf fix white pointed Leaves apiece^ Star fi/hion, fomething like a G'kkweed Flower, bat larger ^ with feveral fmall yelfoivi/h Threads in the middle; which bring ftift, there conies in place a/mall round head, j'malkr than a Coriander Seed) containing within it divers fmall black SceJ, covered with a thin white Skin.

V. ThePhccs. Thefirftgrowsin fevcral of the Northern Parts ofEngland, as Laneajhire, Torkjhire, and in otherplaces farther North, and in a place called Crag-Qofe-, and in the Woods in Scotland, almoft every where, tint rarely in Fields. The fecond in the Woods in Germany, in divers places; as alfb in the Beechiaood in Scotland, as Bünhinsu fays, and likewite on the Mountains in Wales.

VI. The Times. They both grow Winter and Summer, and Flower in the Months rffune and

y-

VII. The Qualities. They ace Cold in the fecond degree, and dry in the third; Abfterfive, Afttingent, and Vulnerary.

VIII. The Specification. The firft which is only or chiefly ufed, as it is exceedingly Afringent and Glutinous withal, fo it is a speedy Cure for Green Wounds; as alfo for all Inward Wounds and Bleedings: ir flops all Fluxes of the Belly, whether of Blood or Humors, the Bleeding of Wounds, and the overflowing of the Terms in Women; It alfo Cures old-running Sores, putrid Ulcers, B&ila's, and the like.

IX. The Preparations. You may have therefro, 1. A Liquid Juice. 2. A Decodion in Wine and Water. %. A Balfm or Ointment. 4. A Cataplafm of the Green Herb. 5. A Dijillid tVjUr. 6. Tlv I'vmdcr of the Herb.

the Virtues.

X. *The Liquid Juice.* It consolidates Green Wounds, uinng their Lipspeedily together, and inwardly 2 or 3 Spoonfuls at a time in Wine and Water, it stops inward Fluxes of Blood, and Cures inward Wounds; it Hops the overflowing of the Terms in Women, Cures Spitting and **Pojmt- ing** of Blood, the Hepatick Flux, Bloody Flux, and all other fluxes of the Bowels. It is did co Cure Ulcers and Wounds in the Keins and Bladder, Womb, and other feciet parts, as also Ulcers and Fiftula's in any other part of the Body, being inwardly taken and outwardly applied; not being interior to *Agrimony, Avins, Betony, Burnt, Comfrey, Daijies, Golden Rod, ilarfetail, Knot-graft, Ladies Mantle, Abwfi Ear, Mjdr Roots, Periwinkle, Sanick, Taracmil,* or other Herb of like kind.

XI. *The Decofion in Wine and Wafer.* It has all the former Virtues, but not ittogesruir I **erfui** 5 and may be given Morning and Night, from 3 Ounces to 6, mixed with Syrup of the juice of the fame. It heals inward Ulcers in the Keins and Bladder* and hirdecs liilainations, healing iomenred upon any part affected."

XII. *The Balfim or Ointment.* It is made with Hogs Lard, or with Oil Olive, Bets WJX, and a little Turpentine. It heals all manner of Wounds, and Sores: the *Germans* use it very much, and extol it beyond any other Balfam made of a simple Herb. It is no less helpful for foul Ulcers and **Fiftula's**, hard to be Cured in what part of the Body soever, and heals Cankers of the Mouth and Gums.

XIII. *The Catjptijiti of the Grec-n Herb.* It is Afringent and Glutinous withal, and a Gngular remedy to be profently applied to simple Green Wounds, to contblidaie them. It also gives ease in the Gout, and abates the Tumor.

XIV. *The bilVilled Water.* It has all the Virtue* of the juice and Decotion, but much inferior in Virtues and **Efi&s**; and therefore may be used as a Vehicle to convey the other Mpdidees down in. But it may be given of ic self for the lame purposes from 4 to 6 Ounces, **fwetned** wuli Syrup of Comfrey, or Syrup of some of the other Confolidatives.

XV. *The Fonder of the Ifrrb and flowers.* It may be given for all the fame purposes in the Decotion, Distilled Water, or some proper Syrup, or in Honey, from 2 Scruples to a Dram, or Draim and halt, Morning and Night.

CHAP. DCCXL.

O/WOAD, Garden and Wild.

THE Names. It is called in Greek, 'I<VK in Latin, *Glajnm* and *Iat* it also; and by some *Cntadum*: and in English, *Woad*.

U. *The KinJs.* We have but two Kinds here of, vis. 1. *WTM iut&*: *Glafum falivum, J^{aim}*: Our Manured Woad. 2. *U711 a[^]*: *Glfl* *fjSveflre, Ifetis agrU*: Wild Woad.

the Descriptions-

III. The Fitft, or our Common Manured Woad. *Its Root is white and long, growing doivnmrdi: «*

Woad Garden.

Woad Garden.

bat divers large, long, and something broad Leaves, not much unlike to those of Ribwort Plantane, but larger, thicker, and of a darker blewoifh green color, i'rim among which rise up, one or twofstrong Stalks 1 or 4 f high, and. Jometimes more, with divers fuch Leaves Jet thereon, but smaller as they ap-ub up to the top; where they fspread them/elves into many Branches: at the ends thereof grow fmall yellow Floaers: in whofe places come long flattifi Cods or Pods like Tongues, black wlxn they are ripe, and pendulous, or hanging downmards, wherein lye the Seed, which if it be a little chewed or broken with moijlure, will give a blew color.

IV. The Second, or Wild Woad. It is very like vnto the former, mitt Root, Stalks, Leaves, manner anifafhwn of growing, faving that the¹ Stalk is

Woad Wild.

flenkrtr, tenderer, and. browner, the Leaves lef-fer, and the Husks or Cods not fo great, and. nar-rower, and the tobole Plant fmaller.

V. The Places. The Manured Woad is Sown in Gardens, and whole Fields are Sown with it in England, France, Germany, Italy, and Spain, as alfo in the Iflands of Ierceras, belonging to Spain. The Wild in Fields and Untied Places in England, German}, Sec. where-the Manured has been Sown.

VI. The Times. They Flower in June and July, and the Seed is late Ripe, viz. in September or QQober.

VII. The Qualities. The Manured woad is hot in the firft Degree, and dry in [he fecond, bitter withal, bat not (harp. The Wild is as hoc, but more dryingffe. in the third Degree, and is more (harp ifidMoiig, exceeding the Manured in all its properties^tley are Abftaive, Afringenr, and Vulnerary.

VIII. The Specification. It is good againlt the Obfeuaion, Pain, and Tumor of the Spleen; and is proper for the Cure ot fimple Green Wounds, Ulcers.

IX. The Preparations. You may have there- from, viz. from the Herb, t. A Liquid Jui<-e. 2. A Decoftion in Wine or Water. 7.. A Bdfam. 4. A Diffilled Water. 5. APouder of the Herb.

17?e Virtues.

X. Ti?e Liquid Juice. It is binding and very drying, refills Putrefaction, flops Bleedings of all ibrts, whether inward or outward, by the Mouth, Note, Fundament, or private Parts_h and therefore is profitable to flop the overflowing of rhe Terms and Loches in Women: uied ro Green Wounds, it fodders up their Lips and quickly heals them •, and is no lefs profitable to deanfe and cotrecl die pu-tridity and malignity of old running Sores, and eating Ulcers, rebellious Fiftula's, pernicious Can-cers, and che like, being outwardly applyed and inwardly taken, from 1 Spoonful to 6, (according to die Advice of the rhyficianj Morning and Night, mixr with a little Wine, or Wine and Water, or other fie Vehicle; and fo taken, ic is good to open the Spleen, cafe its Pain, and todif-cufs all hot Tumors thereof?

XI. The Decodion in Wine. It has alt the for-mer Virtues, tho' not altogether lb powerful, and therefore may be taken Morning and Night, from 3 to 6 Ounces i and outwardly applyed to fimple Green Wounds, old running Sores, foul Ukers and Fiftula's, to waft and foment them therewith, it Abfterges or cleanfo, and induces their healing: but particularly helps the hardnefs of the Spleen being Drank, and the Region thereof being alfo i omen ted therewith.

XII. The Balfam. It is of lingular ufe (being applyed) for the Curing of fimple Green Wounds, and deanfing, incarnating, drying and healing, of old running Sores, malign and putrid Ulcers, ar.d rebellious Fiftula's, &c.

XIII. The Diffilled Water. It has all the Vir-tues of the Juice or Decoftion ; but as it is much weaker, fo-it mult be taken in much greater quan-tities, and is belt ro be ufed mixed with cither the Juice or Decoftion.

XIV. The Fonder of the Herb. It may be given from half a Dram to a Dram, Morning and Even-ing in 3 Glafs of Wine, or Wine mixed with che Diitil&d Water, or in the Decoftion aforementi-oned, to all the purpofes laid. It is good againlt the Bloody-Flux, as alfo all other Fluxes of the Belly, or Defkxions of Humors upon any part, vehement Catarrhs, and the like.

XV. The Tscottion in Water. It is ufed by Dyers to Dye Cloth, WOOL, Yarn, &c. of a blew color, by Boiling the matter to be Dyed therein.

CHAP. DCCXII

O/WOODROOF:

OR,

WOODROWEL; Common,
BUJP, and Breakstone,

THE Names. IthasnoknownGreekName, but in Latine it is called *Afperula*, and *Afpcrgula*, and in EngUih *Woodrocof*.

7 Z

II The

It. He Kindt. Thole which are moll known to us, are the three following, vis. 1. *Afferula Dotonidi* & *IAelij*; *AJprula odorata* Clifff.; *AfferguU odorata* nojirat fene -; *Aparinc Syfoejins mtxiar Cordi*; *Rub'ta SylveIris aha minor Gefnen tiepstiet Sttliata Tahern^montani* i Our Commou Woodroof; 1. *Afferula Wore Crulea Dodo-H/i*, *Omerariji Lobehjtf Lugdunenjis*; *Afferula Crulea wenfis Bnuh'mi^* Woodroof with a Blew Hovver. 2. *Afferula repent*, *Juncaria Sitlmatienfti Qlufi*; *SynMcbica Species Luidunenfis*; *Juncarin Titbern&FUpniani ^kubia Imifolia nspera Baubhi*, Small Break-Scone Woodroof, or Woodroof Stone-Break.

The Defcriptions.

III. The fiift, ot our Common Woodroof. *In Rtm runs and creeps under Ground, and floats up new Stalks round nbmt it every where. IT fend forth feverrf fqtire Stalks half t toot high or more%*

Woodroqf Common.

JMU of Joints, and,4vcry ^oitti, 7 or 8 fair grew Jhining Lewes, broader than ibojc of Clavers or Goofe-Gtafs, in a manner Jmoml or but little rough at all. At the tops of the Stst/u, Hand 4 or ; ahitte fact Smelling flowers, made of 5 Leaves apiece, kid open like a Star j after which, comet fndli rouni Seed, a little raugh, or. (leaving to vibatfoever it touches.

IV. The fcond, or Woodroof with a blew Flower. *Its Root is fnall, fometahat yellcx'fo and iibrout, ferijhing eiery Tear. It hat feldom more than one round Stalk arifing from its Root, fet full <\$ Joints, at every one of wNcb fiand feveral fnall and Something long green Leaves incomp*ffine it, not Jo fmoorb and green as the former i which spreads it felf out into fnall Branches, from the bottom almoj up 40 the top, fet with the like Leaves, but fmlkr ^ where the t'loners Jiand 3 or 4 toge-*

ber, each upon a fnall FootJiaW, which are of tie fame Magnitude with the former, or rather jomc-thing left, and of a fair blewifh Purple color,

Woodroof Blew Flower'd.

*wibeut any Smell et cJL After they are pull, in their places grow fm*U ^dbrmf rough at ill. trm this Seed x>bcn it fall up frejh 'Slants the next Tear.*

Woodroof Break-Stone.

V. The third, or small Stone-Break Woodrooh
*Its Root it white and thready : It is a very [mM
 Plant, growing upright, with square, rough, ruij-
 iike Benches, spreading it Jilf out into mn
 /mall Divifions, ulmft like unto an Horfe-Tail,
 full of Joints, with two Leaves, and jometimes
 more at a Joint, fomevobat long and narrow Me
 unto Line or Fhx, but rough. „<*£*«& "f f
 Branches come forth many fmall ubite timers fe
 in Spikes, and 4 or s fin*'? *P.M.' \$^{ort}, **£
 HalA together, vbicb fhnd tn rough Wifh, n
 nbich is contained the Seed, which is black and*

fi The Places. The firR is found growing Wild
 in the Woods in Germany, but both firft and fecond
 are Planted and Nurft up with us in Gardens. 1 he
 third Clujiw faysgrowsabouiSuAi«7ff//j mS/ww,
 hue Parkinon fays he found it on the tight hand
 of Bradford-Bridge, at the lower end or brays-Inn
 Une near London, by the Water Courfe which
 pafies along there 5 and for that reafon, may poff-
 ibly be found in many other parts of this Kingdom

%!! The Titury. The two firft Flower about
 May and their Seed ripens in the mean Seafon,
 while they are in Flower, orprefently aftec. The
 third Flowers in the end of Summer, the Seed
 ripening in Come fmall time following.

VIII. The Qualities. Woodrocf is temperate in
 lerpea of heat or cold, drynefs or moifture:, and
 is very like in Qualities to our Udwt-Btdjlrav.
 They are Aperitive, Abfterfive and Vulnerary Gtr-
 diack and feparick, chearmg the Heart and ma-
 kbig it merry- *The Break-Stone*•XVtod'roofs t m .
 pemte alfo, hot and dry in the firft dreree Aper-
 itive, Abltafive, opens Obtrru&ons at the Bowels,
 isDiuretickandWephtick.

IX Ti>e Specification. The Wootrooh cheat
 the Heart, reEft Melancholy, make a Man light-
 fm and pleafant, and inducetheCmire of Wounds.
The BreMone opens Obfruffions of the Urinary
 Paffiges, provokes Urine powerfully, and gives
 tte m the Stiargury, and is ar^cellent thing for
 that Difeafe in the Throat callefla %uinfie.

X. The Preparations. From the Woodrwf you
 may hare, 1. AUqu'id Juice. 2. Aalnjujionor
 Dccoftion in Wine, 3. A Cataplafm. 4. A Dijit-
 led Water. From the Break-Stone you have,
 1. A Uqmd. 'juke. 2. A DeceSion in Water or
 Wine ; where Note, that of the Woodroofs, the
 firft is only or chiefly fd

Tffe Virtues.

