eni. Branches, many fet together, which arc /mall and fiwt, of a dead purpith color, turning Wan with (landing; and change into fmall, black, and almoft round pointed Cods, in which are contained 4 or y fmall blackifh Grains or Pulfe..

VI. The thirdj or the true great Hatchet Vetch, or Sickle-wort, its Root is /mull, fmfhing every Tear. It grows not above a foot high, t>iti > divers winged Le&irs growing on its Stalks, which are fo weak, ufnot nt fland upright. Each of the Leaves it /mJfl, not vtry long, and round at the end. At the tip are many fmall yellow'fywers, (Mathtolus fay si reddifh, in which he VIM mifiaken:) After tabfch, come as many long, flat, thin, reddifh, /mail crooked pointed Cods, containing flat and reddifh Grains ; fo lying in them, that they may be difterned thro\ the Cod ; the ahele Cod being compar- ed in Form to a Hatchet.

VII. The fourth, or lefler Hatchet Vetch. Its is like the former, and perifhes Tearly xnith Jit form and manner of growings it is much to the former, but fomething leffer; yet not) lower, if it groat in any good Ground. The wwers grow many together, of a pale yellow color, dfter them erne /mall crooked Cods bowed •Jmof together, or much like to a Horfe-Shooe; n which iyc pale brotxn Grains, not fully round, «/(quire and leffer.

Vetch Hatchet Greater,

O R,

Shkle-Wort Greater.

VIII. The fiFth, or greater Horfe Shooe Vetch. Its Root b flender, 3 or 4 Inches hng, with feveral libres or Strings adjoining, while and hard, and lives many lears. it hat divers fmall winged Leaves, fa on fmall weak Stalks, leaning, or rather lying upon theGraund, each Lt,ifbeing/malt, fbort, a /tith lungifh, almo/t round pointed, of a whitifhgreen color. At the Joints with the Le<ves, come forth fingle Flowers, viz. one at a place, on a very fhort toeltalk, being Jtmil cad yellow -, after which, follow a hng flat Cod, a little bowed, and cut or divided on the Concave or inner edge, into 4, y, or 6 Dhifions, each being cut in round, fomething like the Letter C. or like an Horfe Shooed whence it took its Kame ; in which lye fo many Grains, as there are /paces between the Cbafms or Cuts, which are/mall, longifh and crooked.

IX. Thefkth, or lefler Horfe-Shooe Vetch. Thit in its Roots, St'-lks, Branches, Leaves, Vlotacs Cods, and manner efgrowing, is very tike to the former or greater km, but leffer by the half, the Stalks being not above three or four Incheslong, and lying chfe upon the Ground, and is of a little 'whi- ter color than it.

X. The fet-enth, or greater Birds-foot Vetch. Ithju a long, flender, fringy Root, running deep into the Karth, It w a fmall Vetch, (tho' greater than the next) not growing above a Span, or 8 or \$ Inches- high, with many Branches fpread on the Ground fet with many Wings of/mall Leaves;- in manner of the lafl Vetches, but much/mailer. The Wotvers grow upon the Branches, many fnalt ones /ct lit a Tuft or Head together, of a pale yellow color, which afterwards turn into fo many /mall jointed Cody voillrefembling the Claws of*matlSird,%ou)hen^se f <± tht

the Name-) in which are contained many Jmall round Grams.

XL Theeightr^orldTer Birds-Toot Vetch. Ttism its Roots, Stalks, Leaves, b^ateers, Cods, and manner of growing, is lie the former, but Ujjer in all its parts, and growing wish its Branches and Leaves in a more handfern manner, ir. i^hich is ait the dif- ference,

XII. The ninth, or Kiorted Birds-F^t Vetch. Th/ b/u in in Rw/j many/nail ahite Knots or Kerneh among its fibres; etbenstft in its Sulks, Winged Leaves, blower jf Qi.h, and manner of growing, it a like to th-greater Birds-foot. Jo-Sing tl blowers are of a pale tabiti/h red color; the Cods diflinli by Joints, and the voisok Plant fcm-ihins Urger.

XIJI. The tenth, or our common Kidney tftclr Its Root is Jong, bUchfhon the cutside, wbn, parted many/mi's mte iar ^ermoi adjoining to them h is \ final! OBSERVATIONS.

IX. i. If you would make a Vineyard in out cold and moist Climate, chuse a wholefome, dry, and warm peice of Ground, ihelted with a Hill from the North-Weft, North, and North-Eaft Winds, and open to the South-Eaft, South, and South-Welt Sun-, let the Earth be welt dig'd, deep, broken final], and cleared from the Roots of Weeds in Summer-time, before *Michaelmas*, then in fair open Weather in *December*, plant your Rooted Vines, of three or four Years old, in even (trait Ranks, about 6 Feet afunder, very (hallow, yet fo that their Roors be covered; and between every Rank of Vines, let there be a Path of 4 Feet broad, that you may eafily pats between the Rank?.

X. 2- **Thefirft** Year after this Planting, do not prune them too much, but let a Stake clofe by each Root, of about 4 Feet high, to which foftly tie the Hrongeft Shout, and let the other Branches fall down as they will; and in *April* following, or beginning or *May*, juft as they bud forthLeaves, bow the tops of each Vine Arch-wile to the next Stake, and there tye it fo as it may not flip away **, and from this howed Branch, will come out new Shoots, which will produce Grapes which will hang down to the Earth, and thofe will be the **Iweeteft** which will be neareft the Ground.

XI. 3. This is all which is to be done to them untill Pruning time, which is from the latter end or *January*, till the latter end of *February*, and then you muft cut away this Branch which was ryed the Lilt Year to the Stake, and Arched down, even as low as the loweftEye, butoneot two at the molt -, and then tie up another of the ftrongett Branches from theStock, in (teadoi"the former, Pruning away all the other Branches within an **Eye** or two of their bottoms ; for the fewer Branches you leave to the Root, the moie Grapes you will have the Year following.

XII. 4. The Ground in your Vineyard muft be digged up every Year, tho'not deep, both between each Vine, andalfo the Paths between each Rank ; and freh Mouid out of the Paths, is to be thrown to their Roots, and fo all laid fmooth again, and clear from We^s every Spring, the Weeds inSummer muft be Howed up often * for the barer the Earth is kept, the better will your Vines thrive, and the larger and better will be your Grapes; but the Earth about the Vine-Roots muft notbeltirred in Summer, nor in their time of Bearing.

XIII. 5. The Elder the Vineyard grows, the deeper it fhould be digg'd, and turn'd up yearly, and forTvery old rotten Dung or Allies fhould then in februiiry or *March*, yearly, or every other Yeif, be mixt with the Natural Earth, but too mach Dung, (dpecially if it'be new) is not good, ami Aflies are much better than Dung. The Elder your Vines ate, if they be Healthy and Sound, the larger and **better** Grapes will they bring forth ; but when you find them to decay, you mlt let young ones in their (tead.

XIV. &• To increafe your Stock, or (tore of Vines, you muft either lay the new Branches in the Earth, or elfe plant Cuttings, both ways they will be apt to take Root, and in a Year or two, will be ready to Transplant, and difpofe as you haveocallion; and whilt they Hand unremoved, thefe new Plants muft be yearly Pruned at the fame time with the Stocks, **otethro** the whole Month of *Yebrunry*, and after the fame manner.

XV 7 And therefore to get new Roots either to Plant your Vineyard af firft, ot to fupply the

Stocks as they decay, you muft take rhe;n from rhoe produced by the former method of Lams or Cuttings, which were partly covered with Earth, that thsy might take Root in Winter, which in about two 01 three Years time will he well Rooted, fo as they *my* be removed: Or you may take Suckers from the old Vines or Stocks, which may anfwer the end rull as well.

XVI. 8. But if you will raife a Nurfejr from the Cuttings of Vine Branches, let them be the Cuttings of that Years growth, which Plant in a Nurfery a-parr, of good rich Mould : any Cuttings almoit will grow, but the largdi and itrongeti Branches of that Year afford the **best**: Theft; Cuttings muft beabout a Foot, or Foot and half long, contifting of four or five joints or Eyes at moil, whereof two muft be rhruft into the Earth, and one or two left above Ground: Thefe Cuttings mult Jtand in the Nurferies 2 or ! Years to get good Roots, and then they may tie Planted in the Vineyard. TheCuttings from Branches which bare well the fame Year, and were not much ihaded from the Sun are belt.

XVII. 9. Vines proffer beft in a dry, gravelly, or ftoey Earth •, Clay or any fuff or wet Soil, is diiagreeable to their Nature, and a rich black overdung'd Earth, will caufe them to (hoot too much into Wood, and to bear but lew Grapes, and thofe commonly *Morbide*, thatisrl.it. or ill ihaptd, and not well tatted. Generally all Vines aJfettanEaft-eily and South Sun, but proffer not upon a Weft or North Wall; and they ought to be defended with high Hills or Trees, from cold North-Welt North, and North-Eaft Winds.

XVIII. 10. Every Winter the Earth about tht; Roots muft be opened, and fome good old well rotted Dung or Ames mult be added to the Earth, and well mixed therewith, (as isbtforehinted) and foapplyed to the Roots of the Vines, which being Planted under good Walls, and welt fread, and Nailed thereto, will bear in muft Yearsg«od'tore or Grapes. The time of' Pruning them, *we* have told you before, but fome begin that work at the latter end of *tiember*, for ilic new Shoots only bear Grapes j therefore in Cutting of ths Branches an Eye or two mult be Jett to (hoot out new Branches again; for if' you cut dole to the old Wood tew or no Branches from thence will fucced • So* that in Cutting or Pruning of Vines, the Rules for Pruning order fruit Trees mult not be followed ; lorthofearetohecutoffdofetoa Bud; but Vines muft hecur about the middle, between two Buds.

XIX. 11. A Fertile Soil is tttctft for fome Vines, viz. fiich as bring forth thong Bodied and Jat Wines, which is every black Earth, that is not vity clofe nor clammy as *Yloremim* fays : *G>h(~melk* advifes to have regard to the kind or nature of the Vine, to plant it in a Soil atgeeable to the Earth of the Gauntry where it was a Native. A poor and lean Vine may be Planted in a Fat and Fruitful Soil ihat is fb of its own Nature, but yet not too Fat. A ftrong and Fruitful Vine may be Planted in a leaner or moreSteril Ground. A large and ipreading Vine, may be Planted in a more cloie and compact Eath. A Vineof lew Branches, may be Planted in a more loofe but Fruitful Soil, But fays *Ceivmefia*, the Vine delights not to grow in a Soil too much Dung'd, let the Dung be of what kind foever. ButMould mixed with lbmeShavinas of Horn, being dtfpoied about the Roots, wjllcaulu the Vine to become vcty Fruitful.

XX. 12. A late *brunch* Author fays^ that tho' fome are oi Opinion that Vines (hould be Pruned ^{Vet he fi)S the *are} ~~infiftW. ? rt~~ ^{now} dually Pruned in *March* -, and that if » Vine be

not Pruned, the Grapes will not be large nor well tatted, and btfides, thai it will not be of any long Lite. That all the d&id and udefs Branches art; to be cut off: That the beft Bunches (hooting out the largett Stems, are to be cut off to 4. Eyes, and the other Branches lower, or beneath them, to i Eyes : That in Pruning, an Inch of Wood is Co be left above the Eye, at the upper end of the Branch: That the Cut mud be made Hoping on the contrary fide to the Eye, for fear of prejudicing it -, for when the Sap is in motion, the Vine weeps very much ; fo that it the Slope were on tli; Eye fklc, it would in a manna be drowned by the Tears: And that the Vine be dif-budded and tyed up in *Aidy, June* and *July*, that the Gripes rmy thrive, and grow perfectly ripe. That the lower Branches are Pruned, to two Eyes, that they may give us two other good Branches, which may be hi to be Pruned the Year following, whereby you may re-trench the Branch before Pruned to 4 Eyes, with all the reft (hooting from it. That theft; 2 new Branches fpringing from the faid lower Branch, are to be fo raised, that 4 Eyes may be left to the higheft Branch thereat, ind 3 Eyes only ro the lower of the fame. But it the firft faid lower Branch gives but one Branch, that is then to be Pruned to 2 Eyes ; it it gives no Branch, then you go to the upper Branch which had a, Eyes left, which if it has 4 Branches, you mutt cut off the two higher Branches, and Prune the two lower, leaving 4 Hyes to the higher oS the two, and two Eyes to the lower.

XXI *IT.* But fiuce we fearcely ever Plant Vineyards in *England*, hut pUce our Vines againt Walls, you mult dig a Tioncli about 1 Foot and halt broad, and prepare your Layers or Cuttings, which may have each 7, Eyes apiece; cut off a fmall pan of the Fihres, and lay your Layers in the Trench 2 Feet afunder, ibit rhe Lattice may the iboner be formed -, after which, lay on fome Dung, till the Trench be quite tilled up, fo wilt the Vines (hoot out admirably : If the Earth be hot, Cow dung is the mottrwoper, butif that can't be had, thentake Hoife-Dung which is welland perfectly rotten, and diicharged of its heat: But in a wet and cold Ground, Hoffs-dung half rotten will do better than the other, which being of a cold Naiure, Cow-dung will not ib well agree.

XXII. 14. Our Vines in *England*, begin to put forth their Leaves about the end of *April*, and are in t lower about the latter end of *June*; not very long after it will be good to Hop the Branch fome diihnce from the Flowers, that the Gripes coming on, may have the more Nouriflimem, and the Sap not drawn away from them, or fpent upon other ufelefs parrs.

XXIU. 15. In the end of *Augtft*, cut away fuch Branches and Leaves as keep the Sun from the Grapes, fo will they riperuthe better, and fome early kinds will be throughly ripe 'm*Septem-ber*, others in *QUo*ber -, but it often happens, that fuch as are late ripe, are fpoiled by Frofts, unlefs they be well defended with a Tilt, efpecijly in the 'Kight, from Sunfct, till the Sun is nearly an Hour high; and if it is a trofty Seafon, all the day long.

XXIV. 16. Befides the Vines we have enumerated, there are more than an hundred forts of others, to which we can give no Names, and many of which arevery good kinds; but we in this place arc to confider which of them will grow beft with us in *England*, which are 1. *Tin-duffer Grape*, or *fmall Black Grape*, which is firft ripe with us, which are thick let on the Bunches, and when ripe, !>Uik and well rafted. 2. *The White Alfdi*

Alipc, which has large Bunches, and has Grapes, fweet and good, and ripening well fears, z. *The Rei Mufcaine Grape*, as ari iht White, but requires the moft Sunny pi • it ripens not fieri; lb well as the former. 3. *The Vonniack Grape*, whi ch is a whi l e. fw*ti Musky Grape, but in fome cold Seafoos, come not to perli-frion here. j. *The Rttift>!* of *llv p^ Grape*, which is large, red and good, warm place ripens reafbn^bly well. 6. 7. *Vine*, or *KCK England*, or *Canada Grape*, is a White Grape, ripens with the Lift, and bur. hinely fee oa the Bunches. To ihefc we may aflj; 7. *The Burla Grape*, which is rhe largeli braj« we have, but are very fowre, ant! ripen net ivit us, except by accident, as having an exream tie Siafon. The Bunches are gTear, and the Grapi> large and white, whereby they make an adm]»^{DI} (how on a Wall. Our chief ure of this Grape, rs ro make Verjuice of it, which is very etceliero- If by chance in a very hot Year, it comes to i nefc, theGrapesareiaidroheplejQnt. H many other forts of good Grapes, which may grow admirably well in our Country, cerning which you may confah the *Vincron*"

XXV. 17. *The Juke of the unripe theGrecksc*U'O(ifaxt«: the Latines. 1 and *Agrecla* : but we in Engliffti, *Virpaet*. flouert of the Wild Vine are called 'Oirwh: "1,* tine, *Oemmtbe*, and *KM Vmi*, (in former lra* much in life, but now wholly negleSed.) *Grapes dried in ike Sun>* are called *Lv*I'iffi* at *Fitful* Sete, faffimti* and *A Bunch>j G>^* dried% is called in Greek, £«>fc: in Lacine, L *Bijft*, and *Pajjuld*. A *Bunch of Grapa nc«J** ibered, is called *Bi*ut and *i-mtwii 1* in Latins^u and *Racemus*. *The Crape n M* is called *^ in Latiiie, iirrw. Tfe GTM«c 5«w is ^ S L. P¹-in Latine, P/»wf«, "fSjTJ *omma-pe rarimentu qiu fuptfunt pofl Uvat*, Galen, *ie aliment*, lib. 2. X7; Is in the middle of the Clutters or which the Grapes do hang, is called hy Bh-fi^f, and ot *Ka'rro*, *ScapaJ Uvarutn* Vineyard is called 'A ^ i, £ 'O»rS;W Urine, *Fmetum*. And the *Fimrose 'bimtotyU*, and in Latine^ *Vwitor*, " *Drelkr*.

XXVI. T&s *Qualities*. Ir ishard the (ualities of Vines and their Production*. ^ caufe they are fo various: However, the i- -jt and the Stones of the Grapes are temp⁶¹ / eCl respect of Cold, but dry in tfa« fteW fleB - Afringent, Vulnerary and Styptick. The ig. The *Grapes* are cooling and inducing Fluxes of the Betty, if atap too P^{re} The rVuw hot and dry in the fecow jif& Aitringent, or Diuretick according to the P, f_r ot the Grape, moving tie Belly, or Srypno*... thg iijie reafon j but all Wines i« gcntrj.

abound with plenty of Spirits, for they are (being moderately and prudently used) grateful to the Stomach, and Cordial, cheer the Heart, revive the Spirits, restore Nature, and restore the then tried whole Body. The *Ferme* is cooling, drying, Styptic and Stomachic. The *Tartar* is cold, dry, Absterfiv, Aperitive, Stomachic, and moderately Carhartic, more especially when it is freed from its effluvia Recrements.

XXVII. *The Specification.* The various and differing Productions of the *Tine*, are such which have as various and differing *Qualities* from whence their *Specifications* are as various and different, so that it would be very troublesome to enumerate them all severally here, inasmuch as many of those Particulars have a confidence number of preparations arising from each of them. For whereafter we (shall omit their Specific Properties in this place, and give an account of the same, as we treat in order of the several Productions or Parts, and Preparations of this Plant-

XXVIII. *The Preparations,* j. A *Juice of the Leaves and Tendrils.* i. A *Decoction of the same* Z • *Tie Tears.* 4. *The Juice of the Branches* ; A *Lye of the Ashes.* 6. *An Unguent of the Ashes.* 7. *A Lotion of the Juice.* 8. *The Juice of Grapes.* a. *Verjuice.* 10. *Wine*, or *New Wine.* II. *Rob,* or *Sapa.* 12. *Wine fermented or Perfected.* 15. *Brandy.* 14. *Spirit of Wine.* iy. *Philosophical Spirit of Wine.* 16. *Raisins or dried Grapes.* 17. *Honey of Raisins.* 18. *A Decoction of Grape or Raisin Stones.* 19. *A Powder of the Stones.* 20. *Vinegar.* 21. *Spirit of Vinegar.* 22. *Wine Artificial.* 23. *Hippoc.* 7. *Gum of the Vine,* i 2. *Wine Lees.* 26. *Tartar* or *ArgoL* 27. *Cream of Tartar.* 28. *Tartar Emetic.* 29. *Spirit of Tartar* 30. *Oil of Tartar Dissolved.* 31. *Mixtura Simplex.* 32. *Salt of Tartar Pure.* 33. *& A* c/ *Tartar Nitrated.* 34. *Tartar* P^a deliquium. ., *Sal Tartar Foliatum.* 36. *Cremor Tartari Solubile.* 37. *Soluble Emend Tartar.* 38. *Sal Tartar!* Vitriolatum. 39. *Sal Tartar!* Volatile. 40. *Liquor of Tartar.* 41. *Spirit of Tartar Compound.* 42. *Diateuron,* or *Pa^afc.*

The Virtues.

XXIX. *The Juice of the Leaves and Tendrils.* It is Cooling, Drying, Astringent and Healing. Mixt with Honey, it makes a good Lotion for a sore Mouth or Throat, or Sores in the Privy parts, to wash, gargle, and bath therewith, it also stops Vomiting, Fluxes, Spitting of Blood, and Womens Courfes.

XXX. *The Decoction of the same.* If a little Roch Alum be dissolved in it, and it be then sweetened with Honey, it has all the former Virtues of the Juice; but drank (without the mixture of the Alum and Honey) it is of good use against Fevers.

XXXI. *The Juice of the line.* These are droppings of the Branches of the Vine, when cut out of due time, or too late in the Spring; drank, it is good either to dissolve a gritty Stone in the Reins or bladder, or to expel and drive out Sand, Tartarous matter, Gravel, and small Stones out of those parts, and possibly it may be more effectual in this case, if ^{be} taken ^{when} sweetened with Honey • for that Honey has not only a power of Dissolving and Cleansing, but also of making the Passages smooth and slippery.

XXXII. *The Lye made of the Ashes of Vine branches.* It is very effectual against the Gravel

and Stone in the Reins, being drunk either (imply of) it itself, or mixt with White Port Wine. The Lye mixed with a little Vinegar, and diluted with Beer, allays Inflammations and pains, and consumes Warts of the Anus or Fundament, eases the Pains thereof, and dissolves the Piles, and other Tumors. The said Lye is good to wash places out of Joint, or burnt with Fire, and mixt with *Juice of Rue and Vinegar*, it is good against the swelling of the Spleen, and helps Frictions and Gallings in any place. And mixed with Wine, it is good against *Ant homes* Fire.

XXXIII. *The Ashes of Vine Branches.* Made into an Ointment with Hogs Lard, it is good against hard Tumors, dearies Fistulas and hollow Ulcers, and heals them; helps Pains, Cramps and flinching of the Nerves. If they are mixed with Oil, and applied, it dissolves Simple Contusions, cures the Bittings of Mad Dogs, and the Wounds of Scorpions. And made into a Cataplasm with *Nitre and Vinegar*, and applied, it consumes or walls Wens, and other Excrecences of the Flesh.

XXXIV. *The Ointment of the Ashes.* Take milk Castor Vine Ashes 4 Ounces, Sal Aitre in fine Powder 1 Ounce; Tobacco in fine Powder half an Ounce in Golden Colored Palm-Oil, (not Olive, or inclining to be Rank) 12 Ounces; Oil of Khodium 3 Drams: The Palm Oil being melted in the heat of a Bath, put in the other Ingredients and mix them well together. It dissolves hard Tumors, and dissolves even Callous hardenings in the Nerves and Joints, and is profitable against Gouts, Sciatica's, simple Contusions, old Sores, Ulcers, Fittens, Tettars, Ring-Worms, *Hittes*, *Impetigo*, Worms in the Face and Skin, and other like rebellious Maladies.

XXXV. *The Lotion or Wash.* Take of the Juice of the Leaves 6 Ounces; Red Port Wine 4 Ounces, Honey 4 Ounces, mix and make a Lotion. It is good to Wash and Gargle, and heal Sore and Ulcerated Mouths and Throats, and also to cleanse and heal Ulcers in other parts. Put into the Eyes, it stops DeHuxions, clears the Sight, and heals Sores and Ulcers therein.

XXXVI. *The Grapes.* The fresh gathered full ripe Grapes being eaten, strengthen the Stomach, refresh the Vital Powers, cause a good Appetite, and cool in Fevers: Those of a Blood-red Juice, are said to stop Spitting of Blood, and other inward Bleedings, because of their Styptic quality; but almost all sorts of Grapes, if eaten in too great a plenty, are apt to cause Fluxes, and to do other Prejudices to the Body, not easily to be retrieved; whereas moderately eaten, they are otherwise a singular advantage to it.

XXXVII. *The Verjuice.* It is a Juice pressed out of any unripe Grapes, but more especially our of this kind of Grape which will not ripen with us, being a very fair large Grape, and making very large Bunches. It is called *Omphacium* also *Succum Omphacium*. It is a pleasing sort of tart Juice, fit to be used in Broths, Meats and Sawces, to acuate and strengthen the Appetite, also to resist Vomiting, and to refresh and accelerate the fainting Spirits. Made into a *Syrup with White Sugar* it is very grateful to the Stomach, quenches Thirst, and extinguishes the heat of Fevers. Mixt with Honey, and used as a Lotion or Gargle, it cures Sores and Ulcers in the Mouth and Throat, &c.

XXXVIII. *The Muft*, or *Kea Wine*. U is pleasing to the Palate, but not so wholesome as that which has Age upon it, and is very tinct. Several sorts of *Muft* are apt to loosen the Belly, but particularly *AVto Canary*, creates Obstructions

in the Reins, and many times uutes a Strangury, or a kind of ftnppage and hait of Urine : But according to the Variety of Grapes, and the Climates and Soils in which they grow. Rich are the *J*afities of the *Maff* \ tome are Laxative, fbme Afringent, fome Styptick, &c. and according to ihofe Qualities 01 Properties, varieties of Prepititions may be made of them.

XXXIX. *Rob*, or *Sapa*, Syrup of *A*, *tJ*, or New Wine. Take Wine newly prefl fr*m* *Crapes*, While or Red, bail it over a gmtic R <, or rather in BJDSO, to the tbitknfs ef Honey. It is or' ufe for queafie and ill Stomachs, lor Faintings, Vomiting, and want of Appetite; it is allo good for Sores and Ulcers in the Gums, Mouth and Throat, becuufe it is not only Ahterfive and Healing, bur alfo repreffes the Flux of Humors, baring i Styptick quality in it, (hut is more or left Styptick, according to the kind and Qualities of the Giape it is prdi from ;) you may take it Morning, Noon and Night, as much as i Walnut at a time, aione by it felc, to ftengthen the Stomach, provoke Appetite, &c. This you are allb to Note, That in what *ftVMcaL Author* fo ever you rcid *Rob* or *Sapa*, without any oier Epithite, out fimply Written, without any relation of what it mould be made, that this *Rob* or *Sapa*, is the thing which is always intended.

XL. *Wine tormented or PerfeUed*. All Wines whatloever ftengthen the Stomach, cheat the Heart, tevive the Spirits, and exhilerare whole Nature; Strong Wines Urengren moll, but many of them are heady, and being drank in too great a meafure, are apt toentime the Blood and Spirits, and caufe Fevers. Weak Wines deanfe much, and that by Urine, but being too plentifully drank, are ape to catifc Kheurrmilms, Gouts, *tfc*. The middle fort of Wines (being very fine) are wholfomelt, and fittell for out Bodies. All forts of *fremb* Wines breed Gouts, Rhcumatifms, Sand, Gravel, Stone, and Tararous humors in the Urinary pirts. All Styptick Red Wines, as *Alkant*, *Barabar*, &c. ftup the over-great Flux of **Urine**, and Ste prevalent againft i *Diabetes*. Choice Canary, us *Palm* and \&d *Pert* Wines, \&f *Lisbon* Wines, *W Bed* *Florence* Wines, and l'uth other like itrong and Gwnetous Wines, are great Cordials, and ought to be choien when uled in Cordial Com poll tions, becuufe they add Lite and Spirit to the Medicament, and make it more Grureful to the Stomach and other Bowels.

XL1. *Brundy*, or *Common Spirit of Wine*, hit made vj ueii *Itimcmrd*, and jometimts of *Priest* Wines, in a *Copper y<:jica* Tinned within, v>nh if; *Head iind Refrigeratory*, or *Worm*, drawing it off ft) long, till it becomet of fuch a *CetiJSJency* at to be but jtif} *Proof*, which may be again rcBtfied in *Balneo*, ifyw fo phafe. This Spirit being old, when the Fire is as it wiireout of it, is much better than when new drawn; and then a fmall Dram being tiken of ic now and then by it fdf, (or mived with white Sugar, or fame Syrup, as fome will have it) is a finguhr Cordial, a Ifrengiheircr of the Stomach, a reviver of the Spirits, a chearcr of the Hear, an exciter of Natural h<>t, and a caucroft Digellion; warming of the Body, and a quickner of the Circulation of the Blood. With this is nude *Black-berry*, ot *Bramble-berry Brandy*, *Mai-berry B-jndy*, *Rafpberry Brandy*, *Morella Cbeny-Bramh*, *Black Cherry Brandy*, 8tc. and wirh it feveral *Tinturci* are drawn out of particular *Simples*, as from *Catechu*, *Ochinelc*, *Saffrnm*, *Sic*. much better than can be done with the belt rectified Spirit of Wine.

XL11. *Sp:r:tu; K/ti*, Spirit of Wine. *mad** jrom brandy, by *DtfljJiatiott* in a *Vefica*, *wiibii* Head *Tuni'd* Kelt within, to tti proper *Wnrm* and *Re:eivrr*; com *Work tilt i ** and *futtl* parts are 4' (which you may hnovo by the *Tajte*; J it may be fever a I times reilificim *Balnco*, ifr.<<<8 off the half, third, or *foxnh parti*, tilt the Spirit is high, and no Humidity remain tchich will t'ift- Where Note, rhic the *Orifice oi tin* covert with a lour fold thin Paper, or *thlcfUOffij* the Spirituous pans *mil* only p^netr-ut, and^TW Watery tall back again. It is a lingu! *urn* 10 make *ExtrtSt*, *TmSurcs* d *B/imvim* and performs many other Admirable things "> Cnymiltiy, as all Learned Phycicians abununjty know.

XLIII. *Pbibfepbick Spirit of Wine*. *Tiff Fare* *loners of Sa* *Armoniack*, w*Sal* *Armoniack* / ^ or thrice *Sublimed* from *common Suit*, 4 *Y"UFL* affufe thereon the *beji AUholiz'd Spirit* 4 »m or Spirit „J *Wine ptrfelth deftegmjted*, or *tW ** fl Uled* from *Salt of Tartar* till it is free from *MX*** fo much ,u to over tnp it 3 or 4. inches \$ being^iil ^ *Glafs rial clofe jbpt* with *Wax*, let it ft n a *Blood warm Ingejlion*, 14 or so, or [that the Spirit of *Wme* may fully imbibe, *mtJ* ^ impregnated with the *tire* or *Sulphur* of *fW* *Armoniack*, to wll, *mib* its *Volatile ParttcU's* *Salt*; which keep for ufe. But *Kirkringius* "nV" *fes*, after this, to *DifU!* off the Spirit l<>* *lf* remaining *Salt*, *Cohobring* and *Dijjillng* % ' c *Spirit* three times. This *Philofophick tip*^111^ Wine, is a *AXenfruggm* vattly beyond the ^r *Simple retlifed* Spirit, for extracting *JH* '?'. *Vegetable* or *Mineral VnSures*, nuking of *Potefiates^Uc*. One of its utes is to *Blood-red Tinfute* from the *Ghfs* of , and from o;her *Mmtrat ajwj* *Metalick* Bodies, is not much unlike, and poffibly not interior ^ that or *B-i/il* *Saltmines*, mentioned in our *Lend. lib. I. cap. 9. foil, 11. 1<>v* thofe *Virtues*. It is profitably ufe^d " X ~-~& tiims, *Gout*, *Stew*, *Jaundice*, *Droplie*, and ^ inward *OLLWions* : *Tfaej* ihat pWte *io* .u^1 g may poffibly give me I for *communca* e the *Svcict* trie of diis moll *Excellent* Spirit; 1^0^f tew Drops (from is, to 10 or 40,) may l>^8^1 in a *Glafs* of *Generous* Wine.

XLIV. *Raifons* or *Dried Grapes*. T Grarefu! to the Stomach, Itrengthen the good againtl *Coughs*, *Culds*, *Catarrhs*, / *Wheangi*, and reitoie in *Conlimptions*, otten eaten alone, or every Morning and with choice *Old Cixjhire Cheefe*, and *Wb't* *Bifeake*^ by which way of eating them, tbi^01 oid and inveterate Fluxes of the Bowels, » tifie as it were the whole Body: The *D Raifons* havea little *Tartnefs* in them, and are v^A pleaffing to the Stomach : The *Malaga R> "j^ltj* alfo of fingular good ule -, but the *Kaifonr* " *Sun* excetd all others for all the purperts mentioned.

XLV. *Money of Raifons*. *Mel* ---fjm Take *Raifons* of t!v *Sun* *stonei*^ and *brwjrl*^* 1 *Marble* *Mortar*, 2 *Pounds*; warm *Water* 6 *re*** infufe 24 *Hours*, then boil in *Baineo* to tP* *jumpiwt* ef the half, and prtfs out the *lfti* *jirongly*, which with *Clarified Itianey* 4 ?**"; (0 a half, boil to its due *Confifitney*: If infiead 9 ^ *Wmer*, you take *Canary*, *Malaga* or *leth* *Medicine* wilt be fo much the better. * choice thing againft *Alibma's*, *C*Ids*, << ^ *Ciurrhs*, *Coirlumpions*, *Hoarfneii*, ^ and other like *Diicafe* of the *Britit* and

Alcldc Paffulit Nompokum, or a Compound Honey of Raifons, is thus made. Take Jukes of Male Peony Roots, of Liquorice, of Bamm, of Hartsfengue, of tſyfibp, of each an Ounce; of the Pulp of Raifons made with Malaga Wine or Canary, a Pound i Double Refined Sugar a Pound and d quarter; mix them, and boil to a Qnſtflency. It has all the former Virtues, beſides which, it is peculiar lot Children againſt Convulſions, the Falling Sickneſſes, Chin-cough, and the Rickets.

X y f. *Decoſton of Grape, or Raifon Stones.* It is good to flop Fluxes of Blood in any pair, as Bleeding at Note, Spitting and Vomiting Blood, inward Bleedings, Bloody flux, and Pilling of Blood. It (tops alt forts of Fluxes of the **Bdly**, ſtrengthens the Stomach, and prevails againſt a **Diabetes**.

XLVII. *Th\$ Ponder of the Grape or Raifon Storm-* It has all the former Virtues, and may be given from Haifa Dram to a Dram in a little Money of Raifons, and then waſht down with a Draught of the *DeeoBion of the Stones*. The Powder outwardly applied, is a good Styptick in (topping of Blood).

XLVIII. *Acetum, Vinegar.* How our Diſtillers make Vinegar, we have taught at large in our *Doron Medkum, lib. i. cap. 24. fcS. 36.* ſo that it would be A3 urn agere, to repeat that again here. But tor fuch as cannot go that way to work, for want of Neceſſaries, it may be done another way, after the following manner. Make a Paſſe of Wlytit Meal and White Wine[^] aiding to every Pound and half thereof half an Ounce of dried Salt, reduced in a very hot Mortar to a fine Powder, let ail be wrought very well together, and lye in Dgfi ²⁴ 4 Hours, then make it all out into little Loaves, which Bake itt an Oven with a ſſſt beat: Take theſe Loaves and ſieep them in the ſtrongeſt Wine Vinegar, (in every Gallon of which, 4 Ounces or more of fine Powder red Salt is added,) with which make a P; >ſle again, and mike into little Loaves, and Bake a* before. Tlyis Work ſo often repeat, till the Loaves will be no more dtſſolved in the Vinegar, or rather receive no more Acidity from it; which done, put a ſufficent quantity of this Bread, into 4, 6, or 10 Gallons, or what Quantity you pleaſe of Strong Wine, (eſpeially ſuch of it at it prick, or begins to grow acid) and it will in a very ſhort time be converted into good Vinegar. Vinegar if it is good, and very acute or Ihaip, is an excellent Stomack, and therefore it is almoſt always an Ingredient in the moſt excellent Sawces. It is a molt fingubr thing to quench Thirir, alii to the heat of the molt violent Fevers, reſilt Poiloi - , and is generally an Ingredient in moſt Liquid Compoſitions againſt the Spotted Fever, Malign Fevers, Meaſles, Small Pox, and the Plague or Peltence it felt; and all foits of Contagious Infections, and Pſtulentiat Difeaſes. It is Styptick, and good toftop all forts of Fluxes of Blood, whether inward or outward.

XUX. *Spirit of Vinegar.* Spiritus Aceti, Acetum Diſtillatum, 1. Take of the bejt Wine Vinegar, put it into a QUfs Still, and with a gentle tire in Bulneo Mjria., or in Aſhes, drtw off the YUgm without laſſe, which teill be near a quarter part -, change the Receiver, and force ever the Spirit- If the Spirit is for Phyſical uſes, you muſt take heed of Burning, left your Preparation Jmell of the ſeme. If it is for a, Meraiine u/e, draw tiff the ſtſegm in Baſſco, and in Sand Diſtill violently[^] till a red Spirit aſcenis, and all be come over. It Otthus, accotding to CiolTa.us. Take 6S&ans of Vinegar, end DijtH tn a lukewarm BalneoM. till but one Qrtar remains; then in Sand or Aſtes,

draw off the remainder to drynejs, 1. • or three times upon the facet. III. Or thus, which is yet itrouger. 1/ſfpij.ite Vivegar 10 the thickiujt of ihney, au&fet it m Gyſtaffſſe, mbich OySalt purijie, by diffatviitg them 1. tie Vingar, and QySallize again; \like the ft Qyflu.'s, and make them into Balls with Belt; an drhtthe Spirit thro" a Retort, which vſtr reUſie[^] Jo toi/lit br ticry anJOrtoJivr. IV. Spiritus Aceii Seruierti. Take fitccs of Diſtilltd Vtm[^]sr, t akiaie them dry\ add to the fame Spirit ij Vuitgor, end dra&j it off again in Sand, Lobobati/jg fa often ſill all its common er fixt Sjlt aſcend with the Spirit. This is Radicated or A!kdftz>d Vinegar. V. Or thus, lake ſiect or Lees of V'inczar, ſijſiUitt a Vefieatory with its Refrigeratory, jo will you have a fiery Spirit, which will diſohe' Metals Stones and Minerals. VI. Spitius Acti Terebmtiuarus, it is main of Vinegar and Turpentine[^] Dijjilting them is a Retort, then ſeparating the Oil tin! Spirit from the IVegm, or Water. VII. Dr. AnthonieV Spirit of Vinegar, wich which he made his Aurum Porabite. Get three er four Ghjs Stills, wbieB will hold a Gallon or raw apeice, and about 6 Gallons of the jirongeſt Red Wine Vinegar, (Vinegar of White Wine or Claret, Kill be tea weak) made of Red Wine, or of Canary, or Majcadine. Put the Vinegar into the Stills, and frt as nuny a going at the Balneum will hold, (which Balneum Might to k t too i-eet and a half Square, to hvid m-utyGhfis.-; take a Pint of that W)kh runs firj), and put it away at weak, and not Jit for u/e; then Dilrill the re\ to drynefs: Waſb the Stills with a little of the Yh-gm or fir/i run/ting: Diſtil again, ri.vi put emay theſirſt Pint ^ this Work repeat four or Jive times; ſo of a Gallon of Vinegar, you will have three Pints of Spirit -, and of your Jix Gallons' nearly IO Pints. If your Spirit is yet too weak, you muſt Diſtil it oftner; this Spirit keep in a Glaſs cloſe ſuſt with a Glu/s Stopple. For a Quart of this Menſtrua, Bijhop Billon gave Dr. Anthony Thirty Shilling!. VIII. Radicaie, Spirit of Vinegar, according to Mirg[^]rave, Take Spirit of Vinegar, or the former Radicated Vinegar, and Diſtil it a new from Sil Armoniack, fa will it be much more potent. Spirit of Vinegar attenuates, incides, dirculPes, reſepries, cools, andlus allthe Properties of Vinegar, but much more intenſe and ftong. It is uſed as a Mcnſtruum to perform Chymiral Extractions with. 'Pie Tereqinthinatedor Radicated Vinegar, is for the diſtblution of Srones of all forts, chiefly of Gems or Pretious S;ones, of which Crullius and Hartman nuke much mention; and it is uſed by P[^]Jfc/ywagainttDireaſes of the Stone, by giving ic in a proper or SpudficK Vehicle. Theſe Authors Qy, that it will diſtblive Flints and other Stones, without any Previous Calcination, and is alſo profitable for, mmy other uſes: Now if if Ms a Power of Diſtblving ſuch hard Sublbnces without Calcination, it mult certainly luvu much more power to do the **Cfine**, after liich a Preparatory Operation of tie Fire. Dr. Antltenies Spirit of Vinegar, may without doubt have alt the fame Virtues and uſes with ortier Spirits, hut what he applied it to, was chiefly to make his Aknjhuum, with which he prepared his Aurum Patabile, rhat Medicine ſo much lam'd throughout aimolt the whole World.

L. *Wine Artificial.* Take Malaga Raſfins freed from their Stalks an hundred'Wright, fair Rain-Water 3-3 Gallons; put the boiling Water upon the Uifvns, ſtirring them well together, which let ſiaml 4S Hours or more, till the Water bat dr[^]ton forth ail the Swteteſſes and Stre'igth cut of the Rai* fvs; then dr&K off theiVmer ft em the bruit into*

Wooden vat, where In it (land till it begeth to ferment; Barrel it vp, keeping it upon the Ises till the Yermataion h ever, and the Wtneis obfoluely line, tobich then msy if you Jo phijr, be Bottled up. This is not interior in Strength to any fvmw Wine, and much more pleatant, drinking a grtat (kal more Acute and Brisk. It has the Virtues or other frong Wines, and mry be drunk ordinarily as other Wines. Uyou pleafc, you may alter its White or ttle color, and make it ofa Red color, by putting into ic Alkanet-Roots, which will give it a Glorious Ked, and thereby mak'; it* much more taking to fome lore of People. When MaUgaRaifons are Cheap, orattheordinary Price, this Wine will (your Labour being fet alide)Icarcelly ifand you in Three Pence a Quart.

LI. Uippocrai, or Spiced Wine, Vinrnn Hippocratikum, I. Dr. Bates Hippocras. Take Ginger, Cloves, of each one Ounce, Cinnamon, Nutmegs, fteach too Ounces; Stunifo Wine or Canary, fix Quart*- , double refined Sugar 7 Pounds and a half, mixt with New Milk a Quirt and half a Pint % let them fi.md 24 ilvuyi^ ilxn firain off, to which add one Limott thin flieed, and ttej tender Sprigs of Rosentaryj often palling u thrd Hippocrates's Sleeve, till it becomes char. D>ofe 3 or 4 Onnces in Languors or Paintings.]], The common Hippocras of the Shops. Take Ginger 3 Drams, Cloves, Nutmeg^ of each 1 Warns, Mace two Setup!, Pepper, Cardamoms of each a

; Cinntmen 6 Drams, Marjh- Mallow Seed, one O. iice: Canary, cr White Lisbon, or pure Red Port Wing 6 Quarts : Let all the hgedicnt be brmfed, and put into a thin Milk Cloth bag, mtb a Snne in it to make it fink, then put in the Wine, and hi all infufe for a Quarter of a Tear, then dram it off, and Bottle it up. Where Note, that fome boil the Spices in the Wine, which t heyfweeten with Double Refined Sugar, and then let it fifs thri a Hippocras Bag, Bottling it up afterward* I But if you twuld have this, or any other Liquor purely clear, you mufi ufe a Tripp/e Hippocras Bag, made of White Coiton or Flannel 1 Jo ahaf fctt p.-fs the firft Big will flay in the feconi, tnivhat paffts the fecond, tail/ Iiop in the third and laft :

*ler them fir, thai the Point or toner i>f the one may hang in the Mouth of the other, and the Corner or Point of the third and taf}, in the l&outh of the Cup or Veffel to receive the Wine. 111. Hippooas Extremporanec. Hippocras msde in an Inltanr.. Take white Tcpper a Dram, Cloves an Ounce, Nutmegs, Mace, Ginger, of each two Ounces-, Cinnamon B Ounces, Spins of Wine three Pints: the Ingredients being all fufftietlybruifed, mix with the Spirit, and dtgefi 14 days cfofe flopt in a cold place, fidking the Veffel twice a day, tfeti prfts cut the Tinliure very hard: To the Magma orixcLS, dffuje frejh Spirit of Wine a Pint and a half, mix, digefi, andfbake as btfont for 14 other days, then prefs out the Tinliure very hard; put this Inner Tin&ure to the former, mix them, and let them fettle for a.or ~j days, then decant the clear, andfilter it thro" brownPapcr, which keep for ufe. Take of your intended Wine you will make your Hippocras of a Quart, of the aforefaid TinUure three large Spoonfuls, more or left, (as you would have it in Strength) mix them together, and you will have good Hippocras in a Moment. Where Note, That if the IVme be of it jelf harjh, it ought to be aferehmd Dulcified with Double Refined Sugar, by which it Kill be madir more grateful to ti>e Palate ; and then letting it ft and till ti is Pure and fine, it may be Bottled up. Dr. Bates ftySj that if you add White Pepper halt a Dram, Recipe, it will make the Compofition more

v«JiitU to the Stomach; ana tor Inch as love Perfumes, he fjs you may add hall an Ounce ot of Musk Seed. Ml tibefe fveral Preparations are very Cordial, frengthen and fortify the Heart and Stomach, fupport the Animal an Powers, recreate the Spirits, dry up Hum and retrefh the Body over wtared with much Labour : They caufe Appetite and a good Digetton, are good againft Fainting and Swooning, a TM 1 * mirably expel Wind, wneier in ihe Sronadl tr Bowels, which trouble them with fowrc Belching^ Heart burnings, firipings, Colicks, and thelike.

LII. Gum of the Vine. The Gum which IU " " our of the Vine of it fclf, (ticking to the Bag (which it emits in hot Climates, hut very rarely in ours) being taken from half a Dram to a UtiSi, difflitOd in White Pott, or Lisbon Wine, is « good u(e in the Strangury, and to expel l>n > Gravel, and Tarurous. Mucilage out of the uflnary PaffTages: Being bathed on theSkm, ir i ^ > away Scurtt; Morphew, Scabs, Tecrars, K"S t, and luch like Dftbrmities rhereot i asaf] " the Leprous Scurf, if the places be fir It v: ? 1 ^ with a Dilution of Nitre in Water or the WTM be diflwd in the faid Nitrated Water, and v > ufed. When the Green Branches of rhe Vine aw burnt, a Gummy Water will drop from their this heing laved, will perform the fame thi the aforefaid Gum, having one and the taint ure and Qualities. Thty fay, being mixed Oil and Liled, it willukeaway Hair, s Wares; this, tho' I know nothing ot by yet I much doubt it, becaule of its fife, a: multifipid Qualities.

LIIU. Mae Lees. From the Lees of W Volatile Salt of Tartar may-be Diftilled, c traced alter this manner. Take Lees of dried with a gentle tore, put them ate « Earthen or Ckjt Retort, fo as to fill it " " " " " third parts Jull. Pur it into a R f f f f i f f ^ " " " " " race, with a large Receiver: make at firjl * (mall tire, fo as to heat the Cornuie by * that the infipid flegm my be drawn fortin. Fumes or Vapors begin to arife, (rup 1)' " • " out of the Receiver, and join it to the A * V Retort again, Luting it well. Encreafe the * # * # Degrees, till the Recipient is filled mtb & > " Clouds, continue the lire at that height, tiu ^ Recipient begins to cool, then incre < > ie the m ft the height, which continue Jo long till no m Vapors will afeend. •tt, which will after.d next to this Vote,
 tile Sal' Where Note, that the Ref'tifiedLSpirit
 of Wine; is not abfolutely neceflary in this Work;
 but there is this in it, that by embracing Tome
 part of the Acid of the Lees, and taking it along
 with it in its Diftillation, it frees the Volatile Salt,
 fo is that you will have it in greater quantity,
 than otherwise without it. In thefe Operations,
 the Acid Subltance of the Juice of the Grape,
 unites it felt with a great part of the Volanle^lr,
 to make the Compofcion of the Tartar: Whence
 it is that Tirtrr yields not fomuch Vdattk•Salt
 as the Xoih Lett at the Ivotom of the Cask do,
 which mightily abound in a Volatile Salt, and a
 ISarJi Spirit. And henceic is, that the Vo-
 latifSst e/ltfirtar,feHaoreeafiW, and more plenti-
 fullv drawn from the Lees, than from the more
 Solid, and Stony Tartar The Virtues. This
 VoJik Salt ofT.:n.ir ii fold to punfie the whole
 Mats of Blood, both by Sweat and Urine, and
 fometimes by Stool, whereby the Mifs of Putre-
 taaive llumors and Matter is carried otr. It is
 eood againft the Palfie, Apoplexy, Epilepfy, Le-
 tharf, and other like Difeafes of Head, Bratu
 and Nerves-, jtfifts all intermitting Fevers, chiefly
 Tertians and Quartans, opens all Obttuaions of
 Stomach, Liver, Spleen, Mefentery Gall, Reins
 and Womb-, cures Cachexies, Droplies, jaundice,
 Scurvy and othei ftubborn Difeafes. Dofe from
 10 Grains ro a Scruple, in any fit Vehicle. ACa-
 taplafm of Wine Lees. It is made by mixing them
 with Rye flower or Meal, till they come to a Con-
 Jijiency. Being applyed, it is accounted an excel-
 len' Uling to e-ate the pains of the Gout.

LIV. Tartjr or Argol. It is that hard part of
 trie Lees of Wine, which mooting it felt to the
 fides of the Cask, flicks to the fame and becomes
 hard almoll like a Stone. That which is taken
 frr.m Rheniffi, and other White Wines, rs rhe belt
 tobc prepared into Medicines: Butthe RedTirtar,
 which proceeds from Red Wines, as it yields no-
 thinenear ib much Salt, fo it is much inferior to
 the Former, but ferns well enough feft««, in
 fixinr- their Colors, and for GollSimths to boil
 their Silver in to whiten it. T)>c White Tarter is
 many times given unprepared, being reduced into
 a Fine and Subtil Pouder, from 2 Drams to half
 an Ounce, in half a Pint or more ot boiling hot
 Water-Giud It purges the Bowels, and cleanses
 them, as alto ihe Urinary parrs, of Slimy and
 Watery Humors, and is profitable againft Cachex-
 ies Dopfies, Obftuaions of the Reins, Bladder
 and Womb, be. But this Crude unprepared Tar.

tar is feldom given, For that the PurifiedT<irtar,
 as alib the Cream of Tartar, is common enough
 to be had, and at an carle price : Purified Tartar
 is thus made. Take pure white Cryjfal/ine Tartar
 i o Pounds, heat it into fine Ponder, and dijfrw
 it in 6 Gallons of boiling Spring Water, and conti-
 nue the boiling till it is dijfdved; then frefently
 jirairt !)ot thro' an Httprocas B£ - The drained
 Liqueur continually fir round with a Wooden Slice,
 till it is cold, then'let it reft, and.in 2 or J hours
 after, the pure fine Tartar will fin A to the bottom
 of the Vcjicl, in form of an impalpable and fhining
 white PouJer, vtbtb « Tartar Purified, and is
 equal with either Cream or Cryftals of Tartar.
 The Virtues, Dofe and Ufe is as the former, and
 the fame with Cream or Cryftah of Tartar nest
 following. See our Sep/qjiunt, or Druggifls.
 Shop, lib. 2. cap. 10.

L V. Cream and Cryftah of Tartar. Hiffhoc
 vnhji quantity of White Tartar you pleafe, in a large
 qx.ir.tity of boiling Water, wbbdvne, ptfs it thro'
 an Hippocras Bag, into a large Earthen V(fl(l^ or
 Bill Glafs undetneath: Evaporate about half away,
 and fit it to Ctytallize for 2 or ^ dayt, (faving
 what fmms a top, as well at the Cryjials ;) Eva-
 por.ue again half avmy, and Jet it to Cryftallisc,
 Joing this folong ti/you have gotten all the Tartar.
 What fwms on the top it called Cremor Tartati,
 The Cream of Tartar; and that which fhoots on
 the fides and bottom, is catted the Ciyifate of Tartar.
 Where Note, that in diffolving and boiling the
 Turur in the Water, it ought EO be done rather
 in an Farthen Pot, than in an Iron one, left it
 Ihould draw a Tincture from rhe lion. V?e Vir-
 rittes of both theft; Preparations ate one and the
 lame, and the fame with the Purified Tartar in
 the former Setho/t, being Aperitive, Purgative,
 good for CacheEiical, Hydropical and Afthmatick
 tWbns; and excellent ugalnit Tertian and Quar-
 tan Agues. The Dole is from 2 Drams to half an
 Ouoce, more or left, which being reduced to very
 fine Pouder, ought to be given in the Vehicle boil-
 ing hot, that it may diflbtve therein, and not tall
 to the bottom.

LVI Tartar Emetiek. Take Cream or Cryftah
 of Tartar in fine Pouder, Crocus Metallorum in
 Subtil Pouder, of each 4 Ounces, nix them, and
 ditfolve in boiling Water, then filter, and evaporate
 to drynefs. It is the belt of all Emeticks, Operat-
 ing with much Gentleneff and Safety, Purging
 both upwards and downwards, and may be given
 from gr. ij. to viij. It may be given in hot
 Water-Gruel, or in fome Conferve or Kieftuary,
 or the Pulp of a roafted Apple, wafhing it down
 with a little warm Poflec-Drink, or Water-Gruel.
 It is good againft Frenzy, Madnefs, Carus, Le-
 thargy, F.pilepfy, Vertigo, Melancholy, Sicknels
 and Wind in the Stomacj, pains of the Sides,
 Jaundice, Dropiie, Gout, Rhetimatiffm, Putrid
 and Malign Fevers, Tertian and Quartan Agues;
 invertebrate Obttu&ions of Liver, Spleen, Reins, Womb
 and Mefentery •, and is profitable againft a Dyfen-
 tery, and rhe malignity of the Plague or Pefthiency
 it left; Emetic^ Tartar may be made by ieveral
 other Preftripts, as you may fee more at large in
 our Seplefium, or Druggijs Shop, lib. 2. cap. 10.
 feti, IS, & id. and in OurPharm.Bateana,lib. 1.

It takes away itoppages of the Lungs, mach and Bowels, provokes the Terms, a' prevalent againft Mthma's, Coughs, Colds, fumptions, Pkurifies, Cachexies, Droppies,.. dice, &c. Doie from half a Dram to a in Ale, Beer, Broth, Wine, tfc. See o iMndtnejis, lib. = cap. it. fcB. <)<). Pharm. Bateana, lib. I. cap. io. fell. 4a.

LXII. Oleum Tarteri per deliquium: SrL Tarrar by Difilblution. Put pure Salt of T>TM upon a Polifht Marble, which place jnelvitg tr Cellar, over an Earthen Glased Pot or P<i>>i y broad Glajs Veffcl, in a mnfi Cellar, jo «" " Z Salt dijtblve into an Oil, and fall down ***V£g Receiver. Or put it into a Hippocras Bag^ ar, n hang up in a moijs Cellar, with a Clap, or E f' Glafs'd Receiver under Ir, to receive the dnpf* Oil, which filter and b.viperate to a CottfipTM But if you would have immediately Oil of ^ Rg(per deliquium, then put one Ounce of ?ure, n< r white Salt of Tartar, into two Ounces of? ^ and it wilt alt diflolve into Liquor, which >J) pteafe, you may hiter thro" brown Paper, eM Af, t for ufe. k has all the Virtues of theSjlc, may bo given trom half a Dram to a Dram> any proper Liquor.

LXIII. Sal Tartan foliatum j Foliated Sa> Tartar. Ta&e Pure Salt of Tartar at much tt)

pitcafe, put it into a largt Glaft Cucurbit, and gently pour on it as fiiwh Spirit of Vinegar as the Salt an fuck up, fo that they may befortiated with eaet other, and no Effervefoeny at all remains, fo will the Work be done at once: Some part of we
 ^Humidity of the Spirit, evaporate by* gentle SanJ
 Inheat, fo mllabl.uk jubjUnce remain at bottom of
 ^theGlafo. Being cold, diffolve.it in good Spirit of
 Wme, mter thro* brown Paper, and in a Cla/s
 Cucurbit in a Sand heat, Evaporate to drynefs.
 Dijolve again in Spirit of Wine, Filler*!/? and
 Evaporate as before. V>h Work repeat, till the
 Salt is white dry, and in dijlinS Leaves at bottom
 of the reflet. It is of fingular ufe to purihe or
 cleane the whole Mais of Blond and Humors,
 and ro refblve and carry off all manner oi Tartarous
 Mucilage, (which isthecaufefoot many Uiro-
 nick and rebellious Difeafes,) whether in the Vif-
 eera, or any other parts of rbe body. It keeps
 the Belly Ibiubl-, and purges by Urine all the
 Filth of the Reins, Ure:ers and Bladder. Dole
 from io Grains to 20, in Broth, or some other
 proper Vehicle. - ! . ; . -

LXIV. *CremorTartari Solubilif -iSdabk* Cream
 of Tartar. Take Cream of Tartar, diffolve it in a
 Sufficient quantity of tcarm or boiling^ Waite-, then
 in Oil of Tartar per deliquiumj till the
 Ebullition ceafes, after which Evaporate tbo humi-
 dity to dry/aft. It will readily diffolve in any
 ivjrm Broth, Gruel, or Liqaor, and may be given
 from half a Dram to a Dram. Ic gently looits
 the Belly, abates the heat of Fevcts, itrengthens
 the Stomach, and opens Obfruttions.

LXV *Soluble Emetick Tartar.* Take of the
 former Soluble Cremor Tartari, Crocus Metailo-
 rum levigated, of each two Ounces; Spring Water
 three Pitts, digcjl a Week, or in a gentle Sand
 hem often Jhaking the Clafs; then boil gently for
 an hour or more, after which Filtrate, and Evapo-
 rate 10 drynefs. This has all the Virtues of the
 former Emetick Tartar, but is more fit for ufe in
 many Paridits, becaufe it will readily Aiffolve in
 any cold.Liquor* and may be given in the Gme
 manner and dofe..

LXVI. *Sal Tartari Vitriolatum* ; Salt of Tartar
 VittioEated- Take of the aforefaid Oil of Tartar
 per deliquium, a Pound, more or left; dropuponit
 Spirit (or Oil) of Vitriol or Sulphur, fo much till it
 makesnonoijt; when the Ebullition ceatf, Evapo-
 rate with a gentle heat to drynefs. It purges very
 well in one or two Dnms, with much eale, and
 cteanles the Body admirably. It kills Worms in
 Children, being given from 10 Grains to a Scuple
 or more, in warm Broth or Cirucl: It cleanies and
 (lengthens the Stomach, cuts and diflblves tough
 and clammy humors in the Vifcera -, ciufe-s a good
 Apperite and Digeftion, quenches Thirtt, and ex-
 tinKuiibes the heat of the molt burning and ma-
 lien Fevers; diflblves Tartar in the Body, and
 opens all mannee of Obftiuftions-, it provokes the
 Terms, and is good against the Rickets in Cb.il.
 dren and Green Sicknefs in Virgins ; and is laid
 to cure alfo Tertian and Quartan Agues.

LXVII. *Sal Tartari Volatile-*, Volatile Salt of
 Tartar. Take white Tartar Calrin'd to blacknefs,
 or rather fommat more, viz. till it is grey, three
 Pounds • p"t >* mo a &reat iroa ^ol_> U pQ" e!
 put fair Water, fo much as to over-top it an Inch or
 tm- Put the Pot over a gentle hre, which when
 the Cakind Tartar is fully Embodied with the Wa-
 ter and is become Blood-warm, pen upon it by

 for Vernu-nations; fiill (Irezcng in more Ponder of
 Crude Tartar, not too much at a time, left the Ebu-
 lition (hould runwer the fide t of the firfr!. When
 you fee the Ebullition irafet, you mult ceafe to
 jireui in any more Crude Pstatder of Tartar. Pur
 this whale matter into a very large Irpn Gv/ttd, toith
 a very long Keck, which cover with itt, head and
 Receiver.- Lute toeil ike Junctures, and Dilfii in
 a Sand heat, jirfi with a very gem Ic tue, (apply-
 ing continually cold wet Cloths about the UoxrJ,
 to Jtcp a hale the boiling of the waite) at lafi
 augment the tire, fo will the Folanlc Sail afend-
 The Difilled Liquor refiify again, at much us is
 fijfor the Separation of the Salt, ishichyoit will have
 in Wbiusejs and Purity. TILS Volatilization is
 maclb by Te.iibn of she tei mentation, made by mix-
 ing ol Crude Tartar with the fixed bait of Tariat,
 whereby a peruft Separation or the Salt is made,
 fas well from the Calcin'd as Crude pans) and fo
 Volatiliz'd; that after Diiiillation t:ere is not to
 be tuund in the faces any Salt at all, either Vota-
 tileorFixed. Buc there isanothrtwayot'ruking
 this Volatile Salt of Tartar, from the pure fixed
 Salt thus ; Take pure fine Salt of Tartar s Pounds,
 of the black difilled Oil of Tartar a Pound, mix
 them well together, and put them into a G.'jfs lic-
 lort, which Jiop very clo/e^ and place ii in a gentle
 Sand heal for 6 Months -, then open the Mouth,
 and fix thereto a large Receiver well Luted, and
 place it in a Sand beat. Dijfil with a gradual
 Fire,fo mill a great quantity of Volatile Salt come
 forth, /melting like Urne, but while and Cryftat'
 line, of a very penetrating Smell, with a Liquor
 tifo, which contains in it a fmall quantity of she
 fome Salt and a little Oil, almoft as penetrating as
 jhe white Crystalline Salt. In thisPrepatation, by
 reafon oi the long Digeftion, there is a ltrecc
 Fermentation between the Difilltd Oil and the
 Fixed Salt; and tho' the faid Oil contains much
 Volatile Salt, yet rhe Volatile Salt here afcending
 proceeds chiefly from the; Fixed Salt of Tartar it
 felf, which in this Operation quitting its Chains
 immediately becomes Volatile, and manUefts ir
 Jelr with all the Properties and Qualities of a Vo-
 latile Salt. The reafon is, becaufe the Volatile
 Salt here afcending, is in a very great quantity,
 and much more than the weight of the Oil, and
 the Faces remaining (which are only a black Oily
 Coal) weigh very much le(s than the Salt if Tartar
 made ufe of The Virtues, Ufesand Doiesoithis
 Volatile Salt, prepared by either of thefe ways,
 are fully and exatly the fame, with Volatile Salt
 extra&ed from ihe Lees of Wine, at Secf. LIII,
 aforegoing.

LXVIII. *Liquor of Tartar.* TakeCalcin'dTar-
 iar, andCommonSalt, of each a Pound; fair Water
 a Quarts -, mix, and digejt in a gentle Sand heat
 for a W&k, firrmg it every day ; ftrain, and add
 thereto pure^WhiteTartar in fine Pouder, a Pound;
 digejt itt a moderate Sand heat for a Month ; then
 ftrain out thro' a Hippocras Bag, and ajterwards
 filter thejirained out Liquor thro' a brown Paper
 and keep it for ufe. It will gently purge tha
 Belly of Vifcous and Watery humois, being given
 from one Spoonful to two, (moreorlefes) in Broth,
 Gruel, or Rhenifh Wine and Mead. It excellen-
 tly opens all Obtructions oi' Liver, Spleen, Mefert-
 tery, Reins and Womb, provokes Urine, anddean-
 fes the Urinary parisj isgoodagjintMelancholv
 the Scurvy, Dropfie, Jaundice, Gour, ObfrucSi*
 ons of the Terms, Vapors and Giddinels of the
 Head, GreenSicknefs, cSV.

LXXIX. *f* *of* *f* *Tartar Cap* *mod.* *ExirsSa*
fine rebite Salt e>J Tartar jrem the Caput Mottu-

tf litur, *jr Sefi*. LVH. WLVIII. *ofa-egnwg*,
vibkb mix with the Jaid l'rgm, Spirit and Oil:
digeft in Balneo, in a e&ft Veffel, lilt the Salt h
dijfofod; then xzjie Ba/t tberrofwith dry Cfay,
and diftil them by Retort, in a naked Fire-, and ail
the Salt mill come over with the Spirit and Oil,
perfectly united to the Spirit. from tobith fparate
the tat id Oil according 10 Art. It has all the Virt-
ues of the former Spirit of Tartar (at Soft. LVII.
above.) exalted, and thetore is much more pow-
erful, but may be given in the lame Dofe, and
after the fame manner.

LXXX. *Diatejjaro/t*, *Punch*, or a Mixture of
four things. *Take choke Brandy, juir Water, of*
each a fguart •, pure Lime Juice a Putt -r, Double
Refitfd Sugar a Pound; mix altogether^ and fir
the Mixture till the Sugar it M diffolved. For a
Conclufion to the Fruit of the line, or the Juice
of the Grape, we thought it fitting to add this
wonderful Reviving Cordial, ihis CharmingLiquor
of Confolation, which gives tdit-t to the Miiirable,
removes Grief, chears the Sorrowful, elevates the
Deiefted, gives admirable fjtUration to the
Difcomented, and a plenary Rcleafe to the Slave,
*of what Kindred or Nation fo (.vet i making *etm**
one teem happy to himfelf, who has the free
Liberty of drinking it plentifully, and oft as he
thinks it convenient. It truly cheats the Heart,
revives the Spirits, Irrengchens Univerfal Nature,
and makes the Patient Pk-afant and Sprightly, if
moderately taken. I know it to be a true Refto-
rative, and ro have Cured fuch as have been in
deep Conrumprions, by drinking it every Day for
about ?, 6, or 7 Months together, half a Pint
every Morning fafting, eating with it a White
Ship Bbker, toaftcd, and fbaked in the fame;
half a Pint half an Hour before Dinner, half a
Pint about <; in the Afrernoorij and half a Pint at
going to Bed. This Quantiry may do weli enough
tor Men, but the VemdeSex, may (ifthey pleaf)
a little diminilri the Dofe, as their Keafon and
Experience (hall dirctt them.

tribies have the Smell of the Garden Kind, but much weaker and some of them bring almost no Smell at all. Of the Wild Violet I am apt to believe that the Garden kind is only this Wild kind transplanted into Gardens, where having a better Soil to grow in, it becomes more perfect in its Color and Smell.

VI. The fourth, or Upright Wild Violet. Its Root consists of Strings, which abide not after Seed time, but preserves its Species by Sowing it fell every Year. It grows to be about a Foot high or more, with hard, upright Stalks, which yet bend down again their tops, having two Leaves somewhat round, set at each Joint, but longer, and more dented about the edges than those of the Garden kind, at which Joints, with the Leaves on both sides of the Stalks, comes forth a larger Flower and more spread open than it, being more like a Hearts-eafe, or Pansey, but of a pale purplish color which as Matthiolus says is almost as facet as the Garden Violet; but as Lobel says, is without any Smell at all. After the Flowers are past, follow the Seed Reflexes, (which are longer than those either of Violets or Hearts-eafe) in which is contained a Seed that of Hearts-eafe, but

The fifth, or Wild Jagged Violet, or Carolinian Violet. It has a (spreading fibrous Root, and rises up with Stalks about a Foot or more high, but so weak as that they can scarcely keep themselves upright, but bend towards the Ground, unless they have some Shrubs, Bushes, or other taller things to support them. There is a Root of the Wild Violet, upon a pretty long stalk which are long, and in on the edges on both sides, into several Divisions, which some will have to re-

semble the longer sort of Crowfoot Leaves, or an Anemone Leaf, but those which I have gathered with my own Hands, were jagged, and shaped more like a Vervain-Leaf. It is the work of the Earth to rise up several kinds of Stalks, with like Leaves, but differ upon them grow higher and taller up to their tops, which have several kinds, but the most common is of a pale Purple, and some of a whitish yellow, and some of it is with a little reddish towards the bottom of their Leaves; some of these flowers had a very fair or Languid Swell of our common Violets, and others had no Smell at all: The Stalks bore also round Heads or Seeds (which contained the Seed) like to the Seed of Violets.

VII. The Places. The first and second grow in Gardens, the third Wild in Flanders, under the Sides of the fourth grows wild in warm Climates, as Spain, Italy, Greece, Africa, &c. but with us in Gardens, the fifth grows Wild in several parts of America. I found it growing plentifully in South Carolina, in the Woods not far from Charles Town.

IX. The Times. They all Flower in March, and if the Season is mild, sometimes earlier. The Double Violets Flower later than the Single, and hold their Flowers longer; and some of them have been observed to Flower again in Autumn, if the Weather be temperate and mild.

X. Observations. The Culture of the Single Garden Violet, is what every body knows, which delights it self in shady places, and such as are exposed to the Sun. The Double Violet grows in any sort of Ground, upon the edges of Borders in Gardens, which when it blows, its Flower is very agreeable to both Eye and Smell; To make it thrive, it ought to be replanted every three Years, and to keep clear of Weeds, which is all the trouble it requires.

XI. The Qualities. Garden Violets while fresh and green, are cold and moist in the first degree, Aperitive, and gently Absterive, or opening the Bowels by Purging.

XII. The Specifications. Violets cool the heat of Fevers, allay Inflammations in the Throat and Lungs, are profitable in the beginning of a Quint's and Pleurisy, and are laid to help the Falling-Sickness in Children.

XIII. The Preparations. You may have therefrom, 1. A Juice both of the Leaves and flowers. 2. An Infusion of the Flowers. 3. A Syrup of the Roots. 4. A Powder of the Leaves. 5. A Powder of the flowers. 6. A Powder of the Seed. 7. A Cataplasm of the Leaves, &c. also of the Flowers of the White Violet. 8. A Julep. 9. Oil of Violets.

The Virtues.

XIV. The Juices. 1. Of the Leaves. It cools any heat or distemperature of the Body, whether inward or outward; abates Inflammations in the Eyes, also in the Womb, and in the Fundament, by being used as a Topick. And being drunk to 2, 3, or 4 Ounces, it gently opens and purges the Bowels, and is good against Quinsies and Jaundices. 2. Juice of the Flowers. It has the same Virtues, and is good against the Pleurisy and Obstructions of the Lungs, hot and sharp Rheums, hoarseness and wheezing.

XV. *The Infuswn of the irlorcerf, fresh or dry* I: h;is all the former Virtue, but not full out fit effectual, and therefore may be drank to half Pint or more. Being made pleafant with tL Syrup of Violets, and (harp with a little Oil of Sulphur, it isan excellent Gargle fur a fore Throat, is profitable again!* a Quinfie and Pleurifie, and cures the molt malignnc burning Fever.

XVI. *The Syrup of the Viewers.* It is mad i. With the Juice of the Flowers thus, *'lah Juice of the Viewers of Violets a \$>uttrt; doable refined Sugar 4 Peunds, mix and melt in the heat of a Baih without boiling,* h cools, moitens, allays the heat of Fevers, quenches Thirft, comforts the Stomach, chears the Heart, and reQfts Putreraftion. Dofe from one to two Ounces, given to four Ounces, u purges Choler admirably, a. *U'ub an Infufion in Water. Take fresh Hewers if Violets a Found, fair Water boiling hat a Quart; Jlop them cife up in a Gla's Malrafs or Vefica forma day, then ffraim out by preffing \ in the /trained Liquor two Founds, dijjblVif of fioub/ir Refined Sugar, four Founds, by the bet if d Bath, and taking off the Scum, make it into a Syrup wilwut Boiling.* It hasalj the former Virtues, but lei's powerful, and therefore may he given in double the quantity. Either of thefe Syrups will be much moreeffe&nal in hot, burning* malign and peftilemial Severe, it (hey bs made a little Acid (when given) with fome iew Drops of the Spirits or Oils if Sulphur or Vitriol^ by which they will bemsJtof a Claret Wine color, and of a fine rart Reliff, p!« Pabte, and fo more potent in cooling all rmur.il beats, and quenching ThirS, EJV.