XI TJ)e Liquid Juice of Woodroof. If it be
 Clarified, it may be given from 1 Spoonful to 2 or
 3 at a time, againlt Hypochondriaek Melancholy,
 and Paffions of the Heart, for it very much cbears
 the Hearn, and revives both Vital and Animal
 Spirits, making the Patient merry. It ftrengthens
 the Stomach, and retries its depraved Tone 5
 caufes Appetite, and is good againft Naufeoufnefs
 and Vomiting. It is both a Prefervadve and Cu-
 «rive of the Plague, and is good againft all kinds
 nf Malign and Pettilential Difeafes.

*vn The Infufion or DecoSion of Woodroof in
 Wine* They have all the former Virtues, but not
 X" ether fo powerful, but admirably open Ob-

of S green Heibbiuiftd. Eeing applied, u «

faid to dilcufs hard Tumors, and to heal Simple
 green Wounds in any part.

XIV. The Diftilled Water of Woodroof. It is
 effectual for all the purpofes aforefaidj and may
 be given alone, (*Dulcified wth Syrup cj Citrons,
 either of juice or Peels*) from 4 Ounces to a j 01
 it may be uled as a Vehicle for other rhings.

XV. The Liquid Juke <f Break-Stone. Given
 from an Ounce to 3 Ounces, in Whire Port Wine,
 01 mixt with Parjley or Hydropiper Water, it po-
 tently opens all ObfrueEHons of th^ Urinary paf-
 fages, expels Sand, Gravel, Stones, andTanatous
 Mucilage our of the Reins and Bladder. And be-
 ing ufed vehemently hot, it helps fuch as are
 troubled with the SSjrinfte, theThroat beinggargled
 therewith, and outwardly Bathed very hot upon
 the afflicted parts; Smphs atlb wet therein being
 applied very hot thereto.

XVI. TJe DccoBion of Break-Stone in U'inc.
 It has all the Virtues of the Juice, but by reafon
 it is not full our fo ltrong, it muft be taken in a
 larger Dofe, as from a quarter of a Pin», to half a
 Pint, againlt Difeafes of the Urinary parts. And
Qtinjus muft be often Gaigaried therewith, as
 hot as can well be endured.

CHAP. DCCXLII.

OfWOLFS-BANE *Deadly.*

I. T^f E Names. The Arabian: call it *CbmaA*
 -L *Adip*, or *Adib*, (i.e. *Stra'igl'itorem Litpi:*)
 in Greek *AxS«nr: in Latin *Aconatum, Lup.iria*[^]
 as alfo, *Lycosonon*, and *CynoQonon*, (becaufe it
 kills both Woolves and Dogs:) in EiiigLijhWwlf-
 Banc.

II. The Kinds. Authors make many forts of
 this Plant, we (hall treat only of the Principal,
 fuch as we Plant and Nurfe up in our Gardens,
 viz. 1. *Aconitum Hymeale*: The Winter Woolf-
 bane. 2. *Asonitum Hymeale fiore pallido*: Pale
 Flower'd Winter Woolf-bane. 9. *Aconitum lute'*
um ponticum fritcox : The earlier whiuflj Woolfs-
 bane. 4. *Aconitum fiore albido ferotinum Fvnti-*
cum, Aconhum primum flare albido Gefneri: Late
 Flowering Wocifs-baoe. \$• *Aconitum LycoUnum*
Jiore Delpbinij mqt Sihfiacum Clufij* -, *Aconitum*
(lore Detpbiniij Guserarij •, Aconitum Ctrukum
'aliudGefneri; Aconitum Caruteumbirjutum fiore
Confolida regalis Raubiai: The greater Woolfs-
 bane with Larks heelFlowers. 6. *Atomumjlore*
Delpbinij minm, Dodonti & Lobelij; Aconitum
*LyceUomtm Ceruleum majut Da'echawpi; Acorn**
turn qmrtura Matbioli; Aconitum Ctrulcum gU-
*brum fare*con-folid* regain Bauhini*: The rinei
 Leav'd, or lefter Woolfs-bane, with Larks heel
 Flowers.

the Defcripthns.

III. TheFirft, orWinterWoolfs-bane. ItsRoot
U Tuberosus, fo like both for fyapt and color unto
Anemone Roots, that they may cafily deceive One
not wcl'vers'd in them j but th^t ibis M browner and
fmaother without, and yellow within, if it it cut or
broken. This little PLMt tbruft up divers Leaves
oftentimes in the deep of Winter in January, //
the weather it any thing mild, but nufi commonly
after the deep and km Yrdfis, bearing up miny
 1

times the Snow vpMi the heads of the Leaves; which, like unto the Anemones, do every Leaf rise from the Root, upon severall fivn fwt Stalks, not above 4 fingers high, some having Homers in the middle of them, (which ntoft commonly come upfirfl) and some none: which Leaves stand as it were round, the Stalk rising up under the middle of the Leaf, deeply cut in, an; \gafir dlmofl la the middle Stalky of a very fair delp green color: in the middle whereof, dye unto the Leaf, fiands a fmall yellow flower, loitfifing of %/>r6 Leaves, very like a Crow-foot, teith yellow Threads in the middle. After the flower K fallen, there rise up divers fmall Horns or Cods fa together, in which are contained whitib round yellow Seed.

IV. The Second, or Pale FlowerM Winter Woolfs-baie, This in its Root, Stalks, Leaves, flowers and Seed, manner and form of growing, H in ail re/petfi like the former; faving only, that the flowvrs of this are of a pale yellowt color, end in some Plants j' mofi white.

V. The Third, 01 earlier whicfli Woolfs-bane. Its Root confifis of, 1 number of diirkbroainStrings, which fsreitd and fafle/t themfahes firon^ty in the Ground, b jprags net out of tlte Earth til' the Spring M taeU bcgun, and then it fend forth great broad green Leaves, deeply cut in about the Edges, and net much unlike the Leaves of the great Wild

Woolfs-bane whitish early.

Crow-foot, but much greater: from among . . . - JLAWM, rizes up a strong fuff Stalk 3 feet high, raving here and there Leaves fa upon it, like unto them which are lower, but /mailer. The Top of the Stalk is divided into 3 or 4 Branches, on which grow severall pale yellow Homers, which turn at laftto be almoji white i in Jafhion a/molf like the tie/met flower, but much fmaller, and not gaping fo wide open.- which being pafst, divers fhort Pods come up in their place, in which is contained black

V. f. T 5c/on rt^J3rhte Flowering Woolfs-bane. lit Root differs not from the former: it has <u large

Leaves at the other lafl defcribed, and ar much divided. cut alfo on the Edges fomevfat deeply, but of a f?cjl)er green color, and not fifing or jpring-, ing cut rf the Ground, for almod a Mo/ilh aftff the former is come up. The Sulk with Leaves thereon rifet to be 4 or ; Feet high, and with " long Branched head, of pale yeilom colored blowers, almifl whitifb, but fwurj later ,1/1/10/1 by eJ&ontb than the third aforegoing. The Cods and Seeds are like the former.

VII. The Fifth, or greater Woolfi-bane, with Larks heel flowers. Its Root is fomehing thick, long, and bhckifh, with Jeveral iibres and hftg Strings adjoining to h_voy which it takes fining hid in the Ground: From viJAth Jhsot forth fivtr» green Leaves, of a very fad or dark green color, Standing upon pretty long foot Stalks, cut in en ('• Edges into ; deep divifions or parts, even to the Stalk, and fomeahat rough or hairy; each p«ⁿ whereof is alfo denied about the Edges: front J-mong which rifes up a rcafonahle great and ffrong round hairy Stalk, about 2 feet high, having f^ fuch Leaves thereon as grow below; at the Top whereof is growing manyl'leuers Spike fafoion, one three another, which are fafhioned hmtthing A*f thofe of Larks heels but larger and thicker, v>ito a Jhcirt thick crooked heel behind them, of a very dead or fad blewijh purple color, feeming as if'ty were rugged or crumpled withal, which adds * greater illfavor'dnefs to them on the oiafide; but of a little frefber or more lively blew color, and fimb en the infide. After which come feveraf fmall rough Codt fltndwg together, tike as other Aconites and. Columbines alfo do, in which is contained a rugged black Seed.

Woolfs-bane Larks heel'd, Greater and Ltfftr.

VIII. The Sixth, 01 lefler Woolfs-bane, with Laiks heels. Its foot differs from the lafl, W* having 1 or ^ thick fljort blackifh Roets, ending >» fmall long points, faflned together at tU bead. *

has divers faoib green Leasts, upon very long foot Stalks, but not a/together Jo large, or of Jo fid a green color, much more finely cut in and divided, in many jags or farts than the former. Vie Stalk al/o rifet not up Co high, and bean fame f mailer and finer Leaves thereon, which ends in a fmall J'pike or bead, of almoft as large Floaters, with a jhort fpur or heel behind at the ether has-, but of a fairer blewifh purple color and more live fy, at well on the out fide a in fide. The Cods and Seed are al/o like the former.

IX. *The Places.* They all grow Wild in German. Italy, and other Countries, in Woods and fhady places: but with us they are only Nurft up in Gardens.

X. *The Times.* The two firft forts bring forth their Flowers with their green Leaves, commonly in January, for which they are only esteemed. The others Flower later, as in May anixne, and the Seed is ripe commonly in the following Months. The Roots of the two firft may be Set in any of the Summer Months, and almoft in any place, for they are hardy Plants, and will thrive almoft any where.

XI. *The Qualities.* They are all hot and dry in the extremity of the fourth degree, burning and deleterious, or deadly, and therefore are not to be given inwardly. The Fieids or Arrows being dipt into the Juice thereof, fo Empoylons them, that they kill all Living tilings who are Wounded therewith.

XII. *The Specification.* Woolfs-bane is proff eatable to kill Lice and Vermin in Ctildrens Heads, and to cleanfe them from Scurf; ifc. to confume dead Fle(h in Ulcers and Sores; and to clear the Eye-fight from any Haw, Pin and Web, Cloud or Film, &c. which nuy obfucate the Sight.

XIII. *The Preparations.* You may have therefrom
1. A Pouder of the Roots and whole Plant.
2. A Dcc[^]Sicn of the fame.
3. A DijHUedWater from the abole Plant.

The Virtues?

XIV. *The Pouder.* Either alone, or made into an Ointment with Hogs Lard, and applied to Childrens Heads troubled with Lice, Scurf[^] Morphew, Dandriff, running Sores, &c. it kills the Lice, and cures the Head of the other Maladies.

XV. *The SCCQUKM of Roots, Leaves, Seed in Water.* It is good for all the purpofes atbefud. Both Deoofiox and Pouder are ufed, as Galen fays, in foul Sores and pucrid Ulcers, to coniume the dead Flefh, and cleanfe them, but they are not to be applied to Sores in the Mouth or Privities, which are too tender Parts for any fuch violent Medicaments.

XVI. *The DijfiUed Water.* Being dropt into the Eyes, it is good to take away the Intimation, as alto Specks, Spots, Haws, Clouds, Films, &c. which may grow in them, or trouble the Eye.

XVII. *Nota.* If any one mould by accident be Poifoned, by taking inwardly Wootfs-bane, he ought immediately to feek for Cure, the method of which, we have laid down in the Cure of Poitbn by *Ht-lmtt-Flower* or *Monks-Hood*; which (to avoid Tautology or vain Repetition) be pleaft to have Recourfe to Chap.CCCUII. Sett. XVI. aforegoing of this Work, where it is plainly ex-

CHAP. DCCXLIU.

Of WOOLFSBANE Antidote i OR, DORONICVM.

THE Names. The Arabians call it fas is fuppoled) *Deromgi* or *ibiruttgi*, (whence the Name *Doronkum* is (uppoled to be derived, becaufe it is not to be found in any of the Ancient *Gnek* or *Latine* Writers;) Chr Modern Authors call it *ioLatine* *Dw[^]/rww*: ind we in Englifh *Woolfs-bane Antidote*, *Wioifim Woo!fs-b*; *jei*; and *Dorsnium*.

II. *The Kinds.* Authors have made eleven or iwelve Species hereof, many of which may not in {bme Ages be fecc hy us: we (kill tierelote t[^]ke notice only of 40r j forts, which are either Nurft up in our *Gardens*, or grow Wild in our *Country*, or the Roots of which are Sold in the *Pruggijis-Shops*. 1. *Doronicxm Vulgar[^]* *Darantcxm Romanian* -, by all Writers, our common Wootfs-banc Antidote or *Doronicum*: I call it ours, kcautie ic is common as well in our *Gardens in England*, as in the *Gardens of other Countries*, 2. *Doronicum minxiClufi* *alierumque*; *Doroniemn Plantaginis folio Baubint*: The lefler Woolfs-bane Antidote, or *Doronicum*. 3. *Doronicum brachiatu radice pena & Lobelij*; *Doreniatm auftriacitmfecundum Clufij*: The Scorpion Rooted *Doronicum*, or *Woolfs-bunc Antidote*. 4. *Doronicuta Germamcum Clufij*, *A'ifma feu Danta/onmrn Mmbkli is!* *Diofcorid/s* *Ldlta Atpina*. *Gijneri y Kardts Celtica alter* Ptnt*, *LoSelij*, *Rondeletij*; *Ptar mica muntana Lugduntnfis* -, *Doronicum Pannonicum*, & *Dironiatm frxtumCluJi*: German, or our EngUlii *Woolfe-bane Antidote*. J. *Dorcmtutnejictnaritm* -, *K.idices Doronta*; *Radices Alechin't*; *Doronicum amujuorias Pent*: *Doronicum of the Shops*. 6. *Doronicum Arabum genuinum*: The true Arabian *Doronicum*.

Tjff Defcriptions.

III. The firft, or our comracn *Woolfsbane Antidote*, 01 *Doronicum*; (*Jo called ourr*, becaufe it has been longeft known unto m, and kept in our *Gardens*.) Its Roots are *Tuberous*, *fmall*, *thick*, and *Jhort[^]* *creeping* or *lying under the upper craft of the Harth*, with *divers Jmill Fibres* fhooting /ram them down into the *Ground*, and encreafing diveri fuch itla *tuberous Roots* round about it, which are *tender* and *net hard*, *fomewhat whitifl*}, with *fome Joints therein*, and *greenifh on the upper fide* next to the upper* f<ice of the *Ground*. Same mould make tbcfc Roots to refemble a *Dead Scorpion*, becaufe of the *Joints*, ahich are like *Scales tkreon*: *Ti)e former part* next the *Leaves*, being *thick*, to be the *Body*, and the other parts being *fmall* to be the *Tail*, which « *fomething fwect in Tape*, and a little *bitter*, and a little *aj/lere clamminfs* *withal*, from this *Root fpring up divers Leaves*, each (*landing by it felf upon a long foot Stalk*, which are fo *Mtwbat* round, greater than the *Romw Sowbread Leaves*, foft and gem te in handling, *fomething hairy*, and of a *frejh grteri color*. From a-
mong which rifies up *feverd green roundifh Stalks*, about a *Tard high* or more, parted jr the *Top*, *fometimes into one or two Branches*, every one carrying a *large Flower*, *fonteKhat iike tf>e Corn Mangold*, but much larger, having many narrow *hngyelhta*
Leaves,

Woolfs-bane Antidote :

Doronictim.

Leaves, as a Border set about a middle Thrum, fomeibat yellow; which when it falls away, turns into small vehtifk Down, with very fnsalt blackijhSeed, nbich it carried away with the Wind.

IV. The Tecond, or lefier Woolfs-bane Antidote, or Doronicum. Its Rout in fnall, not HAe the former, being without theje Joints fo plain in them.

I flivers Leaves longer and. narrower than the Jirft., famenhat like unu Ribxeert Plantan^ but hitiry, and of a yelicnijh green color. The Stalks are slender, and rife nothing Jo high, nor ore much Branched, but carrying the like yellow i'lc-m-(ri as the former, but fometsbat paler.

V. The third, or the Scorpion Rooted Doroniatn, or Woolfc-bane Antidote, its Root creeps not fo ntuch^ but it J'omething longer thruji down into the Ground, with Joints growing upwards, branched (ai it tcerc) en each fide, with young Roots, and ending in a fmalt point, having divers long iibrts adjoining to them. It ha- forge round hairy Leaves like the Jirfi, fomewhat toirvcd or unevenly dented tibont the Edges, cf a [adder green color, and fameth'wg bigger: the Stalks have divert narrow Leaves thereon. The Vioaers are yellow, and their Leaves dented at their ends; and the Seed is like unio the other.

VI. The fourth, or German, or our Englifi Woolfs-bane Amidote. Its Root is final I, Jointed withal, not much unlike the firfi, bur not fo plainly to be difceritei, rf a facet Smell, and & bitter i'iting Tafie, hrjing m.tny fibres underneath it, giving many *fj]-Jets, by which it is encreafed. It bus feveral bread hairy Leaves, cf a yellawijh green color on the upper fide, but wbtifii am j'maith underneath, lying on the Ground, famcthing like unto bread flantane Leaves, or rather like unto the Crofs-wertGentian, having fome loMgRtb

herein. Among thefe Leaves rij'es up a Stalk, and fometimes many, bearing long Leaves at every Joint. At theTop, it Branches forth into ? or j, or more* parts fometies, bearing every one a fiir l**£* blower, fet as it were in a rough Cup, which confifts of many pale yellow Leaves, dented el their ends, as a pale or border about the middle; vtbei) is made up of many fmalt tlowers of 4 Leaves a piece, of a deep yellow color, as it were iheLhrum, wchb being paff, the head turns into Down, which with the Jmall black Seed therein, is carried av>fy with the Wind.

VII. The fifth, or Doronicum of the Shops. That which is Sold in the Shops, it the Doronicum <juartum Clufij, vel Stiriacum 1 Dorontoim jaruonim tiore magno Bauhini: The broad Leav\NLo-ronieum with a large flower. Us Hoot « l' *' *' what long, blackifh on the out fide tad Jointed, but not Jo plainly to be difcerned, the Joints ff^n & *K wards, and not downwards, (at they do in mojt oj he refl) Spreading it fet by means of art** f rings, very jar Jbout, with other tuberous w* " V/ like jerm, many in number, each T< bcr having many long white libres underneath it. if ii a-Plant, but hat many large, and fomewhat h'fig'J' round Leaves, dented about the ESges, like **}^o the third fort before Drfiribed, Jianding « [< > * " "S" foot Stalks. The Stalk ha* fame leaves thereon, longer and narrower than tboje belma •, and at > * Top (not having any Branches) one Winter, itrgr than any of the former, but elfe like unto ttefy having many long yellow Leaves, fit about a miM" 'irownijh yellow Thrum. The Root of t^JT. •bat we have in the Shops, xwbich ii Sold fo' ! & True Arabian Doronicum; but truly is not a-however, our Modern Pbyficuns generally agree, that >t Anjuers the End, and bat the ***** the True Arabian Kind, ibo' it hit no agreement, therewith inform.

VIII. The fmh, or True Arabian Doronicum; Avian Lib. II. Cap. CC. end Serapio in his Boo* cf Simples, CapXCCXXV. hove Defer ibed'tie it, A Root of theigncfi of ones Thumb, of a nara and heavy SubMnce, of a yellow color on tnc outfidc, and brown within, with fome white Vein*, and that it is hot and dry in the third . * . " ? j Parkinlbn/fMM to be cf Opinion, that it i' " W of American Mechinus, (often found m^AJ^m Mechinus, or Black Ginger) brought cbkfly Brazil, which Lobel calls Mechini rara va which has divers circular knotted Lines, as i like Joints on the outfidc, is firm and heavy, ai> full 01white Veins when it is broken, is alfo very fharp, quick, and biting, and Aromatic in Tai;ic* Thafays be, having all the Kvtes cf the Arabia" Kind, can be no other than the Legitimate a?? True Doronicum i bouever he fays, he leavet for every one to judge as bit reafon Jball air bite.

IX. Tlx Placet. The firft grows on tains in &JW>, beyond the Lake Leman, - - - - - ther places in Prance and Germany-^ but with only in Gardens. The fecond grows in "J. The third on the Woody Mountains in A") " I and about Trent ^ as Muffin Jays: but both o» them with us, only in Oaidens. The fo^{uttl} many places in Germany, in Meadows and where^ and with us on the Hilly Grounds in- thumbcrland. The fitch, C*///>«*fays, grows Kewberg in Siiria. the Root of which is *"- to us dryed, and Sold at the Druggilt The fixth, is an abMute Stranger with us, and u" lefs the American Meehmus be ir, which ty ^ cident as it were, is now and than brought hiⁿ¹⁶ we know nothing at all of it. v- T2x

X. *The Times.* They all Flower early for the moft pair, viz. in *Mty*, and their Seed is Ripe in fome flori time after.

XI. *Rotu. Cortufw* of Poi*^{<*}, and *Matthiolu*[^] calls that which is Sold in the Shops, *pyrda/iaxtbes*, and refer it to the *Boifonottw Aconites*, delimiting and railing againft it, as a Poifon not fit to be ufed inwardly in Mans Body; and that rhoie Phyfkians who put V into Cordial Medicines, as *Ek3, de gemmis, EleQ. ex Aromatibu*[^] *DidmefchumDuke*, and other *Cordial Compofitioiu*, do very ill, and have little refpect to the Lift or Health of Man, becaufe they both upon Tryal found it to be true, and that being mixed with Flefh and given to Dogs, it killed them; *to which it is affeered*, that many things which will kill Fowls, Dogs, and other Beatts, may notwithstanding he fafely given to Mankind: And man/ things which are wholfom to Man, and ate often ufed without Scruple, or the leaft danger, will yet quickly kill other Creatures. So *Aloes* and *Bitter Almonds*, given to Dunghil Fowls, or to Foxes, will quickly kill them \ and the *ChmmaleonTbijle*, will kill Dogs and Swine, whilit all thefe things being given to Man, are not only innocent, and abfolutely free from any deleterious or deadly quality, but are even Antidotes againft Poifon, and Sovereign Cordials; and the Roo: of the *thatmateo** being Drank in Wine, is good agiinf the Poifonous Bitings of Vipers, aud other Venemous Creatures. But on tie contrary, fome other Phylitians fay and affirm, that this *Doroaicum* < the Shops, is a perfectly innocent thing, and without the leaft danger in it. *Gefaer* fays, that he had taken much of it, and oftentimes a good quantity, even to 2 Drams in Pouder, that he might find the Operation of it, yet found no harm thereby 5 and that he had given it to others, without any danger or hurt. And *Pelta* and *Lobel* report, that *John de Vrode*, did Eat many Roots thereof without any danger, or Sente of ill thereby j and therefore they advife others, not to abdicate the uft of this Plant to Mankind. *Dofonsw* was once of the lame mind with *OrWifcand ftothioljts*, but afterwards he found his ErTor and reclaimed it. By what has been fiid on this matter, I think it is manfeft, chat the dangetous Qualities faid
« A " L his (ant) are r:; ifel o n y Go " Ignorance
of-Faft, Scruples and Suppofitions, and not from any real Grounds; forafinuch as Experience has firmitly proved the contrary.

XII. *The Qualities.* *Doronicum* of the Shops, is hot and dry in the end of the fecond Degree; *CaidiackjSudorific*, and *Atexipharmick*.

XIII. *The Specification.* It is a peculiar Antidote againft the-Poifon of *Woolfs-bane*, and *Helmet flower* or *Monks-hood*: It alfo reills the Poifon caufed by the Bitings of venomous Creatures, opens Obltruftions of the Lungs, and ftops rhe Defluxions or Humors into the Throat and Eyes, eafing their pain, and taking away the Inflammation of the Pans.

XIV. *The Preparation.* Our Difcourfe now, and prefently of the Virtues, has chiefly refpect to the fifth Species aforegoing ^ tho' fome Authors think that die fune may be faid and applyed to all the oier Kinds, feeing that they are all in Form, and ptccs of growing one fo like to another % and poliibly if Tryal be made, would perform the fattC Effects. You may have therefrom, when frelri GatherU, 1. A Juice from the Roots and Leaves. 2. A Decoffion of the Root. 3. A Poudr of the Root. 4. A Detoflioi of the Engfifb or *Gernun Woolfs-Une Antidote*, (at Seft. 6.) ;. A ?*Qaerofthe Root and Herb of the fame Plant.*

The Virtues.

XV. *The Liquid Juice of the Bwtt sni teavtr.* It is fiid ro be found good to be put into Efes which are hot, red, and inrlimed, to take away their prickings and eale their pain.

XVI. *The Decoſion of the knot iff Wine/cr ter.* It is an excellent Cordial, refills and Ci the Poifon of *Aconitum*, *Monks-hood*, and orhr poifonous Plants 5 as alfo the poifonous Bi tings of Vipers, Mad Dogs, and other venomous Creatures * it cleanfes the Brett and Lungs of thick tough Humors, ftops the Cough, and gives eafe in Ptcuritick Pains and Stitches in the Sides, Head-achs, Vertigo's,£?>. Dofe halfa Pint at jr a utneMorn- ing and Evening, a little Dulcified with Sugar.

XVU. *The Pouder of the Root, h has* all the Virtues of the Decotlion, and may be given Morning and Nighr, from 2 Scruples to 2 Drams, made up into an Eleftuary with fome proper Syrup, or Conferve j or mixed in Syrup oi Citron Peels, or of Juice of Citrons, and fo given in a Glafs of Canary, Sherry, or Madera VVines, CSV.

XVIII. *Tse DecoBion of the Entijl] or German Woolfs-b&ne Antidote in Wine.* It provokes the Terms tn Women, eafes the Pains and Difeafes of the Womb, is effectual againft Poifon, epecially the Poifon of the Fi(h called *Lupus martnut*, as alfo the venomous Biting of Shrew Mice and Toads. It refits the mighty Potency of *Opium*, in l'uch as have taken too much of it: and is given with good fuceft to thofe who have a Bloody-Flux, or any other Pains, or Giipings in the Stomach or other Bowels, by teaon or ft irp Humors offending them. It is profitable againft Convglfions, Cramps, Weakneses, and orhrs pains aud difaffefloits of the Nerves, TenJoiis, arid Joints; and if it is given with the fine Pouder of *Carrot Seed*, or rather oi *Daucus Seed* -, it potently expels Gravel, fmall Stones, and Tartaric Slime, from the Reins, Ureters and Bladder. It is applyed alfo outwardly to eafe Incarnations, and take away the pausofold running SoreSjputrid and eating Ulcers, and the like.

XIX. *The Pouder of the Rcat of the fame Plant.* It may be given Morning and Night, from a Dram to two Drams, mix: with fome proper Syrup, and then to be fwallowed down with ibme of the former Decoſtion, orwithaGlafs of Canary, Sherry, or fome other like generous Wine, for all the purpofes and intentions the aforefaid *Vsecothon* is appropriated to. It is ufed alfo as an Errhine, or rather a Sternutatory, by which way it cleanfes the Head and Brain of cold and moilt Recrements, which caule Dullnels, Drowfinefs, and other ill habits of thofe Parts.

VIII. *The Specification.* It Cures the Scurvy in a cold Constitution -, rectifies the Tone of the Stomach and Bowels, is good againlt naufeoullieft, stops Vomiting, ftrenghens the Venuicle, pf^vokes Urine and the Terms, CuKSSurfeia helps againft the hard Swellings of the Belly * caufes 3 good Appetire, and a strong Orgeilion, and is profitable againlt the Yellow Jaundice, n is also an Antidote againlt many Vegetable Poi- fons, difcufles Quinfies or Tumors in the Throat, and is a good Cofmcticfc, taking away Wheab, Pimpk-s, Worms, Roughncfs, and other defoir- nites of the Skin: It helps the dimnefi of the Eyes, lore and running Eats, and cafes their Pains: n is good againft the fwelling and hardndfe of the spleen; it purges Ghoierick Humors downwards, both by Stool and Urine. It alfo kills Worms in Children being inwardly taken, and outwardly applyedi it is good againlt the Colick, Bloody- Hux, and all other Rajfts oi'the Belly i And being conltantly ufed, ic is laid to Cure a (linking Breath. It is commended againft Tertian and o- ther lingering Agues, by opening Ohftructions, purging by Urine, ftrenghening the Stomach and Liver, and altering the whole habit ofrhe Body-

IX. *17jf Preparations.* From Common Worm- wood you may have thefe, i. A *Liquid jfitia.* 2. *An Effxccc.* 3. A *Deeoffhn.* 4. *Wormwood Beer.* 5. *An Infu&on in Wine.* 6. A *Jfeudcr;* 7. *An Effientia! Salt.* 8. *Cameranui's mixture.* 9. *Syrup of Wormwood Shape.* 10. *Syrup Compound.* 11. *AnlnfolatedOU.* i2. *A\Catap!ajm.* i^ *Tmbes.* 14. *A Simple Diji'tiled Water.* Ij. *A Simple Spi- rit.* 16. *A Water end Spirit Compound.* 17. *A Difjilled Oil.* 18. *Potefiates *r Powers.* 19. *A Spirituous -Tinnf^.* 20. *An Acid X* it. *AnOiiyrmMre.* 22. *A fixed Salt.*

The Virtues.