XVII. *TJK F^ider of tit Leaves.* Taken to 3 Dram in Veal Broth, or White Wine Muird, it and purges die Body

SCSSHSS

XVIII. *The Powder of the PurpUViolet F/owen.* Jiiven to a Dram as the former, it has the fame Virtues and Effects, but Purges not ahogctber (b In&igly : It U alfo faid io be good agjintt the Quinhe, and the Falling Sicknds in Children, ef pttiaUy in the hegimmg of the Difeale.

XIX. *The Ponder of the Seel* It is good againft the Stinging of Scorpions, is Pector.il and good againft Fevers, Qjiinifies, Pleurifios, and Epikpiy i heat and tcalding of Urine, and all pains in che Reins and Back, the Strangury, or OHTm tt ons of the Urinary parts. Dole one Dram in anir convenient Dmrrick, and cooling Vehicle.

XX. *The Qataplafm.* It is made of the green Learn, being fryed with Yolks of Kiggs. It being appWed, eales pains, and diftulTes Swellings in the tmid-imenr, and in a fhorc time is faid to cure TL M:Ki e with Oii *fty", Kdtfcuffes rnmorsj abates Inflammations in any part, andeuius pains; of the Head caufed ihro' want of Sleep.

XXI. *Mfum rtolarum,* Julep of Violets. I/ « wuh of the Water or htfufwn of Violet Ylowers and Sugar, a Found rf Double Refined Sugar to two Quart, of the Water or Infufwn. The Virtues are the fame with the Syrup, and may be ufed to alltbefore pupj^fe and intentions,

AXH. *Oleum VuUama.* Oil of Violets. Take lurfite Violet Homers, tebieb brui/e M a Stone mortar atib a woen Pefile, \Quaees1, OilOmpbacmejcvsraltimeswi/hed, 3 Pounds, mix. ani expofe them m a Ghfs clofejht, to hot Sun for a We-eA, JbrAing them every day •, then boil them gentry in a R.tb, prr/i them out, and put ixfrtb tHew crSi dving m l,ke manner, which repeat a third t,me and keep ,be Oil upon three Pounds vf Juice-rj I wlett, Jbutug then, tether twice a day for a Month at /raj). h is Coo1ing Jrd, Mofiffing,

Opening and Ancdyn, good againlt In Phlegmon^ burning Fevers, Tleaid . and Airopbks -, it al'fj ejfc pains of the Brdt and Lungs.

Firjl, Of the CORN-VIOLETS.

IV. The firft, or *Viola Segetum major*, *penragonia major*, *Speculum Veneris* majus, *Greater Corn Violet.* Its Root is /mail, tld snd Annual, abkb fends fortb feverd , weak, trailing Stalks lying on the Ground, and subdivided from every Joint into Bi fi> j'l, ntfully, that one Plant growing in a Garden, vcould hardly be covered by a V " " • • the Branches are thick fer for. tvith /small and /omewhat long (lightly denied, or rather waved en the c^-- at every Leaf from the middle of the St.il* f uards, comes fortb a timer, of the fcg*>d V £ ro-Pextr, Jo (that five hundred fatten mil be Jeen oprn a once, which it indeed a

<£.!) fet in a fine pointed green Husk, of a fair purplish blew color, made of one whole Leaf plaited into fwc round painted ends, white at the

Violet Corn Greater.

ttmn, to'th a white Pointel in the middle, cking up every Night, and opening in the Day rime only; the Seed is small and yellow, and contained in small long Heads.

V. The fecond, or *Viola Segctum minor*, *Speculum Veneris minus*, Codded or finaH Corn Violet. Its Root is small and Annual, also not much unlike the former, which fends up Stales more upright, like unto the little Cencory, with fewer Branches, more harjb or rough also in handling. The Leaves are like unto the former, but something left. At every Joint almost, come forth two or three Flowers, fianiing at the ends of long Cads, like *JW/O Lyfimachia Stliquofo*, of the same fashion and color at the former, but so small as fix Eye of a little Bird, never rifing above the Husk it Jiands in; end not but in the heat of the day to be feen, which then only lays it self open. The Seed is small and yellow also as the former.

* VI. *The Places.* The first grows in Corn-fields, between *Greenbith* and *Dartfirdm Kent*; as also in the Corn-fields about *Lilly*, a Town in the furtherrooft parts of *Hartfordshire*, towards *Bedford*. -, and for its plealant Afpeft, is also brought into, and Planted in Gardens. The fecond is found about *Hatfield*, in *hartfordfbire*, and in several other places of this Land, *Parkinon* fays, it is much more frequent than the other.

VII. *The Times.* They both Hower in *June* and *July*, even to the end of *Auguf*, the Seed ripening in the mean time.

Secondly, Of the DAMES-VIOLETS.

VIII. The first, or Common Single FloiverJ Dames Violets. Its Root is wholly nmpofed of Strings or Fibres, which abide many Years, jeniisg vp fresh Stalks every Tear, the Lemcs abiding all the Winter. Us Leaves are broadrr, greener, and sharper pointed than the Stack GiliihVwers, and a little indented about the edges. The Stalk is about tvisticct high, bearing itur.ygreen Leaves upon them, jsmaller than theft at the bittern, and branched at the top, bearing many Wooers in fashon much like to thsfe of Steck-G ill (Mowers, conjifing of four Leaves in like memeri, but not

Violet Dames, Single Common.

fo large, of a faint purplish colorin fame, and in others white, having a pretty fwcet Smell, especially towards Niglft, (whence came as fs fuppofed the frame Hepperis.) but in the Day time little or none all, After the flowers are pa/), come small, long, and round Pods, in which are contained two rows of small and long black Seed.

IX. The fecond, or Hungarian Dames Violets. Its Root is fibrous, and its Leaves very like fix fanner, but fmcoier and thicker, and net at all cut in or indented about the edges. The flowers are like the former also, but of a dull pale color, turning themselves, and seldom lying plain open, having many Purple Veins and Streaks, running thro' the Leaves of the Viewers, of little or no Smell in the Day time, but of a very facet Scent in the Evening and Morning. The Seed is like also, but a little browner,

X. The third, or Doubtwhue Dames Violets. It grows not so great in any part thereof, nor so high at the Single does, extent in the JKJKWX, which

being vrry thick of Leaver, of a pure abite-
 >lor, and many jlanding in >: (Suffer, Jmccter, iljo
 !. I n i h e G i rden S i ngl e Kind, and hag tr abiding,
 caufe i to lobe had in fme efleem. its Leeoes are
 Something leffer, anJ of a frefber green color, Rule
 or n-thing Jgipfi about the edges, and more tender;
 but its branches art more plentiful, ani mere
 €d(ie is be ffpit to be Planted again, than tbsfe of
 the Single Kind, bat gives n»Sted, at manyoiher
 Double Flomer'd Plants do in like manner. It is
 alfo more tender to be kept in Winter time than the
 Single Kind.

XL Toe fourth, or Double Purple Dimes
 Violets. Tffefe differ little or nothing from the
 former, faving in the cohr of the Flowert, which
 in this H ofdjine p.ile Purplifb color, and not full
 our fo double a* they, nor jo many cluttering is-
 get her.

XII. The Places. They all grow in Gardens
 for Ornament fake in a great meafure -, and the
 two Double Kinds in many Gardens in the Weft
 parts of Kng.'ani.

Xm. The Times. They all Flower in May,
 June, and July chiefly; and the Whue Double
 longeft in Flower, if it grows not too much in
 the Sun.

XIV. AJ to the Qualitiu^ Specification, Prepa-
 rations it/id Virtues of thdi; Cera and Dames Via-
 kts^ Aurhoisarctorallyiilent *, nor have we lea rn'd
 any thing of them by Experience : yet we did not
 think it fit dtat they fhouki want a place in this
 Oar Herbal. Since the molt General thrifts, and
 all Lovers of Flowers, ibr their Beauty lake, al-
 low them a room in their Gardens.

CHAP. DCCXXVII.

O/ V I P E R S Grafs.

i. **T**HE Kjmes. It has no Arabick nor Greek
 Names that we know of, nor any Ancient
 Latin Name, being a Plant of modern invention,
 and therefore is called by our modern Phyliciaiis,
Serpentarij, *Viperaria*, *viperina*, (from its Virtues
 in curing the Bitings of that Serpent) and *Scorzo-
 fitra*, (from the *Spasutit*^ being equivalent to
Kiperoriu) and in Englith *VipersGrafs*, and alfo
Scorzonera.

II. *TlicKintis*. Authors make 7,8 or 9 kinds, but
 moft of them being perfeft Strangers to us, and
 nor ro be feen in *England* in Ages^ we fhall only
 difcourfe here of fuch as arc Planred and Nurlt
 up in our Gardens, which arc the ibur following,
 viz. 1. *Scorzonera*, *Jeu VipcrariaStiifpanica* ma-
 yor, The Grearer Spaniiah Vipers Grafs. 3. *Scn-
 zoner a minor Pannonich purpurea*, Hungarian Pur-
 ple Flower'd Vipers Grals. ?. *Scorzonera major*
Ptnnamta buifitu. The Greater Hungarian broad
 leav'd Vipers Grafs, i. *Scorxoncra minima radice*
tuberofa Hifpanica, The finalleii Spaniiah Vipers
 Grafs with a Tuberofe Root.

The Defcriptiotis.

DL The firft, or Greater Spfnifh Vipers Grafs.
 Its Rwf it long, thick and round, brittle and black,
 with a certain roughneft on the outfide, but very
 white witbin, yielding when broken, a ftulky U

quor, at every other part of ibe Plant doet I
 yet the IXtxt more than any other part; and
 it abides many Tears without decay. It batjrjra,
 long l.e.rvcs, not broad, nor yet very aiirruSti^{IVTM}
 and crumpled on tbt eigrs, and fomcumct unevenly
 indented cr waved on the edges, of a bleixift &^{1c1n}
 color. From among which, njet up one Stalk, and
 no more for the moj) part, two Feet high, or there-
 abouts, paving here and there fame narrower kn-
 Leaves therevtt than ihcfc below. The top of tot
 Stalk branches it Jc/f forth into other parts, every
 one bearing a long jcaly Head, from out of the top
 whereof, rifes a fair, large, double favr, P)*
 pale yellow color, much like tothcWmcrc of Yellow
 Goats Bend, but a link left; tobich being P»J£
 the Seed comes, being long, vbtitiff and ^{rou^}
 ctoted in much Down, and among them many « « r
 long fmooth Seeds, which are limber ani j»^{ft}
 lefs, but are all carried away with the Win*

IV. The fecond, or Purple Hungarian
 Grafs. Us Root it like tte former, and it
 long and narrow Leaves, of the fame breadth great-
 ly more with the former. The brach rifes up to be
 about a foot and half high, with a few juch
 Leaves, but Jberter thereon, fprcadmg out
 top into 2 or % parts, bearing on each of them
 Flower f*Jhion'd like the former, and P^{3d} of
 the like fcaly Knob or Head, but of * «/l
 purple color, and not fully fo large, ^{TMict>} nj
 the fmeetefl Smell of any of the Species, crW^{*}
 of Vipers-Giafs, not much inferior to the ntoft^{dcn}
 cate Perfume.

V. The third, or Greateft Hungarian V
 Leav'd Vipers-Grafs. Its Root « long and £^{e^}

Vipers Grafs } *Flower'd*
 } *urpk*

Subfile i neither of them to bewUdifrned
the one from the other, after they have grown any
time in the Garden together.

VI The fourth, or fimleft Spamlh Vipeis-
Gtafs'with a Tukrole Roor. Its Root it at thick
a; three Vingert or more, but fiorter than the oilier
Kinds, lubcrefe at the end, bUckijh without^ and
ubhtfh within, yielding but little Milk when it it
broken, but abidct the Winter almoft as wellas any
of the former. It has divers Leaves very Jmall
and narrow, lying o» the Ground, fome Roots gt-
ine fmoPth Leaves, and others crumpled or wa-
ZUZ the edges. | V * - \$ or Stfstrt very
(mall, fearcely rifing butt a loot b,gb, bearing a
lone U>tI faty H*d* * * * and f
Jfcjillm Mover, in ubicb grtm/matter black
Seeds, andenehfid in M lefir Down than in
any of the others.

VII. The fixes. The Native places of thefe
PEants' are declared in their Tides or Names, but
now they are made Free Denizons of our Country,
and are found nurft up, and growing in many of
our Gardens.

VIII. T/v Times. They all Flower from the
btginning of May, and their Seed is ripe before
the end of Jtmti, after which, the Stalks wither
and dye away, new Springing from the Root again
before Winter.

IX- The Qualities. They are temperate in re-
pfehof heat or cold, drinei'sormoifturei Cordial
or Caidiack, and Aleiipharmick, or leCfteis of

X. T)K Specification. As they are faid to
ttingthen the Heart and Vital Spirits, fo alio Mo-
nardus lays they area Counter Poiibn, and harebeen
found 10 cure the bitings of Vipers, or other like
Venomous Sarpems.

XI The preparations. 1. The Boiled, Roalled,
or Baked Roots. 2. The Liquid Juice. 3. An
OMmlmick. 4. A Condite or Prefirvc. y. A
filled Water.

The Virtues.

XII The Boiled, Rifled, or Bdked Roots. They
are fweet in Taft, almoft like a Parfnep, and may
he eaten in the fame manner, without doubt they
chear the Hearn, ftingthen the Animal Spirits,
and reftorein Confumpcions.

Xtll The Liquid jfince. According to Alonar-
dW it is a rood Cordial and Counter-Poifon and
£ not o4 nap, 01 cute the hiring of theViper
Sue <f any other Wbnoos Creatuie, it is good

again it Burning and Conragious Fevers, MIK! indu-
ces Sweating, thereby expelling thro' the Pores,
Peflilentia Infektion. It is good againft Paffions
and Tremblings of' the Heart, SadnefejMeiaicholy,
and Swooning Kits. It opens Obftruftions of Li-
ver, Spleen, TVleientety 3tid Womb, provokes ihe
Courfes, is good againft Hyfterick Fits, and other
Dilafteflions of the Womb, and prevails againft
theHcad-achj Vertigo, and other Difeafcs of the
Head and Brain *, lengthening after an admirable
manner, the Animal and Vital Powers. This
Juice may be taken not only from the Roots, but
al To from the LeavtS and the whole Plant.

XIV. The Ophbalm'tck. Take of the Clarfu-1
Juice a Pint, Clarified Honey tmoOunces, mixani.
dijjolve. Dropped into the Lyes, it isgooiagainlt
Inflamaion and Blood-phot, takes away Clouds,
Spots and Blemidies in them, and heais them it
Sore or Ulcerated, ftrengthening the Sight withal.

XV. The Condited or Pre/ervcd Root. They
are pSeatant to be eaten as a Sweer Meat, not in-
ferior to Eringo Koois, and may have in fome
fmall meafure the Virtues of the Liquid Juice.

XVI. T)X Dtjilkd Water. Authors give it the
Virtues of the Liquid Juice, but I am confident it
is nothing near lo itrong 01 effeftual 5 but they
give itagainftbot., burning and malign Fevers,
and the Infektion of ihe Plague, and all Ions of Con-
tagious, Infecliousand PettHential Difeafes, Faint-
ings, Swoonings, and other PalTions of the Heart.

CHAP. DCCXXXVIII.

Of the V I R G I N I A Creeper.
OR,
CLIMER.

I.n p HE Names. It is a Plant of Noval In-
X vention, beingbrought tous from Virginia,
and other parts of the Weft-Indies; and therefore
has no Ancient Greek or Latin Name; but it is
called in Latin by our Modems, VitU Virginiens[^]
or rather Hedera Virginiana, and in Englifli, the
Virginia Creeper, or Climer.

11. The Kinds, Parkinfa makes two forts
hereof, viz. The Five Leaved Creeper, and the
Three Leaved Creeper. Mr. Rea, in his Pomen[^]
pug. 227. makes but one Species; but for Satis-
faction feke, we will give you all that they hjve
both laid.

The Defcriptions.

III. Thefirft, orHederaQuinquefoliaVirginiana,
Five Leav'd Creeper. Us Root fpreads here and
there under the Ground, not very deep : It it a
flender Vine, Ivy, or Plant, tall and climbing,
and rifes out of the Earth with feveral Stems,
none much bigger than a Mans Thumb, but mjny
lefs. Front whence Jhoot forth many long uie,ik
Branches, not able te flafii upright, unlefs they
be Jujained; yet Planted next to a Wall or high
Pales, Poles, Trees or the like, the Branches at
feveral diftartes of the Leaves, will Jhoot forth
Jmall fhort Tendrels, not twining them/elves a-
bout any thing, but ending in four, Jive, fix, or

more short, and something broad Claws, which will flick to, and fajien like a hand with fingers, fo clofe thereunto, that if full'd off, or forced away from the Wall, or thing it flicks to, it will bring part of the Wall, Bricks, Stone, Board, or other matter it h joined to, away taith it : By **these** Clam it flays it Jelf, and Jo fixes it jelf, as io climb up to the top of the high/ft Climney of any tioufe, or to the very top of the higkefl Tree, bang Planted agamfl them. The L-eaves are crum-
t, or rather folded together, at the firfl coming
b, and very red, which alter in growing large, and are very fair, latge and green, divided into 4, 5, 6 or 7 Leaves, ftanding together upon a fmall Yootflalk, fet without Order on the Branches ; at the ends whereof, a* alfo fomelimes at other places, come forth divers Jhort Tufts or Buds for Flowers -, but in our cold Climate, we fcarcely ever fee them open themfelvrs, to fhew what manner of lower they would be, or what manner of fruit
TMud follow them.

IV. The fecond, or Hedera Virginians Trifolia, t three Leaved Creeper. The Roots of this Plant do Jhoot under **Ground**, <>nd find forth young woody Stalks, ef **ubith** feme Kill fland **upright**, others lye down, end take Riot again as they fpread, as alfo in any Wail they Hand nigh to, like unto our Barren Ivy. The Leaves are broad and
three nlwys Jet together upon a long foot-
At the Joints toith the Leaves, come forth pale flowers, in a loofe Tuft or duller, which turn into pale yellow Berries, with fmall bard round
4fl> colored Seed, in a dry wrinkled Skin or busk, without any motjlure at all in them. Thk Plant yields a white JntIA, without any Tajle, being broken in any part thereof, which after it h:u continud a while, will change to be tu black a* Ink, and therefore held Jit to color Hair, Leather^ or any other things.

V. Mr. fiw's fingiikr Defcription of the Virginia Qimer, is riis. Its Roots run on the top of the Ground, and by cutting fome of them from the Stock, and turning up the ends, new Plants may be raifed. It rifet up with divers fmall Stems, divided into many long weak Branches, **abich** fet agamfl a Wall, will faflen thereunto, with Small Claws like unto a Birds-toot, and climb to the top of a tall On'mney. I he Leaves at firfl are red and irumpled, but aftenoards fair and green, divided into 5, 6, or more Leaves, flanding together upon a fmall footflalk, fet' without order. The Ylowert with us appear only in Bud, but never are feen to open.

VI. Tfx Places. They grow in Virginia, and in her Cold parts of America, from whence they have been Tranplanted to us, with whom they thrive well, being Planted in Our Gardens againft high Stone, or Brick Walls, or the fides of very high Houfes.

VII. The Times. The particular rimes of their Flowering, our Authors have not Oblervd, but it is in the Summer Months.

VIII. Nothing has been Obferved as to their Qualities, Specification, Preparations and Virtues, and therefore we are Silent concerning of them ; however, being a very Beautiful Ornacnr, tve thought not (it to over-pals them.

C H A P . DCCXXXIX.

Of V I R G I N I A Silk-Grafs.

I. T T H E Names. It is a Plant of Noval In-
-I- vention, and therefore no Primary
"t L:tin Names cm be given for it, but onfl
luch as have been alciibed to it by Modem Au-
thors, by whom it is called *Fcripfodi PirgimaMt*
and in Eaglifo *Virginia Silk*, and *Silk Gr<*

. U. **The Kinds**. Mr. fcw gives us the Dsliip
tion of but one forr, bur *Parkin/on* of nv
1. *Periploca reffa*, vel *major Virginian*^ T*?
Greater Virginia Silk-Grals- % *Periplota*
ntana minor, The Lcfler Virginia Silk-Griis-
Gerard will have it to be a kind of *Afckpi** *
Stallowwort, but then he might have called it
*AJelepia** *Lallans*, becaufe this is Milky, or ha*
a Milky Juice, whereas the true *Afclcpio** has no
juch thing. *Alpintis dc Plant* /Egypt, cap. 2*-

calls *Apoeynum Syriacum*, *Paleflinum V JEffpUf*
earn : There, fome will have to he this *Silk-Grafs*,
bur this they cannot be-, for either of them is^a
Irutex or *Shrub*, whereas this is not, but loot*
its Leaves and Stalks, they dying down to "f
Ground every Year. Again, the Milk of thole
Plants is *Cauflick*, as *Alpintx* and *Bella &>*
whereas the Milk of our *Virginia Sdk-Grcfs* is
not. Alfo the Cods of thofe of *Npinus*%, *Beli*>
and *Qufim*, are nearly fraigh t, whereas thofe of *cat*
Silk-Grafs are crooked, almott Like Hooks, and
yet they grow perfectly upright.

The Defcriptiofis-

HI. Mr. *Reas* Defcription, which I take to be
of the Greater **kind**, is this. *Virginian Silk* »^a
*Plant more r.fpeQcd for being a Stranger, IP***
for the Beauty of its llowers: Its Root a big, l?#S
mduihite, running far under Ground, and Jf^S'
itg Up again in many places, it rifes up with out
or more round Stalk, almoft four ftet high, ft' ',*
*feveral Joints with two long, broad, veined, roW**
pointed green Leaves. At the top of the Std
out of a Skinny tioufe, comet forth a great Tuft 4
blowers, to the number of thirty or forty, haul-
ing down on long Vootflalks, each flower conjifli
of Jive fmall hollow Leaves, of a pale purpltb^{(0~}
*tar. neither fair nor plcafant. After they <****
pafl, come kng crooked. Cods, ftanding uprw^
containing Jlat brown Seeds, wrapped Kthitt^
great deal of fine jfoft whitijh brown Silk. I
I take to be Parkin/on's Greater Virginia Silk.

IV. The tirft, or *Parkin/on's* Greater Virgi
Silk-Grals. Its Root « long and white, of the H'
nejs of a Mans thumb\ running under Ground IX'
ry f.;r, and Jhoot ing up in divers places, tb*
Heads being Jet full of fml! white Grumes #
Knots, yielding forth many Branches or Stalks, if
it (lands any time in a place, b rifes up alith eR<
or more flrong and round Stalks, ?ff, feet high
on which are fet at the feveral joints, two f***
long and broad Leaves, round pointed, with m&ty
Veins therein, growing clofe to the Stem, teithe*^l
any footflalk. At the tops of tbeStalks, andfi**'
tims at the joints with the Leaves, tenses jertb 4

great Bitjl> of blowers, out of a thin Skin, to^ the number of 20, fometimes of %o or 40, ever/one Mpon a long Yootflalk, hanging down their Meads for the moji part, efpecially thofe which are outwardmoft, each Handing within a Husk of green Leaves turned to the Stalkward, like to the Virginia Lyfimachia Flower, and eadh of them eonfifling of five fmall Leaves, of a pale fyrplijh color on the upper fide, and of a pale yellowijl> Purple underneath, both fides of eadh Leaf being at it were folded together, making them jeem bottom and pointed, with a few fhort Chives in the middle : After which, come long and crooked Cods, flanding upright and fharp pointed in which are contained flat brownifb Seed, difperfed- h lying within a great diat of Sne /oft and whiti/h brown Silk, very like unto Cods, Seed, and Silk of Alecpias or Swallow-wort but that the Cods are greater, more crooked, and harder alfo in the onward Shell- Tim fo Beautifula Plant, (at Parkinon calls it) even the whole Plant, Leaves and Stalks being broken, yields a pale Milk.

V. The fecond, or Petiploca virgbiana minor, five Apocynum Virginianum minus, or leffer Virginia Silk-Grafs. This creeps not with its Roots in the Ground, like the former, but from many long fibres /hoots forth a round brown Stalk about half a Tori high, having at each Joint a pair of long narrow Leaves, and at top fuch a large Tuft of flowers a* in the firft , but of a deeper Purple color, which have^ a certain clamminefs on them, that wli detain Flies, or other light things which happen to fall thereon ; after which, come long and/traif Cods, (net Crooked like the Greater fort) with fill brown Seed lying therein, in a white kind of Silk or Down, like unto Afclepias or Swallow-wort.- Tjm yields a Milky Sap or June like the other, which fome think to be dan- serous, JW Experience has deelarid no fuch thing I and therefore mull be left to a farther Scrutiny, by Tryals hereafter to be made,

VI. The Places. They both are Natives of Virginia, and othet places of the Wefi-Indies, whure they grow abundantly.' They have been often raifed by Seeds which have come from thence, and alcho' rte Stalks dye to the Ground every Winter, yet the Root is oflong continuance, and will fend forth new at the Spring, efpecially if the place where it grows be covered with Horfe- Dung in the Winter, to defend it from theFrotts.

VII. The Times. They Flower in July, but not every Year, and their Silk and Seeds are ripe in AxguJI, but it Jearcely ever brings forth its Cods with us, by reafon of the coldnefs oFour Climate.

VIII. *Obfervat.* Gerard fays, (off the larger Species) that the Cods are itufted full of a molt pure Silk, of a (Timing white color, among which Silk is the Seed. Thefe Cods are not only full of Silk but every Nerve 01 Sinew, wherewith the Leaves are Ribbed, are likewife molt pure Silk, as alfo the Peelings of the Stems, Stalks, or Branches which come from them, even as Flax or Hemp* fro™ tuoir Stalks. 'Tis admirable ro think, how God has Bleffed thofe Countries with a Subftantial matter (which they daily tread under Foot) by which they may be both well and Honourably Cloathed, and which is fufficient to Annarel or Cloath many Kingdoms, if carefully Manured and Manuraured. But Parknfon fajs concerning it, That he knows there is another Plant growing in Vt>g*mit, called Silk-Grafs, Which is much differing from this,

IX At to its %?alhin, Specification, Prepara- tions 'and Virtues, Authors have faid nothing, nor

do we lay any thing concerning the fame. The NJ rives make Ropw and Cords of it, but nothing elfe, being much itronger than either Hemp or Silk •, but was it ManuFaEtured as it might be, it would make Super-fine Qoarhing of all forts, much exceeding any thing made of Flax, Hemp, or Cot- ton, and poffibly not much inferior (if any thing at all) to what is made of the fined and belt Silk.

ing, and inflaming the Ttfi£«* "P⁰* ^'J'Jfc
thereof, tebich violent Heat continues agrea*
without any diminution or ateranon.

Wake-Robin Spotted, or

IV. The second, or Spotted Wake-Robin. This in its Root, Stalks, Leaves, Co% Fruit and manner #f growing, differs nothing from the former, Jiving that both Roots and Leaves are more violently sharp and biting; and that the Leaves hereof are somevohat harder in feeling, Jharper pointed, and have some blackisb Spots thereon, like the Spotted Arfmart, vobich for the mofi part, abide is the Summer longer green than thefts of the Jirjt do.

V The Places. They grow frequently in many parts of England, in Woods, and near unto Ditches, and by Ditch-fides under Hedges, in lhadowy

*The Times. The Leaves appear prefendy after Winter, early in the Spring, and continue but to the middlo of Summer, or some IimtUirae loneer. The Pclije fhews it felt out of its Hofe or Husk in June, appearing before the Leaves tall away whilft they areyet in Withering; undwhen they are S^{ome}-> ^{the Bunc! or clu^eE U!} Berries, viz. its Fruit, becomes ripe towards the end of July, or maugufi.

VII. The Qualities. It is hot and dry in the fourth degree, Aperitive, Abfterfive, Diutetick and Digeftive, Peftora), Cardiackand Hyfterick, And-atthmatick, Emmenagogick, and Atephurmick.

VIII. The Specification. It is prevalent againft Afthma's, Coughs, Colds, OblhutYions of Lungs, Liver, Spleen, Mefentery, Reins and Womb, provokes the Terms and After-birth, is good againft Difury and Strangury, gives eafc in the Piles, and is a potent remedy againft the Plague or Peitilence, and Poifon.

IX. The Preparations. You may have therefrom, i- Tjff Green Leaves. 2. A Juice of Herb or Berries. ;. A Juice of the Root. 4. A DecoUion in Water. 7. A Milk. 6. A Powder of Roots, Berries of Leaves. 7. An Oil. 8. A Gz-taphni. <?• A Difilled Water. 10. TfoFcecola r Starch.

The Virtues.

X. Tim Green Leaves. Being bruifed and laid upon any place pained with Sciatica or Gout, ir draws out the Morbifick matter, and eafes the pain: And applyed to the Bitings of Mad Dogs, Vipers, or Plague Sores, it draws out the Poion and Malignity, and fecures the Patient from Danger.

XI. The Juice of the Herb or Berries. Taken to the quantity of a Spoonful in any fit Vehicle, it prevails againft both Poifon and Plague; and if a little Vinegar or Juke ofLimons be added to it, it lbmewhat allays the fliarp hitting Tafte thereof: The Juke of the Berries given in White Wine, provokes the Terms in Women, provokes Urine, and prevails againft Difury and Strangury, brings away the After-birth, and deanfes effectually after Child bearing; and taken w^{ih}Sheeps MilA, it heals inwatd Ulcers of the Bowels.

XII- The Juice of the Roar, It has all the Virtues of the Juice of the Herb, butismuchltronger, and therefore muft be given with Caution; mixt with fome other proper Vehicle, it cleanfesall manner of rotten filthy Ulcers in what pan of the Body fover, and heals the tinkling Ulcers in the Wiluils, called Ozena and the Polipw.

XIII. Tfe DecoSion of the Herb, Root or Berrks, in Water. It has all the Virtues of the Juices, but very much later, and may be given to half a Pint at a time. Dropt into the Eyes, ir cleanfes them from any Film or Skin, Clouds, Milts, or other things which obfufcate the Sight; is good againft an Ophthalmia, helps their watering and rednefs, and when by chance they become black and blew.

XIV. The JHili IrismadebyboiSingThe Root therein: fr lias all th; Virtues of Juice and Dr- cdtion, and is good to heal inrerfui Ul:sr>: Do); % or 4 Spoonfuls or more.

XV. Th Ponder nf Roots, Berries or Leave*. Taken to a Dram, it is a moft preterit and certain Kcmedy agsinit the Plague, Poifon, aM the bitlhgs of Serpents or Mad Dogs; The Cimt taken mixed w^{ih} Clarified Ho/vy, jr Sugar, (iniorm of an frAttfuary) is admirably good againft Afthma's, Coughs, Colds, Hoarfencis, Wheeling, and fbepn. nelsofBreath: It is Sromatick, expels Wind, IiT gets, and Abfterges the Stomach, Lungs, un3 order Bowels, from tough Salt Flegm; and has 3II the other Virtues of both Juices and Decottion: Ic provokes Urine and the Terms, and admirably cl<nfes after Delivery.

XVI. The Oil of Roots, Berries, or Leaves. Anointed on pained places icgives ea% and is good againft the Palfic: Dropt into the Ears, it eales their pain, and helps againft Deathis j gives eafe a lib in the Piles or Hemorrhoids, and is profitable againft the Falling down of the Fundament,

XVII. The Cataplafk. The Root mixeti with Bean-blower into a Pultife, and applyed to the Throat or Jaws which, are Inflamed, helps them. The SoDls or Berries made into a Pultife with Ox-Dung, and applyed, gives eafe in the pains of the Sciaica and Gout.

XVIII. The DiftUUi Water cf toon or Leuvef, or both. Ic is good for all the purpofes aforefaid. An Ounce or more taken at a time, is faid to cure Ruptures, and to prevail againft the Lich. If the freff Roots are bruifed, and difilled with Milk, they yield a moft excellent Water to cleanfe the Skin from Scurf, Morpew, Freckles, Spots, or any other Defilements whatfoever.

XIX. The Foccula or Starch, It is made 1. Of the Pouier of the Dryed Root. 2. from the Green Root, at you make the Fcecula of Brioy Roots, Befides its ufe for Starching of Linnen, it has all the former Virtues of the Fonder, and may be given to a Dram in any proper Vehicle.

XX. A Caution. By reafon of the Vehemency of the Green Root, its Juice ought to be ufed very cautiously, and only to be adminiftred by a Wile Hand. The Poudei is an hundred timesmore fate.

CHAP. DCCXXXI.

Of WALL-FLOWERS Single and Double.

\ T"* HE Nantes. This Plant is called by the J. Arabians Keiri, or Cbeiri, in Creek, Aixvtic* x#*«A(: in Latin, *Leucoium Luteum* t and in Englifh Wall-flower.

II. Vie Kinds. There are two fpecial forts of Wall-Flowers, viz. 1. The Single Kind. 2. The Double Flouered. Of the Single Kind, we have, 1. Keiri, five, *Leucoium luteum fimphx vulgare* OurCommon Single Wall-Flower. 1. Keiri, five^ *Leucoium luteum Jimplex majrv*, The Great Single^ Wall-Flower. 3. Keiri fmilex fiore alho, The iWhite Single Wall-Flower.

III. Oi the Double Kind," we have, 1. Kein five *Leucoium Luteum jlore pleno vulgare* Our Common Double Wall-Flower. 1. Keiri Jive, *Leucoium Luteum Jlore pleno alter urn*. Pale Double Wall-Flower, a. Keiri, five, *Lrucvium Luteum majus ftort pleno ferrugineo*, The Douhle

t&iddifli yellow Wall-Flower. 4. Keiri, five *Leu-*
coium Lute urn flare elf no maximum, The Gicateft
Double Yellow Wall-Flower.

*The Dtfcriptions**

IV. The firft, oi «ui Common Single Wall-
Flower. *Its Root is white, bard, and fibrous, has*
/everaljmll, narrow, tcng^ and dirk green Leaves,
/ft without order, upon round, wkitijh woody Stjilks.

Wall-Flower Single, *Common.*

which hear at the tops many Single yellow flatten
one above another, each of them having four
Leaves apiece, and a very /meet Smell: After
tuftieb, com long Pods, containing reddijb Seed.*

V. The fecond, or Great Single Wall-Flower.
Its Root it lite the former, and tuill pfrijb in
Winter, if not defended from hard b'rojls. Us
'Leaves at vscil ar blowers^ are much larger than
the former. Tie Letvet are of a darktr^ and
of a Jhwing green color, and the blowers of a
very derp Gold yellow color, and commonly at
broad at a Half-Crown piece of Silver. The
Spike cr top t>f flovsert it alfo nutty longer, and
it abides much longer in Flowering, and is much
faeeter in its Scent or Smell. The Pojt for
Seed are thicker and (hortrr, with a fnall point
at the enA. Tf>is Plant is /lower in fpreading
it felf one into branches, and rxore lender to be
preferved^ and is increafed by Planting its Branch
es, being ilipt off.

VI. The third, OI White Single Wall-Flower.
It has a Ro«t like the jormer, and its Leaves are
<it green as the Great kind, but nothing Jo Urge.
The blowers fljnd tit tbt top, tut not in (o long a
Spike, but rather in a Tuft, and each Vtovaer is
compofid of», Leaves, of a white color mu much
hrgrt than the Common Kind, but of a Beaker
Smell. The Pods are not fo grtti at thofe of the
former greater one. -Tbit is more eafie to be pro-
pagatcd or increafed, but reqmres /one tort in
defending it from the Cold "j Winter.

Wall-Flower Single, *Great.*

Belonging to SECT. V.

VII. The firft of the Double Kind, fOurC^J-
mon Double Wall - Flo,ver. *T)n* " " u y foil*
Leaves and Stalks^ are very like »^o

Wall-Flower Double *Commtn.*

Single Kind, *faymg thai the Leaves hereof are not of jo deep a green color. The flowers jiaud m the top t-f the Stalks, one above another, M it toere a long Spike, which flower by degrees, the lowejl firjl, and fo upwards, by which means it is a long time in Flowering, the flowers being very Double, of a Gold yellow color, and*

VIII. The second, or Pale Double Wall-Flower. *The Flowers in this jiaud not Spike Fajbion as the former, but more open fspread, and do all cf them blow open almoft at one time, and. not by degrees as the others do. They ore of a paler yellow color, and differ in nothing elfe, fa-v'wg that the green Leaves hereof are alfo of a*

hethiid, or Double reddifh yellow Wall-Flower. Us Lava are a/ green, and almcjl <u Urge as the Great Single Yellow kind, or full ai big as the Leaves of the White Wall-flower. The Sawn a>e not much larger than the ordinary, but are of a darker yellow color than the Great Single hind^ and of a mere brgomifo or red color on the underfids of the Leaves, being at it were firiped.

X. Thiefourth, orGreateftDoubleyellowWall-Flower. *It* Leaves ere as green and as large, if not larger than tbofe of the Great Single kind. The flowers are alfo of the fame deep Gold yellow color, but much larger than any of the former Double lands, and as fweet in fmelling to, At any oi them.*

XI. *The Places.* Thefirigtowsuponoldbtoie and Brick-Walls, Mid fidesot very old Stone-Buildings, in many places through the whole Kingdom j but has of late been brought into, and Planted in Gardens, where the other fix kinds are alfo kept and Nurftup.

XII. *The Times.* All the Single Kinds do Flower often in ihii end of Autumn, and if the Winter is mild, ail the Winter long; but efpecially in the Months or^r February, March and April, even till the hear or^r the Spring Hops them. The Double Kinds Flower lbmetimes^ery eirly, andfometimes very late in the Year, but do not continue Flowering in that manner the Year throughout.

OBSERVATIONS.

XIII. 1. *As to the Single Flowers.* Their Seed lbould be Sown in September, in the Earth juft as you find it, without any previous Preparation; for it is the Nature of this Flower to grow upon Walls, and even amongst Rubbith.

XIV. 2. When they are Cultivated, more Cais is to be taken of them, that they may ferve as Ornaments in a Garden, for Borders of Beds and Flats, where they look very agreeably.

XV. 3. Having managed them as you do Flowets for Tranplantation, as foon as you think them thong enough to change their places, put them m one that agrees with them, and Water them daily, to bcilirate their taking Root

XVI. 4- Be alfo very mindful to clear them of Weeds; for this, as well as the Double Flower^ being Vivacious Planes, they will then grow to you^r liim&tton; the reft of their Culture is to be done as in the Double flower.

XVII. S• *Of the Double Flower you muji oe more drefuU and it is to be multiplied by Layers, or by Slips: If by Layers, chufe the belt, and lay them in the Ear* J and tbur ^ md* noc rife too faft, drive a Hook down upon them, aud let*

the Earth upon your Layers, be at the Ground in which they are laid.

XVIII. 6. Then Water them daily, that they may the better take Root, and iooner fatten them^r, felves in the Earth, and Jet them be laid as i'oon as they have loft their Eloweis, viz. in the end of May, or beginning of June; and leave them till September or Qtlober, at which time take them up, and put them either in Open Ground, or in Pots.

XIX. 7. If you place them in Borders of Plors, &c. the Garden Earth will do well enough- but if in Pots, rake two thirds of Sifted Kitchen-Garden Earth, and one third of Mould, with which (being mixed) rill your Pots, putting your Layers into it according to Art.

XX. 8. And iince thefe Flowers are apt to be injured by Cold, you mutt Houfe your Pots in time, left the Earth fliould Freeze and break your Pots, and fo hurt your Plants: But as for thofein the Open Grounds, you have no farther care to take of them, for they will always bear the Weather.

XXI. 9. If you multiply them by Slips, let them not be kept dry, that they may be Noutiied (b as to extend their Fibrous Roots round about to attraft the nourilhiug Sap, or Juice of the Earth.

XXII. 10. Let your Slips be well chofen, and put into Pots or Pans filled with Sifted Garden-Earth, with fomeMould thinly fspread upon ir, into which fee your Slips half their length •, put the Earth gently down upon them with your hand, to help to fatten them the fboner* Water them, and put them in a fhaJy place till they begin to fpring, after which, remove rhem into die Sun.

XXIII. 11. *Let* them be Planted at the fime time you do the Layers, and when they have taken good Root, let them be Tranplanted into the places you defign for them, not forgetting to Water and Weed them, as often as occadon requires it

XXIV. *The Qualities.* They are hot and dry in the firft degree, Abfterfive, Refolutive, Vulnerary, of thin parts, Neiirotick, Hytterick, andEmmenagogick.

XXV. *The Specification.* They heal Wounds, provoke the Terms, expel the Dead Child, and are good againft Agues, Apoplexies and Palfies.

XXVI. *The Preparations.* 1. A Juice from the Heads of Flowers. 2. A DecoQium of the Heads of flowers in Wine. 3. A Dcceffion of the Roots in Vinegar. 4. A Gargarifm. j. An Ophthalmick. 6. A Pouder of the Seed. 7. Oleum Cheirinum, five Keirinum, Oil of the Flowers. 8. A Bath to Sit in. 9. A Cataplafm. 10. A Dijlilled Water. 11. A Conferve of the Flowers.

the Virtues.

XXVII. *The Juice from the Heads of the Flowers.* It provokes the Terms in Women, expels the Dead Child, and forces away the After-birth -, opens Obfructions of Liver, Spleen and Reins • cleanfes the Stomach, Bowels and Womb, and is good againft Vapors, Paralytick and Apople&ick tits. Dofe 3 or 4 Spoonfuls in Wine, or the Di-jilled Water, or other fit Vehicle; mixt with Spirit of Wine, it cleanfes Wounds and Ulcers, and hails rhem.

XXVIII. *The DeeoSion of-the Heads of Flowers <n Wine.* If it is made ftrong, ir has all the former Virtues of the Juice, and therefore ought not to be taken of Women with Child, for fen of^r caufifig Milcarriage. Dofe half a Pint at a time. It fltengtens the whole Bffdy, or any Member of it

grown

grown looft and weak, by reafon of Paralytick and Con vu Hive Dirtempers.

XXIX. *The Decollion of the Roots in Vinegar.* Being taken inwardly in the *Dijlilfd Water*, and alfo outwardly applyed, it foteens the hardnels of the Liver, Spleen, Mefentery and Womb.

XXX. *The Gargarifi*.* Take of the Juice 6 Ounces, of the Difilted Water 3 Ounces, Roch-Alum 7, 1)rams. Spirit of Wine: an Ounce and half-, Honey 2 Ounces-, mix and diffolve. It cleanfes and heals Ulcers and Sores of the Mouth, Gums and Throat, and other parts of the Body, the parts being daily Gargariz'd or walht therewith warm.

XXXI. *The Opblbalmick.* Take of the Juice 4 Ounces-, Spirit of Wine or Brandy, 1 Ounces-^ Honey an Ounce and half%, firing TinQure of Aloes Succorrina, half an Ounce; mix and diffolve. Drop: into the Eyes it clanfes them from Clouds, Miffs, and other things which obfhcate the Sight-, heals Sores and Ulcers in the Eyes, jtrengthens them, and flops a Flux of Rheum falling into then.

XXXII. *The ?ostier of the Stel* It may be given to a Dnm in any proper Vehicle. It has all the Virtues of the Juice and Dccoftion, and may be ufed Morning and Night, as long as need requires. It has been given with Succelsagainst the Kickers in Children.

XXXIII. *The Oil of the Flowers.* It is DiP ulfive and Anodyn, gives eafe in pains of the Ireit, Reins, Joints, Nerves, Efc and is a very good thing against the Gout.

XXXIV. *The Bath.* It is made of the whole Plant when in Flower, boil'd in fair Water with a proportional quantity of *Genoa Soap*. It is good for Women to Sit in, who have a Itoppage of their Courfes, or are not well cleanfed after Delivery, becaufe it induces the Terms, and cleanfes the Womb of putrid Kecremens.

XXXV. *The Citiapiafm.* h is made of the Heads of Ihwers beaten in a Mortar, adding fome Salt. Bound hard to the Writts, it is ufed as a Kennedy to cure Agues. Bui if made by boiling the fame in Vinegar, with the addition of Barley Yhwcer, and then applyed warm to places pained with the Gour, it gives eafe in the pain, difcufes the Tumor, cures the Difeafe, and admirably itrengthens the part.

XXXVI. *The Difii/led Water from the Heads of Ylowxrt.* It has the Virtues of the Juice and Decoftion, but nothing near lb efficacious: mixt with a quarter part of Spirit of Wine^ and dulcified with white Sugar, it is fa id to deanfe the Blood, comfort the inward part, eafe pain, and caufe (jheatfulnefs.

XXXVII. *The Conferve of the Flowers.* It is given to the quantity of a large Chefnut or Wallnut, Morning, Noon and Night, against Convulsive and Paialytick Diftempers, and AWeaknefs of the Mefentery, Womb, and other Bowels.

CHAP. DCCXXXIII.

Of W H E A T Common;
Red, White, Grey.

TP HE Names. It is called by the Arabia**
X tienta, and siencha, in Greek n**J ^
(irumentumA h'ruendo:) in Latin Tnti^p
(quod tritum ex Spkis fit, vt dial Varro:) all
Siligo, which is the Name of the fineft and mo"
pure Wheat; and in Englim Whcjt.

XL The Kinds. Wheat if we refpeft the E<<
only, is either Naked and not Bearded j or BeJt?-<
ed; bur if we rdpeft the color chiefly, it' ?
threefold, vis. l.Trkktmiriflirnbri, vel
rubris, Red Wheat, tvbich is accounted the
and bvlr of all Wheat, and this is twofold, v'f
either arifii fikttJL with Bearded Ears -, or J'
tkum muticum, Triticum ruhum fpxci mitid, ot

Wheat Naked without Beard or Awns, 2. *Triticum album*, *Triticum unguis a/bis* •, *Silrga*, White Wheat j and this is also twofold, viz. *Trir'at album Arifis Munitum* vel *Arijis Spkatts*, White Wheat with Bearded Eats, or Ears with Awns ^ or *Triticum album muticum* •, *Siligo*, vtl *Triticum album Spica mutica*, or WliEe Wheat without Beard or Awns, and these white Wheats some think to be as fine a Grain as the former, and some will have them to be the finest and best Wheat of all; -without doubt the difference in Goodness between them is so little as not to be discerned. 3. *Triticum Gri/eum*, vel *Cinertum*, *Triticum Crifeum arifis munitum*, and this is that which I take to be the *Zch*, or *Zia Zea* of the Ancients, which they called *Spelta* or *Spelt-Corn* -, and *Adorcum* also *Ador*, which the Ancient Romans made to be a kind of bar, or *Bread-Corn*, being a counterfort of Wheat: This withus, is generally through the Nation called *Gray Wheat*, and is a very good and profitable fort of Grain, tho' not so absolutely fine as the *Red and White Wheats*. To these I add, 4. *Triticum Spica multipliu*, *Triticum ranofum*, the Branched, or manifold Eated Wheat, which *Tabernimontanus* calls *Triticum Tiphinum Spica muhip'ae't*, which for a 11 that I know may be a Species of the *Typha*, or *Tipba Cereali* or *Bodontus*., their Descriptions are fortarily alike.

the Description.

III. The first, or Red Wheat, Its Root is very fibrous, and towards its Head as it is jointed,

Wheat Red or White, Bearded.

from when it is ripe 3, 4, A TMrt or left Stalks v>itb fair long and green Qrafs-hke Leaves, and

as the Stalks grow up higher, at every Joint on Leaf, and at the joint!) Joint usually comes forth the long Ear, or Spiked U.; iJ, one true Stem, without any Branches, which while the Head lies upright, blooming first yellow Aglets, which when it is ripe, a little bows down or bends its Head, by reason of its weight, which is set with two double rows of Grain or Corn, within several Chiffy 1

Wheat White or Red, not Bearded.

or Husks, which when it is cleaned from them, it is of a firm compact Substance, which is of a Dun reddish color •, and the whole bar is of a kind of reddish color when it is perfectly ripe j which is either Bearded with Awns, or not Bearded, but plain and smooth, that being all the difference, which yet makes no Difference in the Goodness of the Corn.

IV. The second, or White Wheat. This in its Roots, Leaves, Stalks, Ears, Viewers, Corn, Magnitude, and manner of growing, differs nothing from the former or Red Wheat, but only in the color, the Stalks and Ears being whiter, and the Grain or Corn of a clear yellowish white color. It is also twofold, viz. either Bearded with Awns, or plain and smooth without Awns, in like manner as the Red Kind. Some, and the Generality of Farmers, maintain the Red Wheat to be the finest and best Wheat, and to make the Sweetest and whitest Bread: Whilst others again maintain this White Wheat to be the chiefest of all, and to make truly the Best and Whiest bread. I indeed know them both very well and have

tried them, and have seen many made of the fine Flour of them both, yet I will say, by all that I could observe, that I could find no difference between the Sweetest. Whiteness and Goodness of the one and the other; but that the one appeared as good as the other, and

Wheat White Bearded.

tehlmut doubt, the difference is little or none -, or if there be any, it would puzzle the Wifeft of Men to find on vibkb fide the Whiteft and bcfi lū ffdi

V. 1 he third, or Gray Wheat. This in its Rcots, Stalks, and m<tnncr ofgrouting, is Me the but the Srnli h larger and floitger,]»gher,

Whc&t Gray i'Zea, or Spelt Corn.

nd rj a brown color, and the Head or Ear i s much larger, of a brown color alfo, teitb }»'>' Sides or Rrnas ofGrains or Corn, fo that it f o be four fqitare^ which it contained m rowa tiuskt^ all wbieb are Armed with To that the whole mikes a large Bearded Ear-, <M'

Wheat Gray, or Greek Wbeti>

the color tftlt Grain within, is also j f oftheRsd Wheat, but much prier, theOrmtt being much of the fame faflnon, but ^*w/>f; £ fuller and forger. The Meal or Flower oj «£j makes admirable good White Bread, Cakes, S^ it is fcarcely Jo White as the offxrt, nor Sweet.

VI. Tbe'fourth, or Branched, or manifold W* Wheat. This in its external form cf Kf Leaves and StMt. h much like the Red V

the Red Wheat, faviirg tba the Ear cf this »& feveral other /mailer Ears, at 2, 4, 6, or >!!C K growing out of the fides thereof. This f^iJi aSpeaes e/Dodonxus's Tiph, or TriticumIF num, which by the Dejcription thereof, can 0* other than our Bearded Red Wheat. It IS. Defferred. Tiph a rifts up with a fngle **" An- Stlkl or Straw, the Ear is leng and t* fturdcA with longy hard, flatty Awns, JF^ff clofely fet together, and the Grain is i^na .} light, but hard, and of a redder color ib^n e^ V^% at, enclpded in dnyers Cheff; HukS- * Icems 10 me to be Our Red Meat before V* Imbed.

VII. Some may Objcft againft me, That Gray Wheat is nor, nor can be the Zen, 01 ^F of the Ancient Greeks and Ramans, beca^1^ they, that ZM, Spelt a, or Greek-Wheat^ r^a ^Jr Naked, without Beard or Awns, to (ot which, they bring ths Teltinaonie* of

r, Gerard, laef arid Iragm;) whereas our
 y Wheat has a Bearded or Awned Far; to which
 I anfwer, that *Lugduncifis* has Defcribed and fet
 forth his *Zea* with a Bearded Bar; and *Metbiolm*
 has given us his *Spelta* with Awns, or a Bearded
 Ear alib: 'Tis true that *Tfoxopbrafut*, from whom
 the *Zea* or *Spelitt* is taken, in his Defcription has
 laid nothing of the Awns or Beard of the Ear;
 tut let us take all the reft of his peicription, as it
 is in his *Hijorie Plarttarum*, lib.[^] 8. cap. 9. and
 compare it with *Camerarim* and *Tragus*^their *Zea*
Spita mutica, or any others wh» maintain the
 fame, and you will find that they are none of
 ipbrahmt Plant.- Thar oiTlxopbraflvt is thus
 bribed, it' R^{"" arma}>'< orbufiy-, andfiron-
 • ftfneil in the Ground, out of which they draw
 uch Nourijhincnt, and it rifes up teitb many ftrong,
 jointed, and high Stalks, with Leaves on them xtoft
 like to Wheat \ the Ear is plentiful in Corn or
 Grain which are enclodj in many Chaffy Husks,
 being the lightcfl of others, and not fo eafily beaten
 out as out of other Wheat; and is very pleafint
 to every one. Now letting alide the Anns of the
 Ear, which are here omitted, Our Gray Wheat is
 the molt like it of any thing in the World, and
 if that be not the *Zt*& or *Speha* of the Ancients,
 I can find no other Grain in the World to which
 it will, or can agree. As for *Qamerarius* and *Tra-*
gm, their *Zea* or *Speha*, can be none of this of
Tbeophrafl its-, for theirs has no fuch Bitthy Root,
 no fuch ftrong nor tall Stalks, nor yet to many
 growing from one and the fame Root; And as the
 Stalks of theirs are low, and fewer, fo the Ears
 are fmaller, and not orderly fet in Rows; by all
 which it is evident, that they had no true Know-
 ledge of *Zea*, or *Greek Wheat*, which is without
 doubt, what we call *Cray Wheat* here in England.

VIII- *The Places*. All thefe Grains are not on-
 ly Sown almoft in all Counties through all the
 Iflands of *Great Britain*, but alfo in moft parrs
 of the Habitable World. 'Tis true, that not long
 lince they were Strangers in *America*, but fince our
Engtifh have Planted and Inhabited almoft all iht
 Ealtetn Coaft or *Florida*, from the North of *Nova-*
Scoria, to the South of *Carolina*, they have been
 made Dentzons of thofe Countries, and arc now
 become Natives of the fame, and prolpw with the
 fame increafe and goodnels, which they have here
 with us.

IX. *The Times*. They are Sowed afterHarveft
 in *Autumn*, before *Winter*, and tho' they prelentty
 Spring up, are fo hardy as as to endure the (harp-
 eft Seafons, and the Ears come to their ripeneffs in
July and *Augufi* following.

X. *The Qualities*. All thefe forts of Wheat
 are temperate in TefpeEt of heat or cold, drinels
 or moifture, are Altriiigent, Vulnerary and Nu-

XI-^{ib*} *Specification*. They flop Fluxes of the
 Bowels, Nourifh much, and reftorc in deep Con-
 fumptions.

XU- *The Preparations*. You may have there-
 from, r. Pollen & Silrgo, *Meal and Flower*.
 1. Alica vel *Chondrus*, *Pultage*. %. *Bread and*
Cakes- 4- *PuMwgs*. *. *Athera*, *Panada*, or *Pap*.
 6 *Far*, or, *Boiled Wheat*. 7. *Ttagus*, or *Flummeiy*.
 g' £mylum, *Starch*. 9, *Fermentum*, *Seven*.
 JO *M'ult*. 1 i. *SweetmeatWafers*. 12. *AGelly*.
 1- *Sanguis* Extraftum *Tritici*, *Blood of Wheat*.
 id *AOfmetick*. l'. *ABdffim*. 16. *ACataplafm*.
 17' *An Oil by Expreffion*. 18. *AClyJier*. 19. *Mum*,
J'StrmPrinh. 10. *A Spirit*. «.«*—»™
frumenty.

The Virtues.

XIII. *Pollen Sc-Siligo, Meal and Flower*. Tho'
 Silgo be the Name of the fineft and bett Whear,
 and of the *White Wheat* in particular; yet *Siligo* with
 them did alfo fignify the pureft and fineft *Wiugi*^
 Flower. Thefe are of uie to make *Bread*, *Coxes*,
Puddings, *Pultage*, *Panada*, *Flummary*, *Starch*,
Levea, *Wafers*, *Oelly*, *Cataplafm*, &c. Outwardly
 applied to Simple Wounds newly made, in a
 large quantity, it prefentty (tops the Flux of Blood,
 and a Spoonful of them mixed with a Glafs of
 fair Water, and fwallowed down, is good againft
 Heart-burnings, and Acidities of the Stomach.

XIV. *i'ult,lgc*. It is called *Alien*, *b *Aiendo*,
 from *Nourifling*, and fo all *Latin* Authors have
 Tranflated *Chondrus*, which is taken to berhemolt
 excellent *Ytttage* ujed in thofe Ancient rimes: If
 made of *Milk* only, or *Milk* and *Water*, it is pro-
 perly a *thick Milk*; if of *Water* only, it is *Pvf-*
tage. It is good to fhengthen the Stomach and
 Bowels -, it nouiflies very well, and Itops Fluxes
 of the Belly.

XV. *Bread and Cakes*. Tbefc are as it were the
 Staff of Life; fot with *Bread* and *Water* alone, a
 Man may live many Years. If the *Pafte* be Fer-
 mented with *Leven* o' *Tej*], the *Bread* o' *Cakej*,
 will be much more wholelbm, and more eafie of
 digelHon -, and with *Bread*, the *Panada* or *Pap*
 for Children, and new Bom Infants is made, and
 for them it is better to be made with *Water*, than
 with *Milk*, becaufe then it is not *Stuffing*. If
 eaten dry, or alone, it abforbs the Watery humor
 in the Stomach and Bowels, and is prevalent againft
 Fluxes of the Belly.

XVI. *Puddings*. They have the Virtues of *Bread*,
 are good againft Weakneffes and Fluxes of the
 Bowels, and if madewith *Milk* and *Eggs*, ftrengh-
 ten much, and reftore in deep Confumptions, be-
 ing alfo very eafie of Digeftion! If they are made
 of pure *White Bread*, they will be yec pleafanter,
 lighter of Digeftion, more Nourifhing, and better
 for the Stomach -, by reafon the *Bread* is a Fer-
 mented Subftance.

XVII. *Panada, or Pap*. It ismadewith *Water*,
Milk and *Water*, and fometimes with *Milk* alone,
 of the pureft and fined *White Bread*, and chiefly
 for Infans and Children, and fuch Elder People as
 have been long Sick, and have fuch weak Stomachs
 as that they can fcarcely digeft any thing. It is
 eafie of digeftion, nouifhes much, and may be
 made very grateful to the Stomach, by rhe additi-
 on of *White Sugar*, *Wine*, *Juice of Oranges*, as the
 Sick likes beft, and may mott *quadmre* with the
 nature of the Difeafe.

XVIII. *Far*, or *Boiled Wlieat*. I know *Far* has
 been thought to be a peculiar Grain, or a mixture
 of feveral kinds of Corn among the Ancients;
 but what particular Corn, OI Corns k Iliould be,
 I krtow no Author has determined. Bui *Arch-*
genes in *Mtius*, gives us the Artificial matter, *vis*.
The Wheat is fteeped a while in Wate> and being
taken from thence, it put into a Mortar, where it
is ekanfed from the husks, by gentle beating with
a wooden Pefile afterwards it is laid in the Sun,
and then rubbed with the Hands tilt it is fully
eleanfcd; which done, it is broken a tittle grofsly,
and being dried, is kept for ufe, to be Boiled upon
occafion in Water. *Ptirkinfon* is of opinion, that
 this well refembles our *Boiled Wheat*, which, #
 ter it it freed from t^e lluskas jufl now declared^
 it it boilid in *Water* till it brcaJtr, and become^

pretty thick, which Country People white it « for, do put into Wooden Dijhes^ and fo bring it to London, to be Sold in the Markets, by the Name of Diih-Wheat and Bowl-Wheat.

XIX. *Tragus, or flummery.* It is made of the ^iefi (f the Flower, mixed with fair Water in a due proportion, and Eoil'd up to fuch a ibicknefs, as being cold, it will cut with a Knife i which whiljl V** is put mitt fmall, flat, white Earthen Dijhes, in which it it kept till it is eaten. They commonly mix with it at Fating, Wine and Sugar, and fo it cbears the Heart, revives the Spirits, comforts Nature, andrettores in Confumprions. Some that ate great Rovers of Milk, ule that initead of the Wine.

XX. *Amylum, White Starch.* Ittsmadeofthe fineit Flower of the Wheat, by the means of fair Water. Made into a *Lahech* with Honey, it is good againft Coughs, Colds, Rheums, and Spitting of Blood, and cauias an eafie exoe&oration of Flegm.

XXj. *Fermenrum, Leven.* It is made of fome Palte or Duugh of the Bread jiier Fermentation, and being made up into a round flat Ball, it is kept in a heap of Table or Bay-tuft powdered, till n grows fowre, which you may know both by the Smell and Talte. It has a power to draw and digilt that which is far off; and therefore U good to be put into *Drawing Cctaplajms*^ to caufe Suppauation<jiTumors. Appiyed to placesafMled with the Gour, it in a fhort time eaias the pain: It is good alio againft Warts, and hard Knots or Kermis in the Flefh, beingapplyedwitMbmsSilr.

XXII. *Mauls.* It is made altogether in the firme manner as you make the *Mault of Barley, the Wooer of it being mixed with Turpentine, Honey, and the Tolk of an Egg,* makes a good lltgUtive •-, mixed with Ammoniacum, Leven, and a little Vinegar, it difcuffes and fohens hard Tumors •, but its chief uie is tor making that fort of .. Drink called *Mum*.

XXIil. *Swea-Mrai Wafers.* They are Sold at i^t CsnfeSiuners, made up into finall white Rouls. Being ejten, they fingularly gratifie the Stomach, and it:engthen it, itop Fluxes of the Bowds, and reitorc in Consumptions. As they are made of the ourtlt and linett Howcr, with a imall addition of Milk, Eggs and Sugar, fo put into Water and they cure the Bloody tlux, and are good .. Kuptores in Children.

XXIV. *The Gely.* It is made iff the former *Waji-rs* bailed in a fufficient quantity of Water, u> the Conjiit-ncy of a Gely; or it may be made of the *Difb - Wheat,* at Sef. XVIII by adding a tittle Water to it, and *Draining it very hot thro' a Cbeefc Cloth.* It is good againft Spitting of Blood, Coughs, Colds, Hoarienels and the like, being diily eaten.

XXV. *Sanj>uk feu ExtraSunt Tritiei,* Blood ot **Whew.** It is made as yjo make the *Sunguk Sityriona, Confolid* majoris, Potatoes, Parftieps, &c.* It is an admirable thing to cheat the Hem, revive the Spiriis, refieth the Bowels, comfort Nature, rettnrein Conliimptions, and recreate Languilhing Nature. The fineit White Bread is belt ro make it of!

XXVI. *The CofmeticK Take of the Flower i, Ounees, Honey t Ounce, Vinegar a Quart; boil them gently together, fo long till the Flower will not eajily Jcttie.* h is laid ro be good againft ft, Morpbew, Sun-burning, Tanning, Freckles,

11. *The Bal/am.* Take Turpentine i Ounces -, leAsiff three Eggs, mixthem till the Turpentine » perfeffly Aiffoivcd in the fc/Ar, thtn sdd

Hirney, Balfam ^/Feiu, of each two Ounces j J Wheat Hover enough to give it the Confijlemy y Balfam. It is Digftive, Abiierlive and HeaOnfe I good Vulneroy in all Simple Green Wouu*? Plague Sores, running putiid Sores, and Olu Ulcers.

XXVII. *The Oil by Expretfen, It is Prefid j in an Almond i>refs out oj the wbrfi WfcM. between two thick Iran or Copper Plates, being heat very hot.* It heals all inveterate King-worms; Taiars, Scabs, *Herpes,* to. on the Face or Ciitu, or other parts of the Body, being laid on wann* and hereby fays *Galen,* we have known many to be Cured. *Matthblus* commeiids the &me to be put bto hollow Ulcers to heal them. The lime is alfo uild lor Chaps in the Hands or Feet, by raicao of Cold, as alto to make a rugged Skin finooth.

XXIX. *The aiaplafm.* It may be made of «* *Leven abnc, mixed wiib a little Vinegar;* being appiyed, it is good againit the Gout, and the naia Tumors in Womctii Btealts. A *CaUphfa mm ofKew What Chevied in the Month,* appiyed toa place birten by a mad Dog, cures it. A *CMploj® of Brad made with red Rose-U'ater,* appiyed to the Eyes which are hot. red, and inrhmed, orate Blood-fliot, hcili: ihem. 4 *Cataplafm made Oj Bread tried in a trying-Pun, trnth Wine Vintgor, bciag* appiyed very hot for an Hour at a time, tot 12 or 14 Days together, to Kings-Evil Kernels in Neck and Throat, is faid perfttly to diflol^{ve} and cure them. A *Cataplafm made rf Wheat-Nh^<' 1 with juke of henbane,* being appiyed, will "Op a Ftux of Humors to the Joints. A *Catiphfi* ?l Wheat Meal Boil'd in ymegar,* Icing applied, <v>" help the ConrratVion of the Nerves, or MnnKin& of the Sinews, as *Pliny* fays. A *Caaplafm of tt» Bran, with a little flower, made by Boiling it W the jharpefl Wine yinegar,* being applycd, Ottcia and difcufTes the Swellings of Womens BreaW 5 and appiyed prefently 10 the Biting of a v i per, draws tbnh the Poifon.

XXX. *'Be Clyjier.* It is made by foiling tbt *Braa (not too near Sifted) in the Broth made Oj « Sleeps Head and Gathers •,* which being exhiburf, does open and cle^ne the Body of fharp and ciuac Humors, and to eafe the Griping pam ot tn> Bowels i and all this it will more eflentially &° if to every Pint thereof, you add four Ounces *Brown Sugar, and a little Salt.*

XXXI. *Mum, or very Strong Drink.* .. made in the fame manner a* you make very *Strong Beer of Barley Mault.* It comforts t"e Stomach and Bowels, ihengthens the Back, ana is a Reiterative ro fiich as are in a Pining a"': Languifhing Condition, fortifying all the Natutai Faculties or the Miaocofm.

XXXII. *The Spirit.* It is drawn off from *OH or Stale Mum in an Akmbiek, m the very ft"**, manner at you draw off the *Maulted S^d^, % Barley;* or as you draw Spirit of Wine. Untf it be very carefully drawn, it will not tafte ve J pleafanly, by reafon it is apt to beloaded wiw *Empyreum** -, bnt if it is drawn neat and cle3°i is nude fo by ReSificiuon, it will anfweral¹^ ends of *Spirit <f Wine,* and perform the thines.

J9KX1U. *irumety, O1 frumenty,* it i .. from *Trumetum,* an old Name ibf Wheat .. It is aade oj Boiled Wheat, v&icb is that which i' Sold in Wooden Dijbes or fowls, in the M London, and called *Dijb Wheat* (at Sect aforegoing,) by Boiling it up Kith a fyficiext i my cl Milk, 10 make a Puitnge thereof tf " thtcknefr. Ir is Stomatick, ftrengihEtishe fo ttops Fluxes, and reftoraiivc in Confumptions.

CHAP - DCCXXXIV.

O/WHEAT Indian:

%

MAIZE.

I. T⁻¹ ti E Kami. We know no G«A* Name for it i but it is called in Latin, *frumemxm Tunicum*, Turkey Wheat; *Frumittum Indicum aliquorum* & *MUivm Indicum maximum*: in *inglijb, TurfoWbs**. Indian Wheat, Indian Corn, and Matte, as the *Wcft-Indians* call it. J ..

II. The Kinds. We have but One Species thereof but fomemay account them Two, tyreaion of their Magnitude, which I lake to be rather from the Nature of the Soil s a rich Soil affording a very laree fort; whereas a poor Soil gives you only a Dwarf kind of Plant: But there is a great Variety in the Colors of the Ears, fome being all White, ibme all Yellow, fome all Red, and Tome Blew. And again, fome Ears have Grains of alt thofeCo; lors at once; but this difference, we account makes no differing Species of the Plant.

the Defcptions.

f ill. Its Root « Thick and Bujhy, full of graft Tibrts or Strings, from rnlxnce fpring up fiveral ftrong and tall Stalks, fix or eight feet high, ai thick as a Girls Wrijl, if it grows in any rank Ground, full of great joints, with a white Spongy Pith inthe middle. Tbc Leaves are long, twice OJ

WheatIndian: Or, Maize.

lane as thofe of Millet. At the Tops come forth Ffe» n in leather-like Sprigs, bending doton- j like as the Tops of Millet, which are either

White, Yellow, Red or Blew, as the Grains in the Ears will prime. T)efe blowers full atway without any thing of an Ear Jucceeding them: Bur tabilft this i'voax'ring is, come forth the Ears at the Jdntx of the Stalks with the Leaves, from which in two or three of the lower Joints up^ towards th flops of the Stalks, One at a Joint, which have many leaves enclojng them, and are fmallefi at the Top, toithn fmall long Bufb cj Hairs or Threads^ hanging doyifi, at the Ends -, which uicn they are Ripe, are to hi gathered. The Leaves enctojng the Ear being taken awtry, the Head or Ear appears, much like to a long Cylinder {not a Cane} fit teeth 6, 8, or 10 rows of Grains^ at large altoft as Teafe, erdtfdm(~ times larger-^ not fully round, but flat on the fides tob'ich jtiin one to another^ orderly and very dofily fet togctly;r, of the fame Colcr on the em fide as the Bloomings were', viz. either White, llellotv, Red or Blew enly, or ojfomc or all cfibofc Colors together ± the vshote Gram k hard and brink, its external Husk being very hard atmoji like a Shell, but its inward Pulp, when grovmd into Meal or Mower, almofi as white as Snow •, wljkb Grains when Chewed, arefomewhat dry, and not clammy in the Alouch, as our Wheat it.

IV. The Places, h is Cud to grow ia Turfy and that it was h'tft brought from thence: It is true, that it is now uiviverOthY Planted almct all over the JVeJi Indies -, but ic is certain, that it was not an aborigine of ihofe Countries; but was fitli: carried thither by Europeans. It rtquirdl to be Planted in a rich and fat Ground, as Millet doesj for apoor lean Soil, makes butapoorfoitof Corn. It has been Planted in our Gardens in England, and in very hot Summershas come to perfection with us.

V. The Times. It is Sown in the Spring, in March and April-, and the Grain is for the raoft part ripe in/^ and dugft.

VI. The Qualities. It is Temperate in refpect to Heat or Cold, and dry in the fiutt Degree, Abterfive, and very nourishing.

VII. The Specification. It cleanfcs the Stomach, wels, Reins, and Urinary Patfaggs ofTarnrous yucilagcj uifomuch, thait it is laid to be very eleftual to hinder the breeding of the Stone. It alfo nourilhes well, with a thin and Abfterfive Nutrimnt, and reltotes in Confumptions.

VIU. The Preparations. Inthe Wfji Indies there s made thereof, 1. The toiled Grain or Maize, i. ?u'tage. 3. Homine. 4. Bread, Cakes, Puddings. % . Parched Cam. 6. ACaiaplafm. 7. The ht/le Grain.

the Virtues,

IX. The boiled Grain or Maize. The Corn is firji fieeped a little in warm iVater, then beaten in a wooden Mortar with a wooden Pefile^ till all the external harjt Hull » beaten off; then it is boiled in Water till theGrain is perfeilly /oft and barft in the boiling, and becomes almofi like to our boiled Di/h W^eat, They Eat it beingfeafoned ivith Salt, by mixing with it Butter, ot Milk, Cream or Wine, and Sugar, it admirably nourifhes and ilrengthens, and makes the Country Man able to go thro^l Labour and Bufinefs.

X. Pultage. Tie Grain if freed from the external hard Hull as afore fold: then being dried iti the Sun, it is growitd in a Mill to Me'il, which being Sifted, and boiled in Wa^cr >till it is foft, is yet more boiled, till it becomes of the confiftance of a thin iJtjfly tudding. It is Eaten as tte former boiled Grain, with Butter, Salt, Milk, Cteam^ot Wine and Sugar, and has the fame Eft'etls in Wu- rfiling and ihengthening thefe that Eat it.