X. *77jf Liquid Juice.* If it be given to i, 2, 3, or 5 Spoonfuls, according to Age and Strength, it is Cathartick, and Purges the Body of Cholerick and Pituitous Humors, ftrenghening the Bow- els at the fame time ; and Snufrd up the Noftri^s as an Enhine, it purges the Head and Brain of Pi- tuitous Recrements. If it is infpilTated and made up into Pills, 10 Grains being taken at a rim^o* admirably ftrenghens the Siomach.

XL *IU Effence.* If taken in dueDofe in Broth or Wine, it gently Purges the *Kifccra* of Cholerick and Flegmatick Humors, kills Worms in the Stomach and Belly, provokes Urine and the Terms, opens Obltruaions of Stomach, Liver, Spteen> Mefentery, Keins and Womb; is good againlt the Jaundice, Dropfie, Gout, 3nd Scurvy, creates a good Appetite and Digeition, Ihengdiens the Stomach and Bowels, Cutts Huxei &r the Belly, and is good againft Tertian Agues, auJ ohtJ like Chronick Difejfes : it flops Vomiting, is good a* giinf a Stinking Breath and Loathings, and K- ftores the Tone of the Stomach, Dole from * quarter to half a Spoonful in Canary, or other, generous Wine, Morning, Noon, and Niglr: but it is to Purge withal, it may be taken fton * Spoonful to 2 or 3, or more, in any proper Vehicle-

XII. *The Decollion in Water or Wine.* It has all the former Virtues, and may be given Morning and Night a quarter of a Pint at a time, in any proper Vehicle. It is laid to be peculiarly good against the Yellow Jaundice.

XIII. *Wormwood Beer.* It is gtomatick, comforts and warms a cold Stomach, takes away loathing of Meat, and caufes a good Appetite and Digestion; it alters a Cold habit of Body by long taking ir, and purifies the Blood.

XIV. *An Infufion in Wine, or Wormwood Wine.* Take Choice Rbexifh Wine a Gallon, dried Wormwood Leave* and Tups of Flowers, a good handful: mix them, and flop them up clofc for a Month or more fhaking the feffel once or twice a Day-, and all the while it is ufed, let it remain upon the Herb or Farces. It is taken at any time mixt with choice Canary; it warms a Cold Stomach, caufes a good Appetite and Digetion, expels Wind, kills WormSj and being Drank alone without mixture, Cures the Green-Sicknefs, being taken in the Morning Fattig; and frequently ufed, it prevents the Cachexia and Dropfy.

XV. *The Pouder of the Herb and Heads of tinnere.* It heats, deanfes, dries, and ftrenghens the *Vifcera*: It has all the Virtues of the Effence, and kills Worms in Children, being taken from 10 Grains to a Dram, (according to Age and cither Accidents) mixt with Honey, or Pulp of an Apple or fome fuch like, and wafit down with a Glafs of Canary, Morning and Evening; it is eood aeainft Surfeiting and Drunken nef; and the Putridity of the Stomach, and helps against a fink-

ⁱⁿCVI. *The Effential Salt.* It has all the Virtues of the Liquid Juice, Effence, Deception, Wine and Pouder, and that in an exalted meafuie. It may be given against all thofe Difeafes, as alfo the Green-Sicknefs in Virgins j frsm a Scruple to a Dram, every Morning Tafting, and at Bed time, in a Glafs of White Fort or Lisbon Wines, or in Canary, witha *Continuando*, rill the Patient grows well.

XVII. *Camerarius's mixture.* %i6c the Tops or flowers of Wormwood, Flowers of Rofevtary, and Flowers of Black Thorn, or Sloe-Bufh, of each 4 Ounces; Saffron 2 Ounces, Rhenijb Wine 4 or j Quarts, mix them, and in a Vejfel dofe covered, fimmer them over the fire for an hour or more, then Strain out and keep it. for ufe. It is commended for the Cure of the Yellow Jaundice, a fmall draught of it being taken in the Morning fading, (the Body being prepared beforehand by Purging;) and fo raken, it brings down alfo the Terms in Women -, and if a little Wine Vinegar be added to it, it is laid to help thofe who are Poifoned or almoft Strangled, by eating Poifbnous MufhroomS; and being taken mixed with Wine, it is good against thePoifon of the black Chameleon Root, Hemlock, Shrew -Moufe, and *Draco Msrinus*, which is called a Quavivex.

XVIII. *The Simple Syrup.* Take Clarified Juke of Wormwood, Clarified Sugar, or the double Refined of each 4 Pounds *, mix, and in the heat of a Rath make a Syrup. It has all the Virtues of the Tuice Effence, and Decoftion, and may be given from one Spoonful to two, in a Glafs of Wine -. If Nitre be diffolved » Jt, it is then good against the Ouintey, and Inflammations of the Throat and Almond, to GVgle with n. Dropt into the Eyes, ir " eood against the dimnefs of Sight, Clouds,

Films tfc. And dropr into the Lars, it heir Pain, and heals runuing Sores therein.

I The Compound Syrup. Take drycdWormwood Rofes, 4 Ounces; Indian Old White Port or Lisbon

Wine, Juice of Quinces, of each j Pints: jicpc them a whole Day in a c/ofe Earthen Vt-jfel, then Boil very gently, and Strain out without prejging; and mjjfr \$. Pounds of double refined &ufjr, make it into a Syrup in the heat of a Bath, h is good for a cold and flegmatick Stomach, eafes its Pain, and ftrenghens it, as alfo the Liver and Conco-9iye Faculty; caufes a good Appetite, expels Wind, provokes Urine, and prevails against this Yellow Jaundice. Dofe from one to two Spoon, fuls Morning and Night, in a Giafs of generous Wine.

XX. *Oleum Abfinthiacum j Inblated Oil of Wormwood.* Take Flowers or Tops of Wormwood, 4 Ounces j choke Oil Olive, 3 Pounds: mix, and fet them in a hot Sun in aGla/s clofefiopt a whole Week, fhaking them every Day then bail in a Bath-, prejfs out the Oil, andput infreffj Wormwood or before, which boil andprefs out: then a fecond and third time, adding 4 Ounces more offrefh Wormxwood, put to it alfo 4 Ounces of Juice of Wormwood; which boil again in a Bath, till the humidity of the Juice it evaporated, then prefs out and keep it for ufe. It heats and ftrenghens the Stomach, being Anointed thereon, Anointed on ibe Stomach and Belly, it kills Worms, rhe Pouder heing given alfo at the fame time: Anointed on the Back-bone, it abates the fhaking Fits of Agues, ifdone the whole length thereof for half an hour before the coming of the Fit: Anointed on Stomach, Sides and Belly, it ftrenghens all the Bowels, chiefly Liver and Spken^ and is good against Cachexies and Dropfies, and Difeafes arifing from Coldnets and Weaknefs Q thole Parts; it caufes alfo Appetite, helps Digestion, and diflipates Wind, for which reafon it is good against the Colick.

XXI. *The Cfaplafm.* It w made of the green Herb, by beating it in a teoode/t Mortar with a wooden Fefle,, adding a little Ox Gall to it. Applying it to tie Stomach, h kills Worms in thofe parts, and ftrenghens them, giving eale alfo to pains of the Liver and Spleen.

XXII. *Ljw to of Wormwood Compound.* \$t Wormwood Leaves and b'lotoers in fine Pouder, Red Rofes in Pouder, Anife-Seeds in Pouder, of each 2 Ounces; Roots of Afarabaeca, Rhubarb, Spicknard, Smatlage-Seed, Jiidce^ Majlka, cab in fine Pouder, one Ounce; Almonds bitter, Infpijate Juke of Maudlin of each an Ounce alfo; Juice <£ Succory enough to make all into a Mafs for Troches. It is a very bitter Medicament, and fcarcely ever taken alone, but with fome proper Vehicle. They ftrenghen the Stomach, Liver, Spleen, Mefentery, and other Bowels, "kill Worms in the Body, opens Obftrufions of the *Vifera*, and are profitable against the Yellow Jaundice. Dofe a Dram Morning and Nighr, in Syrup of Citron Peels.

XXIII. *The Simple Dialled Water.* It heats and comforts the Stomach, is good against Loathing, flops Vomiting, expels Wind, helps Digestion" and caufes a good Appetite; and is laid to give, eafe in the Tooth-ach. It has all the Virtues of the Juice and Effence, but much weaker: Dropt into the Eyes, it clears the Eye-fight; and bathed upon the Temples, it eafes the Head-ach.

XXIV. *The Simple Spirit, It is made from the fermented juice, by DiflilHng it in a Capper Alembick Tinn'd within, with its Worm or Refrigeratory.* Or, Take Leaves undTops tfdrygd Wormwood, 4 Founds *, fmall Wines, 6 Gallons, digefi 24 hours, then Difil in art Alembkk as before • adding to every Pint of the Dijilled Water, two Ounces of double refined Sugar I The jirft u<trt you may call Simple Spirit of Wormwood\ what follows after, fave for Wormwood Water. Theft

have the Virtues of Wormwood, but more fit for Anriem People, whose Natural heat is abated; it warms and comforts the Stomach, and helps Digestion, and is good for such as are troubled with Cachexy, Dropsy, and Jaundice, &c.

XXV. *Water and Spirit of Wormwood Compound.* Take Tgpt and leaves of dried Wormwood, s [P(W7<&j Annifeeds, half a Found., 6 Gallons of [small Wines: mix, and digej] all together for S4 hours, then difillem in an Alembick as aforefnd, adding 2 Ounces of double refined Sugar to every Pirn of (be diftilkd Liquor. The firft Quart hep for Spirit of Wormwood Compound: end all rbe rejf for Wormwood Water Compound. It has all the former Yirraes, but more agreeable to such as have got Coughs, Cold, Wheezing, or any (uffing in the Stomach and Liags, OI troubled with the Colick.

XXVI. *Oil of WormaobR TnjMhl.* ft Jias all the Sperifick Virtues affibed to Wormwood, at Sr3. VIII. aforegoing. A Drop, or 2, or 3, OI this Oil, mxt frit with a little white Sugar, and then drink in a Ghfs of *White tort* or *Lisbon AVine*, or *Canary*, makes an exa-tlen: draught to (hengthen the Stomach, Liver, and otterrifitrt-, TO help atpinf a Cacuexiil, caufe a good Appetite and Digestion, and make 3 good color in the Face: Ir expels Wind, provokes Urine, and is good agiirrt Hypochondriak Melancholy, and univerfillv Strengthens the whole Body.

XXVII. *Voteplates Abfmhijpt Powers of Wormwood.* They have all the Virtues of the Oil exalted, and fo more fubtil, and are alfo much more plealant to be taken: you may rake Morning, Noon and Night, 40 or 50 Drops in a Glafs of generous Wine.,

XXVIII. *The Spirituous TmSurt.* Tisa Nobk Medicamenr, and has alt the Specifick Virtues enumerated, at Sri?. VII. aforegoing; irrcrifts Vomiting and Naufeoaliefs and itrcngchens the Stomach above ail other Preparations of Wormwood. You may take 20, 50, or 4^ Drops, or more at a time, in a Glafs of Canary; the more the Wine \$ the greater number of Drops may be given at a time.

XXIX. *The Acid TinSure.* It is an Antidote againft all hot, burning, and malign Fevers, and is an excellent thing againft the Plague or Pestilence « fdf, and all other Contagious and Pcftilential Difeafe: it provokes Urine and the Terms, and carries off the Morbifk caufe of Internal dilaffections by the Urinary pafkges.

XXX. *Tkt- QilyTinBure.* It is good toprok Urine, and cleane the Urinary pafkges fram Sand, Gravef Stones, and Stinky and Tartarous matter infecting thole Parts: it « an excellent thing againft the Colick, Palfy, Convulfions of the Bowels, and Gout affecting the Stomach. Kofeftom 8-to 16 or 20 Drops, firft Dropt into and mist with Sugar, and then to be taken in a * ilafs of *White Pan* or *Lit fan Wine*: outwardly, it is good to Anoint pans afflited with the Gout, Sciatica, Kheutnatifm, &c. As alfo to help the Headach, ptoceeding frtm .1 cold and moift caule, being Anointed upon the Pan. And applied to the Tiles or Hemorrhoids, it gives prefont cafe, and in a Ihort time after Cares them.

XXXI. *The i-ixed or Efementary Salt, made by inancrtfion and Elixivation.* Taken from 10 Grains to a Scruple, or half a Dram, it is an Andote againft the Scurvy, and purifies the whole Mais or Blood and *Lymph*^ eftc&bally carrying oft the Recrcmops of ttiote Fluids by Urine. It may be given in Wine, in a cold and moift habit or Body: but in a hot and dry Conttirion,

it ought to be given in a thin fort of Water Gruel- If a Scruple or half a Dram of it be mixed with a large Spoonful of Juice or Limons, and ib given to one that is affetled with an extream Vomiting, it Hops it upon the fpot: It gives eafe in er Strangury, provokes Urine potently, atiJ exr«l» Sand, Gravel, and Tattarous Mucilage, from the Reins, Ureters, and Bladder.

T/JC *Defcriptions.*

III. The firft, or our Englifh Marfli Wormwood. *Its Root runs Something deep, yet fpreads it feif in the Ground, being compofed of many large Strings and fmall Yibes. It rffet up with many boary round woody Stalky two feet or more high, being well furnijhei and repleat with it vaji number O) white boary long and narrow Leaves, rather broader and longer than an> Southernwood Leaves^ having a fmall biturijb Tafie, and a very pleafing Krong Smell. The blowers an fmall and yellow, Handing at the tops of the Leaves and Branches, icbicb afterwards give very fmall Seed.*

IV. The fecond, or white Marfli Wormwood. *Its Rwr it toughs moody and Jinagy, creeping far abroad, by which means it very much encreafes. It bat tough hoary white Stalks 2 or 5 beet high, which a little jpread out Jnts Branches. The Leaves are winged, feveral fmall narrow ones (not very teng) fet upon one middle Rib, which feem to be divided Oi it were into many Jtgs, not altogether fo Urge at the True Roman Wormwood, oj J bitter Tijie and pleafant Smeff, >f a very white*

Wormwood Marfh.

Befaging *to Salt. III.*

fi at the tops of these Sulks and Branches, grm fmsll yellow Hewers not much unlike the femur.

Wormwood Sea or Marib, white.

V. *The Places.* The first grows in the Salt Marllies In many places of *England*- I found it growing in the SaltMarth by the Rivers fide, running along the South fide of the Town Of *£/* Regis in flforjol* on the South of that field called the *Fryers*; and iij several other Salt Marihes Dill that Town. And is plentifully found in the *SM* Marflies in *Holland, Vlandars*, and other of the *Lm Countries*. The other is found on the beach Coasts of *Germanyani Italy*; and in ibme oi the Salt Marines of *England*: Thofe Salt Soils overflowed by the Sea, are their Native places oi growth; but being Tranfphted into our *GijM-Wj* they thrive as well as il they were Natural to hem.

VI. *The Times.* They Flower and Seed io the lame Times, in which all the *otbzi Wormwood*: do-

VII. *The Qualities.* They are hot and dry in the fecond degree, Aperitive, Abfterfive, Stpnt¹ ick and Alexipbarmick.

VIII. *The Specification.* They have all the *Vir*ues of the *Common and Reman Womnxesds, IM* not half their ftrengrti and force in r heir Eftttts. Bur by rcafon they are not altogether ft bitter. they are more acceptable to the Nicer fort or rji-jates. They refitt and expel Poifon, and gen^y Purge the Belly.

IX. *The Preparations,* All the Preparations which axe made of *Common WorMwaed*, may be made of the *Marjh* Kinds; yet theft three are the moft ufual, *vis.* i. A *Liquid Juice.* 2. A *Dr coiiicn in Wine.* 3. A *Liquid Juice.*

the Virtttes.

X. *The Liquid Juice.* Taken to 2 O13 Ounces in Veal Broth in the Morning, it gently loolens the Belly, and kills final! Worms in the Stomacn and Guts,

XI. *The DecoSicn in Woe.* Taken [^] a quarter of a Pint to half a Pint, it reEfts and eF pelsPoHon, chiefly that of Hemlock: but the Juice given in Wine for that purpok, much exceeds tbeDecoaiion: But the Decoaiion is g<>a againft all Pains of the Stomach and Liver \$ t< which purpofes the *Mtrjb*, eiceeds even trw *ommon Wormwood.*

XII. *The Cataphfm.* The green Leaves made into a Pultife by bearing them with Figs, Nitre finely powdered, and Darnel Flower[^] and a little to the&lly, Sides, and Flanks, are laid to b for fiich as are Splenerkk, or are troubled with the Dropfy.

CHAP. DCCXLVU-

Of WORMSEED *

I. *Trp HE Names.* I find not by what *Grttk*

1 Name it has been called, but in *Latm* « is called *Sementina*, *Semen ud Lumbrkes*; af[#] *Lumbrkorum* •, and in Englilh *Wormfeed*.

II. *The Kinds.* We make two forts hereof, *vie.* i. *Semen Trtnfwmm*, Foreign Wormfeco •, and this is called *Sjnomcurx* -, *Semen 5j<#^w i* *Semen Sitntonieum*, *Abfmibi* *Janionici* *Semen i Semtmina* ± *Ab/inihium Santomcum Alexandria*[^] *Abfinthij peregrim* *Semen*, Shop Wormfeed[^] *Wonnfeed* Wormwood. 2. *Sementina An* *Semen ad Lumbricos Anflitum*, *Camelina*; *grum alterant amarum*, *Erigtiih WonnfeW* [r

theſe I think good to add, £ *Myagrum Sylveſtre*, *Fleudomyagrum* •, *Linaria yunta* Tragt-, *Sejam Tragi* Wild Gold of Pleaſure, or Oily Seed. The Seed of this 'tis true, when perfeſſly ripe ana dry, has no Birterneſs in it, but is Swcecan and veijf pica-fint, and a molt acceptable Food to final Birds, is *Finchet*, *Linnets*, and the like j hut boch Herb and Seed while they are green, have an unaccountable Bicterneſs beyond Expteſſion, and there tore whilft it is Green, ii Unfed as *Worm/eed*, and will indeed do the fame thing.

The Deſcriptions.

plentiful Stringy and lihrom R, f p g felt far and deep in the Ground y from whence riſei up a link ſhort Stock, which tftermards ſpreads it /elf out into many Stalks, and ſmalhr

Wormfeed Tranſmarine:

Or, *Satitonicm*.

Ramifications, inſonmch that it is very full of Branches, but aũb very ſem Leaver, and thoſe very ſaall, and finely cm at the bottom, of an Aſh color i but flared ſo plentifully with Seed upwards, that itſeemi to be there without Leaves, and wholly to conſiſt of Seed, which as *Rauwolfius* ſays, ire ſemmbat bitter in their Natural Places, and of a rea/onable liveh &nd quick Smell with us, eſpecially if they be/reſh and not old; but are indeed much ſtronger where they grow, and are but memh gathered.

IV The ſecond, or Engliſh Wormfeed, (which *Gerard* calls *Treacle Wormieed*.) /" & f */»*// and *Hfa*fc #***»** ««7 ^ar after *Setd* time, ud then rijixg/again of its own Seed. It grows Zthpretty tall upright Stalks branching themſelves ZLJdi the top, and tbtcker fet with long norrm green Leaves iban the next, ſomewhathke to Zfof tbt *Single WalUftowcr*, but /mailer and Ski n color, and at the tops of the ^ com*forth many very ſmall

Wormieed lingliih.

pale yellow flowers, conjiſting of 4 Leaves apiece s very like to thoſe of *Leucoium Sylveſtre*, or Wild Single Wall-flower, but mud) fmailer^ even by more than half; tebiſch being paji away, after them come ſmall long Cods, containing within them a very pale colored Seed, of a very bitter Tajt.

The other Wormfeed Engliſh-

V. Thechird, or Wild Gold of Fleafure, • the other English Wormfeed. *It hat a long slender Root, mth fome String! and Fibres adjoining to it. ti comes up with but one round Stalk a/mop a Tard high, v>hicb ff reads it fctf cut into Branches or Arms, which have long andfomvihat narrow Leaves, yet a/moji twee as broad at the former, Jharp pointed, fomething rcfemblingthofc of WOLD, but •'hat theft are longer, and broad at bottom, vihere 'cy eompafs the Stalk about, with two pints fik- Wrtg out on either fide, at wbeft tops come forth ffeverd whitifh Mowers, very like to thofe of Flax, after which come forth fmall round Heads-, vsith a Jmali point it the top, very like in fafyon to the Myagram coitb one Seed^ but thefe are full of fmall ycllomijhSeed, like to thit o/Crefles, which vihilfi a is green and fresh, is exceeding bitter, tx? not Jo after it is full ripe and dry.*

VI. *The Pucts.* The firft-grows in Arabia, Syria and Palejina, from which places the Seed is brought to us. The iecond grows Wild in many places of England, which being brought into a Garden, and there fuffer'd to Sow its Seed, it will come up again Yearly of its felf. The third grows in Germany, and is much round in all their flax-Fields and Grounds, which being in Stalk like it, 5s accounted a Weed, and cafi away 5 but fome five the Seed to give w frull Birds, on which they will fed when it ^s perfeEly ripe, and peck It from the Stalk. S

VII. *The Times.* The Srft Flowers late in the Year, but I think the wrtain time is not let down by any Author: The pthei two Flower 'm'June and July, and their Seed is ripe in Auguft and September.

IIII. *The Outlines.* They are all .hot and dry as Aurhors fay, in the third degree.

IX. *The Specification.* They are only, or chiefly ufd to kilt Worms in the Belly, tor which they have been found very effectual.

X. *The Preparations.* The Seeds of thefe Plants areonly ufed, being taken either whole, or a litle Luified.

the Virtues.

XI. *The Seed of the Santonicum.* ItJs given a Scruple at a time Evening and Morning to Children, cither in a tew Raifons ftoned, or in die Pulp of a Roafted Apple or Pear, or in a Siew'd Prune, or in Honey, h kills Worms in the Stomach and Belly, but if a little AJtiesOt Rhubarb be mixed with ir, the Worms will then not only be killed, but they will likewife be expelled withal And if the Seed be mixed aith Aloes, and brought to the farm of an Emplafler TO)V6 Ox-Gall, and applied to the Stomach and Navel, it isT^id to do the iame thing.

XII. *The hngiifb Wormfeed.* If it is bruifed, and given from a Sauple to a Dram, Night and Morning as the former, in any proper Vehicle, and then wafht down with a Draught of Wacet-Gruel, Broth or PoCet-Drink, it is (aid eftettuaUy to kill Worms in the Stomach and Entrails, of what kind foever, it being often enough repeated.

XIII. *The other English Wormfeed, or Seed of the Wild Gold of Pleafure.* This is to be taken hruifed whiltt it ii'Green, andwhillt its inherent Bitremeli is yet with it jt may be given from a Sauple to a Dram, as the former are given, and is much more erreftuul than themhotb, being continued Morning and Night tor fome time. This by iwibn of its exceeding Bitterneis, I am afraid few Children can be obliged to take it.

CHAP. DCCXLVIII.

Of WOUNDWORT.

I. 'Tp HE Names. All the Woundwru being

J. *All-heals,* they have one and the feme common Greek Name, which is n<Fr£, *; naf**^ > in Latin *Panax,* or *Panaees;* and in English *Aik heal,* or *Woundwort.* ••

II. *The Kinds.* There are fevetal forts of thefe Woundvoorts, many of which we have already treated oi'in Chap. IX, X, and XI. CL. and CU. aforegoing of this Work * theie are fome few remaining, which we (hall difcourfe of in this *Chap-er,* and they are, 1. n<m£ Aw*><cr iiwB< : -m**"* * & * > * Nrib-. *Panax Heracleum verm, Vanace< tieracka. veru,* The true AU-heal OI Woundwort of Hercules. 2. n<u<i< n » & Panaees Chimm*) *Panax Cbironis; Panax Aureum, Peaces Aurea, Panax Chironium Tbcopbrafh, Merba Voria vug* ris,* (from one *Doria* a General of an Army, who ordered it to be applied to the Cure of his soldiers Wounds •.) *All-heal,* or *Woundwort of Chiron.*

Panax Cbironium Amtricanum Minor, hcroa Voria Americana minor, The lefler American Woundwort. 4. *Panax AurcumKemorum, Pawees Aitrea Kerxeruni; Confelida Aurea Nemerum;* The Golden *All-heal* or *Wondwon.*

the Descriptions.

III. The firft, or true Hercules *All-heal* m Woundwort. Jtt'Rw/M very thick, fat^ and full of fmce, of a mbiti'sotor, ramified into feveral great or confiderabk Branches. It hat many broad grctnLarves

Woundwort, or All-heal of HERCULES.,

spread upon the Ground, or growing near to It, very rough and hairy, but of an over-worn green color, deeply cut into 3 or more parts, not much unlike a fig-Leaf, or those of the Cow-Parthea each standing on a long Footstalk, which at well as the Leaf is somewhat rough or rugged. From among which, rises up a very strong Stalk, covered over with a rough hairiness, 4 or 5 Feet high, (Gerard says 4 or 5 Cubits high, which may be in a Rich Soil, and its Native Climate,) having upon it such like Leaves as grow in Water, but lesser and stiffer. It is divided (in most Plants) into several Branches, and sometimes it bears only but one Head, the tops or top of which Branches or Stalk, have upon them one or more Tufts or Umbels of yellow Flowers; set together in a Round, like those of Dill, which turn into Seeds large, flat, and of a Strain color, sharp and hot in Taste, and of a pleasant flavour, from this Plant being Wounded it is probable that that valuable Gum called Opopanax, does proceed, which is brought to us out of Syria, and the Parts adjacent, to their most famous Towns, as Alexandria, Cairo, Damascus, and some others. But others say, that the Gum Opopanax, is produced from the Plant Heracleum, which is mentioned in Chap. X. of this Book foregoing. I will not dispute the contrary, it is probable that they may both produce a like Gum. (It is difficult to be known under, because their Juices seem to be of the same color,) and both called by the same Name.

IV. The second, or All-heal, or Woundwort of Chiron, called also Doria's Woundwort. The Root is not so great as the Plant would seem to have, but with its larger Branches has many Fibres proceeding from its Head, which together take firm hold of the Earth, not dry in the Winter, but

Wotmdmrt, or All-heal of Chiron Common.

coming up freely again every Spring. The root is thick, fleshy, long, deep green, as long as Dock leaves, but thicker at the points, smaller at the lower ends, and triadric in the middle, somewhat harsh or hard in handling. From among which, rises up but one great upright Stalk for the most part, about a Man's height, on which grow very sparingly, 3 or 4 Leaves as grow below, but smaller. At the tops of which, and of its Branches, come forth a great many yellow Flowers, in green scaly Heats, like those of Knapweed, greener than those of GbtdcuRod, or of Saracens Confound, which when they are ripe, are blown away with the Wind.

V. The third, or the American Woundwort. Its Root is composed of many thick Fibres, and spreading in the Ground. This Plant is so like the former in appearance, that it cannot but be ac-

Wotindvoort American.

counted a Species thereof: It abides green all the Winter, (as the former does.) Its Leaves are thick, somewhat long and narrow, but not half so great as the former, and of a paler green color, else for the Fashion, very like them. The Stalks which are many, not rising to half that height, are round, and for the most part lean a little on one side, not being able, by reason of the multitude of Flowers to stand upright; which Flowers stand upon longer and greater green scaly heads, than those of Chiron's foregoing, and are also greater, and more laid open, with many small, long, narrow Leaves, which turn into a white Mossy Down, and are carried away with the Wind.

VI. The fourth, or Golden All-heal, or Woundwort. Its Roots are many small white fibres, like unto the Dailies, whose Taste it is somewhat bitter and Aromatic and Astringent or Binding withal.

This

This Golden Herb, hat feveral long, narrow, and /burp pointed Leaver, coming forth from the top of the Roor, very like to Chirons, or Doria's Woundwort, but not fo great, yet thick like them, and of a darker green color. The Stalks rife not to much above a loot high, having here ar.i there narrower long Leaves on them than below. The lowers which stand at the top, art larger than those of the former, hiving many narrow, long, yellow Leaves, and when open, like a Star-Yloteer, with Tjrrums in their middies.

VII. *The Places.* The first is a Native of Syria, and was brought from thence to Italy: It glows in the Kingdom of Naples as Mtth'wlus fays, on the Alpine Hills, and on the Sea Coast of Siena, but with us is Nurtt up in Gardens. The fecond grows as Label fays, near the Banks of Rivers in Provence, and Narbone in trance. The third in some nans of Ylonda in America. The fourth in thick Woods near Orleance in France; but with us, thele three laft are Garden Plants.

VIII. *The Timer.* The first Flowers in September, and fometimes towards the end of that Month. The fecond and fourth Flower in June and July, and the third in Auguft, none of them much earlier 01 later.

Hercules's *Woundwort*, or AU-heal

IX. This Plant, as to its Qualities, Specification, Preparations and Virtues, as also the Opopanax proceeding therefrom, have the fame with those of the other *Herculeii Allheals*, difcourfed of at large in Chap. X. of this *Hifiory of PLANTS* aforegoing, fo that the Properties being every way the fame, we shall fay no more of them here, but refer you thither.