XI. Homtne.

XL. Hemine. This answers to the *Frumenty*, made of our boiled Wheat. *If they take either of the former boiled Maize, or of the Putage, what quantity they please: to which they add a sufficient quantity of Milk, which being boiled, may make it of the thicknes of our English Frumenty; and fame put in fo much Milk as to make it a little thinner, according a: every one likes.* They generally Use it, being made Savoty with Salt and Eruer, and ibme put Sugat to it. It has all the former Virtues and Effects, betides it cleanses the Bowels, and always keeps them Soluble, at leall from being Costive.

XH. Bread, Cater, Puddings. They are made by the Mower, with Water or Milk. This Bread whilit New, is wonderful Sweet, beyond any that can be made of *European Wheat*, but being Stale, it eas iomehing harfli, and more unptealing: After one is used to it, it is then Eaten with a Gratefullness to the Stomach. Somemake the Bread, five with half *Flower of Maize*, and half *Ylower of Wflxat*; and fbme add to the *Yloxaer of Maize*, *F. ddo Ro-jtt boiled soft*, which makes the Bread keep moiff a good while.

XIII. Parched Corn. This whether it be of the dried Corn, or before it is ripe, is much eaten by the *Indians*, becaufe of its easie Preparation, and is exceeding Gratefullnes to the Palate.

XIV. The Cattapiafm, 'tie fbmr mixed with *Levrn, prnl brought to a Cvnfiflency with Oil of the Seeds Ricinus or Palma Chrifti, or frejh Butter;* bting applyed, isfaidto ripen Apoltems.

XV. The whole Grain. It is given to Cows, Oxen, Hories, Hogs, Poultry, ifc. to Nouiiff and make them Strong, and also to Fatten them.

Oj WHITLOW - GRASS :

OR,

N A I L - W O K T.

1. 'Tp W E' Names. It is called in Greek $\mu\alpha\lambda\alpha\kappa\alpha$ - $\alpha\lambda\upsilon\sigma$: in Latin *Paronychia* -, and in English *Whitlow-Urafs*, or *Kail-Wort*.

W. Yhc Kinds. There are 1. *Paronychia vulgaris Dodcnai, Paronychia com munis folio Alfmis Lobelij, Lugdunensis, V? Cameranj •, fhlapfios minima ipeccit Thali} Myrfor it alter* species Lugit-itenfis; BtrrJa Pafloris teculo oblongo Baubwi; Our Common Whitlow-Grili.* 2. *Paronychia folio rutaceo Ijibelij -, Paronychia folijs incijit, Paronychia aitra Dodonai; Paronychia tertia Tabernmontani \ Jagged, oi Rue like Whitlow-Grafs. ; Paronychi* mahr -7 Pitofella Siliquata major I haln; Aizoon Tele phi un Delcchampij Lt/du* venf} The Greater Whitlow-Grafs.* 4. *Paronychia alter* minor, Pihfella Si/iauata minor Thali}; Paro/ychij altera jolius Ah-aeri Gefneri •.* The Less Whitlow-Grafs.

the Descriptionns.

III. The first, or our Common Whitlow-Grafs. Its San consist of a bunch of small fibres; from whence proceed many small and long Leaves lying next to the Ground, somewhat like to those of Chickweed, but somewhat longer and whiter -

Whitlow-Grafs Common.

Whitlow-Grafs Common,

from among which, several slender naked not above 4, 5, or 6 Inches high, bearing white Mowers one above another, exceeding after which, come from flat Pouches, in any of Thelapi; which it contained very Seed, of a (harp Tajle.

IV. The second, or Jagged, or Rue-like Whitlow-Grafs. 1st Root Unnull and Ysbroia in former, which sends forth some pale or reddish green leaves, cut in the edges into 2^{cr} small parts, almost in fashion like to those of Rue 5 from among which, grow up divers *

Whitlow -Grals Jagged.

molt naked Stalks, each Spread out into several Branches, ail of which, have at every Joint, one fmgk but Smaller Leaf much Me the farmer -, which Stalks towards the tops, bend a fitte dnwn-thirds with fomic while Flowers at the tops, greater TJfo foimer, and Husks which Md the Seed, which is greater alfo.

V The third, or Greater Whitlow-Grals. TBK from a small iibrous Root, bat very many Leaves fpringm l«**, and lying »n the Ground in a round Compafs, one by another, about 3 Inches lone, and an inch brci.l <\$tfcg, rough, hairy, of a dark, green color, and .1 huh dented about the edges, growing on Jb&rt l'ooiftalft; from the middle of which, rife up one or two, rarefy three, fmall round naked Stalks, with few, or rather no Leaves thereon, fo, aeek as jearcets to fiand upright, but bending downwards; at their tops cmc forth feveral fmall white Flowers, after which, come /mall long Pods, containing fmall redJifk Seed, but netting fo hot or Jharp at the Seed of the jirji.

VI. The fourth, or Letter Whitlow-Grals. // bat a Root which is fmall, hard and woody, the Plant is /mailer than the former, having divers heaves lying on the Ground, Irffer than the Greater aforegoing, like unto the leffer Mouie-Ear, called CltS-Fooc, but not fo hoary, yet a little hairy, of a ye/lowiff) green color y from among which, irow up feveral fmall, firait, and crefled Stalks, 6 Inches or more high, branching forth at the topi, tehere cvmc farth feveral white Mowers, after which fdiom very flender long Pods, like thole cf Flixweed, full of /mall reddifl> Seed, cu fkarp and hot in Tafa a* Creffes.

VII Vfe Places. The two firfl are often found to grow upon Btick and Stone Walls, and upon old Tiled Houfes which are come to na# much

Much upon t'lem i and foretimes they are found growing upon the fhadowy fides of old Walls. The two laft are found growing upon open Hills, and other like.

VIII. The fometimes in January ^Ubruary, v & er be mild, for about the end or wS die Weather begins co grow warm, April

they dye away, and are no more to be ften al the Year after.

iX. The Qualities. They are all of them hot and Jry in the third or fourth degreej Atiru&ive ami Sunpurative.

X. The Preparations. You may make, 1. A Qal/am or Ointment of the whole Herb. s. A Catnplafm thereof.

'the Virtues.

XI. TV Bdlfam, Ointment or Cataplafm, are applied to rhofo Apofteras at the Fingers ends, called felons, and by the Roois of the Nails called Whitlows, which it is did they effeftually cure.

Whorde-Berries, or Bilberries Marjb.

VI. The fourth, or Marfh-Whorti, or Btlberlies. *lit Root is long and white, running a/lope under the Harih, and not dozen right; whence spring up severall flendzr brmznifh Branches, like unto Strings, fiercely exceeding a foot in length, jmrctptng upon the Ground, befit with many /mall WLCJVCS like unto thole of Thyme, at certain dijan-tty green on the upperfide, and oftentimes hoary underneath. The Flowers come forth at the tops, growing upon long threddy Vootfialks, eonjt/ing of five rcdidjh Leaves, with an Vmbone or Pomle in the middle, which tarn into round reidjtjh Berries, having a fowrijh Aft'ingent Tafle.*

VII. *The Places.* The firft grows on many Heaths, and in Woods, and on Baren Hilly places in many parts of England. ' It lias been found on *iampfieitd-Heaij\ Vincbley-Common*, and *St. Johns Wood*, not far from London. It prolpers beft in a Lean Baren Soil, and in Untill'd Woody places; and are now and then found on high Hills fubjeft to the Wind, and upon Mountains. They grow in many other parrs of England, as on the Hills in *Qiefnre*, called *Broxen-Wlh*, near *Beefflon-Cajlle*; and feveral other places. Thefecond in the North-parts of this Land, as *viLancafhire* and *Torkjhire%* on the HiHs in *Lane&fhire*, upon *Pendlc-tills*; and in *WefimoreUnd*, at *Crosby Ravenfaiaith*, &c. The third grows as *Label* fays, on every Hill in *Provence*; and fome lay they have found it growing in the Southern part of our Ifland. The fourth grows only in Moorifh places, which are often covered over with Mofs\ in Bogs, Watery and Fenny places, efppecially in *Chefnre* and *Staffordjhire*, where it is found in great plenty.

VIII. *The Times.* The hrft three Flower in *March* and *Aprils* and fomctimes in *May*, and the Fruit of the Black is ripe in *Jane mi July*, but of the other two later. Tie *Marjb* kind Flower in *July* and their Fruit is ripe in *Auguft*.

IX. *The Qualities.* The Berries of them all are cold and dry in the fecond degree, Aftingent, and Anri-Emmena gog ick.

X. *~T}jc Specification.* The Juice of the Berries flop Womens Courfes, and all forts of Bleedings; and are good againft all Fluxes of the Belly. It quenches Thirft, ftops Vomiting, extingsi[hes the heat of Burning Fevers; ftops Coughs; and is good againft a *Phihifir*, and other Difeafes of the Lungs.

XI. *The T reparations.* You may have, t. *The ripe Berries.* 2. *A Rob, or Syrup of their Juice.* 3. *A Confervc.* 4. *A Purple Blea Dye.* 5. *A Crimfon color or Dye.*

the Virtues.

XII. *The ripe Btrncs.* The Black Whorts are eaten in the Countries where they grow, with Cream or Milk, and fometimes with Wine, as we eat *Strawberries*, and lo they cool and refrefh the Sromach, ftop Vomiting, allay the hear of Choler, and hind the Belly.

XIII. *Tbefab, or Syrup.* They are good againft the Heat of burning Fevers, cool a hoc Stomacfc and Liver, refirtVojnitmgandNaufeou&es, quench Thirft, are goodagainft the Bloody-Flux and flop all other Fluxes or the Belly, as alfo Cholenck Vlures in particular; and are good to cure all inward Fluxes of Blood, as Spitting and Vomiting Blood, PimnB Blood, Bloody Stools, or Hepacck Flux, the overflowing of the Loches, as alfo of the Terms in Women, &c. and arc profitable for fiaK troubled with an old Cough, and Ob

Itruffions of the Lungs; and are faid to be gool agatnil: a *Phthifi't*, or an Qlceration of that Bowel.

XIV. *The Conferoe of the Berries.* It has all the Virtues of the Rob and Syrup, and may be given Morning, Noon and Night, to the quantity of a large Cheltnur.

XV. *The Purple colored Dye.* Tr#»5rfiw> that the Country People take a Pot full of the Juice of the blick Berries flr/iUffed, inu which they put 4 Spoonfuls of gmd Wine Vinegar, in Ounce of A/uw, and a quarter of an Ounce of Copper Filings, or Votings, or Scales of Copper: which they boil altogether, and make a Dye thereof, into this Dye or Liqueur, they put Cloth, Wool, Thread, Yarn, £?V. letting them lye in it fora good while which afterwards they take out and dry, and then wafh them with cold Water, fo will they have a *Turky Blew color* ^ and if they would liave itdeeper, _ they put into it an Ounce of broken Gault. Allb with rhe *Juke of the Berries*, Painters color Cards, Paper, Maps of Countries, of a Purple blew color, putting theretoIbme Alum and Gauls, by which they make it lighter or deeper, as they pleale.

XVI. *The Crimfon Dye.* U is made of the Juice of the Red Whorcle-berry, by adding thereto a little Alum. The Juice «f thelcSed Whortte-benies, when of an excellent red color, and the Berries are full of Juice, is of fo Orient and Beauiriiril a Purple to Limne withal, that *Indian Lacca* is not to be compared to it; efppecially when this Juice is prepared with Alum according to Arr, as I my felf (lays my Author) have proved by Experience. s

CHAP. DCCXXXVII.

O/WILLIAMS and JOHNS

Sweet, Garden and Wild.

T^{^£} *Nam*, The? have nokno_w "I Greek Name, but are called by this general Name in Latin, *Armerius*: Of tome *Superba*, and *CarW'* phitlm Syheflrtt -. In Englifli, *faeet Williams* and *wfeet Johns*.

II. *The Kinds.* They are either *Latifoliut*, broad Leav'd, which are called *Sweet Williams*-, or *Anguftfolius*, narrow Leav'd, which are called *Sweet Johns*. Of thefe there are theft following Varieties, vis. 1. *Armerius latifolius (implex Ifare albo*, fingle white Sweet Williams, a. *Armerius lattifohus /implex Jiore rubro*, fingle red Sweet Williams. 5. *ArmeAus latifoliut Jintplex verjicofor*, five *Variegatus*, fingle fpeckled Sweet Williams, or London Pride. 4. *Armerius Uttfoliut /implex fiore rubro faturo holafericeo*, fingle deep red, OE Murry colored Sweer Williams, or Vetver Williams. 5- *Armerius latifoliut fiore rubro multiplici*, double red Sweet Williams. 6. *Armertus AngufUfoliusrubensftrnplex*, fingle redSweet Johns, or fingle red narrow leav'd Sweet Williams. 7. *Armerius ctnguftifolius albut Jimplex*, fingle white Sweet Joiins, ot narrow leav'd white Sweet Williams. 8. *Armerius anguftifeliut duple*, double Sweet Johns, or double narrow leav'd S<eet Williams. Gerard fays, that doubttds Sweet Williams are 1 kind of wild Gillirlower.

The Dsjcriptotts.

III. The first « fingle whiu: Swcei Williams. Uro/S a //W/ Effeww ROD*, //s/»£ «> wan/ l»«<? trailing or weak SlaJxi, with Leaves lying on the Ground^s broader than) thafe of the Sweet Johns, t>j ufrej!) green color, the L'jves not being Brown at all-, at the tops of the Stalks or Branches, are tufts (>f Jingle vshitt Fiowrt, grewafg pretty thick aadtlofe together, and in goad numbers, having many small pointed Leaves among them.

IV. The second, or fingle red Sweet Williams. They all of them Jspread into many trailing Branches, icith long bread Leaves lying upon the Ground, in the same manner that the Stoeet Johns following do. The chief differences between them are, that these

Williams Sweet Red.

have broader and darker green Leaves, somewhat broixmfh, especially towards the points; and that the loeers Hand thicker and defer, and a great many more » number together in the head vr Tuft, having many pointed Leaves among them, but with prickles unbutful. The color of the Mower is of deep red, w/out any mixture or spot at all.

V. The third, or fingle ipckled Swutt Williams, or London Pride. He Rwu are some kng and some fmell and thready, running under the uppermit cruft of the Earth. The/r spotted/Vil'iKs are very like the former red Williams, in their farm endman/ier'pf growing, having the leaves as broad as brown, /onetimes at they; The Viewers stand at thick or thicker, clujiennng together, but of very variable colors j for some blowers ail/be of a fine delayed Red, with a few marks or spots upon them, others will be full speckled or/prinkled, with tebit} or Stiver spoti, cireleafe about the middle of the

lowers • Anifiimc mil ban. many Jpicks e> difperfed upon them. All the/r rimers flow at one time, but some nil I be flowering. others are decaying • Jo that abiding long in (bar ?ride, they become Homers of fame value and respect. The Seed x blade, as u all the rest, and nf to be. diftinguijhed one hind from another,

VI. The fourth, or fingle deep iccl. or Many color'd Sweet Williams, <s Vdvet William, Leaves of thU seem to be a little larger, and Johtts a little redder than the former; hit i« I lower color is the chief difference, which Us deep red or Merry VuVU color, like unto Vet ff of lbal cefor, without any Jpots, but/meothand}} at Velvet in handling, having an tye or Circle >* the middle at the bottom of the Leaves.

VII. The fifth, or double red Siveer Williams- Thk double kind differs nothing from the M^{le} kind, of the same color (at ScEt. IV. aforegoing)^{^nl} in the duplicity, or doub/enejs of the blowers, »^{i:f} are with law rows of Leaves in every ilover.

VIII. The fob, or fingle red Sweet Johns, « Jingle red narrow Leav'd Sweet Williams. '» Root is difperfed feverai ways, with ma/,} j^a Fibres adjoining to it. Its Leaves are brow* Jborter and greener, than any of the OiUi fi but ntrramtr than the Sweet Williams ajort bed, Jet by pairs at the Jomtt of the Stalks, are Jborter than most of the Gil/ifiemer s, or and not above a foot and a h&l f high. At *TM i*^ whereof grout runny jntall flowers, Hie unto j* iJinksbitt Rending clofer together, and in J^h or V^a boje or husks, conjifting of S Leaves, Jmaller most of the Tinki, and more deeply tiggd «**£:, Williams-, of a red color in the middle, and V>D»

Johns White and Red JouHe-

belonging to the

at the edges, having but a faint smell, and not all flowering at once, but by degrees. The Seed is black, something like that of the Seed of Pinks.

¹ IX. The fevemh, or fingle white Sweet Johns, or fingle white narrow Leav'd Sweet Williams. This differs not in any- thing from the former, but only that its Leaves do never change bnswnjb, and that the Flower it of a fair white color, without any mixture.

X. The Eighth, or double Sweet Johns or double narrow Leav'd Sweet Williams. These double Johns are both of the red kind, and of the white kind, and in their form and manner of growing, are exalily like the finale red and white kinds, there being no difference between them, but in the duplicity of the blowers, fomc confining of two rows of Leave*, and fame of three, the edges of which Leaves of the Flowers are not so deeply jugged, at are the fingle kinds.

XI. The Places. These grow wild tor rhe molt nan in Italy, and other warmer Climates; bur they are only Nurft up in Gardens with OS, for their Beautiful variety.

XII. The Times. They flourifh or bring forth their Flowers in April or May, before the Gilli-foimtrs and Pinks, and bear their Flowers a great pair of the Summer, r heirSeed being ripe in June and July- They are hardy Plants, and will endure the extremity of our Coldeft VVinters.

XIII. Nota. From the lowing of their Seed many pretty Varieties are raifed^ but every flip of them Ice in the Spring will grow and abide the Winter The Velvet Williams, and the Double Johns are worthy the refpectof thegreateft Ladies, who are Lovers of Flowers. They who haveroom enough, and are pleiled with, may by lowing their Seeds, have great and fine Diverfittes, even of double Flowers,

XIV. As to their Qualities, specifications, Preparations, or Virtues, Authors have faid nothing, and having Experimented nothing concerning them, we aw Silent. Their great ufe with us in England is, to entertain them as an Ornament ro our Gardens, for their Variety and Beauty fake.

WILLIAMS Wild:

OR,

CROW-FLOWER.

XV. The Names. It is called in Latin, Armeria Armeracia^ Armoraria SylveUris, Armerim fios primus Dodonai, Tunix, Cariophyllut minor Sylveflrif foliis latioribus, Flos Cuculi, Flos Corni- is : In Englifh, Wild Williams Crow-Flowers, and Marfb GiUifiowers-

XVI. The Kinds. Gerard fays thele area Species of the Gillifiowers, or of the Sweet Williams, and are raken by Tome to be the true tios Cuculi •, but feeftems itto be a kind o^WildGf^er, Of ^heft we have, i. •tocJHfWidW,n<m, or Crow-Flower. 2. The Female Wilei William, or Crow-Flower. 3. The Double Wild Wilham, or

Crow-Flower.

The Descriptions.

VVII The Firll, or Male Wild William^ or f row Flower, ft &^ Stalks of 9, 10, or 12, hub- Crow.HOWn them* h couples at every is high, the Leaves r m n and bluntly pointed, very Jour, with are rough and hairy. The Vlmtrs are a the tops of

WILLIAMS Wild :

OR,

Creto-Vktoer.

XVIII. The Second, or Female Wild William, or Crow-Flower. It differs not from the former Male, but in its Magnitude this being Iciffer, and the Flowers more finely jugged, like the feathered Pinks, of which t/U it faid to be a kind.

XIX. The Third, or Double Wild Williams, or Crow-Flower. This differs nothing from the firft Crow-Flower, fiving that that it Jingle Homered^ whereat this it double flowered, having many fair double Flowers.

XX. The Places. They grow all about in Meadows and Paflurcs, and in low ftUifi Grounds: but the double k^nd has been brought into Gardens, where it grows very fair and pleafant -, I fuppofe from the goodnefs of the Soil.

XXI. The Times. They begin to flower in May, and continue flowering till towards the latter end of June.

XXH- Of their Virtues. Authors are fiienr.; they only ferve as Ornaments for Gardens, Walks, Houfts, and other places.

C H A P . DCCXXXVIII

Of WIND - FLOWERS :

OR,

ANEMONES.

T^H_{IS} *Nanti*. This Plant is called in Greek *idn*, *m <fk eufi*, *quafi herbii Vent!* • in Latin *Ancmtne* L alfo *tfwfa Ve#ti*%, and Mr *r#y7/i*; and in Englifh we call them *Anemones* and *Wini-tloaert*.

We have already in Ow». 17. and 14. of this Work afbreg' ing, briefly difcourfwl of the *Garden and Wild Kinds* of this Plant, nor then intending to make this our Herbal a *WoriUgium* •, but a tierwards upon iecond Thoughts, confiderinR how acceptable it might be to *tionlrgifis*, to *Yelfont of \$vality*, *Gentlemen jnd Ladia*, wliofe Giriofity might lead them that way, and were vtry inclinable and Induttrious in improving thetnfel ves in the *Knowledge end Culture of Flowers*, we then refolved to m;ike it as ufefu) to them as we could 5 and therefore in all the following Ditcouries, where we have treated of *timers*, we have been very careful to give the Curious and Indultrious that way, it' not a plenary Satisfaction ; yet fuch an *Inin* duSion to the Knowledge and Culture of!*>em, as we hope may gra title all the Lovers or' rhofo admirabti: Curioficies. And fo in order ro the lam^ Refolutioas, feeing we had been fo brief in the laid *Chap. ijt. and. 14.* under the Tide of *Anemones*, we dull now plentitully fupply here, what we were deteftive in there.

II. *The Kinds*. There are 1. *Tlx Wild Kinds*, of whic.^we have already treated in *Chap. 14.* and *Chrp. 54*}. aibregoino, of which we lliall fay no more. 1. *The Garden cr Manured Kinds*, of which we (hall trea: mote fully in this Chapter, and they are, 1. *Antmant latifeUa flore Jrmp/iei*, Broad Leav'd Anemone Single Flower d. 2. *Anemone htifalia flore multiphd, five Jlore plena*, Broad Leav'd Anemonedoubk b'lower'd. 3. *Anemone tenuijolia flore fimpliri*, Narrow Leav'd Anemone Single Klower'd. 4. *Anemone tenuijolia flore duplid, vel jL/e pleno*, Narrow Leav'd Anemone double FlowerM; of all which in order. Ot each of thefe principal kinds, there are a great number of Varieties, too many to be fpecifitid in this *heSion*; and thercfote avoiding that uouble here, we will give you their feveral and various, or piirjcular Appellations in Courfe, as they fhall be Delitbed.

The Defcriptions.

I. Of Broad Leav'd Single ANEMONES.

1 ^U I'. ; " *AnemoneMifoliQ Jlore ftmplet* i Broad Leav'd Anemones with Single Flowers. Us Root is tuberous, with ibme Fibres adjoining to it. Its ttownsaiaU Single, iridi one icw otleans,)nd 3 hauy Head in the middle, of a color differing tomm that of the Leaves. It is of divers torts and

colors, fome bigger, others letter, fome taller,,o thtrs lower, and the Flowers are of divers ReTM, Puiples, Scarlets, dttper or paler, wen to *Bim* or *Peach* color, white, Silver, or *Aft* color -, iorr:

Wind-Flower *Garden Single*.

of the heft forts of which, are kept by *tlmfi* fi* their Seed fake, from whence many dtverimts are raifed, and lbme Double flowers as well as Single; and of differing colors, as well plain jstlnped. In all theft Single Flowers, and fome of thofe !< " Double, than the Double kinds, the Head in trie middle, after the Flowers are fallen, grows bigg« and full of Down, in which the Seed is cndoe«> which muft be careriuily gathered as foon as u ' * ripe, elfe it will be all blown away with trie Wind. Thefe Single kinds are to be Sown and ordered after the lame manner as thole with the narrow Leaves.

IV. 2. *Anemone latifolia flore htico j7mp'icr Hortenfis* • The Garden broad Leav'd Single y«* low *Anemone*, or Wind-Flower. Its Root grow* downward into the Ground, diverfly fpreaw¹¹ⁿ Branches here and there, of a brownifli yellow on the outfide, and whitffh within, fo brittle ^{LA} can hardly be touch'd without breaking. I^l *? divers broad roundLeaves, fomewhat divided, an indnted withal on the edges, brownifli at the t" riling out of the Ground, and almolt foldedJ^f^cher; and after, of a fad green on the uppe⁵ and reddifh underneath. Among which, rift ^U p fmall flender Stalks, befet at their middle *W two or three Leaves, more cut and divided thofe below, with fmall yeUowftowers at tops, conlifling of ten or twelve Leaves « having a tew yellow Threads in the middle, ing round <t lhull green Head, which in time g^l ing ripe, contains fmall flat Seed, enclofca ibtt Wooll or Downj which is cafily blown with the Wind.

V. 3. *Anemone latifolia Purpurea Stella!* a, five *Papavaraea flore simplici* -, The broad Leaved Single Purple Star *Anemone* or Wind-Flower. Its tuberous Root is blackish on the outside, and white within, knobby, with many Fibres growing from it. Its first Leaves, which always spring up before Winter, (if the Root be not kept too long out of the Ground,) are something like the Leaves of *Saniile*, or *Self-Heal*-, but the root which follow, are more deeply cut in or Jagged. Among which, rise up divers round Stalks, beset with jagged Leaves, (as all other *Anemones* are,) above which Leaves, the Stalks rise up about 2 or 3 Inches, bearing one Flower a piece, composed of 12 Leaves or more, narrow and pointed, of a bleak Purple, or whitish Ashcolor, somewhat shining on the outside, and of a fine Purple color tending to a Murry, on the inside, with many blackish blew Threads or Thrums in the middle of the Flower, set about a Head, in which grows the Seed, which is small and black, inclosed in four VVools or Down, which flies away with the Wind, carrying the Seed with it, if not carefully gathered.

VI. 4. *Anemone latifolia flore purpurea Stella attera simplici*; another broad Leav'd Single Star Flower'd Purple *Anemone* or Wind-Flower. This differs not from the former in Leaf or Flower, having that this is of a more pale, or dull color on the outside, and of a paler purple color on the inside.

VII. J. *Anemone latifolia Viola purpurea flore simplici* i broad Leav'd Single Violet colored *Anemone* or Wind-Flower. This has but 8 Leaves, (as many of them which follow have) and is of a Violet Purple color, whence its Name; Of these 3 last sorts, there are some which differ only in having white bottoms, some smaller and some larger.

VIII. 6. *Anemone latifolia flore purpurea striata*; Broad Leav'd single, purple, striped *Anemone*, or Wind-Flower. The Purple is the same with the former, but a little paler, tending more to redness, whose Flowers have many white Lines and Stripes thro' the Leaves.

IX. 7. *Anemone latifolia flore simplici Carnea v'roacifima* } Broad Leav'd single Flow'ed, fleshy bluish colored Wind-Flower. Its green Leaves are something larger, and so is the Flyver likewise, consisting of 4 Leaves, and sometimes of more, of the color of *Carnation Silk*, sometimes pale, and sometimes deeper, with a whitish Circle about the bottom of the Leaves, which Circle in some is larger, and more to be seen than in others, when the blower lays it flat open with the heat of the Sun, having blewish Threads in the middle. This may be called the *Carnation Anemone*, or Wind-Flower.

X. 8. *Anemone latifolia flore simplicid Perjici Violaeea*; The broad Leav'd Greenish color'd single Wind-Flower. This Greenish color is between a Peach color and a Violet.

XL 9. *Anemone latifolia flore simplici Cochinnelle* •, Broad Leav'd single Cochinele Wind-Flower. This is of a fine reddish Violet, or Purple, or Cochinele color.

XII-¹⁰ - *Anemone latifolia flore simplici Car-Sinalit*; Broad Leav'd single Flower'd Cardinal Wind-Flower. It is of a rich Crimson red color. There is another sort of it which is deeper, called *Sanguine* or *Blood red Anemone*, but it is not so lively a color: And another called *Crimson*, called the *Crimson Anemone*., which is of an ordinary Crimson color.

XIII. ii- *Anemone latifolia flore simplici Coccinca* •, Broad Leav'd single Scarlet colored Wind-Flower This is near unto a Scarlet color.

XIV. 12. *Anemone latifolia flore simplici incarnata*; Broad Leav'd single incarnate Wind-Flower. It is of 3 fine delay'd red, or Fleish color. There is another called *Incarnate Hispania*, or Spanish Incarnate Wind-Flower, which is of a lively Fleish color, shadowed with yellow: And another called *Rubescens*, or *Blush Anemone*, of a fair whitish red.

XV. 15. *Anemone latifolia flore simplici Michatellu Jlrata* •, Broad Leav'd single Nunnish Wind-Flower. This consists of 8 Leaves of a dark whitish color, thiped all over with Veins of a rim; Jush color, the bottoms being white.

XVI. 14. *Anemone latifolia flore simplici Enfumata* •, Broad Leav'd single, smoky Wind-Flower. It is of a pale whitish color, tending to gray and is called *Monk Gray Wind-flower*.

XVII. ij. *Anemone latifolia flore simplici Favomijar* H The greater Peacock Wind-Flower, or greater single Orange Tawney *Anemone*?. Its Leaf is somewhat broader than many, or most of the *Anemones*, coming near unto the Leaf of the *Great double Orange eolo'd Anemone*, colliding of 8 large or broad Leaves, very near unto the same Orange color which is in the Double Flower, but somewhat deeper. There is also *Pavo minor*, or Lesser Orange Tawney *Anemone*, whose Flower is lesser.

XVIII. *Kola*. There are besides these expressed, so great Varieties of mixt colors in the Flowers of this *Broad Leav'd Single kind*, arising every Year from Sowing of the Seed of some of the choicest for that purpose, that it is admirable to observe as well in the great Variety of Simple colors, where there is but one only, as in the mixture of two or three colors in one Flower, besides the diversity of the bottoms of the Flowers, some having white or yellowish bottoms, some having none and yet both of the same color or colors; and likewise in the Thrums or Threads in the middle. But the most admirable Beauty is in the *Double Flotcn*, which arise from the Seed of the other *Single ones*, some having two or three rows of Leaves in their Flowers; and some as thick of Leaves as a *Double Marigold*, or *Double Crow foot*, and of the same several colors as are in the *Single Flowers*-, so that it would be almost impossible to express them all severally, some falling out to be Double in one Year, which may prove less Double or Single in another; yet very many abiding contently Double as at first.

II. Of Broad Leav'd Double Flowered ANEMONES.

XIX. 1. *Anemone latifolia maxima verticolor vulgaris*, *Anemone Chalcidonica maxima verticolor*. The common broad Leav'd double variable *Anemone* or Wind-flower, or greatest double Wind-flower of *Constantinople*, by some called the *Spanish* Marigold. Its Root is tuberous, large and thick, of a blackish color on the outside and yellowish within, not (hooting out any long tender Roots as others do. It springs up before Winter, with broader and greener Leaves than any of the former kinds, not so much divided or cut in on the edges, yet it cut in, as that the edges are folding, seldom lying smooth and plain, of a firrth's green color than many which follow, and a little hard in handling, and therefore called by some *Hard-Leaf*: From among these Leaves rise up one or two Stalks (seldom more from one Root) having form; Leaves as about their middles jagged (as all the *Anemones* have)

have) eid>Sralk tearing at is top one large Ylower j
apiece, which is large and double > conifiting of
many narrow, long, fharp pointed Leaves, the
outmolt or which, aie broaddt and greenifli at firft,
butafterwards reddifh, with fome ftripesot'Orange
Tawncy ; the middle Leaves within thefc are
fraaller, and of a red color, OI of an Orange
Tawrsey i the innermolt being fmallest, are wholly
of the lame color, but turned form;whai inward,
covering the Head or Burton, which is dual in the
midit or the Flowers of molt of this kind; thefe
having no Thrums or Threads in the middle as the
toimer have, nor bearing any Seed-

XX. 2. *Anemone hifjeha Cbalcedonkt ahera*,
five Pn-ja major flare duplki. The great broad
Leav'd double Orange Tawney Wind-flower. The
Root ot'this is like the tbimer, and its large Leaves
are fo like the lair, that one can hardly diftinguifli
themaliinder: The Staik alfo hasftch like Leaves
upon it, beating at the top a fair large Flower,
confining of many Leaves, fee in two or three ot
large round pointed Leaves, of a light Scarlet Orange
Tawney color. Theib Leaves lGnd not fo thick
or double as the former, feeming to be but one
thick row, of many fmall long Leaves, of an ex-
cellent Oimfon color, wherein fome yellow is
mixed, which makes that coior we call an Orange
Tawny. The bottoms of the Leaves ate red, with
a whirifh Circle ^ the thrummy Hejd in the middle,
being befct with many dirk blackiUi Hairs or
Threads. This Flower and the former, are molt
common, and belt known of all the forts of double
broad Leav'd Anemones.

XXI. 3. *Anemone ltnfoliafiore plena tocciaeovari-*
egau Anemone Cypar'iffia: The broad Leav'd double
Anemone, with a Scarlet Flower; the double Cy-
prus Anempne or Wind-flower. Its Root differs
not from either of the former, and has Leaves very
like the latt double Anemone, but not altogether
fo large •, the Flower confits of fmaller Leaves, and
of color very neai unto the laft Double Orange Ane-
mone, but thicker of Leaves, full as double as the
firft, altho' not fo great a Flower, without any
head in the middle, or thrums about it, as in the
latt. Mr. tiea fays, that the Stalk is tall, and that
it bears a gallant large double Flower, of a rich
Scarlet color, and every Leaf thereof finely ltriped
and variegated with white; and that it far fur-
pafles any of the former.

XXII. 4. *Anemone lot-i'folia Caeumetn Margin!*,
five Perfica: The broad Leav'd double Perfian
Wind-flower. It came out of *Ptrfia* to *Cenflan-*
taiopte, and from thence to us. In its Root and
Leaf, it is vtry like to the former double Anemo-
nes j only the blower hereof, is rather like unto the
fctond great double Orange colored Anemone, at
Sett. XX. above, ufually called *Pavo m*jer fiore*
plena, being compofed. of three rows of Leaves,
the ouiermtiU row confuting of 10 or 12 larger
Leaves (and thole more inward, leffer and more
in number, but all of them variably marked, with
white, red, and yellow, having their botiomswHITE.
But intlead ci' a middle Head with Thrums about
ir, as ihe other has •, this has a few narrow Leaves,
of a deep yellow color in the middle, the Flower
Handing upright.

XXIII. j. *Anemone htijoliajlore luteo duplici 1*
The broad I eav'd double yellow Wind-Bower. Its
Rooi is Tuberosus, and like the Root of the fingle,
and his Fuch broad rtund Leaves as the fingle, but
fonaewhat larger or ranker. The Stalks ate befct
with taigei Leaves, moredeeply cut in on the edges.
TheJlowws are of a more pale yellow, with fome
purplifh Veins on the outfide; and a little round
poiniol i but tt<y ate all on the infide of a fair

yellow color, confilting of two rows of Leaves, <
which the innermolt is rhe narrower, with a lmji
green Head in the middle, encompp3(Ted with yellow
Threads, as in the fingle. This has little or n>
Smell, and fprings up and flowers later than the
fingle kind.

XXIV. 6. *Anemone latijelia five plena Coca-*
mo: The broad Leav'd double Scarlet colored
Wind-flower. The Leaves are green, but firm"*
than thofe ot'*Favo major*, at Sett. XX. the Flower
is thick and double, confiding of many wuntt
pointed narrow long Leaves, which are wholly <
rich Scarlet color. There is *Comnea Jiera*; *
nother of this fort of double Scarlet Flowers, trie
Leaves whereof are narrow, (harp poinred, and o
a light Scarlet color. And this is that fort,
is called *Super-Rick* There is alfo another
bean double Flowers, almoft as large as the
which are of rhe color oiMmium^ ciRedL

XXV. 7. *Anemone UtjfoSd fiore flens*
The broad Leav'd double red Wind-flower,
dirk green Leaves, and a fmall double
Flower, confining of many narrow Leaves. *"
of this kind there is another like unto it, only, < *
Leaves of the Flowers arc tipt, and a little edg<
with white.

XXVI. 8. *Anemone htifolh fore P¹TM*2"?^*
reo variegata: The btoad Leav'd double pi"
variegated Wind-flower. It differs from the
following, chiefly in Koblenefs OI the
which is very targe, thick, and double, of an
cellent reddifh Purple color | and every Leal r>"
of, lifted about with white.

XXVII. 9. *Anemone htifolk M^e*
purro: The broad Leav'd double Pur,
Mower. It has broader Leaves than the 7*L
going, and of a brownifh green color. TM <; £ " V
is fomerhirg larger, and & Leaves thereof no' TM
numerous, %m loader, of a Murry Purple: c o g
There are divers forti like unto this, which^oniy
differ in the color of the flowers;
deeper, fome lighter, and fome of a pa e
which by long (tanking before they rail,
leem white.

XXVIII. K. *Am mone W f j " Mf*
verier a: The broad Leav'd d<We.
lor'd Wind-tlfcer. This is almct like to th
at Sett. XIX. aforegoing i but lefler whole How
ers are very thick and double, feme being white, o
whitifh, Tome purple, deeper or paler, iome or
blufh or Heh color, and fome ot a / e d ^ < W I
tending to Scarlet, or Camation, w< nrevera, othrt
varieties not eafy to be Named, which all of them
continue conltant in their feveral appearances <
colors.

III. Of Narrow LeavM Single ANEMONES.

XXIX. The *Simile narrow Leav'd*
are of greater rarety, varity and cteem,
Latifolhs. Formerly we had but few ot
Howets, and fuch as were little worrh, but n
of late Years we are become Matters of a ^A-
Varieiy of them, admirable in their kinds, or
vers colors, plain, edged, Iltriped olmarkfd, K' >
Scartot, *Purpter*, *Whites^ Peach hbr'd*, ^"
Ur'd Jimpie and variegated with White.
fome others raifed from the Seeds of rhefe,
produce gallant Double Flowers of feveral
asRrrf, *Starlet Purpfe^c*. both plain and ftii.
which have more refembled the Flowers of
Double LetifoHft, than thofe with narrow v ?

ihese confuting of many fomthing broad Leaves, having no Bruth or Thrum of Leaves, but a firull Head or Burton in the middle, fome having but two rows of Leaves, fome three, and fomefo thick and double, that the Head in the middle is not to befeen, until the Flowers fait. And yet theft kinds, (efpecially the thinner ibrts) perfeft their Seeds, from whence many fine Flowers may be produced. Thefe are called *Hermaphrodites*; for that they partake of both kinds, as hairing the Roots and Leaves of the Narrow, and the flowers of the *Broad Leav'd Anemones*.

XXX. In the handling and ordering or the rater forts of ihese excellent Flowers, fome particular care is to be taken -, for if the Soil, Scituation, Time, and *Modus* of Planting and taking up, be not exactly obferved, the Flowers will neither be fair, nor will the Roots proper and increafe \$ but on the contrary rot and confume; more efpecially all the bed Double kinds with ninow Leaves-, but the ordinary, and rhoe with Single Flowers, ate more hardy-

XXXJ. t. *Anemone tenaifolia flore fimpha vulgaris* -, The Common Narrow Leav'd Single Wind-Flower. Irs Root is much bigger than the Double kind, and apter to incieife, and the green Leaves ate larger, ranker, ami more in number than in the Double kinds. The Stalks are rail, and bear plentifully fair large blufh colored Flowets, commonly confiting of one row of broad Leaves, with a hairy Head or Button in the middle; which after the Flowets are pair, grow big and long, yielding ftore of (mall flat brown Semi, involved in Down.

XXXII. 2. *Anemone angufifolia, jive Geramfolia tdrulea fine jtmpliei*: Narrow LeavM blew Jingle FlowerM Anemone or Wind-Flower. The Root is blackifh without, and extends it felf in long tuberous pieces, fomewhaclike rothofe of the *Broad Anemones*. It fprings not out of the Ground, till the great Winter Froth be pa ft, *vis.* about the middle of *Vtbruary*, when thin cut Leaves come iorrh, fomewhat brownifh at their rlrt appearing -% bur afterwards fpread out into winged green Leaves, fomthing broader than the ref which follow, divided into three parts, and each parr into three Leaves, eveiy one cue in about the edges, one Handing againft another upon a long llender Foot-felk, and the end-Leaf by it felf Among thefe, rife up two or three green Stalks, garnithed with fuch like thin Leaves as are fet at the bottom, from above which rife the Flowers, but upon one Stalk, confiting of 14 or 1J fmall pale watcher, or blew Leaves, leflerrhan any of the Single Kinds which follow, which encompafs many whitift Threads, and a fmall green Head in the middle, fomthing like the Head of the *Wild Crowfoot*^ in which is contained fuch like Seed.

XXXIII. ?- *Anemone angufifolia flore finsplta alba*- Narrow Leav'd white Single Flower Anemone. This is a Species of the latt defcribed, but with this difference, That the Leaves of this are not brown at their firft riling, but green; and that the Flowers in this are white, in that blew.

XXXIV. 4. *Anemone mtgustifoliti purpurej vulgarh* v The common narrow Leav'd Single Purple Wind-Fbwe^ Its Root is fmaUer, and more fneading evy way into (mall, long, fiat, Tuberos parts, thanany other kinds of *Single or Double Anemones*. This is one of the moft common Wind-Flowers, and therefore teift regarded -, n has many winged Leaves tending upon feveral Stalks cut and divided into divers Leaves, much tite unto the Leaves of a *Carrot*. Among which, rfe up Sulks with fome Leaves thereon, (as is

ufual to the whole Family of the *Anemones*, *Wild and M.ixuredJ* at the tops of which ftand the Flowers, confiting of fix Leaves commonly, • but fomtimes they will have 7 or 8, beieg wry large, and of a perfect Purple Violer color, vay fair and lively. The middle Head has many black-ifti Thrums or Threads about it •, but I never heard that it was ever found to bear Stied.

XXXV. j. *Anemone angxflijolid fore Jtmptiici*^ *Carnea pallida*: Narrow Leav'd Single, pale Bluih colored VVind-Flower. This in its ltoorand Leaf is like the former, but the FLOWLT is nothing fo large, but is whitifh tending to a Blufh color, and of a deeper Blufh towards the bottom of the Flower, with blackrfh blew Thrums in the middle, never being obferved to give Seed.

XXX VI. 6. *Anemone ttHnifaia (lore Jixtptici, Carnea virida wigu'ibufque albk*: Narrow Leav'd Single lively Blufh colored Wind-Flower, with whiw bottoms. This is like the laft in Leaf anJ Flower, but that the Flower of this is larger, and Its Nails or bottoms are white.

XXXVII. 7. *Anemone angujUfolia flore fimptki, albavemsfurpuris*: Narrow Leav'd Single white Anemone, with Purple Veins. This isa leffer Flower than the other, and beieg white, has Purple colored Veins and Stripes running through evtryLeaf.

XXXVIII. 8. *Anemone tenu'ijol'u Qocanta fimplexi* thin Leav'd Jingle Scarlet Anemone. Its Root is tuberous, but confiting of thicker pieces, fomewhat like unto the Roots of the *broad LeafA. Anemonei*, but fbmewbat btown, and not fb black, moft like unto the Root of the *Double Surfo Anemone*. The Leaves are fomthing like unto the former, but a little broader, and not fo finely cut and divided; the Flower confilh of *fix* reafonable Urge Leaves, of an excellent bright Red or Scarlet color: the bottoms of the Leaves are large and white, and the Thrums or Threads in the middle, of a blacktflti Purple color.

XXXIX. 9- *Anemone lemtifelia fimplex Coccinea abfyue unguibus*; Narrow, or thin Leav'd fingle Scarlet colored Wind-Flower. This is very near to the color of the laftdefcribed, and without any white bottom in its Leaves.

XL. 10. *Anemone tem'tfolia fimplex flare Hokfcrkeo*.- thin Leav'd fingle Crimfon Velvet Wind-flower. This has as large a Flower as any of the Single Kinds, and is of an Orient deep red Crimfon Velvet color.

XLI. 11. *Anemone tenuifolia Jimphx flare Sanguinea*; thin Leav'd fingle Blood red Wind-Flower. This is of a deeper red color than the former, to wit of a deep Blood red. And there is *Jlore rubrafundo lutej*, another fort of the Same Blood red, with a yellow bottom.

XLII. w. *Anemone tenu'ifoliii/implex Coccinea dilutior*; thin Leav'd fingle bright Crimlbn colored Wind-Flower. Its Flower has fome Leaves round pointed, and others fharp pointed -, and it is of a perfect Crimfon color, fome lighter or more diluted, fome more red than others.

XLIII. 13. *Anemone tenuifolia fimplex <ilb& Stuminibus furepureis*; thin Leav'd fingle white Flower'd Anemone. Irs Flower is pure white, with blewifh Purple Thrums in the middle. And there is one of this kind *Jlore alba Vi'nii Cornets*, which has Huff Veins running through every one of its white Leaves, Alfo another white Flowefd, *unguibus furepureis*, which has the bottoms of all its white Leaves of a purple color.

XLIV. 14. *Anemone tenvifolia fimplex flore CarncitHifpamcai* Thin Lejv'd fingle Spanifh blufh VVind-Flower. This has a r<J great Flower, of a kind

kind of dead, dull, or fallen blufh coi&r, but yet pleaCim, with bfcwiffl Thrums oi Threads in the middle.

XLV. 1J, *Asemonc tenuifalm fimpkx purpurnfentz*, thin Leav'd fingle pule Purple colored VVind-Flower. This confifts of many fmall narrow Leaves, of a pjle Purple or Blufh color on the outfide, and ibmewhat deeper on the infide.

XLVi. 16. *Anemone tenuifolU fsmpkx tacic Yami fiorum* \ thin Leav'd Jingle Apple Flower'd Anemone. This in its Root and Leaf is like unto the firft *Scarlet Anemone*, but its Flower confifts of feven large Leaves, without any bottoms, of a whitecolor, having edges, and fome large Strtips alto of a Carnation or Fleth COIOE to be feen in them, marked fomewhat like an Apple Bloflbm, and thereupon it is called in Lathe, *Anemone tenuioia [implex alba iujlar facie Pomt thrum,*

IV. Thin or narrow htavd double flow trd ANEMONES.

XLVII. i. *Anemone tenrnfolia jiore plena rubro vulgrk*: Common narrow Leav'd double red Wind-flower. Its Roots are thick and tuberous, fomething rdoubling finjll Kates <A GingeT, of a yellowivih brown color, and neiither 16 big nor 16 black, as thole of the other kind wrth broad Leaves. It has many winged Leaves, divided into many and fevetal Brandies, each Leaf being cut and parted into many divifions, fmall, and more divided than thofe of Partly, and fome of them like thole of a Carrot, Among which rifes up one, two, or more Stalks, according to the bignefs of the Root, with fome finall green Leaves about the middle of each of liem, and bearing at the top, one great double Hoiver, cuiifitingof 6or7, and fomeumes of more, brojd outer Leaves, of a deep red color, having in the middle a large Thiuin of finall] Leaves, of a lighter and much paler red color. Out of the middle of which, comes many larger and broadet Leaves, of a lighter red rhan the outward Leaves, and deeper than tholl ol the Thrum, which warmed by the Sun, Ipread themfelves over it.

XLVIIL 2. *Anemone tenuifalid jiore Cacritico pteno vul'ir'ii* • Common narrow Leav'd double Scarlet Wi_{rit}]ficwer. Its Root is tuberous and i thick, very like to the Root of iingle Scarlet Anemone: And i:s Leaves are very like to the fame, but not fo fmall cut and divided, as that with the purple Mower. The Flower when it firft opens it ielt, confiltsof6, and fometimesof 7 or 8 broad Leaves, of a deep red, or excellent Scarlet color, ilie middle bead being thick clofed, apdof a greenilh color, which after the Mower has Hood blown fome time, does gather colors, and opens it felf into many (mall Leaves, very thick, of a more **I**ale red color, and more *Snaul* lfte than the eaves.

XLIX. 5. *Anemone/tuifoliafiorepknoverftcokr*: The narrow L&iv'd double variable Wind-flower, or double Apple-bloflbm. It is in all things like the rirll (*m* Sect. 47.) but only in the color of the Bowers, which in this, will be of a i'lufl color, the tops of the Leaves aliTv>tt white, and the bottoms Peach color. And Tome-lime^, the Hower will be red like the firft, but ttitped and variegated, with pale blufh, almoft white, and fometimes without any marking at all. All thefe divtritics ate found in this one kirted, all proceeding from one Root.

L. 4. *Anemone tenuifolia jiore Cocdmo fe?'' ro plena*: The Double Qmation Velvet Wind-Mower. Its Flower is of a deep Orange Tawney Crimlbn, near unto the color of the outer Leaves of [heNvffct or *African AhrigoM*, and not differing from the next following in any thing elfe.

LI. j. *Anemone telmifolia jiore Coccineplexo varirgitfii'*: the Parti-colored Douhle Cirofon Wind-Flower. This varies not neither in its Koot, Leaf; or rbrm of its Flower, from the fecond at (*Setf*. XLVUIO but in the color, in that this will have fometimes the outer broad Leaves parti-colored, with whicifti 01 blufh colored gear Streaks in the red Leaves both infide and outfide; as aljo divers of the middle or inner Leaves, frriped in the fame manner. Its Root, gives lairer Flowers in fome Years than in others; and fometimes gives Flowers all red again.

LI I. 6. *Anemone temtifoHn Ekgant'wr fiff plena rubro*. Narrow Leav'd more Elegant Double red Wind-Flower. Its Root is as great and tftcK as that of the *Common Red*, but (tatter, and more fpreading than it. It has narrower and more divided Leaves than any of the former; the Static is taller, and the outer Leaves of the Flower more u' number, and (harper pointed, of a good Crimwi color j the Thrum in the middle is of a pale <dj out of whofemiddle comes orhct Leaves, urge ana fpteading themfelves almdt c'uite over the Flower, of a deeper color than the Thrum. Many times iwo Flowers will be joined together on one Stalk, which happens more frequently than in any other.

LIII. 7. *Anemone tenuifolia jiore plena l<''** rubente*: The Greater Double Blufh Wind-Flower. There is almoft no difference in the Roots 01 Leaves of this, from the *Common Double Scarlet Anemone*, (at *SdL* XLVIU.) raving that the Leaves hereot are a little broader and feem to be of a little trefter green color. The Flowex of this is a large almoft, and as double -7 and the inner Leaves likewise almoft as large as they, being of a whitifh or rldh color at their firft opening; but afterwards become of a mod lively blufh color: the bottoms of the Leaves abiding of a deeper blufh; and with tong Handing, the tops oi' the Leaves will turn almoft white again.

LIV. 8. *Anemone tenuifohafiorepleno Cocanee*. Narrow leav'd double Scarlet Anemone, or Wind-Flower. This is like that at *Sell*. LII. above, but that the Stalks grow not fo high, and the Flowers are fomeshing fmalleT, which are thick and double, and of an excellent rich Scarlet color, ufually called the *Incardine de Spain*.

LV. 9. *Anemone unuifali& jiore plena CeeclnM variegaia coma albejetnte*: Narrow leav'd double Scarlet variegated Wind-Flower, with a whitift middle or thrum. This is in all things like the laft, but only in the colot of the Flower, which i" this is of the fame Scarlet color, bu; finely frriped and marked with white; and the Thrum feeming to be almoftall white. Sometimesalfo, thebroo-er Leaves will come out of the middle thereof, 01 a bright Scarlet ftrtped with white, like unto the outer leaves.

LVl. 10. *Anemone tenuifolia jiore ptens tffl& ScarUto*: Narrow leav'd double Scarlet thirumeo Wind-flower. This differs iiom the hit, in that the outer leaves hereof are white, aid the Thrum isoraScailletcolor

LVII. it. *Anemone temt'ifolia fiort plena, dS^ hacara*: Narrow leav'd double VVind-Hower, called Nacara. This is like unto tte Scalei; thving that the Flower is of a deeper and yellower Scarlet color, refembling that of the letter *irt-ncK*

or African Mangold, bur not fodeep: the Thrum is inclining to an Orange color-

LVUI. <2. *Anemone fiore pkr.o Sttlpbureo t* Narrow leav'd double Sulphur colored Wind-flower. This differs from the laff, in that the outer leaves of the Flower arc of a pale: greenifh yellow, or trimftone-like color; and the Thrum more green.

MX. ij. *Anemone unuijolia flare plena vtn-dame* : Narrow leav'd double green Wind-flower. This is like the hit, favuig that the outer leaves arc of a greenilh Orange tawney color, and the middle Thrum of a vellovviili green.

LX. 14. *Anemone tenufoha fiore p''*'»*'»* major- Greater narrow leav'd double white Wind-flower! ThisdiffifeislUtle either in the green leaves, or faftiort of the Flower, from the former; being as large and double as any of them, and or a Milk white color.

LXI 15- *Anemone icmnjolia fiore plena moo mixim'd* : the Greacitl Narrow leav'd double white Wind-flower. This in fj(hion is like the tuft, but much larger, and fairer, and of a pure white color.

LXfl. '£• *Anemone tetiuijolia fiore plena 4&0* 'uinort The leffer narrow leav'd double white Wind-Flower. It bears a fmall double Snow white Flower, hjving fix outer leaves, and a thnum in the middle made tf fmall hairy leaves, Handing even at the top, as if they had been dipt with a mir ofSciflars,

LXIII 17. *Anemone tmttfofta fiereplem alb'ieante* • Narrow leav'd double blufli Wind-flower. This differs very Little from the laft, but only in the color of the Flower ; tor they are both much about the lame bigncs; the middle Thrum like-wjgg >eilg as fmall and morr, and as even above, as if it was them fo-, only iheHoweratfiriropening js almoft white ; bur afterwards the ourer leaves have a more flew of bluffh in them, and the middle part a little deep:r than they.

LXIV. 18. *AtemirK tcnmfolia fiore plena purpureo Viohceo* . * Narrow leav'd double Purple Wind flower. This double Purple Anemone, is of the lame kindred with tire Double Scarlet, at Self XLVIII. aforegoing, having the fame form and'doubknfs of the Flower, confuting but of fix or feven leaves at the moft (in our Country, tho' in the hotter Climates, it has io, 12, or more as large lam) for the outer Border, and as large fmall leaves for the inner and middle alio, and almoft as double, hut of a deep Purple, tending to a Violet color 1 the outer leaves being not io deep as the inner. Irs Root and Leaf comes near to the Single Purple Anemone before delcribed, but iis Roor (breadr not ibmuch.

LXv. 1?' *Anemone tenuifcl'itt fiore plena purpurco Ctruico*: Nanow Leav'd double blew Wind-Flower This differs not in any thing from the foimer double Purple; but only that this Flower is paler, and more tending to a blew color.

f XVI 10. *Anemone tenutjalm fiore plena OtombiM* • Narrow leav'd double bluffh Columbine WinKwer. It has a larger Flower than any of the former, the outer Leaves being long and broad: rt. Thrum is compoied of fhort narrow Leaves,

FKrrh S Tuft of longer and broader Leaves, which f>d over the Flower, almoft to the whdeflow,

SU a Huto «SBh « ^ like « that which in the Flowers Columbines, whence came

nothing from the Columbine Anemone, at SsSt. 66. above, but only in the Flower, which is ibmething fmallcr, and not fo ihick and double as that is; this being of a reddifh color, near to the color of a pale red Rofe, or of a deep colored Damask.

LXVIIIf. 22. *Anemone tcnuijolin fiore plena Rofeo variegata* : Narrow leav'd double variegated Kofe colored Wind-flower. This differs trom* the Jaft only in this, that the Flowers hereof are fripped and variegated with white, fpecially in the outward Leaves.

LXIX. 23. *AnemonetenuifoliafioreplenoGirm-o yivaajjimo* : Narrow leav'd double Carnation Wind-flower. This in its Root, Leaf and Flower, comes nearieir to the former double white Anemone, atSect.^2, above: in refpeEc to the magnitude and duplicity of the Flower; and in the finalnefs of die middle Thrums, and theii evennets at the Tops: it is not fo brge and great 3 Flower as the Double Purple, at Sea. 6d, either in irs inner or outer Leaves, bur yet it is very fair, thick and double, and of a molt lively Carnation Silk color, vtry deep both the outer Leave*, and middle Thrums ; and withal fo bright, that as well as ti delights the Mind of the beholder, foit fills it with'a kinfl of amazement, by reafon of ics excellent appearance: Yet by long Handing in the Sun, it grows paler, and fo pafles away, as do all the other Beauties of*this kind.

LXX. 24. *Anemone tenuifolia fiore plena rubante maculate*; Narrow leav'd double fpotted bluffh colored Wind-flower. It rifes up with a ull Stalk bearing a large Flower: the outer Leaves whereof are almoft white, marked with fmall reddifh ipots and marks, efpecially on the outer fide. The Thrum is large and thick, compofed of many long narrow, lhaip pointed Leaves, ot a reddifh or Peach color, powdered with fmall fpecks of a deeper red color. This is called by thofe ivho brought it out of Wanders, The PerfeffCourtical/i.

LXXI. 27. *Anemonetenuijoliafiorerabrofiuta plena coma Amarantina* ; Narrow leav'd double purple Velvet Flower. It is in all things like to thi; double Carnation, at Sect. 69. above, but p^mething larger. The difference confifts chiefly in the color of the Flower; which in thisis of a deep or fad Crimfon red color, for the outer Leaves; and of a deep purple Velvet color in the middle Thrums, refembling the color of the leffer *Amarantibus purpureut*, or purple Flower-Gen tie, (from whence it took its Name:) which middle Thrum is as fine and fmall, and as even at its top, as the double white or Carnation Anemones, at Sect. 62. and 6?. aforegoing.

LXXII. 26. *Anemone tenuifolh fiore pkno tricolor* : Narrow leav'd double three colored Velvet Wind-flower. Ttis is very like thelaftdefcribed} fjving, that in the middle of the purple Thrums, there comes forth a tuft of Threads or Leaves, of a more light Crimfon color.

LXXIII. 27. *Anemone tenuifolia fiore plena purpureo* -. Narrow leav'd double purple Wind-flower. It comes up with green Leaves commonly before Winter, and many times with Flowers; and therefore for the prevention of fuch fbrwardneft, the Roots are to be kept out of the Ground, and not to be fet till November, which caufes them to bear the fairer Flowers in the Spring following, which will be very large, thick, and double, of a lad dark Violet purple color.

LXXIV. 28. *Anemone Tesuifalia fiort plena LavenduU eolore*: Narrow leav'd double Lavender colored Wind-flower. It is in all things like the lilt, but the Flower is letter, and of a pate heavjr
7 Y blciv

blew color, like unto the Flowers of *Lavender*: there is also another *d* this fort, which is striped with white, especially the outer Leaves of the Flower.

LXXV. 27. *Anemone tenaifolia flore* \sqrt{w} \times *Cerulea*: Narrow leav'd double Wind-flower. It is in its partiort or form like the *Jalf*, differing only in the color of the Flower, which in this, is of a fire bright blew color, more delightful to the eye than any of the *Purple Anemones*.

LXXVI. 50. *Anemone tenuifolia flore plena* *iurpureo*: Narrow leav'd double Wind-flower, with a Purple Thrum. This differs chiefly from the other Purples in the color of the Flower, the outer leaves of this being white, and the Fluff or Thrum, of a beautiful Purple: this Flower by reason of its excellency, is called *The Perfect in Beamy*.

LXXVII. 31. *Anemone untifolia flore plena coma Amdrantina*: Narrow leav'd double Wind-flower with 3 dark Purpl Thrum, called *Amarant*. It has broad green leaves as the *nic* common Red, (*at* *Seff*. XLVtl.) and the Flower is of the fame color, the outer leaves of such red color, and the middle Thrum of a dark Murry Purple color, like the Flower of the lesser *Ai/uranthui Purpureiti*, and therefore wiled the *k-rurj'm Anemone*. Sometimes there will come a Tuft of bright red saves out of the middle of the Purple Thrum, and then some have called such Flowers *Amrntus tricolor*, as if it were a different Kind, which in some Years happens in most Flowers, and in other Years few or none.

LXXVIII. 32. *Anemone tenuifolia flori pkno coma Amaraminavanegdia*: Narrow leav'd double variegated *Amarant* Wind-flower. This is in all things like the *air*, save only the outer leaves, and those which come out of the middle of the Purple Thrum, are variegated with white, much clearer in some Years than in others. There are two sorts of this flower, one from *iinders*, another from *Paris*, the latter being the better, as more constantly marked, and more distinct than the

LXXIX. 21. *Anemone tenuifolia flore plena* $j \gg w^{\wedge} fw/t/ - ; iV$ Narrow leav'd double Wind-flower of five colors. It is like the *Amarant*, but that the Stalk is taller, and the Flower larger: the outer leaves are red, the Thrum of a deep Murry Purple, out of whose middle comes one or two rows of leaves, of a light Crimbln color toward the ends half way, and the rest a pale yellow; in the middle or these leaves, comes forth a small Tuft of flower knots, of a pale Silver color. This is an uncertain Rower, and does not often come well.

LXXX. 74. *Anemone tenuifolia flore firmi Perpertig itigefami*: Narrow leav'd double dark Purple Wind-flower. It has fair large Flowers, of a dark Purplish color, finely striped with white; its Roots are tender, and apt to perish, unless the Soil be very agreeable, as all the other *Karrow Leav'ti jhijhd Anemones* are.

Btides the Thirty Four, Mr. R^c has given us brief Notices of Distinction of half a Hundred more, called by particular Names, and that in an Alphabetical Order, which that you might not want the Knowledge of; we (hall here exhibit them 10 you in the following Eighteen *SeSions*.

LXXXI. *Alboaeif*; white, with a little Carnation in the bottoms of the Leaves and Thrum. *Albertine*, or *Fafs Scala*, Fklli color with Carnation. *Angelica*, white Leaves, and a pale greenish Thrum. *Afian*, white and Carnation Leaves, with a Scarlet and white Thrum. *Afrea*, white and Carnation, *Augujime*, white and Carnation Leaves, with a Scarlet Thrum.

LXXXII. *Bouloioife*: white leaves with Carnation bottoms; the Thrum white Carnation and I morj. *Briote* white and Carnation leav Thrum all Carnation, *Bugle*, it is an ill mixt with Carnation.

LXXXIII. *Candwte*: Gray leaves with Carnation bottoms, and Thrum Carnation up greenish Hair color. *Cazcruen*, the leaves Ciini^h lbn, bordered with a yellow Brimilone color, the Thrum deep Scarlet. *Qelefine*, the white, and the Thrum white ripe with *J Cefide*, the leaves white and Carnation, Rose color, *au'ta*, it consists of Blulli, $\ll r^{icw}$ color and Carnation.

LXXXIV. *toamafine*: Camaiio; While perfectly marked. *Dorifaene*, the Carnation and white, and the Thrum color.

LXXXV. *Extravagant*: Its Leaf is * with white, red and green colors \pm its T. ing of a *Ibange* form.

LXXXVI. *Gabriel*: It has white bl \ll I Thrum green, mixed with White a; *Gallipoh* of *Tholouzc* % the whole i Scarlet and White. *Gayetane*, the first Fi aic white and Purple, the latter Dove color \ll Ptiach.

LXXXVII. *Herejje* .-Its leaves are of a DrOf fon color, fomedmts marked with white, and tu Tiirum is Scarlet.

LXXXVIII. *Jolivet*, the leaves arc Fleflit^h and Crimfon, and the Thrum of a lirick coiw-7 \ll JW, the leaves are of a Bluh or Flefl and Carnation, and the Thrum reddish. *ft* the leaves are a Carnation and White, and Thrum Camarion color only-

LXXXIX. *Limfinc*, it is very much *ib* the *Extravagant*, at Sett. LXXXV. ing. *Lidnoife*, the outer leaves and the within, are of a whitish Gray, with Dove bottoms -, and the Thrum is Dove color green.

XC. *Ahtuane*, the leaves are Limon color, with Carnation bottoms. *Miidsre* the leaves are a deep Suxkt with white bottoms. *Methnt* leaves are all of a dirty Gray, mixt with and Carnation. *Mrefque*, the Flowtr isal mixt with Carnation. *Moretie*, the leaves are a Bluh or Fleh color, and thy Thrum hite with red.

XC1. *Natalia*, the leaves are Carnation White, and the Thrum the fame. *TCt > ire &* leaves are of a Crimfon color, and the Crimbln and almott black.

XCII. *Oriental*, its leaves are of an urni^h color, viz. a blew Gray, much like *tht: talot* f our *Common Slates* with which they cover Houfcs-

XCIII. *Parifien*, It has white leaves with \ll S bottoms, and the Thrum is Limon color, $v. d^c$ at last is almost white, *Parmefj* its l \ll v^{ei} white with red bottoms, and the Thrum is a t^h rure of Rose color, Carnation, and light Hair color- *Picord* or *Juno*, the Flower is all white, Veach color. *Provinfallce*, the whole throughout is Green and Peach color.

XCIV. *Quetri Color*, m *Amorinshe* is of three sorts, viz. 1. One with Crimbln leave* striped with White, and its Thrum a fid Murtf with a red Tuft in the middle. 2. One with W>J" lbn kaves, a fid Murry Thrum, and a Scat^c Tuk tip with white. 3. One with white mixt with lbme Crimfon, its Thrum Murty, 3 [g Tufi in the middle Carnation. 4. One with Oimlbn leaves with striped with whin-, Murty, and Oic Tuft Carnation,

XCV. *Regale*, the whole, both Leaves and Thrum, are a well mark'd Flower with Crimfon and White.

XCKJ. *Saint Charlet*, the Leaves are of an ill or poor flthite, with red bottoms, *Seata* its Leaves are also of a dirty white, and its Thrum Scarlet-*Scrmoneita*. the whole flower is ail Scarlet and a pale ycllorf. S«ri*w, its Leaves are a pale *Ifobel-In*, clouded with Blufh or Flefh color, and the Thrum is a light Green To clouded.

XCVI. *TijtUhi* The whole Flower is cF a faded mixed with a little Hair color. *rynvife*; The whole Flower, both its Leaves and Thrum are White, but the bottoms of the Leaves are Carnation.

XCVII. *ViQorim* Its Leaves are of a Blufhor color mixt with Carnirion; and its Thrum Hair color and Carnation. These *Anemones*, with many others not here named, are all fine *Narrow Leaved Double Vowcn*, notably differing from each other, and thrive very well in our Gardens.

Belides all these, many more Varieties may be produced by the Sowing the Seed of some of the best Single ones, not possible to be accounted for, of which any one may make Tryals at pleasure; what we have further to do, is to shew the manner and way of Sowing and Planting them, and the managing and ordering them to the best advantage.

^CULTURE.

I. Of the Preparing the Earth.

XCIX. In the managing of the rarer sorts of these Beautiful Flowers, very great Care is to be taken, that the Soil or Earth, Scituation or Place, Time or Season, and the way and manner of their Planting and taking up, be exactly observed; otherwise your Flowers will neither be fair, nor the Roots prosper and increase, but rather rot and confume away; especially all the best *Double Kinds* of the *Texuifolia's*; the ordinary Flowers, and Single Flower'd, are more hardy.

C. The Soil is then first to be considered, which must be Fat and Rich, and not too light; a Rich Sandy Loam Earth is said to be best, in which some Meats and Sheeps Dung, with a little Lime has been tempered, and lain long on a heap, and often turn'd over, to that the Dung be fully rotted, and well mixed with the Earth which being first Sifted thro' a Wier Sieve or Skreen, you may then make a Bed thereof half a Yard deep at least. In some place which is not in too hot a Sun, but a little shaded.

C. Or, make five equal Heaps of yellow Sand three others as large of Kitchen Garden Earth, and four others of Bed-Mould well mellowed; then mix them altogether with a Shovel; make as much of this Earth as you (shall have occasion for, which let be a Year old before you use it, during which time, pass it once every Month thro' a Skreen, that it may thereby be thoroughly mixed and perfected, left its too subtil parts (which might hurt the Beauty of your Flowers) mould be retained, which by this means will in some measure vanish.

CII. But if you cannot well stay so long as a Year for the well fitting your Earth or Mould, you may then provide the Earth as in the former *Sel'lon*, and after a Months time use it for the first time; but then you ought always to have a good quantity more of it in reserve, ready prepared as before, a Year before hand. The more this

Earth passes thro' the Skreen, the lighter it will be and more agreeable to the Nature of *Anemones*.

CIII. Before this Artificial or made Earth be laid upon the Natural Soil of your Garden, the Ground ought to be before-hand prepared. If the Fjnl of your Garden be naturally light and Tandy, or Gravelly, you need do no more but dig it up, and cover it about half a Foot thick with this your Artificial Mould; but if your Garden Ground is Wet or Moist, (both which are Inimical to these Flowers) you must dig the Bed you design for these Flowers, and take out about a Foot and half depth of the Earth, and then fill up the hollow Capacity rheieo with a Compound of half Sand and half Artificial Mould; in which you (shall Plant your *Anemones* as shall anon be directed.

CIV. Instead of Mould, you may make your Beds of rotten Herbs, Leaves and the like, which mixed as is before directed, and palt several times thro' the Skreen, will make a *Qimpoff* or Earth, as fit for *Anemones* as can be desired, which you may lay upon your *Hcrfipurtjtenls* of Beds, after it has been well Sifted or Skreen'd.

II. Of the Turns of Wanting of ANEMONES,

CV. The best Season for Planting *Anemones* is from the middle of *September* to the middle of *October*, but if you have a mind to have them in Flower a great part of the Year, you must Plant them in *March* and *April*, but you are not to expect such fair Productions from these last as from the first, where the Sap has had a primary advantage.

CVI. And this seems to be *Parkin/ox's* Secret, to teach us how we may order *Anemones*, that after all others are commonly past, we may have them in Flower for 2 or 3 Months longer than they are otherwise to be seen. The ordinary time (says he) to Plant *Anemones*, is in *August*, which will have Flowers, some per chance before Winter, but most commonly in *February*, *March* and *April*, few or none of them abiding until *May*, but if you will keep some Roots out of the Ground implanted, until *teoriMry*, *Mwcb* and *Aprils* Planting time at one time, some at another, you will have them bear Flowers according to their Planting.

CVH. Those (says he) which you Plant in *February*, will Flower about the middle or end of *May* and so the rest accordingly after that manner. And thus you may have the pleasure of those Plants out of their Natural Seasons, which is not permitted to be enjoyed in any other Flower that I know of, Nature being not so prone to be furthered by Art in other Plants as in this.

CVIII. But this to be observed, that when you keep your Roots out of the Ground for this purpose, that you must be very careful in laying them up and preserving them, that you keep them neither too dry nor too moist, that they may neither spout nor rot, and then in Planting them, that you set them not in too open or Sunny a Place, but where they may be a little shaded.

CIX. The *Latifolia's* are generally Planted earlier or first, as in *August* and in *September*. The *AngitfiffoUa's* or *Tenuifolia's* are ever Planted after them, later in the Year, being kept out of the Ground (in some proper dry place) till the end of *October*, and the Purples a Month longer, and then set in the same manner as the others. The *LatiMA 01* Broad Leav'd, will come up before Winter. The *AnguMoM* or *TemafrSfs*, the Nar

row LeavU, about the end of *February* or sooner, if the Winter is mild, otherwise in *AWW?* or *April*. li the Seifbn is dry, they ought to be Watered, which will caufe them to thrive much the better, and to bear the fairer Flowers.