Of Chirons, and Coldtn Woundwort, or All-heals.

X. *The Qualities.* It is hoc and dry in the third degree, Abfterfive, Afringent, Vulnerary and Alexipharmick.

XL *The Specification.* Its chief nfe is for the curing of Green Wounds, and to expel the Poifon, and cure fuch as are bitten by Vipers, Mad Dogs, and the Spider *Phalangium*, and other Venomous Creatures.

XII. 77< *Preparations.* You may have therefrom, 1. A Liquid Juice. 2. A Becolition in Wine or Water, %. An l'folatei or Deco Sed Oil. 4. A Baljum. 5. A Ponder. Parkin/on lays, that this is in a Medium between the Confounds^ as Saracem Confound, and the Golden Rod, and therefore that this needed no farther Repetition or Amplification of its Virtues. However, we think fit for die Publick Good, to add the following *Seffiont*.

The Virtues.

XIII. *The Liquid Juice.* Given inwardly, from i Spoonfuls to 4, or more, in a Glafs of Rod htypuck Wine, it ii good againft inward Bleedings, Bruifts, or Ulcers in the Bowels, Reins or Bladder -, and continued for fome time Morning and Night, u contributes to the healing of all recent Wounds, running Sores and Ulcers, as alto the Bitmgs of Vipers, Mad Dogs, *Fbalangium*, or of any other Vwomous Creature, in what part of

the Body foever. It is profitable againtt Spitting and Pitting of Blood, the Bloody Flux, and all other Fluxes of the Bowels whatsoever.

XIV. *The Dccotfiox to Water or Wine.* It has all the former Virtues, but as it is weaker, fo it may be given Dulcified from a quarter of a Pint¹⁰ half a Pint. Injefted into FilWs, it cleanfes them, and induces their healing. Sweetned with Honey, and injefted into the Yard, it cures a Gonorrhosa in Men, ifc.

XV. *The Infolated or Decoded Oil.* Anointed upon the Bitings of Vipers, Mad Dogs, the *Yhu-Ungium*^ or other Venomous Creatuies, it curci them, provided the Patient at the fame iin*.i takes the Liquid Juice, or Decofion inwardly-

XVI. *TixBalfam.* Ithealsfimplegreen1 Wound many times at once drefling; it alio digefts old Sores and eating Ulcers, cteanling, incarnating, and drying them, thereby inducing a fpeedy healing.

XVII. *Tj.'e Ponder of the Herb.* It has all the Virtues of the Juice and Decofion, and trjay bt given from 2 Scruples to 2 Drams, Morning & Nighr, in a Gbls of the *Decotlwn*, for all the pu* pores afoiefaid. Outwardly applysd in a plentiful manner, upon old running Sores or Ulcers, U cleanfes them, drys up the Flux of Humors, **incarnates**, and caufes a fpeedy healing.

C H A R DCCXLIX.

Of W R A C K - S E A ;

OR,

ALGA MARINA.

I. T¹ HE Names. It is called in Greek t*** X *tuchawiri* lili Latin *Phycij*; *Phucus*; ana *Fucm marinus*, to *dichgufm* it from *Fucus herba*, which is *Anchufa*, or *Alkanet* *, and *Alga marina* : in English *Sea Wrack*, or *Sea Weed*.

II. *Vie Kinds.* Tho^J Authors make near 2^o forts of thefe Plants, yet we fliall Difcouric only of thefe 6 following, viz. 1. tic <f *mannix* & *^o *minem*, *Alga marina graminea* -, *f'ueut marina* * *alter Dodonni*; *Palea marina* by thofe of *Mon'p'*^e *Her*, being ufed by them for Litter for their Cattle, and the belt fort of Dung for their Fields; *Alga angitjiifolia vitrariorum Bauhini*: (becaufin the *Levant* or *Mediterranean*^ they Burn it vx Pot-alhes, whereof they make Glafi.) Gr^{als} *Wrack* or *Sea Weed*. There is alfo a broader fort of it, called *Yucus giganUut*, and *Pa/mifi*''' *am giganteum*, by *Imperalus*, 1. *Yucus manfflM Cr ap*, *ktifoliut* t Broad thick Sea Wrack or Girdle. 3. *Fucm mannus Utiffimsts utuif* <>I">^ Broad and chin Sea Wrack, or Girdle. 4. *** *M i n i anguftifolia*, *vet fecundus Dodonsi* \ ^S^{ca} *marina angujlifolia*; *Yucts Zojier Lugdtmen*^l i *tuais bngo Angufto Of Crajfo holo*^ *Baubini*: Narrow long and thick Sea Wrack, or Girdles. \$• , *^o *cui miirins Yrufacew Lobelii* -, *Mufcus martnui Yerulaceus*, *Alga marina Yerulawa* : Long Funnel-like Sea **Wrack** or Sea Mofs. 6. *Alga tinSsr** *Lugdunenfts*, *Yucus marinas Untioribui Lugfotn* ** *fit*; *Mufcut marinus tiaQorim* -. Dying Sea Wrack* red Dying Sea MQ£; the Dyeis Wrack, with which they Dye deep CrimJbn, or reddilh Puip^{ic} which will bit lung.

The Description.

III. The first, or Grafts Wrack, or Sea Weed. Its Roots are roundish and hairy, and blackish in the outside; From whence rise up final round and white hairy Heads, breaking out at the sides as it vscres into Branches, on the tops whereof, stand; or 4 very long and narrow soft green Leaves* some

WRACK-SEA Grafts:
Sea Weed Grafts.

4

being 4 or 5; erect or more bending, about an Inch more or less broad, it has neither Stalk nor Seed, but lies on the Ground till the Tide raise it on the top of the Water; which being broken off by the force of the Waves, it carried to the Shore where it is Gathered, and kept for many things.

IV. The second, or broad thick Sea Wrack, or Girdle. This differs from the former, in that the Root is wholly Fibrous; the Stalk rising from thence thick and round, 2 or 3 Inches high, and the Leaf which is sometimes but one, (very seldom two) of a very great length sometimes 6, 8, or 10 Fingers long, and above 4 Inches broad equal from a little above the fading on to the end but somewhat waved or crumpled on the edges, being thick, and of a deep green color: so soft or moist whitish & that it is almost like soft Clew, and will hardly dry, unless it lies long in the Sun; and will not be fit to be kept, till after many Days drying.

V. The third, or broad and thin Sea Wrack, or Girdle. This is like the last, saving that the Leaves are thinner, broader, and shorter; yet crumpled or waved on the edges, and of a paler green color; which when dried, is almost like unto thin Vnrcbment.

VI. The fourth, or narrow long and thick Sea Wrack, or Girdles. Its Root is round and flat, from whence spring 2 or 3 narrow thick Leaves, about a foot and half long, divided into several flat, thick Thongs like Leather, some long, and some shorter, and they again divided into other smaller and longer ones, almost like a Buff.

VII. The fifth, or long Ferial like Sea Wrack, or Sea Moss. The Leaves hereof are very long and fine, like to those of the Ferula, or Fennel Giant, growing from Stalks near a Foot long, with

Wrack or Moss Sea Vennellike,

S

are divided into many Branches, at whose tops, white Mosses and the Jaid Fennel like Leaves grow. Its Root is manifold, sometimes a Yard, or 5 long, and spreading, extending and creeping much about.

VIII. The sixth, or Dying Sea Wrack, or red Dying Sea Moss or Alga; the Dyers Sea Wrack. It rises up with 4, 5, 6, or more Stalks, 4, 5, or 6 Inches high, each Stalk spread out into some few Branches, each of which are well repleat with it full of fine Leaves on them, not much unlike to Fennel, of a reddish color, but with some whitenefs mixed together. This is used by divers sorts of Mechanicks, to strike a deep Crimson color, or reddish Purple Dye; which will not quickly nor easily decay, but last long.

IX. The Places. Most of these are found on our English and Scotch Coast; but they are also found in the Levant or Mediterranean Seas; and Coasts of other warmer Climates.

X. The Times. They flourish not in Winter; but their chiefest time of Beauty Use, and Gathering, is in the Summer Season, and latter end of Summer.

XI. The Qualities. Sea Wrack is cold in the first Degree, and dry in the second; Astringent, and Anodyne,

XII. The Spccfkathn. Being Applied whilft they arc frch, they allay Heat and Inrlamations, eafe the Gout, flop Vomiting, and ftienghen the Stomach-, and to cleanie, dry, and heal, old running Sores, and old Ulcers.

XJIL The Preparations. You have, i. TI>e Sea Wrack in fubftance, either green or dried. 2. ATtection ofibe Dying Sea Wraek. ;. APouder of the fame.

'the Virtues.

XIV. 17* Sea Wrack is fubftntce of the firft five Kinds. Whilft freth and green, being Applied as a Cataplafm to the Gout, they abate the Infimation, eafe the Pain, and remove the Difcafk, and withal ftrenghen the Par: 5 but when dry, their chief ufe, by the Venetians, our Selves, and others, is. inftead of Hay or Straw, to pack up GlaUcs, and other tender Wares, to keep them from Breaking : they are alfo ufed as Litter for Horfes. And being made into a Compoft, are an excellent good Manure for Barren and worn out Lands. The firft efthcm, which is found in the Mediterranean Sea, is alfo of ufe to make a kind of JEV AJhes, of which Glafs is made in rbofe Conntrin - as sao Spap: But the feme N found in our Korthert Seas, will do no fuch thing; as not containing fo VKcclcn: a Salt, nor fo large a quantity of it, as \$at does which is Gathered in the Levant.

XV. The Decctien of the red tying Su Wrack, or Sea Mofs. It ftrenghens the Stomach, is good againft the Poifon of Vipers, mad Dogs, and o- iher venomous Creatures, and to reülhe Longings of Women with Child: It cools, drys, binds, and is good againft all Fluxes of the Belly, and alfo kills Worms in Children: and in the Gout, being fomented therewith hot, it eafcs the Pain : dropt into the Eyes, it eafes then Pain, and allays their heat and "inflammation. If it is made with Wine, ir fiopseVomiting, and admirably ftrenghens the Stomach. Injected up the Womb, it is good a- agdnft the Overflowing of the Terms, and the Whites in Wotnen, and afrer due Purging, cures a Gonorrhxn in Men ^ and injected into tie Bladder in fcedn, it is goodi to deanfe and heal Ulcers in the Neck thereof: dofe from 3 quairer to half a Pint, Morning and Evening. The Decoftioa in Wa- ter^ makes an admirable Dye, whereby Silk, Lin- nen, Leather, and many other things, may be Dyed and Stained of a mofl glorious deep Ctimfon, or 3. Cngubr reddim Purple, which will not ejfily fade, OI become dull, but abide in its Beauty for a long time.

XVI. The Ponder of the red Dying Sea Wrack, or Sea Mofl, It has alt the Virtues of the aforego- ing Decottion, being taken inward I y*Morn ing and Night, from half a Dram to 2 Drams; mixed faff with a little Syrup of Cleve Gillijlawers, or of Citron Peels, or Jome fuch like, and then mixed with a Glafs of Red Pert Wine, and to drank. Taken alfo with Wine mixed with Vinegar, or Syrup of Limons, it is a fingular thing againft vomiting. Loathing of Food, and weaknefi of that Bowel. tor it ftrenghens it alter a lingular man- ner: Applied aifo outwardly, to old ninfingSores and putrid Ulcers, it cleanfes them, drys up the Araux of Humors, 'and induces their healing. And • given in Wine, it is laid to be good againft the btoncin the Reins: Injected with ted Pan Wine into i X)< inA B1jddet; i » is gottf to heal Ulcers in the Neck thereof, and to cute a virulent Goner- Univer&ls being fait Premiled.

CHAP. DCCL.

O/YARROW Land, or Milfoil-A

THE Names. The Arabians call it EgHo*; but in Greek it is called STCMSTM i Xrwf- r™A, Stratiotes Cbiliophyllos: 'A%M£& mSiv"l Diofcoridis ; Acbillca Sderiis ot Diofcorides: in latine, Mitlefolium ^ Millefolmm Miliw™s Acbilea, Achilea Siderbit - and in Englifh» '<" me, Milfoil, and Achilles Woundmrt. Many Authors fay that MHLcfolium andJ(iW//«, are one and the £ime Plant, and the fame Herb which one Author caJls Milleflium, another calls Achileaj Others fay, that QUILTophyllut, or JM&efolim*, IS the general Name, and that AtbiUea is the prop^ Name to one of the particular Species •, but be that how it will, it is certain that all Ac I'arrows ha* = been called by many Authors, by both the Names indiSerently ; thtf the Name Achillea, has by B« Writers, been chiefly applied to our fifth Specie* following.

II. TheKindf. It is not out bufnefs here, w enumerate all the Kinds of Xarrows, entreated OI by Authors, for as much as the greater part of them are perfeft Strangers here, we (hall only dilcourie ofluch as are familiar with us, molt known, ar» which arc only or chiefly ufed in Pliyfic, which zre the five following, viz. 1. BV« Ifolium album majm Bshini, Lugdu«>'« w Matbioli: The Greater White Yarrow. lefolium rubrum vulgare, Our Common J ettd Yarrow. 4. Millefolium blare rubro nwx f mum (Caffi) -, Millefolium maximum-. The Great Red Yarrow. j. MtiefdmrnKibihTregtySt't tiotes vera • Stratwtes, & Stratiotes Millrf Gefneff. Millefolium Nobile, Cf Achillea laOer nemohani; Achilla* Cora. Lacum, M Achillea Aebii; sodanifai Achillea Noble Wound- wort, fo called irom Achillasthe General otj) Army, who applied it for the Curing of his crs Wounds.

Iht DefcriptiofIS.

III. The firft, or our Common White Flower** Yarrow. Its Root confifts cf many long white iibret or Strings, fpreading far about and deep- }* ** many Leaves fpread upon the Ground, tebich & long and winged, finely cut into many fmaH f™^ exceeding the fine Leaves of TanGc. From among ribich. rtfc up 2 or 3 round green Str^, " fuch like winged Leaves upon them us grow bel0&> but /maier and finer as they approach up to the W^ where come forth rsany fmall Flowers ahkb * white, and fet in a Tuft or Umbel cleft together, each Flower confifling- of j fmal round pot*** Leaves^ with a little yelloicifb Thrum in the \$& die, J welling fomevihat ftrong bei>: i rubbed "ll Hand, but net unpleafanr. Where A'w, i"*** there is fame Varieties obferved in the Ylar fame being more white than ethers ; fomt fhicker fet together; and fonte either gret't fmaier than other*.

Yarrow Common.

IV. The fecond, or Greater White Yarrow. This in its Roots, form of the Leaves and flowers, and manner of growing, differs not much from the

Yarrow White, Great.

former; living that the Stalks and Leives of r1* are larger, its green Leaves being as large almoj as thofc (Tanfie ; the Flowers alfo being greater, andftanding in a larger Umbel\ the Smell of which is a little franger than ordinary.

V. The third, or our common Red Flower d Yarrow. This differs in nothing, neither in Root, Stalks, Leaves, Ylowers, nor manner of growing from the firft, or our Common White Jort, but only in the color of the i'lovaers; ibefe being of a deeper or paler red, or almoft of a bhtfh color. Vff" Thrum in the middle being yellow.

VI. The fourth, or Great Red Yarrow. It ha* as great, and as large Winged Leaves, as the great White Yarrow, (at Se&. IV, above,) but morejinefy cut in on the fides. The Stalks are as great and as high, Branching forth at their tops^ and ftored with large Umbels of red Flowers like unto them, faving that they are of a fair, bright^ reddifh color, and in jome paler, with pale yellow Thirums in their middles, which have a pleafing, but /mail Smell.

VII. The fifth, or Achitles\ Noble Wound wort. This Woun&vwrt, or Yarrow of Achilles, hat a long, thick, and creeping Root under Ground, vibwb perijhes every Tear after Seed time. It hat many l*rgti tbin, or fine cut Leaves lying next the Ground, more finch and deeply cut in, into the middle Rib, andeacō part divided alfo, which makes it to differ /omeihing fr>>m our firft Common Yarrow. From among tbkfe Leaves, rife up more and taller Stalks, oiith^divers finer Leaves let thereon ; and at their tops many Ffoieersin Tufis together, being both more in number, and larger than our firjl Common Yarrow, cf « whitijh or reddiib color, with a yellow Thrum in the middle. TJx zeho/e Plant Smells very fu&et.

VIII. The Placet. The four firft grow all in England; the firft and third of which, are very common. The fifth is a Stranger with us, being only Nurft up in Gardens, and requires a fat Ground and rich Soil.

IX. The Times. They all Flower from the beginning of June, to the end of Summer, viz. rill near Bartholomew-Tide.

X. The Qualities. They are cold in the firft degree, and dry in the end of the fecond, or beginning of the third, Afringent, Glutinative, Anodyn, and Vulnerary.

XI. The Specification. They ftop Bleeding at Nofc or other parrs -, the Bleeding of Wounds, Piffing Blood, Bloody Flux, and all other Fluxes of Blood, inward or outward. Stopthc Couries in Women, and arc good to Cure all Simple Green Wounds in a very Ihort time, by drying them, and confolidating their Lips. They eafe the Tooth-ach, give help in the Colick, and cure the Gononhcea in Men, and Whites in Women, Univerfals being premifed.

XII. The Preparations. You may have Therefrom, 1. TJe Qeanfed Green Root, or Green Leaves. 2. A Liquid Juice. 3. Ait Ejence. 4. A Deco&ion in Wine or Water. 5. A Pouder of Leaves and Heads of flowery 6. An Oil by Infolat'wn. 7. A Balfam. 8. A Cataplafm. p. 4 DijWled Water.

The Virtues.

XIII. The Qeanfed Green Root, or green Leaves, Being chewed in the Mouth, and held againft the Teech for fome time, ii is did, to give eafe in th< Toorh-ach.

XIV. *Tlx Liquid Juice.* It Hops all inward Bleedings whatever, as Spitting and Vomiting Blood, Bloody Flux, Pilling of Blood, the Overflowing of the *Lochei* and Terms in Women; and all Fluxes of the Belly whaifoever, being taken from 1, to 5 or 4. Spoonfuls at a time, Morning and Night, in a Glafsof Red *Spa/tijb* or *Fort-Wine*. Outwardly allb applyed, it [tops die Bleeding at Nofe, and Bleedings or* Wounds. Taken to the quantity yforelaid, in tome of the *Itfijfi Water*, (Univer&ls being ppremfed,) it cures a *Gonochea* in Men, and the *Whites* in Women, and other Wtakneffes of the Womb. If dropunto the Fyes, it takes away their Infsmati&n, eates their Pain, and cures their Rednefs, being Blood-flor. In-jeffred into Filtuia's, it cleanfes them, and induces their healing. Taken to three or four Ounces in Wine, it is a good Remedy againlt Agues, and for fuch as are troubled with Nauteouftieis or Vomiting, and cannot retain thier food in the Stomach: It ought to be given a or ; Hours before the Kir, to be continued till the Ague is gone, and yet fitH to be repejred tor \$, 6 or 7 times afterwards: It (tops Bleeding at Nofe alfo, being Snufied 01 Intetred up.

XV. *The Ejjetiee.* It has ill the Virtues of the Juice exalted, and therefore may be given inaleScr Dole, vis. from 1 to ; Ounces, or two Ounces and a halt, Morning and (Night, in any proper Vehicle. If given in a *Gaaofbs*; i, or ibe Whites, a little *Voudcr of Amber*, or *iiiiecbu*, or both of them may be added; and Ib it may k given againtt Pitting of Blood, and the Overflowing of the Terms in Women.

XVI. *The DeeaU'wn in Wine or Water,* It has all the Viirues of the Juice 01 Eilence, and therefore may be given from a quarter to half a Pint. It is a good Lotion for old running SoreSi putrid Ulcers, and inveterate Fittula's.

XVII. *The fonder nj the Letvet, and heads of Warners.* It has the Virtues of the Juice, Eflence and Decoftiort. Dole from half J Dram, to a Dram and half, in Come proper Vehicle, as *Mithridaie*, fVnice *Treacle*, Etc. Outwardly applyed, it ptefently flops the Bleeding of Wounds, at. Ifrb« Pouder inwjrdrly given, be mixed with half a Dram cr 2 Strupk-s, of fine *Bolt* or *Citechu*, ir will be fo much the more cflt&ual agiintl inward Bleedings, Cf.

XVIII. *The Infolded Oil.* Ir gives tare in the Goat, and other Neurotick pains; and anointed upon the Head, comforts the Roots of the Hair, and hinder its (hedding or falling.

XIX. *Ike Baljm.* It digelts, deanfcs, incar-nates, glutinatesanddryes, and therefore isoffingular ute, not only to heal and cure fimple Green Wounds, but alfo old running Sores, putrid Ulcers, and rebellious Fiftula's, being featonably and Artliilly applyed.

XX. *Tlie CaupUfm.* Applyed immediately upon a fimple recent Contufion, it dtlucffes it, and prefently eafes the pain. Applyed to a Bleeding new Wound, it Hops the Flux of Blood; and in the Gout of Bands or Feet, it prefendy gives eafe.

XXI. *The Dipilled Water.* It has the Virtues of the Juice, Eflence and Pouder, but nothing near fo effectual; and rho¹ it may be ufed in all thofe cafes alone, or Dulcified, yet it is more often ufed as a Vehicle, to tonvey fome of the other Preparations in down the Throat. Mtxt with Honey, it is a good Ophthalmkk, helps rednefsand Inflammations in the Eyes, and cures Sores or Ulcers in the fame.

The Defcriptions.

III. The firft, or our Common VV«oTf«rc«J *R f b t h n ^ white* [^] *d,vcn tib'res adyng to it. U r,fn *P* round freight *Stalk*, having divers long

Yarrow Water, Common.

Y Leaves at the bottom of it, cut and divided into
& any fine findl Leaves, jet on both Jides of a mid-
Vle Ri^ like unto the Land Yarrow, but much
Pta tenderer, and with as fine Leaves •xlmoU tu Fennel
itself. At the Stalk /ikcwife grow fuch fine Leaves
Up to the top; where fiandon Brandies, largtufts
of findl'i white Floweir/et ckfe together.

IV. The fecond, or the Violet Water Yarrow.
Its Root it very fmall and creeping, fhooting forth
fibres in many places, and a Bunch of Fibres at its
end: From teakh rife up fevers/ long winged
Leaves, confining of many fmall Leavis, Jet on each
fide of a middle R.A, which are ltrger and greater
than thofeof the former, of a fad green color. The
Stalk, or Stalks, which rife up among them, are
bare of Leaves from the bottom to the upper Joints^

Yarrow Water Violet,

whereabout grow divert fmall vihitifh and fweet
Flowers, fomctbing like to Stock Gilliflowers, or
Violets j of 5 Leaves apiece, one row above another,
with yellouiifh Threads in the middle. There is a-
nuthcr fort hereof very like it, but that it has larg-
er Wings, and finer jagged Leaves.

V. The third, or Crowfoot, or Fennel Leav'd
Water Yarrow. It hits a long flcnder Ra»;), wjh
a Fibrous bujh or tuft at its end. It U a leffer
Herb thin jiny of the former, growing only in
fallow Waters, where it feldsim rifes above an
handfulhigh, with very many, and very fine Jhort
Leaves, at fmall as Camomtt, and of a yellowi/h
green color. The fhort Stalks among them^ bear
Jingle fmall white Flowers, refembling the Water
Crowfoot, both in the Flowers, and in the finer
Leaves, but his no broad Lewes at bottom^ as the
Vyfeer Crowtpot has: it bears ulfo a head of Seed
after the Flower is pa!}, very like to thofe of Crow-
toot, viz. *) fmall bunch of Seeds fet cfofe toge-

"i'l. The Placet. The firft grows very plentiful-
ly about London, even in the Water, and in

Yarrow Water Crowfoot.

Belonging to Seft. j.

many other Parts of England: and fo do the other
two, in Flathy and Watery places * bur the bit
grows only in the Water, efpecially being (hallow.

VII. The Tunes. They all Flower from the
middle of Summer to the end, viz. from the mid-
dle Qffune to the middle of September, if [he
Seafon is warm.

VIII. The Qualities. They are all cold in
the firir. Degree, and dry in the end of the fe-
cond, Afringent, Glutinative, and Vulnerary.

IX. T!>e Specification. They cool, allay infla-
mations in Wounds and Ulcers, are good againft
inward Falls and Brutfes, help the Strangury, and
give eafc in the Tooth-ach.

X. Ttv Preparations. You may have therefrom,
1. A Liquid Juice. 2. A Deco&ion in IVme.).
A. Mixture- 4- A Balfant. 5, ACatapkm.

The Virtues.

XI. The Liquid Juke. Given from a Spoonfill
to % Spoonfuls or more, mixt with a little Vine-
gar, it is good againft inward Bruifes coming by
a &ll from tome high place; and fo mixt, being
held in the Mourh, it eafes the Tooch-ach.

XII. The Deco&ion in Wine. It has rhe Virtues
of the Juke \ and fomented upon inflamed Wounds,
it abates the InHamation, and e^ifo the Pain: Ta-
ken with a Scruple^ or hall a pram of Salt of
Tartar, it opens Obftru&ions of the Urinary Pat-
fages, and gives eafe in the Strangury.

XIII- The Mixture. Take of the Deco&ioB
8 Ounces^ Spirit of Wine, an Ounce and halt •,
Nine in fine Pouder, 3 Drams.- mix and diffolveJ
Ufed as a fomentation, and as a Wafh, OI Lotion, it

gives

gives ease in old painful running Sores and Ulcers, allays their Inflammations, digeltes, cleanfes, incainates, and heals them.

XIV. *The Ballam.* It digefts and cleanfes admirably all running, putrid or filthy, and ibul running Sores and Ulcers; and with the Mixture atbreggoing, quickly incamates and heals them.

XV. *The Cataplafm.* Beaten up with Nitre in fine Pouder, adding thereto a little Wine Vinegar, and bringing it to a confiKency with Barley flowp. er, and ib applied to a Simple recent Contufion, Wp it diicufies it, hinders the In Hamad an, and takes away a hot Fluxion if prefont: It difcuffes ho: Tumors alfo, eafes Pain, and is truly profitable againlt the Gout.

CHAP. DCCLII.

0/ YUCCA; HIUCCA;
OR,
C A Z A V I.

I- *HPHE Names.* It being to us a Plant of new Invention, it cannot be fuppofed to have any Greek or Latine Name, but it is called by the Indians *Hiucca*, *Jucca* and *Titcca* •, alfo *AUndioca*, *Manibot*, and *Cazavi* •, many, or all of which Names, are brought into the *Reman Tongue*; and the Lift, vis. *GaStf?* \a Cdfmi, is made inghjb

II. *The Kinds.* It is dWided into the Tnre and fuppoifiritious. The *True YUCCM*, or *Cazavi*, is V*^{W*} *^{ve} ^UCCIX_> P^{ve} *Mandioca Genuina Mexicana*, folijt *Cannab'mit*, The *True Indian Csi* or *tueca*, *Hemp-Lemfd*. 22. *Uiucca*, five 3*«<i, five *HdchAAmericA/tum*-, *Mfo* *Mafoow-Leav'd Indiin Cazavi*, or *Potatoe-like Cauui*. 5. *Tucca*, *fatijs Alots*, five *Jucca India putara*, The *Suppoititious Indian Cazavi* - This is not the *True l'uccd*, or *Cazavi* of *Ovicdul*, *Thevet*, and others, of which the *Bread Gifau* is made, as *Monardut* has plainly demonftrated •, ibr the *True lucca* is the *hemp-Lemfd Tueca*, firft Named, its Leaves being divided into 7, 8, or 9 parts, Handing on long *FootKalks*, as immediately will be declared.

'the Defcriptiotis.