III. Of the manner of Planting ANEMONES.

CX. The Beds or other pches being prepared, and made even and fsmooth w'nh the Rake; take a Cord, and extending it long-ways, diaw a Rill, or liddle hollow Line or Gutter, from one end of the Red to the other: This done, extend your Cord, and do in like rmoner again, a fecond, third, and a fourth time, or more, according co the brearh of your Bed, ar j Inches diftance, (Mr. Rrj frys 4 or 6 Inches) afunder from acb other,-

CXI. This done, take up your Cord again, and place ir in like manner, to draw Rills or Gutters crofs all theft Beds from one end to the other, and all of them equally at the aforenamed diftance, « S, 6, or 8 Inches, by which means you will form A regular ohlong Paralleltogrsm_s in which, either in the middle of each Square[^] or in the points where the Lines cro& one another, yonare to Plant your Anemone Roots, which being at an equaiditanceci they will when they come to blow give you a fingui n pleasure, which will arife from rheir great variety, of colors, and their regular order of Planting.

CXII. When you are a going to Plant the ^{Koots} make ^{3 nt} e foe every ⁰¹ e of them with your Finger, or an Iron made for that purpofe •, which let not be above 3 Inches deep in the tiround, and place the Root always upon the lar-Rct frleofit, with the Hit downwards, to the end that the *Yabutum*, or nourifhing Juice, may rife directly into the Root, to tjufe "it to fpring, fo as to anfwer your FxpeEtations.

CXIII. Or as Mr. RCJ fays, put the Root into the hole with thar fide of it upwards[^] where you perceive fmall Emirtencies to put forth Leaves. The *Leiffoli Ji* and *An£ufijftlia* or *Tfnvijotiit* are all of them to be handled In the lime manner, only differing in ihv Times of their Setting or ^g:g, as we have (hewn in Sc3. 109. afbre-goujg

CXIV. Anemones are not Planted in open Grounds, but they are fometimes put into Pots, one or two or more Roots into each Pot. (according to the mignltudffof the Pot) and this becaulc, that if any of the Roots (hould chance to tail, there may be found in thefe Pots wherewithal to fill up the vacancies.

CXV. Tliis failure (if any *be*) will be perceived about three Wedcs after you have put your Roots into ihu Ground, and which does not always proceed from 3 corrupted Root; bur fometimes is uccalloned by the *£.ulum* or Sap's not rifing lb kindly as it ought: You are ever to look ibr fiich a Root in left dian a Month[^] and you will fbometimes rind Uiem in your Pots alfo, as well as in your Beds.

CXVI. The Flower* inquire to be Planted in an open place, anilyno means in a (hady; becanfe, fending forth a great many fibrous Threads or Suing*, and large inrts of Leaves, they would be apt to fpend thtmilives too much, if fo placed; and fo caulflaweaknelciu their Stems, and hazard theg proving Abortive, or oihervilc to yield hue a very few Flower*. And the Stalk being thus

render, would certainty be killed by the CoW, which they would be too fufceptible of in th' or elfe be broken with the Wind, which would <6 a great damage to the Root it Ilf.

CXVII. If the Autumn be dty, you care ro Water them well: but contrarjwife, ^J "• £ Rains very rrllich, you muft then defend them lrot> W too much motltute, (whial agrees nOLw 1 with skreens'of Straw. iTheyJBrrbe waff from the Month of *lebriihry*, to the times; or il Flowering, which how much, or how often it is to be done, experience only. niJtMU >¹⁰¹

CXVIII. Tho' Cold is no mctraffrlDiy to the; yet when it happens ro be very feverq^e rHA ought to be covered with long dry Du-nfc or 1 Straw: and your Pots ought to be alfo\aiU Placed, whe'e they may be moft fei Weather.

CXIX. Then again when the W< mild, you may uncover them; but witha muft be fure to cover them again, it it ehj be Cold again. In fum, your prudence and experience muft excite your "nduftry, MA dif^ when, how often, and long, you muft bellow uu* trouble upon them.

CXX. If at any Seafon of Plaming or SettiDg your Roots, you put a little Willow Earth " and over the Roots, it will caufe them ft put forth Fibres; and thereby make them able abide or enduie the Winter. Yet in Froft and E Weather, it will be good.to cover them which are fprung up (as afbrefaid)with Mats orPeale =>c<<" which you may take off for two or three hour* every other day, f if lair, and the Sun (Junes, an< there be no nipping North, NorthEalt, or fctfwaid Winds) to give them Air, and prevent MouW'nc^ (whicli is apt to happen to them, and) whicri r-been the rain and deftruction of many a Plant, from which you might have expctted ve admirable Flowers.

IV. Of ChHfwg Plants for Seed-

CXXI. There is fome Ipecial choice to made of luch Flowers whole Seed is fitteft > taken: of the *Laiifotia's*, the double Oran^ Tawny Seed being Sown, yield many pltalant varieties -, but the Purples, Reds, or Crimilms, r " thtr *Lafifo/iiPi* or *Tenmfelia%* yield fmall 01 varieties, but fuch chiefly as draw neareft Original, tho' it may chance that fome may •# a little deeper or lighter than others.

CXXII. But the light colors ate tlufc, are to bechofen for this pwpofo, asWhite, Aih-color, Blufli or Carnation, light Orange, i or parti-colored, fingle or double, (if they Seed, as ioroerimes riefy do; Tnefe are wioioe Seed you are carefully to garher, t" not before it is throughly ripe, which you may by the head.

CXXIII. For when the Seed with its nets begins to rife a little of it felt at the end, it muft then be quickly gathered, I" (" - Wind carry it alt away. After it is thus caretw^{1*} faved, it mult be laid to dry for a Week or 1 which, then being gently tubbed!with a !i<l and or Eanh, it will cauk the Seed to be fom^{er} feparated, altlio' notthroughly, (trill)

CXXIV. • If then remains any WooUruds in pull it afunder as well as you can, that they be perfectly Ieparat<l; foemdefe this be tt will be impoffible to Sow them ifl¹⁰ i

due order, which the Nature and Quality of this Plant requires.

CXXV. For the raising of new Varieties of *Anemone** from Seed choice must be made of the **Boms** (is Mr- Ru &js) as Uirly*s » meof tV D « W LtffifiA bringSceds, therichelt Scarlek paleft Purples, Pink colored, White and Sky

ire the belt
VI. But in the Single *Anguft.foiui*, or OTfirw'si there is more choice* as Red and ts with deep white edges, all that are vanelated or tripced with White; and in theie, the d S S I Velvet Purples are the best: But above all others, those which have 2 « i Rows of Leaves, and that excellen: *Single Velvet Blew*, are thieflj to be preferM.

CXXVU. In fhorr, to have good beed, you oueht to pitch upon *Single Anemone*: which have Ill-one Stalks, and proportioned, in height to the lareenefs oi the flower, and which have long and round Leaves, for-thtil; kinds of Flowers never degenerate: and therefore it may be in a manner certain, that if Nature, the Seafon, and the Soil favour us, they will give us a produce of wry fine Flowers.

V. Of Sowing the Seed.

CXXVIII. The Seeds of these Flowers will be ready to be gathered in AUy, which must be done as the Down rifics, else they will be all blown away • and hiving gathered all your Seed, dried I cleared them from their Down, as diteftej at J, CXXIII. above, or by mixing with them a Sufficient quantity of dry fine Sifted Earth, and in a Bowl, Trey or Bafon, ftiring and mixing them with your Fingers fo long, till none of the white Down appears -, you ate then (not to ftay till *Aitgufl* as Tome Fi-wfc Gardiners diieft,) but to Sow them about a Month after as *Parki/ion idvi&S*, 01 not exceeding 6 Weeks, or the middle of *July* at molt, as Mr. *Rta* fcys.

CXXIX. Then be furc the Earth in which you Sow] them be good, and finely Sifted, and lee the Ground be mads into Beds as before directed, or puc into Boxes or Pots, it you defign them: This Ground must not be a too ftiff Clay, nor too light 2 Sand 5 but if not fie for the purpose, it mult be prepared, and may be compounded thus. *The Clay Earth is to-be mixed with Brook Sand and Pearl Sand, ind good fresh fat Earth, taken from next under the Turf of fsnx god Pafiture^ vfah with some eld Neats Dung met/ rotted to Earth, and some Lime, are to be tcell mixed together, and being dry, to be often Sifted or Skrcen'd wer, that The Mould may be made very fine.*

CXXX With this Mould thus prepared, you may make Beds, &c. as aforefiid, u pon which you are to Sow your Ssed reafonably thin, and not too thick; (fo alfo in Boxes or Pots,) lee the rop of the Bed, #* be firft made very plain and Gnooch, then your Swd being Sown upon the fame, gently ftrew or Sift over them, some fine good froth Mould, covering them about an Inch thick at molt for the firft time.

CXXXL About a Month after their iirtlbring-ine up flie^ 01 Sift over them again another Inch (h-ckifis of fine Earth •, and in the mean time, if the Weather proves dry, you must Water them aently and often, but not to overglut them with moiSture. And thus doing, you will have them - up before Winter, and grow pretty frong, i abide the (harp Seafon in this their fo ten- *Age s efpecaUy if you take a little care to co-

ver fkeff loofely with some Fearn, Stia) Straw, Hay or the iVe, which must nor Ij-cclode upon them, nor yet too tar o&, being laid ovc: hem upon Sticks.

CXXXII. But in your Sowing the Seed, tlio' you arenot to Sow them too thick, yec'you ought not to err on the other Hand neither, in Sowing them too thin, becaute ni:iy of them may n carry, and neve* Spring up, which bcin^ covered as afore&id, about an Inch thick with tine Sifted rich Earth, and fo to be farther ordered as in the former *SeJfion*, will not fail to anfwer your Expe&tations.

CXXXUI. Some in Sowing the S*e4, io it after this manner, (the Bed being before hand piepared) they take the Seed and pur it into a Leather Bag, and clofing up the whole, fo as'only-three Fingers may enter in, you may prelj the Bag with one Hand, and Jerk, or a liule (hake it with Viz other, fo will the Seed fpring out, iifuch 3 manner as it ought co he Sown, moving the Bag up and down over the Bed, both long ways and crofs ways, :hateach part may have its (hare of Seed.

CXXXIV. Which done, and fii)e Earth being Sifted over it as aforefaid, immediately ftrew the whole Bed thinly over with long Straw, and forthwith Water it with a Watering-Pot, which let be pretty • confiderable, but afterwards lefs^ becaufe roo grear a Quantity of Water would tot the Seed, and To to rally deftroj it.

CXXXV. After 1; or 26 days, take off this thin ftrewed Straw. It may be the Ssed may begin ro fprout in that fpace of time, or fooner: but if they fhoot not for \$ 01 6 Weeks gtne, be not concern'd, for they may yet grow well

CXXXVI. The *French* Gard'mers fay, that if the Seed be well Sown, and great care be taken in Cultivating it, that you will not tail of Flowers in *Mareh* following, or in *April* at farheft; becaufe in *June*, when the Stalks begin to wither, and their Roots are difplanced, the Bed where they are is to be digg'd thro* three Inches deep, and the Earth as foon as it is call up, to be laid upon a Linnen Cloth or Canvafe, till fuch rime irs the hole be dug, which is then to be crumbled, and lifted, 01 feate'd on a hollow Bed, till fuch time as there remains above Ground only the *Fangs* of these young Anemones, which are then called Peas, becaufe they referable that Pulfe in form and magnitude.

CXXXVII. *Firkiftfontevs*, the Seed being thus ordered, that the Plants will bear Rowers the fc cond Year after Sowing -, and moft or all of them the third Year, if the place where you Sow them be not annoy'd with Smoak of Breweis, Dyers. Malt Kilns, 01 other inconveniencies, which if they be, rtiev will never thrive well.

CXXXVIU. Mr. *Sea* in his *Eora*, page. 128. fays, that some report: that they have had Anemones bear Flowers the next Year, and others, the fecond Year after Sowing. But I (lays he) can expeft few or none that are good before the third Year, and many will not bear until the fourth Year. But the agrecablsnefs and goodnels of the Earth and Air, for bringing them Forwards is moft confiderable •, therefore you ought to be fare to make it as rich (for the kind) and as good as you can, taking heed cf not putting or mixing with the Mould too much Dung.

CXXXIX. These *Pejfe* aforenamed, at *SeS*. %f. above, being gathered, are to be carried and kept in a dry place, as carefully as poffibly may be till *September* nttx, when (new Beds being made for Tiaming Antmony RootsJ they ate 10

Keptanred, after [the method before prefcri-

CLX. This way of *Multiplying Anemones*, is as it were a Nurfery, where Nature from fingle Flowers which were Sown, gives double ones, according as (he is pleafed to Aft. When the favourable chance does fo happen, you ought to fet ? mar* of diftinction on fuch as deferve it i to the end, that in the third Year when you take them up, you may put them in Beds by themfelves.

Vi. Of the taking up the Roots.

CXLI. *farkinfon* fiys, that the next Spring after Sowing, you may if you will remove them; buthealfb lays, that it is better to flay' till *Auguft*, and then make the Kemove, when you may fet them in order by Rows, with fufficienrdiftanceone from another, as is before diiefted; where they may abide until you fee wkii manner of Flower each Plant will have, which you may afterwards better difpofe of jeording to your Mind.

CXLII. As to the *Anemones* nifed from the Planting of their Roots, if they like their Entertainment grow Strong, bear fair Howerson tall Stalks, and profpr well, you may ibrbe3r to take up their Roots until the end of *June* or *July*-. But on ihe contrary, it' the green Leaves are rcw, the Stalks fliorr, and the Howers finall, it is a manifet (ign of their di/like, and that the Soil is too cold and poor, or die too hot and rank, which is far more dangeroifc.

CXLIII. In this cafe, they muft be taken up as foon as the green Leaves turn yellow.

mmmm

....., you aim twifume away, efpecially if any ftore ol Rain fhould fall upon them.

CXLIV. In taking up their Roots, you muft rake care that they be not broken, efpecially the *LatifbHa's*; which muft not be divided nor broken, until they part of themfelves. The *Anguftifo/ia* or *Texutfwfs*, may be broken or parted with kfs prejudice; but the wholei they are kept, the betrr they will thrive.

CXLV. And tho' the Times mentioned in fotne of the former Seftions, be belt for planting or fetting thefi; Roots, of both kinds O1 the mote excellent and rare of thefe Flowers, yet the more ordinary kinds, may be kept out of the Ground till the end at *February*, which fom; do. to caufe them to flower late, after the other finer and rarer kinds are gone.

CXLVI. In this cafe, it will be good to fteep thete long kept Roots 34 hours in warm Water, before you Plant or Set them: and then to Plant them with focne Willow £mh under and over them, and in a more (liady place than ordinary -, becaufe the heat of the Sun, in the time of thar flowering, will much ditninih thtir beautiful appearance.

CXLVQ. If then you have two Beds fited wirth choice varieties ni *Anemones*, let the latter which are Set, be more fhady than the tirtf^ and fo gradually as they are later in Planting; and then if the aforementioned Rules be oblerved, you will be fure to have admirable Flowers in pan of *March*^ and all *April*, and the greattt part of *My*; uniefs your Garden ftand in Tome Smoaky

or ill nated place, where neither *An* nor *Induftry* can make them profper j uniefs they be Set, in a hot Bed, as fome in and about *London* commonly do.

VII. Of the Choice of VUms md] Flowers.

CXLVIII. The Beauty of this Flower con in its largenefs, roundnefs, and fine colors, to wl m the double kind add its duplicity comdlea* e;pe5!ally wih i« great Leaves, exceeding a little the bignefs of its Tuft: and the extremities of its «rgeit Uaves are round, as well as thole of its

r v i f a h k t o u g i t t o ^ l a r g e a n d n o t M B o w
CXLIX. That is a fine Plant whofe Stem is proportioned in height to the largenei of its flower, and is ftrong enough to bear ic up without biding r alfo when its Leaves are curl'd, its Tuttlow and bufliy, repreftenting a kind of Cu-P^o i and withal has a great many Stalks or

CL. Its Poiite! in the middle ought to appear a Lttle, and be as it were upon a level, with teavesof the Flower, of an indifferent thicknefs, ror it is too thick it is a defect, and it ought to be alfo of fomething a different color from the great Leaves and the Tuft.

CLI. There are fome *Anemones* which are apt to (hoot up into height, fo that inftead of Flowers, they only produce Leaves; and this comes from having fuch a great number of produaions on every fide, which draw away the fucculent and nutritive Juices and Salt of the Earth. This great abundance of Leaves you muft reftiuy, by clearing the Plants of fuch as are fuperriuous, whereby the reft of the Plant receiving fo much the more of that fucculent Nutriment, will make it the better to produce its Flowers.

CLII. If the *Anemones* (hould grow mouldy at that part of the Root from which they (hoot, (which is their Oldeft part) give them a fillip with your Finger on that part, and if they found hollow, or have little holes therein* then you may take a Knife and pare away that decayed p3rt to the quick, fmoother the place where you make the Incifion, lor fear that if any hokfhould remain, fome of the tumidity may lurk behind, which may make the Root fall into the ftme Dif-eafe again; which when the decayed part is cut quite away, new Roots will fhoot forth, which will give you Flowers in great abundance.

CLIII. In doing this work, many Roots O1 fegments of Roots you may cut off; theie you ought not to throw away, but to Re-plant them again i for many times chofe off cuts being Keplanted, will admirably revive, grow ftrong, and bear very good Flowers.

CUV. But in the Roots where you have made the Incifion, fo foon as ever they are dry, y^{ou} muft rub them in the wounded place with a mixture of melted Kofin and Wax, which being well hxed on them, will hinder them from farther corrupting.

CLV. And as it is to be oblerv'd, that the Seed only or chiefly of the *Single Anemone*** bring forth Double ones* lb the *Double Anemonei* feldoro or never multiply, but by the Fangs of their Roots, which are conflant fa their produQion, and never found to degenerate.

CLVI. We have given you the Names of the principal kinds of above foufcore various fops of k ^ 7 s v a t m t l s P ^ o l c, there are a hundred other forts, with Names in, pored up O11 them,

tban, which indeed can fignify yew little to infer here, being given them purely from Whinrfie, Fancy, and Fantafricalnels, many of which, when the Flowers Die, their Names Die with them: for which reafen we forbear, thinking it diffident what is already find, and that we have givon you enough Signs and Manifefto's todifcover and know all fiich, as you are to fet a good value and ettimation upon.

CLVII. What remains, has relation to their Qualities Specification., preparations and Virtues; bur they being'die fame with rhe moft vulgar and Qmmn Anemones, of which we ittve treat

XIII. ar IV. afoijoining, we (hall "iy no mote in ibis pbee, but will rufrr ym lit her.

CHAP. DCCXXXIX

O/WINTER-GRHEN,

It was unknown to theGreeh; and is called by the Latmes Pyroh (k foliorum Pyri arborii, etiam finiihtudine:) from its likenefc to the Leavesand Flowers alfo of the Peat-Tree; in nglitii, Winter-Green.

11. T» Kinds. Authors have mjde many Species of this Plant, moft of which ate perfeEt Strangers to us, we (hall only takt notice of theib two, vis. 1. PyroU nofiros vuigar'is; Pyrola vulgarior: Our common Winttr-Gceen. 2. fyroLa Euzep.tii Alfines jbrc -7 terbti TrientalU Cordi; AlfineAtpinaSchtcntyddij-, Aljnanthemom Tbalij, 1. e. Winter-Green,

the DcfcRIPTIONI.

IH. The Firft, or OUT Common Wint'jr-Green. Its Hoot U /ender, fnall, creeping^ cerspaS OJ many fma!l Fibres, or thready Strings -, jn \ ihoot forth 1 or 8, or 9 Lr^vr.; ll/mhdig on d'ton? foot Stalk, which ttre'a/mvj1 IU broad'M long a nunA pointed^ of a/ad green crio>\ bard in hund-ing\ and feme thing like to a Pa;r-'tree Is \ij , nee the Jsame) or at Jome will have it tike to tbe/mallLriivrs ofWild Beets, whence comet forth for ihb mcji pun bat one (but fmetbnei tcca) (lender tot'ak Stalks, yet jlartring upright, bearing at t)ye Top many lwalf vtbite F&tvt/v, fwelling as Jeet as thwfe of the Lily Conv.ili'y. laid open like a Star, confifing of 5 round pointed Leave*, mhb mmy yeftomiJbTbreadt in :h' middle about a green head, and a long file with them, which in time grom to be the Seed Vejfei. which when it is ripe, is quinquangulsir, or five Jfded, toib a Jm-iUpoint at it, in which is contained Seed as fmall as duji it fclf.

IV. The Second, or Winter-Green with Chickweed Flowers. Its Root is*made of 111 any fmill Ft-bret, proceeding from a futali'raynd head. H rifies up with one or more, flrait round Stalks^ 6, lyor 8 inches high, tlmojr bare of Leaves for a fface next to the Root 5 or at moji with but 2 or 3 very fmall Leaves, fct one a little above another: but at the top thereof grotos 5, 6, 7, or 8 Leaves, fomeibing long, and pointed at their ends, fame-thing like to a Pear Tree Leaf, but longer and nut jo round 5 being many of them tin Inch jind half long or more, tende>\ jmeoth, green, having one middle Rib, with divers Veins in the Leaf finely dented about the edges: from among which Leaves, rife up weak foot Stalks, rather than Stalks, about ? inches long, fuffmning 3 or 4 flowers, each by it ftlf wade cf fix white pointed Leaves apiece^ Star fi/hion, fomething like a G'kkweed Flower, bat larger ^ with feveral fmall yelfoivi/h Threads in the middle; which bring ftift, there conies in place a/mall round head, j'malkr than a Coriander Seed) containing within it divers fmall black SceJ, covered with a thin white Skin.

V. ThePhccs. Thefirftgrowsin fevcral of the Northern Parts ofEngland, as Laneajhire, Torkjhire, and in otherplaces farther North, and in a place called Crag-Qofe-, and in the Woods in Scotland, almoft every where, tint rarely in Fields. The fecond in the Woods in Germany, in divers places; as alfb in the Beechiaood in Scotland, as Bünhinsu fays, and likewite on the Mountains in Wales.

VI. The Times. They both grow Winter and Summer, and Flower in the Months rffune and

y-

VII. The Qualities. They ace Cold in the fecond degree, and dry in the third; Abfterfive, Afttingent, and Vulnerary.

VIII. The Specification. The firft which is only or chiefly ufed, as it is exceedingly Afringent and Glutinous withal, fo it is a speedy Cure for Green Wounds; as alfo for all Inward Wounds and Bleedings: ir flops all Fluxes of the Belly, whether of Blood or Humors, the Bleeding of Wounds, and the overflowing of the Terms in Women; It alfo Cures old-running Sores, putrid Ulcers, B&ila's, and the like.

IX. The Preparations. You may have therefro, 1. A Liquid Juice. 2. A Decodion in Wine and Water. %. A Balfm or Ointment. 4. A Cataplafm of the Green Herb. 5. A Dijillid tVjUr. 6. Tlv I'vmdcr of the Herb.

the Virtues.

X. *The Liquid Juice.* It consolidates Green Wounds, uinng their Lipspeedily together, and inwardly 2 or 3 Spoonfuls at a time in Wine and Water, it stops inward Fluxes of Blood, and Cures inward Wounds; it Hops the overflowing of the Terms in Women, Cures Spitting and **Pojmt- ing** of Blood, the Hepatick Flux, Bloody Flux, and all other fluxes of the Bowels. It is did co Cure Ulcers and Wounds in the Keins and Bladder, Womb, and other feciet parts, as also Ulcers and Fiftula's in any other part of the Body, being inwardly taken and outwardly applied; not being inferior to *Agrimony, Avins, Betony, Burnt, Comfrey, Daijies, Golden Rod, ilarfetail, Knot-graft, Ladies Mantle, Abwfi Ear, Mjdr Roots, Periwinkle, Sanick, Taracmil,* or other Herb of like kind.

XI. *The Decofion in Wine and Wafer.* It has all the former Virtues, but not ittogesruir I **erfui** 5 and may be given Morning and Night, from 3 Ounces to 6, mixed with Syrup of the juice of the fame. It heals inward Ulcers in the Keins and Bladder* and hirdecs liilainations, healing iomenred upon any part affected."

XII. *The Balfim or Ointment.* It is made with Hogs Lard, or with Oil Olive, Bets WJX, and a little Turpentine. It heals all manner of Wounds, and Sores: the *Germans* use it very much, and extol it beyond any other Balfam made of a simple Herb. It is no less helpful for foul Ulcers and **Fiftula's**, hard to be Cured in what part of the Body soever, and heals Cankers of the Mouth and Gums.

XIII. *The Catjptijiti of the Grec-n Herb.* It is Afringent and Glutinous withal, and a Gngular remedy to be profently applied to simple Green Wounds, to contblidaie them. It also gives ease in the Gout, and abates the Tumor.

XIV. *The bilVilled Water.* It has all the Virtue* of the juice and Decotriou, but much inferior in Virtues and **Efi&s**: and therefore may be used as a Vehicle to convey the other Mpdidees down in. But it may be given of ic self for the lame purposes from 4 to 6 Ounces, **fwetned** wuli Syrup of Comfrey, or Syrup of some of the other Confolidatives.

XV. *The Fonder of the Ifrrb and flowers.* It may be given for all the fame purposes in the Decofion, Distilled Water, or some proper Syrup, or in Honey, from 2 Scruples to a Dram, or Draim and halt, Morning and Night.

CHAP. DCCXL.

O/WOAD, Garden and Wild.

THE Names. It is called in Greek, 'I<VK in Latin, *Glajnm* and *Iat* it also; and by some *Cntadum*: and in English, *Woad*.

U. *The KinJs.* We have but two Kinds here of, vis. 1. *WTM iut&*: *Glafum falivum, J^{aim}*: Our Manured Woad. 2. *U711 a[^]*: *Glfl* *fjSveflre, Ifetis agrU*: Wild Woad.

the Descriptions-

III. The Fitft, or our Common Manured Woad. *Its Root is white and long, growing doivnmrdi: «*

Woad Garden.

Woad Garden.

bat divers large, long, and something broad Leaves, not much unlike to those of Ribwort Plantane, but larger, thicker, and of a darker blewoifh green color, i'rim among which rise up, one or twofstrong Stalks 1 or 4 f high, and. Jometimes more, with divers fuch Leaves Jet thereon, but smaller as they ap-ub up to the top; where they fspread them/elves into many Branches: at the ends thereof grow fmall yellow Floaers: in whofe places come long flattifi Cods or Pods like Tongues, black wlxn they are ripe, and pendulous, or hanging downmards, wherein lye the Seed, which if it be a little chewed or broken with moijlure, will give a blew color.

IV. The Second, or Wild Woad. It is very like vnto the former, mitt Root, Stalks, Leaves, manner anifafhwn of growing, faving that the¹ Stalk is

Woad Wild.

flenkrtr, tenderer, and. browner, the Leaves lef-fer, and the Husks or Cods not fo great, and. nar-rower, and the tobole Plant fmaller.

V. The Places. The Manured Woad is Sown in Gardens, and whole Fields are Sown with it in England, France, Germany, Italy, and Spain, as alfo in the Iflands of Ierceras, belonging to Spain. The Wild in Fields and Untied Places in England, German}, Sec. where-the Manured has been Sown.

VI. The Times. They Flower in June and July, and the Seed is late Ripe, viz. in September or QQober.

VII. The Qualities. The Manured woad is hot in the firft Degree, and dry in [he fecond, bitter withal, bat not (harp. The Wild is as hoc, but more dryingffe. in the third Degree, and is more (harp ifidMoiig, exceeding the Manured in all its properties^tley are Abftaivc, Afrtingenr, and Vulnerary.

VIII. The Specification. It is good againlt the Obfeuaion, Pain, and Tumor of the Spleen; and is proper for the Cure ot fimple Green Wounds, Ulcers.

IX. The Preparations. You may have there- from, viz. from the Herb, t. A Liquid Jui<-e. 2. A Decoftion in Wine or Water. 7.. A Bdfam. 4. A Diffilled Water. 5. APouder of the Herb.

17?e Virtues.

X. Ti?e Liquid Juice. It is binding and very drying, refills Putrefaction, flops Bleedings of all ibrts, whether inward or outward, by the Mouth, Note, Fundament, or private Parts_h and therefore is profitable to flop the overflowing of rhe Terms and Loches in Women: uied ro Green Wounds, it foddens up their Lips and quickly heals them •, and is no lefs profitable to deanfe and cotrecl die pu-tridity and malignity of old running Sores, and eating Ulcers, rebellious Fiftula's, pernicious Can-cers, and che like, being outwardly applyed and inwardly taken, from 1 Spoonful to 6, (according to die Advice of the rhyficianj Morning and Night, mixr with a little Wine, or Wine and Water, or other fie Vehicle; and fo taken, ic is good to open the Spleen, cafe its Pain, and todif-cufs all hot Tumors thereof?

XI. The Decodion in Wine. It has alt the for-mer Virtues, tho' not altogether lb powerful, and therefore may be taken Morning and Night, from 3 to 6 Ounces i and outwardly applyed to fimple Green Wounds, old running Sores, foul Ukers and Fiftula's, to waft and foment them therewith, it Abfterges or cleanfo, and induces their healing: but particularly helps the hardnefs of the Spleen being Drank, and the Region thereof being alfo i omen ted therewith.

XII. The Balfam. It is of lingular ufe (being applyed) for the Curing of fimple Green Wounds, and deanfing, incarnating, drying and healing, of old running Sores, malign and putrid Ulcers, ar.d rebellious Fiftula's, &c.

XIII. The Diffilled Water. It has all the Vir-tues of the Juice or Decoftion ; but as it is much weaker, fo-it mult be taken in much greater quan-tities, and is belt ro be ufed mixed with cither the Juice or Decoftion.

XIV. The Fonder of the Herb. It may be given from half a Dram to a Dram, Morning and Even-ing in 3 Glafs of Wine, or Wine mixed with che Diitil&d Water, or in the Decoftion aforementi-oned, to all the purpofes laid. It is good againlt the Bloody-Flux, as alfo all other Fluxes of the Belly, or Defkxions of Humors upon any part, vehement Catarrhs, and the like.

XV. The Tscottion in Water. It is ufed by Dyers to Dye Cloth, WOOL, Yarn, &c. of a blew color, by Boiling the matter to be Dyed therein.

O/WOODROOF:

OR,

WOODROWEL; Common,
BUJP, and Breakstone,

THE Names. IthasnoknownGreekName, but in Latine it is called *Afperula*, and *Afpcrgula*, and in EngUih *Woodrocof*.

It. He Kindt. Thole which are moll known to us, are the three following, vis. 1. *Afferula Dotonidi* & *IAelij*; *AJprula odorata* Clifff.; *AfferguU odorata* nojirat fene -; *Aparinc Syfoejins mtxiam Cordi*; *Rub'ta SylveIris aha minor Gefnen tiepstiet Stliata Tahern^montani* i Our Commou Woodroof; 1. *Afferula Wore Crulea Dodo-H/i*, *Omerariji Lobehjtf Lugdunenjis*; *Afferula Crulea wenfis Bnuh'mi^* Woodroof with a Blew Hovver. ? *Afferula repent*, *Juncaria Sitlmatocenfti Qlufi*; *SynMcbica Species Luidunenfis*; *Juncarin Titbern&FUpniani ^kubia Imifolia nspera Baubhi*, Small Break-Scone Woodroof, or Woodroof Stone-Break.

The Defcriptions.

III. The fiift, ot our Common Woodroof. *In Rtm runs and creeps under Ground, and floats up new Stalks round nbmt it every where. IT fend forth feverrf fqtire Stalks half t toot high or more%*

Woodroqf Common.

JMU of Joints, and,4vcry ^oitti, 7 or 8 fair grew Jhining Lewes, broader than ibojc of Clavers or Goofe-Gtafs, in a manner Jmoml or but little rough at all. At the tops of the Stst/u, Hand 4 or ; ahite fact Smelling flowers, made of 5 Leaves apiece, kid open like a Star j after which, comet fndli rouni Seed, a little raugh, or. (leaving to vibatfoever it touches.

IV. The fcond, or Woodroof with a blew Flower. *Its Root is fnall, fometahat yellcx'fo and iibrout, ferijhing eiery Tear. It hat feldom more than one round Stalk arifing from its Root, fet full <\$ Joints, at every one of wNcb fiand feveral fnall and Something long green Leaves incomp*ffine it, not Jo fmoorb and green as the former i which spreads it felf out into fnall Branches, from the bottom almoj up 40 the top, fet with the like Leaves, but fmlkr ^ where the t'loners Jiand 3 or 4 toge-*

ter, each upon a fnall FootJiaW, which are of tie fame Magnitude with the former, or rather jomcting left, and of a fair blewifh Purple color,

Woodroof Blew Flower'd.

*wibeut any Smell et cJL After they are pull, in their places grow fm*U ^dbrmf rough at ill. trm this Seed x>bcn it fall up frejh 'Slants the next Tear.*

Woodroof Break-Stone.

V. The third, or small Stone-Break Woodrooh
*Its Root it white and thready : It is a very [mM
 Plant, growing upright, with square, rough, ruij-
 iike Benches, spreading it Jilf out into mn
 /mall Divifions, ulmft like unto an Horfe-Tail,
 full of Joints, with two Leaves, and jometims
 more at a Joint, fomevobat long and narrow Me
 unto Line or Fhx, but rough. „<*£*«& "f f
 Branches come forth many fmall ubite timers fe
 in Spikes, and 4 or s fin*'? *P.M.' \$^{ort}, **£
 HalA together, vbicb fhnd tn rough Wifh, n
 nbich is contained the Seed, which is black and*

fi The Places. The firR is found growing Wild
 in the Woods in Germany, but both firft and fecond
 are Planted and Nurft up with us in Gardens. I he
 third Clujiw faysgrowsaboutiSuAi«7ff//j mS/ww,
 hue Parkinon fays he found it on the tight hand
 of Bradford-Bridge, at the lower end or brays-Inn
 Une near London, by the Water Courfe which
 pafies along there 5 and for that reafon, may poff-
 ibly be found in many other parts of this Kingdom

%!! The Titury. The two firft Flower about
 May and their Seed ripens in the mean Seafon,
 while they are in Flower, orprefently aftec. The
 third Flowers in the end of Summer, the Seed
 ripening in Come fmall time following.

VIII. The Qualities. Woodrocf is temperate in
 lerpea of heat or cold, drynefs or moifture:, and
 is very like in Qualities to our Udwt-Btdjlrav.
 They are Aperitive, Abfterfive and Vulnerary Gtr-
 diack and feparick, chearmg the Heart and ma-
 kbig it merry- *The Break-Stone*•XVtod'roofs t m .
 pemte alfo, hot and dry in the firft dreree Aper-
 itive, Abltafive, opens Obtrru&ons at the Bowels,
 isDiuretickandWephtick.

IX Ti>e Specification. The Wootrooh cheat
 the Heart, reEft Melancholy, make a Man light-
 fm and pleafant, and inducetheCmire of Wounds.
The BreMone opens Obfruffions of the Urinary
 Paffiges, provokes Urine powerfully, and gives
 tte m the Stiargury, and is ar^xcellent thing for
 that Difeafe in the Throat callefla %uinfie.

X. The Preparations. From the Woodrwf you
 may hare, 1. AUqu'id Juice. 2. Aalnjujionor
 Dccoftion in Wine, 3. A Cataplafm. 4. A Dijit-
 led Water. From the Break-Stone you have,
 1. A Uqmd. 'juke. 2. A DeceSion in Water or
 Wine ; where Note, that of the Woodroofs, the
 firft is only or chiefly fd

Tffe Virtues.

XI TJ)e Liquid Juice of Woodroof. If it be
 Clarified, it may be given from 1 Spoonful to 2 or
 3 at a time, againlt Hypochondriaek Melancholy,
 and Paffions of the Heart, for it very much cbears
 the Hearn, and revives both Vital and Animal
 Spirits, making the Patient merry. It ftrengthens
 the Stomach, and retries its depraved Tone 5
 caufes Appetite, and is good againft Naufeoufnefs
 and Vomiting. It is both a Prefervadve and Cu-
 «rive of the Plague, and is good againft all kinds
 nf Malign and Pettilential Difeafes.

*vn The Infufion or DecoSion of Woodroof in
 Wine* They iave all the former Virtues, but not
 X" ether fo powerful, but admirably open Ob-

of S green Heibbiuiftd. Eeing applied, u «

faid to dilcufs hard Tumors, and to heal Simple
 green Wounds in any part.

XIV. The Diftilled Water of Woodroof. It is
 effectual for all the purpofes atorefaidj and may
 be given alone, (*Dulcified wth Syrup cj Citrons,
 either of juice or Peels*) from 4 Ounces to a j 01
 it may be uled as a Vehicle for other rhings.

XV. The Liquid Juke <f Break-Stone. Given
 from an Ounce to 3 Ounces, in Whire Port Wine,
 01 mixt with Parjley or Hydropiper Water, it po-
 tently opens all ObfrueEHons of th^ Urinary paf-
 fages, expels Sand, Gravel, Stones, andTanatous
 Mucilage our of the Reins and Bladder. And be-
 ing ufed vehemently hot, it helps fuch as are
 troubled with the SSjrinfte, theThroat beinggargled
 therewith, and outwardly Bathed very hot upon
 the afflicted parts; Smphs atlb wet therein being
 applied very hot thereto.

XVI. TJe DccoBion of Break-Stone in U'inc.
 It has all the Virtues of the Juice, but by reafon
 it is not full our fo ltrong, it muft be taken in a
 larger Dofe, as from a quarter of a Pin», to half a
 Pint, againlt Difeafes of the Urinary parts. And
Qtinjus muft be often Gaigaried therewith, as
 hot as can well be endured.

 Leav'd, or lefter Woolfs-bane, with Larks heel
 Flowers.

the Defcripthns.

III. TheFirft, orWinterWoolfs-bane. ItsRoot
U Tuberosus, fo like both for fyapt and color unto
Anemone Roots, that they may cafily deceive One
not wcl/vers'd in them j but th^t ibis M browner and
fmaother without, and yellow within, if it it cut or
broken. This little PLMt tbruft up divers Leaves
oftentimes in the deep of Winter in January, //
the weather it any thing mild, but nufi commonly
after the deep and km Yrdfis, bearing up miny
 1

times the Snow vpMi the heads of the Leaves; which, like unto the Anemones, do every Leaf rife front the Root, upon fevcrai fiwn fwt Stalks, not above 4 fingers high, fame having Homers in the middle of them, (which ntoft commonly come upfirfl) and fome none : which Leaves fland as it were round, the Stalk rifing up under the middle of the Leaf, deeply cut in, an; \gafir dlmofl la the middle Stalky of a very fair delp green color: in the middle whereof, dye unto the Leaf, fiands a fmall yellow flower, loitfifing of %/>r6 Leaves, very like a Crow-foot, teith yellow Threads in the middle. After the flower K fallen, there rife up divers fmall Horns or Cods fa together, in which are contained whitib round yellow Seed.

IV. The Second, or Pale FlowerM Winter Woolfs-baie, This in its Root, Stalks, Leaves, flowers and Seed, manner and form of growing, H in ail re/petfi like the former; faving only, that the flowvrs of this are of a pale yellowt color, end in fome Plants j.'mofi white.

V. The Third, 01 earlier whicifli Woolfs-bane. Its Root confifis of, 1 number of diirkbroainStrings, which fsreitd and fafle/t themfahes firon^ty in the Ground, b jprags net out of tlte Earth til! the Spring M taeU bcgun, and then it fend forth great broad green Leaves, deeply cut in about the Edges, and net much unlike the Leaves of the great Wild

Woolfs-bane whitifh early.

Crow-foot, but much greater : from among . . . - JLAWM, rizes up a strong fiiff Stalk 3 feet high, raving here and there Leaves fa upon it, like unto them which are lower, but /mailer. The Top of the Stalk is divided into 3 or 4 Branches, on which grow feveral pale yellow Homers, which turn at laftto be almoji white i in Jafhion a/molf like the tie/met flower, but much fmaller, and not gaping fo wide open.- which being pafit, divers fhort Pods come up in their place, in which is contained black

V. f. T 5c/on rt^J3rhte Flowering Woolfs-bane. lit Root differs not from the former: it has <u large

Leaves at the other lafl defcribed, and ar much divided. cut alfo on the Edges fomevfat deeply, but of a f?cjl)er green color, and not fifing or jpring-, ing cut rf the Ground, for almod a Mo/ilh aftff the former is come up. The Sulk with Leaves thereon rifet to be 4 or ; Feet high, and with " long Branched head, of pale yeilom colored blowers, almifl whitifb, but fwurj later ,1/1/10/1 by eJ&ontb than the third aforegoing. The Cods and Seeds are like the former.

VII. The Fifth, or greater Woolfi-bane, with Larks heel flowers. Its Root is fomehing thick, long, and bhckifh, with Jeveral iibres and hftg Strings adjoining to h_voy which it takes fining hid in the Ground: From viJAth Jhsot forth fivtr» green Leaves, of a very fad or dark green color, Standing upon pretty long foot Stalks, cut in en ('• Edges into ; deep divifions or parts, even to the Stalk, and fomeahat rough or hairy; each p«ⁿ whereof is alfo denied about the Edges: front J-mong which rifes up a rcafonahle great and ffrong round hairy Stalk, about 2 feet high, having f^ fuch Leaves thereon as grow below ; at the Top whereof is growing manyl'leuers Spike fafoion, one three another, which are fafhioned hmtthing A*f thofe of Larks heels but larger and thicker, v>ito a Jhcirt thick crooked heel behind them, of a very dead or fad blewijh purple color, feeming as if'ty were rugged or crumpled withal, which adds * greater illfavor'dnefs to them on the oiafide ; but of a little frefber or more lively blew color, and fmm en the infide. After which come feveral fmall rough Codt fltndwg together, tike as other Aconites and. Columbines alfo do, in which is contained a rugged black Seed.

Woolfs-bane Larks heel'd, Greater and Ltfftr.

VIII. The Sixth, 01 lefler Woolfs-bane, with Laiks heels. Its foot differs from the lafl, W* having 1 or ^ thick fljort blackifh Roets, ending >» fmall long points, faflned together at tU bead. *

has divers faoib green Leasts, upon very long foot Stalks, but not a/together Jo large, or of Jo fid a green color, much more finely cut in and divided, in many jags or farts than the former. Vie Stalk al/o rifet not up Co high, and bean fame f mailer and finer Leaves thereon, which ends in a fmall J'pike or bead, of almoft as large Floaters, with a jhort fpur or heel behind at the ether has-, but of a fairer blewifh purple color and more live fy, at well on the out fide a in fide. The Cods and Seed are al/o like the former.

IX. *The Places.* They all grow Wild in German. Italy, and other Countries, in Woods and fhady places: but with us they are only Nurft up in Gardens.

X. *The Times.* The two firft forts bring forth their Flowers with their green Leaves, commonly in January, for which they are only esteemed. The others Flower later, as in May anixne, and the Seed is ripe commonly in the following Months. The Roots of the two firft may be Set in any of the Summer Months, and almoft in any place, for they are hardy Plants, and will thrive almoft any where.

XI. *The Qualities.* They are all hot and dry in the extremity of the fourth degree, burning and deleterious, or deadly, and therefore are not to be given inwardly. The Fieids or Arrows being dipt into the Juice thereof, fo Empoylons them, that they kill all Living tilings who are Wounded therewith.

XII. *The Specification.* Woolfs-bane is proff eatable to kill Lice and Vermin in Ctildrens Heads, and to cleanfe them from Scurf; ifc. to confume dead Fle(h in Ulcers and Sores; and to clear the Eye-fight from any Haw, Pin and Web, Cloud or Film, &c. which nuy obfucate the Sight.

XIII. *The Preparations.* You may have therefrom
1. A Pouder of the Roots and whole Plant.
2. A Dcc[^]Sicn of the fame.
3. A DijHUedWater from the abole Plant.

The Virtues?

XIV. *The Pouder.* Either alone, or made into an Ointment with Hogs Lard, and applied to Childrens Heads troubled with Lice, Scurf[^] Morphew, Dandriff, running Sores, &c. it kills the Lice, and cures the Head of the other Maladies.

XV. *The SCCQUKM of Roots, Leaves, Seed in Water.* It is good for all the purpofes atbefud. Both Deoofiox and Pouder are ufed, as Galen fays, in foul Sores and pucrid Ulcers, to coniume the dead Flefh, and cleanfe them, but they are not to be applied to Sores in the Mouth or Privities, which are too tender Parts for any fuch violent Medicaments.

XVI. *The DijfiUed Water.* Being dropt into the Eyes, it is good to take away the Intimation, as alto Specks, Spots, Haws, Clouds, Films, &c. which may grow in them, or trouble the Eye.

XVII. *Nota.* If any one mould by accident be Poifoned, by taking inwardly Wootfs-bane, he ought immediately to feek for Cure, the method of which, we have laid down in the Cure of Poitbn by *Ht-lmtt-Flower* or *Monks-Hood*; which (to avoid Tautology or vain Repetition) be pleaft to have Recourfe to Chap.CCCUII. Sett. XVI. aforegoing of this Work, where it is plainly ex-

CHAP. DCCXLIU.

Of WOOLFSBANE Antidote i OR, DORONICVM.

THE Names. The Arabians call it fas is fuppoled) *Deromgi* or *ibiruttgi*, (whence the Name *Doronkum* is (uppoled to be derived, becaufe it is not to be found in any of the Ancient *Gnek* or *Latine* Writers;) Chr Modern Authors call it *ioLatine* *Dw[^]/rww*: ind we in Englifh *Woolfs-bane Antidote*, *Wioifim Woo!fs-b*; *jei*; and *Dorsnium*.

II. *The Kinds.* Authors have made eleven or iwelve Species hereof, many of which may not in {bme Ages be fecc hy us: we (kill tierelote t[^]ke notice only of 40r j forts, which are either Nurft up in our *Gardens*, or grow Wild in our *Country*, or the Roots of which are Sold in the *Pruggijis-Shops*. 1. *Doronicxm Vulgar[^]* *Darantcxm Romanian* -, by all Writers, our common Wootfs-banc Antidote or *Doronicum*: I call it ours, kcautie ic is common as well in our *Gardens in England*, as in the *Gardens of other Countries*, 2. *Doronicum minxiClufi* *alierumque*; *Doroniemn Plantaginis folio Baubint*: The lefler Woolfs-bane Antidote, or *Doronicum*. 3. *Doronicum brachiatu radice pena & Lobelij*; *Doreniatm auflriacitm fecundum Clufij*: The Scorpion Rooted *Doronicum*, or *Woolfs-bunc Antidote*. 4. *Doronicuta Germamcum Clufij*, *A'ifma feu Danta/onmrn Mmbkli is!* *Diofcorid/s* *Ldlba Atpina*. *Gijneri y Kardts Celtica alter* Ptnt*, *LoSelij*, *Rondeletij*; *Ptar mica muntana Lugduntnfis* -, *Doronicum Pannonicum*, & *Doreniatm frxtum CluJi*: German, or our EngUlii *Woolfe-bane Antidote*. J. *Dorcmtutnejictnaritm* -, *K.idices Doronta*; *Radices Alechin't*; *Doronicum amujuorias Pent*: *Doronicum of the Shops*. 6. *Doronicum Arabum genuinum*: The true Arabian *Doronicum*.

Tjff Defcriptions.

III. The firft, or our comracn *Woolfsbane Antidote*, 01 *Doronicum*; (*Jo called ourr*, becaufe it has been longeft known unto m, and kept in our *Gardens*.) Its Roots are *Tuberous*, *fmall*, *thick* and *Jhort[^]* *creeping* or *lying under the upper craft of the Harth*, with *divers Jmill Fibres* fhooting /ram them down into the *Ground*, and encreafing diveri fuch itla *tuberous Roots* round about it, which are *tender* and *net hard*, fomewhat *whitifl*}, with *fome Joints therein*, and *greenifh on the upper fide* next to the upper* f<ice of the *Ground*. Same mould make tbcfc Roots to refemble a *Dead Scorpion*, becaufe of the *Joints*, ahich are like *Scales tkreon*: *Ti)e former part* next the *Leaves*, being *thick*, to be the *Body*, and the other parts being *fmall* to be the *Tail*, which « *fomething fwect in Tape*, and a little *bitter*, and a little *aj/flere clamminfs* *withal*, from this *Root fpring up divers Leaves*, each (*landing by it felf upon a long foot Stalk*, which are fo *Mtwbat* round, greater than the *Romw Sow-bread Leaves*, foft and gem te in handling, *fomething hairy*, and of a *frejh grteri color*. From a-*mong* which *rifes up feverd green roundifh Stalks*, about a *Tard high* or more, parted jr the *Top*, *fometimes into one or two Branches*, every one carrying a *large Flower*, *fonte Khat iike tf>e Corn Mangold*, but much larger, having many narrow *hngyelhta*

Leaves,

Woolfs-bane Antidote :

Doronictim.

Leaves, as a Border set about a middle Thrum, fomeaibat yellow; which when it falls away, turns into small vehtifk Down, with very fnsalt blackijhSeed, nbich it carried away with the Wind.

IV. The Tecond, or lefier Woolfs-bane Antidote, or Doronicum. Its Rout in fnall, not HAe the former, being without theje Joints fo plain in them.

I flivers Leaves longer and. narrower than the Jirfi., famenhat like unu Ribxeert Plantan^ but hitiry, and of a yelicnijh green color. The Stalks are slender, and rife nothing Jo high, nor ore much Branched, but carrying the like yellow i'lcmm- (ri as the former, but fometsbat paler.

V. The third, or the Scorpion Rooted Doroniatn, or Woolfc-bane Antidote, its Root creeps not fo ntuch^ but it J'omething longer thruji down into the Ground, with Joints growing upwards, branched (ai it tcerc) en each fide, with young Roots, and ending in a fmalt point, having divers long iibrts adjoining to them. It ha- forge round hairy Leaves like the Jirfi, fomewhat toirvcd or unevenly dented tibont the Edges, cf a [adder green color, and fameth'wg bigger: the Stalks have divert narrow Leaves thereon. The Vioaers are yellow, and their Leaves dented at their ends; and the Seed is like unio the other.

VI. The fourth, or German, or our Englifi Woolfs-bane Amidote. Its Root is final I, Jointed withal, not much unlike the firfi, bur not fo plainly to be difceritei, rf a facet Smell, and & bitter i'iting Tafie, hrjing m.tny fibres underneath it, giving many *fj]-Jets, by which it is encreafed. It bus feveral bread hairy Leaves, cf a yellawijh green color on the upper fide, but wbtifii am j'maith underneath, lying on the Ground, famcthing like unto bread flantane Leaves, or rather like unto the Crofs-wertGentian, having fome loMgRtb

herein. Among thefe Leaves rij'es up a Stalk, and fometimes many, bearing long Leaves at every Joint. At theTop, it Branches forth into ? or j, or more* parts fometies, bearing every one a fiir l**£* blower, fet as it were in a rough Cup, which confifts of many pale yellow Leaves, dented el their ends, as a pale or border about the middle; vtbei) is made up of many fmalt tlowers of 4 Leaves a piece, of a deep yellow color, as it were iheLhrum, wchib being paff, the head turns into Down, which with the Jmall black Seed therein, is carried av>fy with the Wind.

VII. The fifth, or Doronicum of the Shops. That which is Sold in the Shops, it the Doronicum <juartum Clufij, vel Stiriacum 1 Dorontoim jaruonim tiore magno Bauhini: The broad Leav\NLo-ronieum with a large flower. Us Hoot « l' *' *' what long, blackifh on the out fide tad Jointed, but not Jo plainly to be difcerned, the Joints fj^n & *K wards, and not downwards, (at they do in mojt oj he refl) Spreading it fet by means of art** f rings, very jar Jbout, with other tuberous w* " V/ like jerm, many in number, each T< bcr having many long white libres underneath it. if ii a- Plant, but hat many large, and fomewhat h'fig'J' round Leaves, dented about the ESges, like **}^o the third fort before Drfiribed, Jianding « [< > * " " S " foot Stalks. The Stalk ha* fame leaves thereon, longer and narrower than tboje belma •, and at > * Top (not having any Branches) one Winter, itrgr than any of the former, but elfe like unto ttefy having many long yellow Leaves, fit about a miM" 'irownijh yellow Thrum. The Root of t^JT. •bat we have in the Shops, xvbich ii Sold fo' ! & True Arabian Doronicum; but truly is not a-however, our Modern Pbyficuns generally agree, that >t Anjuers the End, and bat the ***** the True Arabian Kind, ibo' it hit no agreement, therewith inform.

VIII. The fmh, or True Arabian Doronicum; Avian Lib. II. Cap. CC. end Serapio in his Boo* cf Simples, CapXCCXXV. hove Defer ibed'tie it, A Root of theigncfi of ones Thumb, of a nara and heavy SubMnce, of a yellow color on tnc outfidc, and brown within, with fome white Vein*, and that it is hot and dry in the third * . " " ? j Parkinlbn/fMM to be cf Opinion, that it i' " W of American Mechinus, (often found m^AJ^m Mechinus, or Black Ginger) brought cbkfly Brazil, which Lobel calls Mechini rara va which has divers circular knotted Lines, as i like Joints on the outfidc, is firm and heavy, ai> full 01white Veins when it is broken, is alfo very fharp, quick, and biting, and Aromatic in Tai;ic* Thafays be, having all the Kvtes cf the Arabia" Kind, can be no other than the Legitimate a?? True Doronicum i bouever he fays, he leavet for every one to judge as bit reafon Jball air bite.

IX. Tlx Placet. The firft grows on tains in &JW>, beyond the Lake Leman, - - - - - ther places in Prance and Germany-^ but with only in Gardens. The fecond grows in "J. The third on the Woody Mountains in A") " I and about Trent ^ as Muffin Jays: but both o» them with us, only in Oaidens. The fo^{uttl} many places in Germany, in Meadows and where^ and with us on the Hilly Grounds in- thumbcrland. The fitch, C*/ // < * fays, grows Kewberg in Siiria. the Root of which is * " - to us dryed, and Sold at the Druggilt The fixth, is an abMute Stranger with us, and u" - lets the American Meehmus be ir, which ty ^ cident as it were, is now and than brought hi¹⁶ • we know nothing at all of it. v- T2x

X. *The Times.* They all Flower early for the moft pair, viz. in *Mty*, and their Seed is Ripe in fome flori time after.

XI. *Rotu. Cortufw* of Poi*^{<*}, and *Matthiolu*[^] calls that which is Sold in the Shops, *pyrda/iaxtbes*, and refer it to the *Boifonottw Aconites*, deliming and railing againif. ir, as a Poifon not tit to be uled inwardly in Mans Body; and that rhoie Phyfkians who put V into Cordial Medicines, as *Ek3, de gemmis, EleQ. ex Aromatibu*[^] *DidmefchumDuke*, and other *Cordial Compofitioiu*, do very ill, and have little refpeft to the Lift or Health of Man, becaufe they both upon Tryal found it to be true, and that being mixed with Flefh and given to Dogs, it killed them; *to which it is affeered*, that many things which will kill Fowls, Dogs, and other Beatts, may notwithstanding he lafely given to Mankind: And man/ things which are wholfom to Man, and ate often ufed without Scruple, or the leait danger, will yet quickly kill other Creatures. So *Aloes* and *Bitter Almonds*, given to Dunghil Fowls, or to Foxes, will quickly kill them \ and the *ChmmaleonTbijjle*, will kill Dogs and Swine, whilit all thefe things being given to Man, are not only innocent, and abfolutely free from any deleterious or deadly quality, but are even Antidotes againft Poifon, and Sovereign Cordials; and the Roo: of the *thatmateo** being Drank in Wine, is good agiinft the Poifonous Bitings of Vipers, aud other Venemous Creatures. But on tie contrary, fome other Phylitians fay and affirm, that this *Doroaicum* < *the Shops*, is a perfectly innocent thing, and without the leaft danger in it. *Gefaer* fays, that he had taken much of ir, and oftentimes a good quantity, even to 2 Drams in Pouder, that he might find the Operation of it, yet found no harm thereby 5 and that he had given it to others, without any danger or hurt. And *Pelta* and *Lobel* report, that *John de Vrode*, did Eat many Roots thereof without any danger, or Sente of ill thereby j and therefore they advife others, not to abdicate the uft of this Plant to Mankind. *Dofonsw* was once of the lame mind with *OrWifcand ftothioljts*, but atterwards he found his ErTor and reclaimed it. By what has been fiid on this matter, I think it is mamfeft, chat the dangetous Qualities faid
« A " L his (ant) are r:; ifet o n y Go " Ignorance
of-Faft, Scruples and Suppofitions, and not from any real Grounds; forafinuch as Experience has firrfinently proved the contrary.

XII. *The Qualities.* *Doronicum* of the Shops, is hot and dry in the end of the fecond Degree; *CaidiackjSudorific*, and *Atexipharmick*.

XIII. *The Specification.* It is a peculiar Antidote againft the-Poifon of *Woolfs-bane*, and *Helmet flower* or *Monks-hood*: Italfo reiills the Poifon caufed by the Bitings of venomous Creatures, opens Obltruftions of the Lungs, and ftops rhe Defluxions or Humors into the Throat and Eyes, eafing their pain, and taking away the Inflammation of the Pans.

XIV. *The Preparation.* Our Difcourfe now, and prefently of the Virtues, has chiefly refpeftto the fifth Species aforegoing ^ tho' fome Authors think that die fune may be faid and applyed to all the oier Kinds, feeing that they are all in Form, and ptrecs of growing one fo like to another % and poliibly if Tryal be made, would perform the fattC Effects. You may have therefrom, when frelri GatherU, 1. A Juice from the Roots and Leaves. 2. A Decoffion of the Root. 3. A Poudr of the Root. 4. A Detoflioi of the Engfifb or *Gernun Woolfs-Une Antidote*, (at Seft. 6.) ;. A ?*Qaierofthe Root and Herb of the fame Plant.*

The Virtues.

XV. *The Liquid Juice of the Bwtt sni teavtr.* It is fiid ro be found good to be put into Efes which are hot, red, and inrlimed, to take away their prickings and eale their pain.

XVI. *The Decoſion of the knot iff Wine/cr ter.* Ir is an excellent Cordial, refills and Ci the Poifon of *Aconitum*, *Monks-hood*, and orhr poifonous Plants 5 as alfo the poifonous Bi tings of *Vipers*, *Mad Dogs*, and other venomous Creatures * it cleanfes the Brett and Lungs of thick tough Humors, ftops the Cough, and gives eafe in Ptcuritick Pains and Stitches in the Sides, Head-achs, *Vertigo's,£?>*. Dofe halfa Pint at jr a utneMorn-ing and Evening, a little Dulcified with Sugar.

XVU. *The Pouder of the Root, h* has all the Virtues of the Decotlion, and may be given Morning and Nighr, from 2 Scruples to 2 Drams, made up into an Eleftuary with fome proper Syrup, or Conferve j or mixed in Syrup oi Citron Peels, or of Juice of Citrons, and fo given in a Glafs of Canary, Sherry, or Madera VVines, CSV.

XVIII. *Tſe DecoBion of the Entijj] or German Woolfs-b&ne Antidote in Wine.* It provokes the Terms tn Women, eafes the Pains and Difeafes of the Womb, is effectual againft Poifon, eſpecially the Poifon of the Fi(h called *Lupus martnut*, as alfo the venomous Biting of Shrew Mice and Toads. It refits the mighty Potency of *Opium*, in l'uch as have taken too much of it: and is given with good fuceſt to thoſe who have a Bloody-Flux, or any other Pains, or Giipings in the Stomach or other Bowels, by teaſon or ft irp Humors offending them. It is profitable againft Convglfions, Cramps, Weakneses, and orhrsr pains aud difaffeſſioits of the Nerves, TenJoiis, arid Joints; and if it is given with the fine Pouder of *Carrot Seed*, or rather oi *Daucus Seed* -, it potently expels Gravel, fmall Stones, and Tartaric Slime, from the Reins, Ureters and Bladder. It is applyed alfo outwardly to eafe Incarnations, and take away the paufofold running SoreSjputrid and eating Ulcers, and the like.

XIX. *The Pouder of the Rcat of the fame Plant.* It may be given Morning and Night, from a Dram to two Drams, mix: with fome proper Syrup, and then to be fwallowed down with ibme of the former Decoſtion, orwithaGlafs of Canary, Sherry, or fome other like generous Wine, for all the purpoſes and intentions the aforeſaid *Vſecothon* is appropriated to. It iſufed alfo as an Errhine, or rather a Sternutatory, by which way it cleanfes the Head and Brain of cold and moiſt Recrements, which caule Dullnels, Drowfineſs, and other ill habits of thoſe Parts.

j. The Plant, is erows plentifully Wild al
 ij. It throughout the whole Kingdom, and is be-
 lieved often found by Gattens, coming up of its
 own accord.

VI. *lie Jims.* It flowers and Seeds in *Jtffy* and *Auguj}*, which when it is in the height W its Howering, ought to be gathered, dried, and tate-fully laid up for Medical uses.

VII. *The Qualities.* It is hot and dry in the third Degree ; Aperitive, Abfterfive, Aitringwt, Stomatick, Nephritick, Hyltetick, and Caihaitick.

VIII. *The Specification.* It Cures the Scurvy in a cold Constitution -, rectifies the Tone of the Stomach and Bowels, is good againlt naufeoullieft, stops Vomiting, ftrenghens the Venuicle, pf^vokes Urine and the Terms, CuKSSurfeia helps againft the hard Swellings of the Belly * caufes 3 good Appetire, and a strong Orgeilion, and is profitable againlt the Yellow Jaundice, n is also an Antidote againlt many Vegetable Poifons, difcufles Quinfies or Tumors in the Throat, and is a good Cofmcticfc, taking away Wheab, Pimpk-s, Worms, Roughncfs, and other defoirntes of the Skin: It helps the dimnefi of the Eyes, lore and running Eats, and cafes their Pains: n is good againft the fwelling and hardndfe of the spleen; it purges Ghoierick Humors downwards, both by Stool and Urine. It alfo kills Worms in Children being inwardly taken, and outwardly applyedi it is good againlt the Colick, Bloody-Hux, and all other Rajfts oi'the Belly i And being conltantly ufed, ic is laid to Cure a (linking Breath. It is commended againft Tertian and other lingering Agues, by opening Ohftructions, purging by Urine, ftrenghening the Stomach and Liver, and altering the whole habit ofrhe Body-

IX. *17jf Preparations.* From Common Wormwood you may have thefe, i. A *Liquid jfitia.* 2. *An Effxccc.* 3. A *Deeoffhn.* 4. *Wormwood Beer.* 5. *An Infu&on in Wine.* 6. A *Jfeudcr;* 7. *An Effientia! Salt.* 8, *Cameranui's mixture.* 9. *Syrup of Wormwood Shape.* 10. *Syrup Compound.* 11. *AnlnfolatedOU.* i2. *A\Catap!ajm.* i^ *Tmbes.* 14. *A Simple Diji'tiled Water.* Ij. *A Simple Spirit.* 16. *A Water end Spirit Compound.* 17. *A Difjilled Oil.* 18. *Potefiates *r Powers.* 19. *A Spirituous -Tinn^.* 20. *An Acid X* it. *AnOiiyrmMre.* 22. *A fixed Salt.*

The Virtues.

X. *77jf Liquid Juice.* If it be given to i, 2, 3, or 5 Spoonfuls, according to Age and Strength, it is Cathartick, and Purges the Body of Choleric and Pituitous Humors, ftrenghening the Bowels at the fame time ; and Snufrd up the Noftri^s as an Enhine, it purges the Head and Brain of Pituitous Recrements. If it is infpilTated and made up into Pills, 10 Grains being taken at a rim^o admirably ftrenghens the Siomach.

XL *IU Effence.* If taken in dueDofe in Broth or Wine, it gently Purges the *Kifccra* of Choleric and Flegmatick Humors, kills Worms in the Stomach and Belly, provokes Urine and the Terms, opens Obltruaions of Stomach, Liver, Spteen> Mefentery, Keins and Womb; is good againlt the Jaundice, Dropfie, Gout, 3nd Scurvy, creates a good Appetite and Digeition, Ihengdiens the Stomach and Bowels, Cutts Huxei &r the Belly, and is good againft Tertian Agues, auJ ohtJ like Chronick Difejfes : it flops Vomiting, is good a* giinf a Stinking Breath and Loathings, and K-ftores the Tone of the Stomach, Dole from * quarter to half a Spoonful in Canary, or other, generous Wine, Morning, Noon, and Niglr: but it is to Purge withal, it may be taken fton * Spoonful to 2 or 3, or more, in any proper Vehicle-

XII. *The Decollion in Water or Wine.* It has all the former Virtues, and may be given Morning and Night a quarter of a Pint at a time, in any proper Vehicle. It is laid to be peculiarly good againft the Yellow Jaundice.

XIII. *Wormwood Beer.* It is gtomatick, comforts and warms a cold Stomach, takes away loathing of Meat, and caufes a good Appetite and Digeftion; it alters a Cold habit of Body by long taking ir, and purifies the Blood.

XIV. *An Infufion in Wine, or Wormwood Wine.* Take Choice Rbexifh Wine a Gallon, dried Wormwood Leave* and Tups of Flowers, a good handful: mix them, and flop them up clofc for a Month or more fhaking the feffel once or twice a Day-, and all the while it is ufed, let it remain upon the Herb or Farces. It is taken at any time mixt with choice Canary; it warms a Cold Stomach, caufes a good Appetite and Digeftion, expels Wind, kills WormSj and being Drank alone without mixture, Cures the Green-Sicknefs, being taken in the Morning Fattig; and frequently ufed, it prevents the Cachexia and Dropfy.

XV. *The Pouder of the Herb and Heads of tinnors.* It heats, deanfes, dries, and ftrenghens the *Vifcera*: It has all the Virtues of the Effence, and kills Worms in Children, being taken from 10 Grains to a Dram, (according to Age and cither Accidents) mixt with Honey, or Pulp of an Apple or fome fuch like, and wafit down with a Glafs of Canary, Morning and Evening; it is eood aeainft Surfeiting and Drunken nef; and the Putridity of the Stomach, and helps againft a fink-

^{in^CVI} *The Effential Salt.* It has all the Virtues of the Liquid Juice, Effence, Deception, Wine and Pouder, and that in an exalted meafuie. It may be given againft all thofe Difeafes, as alfo the Green-Sicknefs in Virgins j frsm a Scruple to a Dram, every Morning Tafting, and at Bed time, in a Glafs of White Fort or Lisbon Wines, or in Canary, witha *Continuando*, rill the Patient grows well.

XVII. *Camerarius's mixture.* %i6c the Tops or flowers of Wormwood, Flowers of Rofevtary, and Flowers of Black Thorn, or Sloe-Bufh, of each 4 Ounces; Saffron 2 Ounces, Rhenijb Wine 4 or j Quarts, mix them, and in a Vejfel dofe covered, fimmer them over the fire for an hour or more, then Strain out and keep it. for ufe. It is commended for the Cure of the Yellow Jaundice, a fmall draught of it being taken in the Morning fading, (the Body being prepared beforehand by Purging;) and fo raken, it brings down alfo the Terms in Women -, and if a little Wine Vinegar be added to it, it is laid to help thofe who are Poifoned or almoft Strangled, by eating Poifbnous MufhroomS; and being taken mixed with Wine, it is good againft thePoifon of the black Chameleon Root, Hemlock, Shrew -Moufe, and *Draco Msrinvs*, which is called a Quavivex.

XVIII. *The Simple Syrup.* Take Clarified Juke of Wormwood, Clarified Sugar, or the double Refined of each 4 Pounds *, mix, and in the heat of a Rath make a Syrup. It has all the Virtues of the Tuice Effence, and Decoftion, and may be given from one Spoonful to two, in a Glafs of Wine -. If Nitre be diffolved » Jt, it is then good againft the Ouintey, and Inflammations of the Throat and Almond, to GVgle with n. Dropt into the Eyes, ir " eood againft the dimnefs of Sight, Clouds,

Films tfc. And dropr into the Lars, it heir Pain, and heals runuing Sores therein.

I The Compound Syrup. Take drycdWormwood Rofes, 4 Ounces; Indian Old White Port or Lisbon

Wine, Juice of Quinces, of each j Pints: jicpc them a whole Day in a c/ofe Earthen Vt-jfel, then Boil very gently, and Strain out without prejging; and mjjfr \$. Pounds of double refined &ufjr, make it into a Syrup in the heat of a Bath, h is good for a cold and flegmatick Stomach, eafes its Pain, and ftrenghens it, as alfo the Liver and Conco-9iye Faculty; caufes a good Appetite, expels Wind, provokes Urine, and prevails againft this Yellow Jaundice. Dofe from one to two Spoon, fuls Morning and Night, in a Giafs of generous Wine.

XX. *Oleum Abfinthiacum j Inblated Oil of Wormwood.* Take Flowers or Tops of Wormwood, 4 Ounces j choke Oil Olive, 3 Pounds: mix, and fet them in a hot Sun in aGla/s clofefiopt a whole Week, fhaking them every Day then bail in a Bath-, prejfs out the Oil, andput infrefffi Wormwood or before, which boil andprefs out: then a fecond and third time, adding 4 Ounces more offrefh Wormxwood, put to it alfo 4 Ounces of Juice of Wormwood; which boil again in a Bath, till the humidity of the Juice it evaporated, then prefs out and keep it for ufe. It heats and ftrenghens the Stomach, being Anointed thereon, Anointed on ibe Stomach and Belly, it kills Worms, rhe Pouder heing given alfo at the fame time: Anointed on the Back- bone, it abates the fhaking Fits of Agues, ifdone the whole length thereof for half an hour before the coming of the Fit: Anointed on Stomach, Sides and Belly, it ftrenghens all the Bowels, chiefly Liver and Spken^ and is good againft Cachexies and Dropfies, and Difeafes arifing from Coldnets and Weaknefs Q thole Parts; it caufes alfo Appetite, helps Digeftion, and diflipates Wind, for which reafon it is good againft the Colick.

XXI. *The Cfaplafm.* It w made of the green Herb, by beating it in a teoode/t Mortar with a wooden Fefle,, adding a little Ox Gall to it. Applying it to tie Stomach, h kills Worms in thofe parts, and ftrenghens them, giving eale alfo to pains of the Liver and Spleen.

XXII. *Ljw to of Wormwood Compound.* \$t Wormwood Leaves and b'lotoers in fine Pouder, Red Rofes in Pouder, Anife-Seeds in Pouder, of each 2 Ounces; Roots of Afarabaeca, Rhubarb, Spicknard, Smatlage-Seed, Jiidce^ Majlka, cab in fine Pouder, one Ounce; Almonds bitter, Infpijffate Juke of Maudlin of each an Ounce alfo; Juice <£ Succory enough to make all into a Mafs for Troches. It is a very bitter Medicament, and fcarcely ever taken alone, but with fome proper Vehicle. They ftrenghen the Stomach, Liver, Spleen, Mefentery, and other Bowels, "kill Worms in the Body, opens Obfrufions of the *Vifera*, and are profitable againft the Yellow Jaundice. Dofe a Dram Morning and Nighr, in Syrup of Citron Peels.

XXIII. *The Simple Dialled Water.* It heats and comforts the Stomach, is good againft Loating, flops Vomiting, expels Wind, helps Digeftion" and caufes a good Appetite; and is laid to give, eafe in the Tooth-ach. It has all the Virtues of the Juice and Effence, but much weaker: Dropt into the Eyes, it clears the Eye-fight; and bathed upon the Temples, it eafes the Head-ach.