III. The hrft, or *True Indian Yucca*, or *Cafcavi*, it hat a pretty great long *Root*, at great at that of a *Luge Carrot*, brown on the outside, and very white within, alfo *Sappy*, and full of a *Juicy Plejhy Subjia/ce*- *Tirit Root* is Planted every fear, or every otlrer *Tear*, axd quickly grows to be very great or targe, and long withal, from this *Koot Springs* forth one or more *woody Stalks*, of 4, 5, or more feet h'tgh, ^ growing up to be at it were a *mail Shwab*. Vpon the *Stalks* grow many fair broad *Leaves*, ach upon a long *l'octjialk*, and divided if to J, 6, 7, or more parts, or *Jingle Leaves* *s it were, not much unlike to *HeUeborafter*, or *Hemp-Leaves*, {whence it hat part of its Name,) which *L.covet* are about 6 *Inches* long, two *Inches* or more brojd, not indented, but even about the edges, and abiding almayt *Green*. Tie *Stalk* it dividea into divers *unequal Branches*, bearing many pretty large *t'fovsrct*, Spotted a little; they are narrow at their bottoms, *Jong* and *fh. irp* pointed, and arc in number *fix*, abite on the *infuie*, but of a dead *brovsnjh v:.)ite* color on the outside; fo that it w a *Ihwer* of no great *B'itty*, and is only to be elieemed at *m Exotick*—

IV. The fecond, or *Mallpw - Leav'd Cazavi*, or *Potato-like Cafavi*, or *Yucca*. hat a *Root* 5, 6, 7, 8, or 9 *Inches* long, and fit times longer, great and thick at its top, and fit pointed at the bottom, very like to thofc of tee great long *Turneps*: Thk *Plant* is of *tnjfb* viz. one which is *yello-ajjh*, and another which *1* white*, when they are *Boiled* or *Baked* into *Bread*. From the top of this *Root*, fprings forth many long, ftender, tender weak *Branches* of *Lewes*, fime of them being very long, and feme *muebhorter\ }om** not a half, and fome not a third part of the length of the longer *Stalks* of *Leaves*. Theft *StalhP*** each of them at their extremities, one large much larger than thafe which grow below about the middle, or other parts of the which are not a quarter part, and many times no an eighth part, or tenth part of the *Magnitude* } the great *Xeaf* at the end of the *Stalk*, all ubtc% both greater and fmailer, are roundijh, *Ull* } J^{mc} nftmblance of a *Mallow-Leaf*, vbencc *cemf.?''* of ike *Name*. Tlxft *Stalks* of *Letve* tare ft •&***> that the longer of them never grow uprtgM, ° always trail upon the *Ground*, and the veryjpa of them lean much, never growing perfe^o but in a declining *pojiure*.

V. The third, *01 Suppoifiritious Indian* b hot a great thick, end withal long *tuberous *#*** Spreading it ft If out in time, intomany other *luscious hiads*'from whence *Jhcot* forth many *lottg*, hard, andholku, *ernarm guttered Leaves*,

Yucca Suppositions.

Hmk *Subjiance*, *Jbarp edged*, <nr *flasp P^{01*}* encompassing one another at the bottom, fj a *g'7* *ijb* green color, abiding *frejb con.imMy*, or *p dom* falling aiay, mth *feveral hard ^rcf''* *ningin* or thro* them length-aays, && *f''* withered, become *pliant withal*, to bind *iff*** mth. from the middle of th* *Bunch* of *U***>* fpringt up a *firm rwi Stalk*, and that *tf* /*

Tear, in the Native Places of its Growth, (but not stveryTrar with us, incur Colder Climates ;) woich Stalk freads its fctf out into feveral Branches^ on which grow divers Flowers, fomewhat large, and banging downwards, eonftjiing of fix Leaves, Kith divers Veins, of a weak reddifb er blufh color, fu/bread on the buck of the three outward Leaves, from the middle to the bottom, but not reaching to the edge of any Leaf. Tl.vfe Flowers abide not long^ but quickly fall away, without bearing any Seed in our Cold Countries.

VI. This Plant is thus defcribed, by Gerard. *It hat a. great Root, thick 'and Tuberom, very knotty, and full of Juice, which is fomewhat fweetin Tap, but of a Pernicious Quality. From which Root, rifes up immediately very many Leaves round the head thereof, the Stalks of which are about a Cubit long, hollowed like a Gutter or Trough, very fmoftb, and of a green color, like unto that of Woad. The edges of the Leaves arejsharp, like tbtjrige of a Knije, and of a brown color. Tlc point of the Leaf is aTrickle, asfiarp asaXecdk; and the whole thereof being well viewed, is not much unlike toa Wierry, orfade fuch like Boat. Theff Leaves are alfo very tough, hard to break, and not eafie to be cut, except the Knife be very fsharp. To this Defcription, Jdhnfon upon Gerard alfo farther adds, in fime Tears (fays he,) it puts forth a pretty fuff, round Stalk, fame three Cubits high, divided into divers unequal Branches, carrying very many pretty Urge l'bwerr, Jhaped fomewbai Me thefe of Fritillaria, but that they arc narrower at their bottoms ; the Leaves of the flower are fix in number, which are of a white color on their infide, but on the out fide, of an over-worn reddifb color, from the Footjialk to the midfi of the Leaf; fo that it is a Flower of no great Beauty but is only eficemedfor its rarity.*

VII. *The Places.* The two rirlt grow in molt places of America, from Florida to Peru, and about the Straights of Magellan, as alfo in the Iflands of the Ocean, as in Jamaica, BarbaJoos, and others of the Caribbet and Leeward Iflands, even in rhofe places where They had Maize, or Indian Wheat. The third or lalt of them, grows alfo in all, or moil places in the Weji - Indies, where the two former grow, from the Southern parts of Brazil and Gnli, to tie Cape of Florida • and in mott of the Canabal Iflands, and other Countries near adjacent to them ; as tike-wife In our Cnglijh Plantations, as in Virginia Maryland, New-England, &C. as it is conftantly affirmed.

VIII. *The Times.* The Seafons wherein the firtt and fecond flower and Seed aie uncertain, and thereof Authors have laid nothing. The third or laft, Flowers about the middle or latter end of July, the Flowers falling away within a little time after' they have been blown open; but as for its Seed, it has never been obfaved to come to perfection with us. As to its Leaves, Gerard fays that rhev kept Green both Winter and Summer, in his Garden, without any coveting upon them to defend them, notwithstanding the injury or infelicity of OUT cold Climate.

IX. *The Vitalities.* Of thefe forts of Plants, the Koots arc enly of uin. *The Juke of the firtt* is hot and dry in the fourth degree -, Volatile; in the highell depree, and Deleterious or Foiibnous; and fo is the Root it felt; if eaten whilft it is frelii and moift -, but when dry, or reduced into Flower, it is template in lefpea to heat or cold-nefi drynefsormoifturc, bemg perteftly free from a n V r ^ w or malign QuaUiy, and he for jood and Nourilment of the Body. *The Jmee of the*

fecond, is affirmed by fbme to be free from any Poifonousor hurtful Qualities, whereas others fjv, it has the fame Deleterious Qualities with the iirtt. I know nothing of it by Experience, but if the Koot is of the nature ofSpanish Potatoes, as is affirmed, it muftbe Innocenrenough; and the Koot it felt^ anfwers toall the Intentions of the firtt. Pl'anr. *The ram Juice ofthe third,* is faid to be Deadly, or very dangerous, like to the Juice of the firtt. *Aid's-nut* retores, that a Wound made in his hand by the fsharp Prickle or point at the Leafs end, g him fuch inalterable Pains as almort Dittracted him, (which fhews the Malignity of its Subtil and Volatile parrs,) and that he could have no eafe till he applied his own Ballam thereto, which cured it. But the dried Root, or the Flower thereof, is innocent, temperate as to heat or cold, and dry in the firft degree, rlc to make Food of; in like manner as the former.

X. 77« *Specification.* Authors have afcribed nd Virtues to thefe Plants; but if we may make an Eltimateof them, from the confidatation of their Roots being received as Food, and nourishing Mankind, making him to increale in Subftance and Strength •, it is rational to believe that they ar« reftorative in Confumprions, comFoit and refrefh weak and decayed Nature, accordingly as they may be applied to rhofe purpoies: And as they arc of a drying Quality, fo they ma? be Afrinpt, and io be profitable to ftop Fluxes of the iowels i this we fpeak as to the Root it felt. And as to the Juice, r;\<fen it is well prepared, fo as to be divefted of its Deleterious and Poitonus Qualities, it may be of excellent ufc to allay the heat of Fevers, quench Thirir, cure fore Mouths and Throats, and the like ; as alfo to chear and refrefli the Vital Spirits, when oppreff and weakened thro' Cares, Afflictions, Melancholy, Perturbations of the Mind, or any preient Heterogene matter deprefling them.

XL *The Preparations.* You may prepare from the Jukes gi all thefe Plants, but efpccially from the Juice of the firtt of them, i. A Drink, a. A Vinegar, i. A RoborSapa. And from thedried Roor, i. A Flower. 7. Cuzavi, or a Fine Write fort of Bread; the like of which may be prepared from both the fecond and third forts alfo.

XII. *Aa Obfervation.* That the Juice of the firtt of thefe Plants, (if not of the other two) is an Egregious Poilbn, hxpcrience, as well as the Tettimony of Authors, has fufriciemlyalcertain'di and that it is a Poifon of that indubitable Efficacy, that it certainly Kills in a very (hort time after the uking of it; whilft the Root it fdf when dried, and the Juice when fufficiently boiled, have not the leaft of any fuch Qualities in them ; the daily Eating and Drinking of rhem for many fcores ofYears, have affiir'd us that they have no malign or hurtful Qualities in them, butabfoludty on the connary, are-Coniervatorjr to the Health, Strength and Life of Mankind, which feems to be a kind of Paradox \$ fince other Poifons, neither drying, boiling, nor even burning, can alter their innate Properties. The like is to be fiid of Opium, that the Poudet of that Succulent Gum being gradually drycd, has not the leatt. Deleterious property in it, (what ever it had before) but on the contrary, in-Itcad of making Sick at Stomach, caufing Vomiting, Convullions, Faintings and Swoonings (as it has done in multitudes of People,) does rettore and comfort the Tone of the Stomach, chear und enliven the Parienr, and profligates rhe prefent Evil beyond all that pottibly it could do, whiltl it retained within it, its Native Deleterious humidity; this is a Note worthy of Oblemtion.

Kill, li may then be demanded how these things come to be freed from those their Deadly dualities > To which I answer, That their Poisons are Volatile, highly Volatile, Volatile even in the highest degree ^ which by the means of the heat of the tire, or Subtil Attractive properties of the Air, are made to evaporate, and fly away, and so clear the remaining parts of the matter, and make it absolutely free from any hurtful or evil Quality; whereas had that Poison been fixed, and essentially incorporated into the substance of the matter, every Particle thereof would have had these same Properties, nor could any Evaporation, drying, or even burning it self, have altered it, but that it would have been inviolably the same, as long as it could confer it self in the World; of which Truth, and master of Faith many Examples are capable to be given.

T/je Virtues.

XV. *The Drink.* It is made of the expressed Juice of the Root, which when it is new pressed cut, has an evil Smell, and of such hurtful Qualities, that who should taste of it, will die Man or Beall, dies without Remedy, and that quickly. The rind of the Root is pared off, then the Root it self is either scraped, or broken into small bits, and bruised; after which, it is put into a Hair Cloth or fine sieve, and fame other proper Cloth, and pressed out, and the Juice is put into a Glass, and they take, and boil it half away, which afterwards by a very gentle Fermentation, becomes a good whole, and pleasant Drink, like to a middle sort of Ale. It quenches Thirst admirably, cools in fevers, more especially if the Juice of a Union or Orange is mixed into it: It clears the spirit, refreshes the Vision, and relieves the malignity of putrid and pestilential Diseases. It made very facet with honey, it makes an excellent Garment for a sore Mouth or Throat, and to cleanse and heal Ulcers in those parts.

XV. *The Vinegar.* It is made of the expressed Juice, by setting it in the Sun till it becomes acid, and as sharp as the beji. Wine Vinegar. Authors say, that the Vinegar made hereof, is as good as that which is made of Wine. It cools in Fevers, and quenches Thirst, and is admirable against malign and pestilential Diseases. It may be made into a Honey, or double refined Sugar, which drank mixed with Water, or other proper Liquid, cools singularly, any heat or Inflammation of the Lungs, opens Obstructions of the Lungs, and causes breathing. It likewise heals all kinds of Sores, Cankers, and Ulcers of the Mouth and Throat, cleansing and drying them, and also alleviating any Inflammation in those places.

IV. *The Rob or S-jpa.* It is made of the Juice boiled to the thickness of new Honey. When it is To Boiled, to such a Consistency of a Honey, it is put into a Glass, and is as sweet as Honey. Of this kind of Rob, made, by mixing it with Water in a proper proportion, as you see of Honey, when you make Mead thereof. But the quantity of this Rob or Sapa, be half as much more, it will make it so much the stronger, and more pleasant withal. It is a pleasant sort of Liquor, to

drink in hot Weather, to refrigerate or cool, to quench Thirst.

XVII. *The Flower of the Root.* It is expressed Juice, and then drying the residue after which, it is reduced to a fine powder Flower, either by Grinding it in a proper Mill by beating it in a Mortar, and continually Sifting it, till the whole Mass is reduced to such a Subtil Consistency. Some only flake the Root into very thin Slices, which they slice edge-ways, so that the Juice may drain out of its own accord, and continue it filtering till it is thro' dry, after which, they break it into small bits with their Fingers, and then either by a proper AMU, or by beating in a Mortar, reduce it to fine Flower as aforesaid. Of this Flower with Milk, Eggs, &c. they make Cakes, Pan-Cakes, Puddings, Chcese-cakes, &c. as usually done with Wheat Flower, which are very sweet, Palatable, good and nourishing, and very useful to the Bodies of Human kind.

XVIII. *Cazavi, or the Bread.* It is made of the aforesaid fine flower with Water, or rather Milk, either alone, or adding Teaf, Eggs, or whatever may make the Bread light and pleasant which they form into little, thin, small Loaves at Pleasure, and gently Bake them, which Bread is as white as Snow. This Bread is new, is very pleasant, palatable, and agreeable to the stomach, and what the most Appetite will not refuse. And when Stale, very good and pleasant, though not calling as when it is new: Bui I hiree auni or when Stale, (being about 5 or 6 Months old) and to me it seemed to be full as good as any of our Wheat-Flower Bread, of four or five days (This Bread Authors say, will abide and keep 5000 for a very long time. Some make their Bread thus: They take the Juice of the Root, from whence the Juice is pressed, which they put into an Earthen Pan, and set it over the Fire to make it grow dry, then being dry, they beat it into powder: This powder they mix with Water, and form it into Cakes or Leaves, which they dry in the Sun, & then keep them for use. These little Cakes or Loaves, will keep good for a long season, even twenty Years without corrupting, and give good Nourishment to the Body.

XIX. Of this Root, the Americans, or West-Indians in many places, (though they had this, or Indian-like in great plenty,) did make their Bread, on which they lived, after the former manner, and that (as they say) for some hundreds of Years, which Bread was used by all the People of America, from the most Southern parts of Florida and Florida even to the Northern parts of Florida or KewEngland.

XX. *The way and manner of flaming and Spicing it, it is this.* Of the first sort or kind; they cut off a Stalk about a Foot long, which they put more than halfway into the Ground, where it suddenly takes Root, and within a Year or little more, the Root comes to be sufficiently great, and fit to be taken up for the use aforesaid. The second kind is Planted from the Root cut into many pieces, each piece having some of the outmost thereof: These pieces they put each into a hole in the Earth, made fit for them, which in 3 Years time or less, grow to their just Magnitude and are fit for taking up, and to be prepared for Food.

Fimlir, 15 Decemb. 1708.