XXIV. *The Simple Spirit, It is made from the fermented juice, by DiflilHng it in a Capper Alembick Tinn'd within, with its Worm or Refrigeratory.* Or, Take Leaves undTops tfdrygd Wormwood, 4 Founds *, fmall Wines, 6 Gallons, digefi 24 hours, then Difil in art Alembkk as before • adding to every Pint of the Dijilled Water, two Ounces of double refined Sugar I The jirft u<trt you may call Simple Spirit of Wormwood\ what follows after, fave for Wormwood Water. Theft

have the Virtues of Wormwood, but more fit for Anriem People, whose Natural heat is abated; it warms and comforts the Stomach, and helps Digestion, and is good for such as are troubled with Cachexy, Dropsy, and Jaundice, &c.

XXV. *Water and Spirit of Wormwood Compound.* Take Tgpt and leaves of dried Wormwood, s [P(W7<&j Annifeeds, half a Found., 6 Gallons of [small Wines: mix, and digej] all together for S4 hours, then difillem in an Alembick as aforefnd, adding 2 Ounces of double refined Sugar to every Pirn of (be diftilkd Liquor. The firft Quart hep for Spirit of Wormwood Compound: end all rbe reji for Wormwood Water Compound. It has all the former Yirraes, but more agreeable to such as have got Coughs, Cold, Wheezing, or any (uffing in the Stomach and Liags, OI troubled with the Colick.

XXVI. *Oil of WormaobR TnjMhl.* ft Jias all the Sperifick Virtues affibed to Wormwood, at Sr3. VIII. aforegoing. A Drop, or 2, or 3, OI this Oil, mxt frit with a little white Sugar, and then drink in a Ghfs of *White tort* or *Lisbon AVine*, or *Canary*, makes an exa-tlen: draught to (hengthen the Stomach, Liver, and otterrifitrt-, TO help atpintf a Cacuexiil, caufe a good Appetite and Digestion, and make 3 good color in the Face: Ir expels Wind, provokes Urine, and is good agiirrt Hypochondriak Melancholy, and univerfillv Strengthens the whole Body.

XXVII. *Voteplates Abfmhijpt Powers of Wormwood.* They have all the Virtues of the Oil exalted, and fo more fubtil, and are alfo much more plealant to be taken: you may rake Morning, Noon and Night, 40 or 50 Drops in a Glafs of generous Wine.,

XXVIII. *The Spirituous TmSurt.* Tisa Nobk Medicamenr, and has alt the Specifick Virtues enumerated, at Sri?. VII. aforegoing; irrcrifts Vomiting and Naufeoaliefs and itrcngchens the Stomach above ail other Preparations of Wormwood. You may take 20, 50, or 4^ Drops, or more at a time, in a Glafs of Canary; the more the Wine \$ the greater number of Drops may be given at a time.

XXIX. *The Acid TinSure.* It is an Antidote againft all hot, burning, and malign Fevers, and is an excellent thing againft the Plague or Pestilence « fdf, and all other Contagious and Pcftilential Difeafe: it provokes Urine and the Terms, and carries off the Morbifk caufe of Internal dilaffections by the Urinary pafkges.

XXX. *Tkt- QilyTinBure.* It is good toprock Urine, and cleane the Urinary pafkges fram Sand, Gravef Stones and Stoney and Tartarous matter infecting thole Parts: it « an excellent thing againft the Colick, Palfy, Convulfions of the Bowels, and Gout affecting the Stomach. Kofeftom 8-to 16 or 20 Drops, firft Dropt into and mist with Sugar, and then to be taken in a * ilafs of *White Pan* or *Lit fan Wine*: outwardly, it is good to Anoint pans afflited with the Gout, Sciatica, Kheutnatifm, &c. As alfo to help the Headach, ptoceeding frtm .1 cold and moift caule, being Anointed upon the Pan. And applied to the Tiles or Hemorrhoids, it gives prefont cafe, and in a Ihort time after Cares them.

XXXI. *The i-ixed or Efementary Salt, made by inancrtfion and Elixivation.* Taken from 10 Grains to a Scruple, or half a Dram, it is an Andote againft the Scurvy, and purifies the whole Mais or Blood and Lymph^ eftc&bally carrying oft the Recrcmops of ttiote Fluids by Urine. It may be given in Wine, in a cold and moift habit or Body: but in a hot and dry Conttirion,

it ought to be given in a thin fort of Water Gruel- If a Scruple or half a Dram of it be mixed with a large Spoonful of Juice or Limons, and ib given to one that is affetled with an extream Vomiting, it Hops it upon the fpot: It gives eafe in er Strangury, provokes Urine potently, atiJ exr«l» Sand, Gravel, and Tartarous Mucilage, from the Reins, Ureters, and Bladder.

Of WORMWOOD Roma

OK,

F O N T J C K.

E Kames. It is called in Greek [^] I fmin in Latin *Abfinthmm Kmnanum*, [^] * *fintVmm Ponticum*, by almolt all Writers, i" *Englijb*, *Reman Wormwood*, and *Vonntk Worm-*

II.* *The Kinds.* We obferve but three Species, viz. I. *Abjmb'mm Romanum vulgare-*, *Abfathttu** *Poiiticam commune*: Our common Roman, or Pontick, Wormwood. This by many is judged to be the true *Abfinthium of Poniuu*, which i" * *ofcorides* and *Galen* do fo much commend- * *AbfintVmm Ponticum -aerum*^ *Abfinthium Fontt-* *cum Alontanum Bauhini* j *Abjintbium Montanum* *Omerarij W Tabern<emontan't*: who alfo caUs it *Romanian Abjintbium commune*^ *Jive Alp'tnum Gejniri*; *Abfinthmm unmfolium Vonucum G&leniy-* *raria*: • The true Roman Wormwood. ? . AV' [^] *thium tenuifufium Auftriacum Clifij*, & *Jtahcam*, (becaufe it has been found to grow in feveral Pans in Italy.) *Abfinthium Ponticum Tridenunuf Uerbariorum LAflw & Lugiuenfi*: Fine Leav a Pontick Wormwood, or Auftrian Wormwood.

The Deferiptjonf.

III. The fiift, or our common Roman tick Wormwood. *Ti:e Root from a Jhort fboots forth many long t'ibret into the Earth, which it is nourijhed% and fends forth dr Sprouts round about it, by which it notch encrtajes- It is a fmall lew Herb, teitb much more /ender end, Jhort Stalks than the next • on which grout vep > fadll cold fine Jhort hoary white Leaves, finauer and finer than thofe of the fine Southernwood; which grow at feveral Joints, many coming J^{erl}? together * at the tops of the Stalks grata finalj) [^] lowifh Flotcen, neither fo marry nor fo great, & thofc of the next. The fmell hereof is faint, sna far weaker than in the next to be hfferibtd; *²¹ the Taiie thereof much lefs bitter.*

IV. The fecond, or true Roman Wormwood- Its Roots are *fintBer*, *lefs Weoty*, and *fuiler q Fibres*, than thofe of our Common Wormwood » ht the lafl Chapter: // has aljb more flcnder oft Jhorter Stalks, by a Foot at leajt, tpan that of [^] Common Wormwood, and rcafonable Urge Leavt-> yetfifaler, and more finely cut in and divided to it, but as mhite and hoary bath Leaves and •\$[^] } *Ti'e Ffrarers are alfo of a pale yellow color, l[^] [^] ing upon the fmall Efanclirs in the fame turf*[^] fo that excepting it n fmaller every way, dad [^] each part, it it altogether like to our Common*

{ Roman: }
Wormwood? Or, Jtrue.
{ Pontick }

broad Leav'd Wormwood. *Its fall is something Aromatickweet, audits b'titernefs is notfogretf.*
V. The third, or fine Leav'd Pontick, or Aulhian Wormwood, // has a long slender, and fibrous

Wormwood, Pontick fineLeav'd.

licet, jpreading it Ji/J under Ground, *which f... up many fmall, batd, füf\ and boary Stalks, on tchitb are fct, without erder^ fmall and fometebat lung, and hoary Leaves, very like to the Leaves O} Marfh Wormwood; which Stalks arc divided to- wards their topi, into many otter fwttit andjknldr Branches, r'tfwg jrom the Joints where the Leaves do grew, with many fmall Heads, whicb give jcrtb m:iny fmall mitijb blowers.*

VI. **Jbe Places.** They ate Italian, Ae.fr'un, < and Hungarian Plants % but/or thtir excellent Vir- tities fake, have been Tranfphted into our Caun- tiy, where now they are Nurft up in Gardens.

VII. **The Times.** They all Flower in July and Auguji; in which Times they ought to be Gather- ed, and carefully laid up lot Medical ufes-

VIII. As » laea Qualities, Sficcjficaruut, Prepa- rations and Virtuet, they arc the iame with thofe of our Q>mmon Wormwood^ in the former Chapter j and therefcujp no more need be laid of them here. But this is to be Obferved, that our Common fort: in the former Chapter, is the motr Potent and EffeEtual to all the Purpofes to which any of thofe may be applied.

C H A P. DCCXLVI.

Of W O R M W O O D,
Sea or Marjb.

Ttf E Names.- It is called in Greet *Abjinthittm Serighium^ zn&Scriphium^ Abfn- ihittm Mariium, £? Marinum:* in Englifh, *AUrJfr Wormwood, and Sea Wormwood.*

II. The Kinds. Authors give us 4 or j foits of this Plant, but not being Common with us, we *only Treat of fuch as Grow in our Salt Marfhes, or are Nurft up in our Gardens, we. I. Seripbium Auglicum^ Abfintbmm Seriphium; Abfnthttm. Msriium vel Marir.um:* Out com- mon Englifh Marfh Wormwood. 1. *Seriphium album, Abfmhium Marinum album;* White Marfli Wormwood.

T/JC Defcriptions.

III. The firft, or our Englifh Marfli Worm- wood. *Its Root runs Something deep, yet fpreads it feif in the Ground, being compofed of many large Strings and fmall Yibes. It rffet up with many boary round woody Stalky two feet or more high, being well furnijhei and re- pleat with it vaji number O) white boary long and narrow Leaves, rather broader and long- er than an> Southernwood Leaves^ having a fmall biturijb Tafte, and a very pleafing Krong Smell. The blowers an fmall and yellow, Handing at the tops of the Leaves and Branches, icbicb afterwards give very fmall Seed.*

IV. The fecond, or white Marfli Wormwood. *Its Rwr it toughs moody and Jinagy, creeping far abroad, by which means it very much increafes. It bat tough hoary white Stalks 2 or 5 beet high, which a little jpread out Jnts Branches. The Leaves are winged, feveral fmall narrow ones (not very teng) fet upon one middle Rib, which feem to be divided Oi it were into many Jtgs, not altogether fo Urge at the True Roman Wormwood, oj J bitter Tijie and pleafant Smeff, >f a very white*

Wormwood Marfh.

Befaging *to Salt. III.*

fi at the tops of these Sulks and Branches, grm fmsll yellow Hewers not much unlike the femur.

Wormwood Sea or Marib, white.

V. *The Places.* The first grows in the Salt Marllies In many places of *England*- I found it growing in the SaltMarth by the Rivers fide, running along the South fide of the Town Of *£/* Regis in flforjol* on the South of that field called the *Fryers*; and iij several other Salt Marihes Dill that Town. And is plentifully found in the *SM* Marflies in *Holland, Vlandars*, and other of the *Lm Countries*. The other is found on the bea Coasts of *Germanyani Italy*; and in ibme oi the Salt Marines of *England*: Thofe Salt Soils overflowed by the Sea, are their Native places oi growth; but being Tranfphted into our *GijM-Wj* they thrive as well as il they were Natural to hem.

VI. *The Times.* They Flower and Seed io the lame Times, in which all the *otbzi Wormwood*: do-

VII. *The Qualities.* They are hot and dry in the fecond degree, Aperitive, Abfterfive, Stpnt¹ ick and Alexipbarmick.

VIII. *The Specification.* They have all the *Vir*ues of the *Common and Reman Womnxesds, IM* not half their ftrengrti and force in r heir Eftttts. Bur by rcafon they are not altogether ft bitter. they are more acceptable to the Nicer fort or rji-jates. They refitt and expel Poifon, and gen^y Purge the Belly.

IX. *The Preparations,* All the Preparations which axe made of *Common WorMwaed*, may be made of the *Marjh* Kinds; yet theft three are the moft ufual, *vis. i. A Liquid Juice. 2. A Dr coiiicn in Wine. 3. A*

the Virtttes.

X. *The Liquid Juice.* Taken to 2 013 Ounces in Veal Broth in the Morning, it gently loolens the Belly, and kills final! Worms in the Stomacn and Guts,

XI. *The DecoSicn in Woe.* Taken ^{^ a} quarter of a Pint to half a Pint, it reEfts and eF pelsPoHon, chiefly that of Hemlock: but the Juice given in Wine for that purpok, much exceeds tbeDecoaiion: But the Decoaiion is g<>a againft all Pains of the Stomach and Liver \$ t< which purpofes the *Mtrjb*, eiceeds even trw *ommon Wormwood*.

XII. *The Cataphfm.* The green Leaves made into a Pultife by bearing them with Figs, Nitre finely powdered, and Darnel Flower[^] and a to the&lly, Sides, and Flanks, are laid to b for fiich as are Splenerkk, or are troubled the Dropfy.

CHAP. DCCXLVU-

Of WORMSEED *

I. *Trp HE Names.* I find not by what *Grttk*

1 Name it has been called, but in *Latm* « is called *Sementina*, *Semen ud Lumbrkes*; af[#] *Lumbrkorum* •, and in Englilh *Wormfeed*.

II. *The Kinds.* We make two forts hereof, *vie. i. Semen Trtnfwmm*, Foreign Wormfeco •, and this is called *Sjnomcurx* -, *Semen 5j<#ⁱ<w* i *Semen Sitntonieum*, *Abfmibi* *Janionici* *Semen i Semtmina* ± *Ab/inihium Santomcum Alexandria*[^] *Abfinthij peregrim* *Semen*, Shop Wormfeed[^] *Wonnfeed* Wormwood. 2. *Sementina An* *Semen ad Lumbricos Anflitum*, *Camelina*; *grum alterant amarum*, *Erigitih WonnfeW* [r

theſe I think good to add, £ *Myagrum Sylveſtre*, *Fleudomyagrum* •, *Linaria yunta* Tragt-, *Sejam Tragi* Wild Gold of Pleaſure, or Oily Seed. The Seed of this 'tis true, when perfeſſly ripe ana dry, has no Birterneſs in it, but is Swcecan and veijf pica-fint, and a molt acceptable Food to final Birds, is *Finchet*, *Linnets*, and the like j hut boch Herb and Seed while they are green, have an unaccountable Bicterneſs beyond Expteſſion, and there tore whilft it is Green, ii Unfed as *Worm/eed*, and will indeed do the fame thing.

The Deſcriptions.

plentiful Stringy and lihrom R, f p g felt far and deep in the Ground y from whence riſei up a link ſhort Stock, which tftermards ſpreads it /elf out into many Stalks, and ſmalhr

Wormfeed *Tranfmarine*:

Or, *Satitonicm*.

Ramifications, inſonmch that it is very full of Branches, but aũb very ſem Leaver, and thoſe very ſaall, and finely cm at the bottom, of an Aſh color i but flared ſo plentifully with Seed upwards, that itſeemi to be there without Leaves, and wholly to conſiſt of Seed, which as *Rauwolfius* ſays, ire ſemmbat bitter in their Natural Places, and of a rea/onable liveh &nd quick Smell with us, eſpecially if they be/reſh and not old; but are indeed much ſtronger where they grow, and are but memh gathered.

IV The ſecond, or Engliſh Wormfeed, (which *Gerard* calls *Treacle Wormieed*.) /" & f */»*// and *Hfa*fc #***»** ««7 ^ar after *Setd* time, ud then rijixg/again of its own Seed. It grows Zthpretty tall upright Stalks branching themſelves ZLJdi the top, andtbtcker fet with long norrm green Leaves iban the next, ſomewhathke to Zfof tbt *Single WalUftowcr*, but /mailer and Ski n color, and at the tops of the ^ com*forth many very ſmall

Wormieed lingliih.

pale yellow flowers, eonjiſting of 4 Leaves apiece s very like to thoſe of *Leucoium Sylveſtre*, or Wild Single Wall-flower, but mud) fmailer^ even by more than half; tebiſch being paji away, after them come ſmall long Cods, containing within them a very pale colored Seed, of a very bitter Tajt.

The other Wormfeed Engliſh-

V. Thechird, or Wild Gold of Fleafure, • the other English Wormfeed. *It hat a long slender Root, mth fome String! and Fibres adjoining to it. ti comes up with but one round Stalk a/mop a Tard high, v>hicb ff reads it fctf cut into Branches or Arms, which have long andfomvihat narrow Leaves, yet a/moji twee as broad at the former, Jharp pointed, fomething rcfemblingthofc of WOLD, but •'hat theft are longer, and broad at bottom, vihere 'cy eompafs the Stalk about, with two pints fik- Wrtg out on either fide, at wbeft tops come forth ffeverd whitifh Mowers, very like to thofe of Flax, after which come forth fmall round Heads-, vsith a Jmali point it the top, very like in fafyon to the Myagram coitb one Seed^ but thefe are full of fmall ycllomijhSeed, like to thit o/Crefles, which vihilfi a is green and fresh, is exceeding bitter, tx? not Jo after it is full ripe and dry.*

VI. *The Pucts.* The firft-grows in Arabia, Syria and Palejina, from which places the Seed is brought to us. The iecond grows Wild in many places of England, which being brought into a Garden, and there fuffer'd to Sow its Seed, it will come up again Yearly of its felf. The third grows in Germany, and is much round in all their flax-Fields and Grounds, which being in Stalk like it, 5s accounted a Weed, and cafi away 5 but fome five the Seed to give w frull Birds, on which they will fed when it ^s perfeEtly ripe, and peck It from the Stalk. S

VII. *The Times.* The Srft Flowers late in the Year, but I think the wrtain time is not let down by any Author: The pthei two Flower 'm'June and July, and their Seed is ripe in Auguft and September.

IIII. *The Outlines.* They are all .hot and dry as Aurhors fay, in the third degree.

IX. *The Specification.* They are only, or chiefly ufd to kilt Worms in the Belly, tor which they have been found very effectual.

X. *The Preparations.* The Seeds of thefe Plants areonly ufed, being taken either whole, or a litle Luified.

the Virtues.

XI. *The Seed of the Santonicum.* ItJs given a Scruple at a time Evening and Morning to Children, cither in a tew Raifons ftoned, or in die Pulp of a Roafted Apple or Pear, or in a Siew'd Prune, or in Honey, h kills Worms in the Stomach and Belly, but if a little AJtiesOt Rhubarb be mixed with ir, the Worms will then not only be killed, but they will likewife be expelled withal And if the Seed be mixed aith Aloes, and brought to the farm of an Emplafler TO)V6 Ox-Gall, and applied to the Stomach and Navel, it isT^id to do the iame thing.

XII. *The hngiifb Wormfeed.* If it is bruifed, and given from a Sauple to a Dram, Night and Morning as the former, in any proper Vehicle, and then wafht down with a Draught of Wacet-Gruel, Broth or PoCet-Drink, it is (aid eftettuaUy to kill Worms in the Stomach and Entrails, of what kind foever, it being often enough repeated.

XIII. *The other English Wormfeed, or Seed of the Wild Gold of Pleafure.* This is to be taken hruifed whiltt it ii'Green, andwhiltt its inherent Bitremeli is yet with it jt may be given from a Sauple to a Dram, as the former are given, and is much more erreftuul than themhotb, being continued Morning and Night tor fome time. This by iwibn of its exceeding Bitterneis, I am afraid few Children can be obliged to take it.

CHAP. DCCXLVIII.

Of WOUNDWORT.

I. 'Tp HE Names. All the Woundwru being

J. All-heals, they have one and the feme common Greek Name, which is n<fr>*, *; naf**^ > in Latin Panax, or Panaees; and in English Aik heal, or Woundwort. ••

II. *The Kinds.* There are fevetal forts of thefe Woundvoorts, many of which we have already treated oi'in Chap. IX, X, and XI. CL. and CU. aforegoing of this Work * theie are fome few remaining, which we (hall difcourfe of in this Chapter, and they are, 1. n<m> Aw*><r iiwB< : -m**"* * & * > * Nrib-. Panax Heracleum verm, Vanace< tieracka. veru, The true AU-heal OI Woundwort of Hercules. 2. n<u>i< n >& Panaees Chimm*) Panax Cbironis; Panax Aureum, Peaces Aurea, Panax Chironium TbcopbraH, Merba Voria vug* ris, (from one Doria a General of an Army, who ordered it to be applied to the Cure of his soldiers Wounds •.) All-heal, or Woundwort of Chiron.

Panax Cbironium Amtricanum Minor, hcroa Voria Americana minor, The lefler American Woundwort. 4. Panax AurcumKemorum, Pawees Aitrea Kerxeruni; Confelida Aurea Nemerum; The Golden All-heal or Wonndwon.

the Descriptions.

III. The firft, or true Hercules All-heal m Woundwort. Jtt'Rw/M very thick, fat^ and full of fmce, of a mbiti'sotor, ramified into feveral great or confiderabk Branches. It hat many broad grctnLarves

Woundwort, or All-heal of HERCULES.,

spread upon the Ground, or growing near to It, very rough and hairy, but of an over-worn green color, deeply cut into 3 or more parts, not much unlike a fig-Leaf, or those of the Cow-Parthea each standing on a long Footstalk, which at well as the Leaf is somewhat rough or rugged. From among which, rises up a very strong Stalk, covered over with a rough hairiness, 4 or 5 Feet high, (Gerard says 4 or 5 Cubits high, which may be in a Rich Soil, and its Native Climate,) having upon it such like Leaves as grow in Water, but lesser and stiffer. It is divided (in most Plants) into several Branches, and sometimes it bears only but one Head, the tops or top of which Branches or Stalk, have upon them one or more Tufts or Umbels of yellow Flowers; set together in a Bundle, like those of Dill, which turn into Seeds large, flat, and of a Strain color, sharp and hot in Taste, and of a pleasant flavour, from this Plant being wounded it is probable that that valuable Gum called Opopanax, does proceed, which is brought to us out of Syria, and the Parts adjacent, to their most famous Towns, as Alexandria, Cairo, Damascus, and some others. But others say, that the Gum Opopanax, is produced from the Plant Heracleum, which is mentioned in Chap. X. of this Book foregoing. I will not dispute the contrary, it is probable that they may both produce a like Gum. (It is difficult to be known under, because their Juices seem to be of the same color,) and both called by the same Name.

IV. The second, or All-heal, or Woundwort of Chiron, called also Deria's Woundwort. The Root is not so great as the Plant would seem to have, but with its larger Branches has many Fibres proceeding from its Head, which together take firm hold of the Earth, not dry in the Winter, but

Wotmdmrt, or All-heal of Chiron Common.

coming up freely again every Spring. The root is thick, fleshy, long, deep green, and as long as Dock leaves, but thicker (harder) at the points, smaller at the lower ends, and triadric in the middle, somewhat harsh or hard in handling. From among which, rises up but one great upright Stalk for the most part, about a Man's height, on which grow very sparingly, 3 or 4 or 5 Leaves as grow below, but smaller. At the tops of which, and of its Branches, come forth a great many yellow Flowers, in green scaly Heats, like those of Knapweed, greener than those of GbtdcuRod, or of Saracens Confound, which when they are ripe, are blown away with the Wind.

V. The third, or the American Woundwort. Its Root is composed of many thick Fibres, and spreading in the Ground. This Plant is so like the former in appearance, that it cannot but be ac-

Wotindvoort American.

counted a Species thereof: It abides green all the Winter, (as the former does.) Its Leaves are thick, somewhat long and narrow, but not half so great as the former, and of a paler green color, else for the Fashion, very like them. The Stalks which are many, not rising to half that height, are round, and for the most part lean a little on one side, not being able, by reason of the multitude of Flowers to stand upright; which Flowers stand upon longer and greater green scaly heads, than those of Chiron's foregoing, and are also greater, and more laid open, with many small, long, narrow Leaves, which turn into a white Mossy Down, and are carried away with the Wind.

VI. The fourth, or Golden All-heal, or Woundwort. Its Roots are many small white fibres, like unto the Dailies, whose Taste it is somewhat bitter and Aromatic and Astringent or Binding withal.

This

This Golden Herb, hat feveral long, narrow, and /burp pointed Leaver, coming forth from the top of the Roor, very like to Chirons, or Doria's Woundwort, but not fo great, yet thick like them, and of a darker green color. The Stalks rife not to much above a loot high, having here ar.i there narrower long Leaves on them than below. The lowers which ftand at the topi, art larger than those of the former, hiving many narrow, long, yellow Leaves, and when open, like a Star-Yloteer, with Tjrrums in their middies.

VII. The Places. The firft is a Native of Syria, and was brought from thence to Italy: It glows in the Kingdom of Naples as Mtth'wlus fays, on the Alpine Hills, and on the Sea Coast of Siena, but with us is Nurtt up in Gardens. The fecond grows as Label fays, near the Banks of Rivers in Provence, and Narbone in trance. The third in fome nans of Ylonda in America. The fourth in thick Woods near Orleance in France; but with us, thele three laft are Garden Plants.

VIII. The Timer. The firft Flowers in September, and fometimes towards the end of that Month. The fecond and fourth Flower in June and July, and the third in Auguft, none of them much earlier 01 later.

Hercules's *Woundwort*, or AU-heal

IX. This Plant, as to its Qualities, Specification, Preparations and Virtues, as alfo the Opopanax proceeding therefrom, have the fame with thofe of the other *Herculeii Allheals*, difcourfed of at large in Chap. X. of this *Hiftory of PLANTS* aforegoing, fo that the Properties being every way the fame, we fhall fay no more of them here, but refer you thither.

Of Chirons, and Coldtn Woundwort, or All-heals.

X. The Qualities. It is hoc and dry in the third degree, Abfterfive, Afringent, Vulnerary and Alexipharmick.

XL The Specification. Its chief nfe is for the curing of Green Wounds, and to expel the Poifon, and cure fuch as are bitten by Vipers, Mad Dogs, and the Spider *Phalangium*, and other Venomous Creatures.

XII. 77< Preparations. Yon may have therefrom, 1. A Liquid Juice. 2. A Becolition in Wine or Water, %. An l'folatei or Deco Sed Oil. 4. A Baljum. 5. A Ponder. Parkin/on lays, that this is in a Medium between the Confounds[^] as *Saracem Confound*, and the *Golden Rod*, and therefore that this needed no farther Repetition or Amplification of its Virtues. However, we think fit for die Publick Good, to add the following *Seffiont*.

The Virtues.

XIII. The Liquid Juice. Given inwardly, from i Spoonfuls to 4, or more, in a Glafs of Rod htyuck Wine, it ii good againft inward Bleedings, Bruifts, or Ulcers in the Bowels, Reins or Bladder -, and continued for fome time Morning and Night, u contributes to the healing of all recent Wounds, running Sores and Ulcers, as alfo the Bitmgs of Vipers, Mad Dogs, *Fbalangium*, or of any other Vwomous Creature, in what part of

the Body foever. It is profitable againtt Spitting and Pitting of Blood, the Bloody Flux, and all other Fluxes of the Bowels whatfoever.

XIV. The Dccotfiox to Water or Wine. It has all the former Virtues, but as it is weaker, fo it may be given Dulcified from a quarter of a Pint¹⁰ half a Pint. Injefted into FilWs, it cleanfes them, and induces their healing. Sweetned with Honey, and injefted into the Yard, it cures a Gonorrhosa in Men, ifc.

XV. The Infolated or Decoded Oil. Anointed upon the Bitings of Vipers, Mad Dogs, the *Yhu-Ungium*[^] or other Venomous Creatuies, it curci them, provided the Patient at the fame iin².i takes the Liquid Juice, or Decofion inwardly-

XVI. TixBalfam. Ithealsfimplegreen1 Wound many times at once drefling; it alio digefts old Sores and eating Ulcers, cteanling, incarnating, and drying them, thereby inducing a fpeedy healing.

XVII. Tj.'e Ponder of the Herb. It has all the Virtues of the Juice and Decofion, and trjaj bt given from 2 Scruples to 2 Drams, Morning Nighr, in a Gbls of the *Decotlwn*, for all the pu* pores afoiefaid. Outwardly applysd in a plentiful manner, upon old running Sores or Ulcers, U cleanfes them, drys up the Flux of Humors, incarnates, and caufes a fpeedy healing.

OR,

ALGA MARINA.

I. T¹ HE Names. It is called in Greek t*** X *tuchawiri* lili *Lutan* *Phyvjji* *tut* *Phucus*; ana *Fucm marinus*, to *dichgufm* it from *Fucus herba*, which is *Anchufa*, or *Alkanet* *, and *Alga marina*: in English *Sea Wrack*, or *Sea Weed*.

II. Vie Kinds. Tho^J Authors make near 2^o forts of thefe Plants, yet we fliall Difcouric only of thefe 6 following, viz. 1. tic <f *mannix* & *^o *minem*, *Alga marina graminea* -, *f'ueut marina** *alter Dodonni*; *Palea marina* by thofe of *Mon'p'*^e *Her*, being ufed by them for Litter for their Catile, and the belt fort of Dung for their Fields; *Alga angitjiifolia vitrariorum Bauhini*: (becaufin the *Levant* or *Mediterranean*[^] they Burn it vx Pot-alhes, whereof they make Glafi.) Gr^{als} *Wrack* or *Sea Weed*. There is alfo a broader fort of it, called *Yucus giganUut*, and *Pa/mifi*''' *am giganteum*, by *Imperalus*, 1. *Yucus manfflM Cr_ap*, *ktifoliut* t Broad thick Sea Wrack or Girdle. 3. *Fucm mannus Utiffimsts u/tuif*<>1">² Broad and chin Sea Wrack, or Girdle. 4. *** *M i n i anguftifolia*, *vet fecundus Dodonsi* \ *^S*^{ca} *marina angujlifolia*; *Yucts Zojier Lugdtmen*¹ i *tua is bngo Angufto Of Crajfo holo*[^] *Baubini*: Narrow long and thick Sea Wrack, or Girdles. \$•, *^o *cui miirins Yrufacew Lobelii* -, *Mufcus martnui Yerulaceus*, *Alga marina Yerulawa*: Long Funnel-like Sea **Wrack** or Sea Mofs. 6. *Alga tinSsr** *Lugdunenfts*, *Yucus marinas Untioribui Lugfotn*** *fit*; *Mufcut marinus tiaQorim* -. Dying Sea **Wrack*** red Dying Sea MQ£; the Dyeis Wrack, with which they Dye deep CrimJbn, or reddilh Puip^{ic} which will bit lung.

The Description.

III. The first, or Grafts Wrack, or Sea Weed. Its Roots are roundish and hairy, and blackish in the outside; From whence rise up final round and white hairy Heads, breaking out at the sides as it vscres into Branches, on the tops whereof, stand; or 4 very long and narrow soft green Leaves* some

WRACK-SEA Grafts:
Sea Weed Grafts.

being 4 or 5; erect or more bending, about an Inch more or less broad, it has neither Stalk nor Seed, but lies on the Ground till the Tide raise it on the top of the Water; which being broken off by the force of the Waves, it carried to the Shore where it is Gathered, and kept for many things.

IV. The second, or broad thick Sea Wrack, or Girdle. This differs from the former, in that the Root is wholly Fibrous; the Stalk rising from thence thick and round, 2 or 3 Inches high, and the Leaf which is sometimes but one, (very seldom two) of a very great length sometimes 6, 8, or 10 Fingers long, and above 4 Inches broad equal from a little above the fading on to the end but somewhat waved or crumpled on the edges, being thick, and of a deep green color: so soft or moist whitish & A that it is almost like soft Clew, and will hardly dry, unless it lies long in the Sun; and will not be fit to be kept, till after many Days drying.

V. The third, or broad and thin Sea Wrack, or Girdle. This is like the last, saving that the Leaves are thinner, broader, and shorter; yet crumpled or waved on the edges, and of a paler green color; which when dried, is almost like unto thin Vnrcbment.

VI. The fourth, or narrow long and thick Sea Wrack, or Girdles. Its Root is round and flat, from whence spring 2 or 3 narrow thick Leaves, about a foot and half long, divided into several flat, thick Thongs like Leather, some long, and some shorter, and they again divided into other smaller and longer ones, almost like a Buff.

VII. The fifth, or long Ferial like Sea Wrack, or Sea Moss. The Leaves hereof are very long and fine, like to those of the Ferula, or Fennel Giant, growing from Stalks near a Foot long, with

Wrack or Moss Sea Vennellike,

are divided into many Branches, at whose tops, white Mosses and the Jaid Fennel like Leaves grow. Its Root is manifold, sometimes a Yard, or 5 long, and spreading, extending and creeping much about.

VIII. The sixth, or Dying Sea Wrack, or red Dying Sea Moss or Alga; the Dyers Sea Wrack. It rises up with 4, 5, 6, or more Stalks, 4, 5, or 6 Inches high, each Stalk spread out into some few Branches, each of which are well repleat with it sort of fine Leaves on them, not much unlike to Fennel, of a reddish color, but with some whitenefs mixed together. This is used by divers sorts of Mechanicks, to strike a deep Crimson color, or reddish Purple Dye; which will not quickly nor easily decay, but last long.

IX. The Places. Most of these are found on our English and Scotch Coast; but they are also found in the Levant or Mediterranean Seas; and Coasts of other warmer Climates.

X. The Times. They perish not in Winter; but their chiefest time of Beauty Use, and Gathering, is in the Summer Season, and latter end of Summer.

XI. The Qualities. Sea Wrack is cold in the first Degree, and dry in the second; Astringent, and Anodyne,

4

S

XII. The Spccfkathn. Being Applied whilft they arc frch, they allay Heat and Inrlamations, eafe the Gout, flop Vomiting, and ftienghen the Stomach-, and to cleanie, dry, and heal, old running Sores, and old Ulcers.

XJIL The Preparations. You have, i. TI>e Sea Wrack in fubftance, either green or dried. 2. ATtection ofibe Dying Sea Wraek. ;. APouder of the fame.

'the Virtues.

XIV. 17* Sea Wrack is fubftntce of the firft five Kinds. Whilft freth and green, being Applied as a Cataplafm to the Gout, they abate the Infimation, eafe the Pain, and remove the Difeafk, and withal ftrenghen the Par: 5 but when dry, their chief ufe, by the Venetians, our Selves, and others, is. inftead of Hay or Straw, to pack up GlaUcs, and other tender Wares, to keep them from Breaking : they are alfo ufed as Litter for Horfes. And being made into a Compoft, are an excellent good Manure for Barren and worn out Lands. The firft efthcm, which is found in the Mediterranean Sea, is alfo of ufe to make a kind of JEV AJhes, of which Glafs is made in rbofe Conntrin - as sao Spap: But the feme N found in our Korthert Seas, will do no fuch thing; as not containing fo VKcclcn: a Salt, nor fo large a quantity of it, as \$at does which is Gathered in the Levant.

XV. The Decctien of the red tying Su Wrack, or Sea Mofs. It ftrenghens the Stomach, is good againft the Poifon of Vipers, mad Dogs, and o- iher venomous Creatures, and to reülhe Longings of Women with Child: It cools, drys, binds, and is good againft all Fluxes of the Belly, and alfo kills Worms in Children: and in the Gout, being fomented therewith hot, it eafcs the Pain : dropt into the Eyes, it eafes then Pain, and allays their heat and "inflammation. If it is made with Wine, ir fiopseVomiting, and admirably ftrenghens the Stomach. Injected up the Womb, it is good a- agdnft the Overflowing of the Terms, and the Whites in Wotnen, and afrer due Purgng, cures a Gonorrhxn in Men ^ and injected into tie Bladder in fcedn, it is goodi to deanfe and heal Ulcers in the Neck thereof: dofe from 3 quairer to half a Pint, Morning and Evening. The Decoftioa in Wa- ter^ makes an admirable Dye, whereby Silk, Lin- nen, Leather, and many other things, may be Dyed and Stained of a mofl glorious deep Ctimfon, or 3. Cngubr reddim Purple, which will not ejfily fade, OI become dull, but abide in its Beauty for a long time.

XVI. The Ponder of the red Dying Sea Wrack, or Sea Mofl, It has all the Virtues of the aforego- ing Decottion, being taken inward I y*Morn ing and Night, from half a Dram to 2 Drams; mixed faff with a little Syrup of Cleve Gillijlawers, or of Citron Peels, or Jome fuch like, and then mixed with a Glafs of Red Pert Wine, and to drank. Taken alfo with Wine mixed with Vinegar, or Syrup of Limons, it is a fingular thing againft vomiting. Loathing of Food, and weaknefi of that Bowel. tor it ftrenghens it alter a lingular man- ner: Applied aifo outwardly, to old ninfingSores and putrid Ulcers, it cleanfes them, drys up the Araux of Humors, 'and induces their healing. And • given in Wine, it is laid to be good againft the btoncin the Reins: Injected with ted Pan Wine into i X)< inA B1jddet; i » is gottf to heal Ulcers in the Neck thereof, and to cute a virulent Goner- Univer&ls being fait Premiled.

CHAP. DCCL.

O/YARROW Land, or Milfoil-A

THE Names. The Arabians call it EgHo*; but in Greek it is called STCMSTM i Xrwf- t™^, Stratiotes Cbiliophyllos: 'A%M£& mSiv"™ Diofcoridis ; Acbillca Sderiis ot Diofcorides: in latine, Mitlefolium ^ Millefolmm Miliw™ Acbilea, Achilea Siderbit - and in Englifh» '<" me, Milfoil, and Achilles Woundmrt. Many Authors fay that MHLcfolium andJ(iW//«, are one and the £ime Plant, and the fame Herb which one Author caJls Milleflium, another calls Achileaj Others fay, that QUILTophyllut, or JM&efolim*, IS the general Name, and that AtbiUea is the prop^ Name to one of the particular Species •, but be that how it will, it is certain that all Ac I'arrows ha* = been called by many Authors, by both the Names indiSerently ; thtf the Name Achillea, has by B« Writers, been chiefly applied to our fifth Specie* following.

II. TheKindf. It is not out bufnefs here, w enumerate all the Kinds of Xarrows, entreated OI by Authors, for as much as the greater part of them are perfeit Strangers here, we (hall only dilcourie of luch as are familiar with us, molt known, ar» which arc only or chiefly ufed in Pliyfic, which zre the five following, viz. 1. Millefdium *»& vulgare, MiUefvliumtlbumminor-, StraticetMi' lefolia, Stranotet terrcjlrii, Achillea, ^chir. Militarist OurCommon Whire Yarrow. 2. BV^A Ifolium album majm Bshini, Lugdu«>'« w Matbholi: The Greater White Yarrow. lefolium rubrum vulgare, Our Common J ettd Yarrow. 4. Millefolium blare rubro nwx f mum (Caffi) -, Millefolium maximum-. The Great Red Yarrow. j. MtiefdmrnKibihTregtySt't tiotes vera • Stratwtes, & Stratiotes Millrf^ Gefneff. Millefolium Nobile, Cf Achillea laOer nemohani; Achilla* Cora. Latunt, M" V Achillea Aebri; sodanmfai Achillea's Noble Wound- wort, fo called irom Achilla the General otj) Army, who applied it for the Curing of his crs Wounds.

Iht DefcriptiofIS.

III. The firft, or our Common White Flower** Yarrow. Its Root confifts cf many long white iibret or Strings, fpreading far about and deep- }* ** many Leaves fpread upon the Ground, tebich & long and winged, finely cut into many fmaH f™^ exceeding the fine Leaves of TanGc. From among ribich. rife up 2 or 3 round green Str^, " : " fuch like winged Leaves upon them us grow bel0 & > but /maier and finer as they approach up to the W^ where come forth rsany fmall Flowers ahkb *^ white, and fet in a Tuft or Umbel cleft together, each Flower confifling- of j fmaI round pot*** Leaves^ with a little yelloicifb Thrum in the \$& die, J welling fomevihat ftrong bei> : i rubbed "ll Hand, but net unpleafanr. Where A'w, i" *^ there is fame Varieties obferved in the Ylar^ fame being more white than ethers ; fomt fhicker fet together; and fonte either gret't fmaier than other*.

Yarrow Common.

IV. The fecond, or Greater White Yarrow. This in its Roots, form of the Leaves and flowers, and manner of growing, differs not much from the

Yarrow White, Great.

former; living that the Stalks and Leives of r1* are larger, its green Leaves being as large almoj as thofc (Tanfie ; the Flowers alfo being greater, andftanding in a larger Umbel\ the Smell of which is a little franger than ordinary.

V. The third, or our common Red Flower d Yarrow. This differs in nothing, neither in Root, Stalks, Leaves, Ylowers, nor manner of growing from the firft, or our Common White Jort, but only in the color of the i'lovaers; ibefe being of a deeper or paler red, or almoft of a bhtfh color. Vff" Thrum in the middle being yellow.

VI. The fourth, or Great Red Yarrow. It ha* as great, and as large Winged Leaves, as the great White Yarrow, (at Se&. IV, above,) but morejinefy cut in on the fides. The Stalks are as great and as high, Branching forth at their tops^ and ftored with large Umbels of red Flowers like unto them, faving that they are of a fair, bright^ reddifh color, and in jome paler, with pale yellow Thirums in their middles, which have a pleafing, but /mail Smell.

VII. The fifth, or Achitles\ Noble Wound wort. This Woun&vwrt, or Yarrow of Achilles, hat a long, thick, and creeping Root under Ground, vibwb perijhes every Tear after Seed time. It hat many l*rgti tbin, or fine cut Leaves lying next the Ground, more finch and deeply cut in, into the middle Rib, andeacō part divided alfo, which makes it to differ /omeihing fr>>m our firft Common Yarrow. From among tbkfe Leaves, rife up more and taller Stalks, oiith^divers finer Leaves let thereon ; and at their tops many Ffoieersin Tufis together, being both more in number, and larger than our firjl Common Yarrow, cf « whitijh or reddiib color, with a yellow Thrum in the middle. TJx zeho/e Plant Smells very fu&et.

VIII. The Placet. The four firft grow all in England; the firft and third of which, are very common. The fifth is a Stranger with us, being only Nurft up in Gardens, and requires a fat Ground and rich Soil.

IX. The Times. They all Flower from the beginning of June, to the end of Summer, viz. rill near Bartholomew-Tide.

X. The Qualities. They are cold in the firft degree, and dry in the end of the fecond, or beginning of the third, Afringent, Glutinative, Anodyn, and Vulnerary.

XI. The Specification. They ftop Bleeding at Nofc or other parrs -, the Bleeding of Wounds, Piffing Blood, Bloody Flux, and all other Fluxes of Blood, inward or outward. Stopthc Couries in Women, and arc good to Cure all Simple Green Wounds in a very Ihort time, by drying them, and confolidating their Lips. They eafe the Tooth-ach, give help in the Colick, and cure the Gononhcea in Men, and Whites in Women, Univerfals being premed.

XII. The Preparations. You may have Therefrom, 1. TJe Qeanfed Green Root, or Green Leaves. 2. A Liquid Juice. 3. Ait Ejence. 4. A Deco&ion in Wine or Water. 5. A Pouder of Leaves and Heads of flowery 6. An Oil by Infolat'wn. 7. A Balfam. 8. A Cataplafm. p. 4 DijWled Water.

The Virtues.

XIII. The Qeanfed Green Root, or green Leaves, Being chewed in the Mouth, and held againft the Teech for fome time, ii is did, to give eafe in th< Toorh-ach.

XIV. *Tlx Liquid Juice.* It Hops all inward Bleedings whatever, as Spitting and Vomiting Blood, Bloody Flux, Pilling of Blood, the Overflowing of the *Lochei* and Terms in Women; and all Fluxes of the Belly whaifoever, being taken from 1, to 5 or 4. Spoonfuls at a time, Morning and Night, in a Glafsof Red *Spa/tijb* or *Fort-Wine*. Outwardly allb applyed, it [tops die Bleeding at Nofe, and Bleedings or* Wounds. Taken to the quantity yforelaid, in tome of the *Itfijfi Water*, (Univer&ls being ppremfed,) it cures a *Gonochea* in Men, and the *Whites* in Women, and other Wtakneffes of the Womb. If dropunto the Fyes, it takes away their Inftsmati&n, eates their Pain, and cures their Rednefs, being Blood-flor. In-jeftred into Filtuia's, it cleanfes them, and induces their healing. Taken to three or four Ounces in Wine, it is a good Remedy againlt Agues, and for fuch as are troubled with Nauteouftieis or Vomiting, and cannot retain thier food in the Stomach: It ought to be given a or ; Hours before the Kir, to be continued till the Ague is gone, and yet fitH to be repejred tor \$, 6 or 7 times afterwards: It (tops Bleeding at Nofe alfo, being Snufied 01 Intetred up.

XV. *The Ejjettee.* It has ill the Virtues of the Juice exalted, and therefore may be given inaleScr Dole, vis. from 1 to ; Ounces, or two Ounces and a halt, Morning and (Night, in any proper Vehicle. If given in a *Gaaofbts*; i, or ibe Whites, a little *Voudcr of Amber*, or *iiiiecbu*, or both of them may be added; and Ib it may k given againtt Pitting of Blood, and the Overflowing of the Terms in Women.

XVI. *The DeeaU'wn in Wine or Water,* It has all the Viirues of the Juice 01 Eilence, and therefore may be given from a quarter to half a Pint. It is a good Lotion for old running SoreSi putrid Ulcers, and inveterate Fittula's.

XVII. *The fonder nj the Letvet, and heads of Warners.* It has the Virtues of the Juice, Eflence and Decoftiort. Dole from half J Dram, to a Dram and half, in Come proper Vehicle, as *Mithridaie*, fVnice *Treacle*, Etc. Outwardly applyed, it ptefently flops the Bleeding of Wounds, at. Ifrb« Pouder inwjrdrly given, be mixed with half a Dram cr 2 Strupk-s, of fine *Bolt* or *Citechu*, ir will be fo much the more cflt&ual agiintt inward Bleedings, Cf.

XVIII. *The Infolded Oil.* Ir gives tare in the Goat, and other Neurotick pains; and anointed upon the Head, comforts the Roots of the Hair, and hinder its (hedding or falling.

XIX. *Ike Baljm.* It digelts, deanfcs, incar-nates, glutinatesanddryes, and therefore isoffingular ute, not only to heal and cure fimple Green Wounds, but alfo old running Sores, putrid Ulcers, and rebellious Fiftula's, being featonably and Artliilly applyed.

XX. *Tlie CaupUfm.* Applyed immediately upon a fimple recent Contufion, it dtlucffes it, and prefently eafes the pain. Applyed to a Bleeding new Wound, it Hops the Flux of Blood; and in the Gout of Bands or Feet, it prefendy gives eafe.

XXI. *The Dipilled Water.* It has the Virtues of the Juice, Eflence and Pouder, but nothing near fo effectual; and rho¹ it may be ufed in all thofe cafes alone, or Dulcified, yet it is more often ufed as a Vehicle, to tonvey fome of the other Preparations in down the Throat. Mtxt with Honey, it is a good Ophthalmkk, helps rednefsand Inflammations in the Eyes, and cures Sores or Ulcers in the fame.

Pta tenderer, and with as fine Leaves •xlmoU tu Fennel
itself. At the Stalk /ikcwife grow fuch fine Leaves
Up to the top; where fiandon Brandies, largtufts
of findl'i white Floweir/et ckfe together.

IV. The fecond, or the Violet Water Yarrow.
Its Root it very fmall and creeping, fhooting forth
fibres in many places, and a Bunch of Fibres at its
end: From teakh rife up fevers/ long winged
Leaves, confining of many fmall Leavis, Jet on each
fide of a middle R.A, which are ltrger and greater
than thofeof the former, of a fad green color. The
Stalk, or Stalks, which rife up among them, are
bare of Leaves from the bottom to the upper Joints^

Yarrow Water Violet,

whereabout grow divert fmall vihitifh and fweet
Flowers, fomctbing like to Stock Gilliflowers, or
Violets j of 5 Leaves apiece, one row above another,
with yellouiifh Threads in the middle. There is a-
nuthcr fort hereof very like it, but that it has larg-
er Wings, and finer jagged Leaves.

V. The third, or Crowfoot, or Fennel Leav'd
Water Yarrow. It hits a long flcnder Ra»;), wjh
a Fibrous bujh or tuft at its end. It U a leffer
Herb thin jiny of the former, growing only in
fallow Waters, where it feldsim rifes above an
handfulhigh, with very many, and very fine Jhort
Leaves, at fmall as Camomtt, and of a yellowi/h
green color. The fhort Stalks among them^ bear
Jingle fmall white Flowers, refembling the Water
Crowfoot, both in the Flowers, and in the finer
Leaves, but his no broad Lewes at bottom^ as the
Vyfeer Crowtpot has: it bears ulfo a head of Seed
after the Flower is pa!}, very like to thofe of Crow-
toot, viz. *) fmall bunch of Seeds fet cfofe toge-

"i'l. The Placet. The firft grows very plentiful-
ly about London, even in the Water, and in

Yarrow Water Crowfoot.

Belonging to Seft. j.

many other Parts of England: and fo do the other
two, in Flathy and Watery places * bur the bit
grows only in the Water, efpecially being (hallow.

VII. The Tunes. They all Flower from the
middle of Summer to the end, viz. from the mid-
dle Qffune to the middle of September, if [he
Seafon is warm.

VIII. The Qualities. They are all cold in
the firir. Degree, and dry in the end of the fe-
cond, Afringent, Glutinative, and Vulnerary.

IX. T!>e Specification. They cool, allay infla-
mations in Wounds and Ulcers, are good againft
inward Falls and Brutfes, help the Strangury, and
give eafc in the Tooth-ach.

X. Ttv Preparations. You may have therefrom,
1. A Liquid Juice. 2. A Deco&ion in IVme.).
A. Mixture- 4- A Balfant. 5, ACatapkm.

The Virtues.

XI. The Liquid Juke. Given from a Spoonfill
to % Spoonfuls or more, mixt with a little Vine-
gar, it is good againft inward Bruifes coming by
a &ll from tome high place; and fo mixt, being
held in the Mourh, it eafes the Tooch-ach.

XII. The Deco&ion in Wine. It has rhe Virtues
of the Juke \ and fomented upon inflamed Wounds,
it abates the InHamation, and e^ifo the Pain: Ta-
ken with a Scruple^ or hall a pram of Salt of
Tartar, it opens Obftructions of the Urinary Pat-
fages, and gives eafe in the Strangury.

XIII- The Mixture. Take of the Deco&ioB
8 Ounces^ Spirit of Wine, an Ounce and halt •,
Nine in fine Pouder, 3 Drams.- mix and diffolveJ
Ufed as a fomentation, and as a Wafh, OI Lotion, it

gives

gives ease in old painful running Sores and Ulcers, allays their Inflammations, digeltes, cleanfes, incainates, and heals them.

XIV. *The Ballam.* It digefts and cleanfes admirably all running, putrid or filthy, and ibul running Sores and Ulcers; and with the Mixture atbreggoing, quickly incamates and heals them.

XV. *The Cataplafm.* Beaten up with Nitre in fine Pouder, adding thereto a little Wine Vinegar, and bringing it to a confiKency with Barley flowp. er, and ib applied to a Simple recent Contufion, Wp it diicufies it, hinders the In Hamad an, and takes away a hot Fluxion if prefont: It difcuffes ho: Tumors alfo, eafes Pain, and is truly profitable againlt the Gout.

CHAP. DCCLII.

0/ YUCCA; HIUCCA;
OR,
C A Z A V I.

I- *HP HE Names.* It being to us a Plant of new Invention, it cannot be fuppofed to have any Greek or Latine Name, but it is called by the Indians *Hiucca*, *Jucca* and *Titcca* •, alfo *AUndioca*, *Manibot*, and *Cazavi* •, many, or all of which Names, are brought into the *Reman Tongue*; and the Lift, *vis. GaSft?* \a Cdfmi, is made *inghjb*

II. *The Kinds.* It is dWided into the Tnre and fuppoifiritious. The *True YUCCM*, or *Cazavi*, is V*^{W*} *^{ve} ^UCCIX_> P^{ve} *Mandioca Genuina Mexicana*, folijt *Cannab'mit*, The *True Indian Csi* or *tueca*, *Hemp-Lemfd*. 22. *Uiucca*, five 3*«<i, five *HdchAAmericA/tum-*, *Mfo* *Mafoow-Leav'd* *Indiin Cazavi*, or *Potatoe-like Cauui*. 5. *Tucca*, *fatijs Alots*, five *Jucca India putara*, The *Suppoititious Indian Cazavi* - This is not the *True l'uccd*, or *Cazavi* of *Ovicdul*, *Thevet*, and others, of which the *Bread Gifau* is made, as *Monardut* has plainly demonftrated •, ibr the *True lucca* is the *hemp-Lemfd Tueca*, firft Named, its Leaves being divided into 7, 8, or 9 parts, Handing on long *FootKalks*, as immediately will be declared.

'the Defcriptiotis.

III. The hrft, or *True Indian Yucca*, or *Cafcavi*, it hat a pretty great long *Root*, at great at that of a *Luge Carrot*, brown on the outside, and very white within, alfo *Sappy*, and full of a *Juicy Plejhy Subjia/ce-* *Tirit Root* is Planted every fear, or every otlrer *Tear*, axd quickly grows to be very great or targe, and long withal, from this *Koot* Springs forth one or more woody *Stalks*, of 4, 5, or more feet h'tgh, ^ growing up to be at it were a *mail Shwab*. Vpon the *Stalks* grow many fair broad *Leaves*, ach upon a long *l'octjialk*, and divided if to J, 6, 7, or more parts, or *Jingle Leaves* *s it were, not much unlike to *HeUeborafter*, or *Hemp-Leaves*, {whence it hat part of its Name,) which *L.covet* are about 6 *Inches* long, two *Inches* or more brojd, not indented, but even about the edges, and abiding almayt *Green*. Tie *Stalk* it dividea into divers unequal *Branches*, bearing many pretty large *t'fovsrct*, Spotted a little; they are narrow at their bottoms, *Jong* and *fh. irp* pointed, and arc in number *fix*, abite on the *infthie*, but of a dead *brovsnjh v:.)ite* color on the outside; fo that it w a *Ihwer* of no great *B'itty*, and is only to be elieemed at *m Exotick*—

IV. The fecond, or *Mallpw - Leav'd Cazavi*, or *Potato-like Cafavi*, or *Yucca*. hat a *Root* 5, 6, 7, 8, or 9 *Inches* long, and fit times longer, great and thick at its top, and fit pointed at the bottom, very like to thofc of tee great long *Turneps*: *Thk Plant* is of *tnjfb* viz. one which is *yello-ajjh*, and another which *1* white*, when they are *Boiled* or *Baked* into *Bread*. From the top of this *Root*, fprings forth many long, ftender, tender weak *Branches* of *Lewes*, fime of them being very long, and feme *muebhorter\ }om** not a half, and fome not a third part of the length of the longer *Stalks* of *Leaves*. Theft *StalhP*** each of them at their extremities, one large much larger than thafe which grow below about the middle, or other parts of the which are not a quarter part, and many times no an eighth part, or tenth part of the *Magnitude* } the great *Xeaf* at the end of the *Stalk*, all ubtc% both greater and fmailer, are roundijh, *Ull» J^{mc}* nftmblance of a *Mallow-Leaf*, vbencc *cemf.?''* of ike Name. *Tlxft Stalks* of *Letve* tare ft •&***> that the longer of them never grow uprtgM, ° always trail upon the *Ground*, and the veryjpa of them lean much, never growing perfe^o but in a declining *pojiure*.

V. The third, *01 Suppoifiritious Indian* b hot a great thick, end withal long tuberous *#*# Spreading it ft If out in time, intomany other luscious *hiads*'from whence *Jhcot* forth many *lottg*, hard, andholku, *ernarm guttered Leaves*,

Yucca Suppositions.

Hmk Subjiance, *Jbarp edged*, <nr *flasp P^{01*}* encompassing one another at the bottom, *ff a g⁷* *ijb* green color, abiding *frejb con.imMy*, or *p dom* falling aiay, *mtf* feveral hard *^rcf^{''}* ningin or thro* them length-aays, && *f^e* withered, become pliant withal, to bind *iff*** *mtf*. from the middle of th* *Bunch* of *U***>* fpringt up a firm *rwi* *Stalk*, and that *tf** /

Tear, in the Native Places of its Growth, (but not stveryTrar with us, incur Colder Climates ;) woich Stalk freads its fctf out into feveral Branches^ on which grow divers Flowers, fomewhat large, and banging downwards, eonftjiing of fix Leaves, Kith divers Veins, of a weak reddifb er blufh color, fu/bread on the buck of the three outward Leaves, from the middle to the bottom, but not reaching to the edge of any Leaf. Tl.vfe Flowers abide not long^ but quickly fall away, without bearing any Seed in our Cold Countries.

VI. This Plant is thus defcribed, by Gerard. *It hat a. great Root, thick 'and Tuberom, very knotty, and full of Juice, which is fomewhat fweetin Tap, but of a Pernicious Quality. From which Root, rifes up immediately very many Leaves round the head thereof, the Stalks of which are about a Cubit long, hollowed like a Gutter or Trough, very fmoftb, and of a green color, like unto that of Woad. The edges of the Leaves arejsharp, like tbtjrige of a Knije, and of a brown color. Tlc point of the Leaf is aTrickle, asfiarp asaXecdk; and the whole thereof being well viewed, is not much unlike toa Wierry, orfade fuch like Boat. Theff Leaves are alfo very tough, hard to break, and not eafie to be cut, except the Knife be very fsharp. To this Defcription, Jdhnfon upon Gerard alfo farther adds, in fhme Tears (fays he,) it puts forth a pretty fuff, round Stalk, fame three Cubits high, divided into divers unequal Branches, carrying very many pretty Urge l'bwerr, Jhaped fomewbai Me thefe of Fritillaria, but that they arc narrower at their bottoms ; the Leaves of the flower are fix in number, which are of a white color on their infide, but on the out fide, of an over-worn reddifb color, from the Footjialk to the midfi of the Leaf; fo that it is a Flower of no great Beauty but is only eficemedfor its rarity.*

VII. *The Places.* The two rirlt grow in molt places of America, from Florida to Peru, and about the Straights of Magellan, as alfo in the Iflands of the Ocean, as in Jamaica, BarbaJoos, and others of the Caribbet and Leeward Iflands, even in rhofe places where They had Maize, or Indian Wheat. The third or lalt of them, grows alfo in all, or moil places in the Weji - Indies, where the two former grow, from the Southern parts of Brazil and Gnli, to tie Cape of Florida • and in mott of the Canabal Iflands, and other Countries near adjacent to them ; as tike-wife In our Cnglijh Plantations, as in Virginia Maryland, New-England, &C. as it is conftantly affirmed.

VIII. *The Times.* The Seafons wherein the firtt and fecond flower and Seed aie uncertain, and thereof Authors have laid nothing. The third or laft, Flowers about the middle or latter end of July, the Flowers falling away within a little time after' they have been blown open; but as for its Seed, it has never been obfaved to come to perfection with us. As to its Leaves, Gerard fays that rhev kept Green both Winter and Summer, in his Garden, without any coveting upon them to defend them, notwithstanding the injury or infelicity of OUT cold Climate.

IX. *The Vitalities.* Of thefe forts of Plants, the Koots arc enly of uin. *The Juke of the firtt* is hot and dry in the fourth degree -, Volatile; in the highell depree, and Deleterious or Foiibnous; and fo is the Root it felt; if eaten whilft it is frelii and moift -, but when dry, or reduced into Flower, it is template in lefpea to heat or cold-nefi drynefsormoifturc, bemg perteftly free from a n V r ^ w or malign QuaUiy, and he for jood and Nourilment of the Body. *The Jmee of the*

fecond, is affirmed by fbme to be free from any Poifonousor hurtful Qualities, whereas others fjv, it has the fame Deleterious Qualities with the iirtt. I know nothing of it by Experience, but if the Koot is of the nature ofSpanish Potatoes, as is affirmed, it muftbe Innocenrenough; and the Koot it felt^ anfwers toall the Intentions of the firtt. Pl'anr. *The ram Juice ofthe third,* is faid to be Deadly, or very dangerous, like to the Juice of the firtt. *Aid's-nut* retores, that a Wound made in his hand by the fsharp Prickle or point at the Leafs end, g him fuch inalterable Pains as almort Dittracted him, (which fhews the Malignity of its Subtil and Volatile parrs,) and that he could have no eafe till he applied his own Ballam thereto, which cured it. But the dried Root, or the Flower thereof, is innocent, temperate as to heat or cold, and dry in the firft degree, rlc to make Food of; in like manner as the former.

X. 77« *Specification.* Authors have afcribed nd Virtues to thefe Plants; but if we may make an Eltimateof them, from the confidatation of their Roots being received as Food, and nourishing Mankind, making him to increale in Subftance and Strength •, it is rational to believe that they ar« reftorative in Confumprions, comFoit and refrefh weak and decayed Nature, accordingly as they may be applied to rhofe purpoies: And as they arc of a drying Quality, fo they ma? be Aftrinpt, and io be profitable to ftop Fluxes of the iowels i this we fpeak as to the Root it felt. And as to the Juice, r;\<fen it is well prepared, fo as to be divefted of its Deleterious and Poitonus Qualities, it may be of excellent ufc to allay the heat of Fevers, quench Thirir, cure fore Mouths and Throats, and the like ; as alfo to chear and refrefli the Vital Spirits, when oppreff and weakened thro' Cares, Afflictions, Melancholy, Perturbations of the Mind, or any preient Heterogene matter deprefling them.

XL *The Preparations.* You may prepare from the Jukes gi all thefe Plants, but efppecially from the Juice of the firtt of them, i. A Drink, a. A Vinegar, i. A RoborSapa. And from thedried Roor, i. A Flower. 7. Cuzavi, or a Fine Write fort of Bread; the like of which may be prepared from both the fecond and third forts alfo.

XII. *Aa Obfervation.* That the Juice of the firtt of thefe Plants, (if not of the other two) is an Egregious Poilbn, hxpérience, as well as the Tettimony of Authors, has fufriciemlyalcertain'di and that it is a Poifon of that indubitable Efficacy, that it certainly Kills in a very (hort time after the uking of it; whilft the Root it fdf when dried, and the Juice when fufficiently boiled, have not the leaft of any fuch Qualities in them ; the daily Eating and Drinking of rhem for many fcores ofYears, have affiir'd us that they have no malign or hurtful Qualities in them, butabfoludty on the connary, are-Coniervatorjr to the Health, Strength and Life of Mankind, which feems to be a kind of Paradox \$ fince other Poifons, neither drying, boiling, nor even burning, can alter their innate Properties. The like is to be fiid of Opium, that the Poudet of that Succulent Gum being gradually drycd, has not the leatt. Deleterious property in it, (what ever it had before) but on the contrary, in-Itlead of making Sick at Stomach, caufing Vomiting, Convullions, Faintings and Swoonings (as it has done in multitudes of People,) does rettore and comfort the Tone of the Stomach, chear und enliven the Parienr, and profligates rhe prefent Evil beyond all that pottibly it could do, whiltl it retained within it, its Native Deleterious humidity; this is a Note worthy of Oblemtion.

Kill, li may then be demanded how these things come to be freed from those their Deadly dualities > To which I answer, That their Poisons are Volatile, highly Volatile, Volatile even in the highest degree ^ which by the means of the heat of the tire, or Subtil Attractive properties of the Air, are made to evaporate, and fly away, and so clear the remaining parts of the matter, and make it absolutely free from any hurtful or evil Quality; whereas had that Poison been fixed, and essentially incorporated into the substance of the matter, every Particle thereof would have had these same Properties, nor could any Evaporation, drying, or even burning it self, have altered it, but that it would have been inviolably the same, as long as it could confer it self in the World; of which Truth, and master of Faith many Examples are capable to be given.

T/je Virtues.

XV. The Drink. It is made of the expressed Juice of the Root, which when it is new pressed cut, has an evil Smell, and of such hurtful Qualities, that whosoever should taste of it, whether Man or Beast, dies without Remedy, and that quickly. The rind of the Root is pared off, then the Root it self is either scraped, or broken into small bits, and bruised; after which, it is put into a Hair Cloth or fine sieve, and fame other proper Cloth, and pressed out, and the Juice is put into a Glass, and they take, and boil it half away, which afterwards by a very gentle Fermentation, becomes a good whole some, and pleasant Drink, like to a middle sort of Ale. It quenches Thirst admirably, cools in fevers, more especially if the Juice of a Union or Orange is mixed into it: It clears the spirit, refreshes the Vision, and relieves the malignity of putrid and pestilential Diseases. It made very facet with honey, it makes an excellent Gargle for a sore Mouth or Throat, and to cleanse and heal Ulcers in those parts.

XV. The Vinegar. It is made of the expressed Juice, by setting it in the Sun till it becomes acid, and as sharp as the beji. Wine Vinegar. Authors say, that the Vinegar made hereof, is as good as that which is made of Wine. It cools in Fevers, and quenches Thirst, and is admirable against malign and pestilential Diseases. It may be made into a Honey, or double refined Sugar, which drank mixed with Water, or other proper Liquid, cools singularly, any heat or Inflammation of the Lungs, opens Obstructions of the Lungs, and causes breathing. It likewise heals all kinds of Sores, Cankers, and Ulcers of the Mouth and Throat, cleansing and drying them, and also alleviating any Inflammation in those places.

IV. The Rob or S-jpa. It is made of the Juice boiled to the thickness of new Honey. When it is To Boiled, to such a Consistency of a Honey, it is mixed with a little Water, and is as sweet as Honey. Of this is a kind of Ale made, by mixing it with Water in a proper proportion, as you see of Honey, when you make Mead thereof. But the quantity of this Rob or Sapa, be half as much more, it will make it so much the stronger, and more pleasant withal. It is a pleasant sort of Liquor, to

drink in hot Weather, to reiterate or cool, to quench Thirst.

XVII. The Flower of the Root. It is expressed Juice, and then drying the residue after which, it is reduced to a fine powder by Flower, either by Grinding it in a proper Mill by beating it in a Mortar, and continually Sifting it, till the whole Mass is reduced to such a Subtil Consistency. Some only flake the Root into very thin Slices, which they slice edge-ways, so that the Juice may drain out of its own accord, and continue it filtering till it is thro' dry, after which, they break it into small bits with their Fingers, and then either by a proper AMU, or by beating in a Mortar, reduce it to fine Flower as aforesaid. Of this Flower with Milk, Eggs, &c. they make Cakes, Pan-Cakes, Puddings, Chcese-cakes, &c. as usually done with Wheat Flower, which are very sweet, Palatable, good and nourishing, and very useful to the Bodies of Human kind.

XVIII. Cazavi, or the Bread, it is made of the aforesaid fine flower with Water, or rather with Milk, either alone, or adding Teaf, Eggs, or whatever may make the Bread light and pleasant which they form into little, thin, small Loaves at Pleasure, and gently Bake them, which Bread is as white as Snow. This which it is New, is very pleasant, palatable, and agreeable to the stomach, and what the most Appetite will not refuse. And when Stale, very good and pleasant, though not so calling as when it is New: But I have seen one or two when Stale, (being about 5 or 6 Months old) and to me it seemed to be full as good as any of our Wheat-Flower Bread, of four or five days (This Bread Authors say, will abide and keep 50000 for a very long time. Some make their Bread thus: They take the Juice of the Root, from whence the Juice is pressed, which they put into an Earthen Pan, and set it over the Fire to make it grow dry, then being dry, they beat it into powder: This powder they mix with Water, and form it into Cakes or Leaves, which they dry in the Sun, & then keep them for use. These little Cakes or Loaves, will keep good for a long season, even twenty Years without corrupting, and give good Nourishment to the Body.

XIX. Of this Root, the Americans, or West-Indians in many places, (though they had this, or Indian-like in great plenty,) did make their Bread, on which they lived, after the former manner, and that (as they say) for some hundreds of Years, which Bread was used by all the People of America, from the most Southern parts of Florida and Florida even to the Northern parts of Florida or KewEngland.

XX. The way and manner of flaming and softening it, is this. Of the first sort or kind; they cut off a Stalk about a Foot long, which they put more than halfway into the Ground, where it suddenly takes Root, and within a Year or little more, the Root comes to be sufficiently great, and fit to be taken up for the uses aforesaid. The second kind is Planted from the Root cut into many pieces, each piece having some of the outer skin thereon: These pieces they put each into a hole in the Earth, made fit for them, which in 3 Years time or less, grow to their just Magnitude and are fit for taking up, and to be prepared for Food.

Fimlir, 15 Decemb. 1708.

cond or Great Spanifli Kind, that they can Scarcely be known cif under, but that this is fuller of Stalks and Leaves. The Flowers at the tops of the Branches, are at firft of a file blujh color, ; but being blown open confift of five white Leaves x, and a great number of white Threads in the Middle tipt with yellow.

IX. *The fifth, or Laffer purple Virginia Meadow Rue.* This is in almoft allrefpeffs much like the former, but Smaller, and differs mojiin the color of its Flowers, which in this are of a purple color tipt with yellow.

X. *The Places.* The firft grows in many places in England, in the borders of moift and plafhy Meadows and by Ditch fides. The fecond is alfo found in our rioift Meadows and by Ditch fides but near the Sea, as at Margate on the Chalkey Gift on the left Hand. as you go from the Town to the Sei fide, and in other places farther from the Sea. But this grows alfo in Spain, from whence it has been brought to us, whence came the Name: of *Spanifh Meadow Rue* but is truly a Native aj^o of England. The fifth grows alfo in lower Grounds by River fides. All thefe Gerard fays grow along Ditch fides leading from Kentifh Street to St. Thomas Waterings, (the place of Execution) on the right Hand. They grow alfo upon the Banks of the Thames leading from Black-wall to Woolwich[^] near London, and in feveral other places. The two laft came to us from Virginia.

XL *The Times.* They all Flower in the Months of July and Augufth, and the Cods of Seed are ripe in fome fhort time after.

XII. *The Qualities.* It is hot and dry in the fecond Degree, is AbfteHive, Aperitive, and gently Cathartick or Soluble.

XIII. *The Specification.* It is ufed to cure the Plague or Piftilence, and the Yellow Jaundice: and Is profitable for fuch as have the Falling-ficknefs.

XIV. *The Preparations.* There is, 1. *The Herb it felf ufed as a Pot Herb.* 2. *A Juice or Effence.* 3. *A Decoffion of Roots and Leaves in Ale.* 4. *A Decoffion of the Same w Water.* 5. *A Cataplafm of the Leaves.* 6. *A DiliilledWater.* 7. *An Acid Tinfure of Roots, Leaves, and Flowers.* 8. *A Saline Tinfure of the Roots.*

Virtues.

XV. *The Frefh Herb and Roots.* They are eomfr>rijly ufed as *Pot-Herbs*[^] with other Herbs, and if they are put in plentifully, they gently purge the Belly, and provoke to Stool* but the Roots more than the Leaves.

XVI. *The Juice or Effete of the Roots and Leaves.* They open Obftruaions of the Vifcera, and cleanfe: and being taken from 2 Spoonfuls to 4 or %, or more, they very pleafantly and eafily purge and cleanfe the Belly of thi«k, clammy and grots Humors. They are profitably given againft the Plague, and another malign, contagious, and peltential Diltempers. In Saxonie the Juice is ufed agninfth the Jaundice •, it is indeed profitable in that Cure, if fome *Antiriftional Emetick* be given once or twice[^] beforehand. *Lugdunenfis* in transferring the Name *Pigamum* to *Meadow Rue*, does therewith afcribe to ic a Virtue proper to *Rue*, as if it did belong to this, viz. that it Mfes or reftores him but of his Fit, that is troubled with the *Epilepftic* or Falling Sicknefs, if fome of the Juice of it be *flut up into his Noitrils, and kept there a while/

XVII. *The decoffion of the Roots or Leaves in Ale.* Being drank pretty largely, it provokes to Stool and gently purges: but the *Decoffion of the Rotts*'s more powerhil than that of the Leaves • and carries off much of the Morbifick Matter of the jaundice and *Epilepfie*.

XVIII. *The Decollion of the Roots or Leaves in Water.* Being waflied upon the places troubled with Vermine or Lice, whileft it is very warm, it is faid perfectly to deftroy them: belides it drys up old Sores, and moift running Scabs, the places effected being bathed therewith very hot, 2 or 3 times a Day or more, for near half an Hour at a time} it warms, comforts, loofens, and opens the Pores of the Scabs, Ulcers, and Flefh, as alfo the Skin adjacent thereto, and powerfully attracts and draws foith the Virulent and Mofbifick Matter.

XIX. *The Cataplafm of the Leaves.* It vi made by beating them in a Mortar frefli and green[^] and fo applied to old Sores it brings them to cicatrizing, and does perfe&ly cure old Ulcers, as *Diofcorides* fays} and *Galen* fays, it dryes without any heat of fharpnefs.

XX- *The Difiilled Watt or of the Roots, Leaves, and flowers.* It has the Virtues of the Juice, Effence, Decoffion, and Cataplafm-, but is not fo powerful in its effe&s: but if a little Nitre be diffolved in it, it becomes a good *CofmeticL*

XXI. *The Acid Tinfure of Roots, Leaves and Flowers.* It has all the Virtues of the Juice and Effence*, and a Specifick againft the Plague or Peltilence, and all forts of malign and peltential Diltempers. Dofe4o, 50, or 60Drops in all that the Patient drinks, as alfo in all his Brdth or Spoonmeat, except it is made of Milk.

XXII. *The Saline Tinfure of the fame.* It is very Abfterfive, and a great cleaner of the Flefli and Skin from Pimples, Pufhes, Tettars, Ring-worms, Scabs, Itch, running Sores, Scurff, Morphew, and other breakings out > and withall kills Lice, and other Vermine, to which the Patient is Subjeft, being ufed very hot 2 or 3 times a Day, and for fome confiderable time, as nearly half an Hour, every time it is ufed.; it opens the Pores of the Flefh and Skin, and draws forth powerfully the Purulent and Morbifick Particles of the fame.

C H A P . DCVI.

Of R U E -- G O A T S .

I. *Its Names.* The Greeks knew nothing hereof: the Latines call it *Galega, Rut a Capraria*, alfo *Herb a Gallica*, as *Fracastorius*^{oe}§: in *Engliſh* it is called *Goats-Rue*.

II. *The Kinds.* Thofe which Authors have chiefly taken notice are thefe two, 1. *Galega vel Rut a Capraria Vulgaris*, Our common Goats-Rue, 2. *Galega Mdtana Lugdunenfis*[^] Mountain Goats-Rue.

The DecriptionM,

III. As to the *JOefcnptions* oi thefe Plants their *Places of Growth*, and *Times of Flowering and Seeding*, as, alfo their *Qualities, Specifications, Preparations, and Virtues*, we (hall fey nQthing to in this

Rubus

The first part of the medicinal Rubus is the root, which is found in the mountains of the Alps, and is used in the preparation of a decoction, and also in the form of a powder, and is used in the treatment of the same.

The second part of the medicinal Rubus is the leaves, which are used in the preparation of a decoction, and also in the form of a powder, and is used in the treatment of the same.

For Fever

The Rubus is a medicinal plant, and is used in the treatment of the same. It is found in the mountains of the Alps, and is used in the preparation of a decoction, and also in the form of a powder, and is used in the treatment of the same.

The Rubus is a medicinal plant, and is used in the treatment of the same. It is found in the mountains of the Alps, and is used in the preparation of a decoction, and also in the form of a powder, and is used in the treatment of the same.

XVII. The Great Purple Cinnamon. The
 smallest kind of Cinnamon is the most
 of the best, which is the most common and
 best of all the Cinnamon. It is a tree
 about the height of a man, and the
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XVIII. The Great Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XIX. The Great Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XX. The Great Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XXI. The Great Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

II. Small Purple Cinnamon

XXII. The Small Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XXIII. The Small Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XXIV. The Small Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XXV. The Small Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XXVI. The Small Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

XXVII. The Small Purple Cinnamon. The
 bark is of a reddish brown color, and
 is of a strong odor. The leaves are
 of a greenish yellow color, and are
 of a soft and tender texture. The
 fruit is a small round berry, and is
 of a reddish brown color.

CHAP. CXXVI.
OF THE
MARRUBIUM.

THE MARRUBIUM is a plant which grows in the mountains of the Alps, and is called by the Latins Marrubium, and by the Greeks Marrubium. It is a perennial herb, and grows to the height of two or three feet. The leaves are opposite, and are of a dark green colour. The flowers are small, and are of a white colour. The fruit is a small, round, black berry. The root is a thick, woody, and is of a brown colour. The plant is used in medicine for the cure of the cough, and for the cure of the asthma. It is also used for the cure of the dropsy, and for the cure of the jaundice.

The root of the Marrubium is used in medicine for the cure of the cough, and for the cure of the asthma. It is also used for the cure of the dropsy, and for the cure of the jaundice. The leaves are used for the cure of the scurvy, and for the cure of the scorbutic taint. The fruit is used for the cure of the dysentery, and for the cure of the diarrhoea. The plant is also used for the cure of the rheumatism, and for the cure of the gout. It is a very useful plant, and is much valued by the physicians of the East.

The Description.

The root of the Marrubium is used in medicine for the cure of the cough, and for the cure of the asthma. It is also used for the cure of the dropsy, and for the cure of the jaundice. The leaves are used for the cure of the scurvy, and for the cure of the scorbutic taint. The fruit is used for the cure of the dysentery, and for the cure of the diarrhoea. The plant is also used for the cure of the rheumatism, and for the cure of the gout. It is a very useful plant, and is much valued by the physicians of the East.

Scirpus Riv. Curvatus

This is a very common plant, and is found in the lowlands of the East. It is a perennial herb, and grows to the height of two or three feet. The leaves are narrow, and are of a dark green colour. The flowers are small, and are of a white colour. The fruit is a small, round, black berry. The root is a thick, woody, and is of a brown colour. The plant is used in medicine for the cure of the cough, and for the cure of the asthma. It is also used for the cure of the dropsy, and for the cure of the jaundice.

Scirpus Maritimus

This is a very common plant, and is found in the lowlands of the East. It is a perennial herb, and grows to the height of two or three feet. The leaves are narrow, and are of a dark green colour. The flowers are small, and are of a white colour. The fruit is a small, round, black berry. The root is a thick, woody, and is of a brown colour. The plant is used in medicine for the cure of the cough, and for the cure of the asthma. It is also used for the cure of the dropsy, and for the cure of the jaundice.

Scorpius is a plant which grows in the
 fields and meadows, and is
 called *Scorpius* because of the
 resemblance of its leaves to the
 tail of a scorpion. It is a
 very common plant, and is
 used in several parts of
 the world. The leaves are
 very tender, and are
 used in the preparation
 of several dishes. It is
 also used in the
 preparation of several
 medicinal preparations.

Scorpius

The *Scorpius* is a plant which
 grows in the fields and
 meadows, and is called
Scorpius because of the
 resemblance of its leaves to
 the tail of a scorpion. It is
 a very common plant, and
 is used in several parts of
 the world. The leaves are
 very tender, and are used
 in the preparation of
 several dishes. It is also
 used in the preparation
 of several medicinal
 preparations.

Scorpius Golden Flower

The *Scorpius Golden Flower* is a
 plant which grows in the
 fields and meadows, and
 is called *Scorpius Golden
 Flower* because of the
 resemblance of its flowers to
 the tail of a scorpion. It is
 a very common plant, and
 is used in several parts of
 the world. The flowers are
 very tender, and are used
 in the preparation of
 several dishes. It is also
 used in the preparation
 of several medicinal
 preparations.

CHAPTER DENNII

OF SAW-WORT.

... The ... with ...

... The ... with ...

The Description

... The ... with ...

The plant is common in the woods of Great Britain, especially in the north. It is also found in the mountains of France and Germany. The leaves are smooth on the upper surface and hairy on the lower. The flowers are yellow, and the fruit is a globose capsule. The plant is highly poisonous, and its juice is used in medicine to treat various diseases, particularly those of the liver and spleen. It is also used as a vermifuge and as a diuretic.

CHAP. LXXVI.
DE SCABRO,
OR
THROWNE

THE NAME of this Plant is Scabro, or
Throwne, which is derived from
the Greek word *σκαβρον* (scabron) signifying
rough or scabby, because the leaves of this
Plant are very rough and scabby to the touch.
It is also called *Scabro* in Latin, and
Scabro in Italian. The Root of this
Plant is very small and is not worth
mentioning. The Leaves are very
rough and scabby to the touch, and
are of a dark green color. The
Flowers are very small and are
of a pale yellow color. This
Plant is very common in the
fields and is very useful for
many purposes. It is used in
the preparation of many
medicines, and is also used
as a dye for cloth. The
Leaves of this Plant are very
rough and scabby to the touch,
and are of a dark green color.
The Flowers are very small and
are of a pale yellow color.

CHAP. DCXXIX.

Of SELF-HEAL,

I. T^HE Tielnet. This Plant was generally un-J. known to the Ancient GreeH and Latite Authors-, but oui Modem writers call it Prnellj; (from the German Name Brune Ik, or Brunt!leu, becaufe it cures that Difeafe which they call die Bruen^ which is an InHarootion in the Mouth, Throat, and Tongue, with blacknefs therein, accompanied for the moit part ivith a Burning Fever, common to Soldiers in Camps and Gallons.) It is alfo called Confolida minor, and Silidago minor-, Confo-hdn minima Cmerar^A in Englifh Self-Heal,

II. The Kinds. There are feveral Species of ibis Plant, but thofe which are to be foum! with us are thefe three, vis. I. *Prunella Vulgaris* Trugi, hrunclla Brungfji, Dvdon*i., if lj>beHj., Our common Sdfical. 2. *Prunella Villgaris ffry albo*, fclffHeal with a White Flower. 3. *Prunella kciniaso folio BaubinL* Symphyium peirjsum Lbelif, Sdf-HeaJ with Jagged Leaves.

The Defcriptiojjs.

III. The firth or Our common S-If-Heal. Its Rzyt confifis of many Strings or bibres running downwards; and fpreading fideways under Ground, whereby it encreafei. The fmall Stalk, a>ith the :he Leaves creeping upon the Ground fhoet forth Ytbres, which take bold of the Earth, by which it is made a great Tuft in a little time, it it a fiBili l>9 ctQfpiti *:*" hiving many fmall ad foMeib'ng round yet pointed Leaves, fomc- whit like the leaves of Wild Mint., of a dark reen color, without any Deft on the Edges at •II, or very feldom.- from among vibich rif's u* ivers ffiare hairy Stalks, fcarcely a foot high tepid

Self "Heal, or Prunella.

Shepherds Needle er Venus Comb>

CHAP. DCXXX.

Of SHEPHERDS NEEDLE.

OR,

VENUS COMB.

I. *r^HF*, *Naves*. It is called in Greek *s&ntfS*
 X in Latine, *Scaidix*, also *and AcutYentris*.
4tus Pafieris, *EtSta Vexerit*, *A&tfojUiA Samaria*
 and in English, *Skcpberdt Needle* and *Venus Comb*
 II. *The Kinds*. There are several sorts of
 this Plant, viz, 1. *Scaidix Vulgaris*, *fatte*
Vencris, *Scenario*, Our Common Shepherds Nt
 cle. 2. *Sttodix Minor*, *Azthrifcm Pl'mj*, *Ani-*
*fomarathum Colum**, *Scandix Crctica Minor*.
 Small Shepherds Needle. \therefore *Scandix Major*,
Scandix Crctica major. The Greater Shepherd:
 Needle, A. *Scandix altera Ctpite Glomerate*
 round headed Shepherds Needle.

the Description.

H, The first, Or our Common Shepherds Nee
 pt Root is very small and fibrous or bready
 it rises up with several bag, hard, large^ greet
 •Moth of Leaves, much divided, and into mor
 , and of a ruder brown green < o!or, rha*
 rvi/, having no fmeti. The Stalks grow a fie
 \ bearing small Tufts of white flowers^ an
 r them five or six more or less, of long Seed*
 hing round, and pointed at the ends > a lit
 rough as if they were dented, and all of them
 m, from one head, or Umbel, tvitba Jew/ma."
 *^<wj under them.

IV. Gerard says, its Root is white and of
 fingers length., that it does not much differ I
 y>e Quantity of the Stalks, Leaves and P'hen
 Jom Chervil, but has no /tcb ple/ant /mtll A

that has; the Leaves are lesser, more fine ear,
 and of a brown green color. The Flowers grow
 at the tops of the Stalks in small white Tufts-
 after which come up long Seeds very like unto
 Pack-Needles, and orderly fit one by another like
 the great Teeth of a Comb, from whence come
 the Name *Pecten Veneris*, *Venus Comb* or *Venus*
Ktedle.

V. The second, or fossil Shepherds Needle.
 Its Root is small long and white, it has several
 Stalks i>J very fine cut k-mes, not bushing thick
 like the former, but more /parfed and thin, com-
 ing fometh/ig near to *Camomil*, but finer, and J
 little hairy, of a ple/ant /melt and taste; from
 among which rise up slender Jlwrt SiMs, /ome-
 v:hat hairy <;r hoary, icith but fii> Joints or
 Leaves on went, at the tops of which stand
 five or six small white flowers flo/e Jet toge-
 ther confijlwg Of five Leaves *BPite*. ;,,
 middle whewj is a dark purplijh flile or leaf
 longer than the rest Spreading firth like a
 blaming fan; after uhtchfilloK long Seeds like the
 former, but smaller, bigger below. *mi /, &,,?* a-
 bove in *WifmaU* points, whyfe edges are %ore
 rough, and Jcem more dented, and are a little
 Purplijh, « the young ones arc, befirc they be
 ripe, wfoth are the Seeds than/elves. This hat
 been observed to Ifce a better /well growing in
 void, tntiild and gravelly Ground, than thfr
 which grows in the fields.

VI. Gerard, dejeribes a thus. From * /, ,,,
 /ender, and wbtfff, Root, it /ends »t> ~
 fm.lt Leaves like tho/e of the' former CZ
 a pleafing (mtll <md taste, fameihing like that of

Vrom nmongfi theft I

grow Up flender Stalky a little hairy, divided into (bert green aid flender Branches, earylnt i ips little Umbels ej

t<i of Jive, fa, /even, ar *'£ & f^m <itt flows, eempofed of five Leaves apiece, with a, dark purphfli Chive in the middle-, the Jlowrrs arc dei by, or rather grow tip, taith long /ender Cods, cf about <>n Inch long, re/embli ng tj the firji kind. Cluſius fay's% it flowers in June, and thjt he received it front Honorius Rdlus out of Candy, mho writes that there, in ſhe Spring time, it it much u/ed in SutUtt •, and this Plant be take; m be Anthrilcus Plimj, by whkk JYJWC Cluſius feti it for:

tails it jiniſomarahtAjm, hecau/e its fmcBu between that of Ani/e and Yennei.

VII. The third, or greater Shepherds Needle. Its Root is long, /malt and Vibraus. it Crtpd /mil Stalk a Cubit high, parted ſnta ttivtrs Branches, a fo> y feints, having ſi: loner leaves broad, and jo round, divided "> the leffer Burnet Saxifrage, one jet tffofthe Ho Handing uppn lung I together with the heaves are a little fair)-; but thqft tchich /land at the joints tre much more kneb cut in, and like unto the Leaves rf the firji de/cribed. The Umbels are <t little ſprcad, and /mall, vet greater tbn tbole of the fir\ atferibed are Succeeded by a greater Jiore if fong, rough, dented and punted Seed thdt the k\ de/tribed, bauſng each of them two /mall tricks at thend.

VIII. The fourth, or round headed Shepherds Needle, its Root „ like that of the Wild P*rf nep, white and of a bitter und fiarp tetti. It hai Stalks of larger Leaves than the Wild Carrot coming fmeibing near to tarfly, fsmooth, and of a Pale G •. Theft v&icb grew at the joints of the fidks, come forth out of a broad Film or Ski*, as it xccre, and as is /ecu n nuny feruleui and Umbtilifermt Plants, and earing at the Trf a round hejd, of manygreem/h

•hitc threads fet, chfe tip: iX. 77* met., The firft grow> almoit every where in Corn-fields among Wheat and Barly, throughout all England. Thi: other three grow wiU in Candy. Greece, Vrance^ lta/y, and Spain, but with us oniy in Gardens.

X. The Turn. They flower in May and June; and the Seed is ripe in J>y and Augvfl.

XI. The touBtia. Shepherds Needle is fiarp nd bitter, and faid to be hot and dry in the ginning of the third degree: Aperitive, Artralive, Diurctick, Hepatick, Stomaack, and Nebtirick. •

XII. The Spedfiatton. It jipens ohftnjaions -F the Stomach, Liver, Reins, and Womb, deanſing thoſt parts; and by its Atoaan rue, draws forth Thorns, t'ricks, Splinters, and other things flicking in the tWh.

XIII. The Preparations. You may make therefrom, I. A Liquid JIM ol tffence. z. A Decollton in Wine or W.aer. J. A Vouder of the Seed. 4. A Sj/let of the frond, kind. \$. A Capla/m of the Rwt.

The Virtues.

XIV. Tbc Liyuid Juke cr Effeace. Th good, for the Sromach, Liver, Spleen, Reins, Bladder, and Womb. They provoke u rine admirably, u sd and Luii. Jnd iff the Vifeera irom Obfruftions, beng prohuW* alia againit the Colick. Dofc 3 of 4 Sp^{00m} fuls in a Glais of Generoſſ Wine, or E ther Vch

Palms murr like image, another kind of which is small things like the other, faving that there is no division in the Leaves. V The third, is great Shepherds Purfe with undivided or whole Leaves. It has a juell that with fmall round is it like the first, from which usually rife up one juell with a long branched into two or three parts, which have Leaves are whole, without division, being the

ffaorfal/a to thm, and, tb>f« upon the At, encompass them at the bottoms-, the flowers are JU; and the Pads or Seed Veffets fi<it like to tlve Jirfi deferibed.

VI. The Maces. The firft and fecond forts are found frequently in a groat many pl.cts throughout the whole Kingdom -, tor the moft part near Common High-ways, in deleft and untiird places, and among Rubhifh. 3nd near Old Walls: The third grows not in England but only in Gardens.

M1. The Times. They Flourifli, Flower, and Seed all the bummer long j and tberimes they are fo early that they Flower and Seed twice in the lame Year.

VIII. The Qualities. Dodcnait, Meltbhtur, and Raettiut iisy, that Shepherds Purfe is cold and dry: But Lebel and Pciiti hold rhem to be hoi and city, judging lo from the talk of the it having a little hear upuii the tongue. Doubtlefs tho tie Seed may be hot and diy in die tirt degree; yet the Plant it fl-f is cemperate in ripeft to heat or cold, and dry in the fecond degree. It is Afringent, Incrijrating and Vulnerary.

IX. VK SpeeijcatioTi. It flops all fons ot bleeding whether inward, as Spitting, Vomiting, Piffing of Blood or Overflowing or the Locfies ot Comfes in Women; or outward, as that ot Wounds t and Cures all ibrts of fluxes of the Belly of what kind foem. It coals and represses InHamations and Antbsnitt Fire; cleanfes mattering or running Ears, and heals Green Wounds, conglutinating or doling their Lips ;

A* • Efii&t. 3. -A De- &t/e» or Oinmtnt.

the Virtus.

F^rs, it dries and heals them. Drink to j or 4. Spoonfuls morning and night, either alone, or in Tome Styptick Red Wine, it [tops ill torts of inward Bleeding, as by the Mouth, Nofe, Anns, Bladder and Womb, and: cures all forts of FLusesof the Belly, as Coeliaca, DLmlm, Dyrnteria and Lienteria, as alib the Ruxus. Hepaticus. Bached upon Antibomes tire, or other Inflammations, it cool= and reprefe them.

XII. The Etjence. Ic has all rhe former Virtues with advantage, and lingular for healing The Bloody Flux, and Conglutinaung die l.tps of Green Wounds. And being mixed wjtk a third P«t«f Juice of Phntanq vi powafiffly fupnteires, the overflowing or the Loches, as allo ot the Terms in Women. Dofe ? or 4 Spoonfblls motning and night in a Giasf of the Decottion made in Smihs forge Water.

XIII- The DecoBiat- It may be made in Sryptick Red Wine, or rather in Smiths Forge Water, adding after the Boiling a quaner part of the laid Scyptick Red Wke. It has all the Virtues or the Juice and EBence, being taken moTning and night, 6 or-8 Ounces at a time, either alone or freedmed wren the by tup thereof: It is good alfo to healinward Wonrids, and Kupures in Children,

XIV. *Tbt Syrup.* It has the VimifB of the Juice, klkr.ce and Decoction, but not fo powerful a? they ; and is fic to be given to Children in all tilLife cafes; as ullb to lweeren thole fevcul preparations, to make them mGre palatable, and ea fallowed. It is made ui the O-mtied Juice, whh its tqua! quantity of Clarified Honey or doubt ^tgar, if it be nor for long keeping; othervuife, it rt-quires i quantity, tSc.

XV. *The Butljm or Ointment.* They are Abfterfive, drying and healing; admirable ibr the Curing of liaiple Greu Wounds, and that up-on the fpot, in what part of the Boily foever: applyed alib to parts overlhaintd, or where is any wafnefi, it trengtheits them, and rdtiores them m their former firength.

XVI. *The Cataplasm.* Bdng laid upon *Anthemel* tire, or other Jnflamations, it tools, and repreffes them, very much rtfefling thi- parts: ylpplycJ (piecty hitd bound on) to th^ Wrirts, of the Feet, it is tiid to help the Yellow jaundice; but how true this bit is, I cjnnor td1, rw I never tryed it. It is made of the Green Herb cut, and beaten in a Mot car.

CHAP. DCXXXII.

Of SHEPHERDS ROD.

I. *T*HE Names. It has no known Greek Name -

X hut is called in Latine, *Virgij P. cvu.*-and in Englifh, *i-kephcrds Rod*, ot *Shepherds Staff*.

II *The Kinds.* Authors account it io be a ffacus *SyhHftris*, or *Wild Teafle*: *B.iukmu*; t ills the *Dtpjacus Syfvefiris*, or common *Wild Teafle*, *Virgo Vafioris Major*^ and this, *Our Shepherds Rod*, *'trgx fhfitrii minor*, which is thought to be thf G fVJW, *Lib. 27. Cap. 1 **. and the *D nut Camerarij*.

The Dejcriptions.

III. It has a Robt which is long, branched out, and furnithed vñih leveral Fibres or Strings. *Its Leavci are i<trge, dented about the fcJgrt, ^nd cf a fad green color -7 a little prickly on the back, but not Jo prickly us the Wild Teafle. The St.ii.ks grow higher but not tsith fua> Urge Prickles, and the Leaves are Jet by Couples at the Jm/tts, but not encympa!\$r)g the Stalk ji> as in hild tvater, as the Tedflc docs. Che Stj/A end Jeveral Branches r Fops, I mall heads, net much bigger Waltmtt, with fift Prickles thereon, and b/ñih cthred Viewers, mu-rh like to thofe of ihe Wild Tufle. The Stalk cleared from its Prickles, lit formerly made uje of la hold in their bands to guide their Sheep wtbaL whence carte the Name if Viiga Pafloris, ur Shepherds Rod, or Staff.*

IV. *In Genrd it is deferibed thus. It is a kind of Wild Tjffle, and jctmunted among the Thtflts, but growing higher than that, but much like ir, Ja-ti kjjubcd Leaves are no bigger than a A kimeg. Us lower Lejues are deeply cut in with me Gjhh, en each fide, at the bottom if the leaf, hehich make tfom to have (as U were,) little tars,*

 Stalks of this be /aid in the Ground, and covered
 with Earth or S^nios the former, they become white
 like them, and fo .ire more plea/ant to be eaten ram
 as a Sallet with Saff, Pinegar and Oil, and then it
 « called Sjllary as the former.

VI. *The Places.* The fitr grows in unoit and
 wet Grounds, and in Ditches and Dirch fides,
 which are uiways rilled with Water, but if Planted
 in Gardens will a Kb thrive and prosper well The
 fecond and third grow only in Gardens with, DSJ
 b^ing Nuift up as Sallet Herbs. They are faid to
 grow alfo familiarly in *Greea* and *Italy*, where
 both Herb and Root are eaten with great delight,
 as a Sallet, even as they are now eaten with us in
England, in which places they are Sown, and re-
 plamed again.

VII. *The Times.* They flourifh when the Gir-
 den Parjly does, and [heir Stalks come up, the
 next year after they are Sown, and then they bring
 iorth rlowers and Seed, which are ripe in *July* and
Auguft.

VIII. *The Qstalties.* Smallage is hot and dry
 in the beginning of the third degree : Apemive,
 AHterfive, Attractive, Carminative, Digdtive,
 Dilcuflive, Diuretick, Jncifive, Suppurative^ Neu-
 rorick, Stomatick, Fe&ora!, Nephritick, I-lytre-
 ttick, Emmenagogick, Alexipharmick, and Spr-
 matogenedek.

IX. *The Specification.* Smallage opens all Ob-
 ftuQions of the Vifcera, provokes Urine and the
 Terras, is good against Stone, Gravel and Strang-
 ury ^ it cleanies the Blood, anil prevails against
 the Yellow Jaundice, Tertian and Qjjar[an Agues,
 tleanfes and heals fordid Ulcers in the Mouth and
 Throat

X. *The Preparations.* You may make there-
 from. 1. A juice. 2. An Effence. 3. A Deco-
 Uion, 4. A Syrup, j. A Mundifieathe. 6. A
 Gargle or hetton. AH thefe of the whole F/«r,
 or of the Root, 7. A Pouder of the Seed. 8. A
 TinSure of the Seed. 9. A Sjkt 4 the Stalks and
 Roots, ie. A Cataplijf, 11, Vnguentum ex
 Apio.

the Virtues.

XI- TMf JTM£. Taken to 2, 3, or 4 Ounces,
 in a Glafs of White Wine, it opens all obtru-
 ftions of the Stomach, Lungs, Wcmb, Reins and
 other Vifcera^ is very effectual against the yellow
 Jaundice, Terrain and Quartan Agues, asalfbthe
 Strangury, Sand, Gravel, Stone, or Tararous Mu-
 cilage in ReinSj Ureters or Bladder. It diftblves
 congelations of the humors, and thick flegm, and
 powerfully provokes the Terms in Women, being
 i Morning and Night tor feveral days toge-
 ther.

XII. *The Effence of the wlof Plant.* Ic has all
 the lormer Venues, and more powerful to the In-
 tentions. It comforts and warms a Cold Stomach,
 expels Wind,gtveseafe in the Co!ic!, and Gripings
 of the Guts proceeding from Cold, as alfo from
 acrimonious and fktrp humors: niixt with Honey
 of Roles it cleanfes old Ulcers in the Mouth and
 Throat, or in what other part of the Body fever.
 Dofe 3, 4, or 5jSpooniuIs morning and nighr, in
 j Glafiof White wort or *Lisbon* Wine,

XIII *The becdlwn of the whole Plant in Wine
 or Water.* It has all the Virtues of Juice and Efience,
 liur much weaker, and there fore is to be given in a
 much larger Dole, as from 3 quarter of a Pint
 to liulF 2 Pint, rtiorm^ and evening,

XIV- Vxptap. It his ihe Virtues of the Jufce
 andEff«ce, belides which, it is an excellent Peftorif
 opening all okttuaiens of [he Lungs, and eafin&-
 Coughs, Colds, and pains in the Lungs and Sfi>
 mach] it caufes eafie expeftoration, and breath-

ing, takes away hoarfnefs and fiortnels of breath, is of the Urtnc. It ir is madrot the Juice with Hooy, it is admirable to d Ulcers, Cure the Jaundice, and Droply, by expelling the Water by Urine, and to provoke the Terms in Women. Dole 4 or 6 Spoonfuls morning and night in a GEafs of White Lisbon Wine, or in the Deception of the Herb and Roar in Wine.

XV. The Mundificat'rve. Take of the Juice 4 Ounces -. Honey, or Honey of S\$ct, 7 Ounces. Bean ftoer 1 Ounces, mix them. Or thus from Aqttapendens. Take Juice of Smallage 3 I Syrup of Rofet, er Mel Roforum an Ounce : Turfentine half ait O&nce: Meat or Ylmncr cr Bjr/y and Lupins, ana, a fufficient quantity, to bring ail to a confidence-, mix ibtm. Thefe are excellent Abfterfhes, and deanfe old, running, fetid, and fool or rotten Ulcers admirably, in what part of the Body icever. But if Bed Precipitate in (an eight part be added ro ir, it will be 10 much the more effeEtoal in fordid and putrid Ulcers

firfl of thefe applied, Hops the weeping of liute Nerves 01 Sinews, in Gmple Members which arc not tar. or very ftefhy, and brings the lame to perfeft digeftion.

XVI. The Gargle or Lotion- Take of the De-toUion eight Ounces : of the Juice 6 Ounces: Mel Roforum 4 Ounces -, mix them. It Cures malignant Ulcers of the Throaty TosGls, Mouth, and Gums, by gargling and waffing them therewith feveral times a day: It heals exulcetated (and removes their Purrraaion. If to the former Quantity 1 Ouncct of Spirit of Wine be added, it will be (b much the more potent and haling.

XVII. The Pettier of the Seed. It has all the Virtues of ?arfy-Sted but much mote potent in every refpect. Ic prevails sgainft the Colick, Wind, Strangurv, Sand, Gravel and Stone in Rdns and Bladder, obftrufions of the Lungs, Wheezing Hoarfnefs, Shortnefs of Breath, Stinking Breath, provokes Urine and the Courfes, and kills Worms in the Stomach and Belly. Date horn half a Dram to a Dram mint with Honey and Jb taken morning and night.

XVIII. I .isTnUure of the Seed. It basalt the forma Virtues, lut more Sramachicai, and may be taken fom 2 to 4 Dums, mixt with a Glals of the Dtoftion, dulcified with Syrup ot Smatlage.

XIX. Jlv Satla of the Whitei Siothan.! They are cut or llic^ and eaten with Sal Vingar and Oil, n w, they make a plcaQnt SaUet, art graterul to the Palate and Tafte, frerathen the Stomach, and caufe a good Appetite and Di-geftion.

XX. The Citapkm. It is made by boiling the Bruifed Leaves and Roots in Hogs-Lard. Applyed warm, it is ditcuffive, takes away the Pam cl Fellons and Whidoes in the Fingers, and Ripens and heals them.

XXI. Unguemuia ex Apia. Of Smallage. Take Juke of SmaUiigc a Pint: Honey 9 Ounces: Wheat Aic.:! of t'fodkr 3 Ounces- mix and make an Ointment by Beilwg 10 • nefs according to Ari.Xi is an admirable and gentle cleaner of Wounds and Ulceis : opens ohltrucli- .l Spleen, appjyed to the chondersi provokes Urine anointed on the Kegi- ODS of the Kidnies and Shire^ is good again!! ilio fotrck, anointed on the Billy •, and helps the Stuf- fing of the Lungs applied to the Brs.it.

fm. i/ jingle flowers, like tbase oJibeWildIXulv. i he abate Plant is fbarp, biting the Tongue and Mouth. An. l the fmell thereof provokes Sneefng[^] from v&tice it sot-k its •<.:?/r Siernutamentoria, «r Snees-wort.

IV. The fecond, or Snees-wort with double flowers. Its Re N [•] lorn firings, running here and there m th [•] I' has jlrtaght and (lender Sulks, heft with long and rurotn leaves, fnipt round ab [•] fe« m *?(rffprfls like to the former fingle Wild Kind, abieb grows common with us almojt every reberei en the Tops of the Stalfo [•] ^{or} ^{more} white JIOKCTS, one above another, tuith a green leaf at the Bottom of the fertfialk 4 every one of them ; being Jmrjk tbiel, ^{am}K ^{ver}y ^{lln}nb^{le} [>] wlt>I' n l'vle ye&mjhjtfs in the middle of > [•] > \ ' > ke both [•] and color to ibi flower of the Double Fetberfea, but fmaller. This Slant ha* no fmell at ail, *** is delightful etffy for the double white [•] fioters.

V. The third, or Snees-wort of Aulbia. Its foot is hard and black, with feme fibres adjoining to it, periling every year. It fends forth many Leaves, lying upon the Ground, being jift and fmooth, fomewhat hug and narrow, green on the upper fide, and hoary underneath[^] of a little fowc relih or Tajie. from among which rifes up an hsary Stalk, about two feet high or better, having divers fxcb like Leaves thereon, but Jeffer, fpreading out into fome few fiender Branchet, with every one for the mop part, a fmalljcaly mitt Silver bead on them-, from whence fpring forth about twelve or fourteen hard[^] and fmall long pointed leaves, as a border or Pale, About a number of fmall fliort Thrums in the Middle, almoft like, or as if they were made of Parchment^h, whitifh at the firft appearing [^] but afterwards being come to their maturity[^] of a woft fair bleak blewifi purple color, without any fmell la commend it \pkajant only by the Pro/pet? of its firm and color, and by its Curability j for beuo; pothered in its pirfeHion, it withers not, or hojes its eoler in a long time-, but keeps the fame hue and affieti without changing, for many yejrs together', being put into a Paper Book: cibcrwife being let stand upon the Stalks, they became Jomething brotenifl) , having many (matt blackifh long Seeds, lying among a great deal [•] !'own.

VI. The fourth, or ftrall Spanth or Naples Snets-wort. hi Root is Ufa the farmer, but Smaller, and pcrifbes in the fd>:e manner every year. It has fuch like long and narrow foft hoary Leaver,, but not full tot fo large us the former : the Stalk rifes not fa high, but is divided into more, and more flender hard branches; at the Tops wfcreof jland fuch like Scaly heads, but not fo white •<* Silver hke < from whence fboot forth fuch 'like fliff -ho-d} Leaves, as the Border or Pate\bm -neither fe large nor fo many, being Jsdote above \$ or to: neither art they of Ji'fmr !• blewifi purple color, but of a more pale tiiluted color, having mjny Thrums in the Miid%, the Seejt.wbick follows is- Me the la If aforegoing, but fmoBcr. This Plant being a little handled or rubbed between ones fingers, gives forth ti pretty fweel fmell, or what is not apkafant.

VII. This !<\$ in Gerard, h thus defcrtbed. The Root is fmall, whitifo, hard and thready, perijbng when the Seed is ripe; foon fpnnging [•] again by the fall of the Seed. It rifes up [•] b a finally bard, tough, corncr'd, [•] bi

woolly Stalk , divided into many Brm-cWs, and tha/e again divided into ether branches like thofe of Cyanus, or Blew bottle, about two feet high, on which grow long, narrow, . tvbitijh Cotony leaves, without order, and of a bitter Tafle ; wiiter /flow than above, of the color of Worm-wood leaves, having but one Rib or Sinew, and that in the middle of the leaf, and comlonly turn downwards: on the Top of each /lender Branch, grows one fmall Scaley head or knob, like thai of Cyanus, mbich brings forth a pale Purple flower, without fmell, containing fix, firvea, eight, or more, fmall, faird, dry, fbarp pointed leaves - in the middle of which grows many Stiff Chives, their Tops being of the Color of the flowers, which Jiowers fall not away, till the whole Herb penfiies, but change into a Rttify color. Among tbase Chivrs gram long, fiat, blaekifi Seed, with a little beard at the Tup. It remains green all the Winter, and the next fp'ing /emir forth a St.-ilk as afore/aid. The Herb being touched or rubbed, fends forth a pkafant Aroimtlick fmell.

VIIj. The Placet. The firft grows Wild in dry and txnren failures and oilier places.¹ and lus k'en found in the three great Fields next adjoining ro Kentifh-Totun near London -. and in ieveral fields in Kent about South.fieet. It is alfo brought into Gardens in many phces. The fecond grows here in Gardeni The third grows, as Alittibie/ai iiiys, in Italy; Clufius found ir in Auftria[^] it has been found growing alfo in Hungary, and as Lobel lays in Iranee. The fourth grows in Spain and Naples, from whence the beed has been brought to us, thefe two bft grow with us only in Gardens.

IX. The Times. They flower in the end of June, and in July and Auguft, and die Seed is ripe in fome little rime after, as in Auguft or September.

X. The Qualities, Specification, Preparations, Virtues and Ufes of the firft aiid fecontl Species we have declared at large in Chop. jj?. . aforegoing, under the Title of Pellitory of Spain. Wild: fo that we fhall % nothing more of them in this place.

XI. The two htter, farkinjon lays have not ken much ufed in Phyfick, but Clufius fays, that about Vienna in Aujlria, the People fell it to the Apothecaries tor Scabious-, and that the DecoSion of them, given to Children, is very good to eafe them of pains and Tonntws in the Stomach and Bowels.- and fome Authors think, that it may have fomt; of the Properties of Scabious, or of Jacea at leatr, becaufe it fo near approaches to them both in its form and Temperature.

CHAP DCXXXVII.

Of SOLOMONS -SEAL.

I. r[^]HENomes. It is called in Greek, [•] ymxnv.

J_ in La tine, Polygonatma (iRadiciis geniculorum frequatitius noitis, from the m'my Nodes or Knots in the Hoots₅) of fome Scalu Ctrli Heavens Ladder, from the form of the Stalks of Leaves, being fet one above another • alfc Sigillum Solomoah; in Engliſh, Solomons Seal

from the White Knobs in some phew of the Root, with a flat round Circle, representing a Seal, whence came this Name.

1). *The Kindt*, Authors have made a dozen fiveral forts or more, but we shall content our selves, with wfcit grows in Our Own Nation, or in *Our West-Ind'ia Plantations in America*, viz. i. *Ptifigvajrum fuigarc*, by (a roe *Yolygonaium fatifolium*, by others *nujus*; and fcy many *Sigil-um Solomons*, Our Common Solomon **Scall** 2. *Polygonal urn Majut flare majore* Mygorsttum ht'ifolium fecundum Clufij, The Greata Horn; 3. *Pdlyganatum, Virgm'tanum*, Solomons Seal of Virginia. 4. *net tea raceme/urn Amirieanum, Clufitr* like Solomons Seal. 5. *Yalsgonjtutn Raceme/urn perfeint um Americimum majus t' minus*. VUI. The BUeit. The 6rft grows Wild frequently in mam places oi England, as on the North iide of foendip in die P<uill) of Shepten-

I in SomerfetJbiris " P^M a ^ o w H¹¹ J, y CrarfarA in Kent, in Od'um Xark in iUmpfhtre,

la Bradford* Wood i.ur 3 Town four MtkS Bath, in Wiltfhire;'m a Village near Horfley, five Miles from Gtttilford ht S.wly - in a by h'/hpfrl'hill, two Miles from Canterbury: in a Bujby cloft belonging to the Pjrlonage of Alderbitry nt;jr Clarindon, rwo Miles from Salis-bury -, ;md in Cbeffex-Wood on Chejibn-Jlill, be-tween a unil Sfrtingbum in Kent, j* alfo in (eveial other phecS. The fecond grows Wild inO/r Gardens -, and I found it alib growing i; Cirul;n,i. The oilier rhree, grow in I places in America, but with us only in Gar-dens.

]C Tl'e Times. They all Tpring up in fihreh, and the lift flowers in May: the orhet Ameri-can kiids in June and July, thi Ecrn.

r«« in September, and continue on the E till trie Frofis come, add then they fall wiili die Stalks, which rot and prtlii with all above Ground; the Root abiding ail Winter, and (hooting forth a HEW every year.

X. The Qualities. Solomons Sail is temjctjri; in refpea to hear or cold, but djy in the ie-cond degree. It is Attringenr, and as Galen lays, of a mixt property, beirg pardy binding and partly of a (harp and biting quality, with a little bitttrners, which properties we perceive not in thofe which grow in Out Countries.

XI. The Specification. The Root is chiefly id and that principally, of the rltft kind, Ic IIL.IIS Ruptures and broken Bones, Hops tluxcs of the Belly, the Reds and Whites in Women, and running of the Reins in Men: as alfo \o-mirings, Bleedings, and defluxions of humors upon any part, and is very available ro heal fimple Green Wounds, running Sores, and other like Hurts whether outward or inward.

XII. T7w Preparations. You may have therefrom. !• A Juice or Effenee of the Hoot and Herb. •• -i Decoflton of the Knot in If Water. J. An hijxfion of the Root in Wine.

4. A Pouder of the Root, j. An Ointment or &i;jl:m of the Root, 6. A Cntaphm of the Rult. 7. An Apophltgmaticfm of the Root. 8. A Dtfllil-led Water, 9. A Spirituous Tintiuere.

the Virtues.

XIII. The Juice or Effenee. A Spoonful of either of them, or lomething more, talwn at a time morning and evening in a Glafs of Sryp-tick Red WitiL-. or in Smiths Forge Water ^ is (aid to Cure Ruptures when the Guts fall into the Cods, a Cataplafil of the Root being applied outwardly 10 the iame. They are alfi available, to cure the over-flowing of the Terms and Whites in Women, and a Gqrt&trbcM in Men, and incomparably good to knit and conglu-tinate broken bones inwardly taken.¹ outwardly applied being made into a CatapLafm wiri Rye or Wheat Meal, They dry up and corjglutinare the lips of Green Wounds, and Itap the flux or humors upon Ulcers, they being wafhed and ckanfed thetewiEii. Snufft up the Noflrils, they aie Bid to draw flegm out of the head, and to eafe the pain thereof

XIV. The DecoSien hi Wine or Water. Ic has all the former Virtues j Is available for out-ward and inwrad Bruifes, Fulls or Blows, eafe pains, difflbve congealed' blood, and take away the black and blew marks made by ContuGons or other huris. Dofe half a Pint.

XV. *The Infufion in Wine.* It is made of the Root being Bruised, and steened all Night in the Wine. It has all the Virtues of the Juice, Effence, and Deception: taken to a quarter of a Pint or more; morning and night, it **fodders** and glews **together** broken Hones very speedily and strongly, tho' the Hones be but slightly and unskillfully placed, a **Cataplasm** of the Juice, or Hoot, being applied alto to the fame.

XVI. *The Fonder of the Root.* It is given to a Dram or more, morning and evening, in Drink or Broth, against Ruptures, broken **Bodies, Wounds** and **Inward Bruises**, and being a lib made into a Cataplasm with the Juice, and outwardly applied to the parts affected.

XVII. *The Ointment or Balsim.* They wonderfully dry, heal and conglutinate simple green Wounds, and Knit, and join together simple fractures of bones, ease pains, and strengthen a weak Back whether in Men or Women.

XVIII. *The Cataplasm of the Hoot.* It is applied outwardly in simple Comotions or Bruises, tails, Bleivis, Ruptures of the Peritonaeum, Fractures of the Bones, Dislocations, Defluxions of Humors, and weakness in any part. It has been found by late Experience, to be incomparably good to knit and join broken Bones by part of the Body, and is profitable for those which by long sickness, have their Bones softened out of joint, or will not long in when they are set being applied for some considerable time.

XIX. *The Apophlegmafin of the User.* The simple raw Root being chewed in the Mouth, draws away much Flegm and **Viscous** Humors from the parts adjacent, and gives ease in the Tooth-ach.

XX. *The Kiflikd Water of the usale Herb end Rtm.* It is used to cleanse the Skin from Scurf, Morpew, Tanning, Sunburning, Spots, Freckles, and other Marks and Deficiencies, leaving the places soft, fresh, and fair, as it has been for some time used; and is used also as a Vehicle to take the other preparations in.

XXI. *The Spirituous Tincture.* It has all the Virtues of the Juice, Effence, Deception and Intubon, being inwardly taken to a Spoonful at a time in any proper Vehicle, and outwardly applied to the parts affected. It allays the Fluxes or the Bowels after an admirable manner, chiefly the Bloody flux.

CHAP. DCXXXVIII.

Of SOLDIER-WATER.

I. *The Kamcs.* It is called in Greek Σάκκος, X & s^n^, sijnlp- vel &u/f@-: ID Latine, by AlditbhJus, *Stratifies aq&iticur*, and is alib by *Lugdun&nits* it is the *Strut iota five Mi/itrit Aizoides Lobe/ij; Sjrat'wtes fotamos & Sedim mmtie DoJoft^j*: in English *Wafer-Soldier^ Xrejb Water Svldic*, and *Water Houfleck*.

11. *The Kinds.* It is a singular Plant of the Ion-, but *Baobinut* accounts it among the forts of *Abet*, and calls it, *Abet paMr'u*, Water or

'the Deftriptions.

III. *At the bottoms of the Leaves there it is found a small bead, broadest next unto the Trunk and finest at the ends, from whence proceed long Strips like to the Worms (as Dodonarus says, some Crafty Spiders, putting them into Guffet, afterwards, to make them become greater, make others in such a manner that they are Worms which came out of dies of their Ventrals) through Stringed several Hires at their Ends, take them*

Water Soldier.

Mad under the Water. From the foresaid bed upriseth, Spring forth many long narrow Leaves pointed, and set together, semibible like to the Lurjes of Aloet, for the form: but the Hubs /efs^ and sharply toothed about the Edges like it is. From among these Leaves rise forth Stalks, not much higher than the Leaves and Sometimes not so high, bearing one green threeforked head only at the top, much like: * Ubjhrs Ctaw, which is the husk; out of this comes a white juicer consisting of three Leaves with Kith Sacral yellowish hairy Bread in the middle.

IV. Gerard describes it thus. *Thpei* there are long Strings round and white, like to great Harpstrings, or fat Worms, falling down from a short head, (which is the Lewes) go to the bottom of the leaf, even to the Auj, and yet are felt there, from *nbnee* come forth al-ether Strings or threads of the matter, by which the Multiflyed, after the manner of the Leaves are like the theft of the Herb Aloes, or JV*, pervittm, but farther and icjjer, set r^fa <ij

the edges with certain fiuff and jhort Brickies • among which come forth divers Stalks with cafes or husk very like to Crabs Claws; out of which when they open grew white flowers, conjiling 'f three Leavts, altogether like thofe of Yrog-bit, having little ydhwifo Threit in the Middle: T] > e Lemcs and bhaert grow upon the Top "f the Witter.

V. *The Places.* It Grows in Italy, Germany, flanders, Holland and other Countries plentifully; and in ^fifr;rti ic is faid to be found growing plentifully in the Ditches about Rotfey, a fmall Village in Hotkrneft in tt/r^fbirc; and one Mr. William Brcui found it in the Yenr. sin Lincoln/hire.

VI. *The Times,* k Flowers in June and July-, and foriL-tmes in Augufl, the Seed ripening 10 the mean feafbn or no: long after.

VII. *The Qualities.* Ir is cold in the lecond degree, and Jrv in the lirtu hut Galen fays, it Is moilt. IE is Altringent, ObtruEtive, Reper-culfive, and Vulnerary.

VIII. *The Specification.* Ir flops Fluxes of Blood from the Reins and Womb, abates Intiamarions, prevails again ft Amhonies Fire, and cures Wounds, Ulcers, and Fiftula's.

IX. *The ?rrp;:rj:ions.* You may make therefrom, 1- A Juke or Ejjexce from the Leaves. 2. A DecolHsn of the fame. 3. A Fonder of the Leaves. 4. A Gtt dphfm of the Leaves. y. An Ointment or Baljam. 6. A Difilled Water.

tbv Virtues.

, XX. *The Juice or Effenze.* Taken to One or Two Spoonfuls or more at a time, in any proper Lique^ as fume Styptick "Red Wine, or in Smiths Forgg Water, or in its own Djfilled Water, it cures Piffing of Blood, as allb the Bloody Hux, and the overflowing of the Tetrs in Women; but I'hny adds, *Olibanum in Powder* thereto. Bathed upon *Anthonies* Fire, and Infiazirions, itcools them, and ealis the Paini and is good to heal fimple Wounds, foul running Sores, Ulcers, and Fiftula's.

Xi- *i'hc Decotfiofi in Wine or Water.* It has all I he former Virtues, bur may be given in a much larger Dole, as from a quarter of 3 Pine to halt a Pint: If Honey is dtflblved in it, it makes 2 good Gargarifm for a Sore Mouth and Throat; and being Bathed very hot upon aiy infUmation or painful Tumor, it abates it and giw e-jle in the Pain.

XII. *The Pcukr.* It has the Virtues of the Juice and Decotioin; and may be given a dram ^{at} a time, morning and evening, for all the PUrpofts aforefaid, in any proper Vehicle, (trowd ^{ick} upon any foul running Soreor Uteer, it clean-«s, drys up the humors, and induces the healing. *Apinus* lays, it is given every morning fattng, ¹⁰ wop the overflowing of" the Courfes in Wo-^{me}n as alfo other Fluxes of Blood, in any of the Body.

Hi, *ii, Carap/afitt.* It is made of die Bruii- t £? ^{cs} am. * as ^{PP}y^e^ ty Country people, firi ^mY ^mP^e BPTM Wound, which it is ^{ti} to do, to admirifioa Applied in the Exrre- /V <X the Gout, ir is a fingular thing to eale the

J j . *The Ointment or Bulfam.* They are good Vu]l),rarit's, reprefs the flux of humors to or r??^{er} aN? ^{ain} in a ^Vound, running Sore Uker, cleanL, drys, and lieil the diffecied

parr, biing alfo walhtd with ihe Juice or De-cofrion.

XV. *The Difilled Water:* It is ufed as a Vehicle, to take the Juice or Effenze in^ and mixed wirth Honey makes a Gargarifm for a Sore Mouth and Throat: a lirtle Camphir dii- flblved jnd miL*d with it, makes a good Oph- thilmick, for Sore, Rheumy, and Watering Eyes^ and fo^ alfo it is a very good thing co clear the Skin from any kind of Deformity.

CHAP. DCXXXIX.

O / S O P E - W O R T ,

OR,

B R U I S E - W O R T .

I- *Tp//E Names. It is called by fome in Greek

J. STSSws *Struthium* (from its fcouring and deafning quality, bur it is not the *Struthium* of *Bwfcondcs*, *Galen*, *Pliny*, or *Theopbrnfiui*) in J-attne, *Saponaria* (from its great fcouring fa- culty) *Viola agrejlh Tragi*; *Struthium Ftt/cbij*: and in Engli/h, *Sopr-non* or *Bruife-wort*.

II. *The Kinds.* We have but three forts of it growing with us in *Enshnd*. viz. 1. *Srit- thum Vu/gare*, *Saponaria ^ulgurhx* Our Com- mon Sopeworr. 2. *Stpnuria jiore dnplici*, *Sope- wort Double Flowered*. 3. *Saponaria Anglica folio convotm*, which *Gerard* calls *Gentian* Qoniavs* Hollow Leav'd Sopeworr. He placed it next to the *Gentians*^ thinking it 3 Species of them- but it is plainly manifelt to agree in its form with *Sappnarh*, as in its Roots Leaves and Flowers, and not at all with *Gentian* but on- ly in its bitternefs, which is no diftinguifhing

the Defections.

III. The firft, or Our Common Sopeworr. *ht Root creeps under ground far and near, with many Joints, of a brown color on the outside and yellowifb tohbin, fbcoting forth i, dmerl places many weak round Stalks, full efojms jet with two Leaves apiece at every one of them en the contrary fide, which are Ribbed fometbiul like unto tlantane, and faflAoned like the Com- mon field while Campicn Leaves, fddom having any Branches front the fides of the Stalks b'tt fet with divers flowers at the Top, llandir.? in long hush like the Wild &mpion%ed? of Z Leaves apiece, round at their ends, and a little dented «.» £ mddlet, of a paU Rofefrokr almoft White^femetines pater, and feme times of a deeper color, having a reafonnbk good fmell*

IV. Gerard describes it thus. *Its Reels are thick, long, creeping aflope, having certain fr^{rmi} hanging <it them, hke the Roots »f black• Hell** bor, which if they have once taken good and fare footing in any ground, it it almoft impo(jibU „, dejtroy the i'fant Tfe Stalks are flJpZ'n'* der, round, wnted, and a fat and ahal'hiX or higher: the heaves are broody ftt mhhv*M very^hkc broad Leav'd Pla^Je, {*QJ*

f heaves, after which come fit tie round knaps of ytlewifh Seed. The whale Herb V like Sorrel, but much fierper r, and makes better Green Sticee wen any of the former Sorrels. JohnCon in Gerard that he bad fi'me of theje Plants fern Star. With very -fair red jlovacrs^ twhielp were gathered in a Wood of Sir Thomas Wai (ing ham's, called Stotksxl! Wood, at ChiHel-hwfi in Kent, and hi a little rouk hereto adjenti/tg.

The ibcond, 01 Yellow Ftowerd Wood Scq-rel. Us Root it a bujb of fibres, end abides a!! Winter without perilbing, if it be not too Violent or CM, the bxiramty making them ret and perijh, fo that then the YUnt mud be raifed from Seed foton again. It Jhoois forth feverdt /tender, meak, reddijb Stalfo, trailing "pen the ...!, yet growing in a heap as it mere, the S/4Al lake Root at the Joints et they tie, ffreal into many Branches, whb many Leaves en them filing fingly one above another, and nude of three Leavet, tut in at the ends like

the jermcr, but ere touch fmaller, and Paler Grreif-CoiW: at tbt Joints with the I come forth three or jcur j'mall fi&wers tegetbt^ ;:t the end i-j a from the other, tonftfltr.g offm.il/and FeinteJ: like I he former, but tonliined in / fr, like Cods or Hems, yet ttet • but pointed fin; \akkly fail <mtj I when they are ripe, and fpring up <=*»''' itll about where it grew.

VI. The Places. The foil grows fully in many places in Erig/a/id, in Woods and by Wodd-fides, where it moift, and wed from the Sun, alfb' in 01 not too open to the Sun Re.ims, grows in Spain, Italy and Sicily \ but in • plenry in aimoir. all our v. of Maze, in South i adjacent there ;o, where I have gatliny times: there is fcarcely an] in greater plenty in t!x'<: Gouncrj this.

VII. The Times. The firft Rowers eaily » April and May-, the dth'j in June, - 'v' r^?j, and ib continues in Sower, li ;umn CJUI-S it to peridi, the Seed ripens ing in the nearj tinne.

VIII. The Qualities. Thele are of the Teitipemperature, and piopmies ol' Common Sri the former Chapter; h't more Potent thofe purpoles, and are ferial Ak or Acdoil le, and all i^rcS or" Peflilential, Malign, and Burning Fwers.

IX. The Wood Sortd rd>i^ Vomiting, ftiecgfbens the Stomacli, hind>. triiaaion tit the BlooJ,tjueuchMThiilt, provose Appe! is efl'eaul againft the Plagf* Spoitt ikntures, and other like Mal'S" difcafes.

X. rations. You may make theiefrom, 1. A Juke. 2. A Deeaftien or rather^ fujion. 3. A Syryp. 4. ^i Confarve. J-tap/lfm, 6. A BftMkd water.

The Virtues.

XI. The Juke. It has all the before Sp-fied Virtues, cools Infljmatons, takes aw preternatural heats, whether in the St: Bowels, or habit of the Body, rcfits pumiditj" and is moft fingulatly excellent agiinft Contagious (kkncis, or Pettilenti^l Fever. "*" with a fit quantity of double refined it makes moft incomparable Green Sawce.

XII. TV IkcoSian or Infufion. They the Virtues of the Juice, hut not fo c-ftef and may be given hair a Pint at a Time they are made in Wine (whether White or J' they will be fo much the more efitftua fome cafes, more dpeciaHy where no ie^ef prefent,

XIII. the Syryp. It is efeitnal in all ^f Cafes aroreraenrioned, does exceedingly W and abate the heat of Fevers^ and mixed <t^ the Juice, makes 3n excellent G;!gariim iw Sore Mouth and Throat, being Gargled therf with and lpit our, and then freth tsKen "ij wonderfully helps a (linking ioul Canker. < Ulcer in thofc parts; and is fingular gpod Wounds made by Cut or Puncture, i'f>PP^ their bleeding, and caufing than (peedily ^ 1 . XJV. ^

XIV. *The Gttferve.* It is Coidial, retreling in dot Fevers, Hops Vomiting, and firenghens a weak Stomach, and is profitable again It Ca-Unhs or I .ons of Rlwum upon the ich and Lung.s.

XV. *The Caijpkfm.* It is made either of the whole gteen herb bruiled: or m.ide of the H;rb, stewcd between two Pewter Ditties, and brought to a **Conffittence** with Crumbs of white Bread. It abates the heat of Intimations and other hot Tumors, cures iisnple Contuftons, being **prefently** applyed, *vis*, **whitt** thty are recent; applyed to ample green Wounds alb, it heals them in a lhorr time, by flopping the Hemorrhage *ju.i* **conglutinating** their Lips.

XVI. *The ... ter.* It has all the Virtues of tie **jtuce** nnd DecoQion or Infufion, but vjry mudi weaker: It quenches thirth, and ;nward heats of (tie Stomach, Lungs and ... n morning, noon, and night, rulra Pint at a time, fweetned with the Syrup aForenamedi *ami* fo mixed it makes a good ;lin *ioi* Sore and **Cankerous** Mouths and its.

Southernwood Common Mak.

CHAP. DCXLII.

Of SOUTHERNWOOD.

I, *The Names.* It is called inArabick, *Cathxum*, *Kefuvi*, or *Cajjum*: in Greek > in La tine *Abrotonum*, after the Greek, but more uially *Abrotonum* as the Shops call it : and in English, *Southernwood*.

II *The Kinds.* Authors have a great many Species of this Plant \$ we fhall only Treat of the lour following, as being more titu.tl with us. t. *Abrotonum mas*, *Abrotonum vulgare*, *Abrotonum nigrum* *Gtrdi*, Our Common Southernwood, i. *Abrotonum w.it Angustifolium* *Bauhini*; *Abrotonum Magnum* *Camphor at um qm-bufdem* *Incen/aria Camerarij*, Great Southernwood. ?• *Abrotonum V&mtna arbcrfifcens* *Jjodonfi*; *Abrotonum latifolium arborefcens* *Baxbmi*, *Abfinthium arborefcens* (*ierardi*, *Lobel'tj*, *Lugdicensfs*, *ar*,\ *Tabernamontani*. Tree Southernwood, or Female Southernwood; formerly, and by tome Authors *Lavender Hatten* was accouDted ro be the *Female Southernwood*, and called *Abrotonans fa-mint*, but that is error. 4. *Abrotr.mirr. odoratum humille*, *Abrotonum humile* C *denfe futicfum* *L.obgtq*; *Abrotonum Tert;um* *Tragi*; *Abrotonum m,ts anguiffifolium minus* 5 Small Iwvca Southernwood. I

The Descriptions.

III. The firtr, or Our Common Southernwood. *'s foot* *Erms* not very deep, but is **Woody** > several firings adjoining to it. It rifes up with *"any weak and Woody* Branches bending downwards, if they be not held up, especially while they are **fao&i** for the elder flems are more firong and great, rifting in time to be higher than *a* Man-, from which grow out many fmall and &W Branches, on which are Jet many fmall, fine *"d fhort fakveti* as fine as Fennel, but not fo

long, of a Grayifb or Rajfet green color, of aflrong pteaftint fmc/f, and (omemhat bit/cr taffe, Yrom the middle almoji to the Tops of the upper fprig; *gown* fmall roundy *yellow* Flowers, *hoo* fefe little **Buoons**, which never open much, but ptfi may, and after them come, the Seed, which is *fmalltr* than that O} Wormwood, The Stalks and Branches lofe all their Leaves every Ih-r and jibat forth afrejh in the Jpring. This U our Common Garden Southernwood; the others king not fo ujual^ and for the moj part called by other Names, fcarcely bang acknowledged to be any Species hereof.

IV. The fecotid, or **Greaf** Southernwood. The Root is like the jirjl which is woody, and runs under ground in the fame manner. *il;ii* greater **Had** is altogether like the former, growing as high, or rather higher, and with Leaves like thereunto, but fometch.it larger and greener, and of aflrong refwous fmall, not altogether fo pl^{ca}font as thaJ, but coming Jomtbng near to **Camfbr** or Yrankincnfe: The flotaers and Seed differ not from"the 'firfi common, but arc like to them in all refprtl.

V. The third, or Tree Sou them wood, or Female Southernwood. Its Rcot is tooody, Jpreading it felf out with many Strings and Fibres. U is a rare Plant, grows upright with ene ftem or ftalk, to a Mans height, if the **lower** fmall fprig! be cut off from it in the growing, and fhoon jorb many Branches on all fiji's, on tuhich grm many leaves, very much ait in and divided, but are nothing Jo fine and faj// as the former-, but yet a In tie quicker, and nearer rfetnbling Wormwood, as it does alfo ,» its tafte, and more Aromatkk than common Southernwood. The fioteers fland at the Tot>s f, fbc Branches, being more plentiful, and lar/cr

than

mitT; but yell-no like ibgt/, after came: the Seed. mevahal larger. This is more tender than the other, sad requires feme arc to ptfervc it in Winter, acre shtat thofe do.

VI. The fourth, or Small fweer. Southern-wood. It: RtW is WOODY, link firings, and fpreudd like thb others. It floott up U nmdy Branches, rifing, feldom absve half a yrd high, but very thkkh fpread- iig into "her fmalr fprigs, jet full of fmall Leaver, fomtnStia longer, greater, and greener tihut . The Tops of the Stalks are nabei with many fin bends, which fmall ycllom g>- vrt. The whole Pliixt, us well Le<x>t. and the give w very good and ptedfant fneiij, more than the i'thrtt di>, but a little inch/; IVarm-

The flowers are ſmall and us Pitrple, and aſwſed as the purple bwBread of the Spring, at S^ . VI. iſtfr*

APPENDIX.

there are ſome few other Species of this Plant, which though not common, yet becauſe they are to be found in the Gardens of ſome curious Floriſts, we Ibaſi adventure to add in this place.

X. *A ſeventh Species. Cyclamen vtrnum Creticum fore albo:* Candy Spring Sow-Bread white flower'd. This is almoſt in all things like to the former white flower'd Spring Sow-Bread at Se3. VII. aforegoing, ſaving that the Leaves grow much larger and longer, with more comets at the Edges, and more eminent ſpots on them. The flowers are white alſo but ſome-thing longer and larger, in which tilings conſiſt the chief differences,

XI. *An eighth Species. Cyclamen folio heder* outumnale flore albo:* Ivy Leaved Sow-Bread white flower'd. This has its Leaves rounder, and nor ſo much corner'd as the former Ivy Leav'd, at Sc3. V. aforegoing. It flowers in Autumn as that does, but its flow'rs are wholly White, and has no other notable difference.

XII. *A ninth Species. Cyclamen anguifoli- liuni Jbaumatu* Long leav'd Sow-Bread.* Its Root is Tuberosus and blackiſt; and by reaſon its Leaf is longer and narrower than others, it is eaſily to be diſtinguiſhed from all other kinds, it being fashioned at its bottom with Points, ſomehing like to Aron O1 Wake Robin Leaves. The flowers are like the other ſorts for form, but of a purple color. There is alſo another of this kind, in all things like this now deſcribed, ſaving that the flowers are white.

XIII. *A tenth Species. Cyclamen Am'icehe- num Autumntile fiore purpureo duplici:* Double flower'd Sow-Bread of Antioch. Its Leaves are round, like unto the Leaves of the former Sow-Bread at SeS. IX. aforegoing, but leſs notches or corners, and full of white ſpots upon them. It bears flowers on its Stalks like unto others, ſaving that they are double • and likewiſe ſome Sulks which have two or three of thoſe double flowers on them, which are very large, with ten or twelve Leaves apiece, juſt unto the flowers of the Spring Purple Sow-Bread, at Se8. VI. above, being of 3 fair Peach color, and deeper color'd at bottom.

XIV. *An eleventh Specks. Cyclamen Antiochc* **« Autumnalt (lore ſimphci:* Single flower'd Sow-Bread of Antioch. This Species is alſo like unto the laſt deſcribed in its Roots, Stalks, and Flowers, ſaving that the flowers of this are ſingle. There is alſo a Spring Sow-bread of this kind with ſingle flowers, exactly like the eleventh ſort, differing from it only in the ſeaſon or time of flowering.

XV. *A twelfth Species. Cyclamen Antiochenum*

Vernum flore albo duplici. White double flower'd Spring Sow-Bread of Antioch. This is exactly like the tenth Species at SeS. XIII. aforegoing, ſaving that this flowers in the Spring, which flowers are as large and as double as thoſe, and of a pure white color.

XVI. *The Places.* All or molt of theſe grow in foreign Countries as Syria, Candia^ Qretce% Ualy% France, and Germany; but with us they are generally ſown in Gardens. Gerard Tays, that he had heard it from Men of good Qedir that Sow-Bread (the firſt common kind) grows upon the Mountains of Wales-, on the Hills of Lmcolnſhir, and in Sommerſetſhir^ upon a Fox Burrough near to a Town called tiardngton.

XVII. *The Times.* The Spring kinds flower in March and April. The Summer kind in May June and July-, and the Autumn kinds in the latter part of July and through the whole Month of September, when the Plant is without Leaf, which does afterwards ſpring up, continually Green all the Winter, covering and keeping warm the Seed till Midſummer next, at which time it will be ripe.

XVIII. *Obſervnt.* 1. Of the Spring Cyclamen ſome have round Speckled Leaves Red flowers and ſmell Sweetly; others have long Leaves, and White Flowers; others Yellowiſh Flowers, and others, whoſe Leaves are like Violet Leaves, and their Flowers Pale.

XIX. *Obf. x* Of the Autumn Cyclamen's there are ſome whoſe Root is round and as broad as the Palm of Ones Hand, bearing a Red Flower with a ſweet Smell. There blows one in this Seaſon, called the OnjUmhople Cyclamen which the firſt year bears twenty flowers • the ſecond, fifty -, the third, two hundred: but they have no ſmell. Others of them bear White Flowers: Other Flowers of a Carnation color. The German Cyclamen has a very great Root and red flower, but without any ſmell. *

XX. *Obf. j.* They are ſown by Seeds, but the Spring Cyclamens are to be ſown in the borders, and thoſe of the Autumn, in the Autumn. They are rarely ſown in Borders or Beds, but in Pots, fill'd with a very light Earth mix'd with Mould, which when it is well prepared, the Seed is to be ſown in it; which ought to be full ripe, viz. when the Leaves are fallen the Footstalk quite ſhrunk up, and the head of the Cafe containing the Seed opens of it ſelf.

XXI. *Obf. 4.* They are to be ſown in the Ground an inch deep, and two inches diſtance aſunder -, and then they are to be expoſed to the Sun, and prudently watered; that the heat and humidity which contribute to Vegetation, may cauſe them the ſooner to ſpring up; other Plants bring forth their Leaves firſt, but the Cyclamen firſt forms its Bulbs, and afterwards its Flowers.

XXII. *Obf. 5.* They are not to be tranſplanted till three years after they are ſown; and then they are to be put into Pots fill'd with Subſtantial Earth, abounding with Nitrous Sair; the larger the Pots are, the more room they will have to grow in, whereby they will the more extend themſelves, and produce the greater quantity and the finer flowers.

XXIII. *Obf. 6.* When you tranſplant them put their Bulbs two Inches deep in the Ground not deeper, leſt they ſhould ſink, ſo as to deprive the Eye of theſe Plants from the Enjoyment of the Air, whereby hurting their ſpirits, you may ſometimes hinder them,

hum producing thei Flowers; they ought alib to b; kept warm, and Hous'd in Winter, for the Winters Cold is a Mortal Enemy to them in refptil both to its Flowers and leaves.

XXIV. *Obf. 7.* The *Spring Cyclamtds* ought to djvell in an Airy place, and where the Sun Beams strike directly upon them, becaue they begin to bring forth flowers at the end of Winter, when the heat of the Sun is very feeble or !n:ll, and has no great power on Vegetables. But the *Autummal Cyclamen's*, are to pbe'd in a little Iliads, becaufi; they blow better, where the Sun Beams are not over piercing, than where they are expofed to grearer heat.

XXV. *Obf. 8.* If the *Cyclamen* thus put into a Pot, (hoots out abundance of new Branches, and you find it too dofe therein, or that it begins to droop a little, you mult im media rely change the Pot for a larger, full of new Earth, and abounding with Salts, and then it will certainly thrive to your content.

XXVI. *Obf. 9.* Always be fore alfo, when you difplant your *Cyclamens*, not! to take away the Earth which is about their Roots; for if it happens that their Fibrous Roots are put out of order, they will not' grow, and then Roots will decay and tot: wheielbre the fafeft way will be, when you remove them, to take up Eath and all.

XXVII. *Obf. 10.* Thefe Plants, tho" they may be multiplied by Seed; yet they are looner propagated by Roots ilippM oil One Stock is enough to produce a great miny, becaue it is a Vivacious Plant.

XXVUi. *Obf. 11.* Theyare M uld ply ed thus. As foon as the Leaves are fallen., pull up your Stocks, and cut them fo when yorj flit them, that there may be one good Bud upon each Stock; then put them into a cool diy place; and let them remain there, till they are dry'd fo much, that there will appear a fort of Skin, on the part where you mjje the Incilion.

XXIX. *Obf. 12.* Then you mud cover the cut place with Turpentine, or *Spamjh* WJK, and iu replant them, taking care to fupply them at firft with lean Earth; but :ifwtwjtds, to fill the Pot, with a fatter fort of Earth, not watering them prefently, or for fome time, vis. till it begins to (hoot; and then it is to be loofft to, as before direfted.

XXX. *Tlje gaditirt.* Authors fay that Sow-Bread is hot and dry in the beginning of the third degree. And *Galen* ttys, it is Attenuating, Aperitive, 3nd Abfterfive, Attractive, and Dige-fcve, and an opener of the Mouth or the Veins, all which properties are manireit from the particular operations thereof It is alfb Cathirtick, given by ClyL-r, or external Application: And iho* it may and has been given inwardly, yet it ought to be given with Caution by realbn of its danger,

XXXI. *Tbt Spec'iftcJtion.*, It opens Obftructions, provokes the "Terms, cafes the Head-ach, helps the Spleen, gives eale in ihe Colick and Torments of the Bowels, is profitable againft running Sores and Ulcers, and a fingular thing againft the Yellow Jaundice.

XXXII. *The Preparation**. You may make therefrom, 1. A *Liquid Juice*, a. A *DecoSion*, 1** i>ifm. 4. An *Ophthahxtck*- J. AnO- 6. A *Tender of the Rm.* ")• An Oim- Comppnd. 8. A *Peffary*. o. A *Cataplafts*. to. A D#7JM *Wmer*. *

The Virtues.

XXXIII. *The Liquid Juice of the R Herb.* It opens the Hemorrhoids or Files, 3» frongly moves to Stool, being put up Wool or fgnne fuch like, as a fupporitory- As» Clylferivie *Mc/nes* fiys, it caufes tough flegm to be avoided. It is alfo mixed with iuch Medicines as dTcuTs Swellings, Kernels, ard oih« hard knots, in any part of the Body; and Snuffed op the Noftrils as an Errhine, it | (as the fame *Mefua* lays) the Head and from evil humors which offend it; it «fo si- lo the Head-ach and the Megrim. *Galen* a«> iarther fiys, th« if the Belly be Bathed with ihe Juice, it will forceably move it downwarfs, and Kill the Child in the Womb.

XXXIV. *Tbt Decision in Water.* It his the former Virtues, but much weaker; It helh Wounds and running Sores in the head, eales pains in rhe Bones, and ftrength-ns Limbs out of Joint. It is ftid alfo to cure Chilblains J^{nfi} Kibes, and give relief in the Gout.

XXXV. *The Qargarifm.* It is made of f *Jxie*, 4 Ounces mixed with Honey an *Quart*, <9 r, gvrnchingthe Honey in it. U draws Kheuff and I humors from the head and parts ghfes Læe in the Tooth-ach, aad heals the Mouth and Throat.

XXXVI. *The Ophtbalmkh.* The Juice with equal parts of Honey, it draws away offending Humors in the Eyes by the No being Snufft up, and outwardly applied to ^ it icmoves that difeafe of the Eyes called Pin and Web.

XXXVII. *The Otaigik.* Let the Root ^ Beaten with Peacblrne Kernels, and Bitter ^/monds, and then Iteeped in a little Brandy I^{o1} three days, after which prels oat the Milk ot tjeam. Two or Three drops of this being p° into the Ears which are Deaf, or have a 6 Noife in them, gives relief after a (horr of ufing it.

XXXVIII. *Tlje PouJcr of the Root.* The Ro* either drank in Ponder, or ufed as a Fei»JA provokes the Terms in Women, and is p^r, on table fot fuch as have the Yellow Jaundi driving the difeafe forth thro' the Pores of T^{ne} Skin. It may be given from a Scruples t?.³ Dram, or Dram and half, in Mead, or tfofiA* water, and (b it purges downwards tough and ff®/* Flcgro; and other (harp Humors. Taken in ^111 J- it is laid to be profitable againft all fats . Poifon, and the Bitings of Venomous Creature^ being alfo outwardly arSplyed to the Par^ a(H). taken inwardly in White Port Wine, it opa» otllruftions ct tie Liver and Spleen, and h^{e1} P fuch as arc Purfy and fhort winded; but fay it ought to be correfted with P Maftich or Nutmeg, which hinders its S in purging; and thereby many have had ||M of ihe hardnefs and fuelling of the Spleen, • could find no Remedy by the me ol oim« things. It gives eafc alfo in the Cotick, Be«J Ach, and other Torments of the Bowels-

XXXIX. *The Ointment Compound, call* guentum de Arrantta- Take *JucerfSms-Bn* Pounds: Oil of Orricc 2 P'oundt, jstft. Butter, Juice of Wild *Genraferr*, amu 1. ⁷⁰ \ Pofyfodiim 6 Ounctt: Pulp of ^{col}, & ^{lvrtt} t *Outsets*'. *Eupborbtum* half jn Ounce: The «

 bear one fargc yellowijh Jntecr, upon a long
 i top branch, which being ripe, tuith the
 Seed fly away tiiiitb ti

VII. The fifth, or Grear, or Tree Sow-Thistle.
 Iff Root is great and whitifh, accompanied mitb
 many g.ei:t Fibres or firings, net periling in
 the Whiter but encreafing every year, h grows
 To the height of & Man, with a firong Stalk,

Sffw-Thistle Tree, or Great.

an Inch or more thick in its diameter, /moot"
 drafted, and wtlx/at any prickles-, about ah
 groio many Leaves, divided into four, and fame-
 times into Jive divifions, placed on sxh fide, ene
 again/I another, and ing it about at the
 loner, end, where they have many /mall pieces
 flicking forth beyond the Stalk.
 Leaves have no divifions, nvr prickles en the
 Sacks, but /oft ones on lbs edges upon the
 dents, end are green en the upperjide, and gray-
 iff) underneath, the whole Plant being full of
 Alik. The Stalk is parted at the Tap into fe-
 veral Branches, bearing at their Tops many
 flowers fet together, as it were in an Umbel,
 all of them being of an even height, which
 fmall in comparifon of the tallnefs of the J
 el/c net much unlike tho/e of the Common
 ThijUe firj} defenbed, eomposed of many

r, cut in at the ends, cncompiffmg a mid-
 dle thrum, which is more yellow; which when
 they art ripe pa/s into down with grjyijh flriped
 Seed therein, both which are carried away witi-
 the Wind.

IX. The fixth, or Tree Sow-Thistle not Branch-
 ed- It ha; <i great hlackifh Hoot with
 Strings adjoining to it; from whence rife
 feveral (trong, tall, round Stalks three or
 feet high, without ituy Branches at all, k I H <<
 fet with broad Leaves from the Bottom to the
 Top on both fides, waved cr cut in on the
 edges, /mailer as the bottoms, nil br:-,ider to-
 wards the ends, which are pointed, i'rsm the
 Tops of the Stalks, and likewife from the joints
 with the Leaves, come forth fhort Footfalfa,
 with ? w 4 /mail Lettice, or Soathillife like
 flowers on them, which turn into down, which is
 carried away with the Wind. G-riid fays, the
 ROOT is great, thick and hard, the Stalk of a
 Woody fithfiance, the Leaves not unlike Langue-
 beef but not fo rough and taare deeply cut in
 about the Edges: that it has double yellow flow-
 ers, and the whole Plant being rtplenifhied with
 iy juice, Jhews it to be of the kind of
 Herby Sowthifttes, etherwife that it might have
 been referred to the Hawkwoods, ^hereunto in
 face end fbeva it h very like. And Johnfbn
 fiys, the heads and tops of the Stalks are very
 rough and hairy.

II. Of the Prickfy

X. The firft, or Greater Prickly Sow-ThiW
 with whole Leaves. Its Root is long, yellowifh,
 and, famerahat hard when its grown up tv'nh a
 Stalk, bavhfg a number of fmall fibres adjoining
 to it. I/s Leaves are fomething Jong and
 broad, of a Kh.iifb green color, unevenly
 but not gafbt or torn on the edges, and
 dent fit with a ff)arj> prickles, fomswbjt ban!
 and /ometimes prickly alfo along the middle rib,
 on the under fide, yeilding a more bitter Milky
 pace in every part, tohen cut or broken, than
 thafe if we fsmooth kind. The Stalk is hollow,
 fomcwhdt tender, and as it were winged, with
 a Yitm running upon it, rough and fharp, fit
 with fitch like leaves^ as grow below, diver/ely
 A; Kith /mall pale flowers growing at
 lopt, which turn into Down and are blowit
 away with the Wind.

XI. The feconci, or Lefler Prickly Sow-ThiM*

or *Apiuk Sar&m'uw*, whilft others are of another
Opinion, taking that to be a kind of *Fulfatila* or
^SJI

tound knobs or Seed Vijfels, in which the Seed
is contained.

V. The fecond, or Lefferj which is Our Com-
mon Spearwort. *Its Root ennfifts of an infinite
number of Strings*, but in its Stalks, Leaves,
and Viewers it it much like the former, fiming that
it it altogether leffer. *Its Rwt is nothing bat*

Spearwort Common or lefs.

The Deferip ions.

III. The firft, or Greater Spearwort. *It has
hlackijb
inteA
s^ from whence rife up a thick jointed
Smooth SrJ.i, tvq fed high, furnjbed with
large and Jong Jhtning **d jmocth Leaves, tbix-
tier than thufe in the next; fame of them,
being "lore than half a foot lorig^ and tvoa or
three Inches broad, but Jmailer up towards tbt
top, fikere fiattd a fete pale yelfaw Crow-feet I/Ae
jlowers, but larger than in the others.*

IV. This Plant Gerard defcribes thus. *Its
Rcyl is compaS of divers bulbs, or long clogs
mixed with 'an infinite number of hairy Tbrcdi
It has an IKHQVO Stalk full of Knees or Joints^*

Spearwort Greater,

*"it which Jo grow long Leaves a little hairy,
** unlike thofe of the Willow, of a flining gnen
cokr. Xfe flouxrs are- very large, and grea at
«? Tops of the Stalks, confift'wg rffiw Leaves,
of " fair yellow color, very like to the Yield
Gwy Cup, or Wild Cromfoft. After which ceme*

*Speanwort Satolike**

a bush of Hibres or Tj>reds, which grow and, run deep into the Alud. It grows up with a greater flare of fappy green stalks, with thicker, narrower, end sharper pointed heaves thereon, and a greater fiore of pale yellow flowers, like iff thefe of Crowfoot -, and the Veffels, Knobs or Seed, tire alfo like to thofe of the Ci'owfoot.

VI. The third, or Sawlike Spear-wait. It Roirts conjifis of a great number of hairy Strings, b is tilmojl like ike iafl, famitg that this is oftentimes found, having the leaves dented about the Edges, in aare plenty thin in the otber, becsufe both of them are often feen, the plain with fome dented Leaves, and the dented with fome plain Leaves among them. Us Stalk or Stalks, are thick, fut, and hollow, dividing them/elves into divers Branches, en which are Jit fometimes by Couples tieo long Leaves Jkarp pointed, and cut in about the Edges like the Teeth of a Saw. The flowers grow at the Tops of the Branches of a yellow color, in form like ttofe of the field Crowfoot.

VII. The fourth, or Maifh Spearwort. & J Rest h like the former; and it has fuch like long Letves as the leffsr Spearwort has at Scfh V. abmjc: which grow upon long Foettalks, but leffer and narrower by much. The Stalk is bare without Leaves, J'aving that at the Top where the flowers break forth, it has no fmall long heaves. Tfx Jlowers are [mailer than thofe of the common fmall fort, but purely white, the Knobs and Seed being alfo alike. There is a noiber firt of this kind, which toe have had from Bayou tn the hay of Bifcay, which grows in their Marjbes near the Sea Coaft; tehofe Roots ere like the former, Stalk- Branched, Leaves long and narrow, and flifrp pointed at the ends, bearing larger yellow flowers than the former.

VIII. The filth, or round Leav'd Marfh Speatwort. hs Root is a bush of fmall white firings growing in the WfterifB Mtrccr Mud. From which fboct* forth a Stalk round and hollow, about half a yard high, fpreading it Jelf forth into fveral Branches, the lower Leaves of which are rounder than thofe above, and are divided much like to thofe of Doves ftwt, or Cut Mallow, but fometimg greater, of a bright Jbining color. Tbefe leaves are divided fume imp 3 parts, which are the firti and latefl, and others which are higher on the Stalk, into five dro'tfwns, and each of them dented about the edges, Jbmewbjt like unto Coriander Leaves, which are /month, and of a paler green color. Thofe which are yet higher on the Stalks, and Branches, tire fill more and more divided, and fpme of the higheff, have ito division or Dent in ihe/u at all. At the Tops of the Stalk and Branches ft and fmall yellow flowers, like unto thofe of Water Crmcfoot (but Cordus fays that he has cbferv'd fome to bear Purplifb Flowers:) after which come fmall long round heads, in which many Crooked Seeds are fet together^a as in the othen forts is to be feen.

IX. The Places. They all grow in Mootith and Wt[Grounds, and fomenmes by (landing Waters, Ponds and Ditch fides, almoft every where. The firti is more fcarce to be met wichai, D>ut the two next art plentifully enough in many parts of England. The two lair ate not fo common, but are alfo to be found in Mirth and Wet places, in fveral parts or' this Land.

X. The Times. They flower in May, June, and July, and give their Seed in June, July and Aug>ujt, or icon aiter.

XI. The Qualities. It is hot and dry i" fourth degree j raifes Bliliers, arid being inwardly Mills without Remedy. It opens Items, is profitable againtt Rooted? and Pmiil' Ulcers, drawing out their Superfluous moiltuK It is faid to be good againlt the Pally, help Quartans, as P&racelfus, Dodonms and (hers jay. And the laft or round Leav'd is as (harp and virulent, as any of the other kinds. They are in Faculties and Virtue* lite^m the Water, iie'd, and other Crowfeet, whose Sj cifiction, Preparations, and Medical Vfes\ f« Chap. 176. Set/, XXV. ad XXXIV. aforegoing this Book.

 ted Seed Veffelt.

VI. *The ?laees.* The fait grows almoit in all pans of England upon dry Banks and Wood line more especially upon other wafte Sandy Grytinds : w Holders of Fields, in Woods and on Grafly Mole Hills, almoft every where. The fecond is more fcarce, hut has been found in a dofe by *Barns* near *London*, and in ieveral otlitPlaces: I have k-rmerly found italfb in fome Meadow Grounds near *Lyn Sega* in *Norfolk*.

Vii. *TheTimer.* They flower all *June* and *Jth* and fometimes in *At/guft*, and their Seed is ripe in *July*, frgufi **&[*September*.

VUI TW hidtties, Speedwull is lempcrare in it-fpea to heat or coldnefs, drynefs, or moi- ilurcibat is (aid to be a little inclining to dry- nefs- it is Aperitive, Abterfive, Corneccick, Dm- redd Viilnsrary.ti.dorat, Ktomatick, Nephricick, SudorHick and Alexiplvirmick.

IX. *V>e Specification.* It prevails agaiclt the Scurvy and Si ioulnefs and Corruption of the Blood and humors, opens OMtrnfions of the Stomach, I ^A ^{Qui} ^{Kei} ^{rs;} ^{Pe}TM^{HS} a- gainft old Coughs, Ulcers, and IuflamatLons oi the Lungs, anil otha Difeafe of rhoe parts s is an excellent Antidote againlt the Mealies, Small Pox, Purples, all Malign, Spotted and Peftilen- tijl Fevers, and die very Plague or Peftilence it firfj it alfo prevails againlt iretcing Old Sores, tonliiming or eating Ulcers, Iprcading Ringworms and Tettats, malign herpes, and o- ther like dillemper of the texternal parts.

X. *The Preparation**. You,majr make there- from, 1. A *Liquid Juice*. 1. An *Ejence*. 3. A *hccoRwn* m *Wine* or *Water*. 4. A *Peuder* of the *Herb* and *fwert*. s- ^A *Ca/micA*. 6. A &<ilfam or *Oijtment*. 7. A *Caiaplajm*. 8. A *Spirituos TittOure*. 9. An *Acid TinUure*. 10. An *Oi/y Tintfun*: 11, A *Dijitifed Water*. >2. A *Spirit*.

The Virtues.

XI. *lie Liquid Juice.* Drat* to the quan- ty of four Spoonfuls morning, noon and right,

cither alone, or mixt with its diifilled water, icisgood to cure tije Lcproly. It is reported rbac a *trench King* troubled with the Leproy, was cured of it lly ilie life of this Herb, being thereto by one of his Huntfraen. It wonderfully hslps the MemoiVj and a0 Giddi- rLⁿⁱ or Swimming of the held, and eafes the Head-adL It is fiid alfo to mike Women Fruitful which are Bjrren, and deafes the Blood from hnpirittes: taken with a half part of Honey diffotved in ir, ir is good for all man- ner of Coughs, Catarrhs, and difl-afts of the Brft and Lungs, Tliis thing lus been proved by Shepherds, wlio give this Herb with a lit- lJ^ Salt; to their Sheep which arc troubled with the Congh. It opens obftrutions of the Liver, tad Spleen, and prevails againlt the Yellow Jaundice, being taken tor fome time together, and a Catsptelm of the Herb *Kith* Vinegar applied to the Region of the Spleen outwardly. It cures Ulcers of the Reins, Bladder, and Womb, or any other inward Wound or Ulcer, provokes Urine, and h-lp fuch as are troubled with the Stone. Ptfaw *JSgintta* fjys , it is of good ufe for dilcafes of the Back and Reins. Ic is of good ufe to heal all imple Green Wounds, at firli intention, and is no lefs effe- ctual againlt fpreading Tettars, Foul, Old, Fret- ting, and Running Sores and Ulcers which have been of long continuance a;d are hard, to be cured. It Hops the bleeding of Wounds, and all other Fluxes of tile Blood in any part, and diffolves Tumors or fuellings, chietiy ihole in the Neck, tfe.

XII. *The Effi-nce.* It has all the former Vir- tues, but much ftronger, and may be daily given as the former, trom two to three Spoon- fuls in any convenient Vehicle

XIII. *The DtcvSion in Wine or Watr.* It has all the Virtues of the Juice and Hffence, but is much weaker, and therefore may be given riom four to eight ounces at a time; it is truly an excellent Vulnerary.

XIV. *The Peuder O/ the Herb and flmert.* It has the Virtues of the juice and Effence, but aers not with that fpeed and facility, becaufe it is firft to be digetted in the Stomach. It is a finguhr thing againft the Pi:iguc, and all Peftilential Fevers and Infectious Dileafes, to defend the heart and expel their Poifon and Malignity, to corroberate the heart and Sto- mach, and preserve them from Noifom and InfeStious Vapors, being daily given morning and night a Dram or two at a rime either alone, or mixc with a Dram or two of *Venice Treacle* or *Milhriddte*, in a lirall draught of Wine, and fo laid down to fweat upon it.

XV. *The Qfmctick.* It ii made of the *De- purated Juice* mixed with an equal quantity of the *DiJiUlcd Wjier*. It clears the Skin troni yellownefe, Suntointing, Tanning, and other dif- colorings thereof. AnJ if White Vitriol % or 4 Drams to a quart of the mixture be difblved in it, it is admirably good againft Scabs, Itch, Scurfy Morphew, Tettars, King-worms, and all oilier detedations of the Skin.

XVI. *The Bitftm er O'mment.* The Juice or Effence being daily taken inwardly, and either of thefe uled outwardly, they heal all timple Green Wounds, many times at the firft In- tention, and dtgeft, cleanfe, incarnate, and heal all Putrid Ulcers, and other running Sores in what patt of the Body; foevet.

XVII. *Tije Oiapljm.* It is made of the SU Green

Green Herb, and is of firgutar good ufe EO heal all fimpls Green Wounds, in what pact of ihe Body fever, to take away hot ami iharp hurraois, dilhifs Contuitions, Cc

XVIII. *The Spirituous TmSurr.* It is good ayintt Faintings, Swoonings, indigeftion. of the Stomach, Sicknels at hearr, and other indilpofitions of the *Vifcera*, and has all the other Virtues of the Liquid Juice or Effence. Dofe 2 Drams to 4 in a Glais of Wine, morning and night, or at time of the *HcHqu'ntm*.

XIX. *Tffc Acid Tinllure.* It is an incom-patable thing againft the Plague 01 PefiJence, and all Peltifential or Infe&ious Difeafes, as Mcafks, fnull Post, Calenture, Purples, Spotted Fever, and the like, it feengthens and ratifies the Stomach, refifts putridity of the Blood and juices, caufes a good Appetite and ttrong digeftion. Dofe fo many drops as may give a Glafi of Wine, ot other Vehicle, a plea(bg Acidity.

XX. *The Oily TmSurr.* It is a (ingular thing to open Ohlbuttons and cleanfc die Keins, Ureters and Bladder, of Ihiall Stones, Gravel, Sand, and Tartarous matter lodged in thofe parts, to give eafe in the Strangury, and help pains and weaknefes of the Back, *He.* Dofe a gut. xvi. *ad xxx.* in any fit Vehicle.

XXI. *The Difiilted Water, fimple or dtjH/lcd frm Wine.* It has the Virtues of the Juice, but in a much inferior degree, taken inwardly -fwetened with Honey, or Sugar Candy, it is good againft Coughs, Colds, Confumprions, and other Difeafes of the Lungs.

XXII. *The Spint.* It is Stomack, Cordial and Alexipharmick, good againft Faintings, Swoonings, Palpitation of the heart, Sicknefes at Stomach, Colick, and other inward pairs of the Rowels. Dofe from 2 Drams to 4, in a Glafi of Wine.

C H A P . DCXLVII

O/SPIKNARD *European.*

L T M I Kama It is called Greek Nardus X KMIMI: in Larine, *Nardut Celtka* A^A^ - *SpitTHL*, and *2/eiubnardus*: in Englilh, *CrticAj* or *European Spikrtard*.

II. T7v *Kinds.* Authors have given us almoft halt a Score Sorts, of this Plant: we (ull only dderibe ihofe which are molt common, and fuch as are to be had with us: which are, 1. elder they grow, the more cut and Jagged they are. The Stalk and blowers are very Hæe the Stalk whb
rs of the Garden Valerian (or as Gerard f.iys
like tbofeefht Wild Vulerhn, in fape and color,
groxing in an Umbel or Tuft:) they are of a dwk
or deep red coh,ani a greater Jlore of them tbrtji
together \$ the Seed afo not being unlike to that cf
t!e Valerian.

• VI. The fourth, or Bilbrd French Spiknard.
This i'lant grows in form, (in all in parti almoft)
like to thi- true Indian Spiknard. It has a ft-io
small hard Fibres, which tbruji thmfelvc into the
Ground, from which fpring firth feveral hairy
rsun.l fpiky heads or beards, at the bignefs of ones
finger, and cf an hand bredthhigh, of a pale brown
color, which are net pointed at the Tops, but fla
er blunt, through each of ibefi hcuts, even from
the loicefi part next the Root •, xehkh Jboot forth di-
vert long, rough, green Rstjhes, fcarcely a foot

French Baflard Spiknard.

high, many of them growing clofe one to antoher,
fo thai they make the form or Jhem as it taere but
of one Plant, which are likemifejaidto be altogether
without fmell, except tbeje hairy fptky heads or
Beards, which being larger than the Indian bed,
do fmell fomething like to the Meft growing upon
Oak Trees, or that other which grows upon the
Ground. Thefe heads being half way in the
Ground, do fend forth cach.Jf them in the middle
of tboje Rigid Rujhei, a tall /lender and fmooth
Stalk, rifing about a Cubit higher than the Rufhes-
from the middle whereof up to their Tops, on each
fide, come forth many fmall. Green Cods, P^onc^t
at the ends, {landing iff Cups, like to thofe of
CranacsBUI. The whale form hereof does fo nearly re-
fembie the true Indian Sfknari, as Pena, and o-
th have obfemt^d that among a number 0} bund.es

of Indian Spiknard, they have foundfame which
had ibs parts cf fibre:, Heads, Sa/hes, ,md !
ilijii/itly to bsfeen, as this is here dejbribe I • -which
makes it out of doubt, that this French kinJ, ts ,I
Bjltard Species of the Indian.

VII. The ilaces. The three firtf are found up-
on the Celtick Mountains and Alps, as alto in Li-
guria, as Pena and others fay. The l.nmh is round
in Mofly and moift places facing the: South and
Mediterranean Sea, and not tax (rom a (hull Vil-
lage in France, cjlld Gange. Gerard fays that
the firt and fecond grow in a Field in the North
of England, called Crgg-chfe, and ar the foot or
the Mountain Ingleborow i'els, which is the highef
Mountain in England. But that the raid is Nudt
up in Gardens with us.

VIII. The Times. They all flounfli and flower
in the Summer Months, viz. in June, J^{ly}, u[»](
AuguJ}, fome earlier, aad iome later dum others.
The Leaves begin to Wither in September, atwhidi
time they fmell more pleifantiy, than when they
flourifhea and ivere green.

IX The Qualities, European Spikmrd is hot
and dry in the fecond degree; Difcuffive, Diure-
tick, Stomatick, Neurotick, Cardiack, Ncpl'rititk,
and Alexiphatmick.

X. The Specification. It is good againlr Wind,
Grip Ings in the Bowels, Colics, tainting, Swoon-
ing, Convulfions, Strangury, Obftu&ions of the
Splteti, Reins and Bladder, Bitings or Venomous
Beafts, Peitilcnthl Diieafa, and expels poifon.

XI. The Preparations. You may make there-
from, 1. An Ufufwn or Decoion in Wine. 7.
A Poudfr. 3. An Infolated or Detailed OX. i.
A Spirituous TmQure. y. An AtidTmilitrc. i.
An Oily TinUme. 7. A DijlWcd Oil. B.'jl Di-
filled Water.

The Virtues.

XII. The Infufion or DeeaSha in Wine. It
flops fluxes of the Bowels, buc provokes Urine ^
is Stomatick, and good againli loathing of Food,
er Naufeouiheds, gnawings in the Stomach, fick-
nefs at heart, and Wind oppreffing the Bowels.
The Deco&ion in Water ufed as a Bath, is good
againlt Fits of the Mother and weaknefs of the
Womb, drying up humots in thofc parts. The
Infufion or Deception in Wine with a quarter part
of Wormwood, is a noft excellent Stomacick,
profitable againit the Colick, want of Appetite,
iil Digeft'ort, Vomiting, ^, Dofe a quarter of
a Pint at a time, morning, noon, and night.

XIII The Foudcr. It may be gjeva trom 3
Scruple to a Dram, mifr wkh Hony, or any o-
thur convenient Vehicles, and lias all the Virtues
of the Infufion or Decoction. It is a fingular
ingredient in Mithridate, that chiefly made of the
nrlt Species; rbr tho* the Indian Spiknard is al-
ways intended there, yet whto that cannot be had,
this tuft kind always fupplys its place. It is faid
to be good tor fuch as are Liver-grown or hive
ihc Kickets, and alfo for the yellow Jaundice,
Bloody Flux, and the flinging or biting of any
Venomous Oeatures, as allb to expel poifon, uc-
ing inwardly taken. Snuff up the Nolttils, it ex-
cellently purges the Head and Brain.

XIV. The Ufolated or DecoSed Oil. It is
warming, Anodyn, and cumlombe to the Ner-
vous parts: It thins thick and congealed humors,
digefts rhofe which arc crude and moderately
aitringes and ftrengrheis the parts which are loofc,

and WKik, and is trid to be profitable agtfnf TremWingi, Palfes, and the like.

XV. *The Spirirwxt TinSure.* It has the Virties of "il:elrjuJio!i md Deoction, is good againf malign Fevers, and the Pi>i(bn and Infection of the Plague or^eftilence, tfnd all Pefitileorial Di
•I-J ii comforts the Hend, Brain, N-JIVC at^l all the V^tnra, chiefly the Stomach am
, wjrms, dlgetts, Hops thin diftillations o Kheum, ciils pair.s proceeding from cold, as al fb the Colick, and Is profinible agihvfl Palfie\$, Con TuffioBS, Cramps, ifc. Dofe Jrom one to two Drams in a Gtots of generous Wine.

XVI. *Tbt AcitfTinSitre.* h is a parent thing agamft all Ions of hot Burning Fevers, and mor< excellent than the former againft all forts of mi lign FeveiSj the Plague, and all kinds of Pefitential Diceaics, hecaufc hefides the dcKreyiitg thePu triditf, it tal«soff(as it were upon the fpoi) the preternatural hen, and refores the Sick to their natural temper. Doiisfo rmnny drops as to make the Vehicle ptea&o*, and to be repeated as often as tic Psrient drinks.

XVII. *The Oily TinSare.* Ti is a good againf the Colick and Gripings of the Gats, Pain mi rteaknds in the Bick and Reins, the Strangury, the Scone, Gravel, Sard and Tarrarous matter in the Bladder, and other Uinaty parts. It com tors I the lower rifeera, and is of fingubr good effeft, H Ttmhltngs, Palfics, pains ami weakrofls t the Naves and external pans proceeding from Colds, over-fraining of the Limbs, or any other external hurt, or derufiens of Cold humors from parts j It is good to diflblvc Nodes, and other flad lwellings, ard is profitable againft Difeales of the Spletn, Reins and Bladder. Dofe gut. xx. ad xl. or more dropt into Sugar, and then mint with any convenient Vehicle.

XVIII. *The mined Oil.* It is antiparalytick almott in the hit degree, and a patent medica- ment againft trembling of any part, wckneffes of the Nerves and Tendons, Cramps, Convulfions, und other like Difeafes of the Neurotick parrs, as the Stomach, Bowels, Mefeniery, &c. giving I the Colick, and other inward pains, Fas Ot the Mother,)• aiming, Swooning,^, almoit in a moment. Inwardly it may be taken morning and night ftomvj. t0 xij. or xk. dro jn £ Vehicle. Toaft fonft white Bread very hard and then poudet k, drop dda Oil uPOn it/mix them well logetller, and then with the Vehicle you intend to give it in, and fo let the Patient drink it. Outwardly anoint it apon the Baik Bone and the other Parts arretted twice a day.

XIX. *The Dittilled Water.* Let the Grofe Ponder a Pound of it, be digelted in Wiiiite UAon Wine a Gallon, for6 ocjii.fi, ad then difilBed in lialneo. The Water heicot is offiaralai good l&G* Pjlfies, Tremblings, Convulfions, Weak- fldts, and all cold indiiporidon of the Membcts uied both inwardly and outward^, it cotnrorti the Head, Brain, Nerves, Siomach, Heart, ando- tho rifecej, (topi Catarrhs, eaits pains rrom a cold caure j and helps alfo in all fuddatn paffions of the hurt, and gives eaic in the Colick, 3 or 3 Spomruls ihaeoi bang taken upon the occalion.

dereNote: 11M tbe trench KtfiardSptkntnd IT never ufid.at being a Phut wbkb has little or no Virtue/objerved to be in it.

C H A P . DCXLVII,

Of SP1KNARD *Plowwuns*

I. **T**HE *Nmp.* It is calleJ in Greek, *Batchnris*; or as fome will have it n«x««« *vel tio&at, Pxeabarit* or *Panchsrit* (from its excellent imeH :) in Latine, *ftwrfrwn/i* and in Erg- lish, *Plowwuns*; *Spikrtffid*, and *Baabar*,

It. *lie Kindt*, *Pliny* fays That in his rime it was called *Nardus Rufie*,? but as he fays, we alfo fay, it was an error in them which did fo call it: but its general Name *r*, ana *Baccharis MmrfpiCmjium* (altho' it alib g* *England*;) *Cnyza major alrera Vodomei*; > *ntajor Mattbioli Lugdunenje, Conysa major vuig* nt Btwhin'u* (in his *Yinux*) in Englifh, *BascharMO*, *Plowwuns Sptknard*. *Par'kinfon* tdls us of two Ions of this Plant, viz. This treated of in this Chapter, and a *Swim kind*, but die lauu unknown in our Climates, we fhall fry no more *Ol* it in this work. *TiW Cuflom* has prevailed upon us, to call it *Spikniirdt* yet it is no fucll thiftS nor in the lull akin, *Ol* has it any relation tu ttut Plant.

The Defcriptions.

V. *The Plater.* It gtnws plentifully about *mmptfier Jnh; i!!A aril* in many other Countries. *It is in rough and Craggy places, and in a lew and dry Soil, where there is TO moifture. And Gerard lays, tint it grows in divers pans of the Writ Of f>:*

VI. *The Plater.* It flowers with us, about the end of *July*, or beginning of *Auguft*. *Gerard fays, it fprings up in April, flowers in June^ and perfeEts its Seed in Aaguft.*

VII. *The Plater.* It is Temperate in refneft to heat or cold, and dry in the firft degree; Afringent or ffinding, PeftonI, Nephritick, and Alexipharmick.

VIII. *The Specification.* It is a remedy for Afthma's, Coughs, Colds, Inflammations of the Eyes, fweiling of Womens Breafts, ftops Fluxes of the Bonds, and as *Pliny fays*, helps to break the Stont*.

IX. *Tlic Preparations.* You rmy have therefrom, 1. *The Green Root.* 3. *A DecoSton of the Root.* 7. *A Ponder of the Root.* 4. *A Cataplafm of the Green Leaves,* j, *A Bath.*

The Virtues.

X. *The Green Root.* Authors fay, that being bom:!, or hanged to, (I fuppofe they mean the Thighs) it brings a'vay the Birth, and facilitates the Delivery. This Root for its fweet fmell is oftentimes pur among Cloths, to give them 3 kind of perfumed fcent.

XI. *The DecoEion of the Root inWnteWine.* It opsns obftruEions of the Veffeis (as *Pmlut JEginaa* lays) provokes Urine and the Couifes, is good againft Convulfions, and for fuch as are inwardly bruifedby tailing from an high place. It is good alfoaguinf Altmas, Coughs, Colds, fhortnefsof Breath, and other diftempers of the Brest and Lungs. Bathed upon Womens Brcifts which are fwelld, and pained, It gites cafemd difcultes the Tumor. It is good againft piins of the *Pleura* and (ides, opens Obftrutiions of the Spleen, and breads the Scone (is *Pliny fays*) expelling Gravel, Sand and Tartarous Mucilage out of the Urinary parts, and fo gives eafe in a Dyfnria and Stranguria. Dropt in:o the Eyes it cools the Inflammion and itops the flux of Rheum into them. It nwy be given to half a Pint Morning and Night, very well iweetned with Honey. It is alfo Alexipharmick, refills Poifon, and is good againft the bittings of Serpents and Mad Dogs, and other Venomous Creatures.

XII. *The Ponder of the Root.* It has the Virtaes of the former DecoEtion, and may be given TO a Dram morning and night, againft Violent Cafarths, and to break and expel the Stone whether in the Reins or Bladder.

XIII. *The Ctii.ijifajm of the Greest heaves.* Ap- ro the place of' the Head pained, it eafes the 1-a*. It alfo ftops a flux of humors flowing to any Fart, and ftrcngthtns weak Joints.

XIV. *The Bath made of the Roots and Leaves in Water.* Drank to half a Pint, ;t ftops Catarrhs t applied as a fomentation it ftops a flux of Rheum to the Parr.Cools Inftamarions.and Cures An thonies, Jnre, being Bithcd therewith,and Cloths wet ther- j'l being alfo applied to the fame. Made in great

Qtianriry, fo as the Patient may fit in it in a Bathing Tub, or otherwife put into a VefTel in a Cl^fe Stool, fo as the Patient may receive the hot Vapors thereof up inro the Womb, it is laid to induce the Courfes, when ftopt or flow but poorlr, as alfo to provoke, haften and facilitate ihe Birth. Taken inwardly it is laid to be profitable Ruptures.

CHAP. DCXLIX.

Of SPIDER - WORT.

HnilE Names. It is called Greek, te',f J. \$**niyynf. in *Latine, Fhjlangmm & itMxgitei:* and in *linglifh, Spiderworr.*

II. *The Kinds.* There are leveral forts of this plants as, 1. *ybafongum Ahbrcgtcum, Phahngium amiquorum^* The Savoy Spiderwort. 2. *I'hjianpum majus lttttiatnt album,* The Greater Italian Spiderwort. ;. *Phahngium non ramofum Vulgarc,* Unbranched Spiderwort: *CirJus* calls it *LiJijga.* q. *Pba/ajrgium ramofum,* Branched Spiderworr. s. *Phalangmm V'trginianum, Phahngium Ephemorum Virginianum Joba/init Tradefcanti,* The Virginian Spiderwort, The foon fading Spiderwort, and Tradefcants Spiderworr, becaufe Tradefrant firft brought it into our Englifh Gardens, it has been thought by fome to be the *Silk-Grafs* which grows there.

The Descriptions.

III. The &ft or Savoy Spiderwort. *la root confifis of many white, round, thick, brittle firings joining together at the bead, but arc nothing fa long*

Spidermrt Savoy.

"i tbc/e of the uibr Spiderwort. It /firings up with four or five green Leaves, long ana narrow, yet broader at the bottom, narrower itpmards, and pouted ft tbe en I. Utt theft of the Lilly Aphodil kri/rg a iir/e holloas in the middle. Yrom among which ari/cs up a round fi'jf Stalky .; fool ami a half high, bearing at the T<f, one above another /even or eight or mare flayers, every one as huge at the day Lily, but much greater than in tirty of the other Spiderworts, of a pure while color, wrtb fame Threads in the middle, lipt with yelhv, and a /mail jerked Pointel. Ajer the n are paf, the head or Seed Veffels grow alma!] Triangular, yn fomelhing round, in which is contained blacktfh Seed.

IV. Thj fcond, or Grater Italian Spiderwort. Jtt Roots ere long anl white like the next f<l-knutg, ^{ost} /ometbing larger. It has divers long and narrow Leaves Jpresd upon the GroundBand not r'tfing up as the former, nor yet fo oroat, but fame thing larger than the next following. The Stalk is bigger, but folhm rtes up f> bigb at the next third Species, being Ion; anl unbranched, fct fa!'. It xoaurit the Top of a Sfarltxe fash'ion. but juntewh.it hrgcr.

V. The third, or UnbrancheJ Spider wort. Its foot confifis of long abite Strings running under Ground, like tbtft <f 'he Lfi defenbed, but . It has fault Grafts-like Leaves, but hrgcr than theft of Grj/s, i'J a whuijb or gray-ibf green color, ripag immediately from the head or Tuft oj Roots, i'rom among which rife up i>n.- or tuo Stalks, hce cr three feet high fometimes, be/ei towards the Top, with a great many /mall white Star like flowers, which after they are piffi, turn into/mall round heads, containing black Seed, like to the Seed of the little yellow Aphodil, but leffer.

VI. Ttie fourth, or Branched Spiderwort. In Retst confijit of many Strings, tough and white, like the third: but its Leaves arc fomelhing broader, and of a yellowijb green color, much like in form to (.ouch or Quitch Grafts, yet foxething thicker ami fatter, and of a more whitifb green eohr. The Stalk, which comes up from among the Lejvcs growt to be about a joot and a half high, jni jpr-ead out with /mill branches tovardt the Top, rrprenijhed with many /malt white Star-like fleaert, confining oj fix Leaves apiece like the jormer, twth threads in the middle, of a vshttifb cohr mixed with a fair yellow: which being fallen, /mall roundifh Triangular Knobs fo'li'w, containing black colored Seed.

VII. The fifth, or Virginian Spiderwort, fupoftd by fome ro be ttu Virginian Silk-Grafts-its Rocf is flrtngy, and creeps jar under ground, rijng up again in many places with divers heads oj long ji'lded Graft-Uke leaves, of a greyifh overworn green color, two or three for the moft fart tegth-r, and not above, compajfin% one another at the bottom, and abiding green in many places all the Winter, and in fome places perifh-irg attd rifng anew in the Spring, which Leaves rife up witi: the great round Stalk, being fit thereon at the joints, commonly but one at a joint, Inojd at tlx bottom, where they contpals the Stalk, and growng gradually jmrfler towards the end vibicb terminates in a jbarp point. At the upper joint which is the Top of the Stalk, there grows two or three fuch like Leaves, but /mailer, from among which break out 12, 16, or 20 or mare, round green beads, hanging themselves down by little Yaotfialks, which when the flowers begin to blew open, grow longer, and jiaand upright, ba-

ving three /mall pale gnex I tsoit j if • husi, and. three other Leaves within them for -a which lay themelves flat ifen, of d purple color, htrng a fm.till Fointel cr in the middle, ciojefy fet about at/b fix re haaiy, or feathered l'hrea.h, tipt with yetim p dents. This flamer opens it jelf in . and Shuts it/elf ufu.illy at night, .-:J » pent again, but pcrijbes, and then ha rj d head ag,tin. The green husk of three t clojng it /elf *g<tin, in the form <>fa fe*/. « it was before, but greater; the Vi'inid in the 8>tdr die, growing to be the Seed Vejffl, in which is CCTf tabled /mall bluckilb long Seed. Of these flowers feldom more than one or nvo are /een, bt a time upon the Stalk, far which reejpn it w rf long time in flowering, before. . . . btoten open.

VIII. The Places. Their Njme; for tbc molt parr (hew rhdr Native Soil, or H! ict cf gn but with us they all grow in Gardens, The it" ginia/i is a great encrofer, and [hereby ;s >&w grown Corrunon almolt in etety Gind<-n. It *** tirtl brought to US out of Virginia : firee W received from thence several other Vjrieci--fwirg chiefly in the color of the rwo-ii-- '«? bddes this blew Purplilh h;rc delcribed, rt another which bears bigger anu fairer Blew flor-ets : two alfo, viz. a greater and leffer, wliiw have Red flowers: and one with Smiv Wtiuw flowei In iome Years die flowtts of ii:er Red will comt iorth double.

IX. The Times. The third or Unbranched Spiderwort flowers before all the rthi: anil ^ Branched a Month aiter it: the oilier two about one time, viz. towards the Snd of May, and no¹ much after the Unkanched kind. Gerard 1^ that fiift and fourth flower in June, and the thim about the beginning of June, and the fecond 3-bout Augufi. The fifth or Virginian, from tW end of My until Juk, if it has had green Leave* all the Wafer, but later, if the Cofiaefc Winter puts a itop to its Vivacity. Ttieie ¥ jn B ait all hardy, and will live and thrive almolt i" any Soil, but kit in that which is moift. ^{IDS}

Plants of the liefi kind are to be railed, they which fprng from the ffeed are long [^] tore tlxy bear flowers, yet it is worth the hit ^{olu} and attendance.

X. Ibe Qualities. They ate hot and dry ^{jit} the firft degree, of thin pans, and Alexiph^{*1} mick.

XI. TJ>e Specification. They reftt poifon, J^{n1*} are peculiarly good againii the biting of the langium or Poifonous Spider, as Authors fay,) whence it is thought they derived their Na That of Virginia, is ot 110 known Virtues Ufe.

XII. The Preparations. You may have from Common Spiderwort, 1. A VkcoSion in wii* Water of tbe Rwt, Leaves, flowers, and a. A Peuder cj the fame. 3. A Diet Driet

The Virttm.

XM. Tb\$ Jjece3fo, in Wine or cortdes lays, thar being made in Drank, it prevails agauift the bitings

ons, and the biting of the Spider *Vb&knigium*, and of other Venomous beafU-

XIV. *The Voider.* It has all the fame Virtues, being taken in Wine morning and evening to the quantity of a Dram; or mixed with an equal quantity of Mithridate and swallowed, drinking a Glass of Wine after it.

XV. *The Diet Drink.* The Roots being un'd up with new Ale, and then drank for a Month together, it expels Poifon, yea tho* it be universality spread throughout the whole Body.

CHAP. DCL

of SPIGNEL.

I. *The Names.* It is called in Arabick, *Me?*: in Greek *Μετρη*: in Latine, *Meffl*, and by some Ancient Authors, *Aibamanticum*, either from *Atbamantcs* who first found it out, or from the Mountain *Athamantcs* in *Theffalia* where the belt giewj *Pliny* calls it *Mjcedonicum* and *tljpankum*, from the places where the belt was found in his time\ for frys he in *Italy* it is only fown by some few, tho' now it is known to grow wild in several places of that Country. If English it is called *Spignel* and *Spicknel*.

II. *The Kinds,* formerly there was but one sort of this Plant known, now there are many Species thereof, the chief of which are the following, viz. 1. *BSflm Vdgatius, Meum Antiquarium, Terdylion Cardi, Anetbum Sylvestre, Antihunt tortuafum aljarum, Meum fotiji Anethi,* Our Common or ordinary Spignd. 3. *MCJIX Spiritua Italieunt Miittbhli, Meum adultennum Bmthini & Tabcrntontani, Meum Spimtn alteruia Italieunt Lobelli, Battard Spignel.* 4. *Meant Germankum, ilhs Mutteiiitta SSitm, Meum. Alpinum,* German Spigniel or Mountain Spignel.

The Descriptions.

Hi. The first, or Our Common or Ordinary Spignel. Its Roots do spread much and deep in the ground, many rising or branching springing from one base, which is hairy at the Top, of a tickish brown color on the outside and white within, smelling of a strong good fennel and of an aromatick taste. From whence rise up several long slender very fine cut Leaves, smaller than Parsley, thick on both sides of the Stalk, and of a good smell, from among whose Leaves rise up roundish joints, but beset with Leaves resembling tennel or Jil, but finer cut; and at their Tops an Umbel of fine pure white flowers to the edges, on which valljemet aut be fees a jas of a reddish bluish color, especially before they are full blown, and are succeeded by small, longish and somewhat round Seed, larger than the ordinary Yennel Seed, of a browner color, divided into two parts, as is to be seen in the following Art.

Spignel true or Common.

IV. The second, or Battard Spignel. Its Root branches out like to that of the former true Spignel, but smaller somewhat like to Sow or hog-

Spignel Battard or Italian.

Feme

Yenni L. In its form and manner of growing it is something like unto the true or former, kind, *Yenni* L. onto Lf/l with linger and thicker Leaves: the Stalks rise at high us thit with white Umbels of Tkcters, and larger Seed on Iran. The whole Plant and every part thereof, is of a more Wrong Smell and taste than the first, and the Stalks spread themselves out like the former.

The third, or German w Mountain Spignel. Its Root is of about a fingers length, covered with a rough or rugged blackish bark, and but few Fibres adjoining to it, with a bit of hair at the top. I -p, *efajlreng fh. irp* smell like to the firli or *m'ti Splgr. el*, but much jot-aker. It has but few Stalks of Winged Leaves rising from the Root, but they are something broader than the Leaves of the first or Common Spignel and Jlarter, being a mean between them and Carum or Caraway. From among which rises up a (lender firaked Stalk a Foot high, * > are of Leaves for the most part up to the Tip, there grew turn or three fatal! Umbels of Purplish flowers, confining of five small Leaves apiece, bearing Seed afterward something long *an&ffeuylergc*, with rejepeii to the former.

VI. *the Places.* The first grows Wild in many Places in the Northern parts of England, as Lancashire, Yorkshire, &c. but is Planted almost every where in Gardens. The second grows Wild in Italy, but with us only in Gardens. The third is said by some Authors to be growing Wild in England, it grows Wild in Germany, and on the Alps and other Mountain, but with us is for the most part a Nursey. The two first I have found growing in North Carolina up Cooper River, by a Pathway leading to *Capt. Quintis* Plantation, from a right hand branch of the said River, where (when I was there) they grew Wild and in vast plenty.

VII. *the Times.* They Flower in June and July, and perfect their Seed in August.

VIII. *the Qualities.* The Roots of the true Spignel are laid to be hot in the third degree and dry in the second. Aperitive, Diuretick, Stomack, Hepatick, Nephritic, Hysterick, and Alcxipharmec.

IX. *The Specification.* Spignel refills poison, and the Uclngs of Venomous Creatures, provokes Urine and the Courles, causes pains in the Reins, the Fomb, and Bladder, is profitable against the Strangury and all Stoppages of Urine, cleans Wind out of the Stomach and Bowels, is good also against Catarrhs, Rhuimifins, Arthritic pains, and Colick of the Stomach and Bowels, Vapors, Hysterick Fits and the like. The Root is only used with us, hot the Seed is very Aromarick, and has the same Virtues.

X. *The Preparations.* You may have therefrom, i. A Decoction or Infusion of the Roots or Seed in Wine or Water. 1. A Ponder of the Roots or Seed, which is an Ingredient in Alithridate and Venice-Treacle.

The Virtues.

XI. *The Decoction or Infusion of the Roots or Seed in Wine or Water.* Taken morning, noon, and night, to the Quantity of half a Pint, it gives ease in the Strangury, helps all sorts of Stoppage of the Urine, and provokes the Terms in Women when they stop; it eases also pains in the Reins, Womb, and Bladder, opens Obstructions of the Stomach, Spleen, and gives ease in the Colick, and other Disorders of the Stomach and Bowels, re-

press Vapors, and gives relief in Fits of the Mother, as also in Catarrhs, Rheumatisms and the like. It is an Amidore against Poison, as against the bitings or Stinging of Vipers, Mad Lizards, Scorpions, Hornets, and other Venomous creatures.

XII. *the Tender of the Root or Seed.* It may be given to a Dram morning and evening, against all the aforementioned Disorders; in any proper Vehicle. Or it may be made into a *Wwcbmvi a^onev*, and so taken; and then it is proper to the Obstructions of the Stomach and Lungs, to tlegm and expectorate it, and to dry up the Affecting those parts.

CHAP. DCL

OF SPINAGE.

THE Names: It is called by the Latins *cimol* *E^aVa^aia*: in Latine, *S^ro^mlⁱ* (A rat it ate in use medico) but by the *SpnJ* (A *Olus hispanicum* Tragi, (supposing it a Pot-151 which, first came from Spain:) and in English Spinage or Spinach.

II. *The Kinds.* Some Authors will have it to be 3 Species of the *Arachis*, others of the *Blites*: but I think it to be one.

Relation to any of these Plants, but is a particular kind of its own. Some make four Species of it, Kitb, accounting that which bears no Seed, One, which is indeed but accidental, as it increases several times to divers other *Hemp, Herb Ahrcury, Kc.* There are three sorts hereof, viz. i. *Sfinnehia featt^a aculeato minor*, The lesser Spinage, which is our Common Spinage. ii. *nachia (emine aculeato major*, The greater Seeded Spinage, which is also Common had. iii. *Spinachia femine non aculeato, Sptn^a femut Lew*, Smooth Seeded Spinage, which is more rare kind, and Nuisance but in a few

lbs Vefcriptions.

III. The first or lesser Spinage with Prickly Side which is (as before is said) Our Common Spinage. Its Root is long, white and small with many Fibres adjoining to it. It has long green Leaves, the Stalk, and rent or torn as it were into four Corners, and sharp pointed at the ends. If it runs up to Stalk, if it is Sown in the Spring, but else, if Sown at the end of the Summer, it abides all the winter green, and then in the very beginning of the Spring runs up where there does appear many small green in *Chfirt*, and after them a prickly Spinage it be after cut, it will grow the Spinage up very small, and *mtb* but *fa* upon the Stalk.

IV. Gfwd describes it thus. many Thread, from which Spring

SPIXAffE

tender Leaves of a dark green color, full of juice; which are jber pointed, and in the largefi part or lower end square: parted oftentimes with a deep gajb on either fide next tt> she Stem or Fcotflata. The Stalk is round, -'bout a Foot high, and uiihi/t; and on the Tops of the Branches grotolitie Jipners in Cluficrs^ in ubofc places come after- <eards prickly Seeds.

The fecond, or Greater prickly Seeded Spinage. Tfis in its Roots, Leaves, Stalks, F&atrs, and Seed, and in. it t form and manner of growing, is like to the firmer^ laving that in all its parts of Stalk, Leaf and Seed it is larger.

VI. The third, or Smooth Seeded Spinage It is iti irs Root /ike the former, but its Leaves are broader and a little rounder pointed than ihcfirfl, especially the lower Leaves; for thofe which grow upwards upon the Statli are mare pointed, and as it were three fquare, of as dark a green color as the former. At the fveral joints of the Stalks and

bet fidtid clujcring many fmall greenifli Jiow- (rs, aibkbtun into clufers of round thhitifb Seed, without any prickles at all upon them.

VII. Tbislafl kind Genii fays is called Wild Spinage, but is found in Our Gardens, and is like 'o the other kinds in goodnefs, as alfo injbape, Javing thji the le>roes are not fo great, nor fo deepfy gafhí or indented, the Seed having no prickles at all.

VIII. TZf Places. They are all Sown and grow in Gardens, without any great labour and indu- and thrive ia any Ground which is but mo-

IX. The Times. Spinage may be Sown almoft j« any time of the Year; but being Sown in Spring, quickly Springs up, and comes to perfection in shout two Months fpace : but that which is Sown in tte Autifmn, is longer in coming to its growth, yet continues all Winter, and Seeds prefently up- on the beginning of the Spring.

X. The 'Sxrfities. It is cold and moift almoft in the fecond degree; 3nd by reafon it is of a WJ- tery fubftance, almoft without Tafte, and therefore quickly defcends out of the Stomach into the Belly, being ivitial Abiterfive and Laxative, keeping the Bowels iohibis.

XL The Specification. There are no nominal Virtues afcribed to it by Authors, but as it is cooling li) itgnuiries a hot Stomach, Quenches Thirif, and is gooj againit Fevers.

XII. ThePrejratieas. h is an Herb fit for SalLii, and other ules of the Table Man} pie Sav the rktb in a Pot ot Pipkin, or ia i Sawce-Pyn, or between two Plates, without any other moiltutt; than its own, and alter themoilWe is a linic preflcd from ir, isdwftjs a boiled Sal- let, with Butter, Vinegar, Pepper, and Salt, and fomadea very palatable Difh. SomeCooJcsmake it into IVfj-, by mixing with it Limns wry itiin ificed, with the addition of a little Sugar, and fome Spice, which are Palatable enough. But be- fides riefc Kirchin Preparations you may make therefrom, t. A Liquid Juke of the Herb. 2. An A nt ifebr.'tic;i. 3 ACpnftnx, 4. A Diiiii.'lcd Water.

The Virtues.

XIII. The liquid Jmce. Mixed with half i<s weight of Honey and Ib taken to 4 or 6 Ounces in the morning fattig it loofens the Belly, and deargS the Stomach and Guts, of Cold, flimy and Pituitious humors, and eracnares Tartarousmatter from the Keiiv, Ureters, and Bladder.

XIV. The Antifebrtkk. h is mide ihvs. Take of the Liquid Juke clarified a Pint; Juke ef Limns iMlfa Pint: double refined Sugar enough to make it pleafatt. Dofe 3 quarter of a Pint or more now, 3nd than efpecially in rhe coming of the burning fir, as alfb in the height thereof, and to quench thirft when neceffity requires.

XV. Ibc Confine. It is good againft Coughs, roughnefs and hoarfhefs of the Breu and Lungs; cooB and quenches thirft in hor burning Fevers, and very much refrefhes the fainting Spirits, cau- Fed from the wafting heat of the Stomach and humors.

XVI. The piJilleiWtter. It may be taken to a quarter of aPint, acuaied wirha few drops of Spi- rit orOii of Sulphuian and made pleafant with dou- ble refined Sugar: ir cools admirably, andisgood againtt alt forts of Malign and Peftilentiatdiieali^ ouenches thirft and cleanfe the Lungs, Stomach and Bowels of acrid, Ourp and Pituitious hu- mors.

CHAP. DCLII.

Of SPLEEN-WORT,
Smooth and Rottgb.

I. Tptf£ Names. It is called of the latter An- J_ bians, Scolopendrium: in Greek, STA\ * 5A»AVvw: in Latine, Afplenium and SpU ***** in Englifh, Spleenmrt, Alill-wafte, and fern.

II. *The Kinds.* There are two Special Kinds thereof, viz. I. *'Amtirutawer, Afpkium, Aplantium Lve, S*«LWIVJW, Seolopcndritt, and mira* (tram the likenes of the Leaf to the *Siolopendr* worm fo called :) a I fa u^nir, ^rftpC (as it is in rtie Vulgar Copies) *Tbeaphrafii, Scotofendrium, Arabice^ and H^W, Hewionum, which* • cjiij yHuAf *Herba.* - in Latine, it is called *AfpknJu/n^Scalopendriam, ScolopcnAru* and *CWe* • •?//.- acid in Englifi, *Spleawort, Smooth Spleen* - it and /U/A C7JO. In former times Apotheca- and Physicians held *llirts Tongue* to be the *kolopcndritt* verxm of the Ancients, and that *ifplemit* was not *Ceterach*-, but thie errors are now fuilfidentlymademanificit. 2. "AortnW •

viuaaffperm, Rough Spleenwon, ami this is threefold, vie, 1. V. The firft of the Rough kbd, or Maring his greater Rough Splenwon. & *pedef of many Rcedijg Strings or*

Spleenwort rough greater*

if Harts-Tongue. It hat feveral Stalks <f fome are tike unto the \$moott!:\$plee/rtixrt er ^t but mart like unto thofe of Patypcdy, & B!!Ut a Ung, cm to the middle Rib on both fides, flf- as it txere fo many feveral little Leaves »/""£ great Winged Leaf, and each j'mail Leaf d<#^ about the Edges with Jbarp points, and rout j both fides, but without /uch fspots on the b<i<& them as Polypody and Oteraeh have.

VI. The Jecond rough kind, o\<&&\. *Rough Spleenwort, Its Rvct has a ««* ^ which is cwered with Scales lying ctte upon ^L.^ with divers ribres adjoining to them- >Tls I wj thing hke to the former or firji rough hnt, ^j thatjbe divided Leaves fet en each fide v^fif*

/ St jlki ere narrower J/IJ longer, each ft-
ed from the other, but not fully to the middle
Rib. Vi the middle of tbofe outmnd Leaves, ruff
up ether; tcbich are larger; and. having bheker
Stalks r-f Narrower heaves h'-f unto them, but
fitly feparafed, and [timing as if they mere Curl-
ed, will) brovutifb Spots or Scales on the backs of
them, ./:• in ether Verm. There is another of this
fecond ki > d, ahieh is Itffer than ibis, and is found
about Coichelter in Elfex, and in other places,
growing in the wet borders of fields, and by Hedge
fides.

VII. Gerard fays, that the Rott of this fecond
rough Hind is black and Jet with a number of flen-
der Jrings, and that it is partly tike the other
• i/jhew, bearing neither Stalk nor Sll
ving narrate Lcixrs a foot long, or fimthng longer,
flatbed on the edges even to the middle Rib, fmaoth
on the upper fide, and of a fwarth green color un-
dinxab, utid rough as are the heaves of Poly-
pofy.

VIII. The third rough ktttd, or Biftard Spleen-
wore. Its Hoot is fnalt, coiBpofed of many firings.
It has brown rough Stalks, with winged Leaves on
that;, fomthing like to the female fern, but thick-
er and greater by much; green on the upperfide^

Spleemort Bastard.

and fpoetei with brown rough Scales on the other
fide, much like to Ccterach rr the fmooth hnd.
Geiatdfays, its Root is (hick, black, and bufthy like
°s it mere a Crows Neff. And it not only barren
"f Stalks and Seeds, bat alfo of thofe marks and
/pots wit! which the others are fpoctcd. The teavis
°re few in number, growing Pyramid or Steeple
Ji'flnori'd, greater" and broader below, and gradually
Harper towards the Top.

IX. The Places. The Smooth Spleenworr, or
CUracb grows as well upon Old Stone Walls and

Kocks, as in moift and fmlowly places in manp
parts ot'Exglanpps about Brittt>land other the W<ft
parts plentifully, as atfo on irammghim-Oflle, on
Brckensfield Church in Barl(hire,"3.1 Sti-puifIn A'cvt,
and in many other Plaas. It is alfo found about
Bath, Wells, and Sahbury, \Where it grows it
plenty. The rrlt of rhe Rough kinds grows in
moitt places, and Moorifh grounds: It is found
growing in Italy, anil I have found ir growing
plentifully in leveral low and moid places ;o rbe
South Carolina. The fecond and third grows in
moitt piacesand Groves, asalfbon barren Moths
in leveral places both of England and Germany.
The fecond grows nor only on dry barren f
but on Sandy Banks and lhadowy places in mo(t
parrs of England, but efped.illy on tiamftead-
Hcath near Condon, where it grows in great abun-
dance.

X. TheTimes. The Ceterachor Smooth Spleen-
worr, like Polypody, abides green all Winter;
and the Rough kinds rloruril and appear in their
Vigor, at the fame times and feafous in which the
other Ferns do.

XI. The Qualities. They are all temperas in
refpeft to heat or cold, moifture or diynefs, or it'
they exceed it any ways, they are rather hot and
dry m the beginning or the firft degree, rhey are A-
peririve, Abiterfive, and vvaiting or confuming,
Diuretick, Hepatick, and Splenerick.

XII. The Spectjkation. Spleenworts of all the
kinds, but the Ceterach or Smooth kind, moreef-
ptcially, (and which is moftly and chittlv ufed)
cures all forts of pains, Tumors, ot Swellings,
and Obftuctions of the Spleen, is good agjiult
the Yellow Jaundice, Hiccough, and the Stran-
gury or Pitting by drops, and is fjid alfo to watte
the Stone in the Biadder, to cure Melancholy, and
fpeedily to help a Virulent Genorrhatl and othei
Symptoms arifing from the trench Difiafe.

XIII. The Preparations. From the Ceterach
or Scoiopendrium, you may have, i. A Decoffion
of the whole Plant in Wine or Water, i. A Pou-
der of the fame. %. A Ditjl from the Backfides of
the Leaves. 4. A Lye from the Ajhi-s. j. A t>i-
jiilled Water. And from the Um&itis or rough
kind, you may have, 6. A Teudcr of the Dried
Leaves. 7. A Cataplafm of the Green Leaves.

the Virtim.

XIV. The DeeoSion of Ceterach, (the whole
Plmt) in Wine or Water. Diqthoridfs (ays, that
the Decociion of the Leaves in Wine, being draufc
for the fpate of forty days, Cures Melancholy,
rakes away Infirmities ot the Spleen, helps the
Strangury and Yellow Jaundice, and raufes the
Stone in the Bladder to moulder and pafs away
this Plant being of thin and fubtl parrs. He fays
likewife, that it tops the Hiccough, cures Venereal
dHeafes, but induces B.trenncfs in Women, and
therefore by them is to be avoided.

XV. The Pomler of the fame. It may be ta-
ken to a Diam morning and night in any conve-
nient Vehicle for all the purpofes aforefaid. It is
•Mb by fome affirm'd, that is is not only good a-
gainft fwelling and hardnefs of the Spleen, but
that all Diltemper of the Li vet may in a vcicy
fhort time be cured therewith.

XVI- The Dufl from the batkCidvt of the
LtMes. ISatbieOu fays, that if a Dram thereof
be mixed with Amber in fine Pouder half a Dram
and taken in the Juice of Purdane or Plantant

(4 Ounces.) it will Speedily cure tin; *Gonorrhoea* 01 running of the Kerns.

XVII. The Lye *efixiatci* from (he *AJhes* of the *tixse Phut*. Coiner arms lays, that being draflk tot forae rime (I fuppose it mutt be mads of loch :i ttrength that it may be drinkable) it cures fucli as are troubled with the Spleen : I am fure it is or good ufe againtt the Strangury, Stone, Gravel, and Tanarous matter, the in Reins, Ureters, and Bladder, and is profitable againtt the Yellow Jaundice.

Will The *D.v./rInjter*. *Cexurtrixj* lays, that being given (10 half" a Pine or more) is very efieEtpal againtt the Stone and Gravel, in both Reins and Bladder. I fuppose that if it be mixed with an equal parr of White Wine and a *Scruple* of the *S<ilt of Spleenaort*, or 1 Drams of the former Lye, it will be much more effectual ro all the purposes intended thereby.

XIX. 'l'bf *Pvudcr* of the *Dryed Lexoes* of the *rough Splecnaort*, or *Lonchitis*, given to a Dram in White Wine Vinegar morning and night for some time, it is held to be very good to difsolve the rurdnds of the Spleen.

XX. *the Catapiefm* of the *Green Leaves*. Applied to fimple Green Wounds, it prevents Inhumations and Flux of Humors, and induces their healing.

SPONGE-WOOL, See Spongiola, Chap.

CHAP. DCUIL

Of SPONGE.

I. "pJ/E *Kama*. It is called in Greek *Xmyy&*: *_l* in Latine, *Sponga*: and in Englifh, *Sponge*: from the Greek Name,

11. *The Kindt*. It was the opinion of lbne that *Sponges* were *Z* e. *Vhntanimames vel ilia*, \i2. *An'mial or Senfible Plants*: and tho' this was the thoughts of fame in *Artifitltt* time, yet he kerns not 10 he of ihat Opinion, for in *ria* *Annatium, Lab*, j. CJ/>. \\$. He Civs, that *ihodivrt* did think and fay in *bit rime* that *Sponges* *ha.l Senfe* in *ihem^* for that as they fay, *iky waulA* *fhrink* if any did pluck them, and *wrc bard* to i'r *puH'd up*, and that they do /a *be Surges* of the *S'j* would break *ff* from *their* *Sc.itt* or *R fikna*:; yet (f,iy, be) *dsvirs* did *Soak* ifthat *Re'Li-*

Tis doubikls a *boiifb* and *falft* Opinion, foi a *Sponge* is no more a *Sot fit* he *fubfam-r* *ib.m* a *Mn'hwim*, and is nothing die, but a' Plant like *Excrefeetia*¹, *bteJ* from *tht m.jtte'* *ir*: as *Agorica* is (rom the *Laxh-free^* and *Jews-tan* from *t!e Sldrr*. We have no more to Treat of here, but or* the Common or Ordinary *Sponges* which are daily in ufe, of which fome arc greater, *Som* are letter, feme round, Tume cornered, *fom* flat, fome Tuberous: fome clofe and hard, Others more loofe and opt: *U=* is a fine and thin *publiince*, others of a *coutiLr* ami thicker: fome of a town yellow color, others of a pale yellow, or a 1 moil whire, And *Baabilia* *Dj-s*, that Jo me were wiled. 1. *Hircina*, Goat *Sponges*, from a hairynefs they had upon them. 2. *Velaria*, from the *hairynefs* of *their* *hairs*, *hairs* noftas *dofe* *mow* as *diolc* in *Vails*. ? . *K tmqft* *fijlulofa*

troin their being branded with a great hollowntfi

I be Defcripio/is.

III. *Spenge U* of a light, hollow, feft, neither Stony, Woody, nor Herb-like, I

holism matted substance made ifuie Wool Of wrought together by nature, full (in *» *pitTs* of it) of final! holes, fome greater, *fott* It' [fir, which are ready to receive and bold *m>cb* fl* *ter*, and by preffing or wringing it bard, *toyttt* it out again s, but as it *encrafts* in the Water, *Vlf>* *tnüijUict* of *Grotch*, it *Jomtimes* gathers itto < or rife there is driven into its *bofa*, fever-¹ *gritty* *Sionct*, *nbitb* are commonly found therein, *jhem* the breeding and growth thereof, n *f on fame Rocky, or Gravelly Places, or not }& from the Earth.

IV. *The Places*. It is ufually found indieSe^ and upon fome (hoars, after it has been by fon* accident broken off from the place OD which it *m* Grown, which poffihly might hw^: been on me Edcd fomeStone, or Rock, or ^ *W* Creek, or hole near tire bottom of the Sea orstt (hoar, which lyes always covered with Water.

V. *The Times*. Thu Scafon!, of its *ftoirrifMflB* and Age is unknown, its podible it may <• grow through all the *pjrt*s and *dnys* oi th< the external Air not penetnrtg, or much-op⁶ⁿ rating upon the bottom of the Sea, or *tjofe* p³?³ which are always pretty deeply covt^ed *mHyvK* *ter*, fo as to caule any *difiertnre* in the time *oi* the flourifhing of futh things as *grow*, and a always ovemlwrncd with the Waters of *ee* Deep.

VI. *Ti>e Quifitiri*. It is temperate in *refprfx*^{^0} heat or coldnelV^drynet; or moiflure, A *Abfterfivt*, *Djttrttik*, and *Nephritick*.

VII. *The Spetucation*. It js fud to be a *Liar* Remedy rot the Kings *F.vil*, Sand, Stone, or any^arurous matter in ihe *I* Bladder: P i oil table again It Blains, Botch K, *Wl* Pufhes, and *oieV* *brwk'rgs* out in the Face *3W* Skin, und to clear the Eye-light.

Mil The Preparations, You tray make therefrom, 1. A *DecoSim* 2. A *fimfle ?sui* *Sponge*. 5. *BrlmorIs Ponder*. 4. *Afh:s*. 5' f *der Oj* *ilv jmall* *Stones* in *Sponges*. 6. *JW^{ti}* *Spirit*, Salt and Oil of *Sponge*. 7. A *Gimps³⁻¹* *Powder*. 8. *Tents* of the *fubjlame* thereof.

The Virtues.

IX. *The Decotfiojt* in Wine or Water, It ufed for a Fomentation or Bathing; it eafes p diicuffles recent Tumors, and *ibtiens* fuch as hard : after Bathing the *Sponge* it felf may be plied as hot as it may be well endured and bound on.

X. *T:e fimple Powder* of *Sponge*. 1. *in* drying the *Sponge* thoroughly by the *File* in an *Own*, atmott to fcorching it, and then it to ponder in an *Iron Mortar*. Dole a *Dram* in any fit *Vehicle!* taken in Wine, it is *Purge* like *Cretnor* *Taruri*, cutting thick, and *Viscous* humors; it eales pains of *the* mach, *Griping* of the *Guts* *Cclick*, *Stone*, *Gravel*, *CV*.

XI. *Ihmonts Peuder* of *Sjwjtf*.

Sponge burnt up to .1 Coal % Ounces: Cuttle Vifft Bone Calein'd, Egg-Jbclls Gilded, Sal Gem, Galls, Ginger, Long Pepper, Pellitory of Spain, ana, an Ounce: ;ill being in fine Ponder, mix them together with the Wker pijilled frvm the aforeftid Sponge, tubich defecate or dry by degrees. It cures the-Kings-Evil, being taken for a Month together, half a Dora at a time mixt with half an Ounce of White Sugar; in ginning to take it when the Moon begins to decteafo, or preftently after die Full. It alib is fciid to cure Pufhes, Botches, Boils, and Swelling Pimples in the Face and other

XII. *The AJjies. They art made by a fimple and naked Calcination in an open tire; er of the Cnpiit Mort. tit tit: hot torn of the Reran after tie Spirited Volatile Salt are ofcendtd or drawn off. Mixed ivith a little Wine, ir. is ufed to clear the Eye-let, and to cure them when Blood-lhor, or iroubl(,j with a Rheum or Watering.*

XIII. *I be Ponder of the fmall Stones in the Sponge, It is given to fuch as are troubled with Stone, Gravd, Sind, and Tattarous Mucibge in the Reins and Bladder: to help to break the Stone, ;inJ to caucie it to jrafs away with the Urine. Dole a Dram morning a;d night in a Glafof White Wine, &c.*

XIV. *The-Volatile Spirit, Suit and Oil of Sponge. They are made by distillation in a Qlajs Retort, Take as much Sponge as you please, cut it very jmall, put it into the Retort, tobieb place in a ciofe ReverSeratory, lett b its receiver: Lute the fun-Hurt tvell, and live tire Gradatim, like as in di-(i illation of Hotter -, and continue to increafc it by little and little, till the white and Oily Clouds begin to come, and tbit you fee the Volatile Salt Sott jublime, and flick to the fides of the Receiver ± tontinue the fire in the fume degree, till all is come jorth, and the Receiver grom: clear of itself. Then toafie the fire, and all being cold, take iit(O) the Vefjels, pour out the Spirit and Volatile Salt together, anafeparate the Oil by a Vunnei, or fame Cotton^ tohiob keep in a G&fi hy its j'elf. Put the Spirit and Volatile Salt iztit a low Ola/s Body, and reSifytlwB in S;ind, keeping them together. This Spirit is a fingulir Lichonrripuck, or breaker of the Stone. Tlie Salt altb is good to beak the Stone ID the Reins and Bladder. It is powerful alfo to difcufs and cure all Strumous Swelling or Kings-Evil, in the Netk or any other part, being given from gr. 6. aJ 16. in any proper Vehicle. This Volatile Salt and Spirit of Sponge arefaid to be ibms; of the greittettopecificks inNarure for theCure of the Kiné Kvil, lx;ing given morning and night in the proponioij atbrefaid, in auv proper Vehicle Univcrfals being jtemifed. And indeed the Spirit, Volatile Salt, and fectid Oil of Sponges, are not only excellent ag;iin(t the Evil •, bur alfo to diflbtve and cure the arpnchoeele^ which is a Bunch or great S veiling roiw d the Throat, to optn Ob-itrutions in the Keirk Ureters, and Bladder, to break the Stone, tuntuMp expel it, as alfo Sand, Gravel, and the like from the Urinary parts. By following ihefe Woiticiik'i tor feme time, you will daily and cvjJaaily lee theft Scrophulous, Strunious, andi>^ Tumors todecreafe and vanitri ^o'nothi^"- I" the Difjillatfa/i, part of the Volatile Salt mill »rifr <ixdj)ick to the Top and Rtk of the Retort, and ptirt of it will mix, and be dijfohed in the- Spirit, You may ttSify each a-part if you f<> ptofff, or diffolve all the S.ilt in the Spirit, III.-I rtlify them together ftorn the Oleaginous particles, as we have in many places taught in Ovi Septafium, or Druggijs Slvp, The Cat-*

cin'd Sponge at the bottom of the Retort may be reduced into l'ouder or Afhes for the parpofot at SeEl. XtL ajorcgveig, and it mitvalfb ferveto viok-nt Fluxes of the Btood." iy-jw tie pCi Mortuum, as it is hft in the bottom you w but little Jixt Salt, wiibevi a new and efi-n Calaniition^ and therefore it is necejjury to Calcine if a-gain in a Crucible till it is white, offer which you Kjy draw forth the faid fixt Salt after tit-gar Method. This rixt Salt is of the nature of other fixi Alcalies, as Salt of Tartar, Sjlt of OiHer-fbitlu and the like, and may be given ia the lame Cafw; a gr. 12. ad 24. inArfmarr, Parfly, or Onion Waters, agsinfl Obifruclions in the Reins, Ureters and Bladder, Stone and Gravel, and to abforb Acid humors, which are the 1 of many pernicious Dileofes. See more ai large here&f in the Third Edition of Our i'harm. B<i-ittato. Lib. 1. Cap. 2. Seft. 33. and tap. 10. Sect. 40. where you will find much litisia-ftion.

XV. *V)e Compound Fonder. Take Voider of Sponges, Pouder of Sows or Heg-Lice, ana^ an Ounce, Ponders of Crabs-Eyes and Winter Cber-rics, ana, hdlf an Ounce, mix them. Dole from 7 Scruples to 4, or a Dram and half in Wine Arlimrt or Partly Water, fwected with Syrup of Marfh Mallows, againft the Stone, Gravel, S;rangury, RiugsEvil, Bronchocele, &c. to be given morning, and night, ffe.*

XVI. *Pledgets or Tents wade of Sponge. The Sponge bring Dipt into a thin Gum Wnter, it then to be fqueec'J hard, andprtft frongiy in a Prejs wdfo kept till they are perfeUy dry, and then 10 be cut out into Tents, or PUJgcts, ,f tol't term or btgnefs yoit please. They are put into hollow-Ulcers which are ready to riofe, before they are ihroughly cleaned, and to open and widen the Orifices of Fiftulas, hollow Uleys, We. a Thred being firrt tyed to them beibti; they are put in, thereby to pull them out again.*

C H A P DCLIV.

O/ S • P U R G E Garden.

Tfi Kames. It is called by the Arabians, -ii. W.v.;, and Miihettdane: in Greek, Asiua: in La tine, i.iiihyns, and Cutapatia minor (becauftt the Seed of Ricinus or Chap. 6)6. following, is uQed Gitapurict majsr) and in HngliOi, Garden. Spurge.

II. *The Kinds.* There are above half a hundrei particular ibrts of this Plant, but we in this work (hall not rake notice of above Kigt Generic Species thereof, and under each of their Titles, we (hall Treat only of fkh as either grow and are Nurit up in Our Gardens, or Grow Wild abroad in Our Fields, Woods, Marfhes, &c. or are found growing in Our Weft-Inditi Plantations, and American Iflands. 1. Avi>.m, hatbyris^ Cataputia 7xl-nor, Garden Sprjree, of which in ibis Omptet. 2. nirj'iM, P'rtiyufa, Efila, and Efula minor fmall Spurge, of which in Chap. 6%^\ Chervj Ki«, BKe^t Cm, and Crot dx, Ricinvs, PalwJ-Chrijit, Gieat Spurge, of which^in Chap. 6\$6. 4. B'juitiiti*, Mezerean, Q)air,d'lea Germanka Thy-melta, SpurgeOlivCj of which inChap. 657. i T,tf_m*. @- >?&>*>< Titfmafia, Titlymalus Chara-

«*» (i.e. Vdhr'u, because it dually grows in Vjlteys and low moitt places.) Wood Spurge, of which in Ohip. 658. 6. *Tibymalus Pstjtrh*, iv- Efu. a major Germanica, Marfh Spurge, or Grater F.ula, of which in Chap. 619. 7. 77-ihymaiui paralicis, LuSaria, herli Lutlaria, Sea Spurge, of which in Chap. 66s. 8. 'Aapriwfe, Laureate, Spurge Laurel, of which « Cfof. 661, following: ot" all which in their order.

111. The **Kinds of the Garden Species**, thfl molt common aic thefe three, v/s. t. JWOrf, Luhyrir major hortenfis, Cataputia minor, The Grater Garden Spurge, 3. Litbyrh minor horletijis, Ciilipittia miner, The letter Garden Spurge. 3. *Lashyr'u minima*, Lathyris minor Wilechjmphij- >iit minor fore conghmerato itwbixi, The fmaliefi Garden Spurge, and this very probably is the *Gttjputia pttfm Ctdpim*- The Name is supposed to be derived from its Purging Qaatitr, it being AD exceeding great and very Vehement P

The Defcriptions.

IV. The firft, Or Our greater Garden Spurge. Its Root is long and Woody, penfbing *s feon as its Seed time is over, aia. fprngs again every of the Seed of its own Sowing. It rifes up with one liollojo Jirait whitifh Stalk, i>f a fingers th'tekne/s, Jhadowed over as it were aith a brown color -y on which grow up ta the Top for the firfl year, many thick fat long and fonteuibat narrow Leaves, of a blcwilh green color on the upperfide, and more tabm/b underneath, fometbtng Me unto It Mow Leaves for ti>e form, which being cut or broken yeild Milk as plentifully as any of the o-Mr Spurges- The next year after, it fpreadt it

Sparge Garden,

felf into meny/mall Branches, with/maile I at every partition, rvery part whereof yield X¹¹ <T the others do, Tlie Jlotters are of a Voleydhw ceisr, end fiaii in Cups, as the other kinds do, but are fmaile than /ante offbeat, yeilding and nothing neqrlo bet and burning Seed, which ti cncbffd in Triangular heads or hush, fimethint like to thafe of Palma Cliiilli, but rounder aim larger, than in many other of the Spurges.

^in the bet Sun (the heads or husks tracking or dividing) will fall out of their man accord.

V. The fecond, ot LdTer Garden Spurge. V.nt in its Roots, Stalks, Leaves, Branches, EtaWA Seed- and form and manner of growing u «TM like the former, faving th<it in every part thereof it is teffer, and can only be difertminifd fiff* it by that very fig/r, and by which it is dijlinguijbt jrem the other.

VI. The rhrd, or Smalleft Garden Spurge. »' Root is fmall, bavmg many Strings wrte K W " adjoining to them, it fprngsuf tmthmany Render branches lying on the Ground, fet full of pTM Leaves, no bigger than thofe of Kwign.J* /«*» among which n/es uf a Stalk, about a toot btgr, having many other Branches jprwging from it, almoji from the bottom 10 the top, tsl/ich are j# full of /uch like /mall Leaves, as grew «'

Spurge Garden Smallefi,

At the Tops whereof eome forth many flowers, xnbhh are /mall and yelhto, Clafiefing thick together, uponsmall toijtjalks, but na jpreud abroad like the former. The Leaves and Stalks of tbts yiehi a Milky juice like thofe aforegoitt.

VII. The Places. Thefe all grow in ibme pta«s Wild about the borders of Fillds-, but for the moit part in Gardens almott every where, in which when they are once Planted, they do not eafiy q^{At} their habitation.

»
VIII. Tht

Am. *The Times.* They all flower about the
aid of June, and throughout July, and their
ripeness ripe in August.

IX. *The ^politic**. They are hot and dry in
the fourth degree, Catharticks, and very strong
M and Catharticks. Of which the Seed a
to; the rr.rA\ part In life with us, to purge Witt,
both by Vomit and Stool

X. *The Specification* Spurge is proper against
the Scurvy, Dropfy, Jaundice, Gour, and Kheu-
nmGn anifog from a Cold caufe.

XI. *Ifc fat?* **** *IM**J have S
from, i ^ /
Juke. -
ter of the tshate Plant.

The Virtues.

XII. *The Liquid Juke or Milk.* It works
more Violently thjn the Seed, and therefore is
y rit co he taken inwardly, but to be out-
ward!/? applycd, and that carefully too-, and fo fit
is a depilatory, and helps to take away hair on
the Eye-brews, Fore-Mad, Temples and other
parts; but it ought not to touch any other part of
the Face or Skin. Being also Cautiouly applied,
it takes away proud and dead flefh in Wounds,
hard Callous fulstjuces, Knots, Corns, or Warts
in rite flefh (if they be firtt pared to thequick,
and then applyed) It isa!lb good agamfr run-
ning Scabs and Sores, as also to obliterate Scars,
Spots, and blemifws or other marks of the Skii.
If it K put into an hollow Tooth, (which you mult
do with that Caution, Ib as it mfy touch no o-
ther Tooth, Gums, nor Mouth) it will ease be
Pain thereof.

XIII. *The Troebes.* If the Milk is made up
into Troches or lirtle Balls, with Meal or flower
of Beans, Peafe, Barlf, or Wheat, and kept dry,
it will ferve all the Year to ufc, asocufion is of-
lbr'd ior the purpofes utbreleid.

XIV. *The DeetSiott in Wine, Water, or fat
Broth.* It has all the Virtues of the Liquid Juice,
but much more gentk, and h good to remove
moft external deformities of the Skin. Taken in-
wardly it works to fome purpofes (as in die
Scurvy, Dropfy, Jaundice, Gout, Evil, and Rheu-
matifTis,) more lately than the Seed, and fome-
wiut more weakly.

XV. *The Seed.* It is given 5, 7, 9, or 10
grains or Seeds at a time, according to the Age and
Strength of the Patient, which purges both ways,
vis, both by Stool and Vomit, and evacuates
tough Flegm, Cholera, Melancholy, and Water as
bioflorides fays, and fo cures thole difeafes caufed
by the abounding of thofe humors. The ufual
manner is to fwalloiv the Seeds whole, without
breaking either Husk ot Kernel, and then they
work the more gently and weakly: but if the
husks are broken, and the Kernels fwalbwd
whole or Chewed, or otheiwife braiied and mix-
ed with Drink OI Broth, they will then work the
more violently, and therefore are to be taken with
the more Caution.

XVI. *The DifiiUei Water of the whole Plant.*
It is of an cfpecial ufe to cleanSe the Skin from
Freckles, Scurff, Morphew, or any other difcolor-
ing, detilcment or deformity of the SkirL uiedci.
the* by it (elf, oc mixed with Bean flower or
Baltard Dittany, or Crowfoot water, being genrlv
on the affe&ed places, lermoving the Dii-

of the parts in a fhort fpace of time.
The fimple water is also profitable agaiuft putrid
anJ foul Ulcers and running Sores.

Nota. TJJ^ *Garden Spurges are /aid to be ?/*
fe8mil for nil the purpofes to which the Palma
ChriLi er greater Spurge may be fyd

C H A P DCLV.

Of S P U R G E [mall,
ox,
E S U L A fad!.

I. /TP^£ *Napes.* It is called in Greek
1 in Latine, and in the Shops *Efulu, Efulc*
mirier^ Yityufn, (as if it was aPine Spurge:) and
in Kngliff, *fmall Spurge* and *Jfaa/i Ejula.*

II. *The Kinds.* There nre Twelve or Thirteen
Teveral forts of this Plant, but the five follow-
ing are ctreHy known to us, viz. 1. *Efula mi-*
nor, Efulu ritunia, Efulc minor rotunda, Fcplus
round beaded Spurge. 2. *Efula minor, fityufa*
mi/or, Thymijus pinea, imall Eflila or Pine
ipurge. 3. *Ejula Cyprina, CypariJJias vitlgeris,*
Tibymalm Cypariffias vulgar is, Our Common
Cyprefs Spurge, or Welcome to our Houfe. 4.
Efula fac Tibymalus Heliofcopius, Efulu folife-
ijtiia, Sun Spurge, becaufe it tollows the motion
and courfe of the Sun. j. *Ejufo exiguu Tragv,*
Pep/is Minor Bakcampij - Tihymalus Lepo-
phylbs Miiithioli, Dwarf Spurge, or linall An-
nual Spurge.

Tilt Defcrijtio/it.

III. The firft, or Round-headed Spurge. *Its*
Root is fault and long, with many fmall Sirmgs and
iibrei at it, perijhing every year^ and rifmg again

Spurge round headed ftiall, or Fephts,

of its own Sowing. It fl>ovts forth round about
the Xpl, many fmallweak reddifh upright branches,
<mall Leaves fit by Couplet for the mof part,
fontvibt like to the Leaves of the Sun Spurge at
bc&, VI. following, but rounder pointed, and [matt-
er, of a grayijh green color on the upper fide; end
2 tittle nddifb or purplijh undernealb, w/bich mil
oftentimes change u be uibt in the Sum-
mer time. The flowers are very Iv-ill and yellow.,
(funding mare rwnd ot efofe tvgetfcr, as il were
:n tin L'mbeJ, otberwife like unto the rejf. The
Seed is very fmall dad contained alfu in a kind of
Trhnguif heads. There is another fort of this
with redifotcers.

IV. The fecond, or fm.ill Efula, or Pine Spurge,
(which is thought ro be RUMJUS his Efula.) In
is fmall and long, of the bignefs of sues
finger, fomethig bl.ickifh on the out fide, but
within, and abiding many years -, yet the Extre-
dees femetimes ret it, and cauje it
toperijh. 'Ike Root of this ffula, is accounted
by the m/i tear tied Pbyfkians to be the true Efula
minor tad that out of which the Kx trail um Efi)lz
Kulandi u to be made. Tbu /mall Spurge has
divers weak and /lender Sulks, half a yard high,
on which grow many fmali, long, and narrow point-
ed Leaves without erder\ round about them, very
like unti the Leaves of Toad-flax - at the Tops of
the Sulks grew yellow flowers, fimetimes dajht o-
vtr with Purple* like feme of the other Spurges,
but leffer, end growing in the like Qtps: tsbich
falling away, the Seed conies after, zahich is jmall
,nd muni and contained in Triangular heads cr
busks.

V. The third, or Our Common Cyprefs Spurge.
I' e Root of this is very like the fecond kindjufi
before described, infoniuch that many have rntfhi-
fu-n it, for the true Efula minor out of which the
Extrd ought to be made. And have ufed it in-
jiead thereof But this Cyprefs Spurge is J» Ufa
to that Pine Spurg, that it has deceived many,
mho htve not carefully view'd it, and oberdd the
differnets: for this fats alfo feveral /lender
brmnifh} Stalks, en which grow fmall narrow
Leaves, but fomethig Jborur and thicker than
farmer, and thicker fet upon the Stalks. And
m its Flowers and S?eJ, it is like the fame

VI. The i'ounh, lit Sun Spuiyt-. tii Hoot is
fmall and Tbrceddy, pcrifhing every year after Seed
time, and rifing again of its awn Sowing. It hi:
- mof part but em reddijb Stalk, half
high, bare cf leaves at the bottom^ almofi halfway
upwards, and then fpcading it fcl into tea or
imjll Branches, on tehich grow Sparfedly it-
ilitixifh green Leaves, /mail at the bottom,
and broader at the ends, fmcthing like unto Pur-
flunc Leaves. The flowers are yellow like unto
the refi, Jianding in holloa Cups if Juo Leeves a-
{-nee, the Stalk running through ttym, as is to be
• others. The rafcafe Top or head
cf floxers is fjid to turn wit!) the Sun, (whence
the Name Tithymalus Heliofcopius five Solife-
quius.) The Seed is fmatt and round, contained
in tike Triangular heads «i the firmer.

VII. The fifth* or Dwarf Elula, or fmall An-
nual Spurge- its Root is fmall, long, hard, and
Woody, perifilng every yew, as fcon us it has gi-
ven its Seed. It hit* many fmall flemler weak
Sulks jbeut two hindfuls high bufhtng forth into
many branches, and fpreading far upon the
Ground: en^chkh greta very fmall, tong^ ^nd
narrow LeiXX^ flanding upright, and which grow
pretty thick Xbetton, ahich oftentimes are not
(harp but flat fainted; the uppermofi whereof are
fmevahat broad at the bottom, ami comfufs about

the Stalks, ending in a long fharp point
mqfl part. The flowers are yellow tike vr,
ethers, and very fmall, after which come Tri'eitgih
is, which arc fnjll and contain fmall round
grayijb Seed, not much bigger than Poppy Seed.

VIII. The Putes. The firfi grows in Vir-
• is yllu in Ditches and borders of Kit-Ids:
Gerard (ays, it grows in Sjl< Mjrlht-s neanbeSea;
as in the Ills of lijantt by the Sea lide, between
Receivers and Margate, in great Plent)-, it alfo
grows in many of Our Gardens. The •• amd
third grow iti ibvnc places in Germany and 1
IJOIII by Kims fides and borders of Jields, but
with us only in Gardens. The fourth, grows wid
with us in many places, Gerard % s, it grows in
barren and <waffe grounds, and in earabTe Land,
almcft every where. The fifth grows in many
Chalky grounds in dry hitly places, as alfo in our
Cornfields.

IX. The Times. The third kind commonly
flowers in May, all the others in June, July,
end Auguft, and their Seeds are ripe in the months
following.

X. The Qualities. Efula is hot and dry in the
fourth tk-gree; Jnrlaming, Catheretick, frong!
Emetick and Cathartick •> of rhefe the fecond kind
is chiefly uled.

XI. The Specification. The Seed and Root are
chiefly in ufe with us, and are good ro evacujw
Viicous humors of ail kinds, and Cure the cold-
Scurvy, Dropfy, Jaundice, Evil, Rheumatifm,
Sciatica, acd Gour. The Milky juice has alt the
Properties but much more violent.

XII- V.v Preparations. There are of Ufa, r.
Tj;e whole Seed. a. A DecoU'mn cf tie fame in
Yat Broth, 3. The Root prepared. 4. The Milt
or Juice. •>. Pills of Efula. 6. A Diffoillced
axter of the whole Plant, 7. J Pouder ff the Seca
and Leaves. 8. An ExtraS,

The Virtues.

XIII. The whole Seed. They may be give"
hutl'd from 3 to 8 (tho* Dbfcories fays they
may be Taken ro a dram, which is too large a
Dofe by much for our Englifh Conlti rations) a-
gaint the Scurvy, Dtopfy, Sciatica, Gour, Rheu-
matifm, pain in the Stomach, and Hypochw
driack Melancholy, they both Vomir and Purge
briskly and expel Water, Flegm, Melancholy,
Cholcr, and other Viicous humors and Tinaroiis
matter from all parts of" the Body.

XIV. The TsectSion cf Seed or Leaves in fat
Broth. By Bathing with it, it cures the Stingings
or Bions of Scorpions, Hornets, Serpents, and
other Venomous Creatures, and purges ihongiy
downwards Cholle*, and Flegm, eafes the pains
and takes away the hardnefi of the Belly and
1 welling of the Breaits. And is fingular againft
the Uropfy, Sciatica, Kheurmifm and Gout, be-
" ^ " ? * °*crniMri inwardly.

XV. The Juice. It is to be taken in
11, and Ilcep^g ,t in Vinegar, and 6 reducing -
r o p o u d c r i w l w w fty^ ir may be gi
2 Drams: hut 1 am fatifkd thar siven froxfhalt
a Dram i^aDram, according to A&md Satm&h
may be a luttciwit quantity: it may be given in
Mtd or Honied Water, for all th o p u r p o f e ^'

XVI. The Milk or Juice. It j\$ dangerous to be
taken inwardly: bur outwardly, it is good againft
the Stingmg o!" Scorpions and Hornets the Bit-
ings ot Serpents, Mad Dogs, Ofi. and applied to
Wans.

Warts, Corns, and other EwwiMncws « raUs them 'away. Ani mixed with a *f ^? ^e'p tity of Honey, it is good to clear the ligh , te-P ofthe Eves, wawingand running oi them.

The Juice is made by beating in a Mortar and Sieving in a hair Sieve, then the Juice, and put it in a Glass, then the Juice, and put it in a Glass, then the Juice, and put it in a Glass.

Of SPURGE Great,

ox,

PALMA CHRISTI.

I. nrffE Kme*. It is called by the Arabians, l C6enw, and firw.' in Greek, K^?< ^ Cm and Cretan, * Crottitu foe Rum JhsUitaint, quod refirt femer- Anas in his Commentary upon JonasCap. 4. lays rhac this Plant is Henited by the Hebrew word kitojen, tho' in our Bibles it is tnnflated a Gourd, in latine Rwnwr, P^AM CS^/, Gtapxtu major, Gmmim K<<w<< by JHf><i and by fome, P<rfa- ^/«r. In Englifil, W)c Great Spurge, and

II. TEw W r . There are feveral forts of this Plant, but the chief are, 1. P... G/ ... Q...

mon Great Spurge, nr vulgar falmi t.hritli. I ut the Seed of this Plant is tor the nioit part called Cdt,iputia major; and by force fiati injernalis : and its Oil in the Shops is called O'f'm de Cfarva, ^nd by fiwae, Oisitm Geinum. a. Ricisut war , Pj/fllj t^v.';r wwar, The leSer Species of the great Spurge, or Palma Chritli: the Seed of this which far kin fen fell Jaw, he fays came Bermudas; wheie they made Oil thereof, 5. AJ-f<T*r Jbnericanus, Curcas lad l.v.v; The A great Spurge, or talma C.hritli.

The Defriptiotts.

III, The fiift, more Common Great Spurge or Vulgar Palma Chritli. Irs Root confijs tf hug and great firings and/mall Vtbrcs, which taib us pcrifh quickly after it has felt the firji Frojh, and muff be fet nets every year by fch -s will hove it, but abides all Winter in Wtrm Countries which have so t'rr/h Tb:s girjt Spurge jprings up in our Country, to be Eight and Janet inter Ki/te or Ten Feet high, with a hollow Stew, as big ai-mefi as our Ordinary Canes, of a brownip color, xanb an Eye of blew boarincji upon it. The Leaves which (land upon she Stem, and upon the branches it fend forth every one firccrally on nil fides upon long lootjhlks, are very broad, or large,

Spurge great common: or Talma Chrifti.

and divided into 3, 7, 8, or 9 farts or fions (reprejening the hand of a Man with the jngert Jpread abroad, of a dark or deep green color orf the upperfid\ and of a whitifh green underneath. "Hie flowers are many roind bmtont, Jhootig? forth together, and fland all along upon a long

5M//C, at the lops of the Stem and **Branches**, • Jiiiing of many pale yellow Threads, tohtcb jail i away without bearing any Seed, but farther or higher up, upon the Stem, or m.tin Stalk, and fomtimes upon the **Branches**, bre.ilc forih ..

• is which are the Seed, ufmn long i'ootjialks, be- tn\$ Triangular, rough and afl o the out- jilde, or outward JbeII, abich opening it felf, or being opened, there lies within it the Seed, whofe OutK.irdhusk is dtfcolored, or as it were fpolied and Jbaped like uai.i a Tick or Ti.ir, which con- taint xbitih in it, a pretty large, round, jomewhat long and flat jhiituig Seed, of a brown color, vjrt£ a while Pulp or Kernel within it, of a hery hot T<jtc, burning the Mouth and Throat of fuch as eat it, but very Oily, and from which (in the IVdt-lr.dies, as in Carolina, Cfc.) they frefs forth an Oil, which is vfed for External purpofes, and feraes alfo to burn in Lamp?, but is hurtful to be ufed with food, at Diolcoiides fays •, and yet I have been told by fume in thofe **West-Indies**, that they eit it at Oil Olive, with- out any httrt or detriment •, this may tit true for all that I know, end yet ijould be loub to make the hxpert intent.

IV. GtViWiiefcribes it after this manner. Rici- nus, Palma Chritti or **Kife**, from a long well branched Root, fpr'ngs up with a great round hollow Stalk, five Cubits or feven or eight feet high, of a brown color, tlyed of a blewjib Purple ttpdh. green. The Leaves are great and large, divided into fever si feStions or parts, fa- fiiioned likv unto the Leave) ej a rigtree, but greater, ardjpread wider open a ve i Mans band.

Towards the Top, theri comes forth a bunch of .tfowcrs cluttering together like a bunch of Grapes, 5 the lcwernpft are of d pale yd low color, and wither away vsitbaut bearing any fruit, but the uppermoji are reddifk, bringing forth three corner- ed heads or husks, in which are containe the Seed as big as a kidney bean, of the callon and fflappt<f •:n Vermin which hunts Ctul, called aTk or Hike.

V. The fecond, or leffer Species of the Great Spurge or Valma Chiilt. // is like the firmer, out Jeffer in every pzrt, attho it grata in the fame fe Seed being ripe is manifefih much • the fermr. This ?l.mt Clufius m his ExotkK Lib. 5. Cap. ?j. hm of; and Beilerus in bis Hottus Eyftettenfis, has largely prefigured.

vi. The third, or American Great Spurge, or P-ilma Chtifti. This differs from the two former f«>is, net only in the greatneff, but alfo in the form. for as Monardus and Aldinus/y, it grows much greater than any growing in Spain, w!)ofe jirft Leaves tire almojl round, and larger I vje of the firft Species, but thofe which fol Ion are bread like to the Pj/m of an kind, and cut in or Tome en the edges for the moj part into five imifwnt, fomthing refembling or anfwering •" the five fingers of a hand (whence probably came the Name Pentadaaylus, and is an appella- tion more proper for this Species, than for cither of the former.) In the Seed there is fome diffe- rence alfo, which tW the heads or husks >are Tri- angular as Oilier Spurges are, and the former Ri- ctni, yet the outward husk is not prickly or rough, bjttfmooth, and of art Afb color, the mncrmoft Seed it fctj being fomewbet like the former but more black, and not fpotted at all, and it full as Oily at the firji before deferibe, and of whiih a great quantity of Oil it made for outward ufes. IIsfitb-

jiane is woody and it of the magnitude of a Shrub.

VII. The Places. The firft grocs with us uj England in our Gardens, and wjs brought to ui from America: but it grows alfo in the hotter Countries of Europe, Afia, and Africa, Syria, M^yfi. and other p;ins adjacent to them, where as Belhnus in Obferuat, Jik I. cap. I⁸ the Stalk grows to be as big as the Body « a Man, and as Tall as ;t reafonalile great Tree, whofe Seed carnoi be gathered without i Ladder, its leaves not falling away in Winter; nothing of which we know in our Colder Climates. This Syrian or ^Egyptian Seed contains a • heat in it; lor the half part of one Seed being taken by a ltrong young Man of about 2 of Age, very much troubled with the Head-ap⁵; purged him very foiceably and eafed ilie FaiD] But by accident chewing the Seed in his W^{utn} (which he ought to have fwaHowed whole ot n Chewing) it fo vehemet; J *nsi •

and Throat, and Mouth of the Sromach, that it put him into a Keverand gave him an into* Third with a Fainting of the Spirits, which con- tinued foi the rpace of nine days, and then dyed, notwthfhnding lie was under the are u three Phyiiians, who uled all the mt; ble. The fecond and third kinds, grow in teyePi parts of Amtfieii; the fecond in paniculjr 1 tourw in lbme Plantations in South Carolina, and ¥&' kinfn fays, his ficfi Seed thereof came from w* Bermudas, as More is hintet^

VIII. The limes. With us* in E^W they Sown in the beginning of Apr\ and flower in tf end of July and beginning of ij^/f, their^c hting ripe towards the totter end of the Month.

IX. The Qualities. The Sced is onlyafcd being hot and dry in die fourth degree, it is inrlaratng, s**treamly Attra&ive, and itrongly Ernetick a⁴ Cathartick.

X. The Specification. It is peculiar for «^{nc} Cure of a cold Scan?, Cephalgia, Drop¹?! Jaundice, Scrophda, Sciatica, Rhcumatilum a³ Gout.

XL The Preparations. You may have, I-^{rf} UtJPdSeed. 2. A Deccoiwn thereof in^{rf} Brrib.^{rf} An Exprejfed Oil of the Seed. 4. A ~

The Virtues.

XII. TlxhuirdSeei. Diofcorides fays, that ^ Seeds freed feom the Husks, being bruifed a^ taken in Drink, or other proper Vehicle, JolA purge choler, water and Hegm, and exp^{el} Aqueous humors abundantly from the Belly, pro- voking Urine alfo; but as Diqfeorides hiff^{ell} confeues, it troubles rhe Stomach, and overturns it mightily^ yet with good Advice it may L* &' ven to ltrong and Vigorous Bodys, corrected vtrtv-A Anifeed, Carraways, Fennel Seed, or Wic^{trcs} CinaTTnon, and fo may be given to fuch as ly from the rraote Parts. Coji-fus in his Com- mentary upon Mijues, thinks that the Dole 01 5.^o Grains or Seeds to be a l'ault in thofe who CopP£ ed out tSiofcoriicr, fctting down 30 for ;, whio¹ Litter number is the utmolt Dofe, which may be fefely given. Clufius lays, he knew divers Em- pyricks give of the fmall Seed, which came out

America, in a final quantity, as a Purge many Difeafes, which they held as a Worth, becaue by its purging the Body well, they round it a great Remedy.

XIII. The JXeoSion » f s ^ g / It is good for all the purpofts. of the ^d Seed before related, the Dofe of which is to be regulated according to the number of the Seas.

XIV. The Expreffel Oil of the Seed. tes W put inw Uylters, it opens of thl Bowels, expels Wind, eato and helps Fits of the Mother the Oil of the Indian Scruf, is 1 perience to Cure all difeafes I Cold Caufes, ditolve Tumors or culTesWind, eafes rhe Colick^id

use Herbs, of differing Species, yet are much of one and the fame nature, and have the Gene Caturick qualities. 1. Chamaedryas species in the Herb. 2. Chamaedryas species in the Herb. 3. Chamaedryas species in the Herb.

Spurge Olive.

The Defcriptiofis.

III. The firll, or Our Me-zeteon, Dwarf Bay, or Dwarf Olive, called alfo Flowering Spurge Olive. Its Root fpreadt out into many ramifications and long tough branches, which are covered with ayellorn Bark. It rifes vp with a thick woody Stem iKO or three beet high, nnd Sometimes higher, according to the goodnejs of the Ground: of the thicknefs (if thty be eld) of a Ghilit cr Jciths Wrifl , at the Ground, which rifing up, fpreads it felf out into many tough flexible or Limber Branches, covered with a tough grayifli B.iri or Rinde, befet with fmall' long Leaves, Jomething like

Spurge Olive or Me^ereon,

unto ?rhet Leaves, but falter, paler, thicker, and fatter, and rounder pointed. Tye flowers amir before the Leaves, oftentimes in January Ind February, eluftring together about the Stalks at certain dipnees, which are fmall, conjiflmg of ioitr Leaves, very many growing together, and breaking out of ike Branches (as it were) by them- Maes of a whitih color tending to Purple, and of a 'fragrant pleafant fweet j'mell After the fiotaen are pazi come the Berries, which ere at firft green, but being ripe, ofa Jbimng red color, which if they pnd too long upon tht Branches become of 0 blackifh red, of a very hot and burning tafte, inflaming the Mouth and 1 threat with danger of Cheating-

IV. The lecond, or Widdow Wail. Its Root 6 Y 1 fpreads

prtfids tit Jelf in the harth, but tfgt very far, being of a hard and Woody fubjlancc, which cafly ptrTfhes, if it be net carefully defended from the Extremitie ef flutrp Winteri. ll hits no great Stem, but a fmall fhrub of about three beet high. The whale Plant fpreads it jelf from the Ground, into mmy flexible tough green Branches, with many j'mall twigs, on which jland feveral fmJl, narrow, long, dark, green Laves, like Privet, taller, 1.1. t blacker, which abide green all the year. The jusen grim at the ends of the Bra/tchcs apd are very fmall, fcarcelly to be feen, ef a pale yellow color, and come forth between the Leaves and the Stalk, mn.ii: of three Leaves t-piece, Which being pazi there comes a fmall, bkekifi triangular berry, very like to the Tithy-males, three ufually fet together, for wliich refan the Plant is called Tntoccos. Thife Berries are green ct fir ft, afterwards red-, and brown^ nhen they bt withered: which contain in them a Qify jinejs, like that ef the Olive, and are of a hot biting tffe. burning the Mouth and Tongue, as do alfo both the Rinde and Laves.

V. The third, or Spurge Olive, properly fo called, or Spurge lbs. Us Rcot it left and tender tebi/ji it is young, very like unto a Radijb Root at Clnfius/jlj- ••, but moody when it is grown elder, covered with a tough thick bark. It fifes up with divers tough Smlks, a Cubit or tw Feet high, fometimes in very good ground a yard, high, of about she :hmknefs of ones thumb, covered xoitn an AJL> colored bark, and fpread nut into many Branches, covered round in a manner with Leaves, which are many, fmall, narrow and long like Myrtle Lciives, or mtber like unto the narrow Leaves of the Okve tree, narmmer ani leffer thin the Leaves of

10 Wail; famething like to thafe of Flax, to which many compare them, bat that they are hinder and broader, being alfo clammy, fiat, and pointed, continually abiding on the branches, without falling off as thnje of the Chamrdea do, At the lops of the branches grow tmjny fmall Starlike flowers, confifing of four white Leaves apiece, after which come fmall round berries, which at firjl are green, and when ripe ef a red Coral-like color, but are a tittle wore long than round, of the bignefs of a Myrtle berry, with a pulp or fubflance like unto a Havhorn or Cherry, in which is a white Kernel covered with a black and fojt, yet brittle Jhell or skin. Jhefe are very hot and burning in the Mouth, like Mezereon.

VI. The fourth, or Mountain Spurge Olive. Its Root is long, andfpreads about, under the upper part of the Earth. It rifes up teith ajntall Woody Stem, ? or \$or more feet high, branching out towards the Top, into many fmall flender and tough branches, covered with a rough, hoary and green bark, befet at the ends thereof with fatter, fuller, end fmailer round pointed Leaves than the firfi or Our Mezeieon, of a grayifh green color on the upptrfide, and lx>ary underneath, which fall away Fefore Winter, as Our fclezereon does. The floxeers are many, fet together at the ends of the branches, greater than the former^ confifing like* aife of four Leaves apiece, of a light ilufb color, flandmg in fmallgrayij busks^ tf very little (mil). The berries are fmall long grains, of an excellent red cnlor, which afterwards turn bl.u

VII. The Places. The firft grows very plentifully in many places of Germany^ and naturally in moift and fludy Woods in Poland and thoe Eaitain Countries! und in great abundance in moit of our Etigtijh Gardens, The fecond grows in Spaiity and in Provence in France, as alto in Lan-

guedock, in lough and ddart pbkra, but with US only in Gardens. The third grows in Spain, aiv in Titfeaity in haly, and about Trent, in rough ^Mountains, and unrili'd pnces, and in I in Gardens. The fourth grows on the Alfis, m the Mountains of Savoy, from whence it t<S been brought co us, and Nurli up in mjuirf Grou:

VIII. TZw Times. The firft flowers in i ber, January and lebrx-iry, and their beuei a&e ripe in Auguft, The l<c<>id flowers fatly in TM^ Spring, as in April and May, :tid cte fruit is r'ps in Autumn, as July, Auguft, and Septembe. The third flowers not in Spain rill July and Aitgujl, and its fruit is me in September. The i(ju> flowers in April, it the weather be temperate^, al the fruit isripe in Autumn.

IX. the ^alines. They are all of them i their Roots, Batks, Leaves and Barries, I"* p" dry in the fourth degreej Aperitive, In Attractive, and violently Emetick and tick.

X. T!)e Specification. The/areefpecially gw*1 againft inveterate, ffjj>born and rebellious hutes, Dropfies, Jaundice, '*> Jf^0^ Sciatica, RneutruKilrms, as alfo the 6MEhicW>ni.f> the Terms in Women, and Madoefs.

XI. The Preparations. You may have ti.cre-From. 1. A DitotfiM ef tbt K<uts or Leaves tt Vat Broth. 2. A foudcr of tie Leaves. ;> *!> of Mezcreon. 4. A Jmee of the Berries. ;> '•• Grains or Seeds. 6. The Ointment.

Tbt Virtues.

XII. The Decofton of the R£>J er Leaves if Fat Broth, k purges Piruitous and watery mois from the molt remore parts of the Bo and that trongty, and therefore is good againit Gout, Sciatica, Rheiuatifin, Dropiy, Scurvy, proiy, Evil, ETV.

XIII. ISB Pouder cf the leafff. When rt Leaves arc grofly beaten, the Strings are to be l ken away out of it, and then it is to be reduced to a fubtil pouder. Dofe halt a Dram in any convenient Vehicle: if given to a Dram, it works as Wrongly as Colocynthis, but it does wonders in iirvflir rate and rebellious Difeaks, being eflfual toraU the purpoies for which tht fbim< Decotlion may be given. The fine Pouder may be kept all I"* year, if it be made up into Troches, or Balls, wit" a little Spanifh Juice of Liquorice, and then ca^* tiilly dried.

XIV. Pills ef Mezereon: Take of the Fed? one Ounce: Wormwood in Pouder 2 Ounces: wif Honied Water maie a Mrfs of Pills, which dry carefully. They difflolve not in the Siomach or Belly, but are for the moll: part voided whole-Alefucs makes theirt thus. Take Pouder ef X& zereon Leaves-, Pulp of yellow and C'hebu/a Afy^a1 baJans, of each an Ounce : with Manna and P^iP of Tamarinds diffotved in Hndhc tater stake f mafs of Pills, fcefe Pills are commended again^ the Dropfy, and Gout; they expel water)- Tartarous humors, but work violently.

XV- Tbt Juice or Pulp of the Berries- to half a Dram in Wine, or Broth which is better, ir purges abundantly all watery humors, and ht> all the Virtues of the DitocVion and Poudtt named. If taken alone it burns the Jaws and Throat, arid therefore it ought to be fwaliowed ui Honey or in a Kaifbn Stoned.

XVI. it*

XVI. *The Grains or Seeds.* Taken to 20 grains is *Dbfcoriies* fays, they purge by Stool, Cholera, Flegm and Water : but unless taken in a Raifon they burn the Mouth and Throat: for fame perions half this Dote may be fuffic ienr, and 10 feme others too much. It Cures Melancholy and Madnefs. They ought to be ufed with Caution, otherwise the Medicament rmy be dangerous, and therefore not TO be taken without Correctives.

XVII. *TibiBaifim.* It it made of the Poudcr <f the Leaves mixt with Honey. Or, It may be beaten up with <i little Nitre and Vinegar. It opens Crufty Sores, and cleanfes and heals Old and Filthy Ulcers.

CHAP. DCLVIII.

OF SPURGE *Wood,*

TITHYMAL

I. *THE Names.* It called by the Arabians *L Xaufar*, and *Ethute*, alfo *Etbuiis*^ and by *e/uei*, *Scebran* and *Aljccbrs*^: in **Greek** *Ti*^*V<^*©- >E<<fj; in Latine, *Tithymnitis*, and *Tithymaiut Characiat* (i. e. *VaUarh*, from its growing in Valleys and low and moift places of the Woods) alfo *Tithymaiut nemsrofus*: in Englilh, *Wood Spitr*& or *Tithymal*.

IV. The fecond, or Our Greater Wood Spurge. Its Root is long and fomewbat tecody\ fprcaditg it felf under ground but not creeping, it has divert

Spurge Wood Great.

i. brownish, red branches abiu uw Jeel bighor moreJ>*re or nakedof Lav ice from the Woot, and afterwards fet up to the lops with n; a ?sy njrr:'u) and long ixiives, yet broader than thafe of the Sea Spurge, and nothing fo large us the Garden Spurge, jhmiji like to the 'Leaves of the Almmd Tree •, fomtbing fmooth in bundling, ami without arty dents aba, u rting reddifl) in the Spru'ij , and wrr in tl'c Summer time. Stalks (for all of them do feldom fiower at erne, being very much branched) jland many yellam flowers, whofc under Cups (viz the two almoji round Leaves enompuffing the • are yellow affi. After which come fmall roandijb Triingutar heads, [landing up a little higher in thofe Cups, than the flowers did upon the Stalks, each head by it feif. in which is contained fmall brownijh round Seed.

V. The third, 01 Our Ldler Wood Spurge. U bis a long Rout defending deep into the Ground^ with fevcral fibres or Strings fpringing from it. It is ha a fmM Plant, and has feveral fltnhr Branches or Stems pretty thick jet with Lc-rues, which are 9bitff>, long, and narrow, much like to

Spurge Wood [mall,

the Brfi Wood Spurge, bat nothing fo large, narrower alfo, and nothing at all boary. V>e Vmbels or Tufts ofJtoncrs are of a greenijh yellow, which before they be operi'd do represent the long Jhape or fora of a very fmall Damfo'n, but in tit color it is like to the ref of the Leaves -, which opening it yields its Jleaert and See j color, form, or Jhape, are like to the former but fometh'ing teffer.

VI. The Fourth, or Myrtle Spurge. Its Root is /mall and long and atc&Mfaimed mib 0<utf Fihvt, N, or/lhrtids. h has many upright reddijh Stalky pfr.g from the Rtmt, about a tbor-high or more, fat atiJ /lender, on which grow veil bout any order many hoary and vihitiJli green Leaves, like

Spurge Myrtle.

inform, but not in hardnefs to thofe of Knee-holder or of the Myrtle bufo (about ctme the which Leaves air jn'iall fit bottom, larger in the middle, and ending in a fimetbat jmail andjharp point. The flomrs are fmall and yellm, but not fo many, Jianding at the Tops of the Stath; UM the ether Spurges, of tehich follow like heads and Seed. Diofcorides defcribes it after this matter. **Ramulos** {Dixie illti) ab Kadice mJrtit dorantales. Folijs crefojt Myrtt proximis, Jed B* ibus, rirmis* in Catuminc acutis, 8t pungentibus. ttLclum Bat alternis Atinis, Nuci finieoitt mordaci guftu. Thr Figure We have gh from Matthiolus, tebich is before it comes to. tit Vi& and Seeding.

VII. The fifth or (hrub Spurge. Its Roi>ts trf not fo great and long as Jome of the former, ft' fi/Jjicently fpread in the Ground to fujiain whole Plant, which Lobel compares to a Mp Shrub, for its magnitude, and form of gro but net as to the form of its Leaves. Tie rf this shrub grows upright to tlie thiekfffi y a Mans Thumb, almoji like to that of ti Spuree, from the bottom, being there bare with". Leaves for b or % inches, and then fpredds :: fjil forth into divers branches of a fingers thkknijh fomvbat hairy, and not red as the others, &" white; on which grow narrow long Leavef <j d idutijh color, fomthing like to the Sea Spurge., ** rather the Marfh, or Great Efulj } hwing I* yellow i'lotsers and Seed, but in other pointt so the ref of this kind.

VIII. The Places. The firft, which Common, kind grows in raotl Woods in Which are dry and watrri; I have gat he ted i' "J Horr.Jty Wood near London. The ftoend »" x third grow in Woods in many parts • fOoi Lwj* JS alfo in Yrunce and Spain, and in fveral of t>u Gaften*

Gardens. The fourth and fifth, grow with as only in Gardens,

IX. *The Times.* They all flower in the Summer Montlis, in *June* and *Julys* and their Seed is ripe in the Months following.

X. *The pities.* They are all hot and dry in the fourth degree; Vehemently Arrive, heating and burning, and firing Emeticks and Catharicfo, like the others.

XL *lie Specification-* They; are good for the **tWofPropfes**, Gouts, Sciatica Rheumatifms Kings-Evil, Leprofie, Leuce, Jaund.ce, and other like inveterate and *-*—«rhieafes.

XLIII. *The Milk or Liquid Juice.* It purges with great violence both by Vomit and Stool, Pituitous and Watm Humors, as also Cholera and Melancholy from the Stomach, Bowels, and Joints-, Ev4cuates the Humidities in DropGes, and takes away the Tartarous matter which breeds the Stone in Reins or Bladder, Gout, Rheumatifms, Sciatica, or Kings-Evil but it Emaciates and **Wastes** the Body, and it often used, is apt to induce a ConfumpEion. Three or four Drops of the Milk **atari** firfh, is often put into a Fig, and mi*t with its Pulp, and fo ufe by Wrong Country People to purge them. The Milk put into Hollow-teerh with a bit of Lint, (fo as it touch "one of the others) **cafo** the TootVach both efieaually and **fpcedUy**. The Milk laid upon a hairy place, takes away the hairs- but ic ought not to lye long at a time, and the places afterwards ought to be **preferently** anointed with Oil of Rofes or Nightfhade. h alfo takes away Callous or hard Skin, Knots, Warts, Corns and the like, being cautiously applied, they being fi ft pared near to the quick. * * *

The Virtues.

XIII. *The Milk or Liquid Juice.* It purges with great violence both by Vomit and Stool, Pituitous and Watm Humors, as also Cholera and Melancholy from the Stomach, Bowels, and Joints-, Ev4cuates the Humidities in DropGes, and takes away the Tartarous matter which breeds the Stone in Reins or Bladder, Gout, Rheumatifms, Sciatica, or Kings-Evil but it Emaciates and **Wastes** the Body, and it often used, is apt to induce a ConfumpEion. Three or four Drops of the Milk **atari** firfh, is often put into a Fig, and mi*t with its Pulp, and fo ufe by Wrong Country People to purge them. The Milk put into Hollow-teerh with a bit of Lint, (fo as it touch "one of the others) **cafo** the TootVach both efieaually and **fpcedUy**. The Milk laid upon a hairy place, takes away the hairs- but ic ought not to lye long at a time, and the places afterwards ought to be **preferently** anointed with Oil of Rofes or Nightfhade. h alfo takes away Callous or hard Skin, Knots, Warts, Corns and the like, being cautiously applied, they being fi ft pared near to the quick. * * *

XIV. *The DecoSion in Vat Broth.* It has all the Virtues of the Juice, but aas with much more geglennefe, and ought to be givea in fmall Dole,4 firft as in one or two Ouncts, and fo gradually encteafed, as you find the Body is able to war it.

XV. *The Grains or Seeds.* You may give them from 5 to 30, according to Age and btrench, they work roughly and with a great force and good againft all the Diieafes the Milk or Juice good acainft-

XVI. *The Ponder of the Outward Bark of the TM«., far of the Leaves.)* They ought to be jirff peeped a day and night in White Wine Vinegar to abate their Acrimony, then dried, and after-ykirds reduced to Poudtr. Half a Dram of it taken in Wine or Honied Water, purges alt watery humors downwards, as alfo Choterand Melancholy, and is very profitable to be given to, (uch as have the Dtopfy, Gout, Rbeuroatifm, Sciatica, Kings-Evil, Lepcofy, Jaundice, Stone, Gravel, &c. And

applied in Green Wounds and Recent Ulcers, ir clejufes and heals them-

XVII. *The Oil by Isolation or Dea&iint* Iris made of the Milk, or of the Kerb, Roots, 01 Seed katen in 3 Mortar and boiled in Oil of Bitter Almonds to Crifpnefs, ©V. repeating the fame 2or ? times. It cle3nfs the Skin of all :K deformities, as Freckles, Lentils, Tanning, San-btrfning, Difcoloring, Yelloivnels, Sturir, Morphey, and other like deicedations, being anointed therewith.

XVIII. *The CorrcSion.* Alt thefe Spurges are heating and Exulcerate the Skin, it hut outwardly appiyed: and taken inwardly, Operate Vehemently and fometimes excoriate the parts, without great care and caution be taken. **Mefuet** lays, they are offensive to the Heart, Stomach and Liver, that they bieak rhe Veins, and ftrip the Guts of their Mucus, and hear the whole Body fo much that many times they caufe Fevers, The firft ill qualities are taken away (fays he) by adding fuch things as frengthen the Stomach Heart and Liver. Their fecond and third ill qualities are raken away by adding things **which** have a glutinous quality, as Gum Tragacanth, Mucilage of Beawort Seeds and Purflani;. The fourth ill quality is taken away, by adding cold and moifl things, as juices of Endive, Niglitlhade, Purfiane, Sowchiftles, or Mucilage of Quince Seeds made with Vinegar, *Sfc.*

XIX. *The Difilted Water.* Itdeanfes the face and Skin from all manner of defotimities, being daily applied, more efpecialy if an Eighth pan of the Liquid Juice be added to it, as the inveteracy of the aftefl may require.

CHAP. DCLIX.

Of SPURGE Marfi.

L ~T*he Kjmet. It is called by the Arabians X *Scebran*, and *Fthias*: in Greek n/^m Una: in Latine: *Tiihyndus palufiris*, *Pityufa palufiris*: and in Englilh, *Marfl) Spurge*, or *Marjb tfvh*.

II. *The Kinds.* There are i. **Efuk major**, *Efit la major Germanics*, *Pityufa pshfirhe major*, Great Marfh Spurge, or Greater Eiu!a, which fbmc will have to be *Rufombis* his **Efula**, of which he made his *ExtraS*: -whechs the *Greater Efufoi* or the *Leffer Efuh*, be the *Efula of Ruhnits* is very doubtful; nor can I find any Author which can truly or certainly determine ir, they are both of them very flrong and potent Medicaments^ attd Therefore in my opinion may indifferently be made ufe of: however that which any one by Experience has found to be heft, he may ftick to. S. **t&mt** §s»r*W«»/P«p#i *Pityufa purpurca palufiris*; *Peplton Dalecbampih* *Pepfisanarit'mi* j<&» obttifo *Bauhini*, *Peplitm Cafapini*, Small Marfh Spurge, or finall Purple Marfh Spurge-

The Defcriptioftf.

III. The firft, or Great Marfh Spurge, or Greater Efula. *Ut fi** it »f a blackifb eelcr en the out* fid**

white within, great, thick, and spreading divers teaws; the barh. abereef is thicker, and more fleshy, than in any of the fesi, and cndfn-es the extremities t>f Winter, tbS the branches thereof perib for the mqfi part every Autumn, and rise anew every fprhtg. it rises up

Spurge Marjb,

many great round reddijb Stalks, en abich are fomettogt tMcA fit, many long, and femewhat broad green Leaves, yet net fr broad, nor j long n ;••/ r-i Wool Spurge oibenoie net much mhke. tbt Stalks are furnijfJ with fcr,r u;d fin*Uer yetien flowers, l fuch a great Plan , :-peiled to boot. Some jilmers break forth olfo be loin the Tops, at the under joints, Standing upon tbehr Stalks, three or four together <it moji ; after which come [mail round Seed tike unto tin- other:. This great Marjli Spurge, is alfo called Eftla major, to diff'ta£uifb it from the Lfiih minor, and the other Spurges.

¶ Gerard deitribes ir thus. 'l has very many and. gnat Roots, covered ever with a thick Bark or Rmde, plaited at it were with many Sureuious Sprigs x, from wbkb rife up fever, :? firong and targe Stems of a jji/tgfrs thkknrfs, and about three feet high, brfet with many pretty large and long leaves like Latbyris, & Garden Spurge, but that they are not Jo thick: J/ni the Seed tind Ji&wers are not unlike the cWer Titbyaals or Sparges. This Plant fiys Gerard called Efula major, is that tvhkh Man'mus Kulandus had in great Veneration, out of tsich lie made his ExtraEt for the cure of many iftveterait dijeafes, as may and dot* apft • n bis Centuria curjtionum Erperiamum, dedicated to the Duke of Bavaria, *Tis true be in that Eiuok often /peaks, and makes

f **Estra&um Riula**, with • ful LV«i but in none of all bis Kerks I •, or difcmiered xdether that bis Kxtraft was made from the major or minor Eful, fo that the true Plant is lift c-rJy to alt]* Lhtre.

V. The fecond, 01 (mall Majfli Spurge ^ Root is jingle^ fnuili and flender^ and cf no ;(/• It fpreads its fmatt purp/ijb branches upon Ground, more plentifully than the other, i'.. 'J muen kjJ^{er} '•> f^r « brings forth a greater fiore of branehes more e/ofely k/tit, and as it tare teas lid together with fhining twifts an handful and half bug. The Branehes are Jet with many /">"• Leaves, almoft like, but leffer than thafe of Pepl^uS, but net fo round at their ends, cf.; Vurplifb celt* underneath and ofentimes above, and not m^u unlike to Wild Pj/rJlane, efpecially \^ul. nir.g and heat of the Tear. T)H f.rmers urej/i^u and yellow ; and the Seed is great like that m Peplus, but bigger, mndjlandingw together far tot mo)) pan, not only upon the Tops, but lure ari there upon the Branches a/Jo. At in Naat,J? in Shape, this rejembltt Peplus, (• ' ' ! is fuller t f Breaches) and comes nearer to the fignification (.i'eplum or HammW lum than Peplus doth.

¶ The Maces. The **first** grows in Places oi Germany; and as Label Qys in Obfcrvations, in a Wootl formerly belonging » one Mr- John Coltes, nigh ro Bath, very I^u fully i bur bur for the moft part it grow us In England in < The fecond grows near the Sia Side, in **Narbtmc**, and about M^u feilles in **frame**, and near the Sea Coalts of Nations.

VII. **The Times**. They both flower in June an July, and their Seed is generally ripe in July and

VIII. **The Stutitict, Specification**, and Vntues of thefe Plants, more efpecially o» the first, are the fame with thole of fmall Efula in Chap. 6J5. aforegoing, to which we Vivr you.

0 / S P U R G E Sea.

THE **Nonet**. It is called in Greek, T < 8 ^ ^ fjw©-: in Latjnc, *lithymalus paraliif*^-'! i herba I all aria, and *LaSartdaaritt*** (from its Milky juice,) by fome, *Lac Lupi*^^\ Wolfs Milk -, by others *Lal'luca marina*, and *Lf prina*, becaufe Goats delight to eat it: a^u English, *Sea Spurge*, and *Sea Titbymal*.

It W>c Kinds. Thofe which ate moIUnov^u and of ufe to us, are, 1. *Tithymalus Varrfw**' five *mariumus*, *IUilaria marina*. Our CornfIO" Sea Spurge.. %. *Tithymalus marit'mus* Vcttf**-* *Titbymatus maritimus Americanos* pel l'lorid^u (becaule I have found it upon Ibme of the dan (hoars) *Alyptta Diofcoridlt Au^aUar*^ ran Venetorum Yen* & *Lobelia*, So. Spurg? ** Venice, or American. 3, *Titbym/ut tit*, Vdralw congener* tiel cognatut Vanterarij •, l>y' nuhu mtrhmo ajfwts Linar iff olio Bauhint; iHT l>!.J!;l: nmygdaloides wgufljolsms Tabcrn*n:c:itJ^u Buftard Sea Spurge.

The Descriptions.

111. The firsh or Our Common Sea Spurge. Its Root is long and Woody, **ibüing** long, and Jo do the Leaves on the Branches, net jailing awy "in Winter. It **rifesvp** with severall reddifb woody S;a **t tndMfbigb thick fetmtb** : 10 the Top, which are

Spurge Sea, or Sea Titbpial

Small **long**, "ni narrow, yet broadtff << the middle fomcibing like to tU leaves of Line j j k bul **thick** and **vbizijb**, full of a white Mdk, if any part of it be cut or broken- which it fo hot, that bang taxied, it barns the Month and Throat intollerably. At the Tops of the Stalks, Rand many **pale yeUotoiJb Jbw**ers, with two Leaves under them, cttcompajjing the **SutH**, as is "»«?» to all the other kind: of Spurge! after **abiib** come findl Triangular heads, in which ts containe round difcolored Seed. <

IV. The ikond, or Sea Spurge of Venice, or [^]American. Its Root is great long and woody, **Wperannud** and fending jorth branches every yt*r. h }_m longer or taller and thicker Stalk* than 'he former, femevfoat hollow and reddijh, **franco**ing forth into divers parts, brfet with [mall big Lewes, two always flanding together, all along **tbt** branched Stalks, net much unlike the growing of U- quorice. Vtejlovers are jmall% pendulous and o) a/adPurp/iJh color, confuting of jive fmallheaves apiece, like a frail Star, without any round Leaves ^V under them, as is **ufud** to other Spurges -yet **yhe** heads of Seed are Triangular like the others, •ind contain like Seed.

V. The third, or Baftaid Sea Spurge. Its

is fotig^ woody and fibrous. Andii r/ies up with browiijb Stalks, hiving many narrow Leaves grout- ing thereon, mush tike to the firsh, or Our Common Sea Spurge, but that thy arc'jhmcctbing hrger or longer, and a llne broaler. The flowers uxi Seei are like thit alfo.

VI. The PUES. The firsh grows by the Ssi (Me, both in FoFsign Countries ami on divers pnces lit"the English jivar. The fecond gr:r.'i On rhe llioaxs oFthe AiriaickScu; and in the Uljnd L:\ belonging to the Venetians^ as allb in many places of the American Sea Coafcs, where I have found ir in perfection The third in Vranconia, and her parts adjicent to ir, and near to rhe Bjnks of me ftiva Sbtyn% bur with us it grows only in Gardens,

VII. The Times. They flower about die latter end oijune, and through the Month of July, and the Seed isiipein Augufi,

VIII. Tjie Realities, Specijkatio/i, Preparations, and Virtues of thefe are the fame with thofe of th» Garden Spurge, and /mall Spurge called , being all hot and dry in the fourth degree, Burn- ing and Exukerating. The tuft ot thefe Sea Spurges is not mentioned by any Author, Ancient or Modern, to be ufed in Fhyfick, becjufo of its vehement and (harp Exulcenting Quality, and tor that it is fo violent a purger both upwards and downwards, that h is featSy fafe to life it inwardly, ic Burning and ExulcetJ ting rhe Skin be- ing outwardly applyed, but fo uled ic is profitable to take away Scabs, Scurf, Motphew, Leproi, Scars, Wans, and other defitdurionsanc! deformi- ties of the Skin, being prudently ,l ppjyed. Yet I know by Experience, rhat if it be comfied and prepared by a wife and skilful hand, the prepara- tions thereof may be given inwardly, as the pre- parations of iho other Spurges may, 3nd nejrly in the fame Dofe; BUE I own, it is not for an unskilful perfon to meddle with it, becaufe of in violence. Galen fays, thiat the Milk or Juice thereof mixed with Meal oj Wlicai or Barfy, and made into a Pujle, and then cajj into the Water for the Yifli to eat it, rhat it will fo much over- come them, as to make them lye tor dead, and ro rife and Swim on rbc Top of the Water, fo thar they may be taken with ones hand.

[X. The Venetian Sea Spurge. The Roots are ufed at Venice by the Phylkians and Apothecaries there, inttead of tfula, where they put them into the **BenediSt Laxatton**, Purging Pills, and other Qrhanick Medicaments, becaufe as Pena fays, it purges forcibly, and with great violence. Or rhe fait, Authors have fa:d nothing; tho' k may be judged to have the fame qualities with other 'Spurges.

C H A P DCLXI.

Of S P U R G E Laurel.

I, ^-r* HE Names. It is called in Greek, **δρυφύλλο**, f\$ XeuuJkf*:6Nt •• in Latine, **Daphnoides** [d Laurifoliorum fimilittdine :) alfo **Laureola** (quajl pafila Laurus vel Laurus minor:) in Eng- lish, Spurge Laurel; and this Plant is that which Bodontut thinks to be the **Cneorum ni- grum** Theophrast,

 toiergn Countries, as well as in many parts of
 idi but being brought into Gardens, it wU
 abide and flouriffl very well there: bur it-fe
 (jid to grow abundantly in the Woods in ^{m0}*
 parts of this Kingdom. The lecond was "
 to us out of Canditt, and prolpsirs well
 with us.

VII. The Times. The firft flowers very
 in the Year, even upon the Winter Tropick t
 :ll December, January and icbruary, it the "
 : and the Fruit is ripe in may, and ,
 and the Plant is always green, enduring the
 efi Scafons in Winter. The other flowers
 early in its Native Clime, but fomthing
 with us.

Pill. 77V Qualities, Specification, ?repar&
 •iives of Spurge Laurel are the lame
 Spurge Olive, or JHezereon in Chap- &IJ- >
 going, to which you are referred: but a lew
 Ulikrvations vauthors have made thereon: vis

IX. The Green Leaves. Being chewed in
 th, they aitratt or draw much flegm 3j
 humors from the H«d, Brain, and Eyes, wl"
 offend and hurt thofe parts.

X. Th pecotliL'n oj the Green Leaves- *c
 purges Pituicous and watery humors by Srooj
 deanfes alfo the Stomach by Vomit, iF Foul, ^
 provokes thg Terms in Women when Stopt-

XI. The Poudcr of the Leaves. It may 1* &
 ven from a Scruple to a Dram in broth, Di"
 rides lays, it evacuates watery humors from
 whole body, and has all the Virtues of the "
 ction aforegoing j and as a Sternutatory
 the Head by Sneezing.

XII. tbt Berries or Grains. They ar
 to 15 Grains (more or le£) as alib the
 of the Leaves by Emprical Phyficians, to
 ivith, and to evacuate watery humors in a 1
 fie, and that with good fuceefs, as alfo to
 the Pains of the Colick.

XIII The J.-d Oil. TheR^...
 boiled in trelJi Oil Olive, or Oil of Bitter
 monds, and the Belly being anointed there*"
 it gives eafe in the Colick. Anointed en tn
 Keins of the Back, and on the Hemorrhoids

Piles, it cafes pains of thole pares and provokes Urine. It is allb good againft Scurr, Morphew, Scabs, Scatd Heads, Freckles, Tannings, Sunburnings, Difcolorings, and other like defadations of the Skin.

XIV. *Nera*. The Leaves and Berries or this Plant arc violent purgers, and do hear and inflame the Scoroch, by whomsoever taken, and excite as many dangerous Symptoms as any of the other *Spurges* and therefore are to be given only by a prudent hand, and with much Caution, with proper and good Correctives.

CHAP. DCLXII.

Of SPURRY,

OR,

SPUKRWORT.

L 'TpJ/E Names. It has no Greek Name that I know of; but a Modern Author *Tbalm*, calls it 'APSUAAWK, *Ambcyhidet r* in Latine, it is called by almost all Authors *Spergula*: and in Eijglifl], *Spurry*, OI *Sputrmrt*.

II. *Die Kindt*. There are ieveral forts hereof, vis. 1. *Spergtik major*, *Spergula Sagina major*, and by *Fab'm Celumna*, A (*fine tenuifolia alterajid A!fine Sylvcftris "Itera*, (yet it is no Species of the duckweeds) *Tricophylto?*-, *Sprrgula Sagina Loblij* (*A Saginand'is peeoriivs*, from its good feeding or fattening of Cartel:) The *Grater Spurry*, or *Spurrmt* 2, *Frank-Spuny*, or *Fattening Spurry* becaufe in *Brdypt* and other parts of the *Low Countries*, Husbandmen Sow their Grounds therewith for the fame purpose, as also tocaufe their Cows, and Ewes to give the greater itore of Milk. 2. *Spergulu miner*. *Spergula Sagina minor*, *Spergula marina*. *Dalechamp*t), The *lesfer Spurry*, or *Sea Spurry*. 3. *Spergula minima*, *Spergula. S.igisn minima^* *Alftne SpcrgilU fuck hauhini*, as it is called in his *Yrairomm*, The *finallest*: *Spurry*, *Red Spuny*, or *Chickweed Spurry*. 4. *Spergula StellarM*, *Afteriat*, *Stellaria*, *Spergula monspescnvt*, *Star like Spurry*, *French Spurry*.

The Descriptions.

III. The *firfl*, or *Greater Spurry* or *Spurwort*. *lis Roct is fmall and fibrous, perijhing every year after Seed time. It fend forth severat I fmall, round nni upright Stalks, not above half a foot high, on which at several diftances or joints grow many fmcll and narrow Leaves, Jet together in form of a Star, or of the Rowel of a Spur, from whence eame the Karr.e. The flmers are many, fmalI^ and white, fianding at the Tops of the StMs, which turn into fmall round heads, containing therein fmall black Seed.*

IV. *Gerard* describes it after this manner, *its Rant is fmall and Tbreddy \ from whence rifts up a mean end loto herb, very tender, having ninny jointed Stdks, on vthich grata Leaves in round Circles, like tbafi of Woodroof, but kffer and fmaother, i/i form like the Ruwel of a Spur. At*

Spurry Greater.

the Tops of the Stalks, grow Jmall white Flowers' after wbbk come round heads, with fyall rpund Seed Me that of Turners. This herb is /own in Brabant, Hinders, and Holland for that peculiar uff of fattening CmeL, and to caufe them to eive much Milk.

V. The *lesfer*, or *lesfer Spurry*, or *Sea Spurry*. *Its Root is fmall and fibrous, and the plant is much fmcll flmers growing to the tops of the Stalks.*

form of growing does not much differ fro, former, but that it has notfo mmy low at row Leaves Jet together at the joints of the Stalks. Thtfc Stalks- are many j, which rife not to above n Span high, but dofome- what more lean downwards to the Ground, which together with tht 'ore idi'te, ami of a faltip or brackijb tafie, [f it i'ov>s near the Sen fide ; otbemeife noth: h, or brackijb at all. Tfx flowers an- and the Seed bkek like t:

VI. The third, or *Smallell Spun* or *Red Chickweed Spurry*. *Its Root is fmall i. I long, which it yet large confidring ll.. Jj the Plant, toitb fame libres or Tbrcdi . intng ti> it. Vrm which rife up feveral iseak jtender Stalks i, 4, or 5 inches hng, bowing donn, or commonly lying Jiat upon the Ground, full f joints, and at every one of them twofmall, jhort white Scaly Leaves, encompaffwg the Stalk at bottom -, out of v>)iofe bofoms, between the Stales and the faid Leaves, come forth other J, nall green, Jharp pointed Leaves without number. Towards the Tops of the Branches come forth at the joints the flowers, each upon a fmall Footfiali abich are fmall and red, and fometimes tend ing to a bleiKiJh purple, which being pajl aww*

Jmull roundheads (/matter than she fanner) fucced, which contain fab like round black Seed also in them.

VII. The fourth, ox S^{at} like Spny. *Ibis differs not much from the last fort, failing that the fm,tl, fhart and narrow Leaves, twich Jjiind tit the johitt of the low Stalks, are all of an equal lengthy asi are stiffir and. border, Ji&nding tight out, In an nee, one from another like a Star. I <f ere small, having five narrow feinted Leaves, kid open abroad like a Star also, but of a reddifi coh: fe you have rtfeU to tbt Leaves or the tfmgtri they are bothin the form of a Star, and from theme the Plant took its Name • but. are miny other Herbs fo culled, which very much differ one from anot!*

IX. *ike Places.* They all grow in dry Sandy Grounds in divers Countries, as well among Corn, us in ontilled and fhady pi: tally the first and fecond of thernj akho' the iccond is also iound growing near the *Sea Sboar.* in the like places: it has ken iound growing in the *S.ilt Morjbet* about *Dartford* in *Kent*, and fuch other like places. The third has been found growing in Sandy Grounds, as in *Tut&iLgields* near *Wejiminfter*, anil that, as also ihe fourth, have been ibund[^] growing in many othtr the like places of this Kingdom,

IX. *The Times.* They all generally flower in *June* and *July*, and their Seed is ufually ripe in *Auguil* or before *Harvttf* time.

X. *The Qualities.* They are hot and moid in the fiitt degree: Glurivative, a little Em*: tick, Lacrogenetic, and Spermitogenetic,

XI. *The Specification.* The Seed evacuates Pituitous, vicid, tlimy and putrid humors out of the Stomach by Vomit: the Herb encreafes Milk in Nurfes, reltores in Conlumpcions, and crakes **Bodjr&t.**

XII. *The Vreparations* Vnu may have therefrom, i. A *Pouder of the Seed.* 2. A *Liquid Juice of the Herb.* 3. A *Dcct&iox of the Green tUrb,* in *jirong Cln'ckex Broth, Cock Broth, PorA* • *Broth,* Etc. 4. A *QaspUfmeft the Green*

the Virtues.

KILL *TI?e Ponder of the Seed.* It may be giom half a Dram to 2 Drams in the morning iafting in Mutton Broth. It evacuates Hegmatick and iViny humors out of the Stomach. Vomiti ltrengthens the Stomach, and rectifies the Diicrafy of the Juices, which in their depraved State hinder digeftion, corrupt the Blood, and overturn the healthful State or the Body.

XIV. *The Liquid Juke <f she Herb.* Given to Nurfes in White Wine, or Wine mixt with pure cle;ir Ale, or with dear Ale alone, it admirably increafes Milk inNurfeBrealh: and being taken for fome time in that manner, very much incrtafes Seed in both Male and Female, and istores in Con liimptions. And this, is in fome mearwe maniittt foi the effect it his upon Cartel in *Brabant, Wanders* and *Holland*[^] and other parrs thereabouts, where they Sowe it on purpofe for their Cartel ro reed oa, fo* that it cauiies their greater ttorc of Milk titan otherwise mtlioui it, makes their Oxen and Sheep fat, mfi3 theiiPtniln

rkijnian is no idle conceit,

for that thefe people have found i: true by their daily ule thereof.

XV. *The Deccoffimt of the Green H i'th, Stt.* It has all the Virmes of the *Ligu<* Juice, but not altogether fo powerful 5 hue if tte Broth be frtrong, it makes go&i Milk in N;:i[^] BteaHs, and rellores wonderfully in Coci tions.

XVI. *The Cetaphfa of the Green Herb.* Being made of the Green Herb bruifed, rad then applied to Cut lingers, or othet places which 2U Cut or Wounded, if the Wound is finople and noi compliate with Accidents, it quickly heals i'

Stalk, miib/bt ether Jmall Leaves in the middle, of a white color, flanding ran; • like a dip; in the midfi of which is a Jmall white Pointed about which Jiands Jix w&A yellow pendants on their Topt; the whole flower being without any fnell. After the Jleti f-fl, come forth great roundih Iriangulsir heads, ;rc too heavy for the Stalk tobestr^ .ind there's down uf .:es or Ground, having certain Lines or Stripes on their outside, in which is contained rounds black, rough Str.l.

Mill The fixth, or the One Leav'd Star-flower. // hat a final/ Bulbous or round white Root, abich fend forth one very long Rusf like, or round green Leaf, but that for i or 5 inches above the Earth it it a little flat, and guttered; which fend forth a fmall or little Stalk about 3 or 4 inches high, bearing at itsTop 3 or 4J'mail whiteJhwert, confiding of Jix very white Leaves apiece, viiibin which are :iv Chives, Tip: witbyelltna pendent't, ing about a jmall Triangular bead, which hat a white PointelJüic&ing as it mere in the midfi there- fnell of which flower t it much Hie the /me/l of the flyvoers of the Hawthorn.

IX. The fevemh, or limit Spanifli Star flower. It bus a fmall white Bulbous Rest which fendt forth in the beginning of the year, Jive or fix fmall long green Leaves, much like thefe of the hrj) common fort, but narrower, and without any white Line or Streak, wherewith thofe otbert are flriped or marked. From among abich rife up one or two fmall Stalks, about tzw bandfah high, k.iring at their Tops, each Stalk about fevtn or eight slower or more, growing each, one <• no'Jycr, yet fo that they fcent to make aTuft or Vm- l with fmall long Leaver it the foet of every , the luwcr flowers being equ.tl in length with be uppermojl; each of which flowers hat fix l f an AJb or whitijb blew color, toil- line down the back of every one of their Leaves, d fo many white Chives or Threads flanding bout a blewijb Pointel or bead in the middle^ h'tch flowerl quickly pafs away without giving •ny Seed.

X. The eighth, or Greattft white Star-flower. fa R-! a huibvus, grc.il, thick and Jhort, fometfbat yellowijh on the outjide, with a flat bottom Hie that of the Arabian Star-flower, but more hardy to endure the Winter; and more apt to encrease, thereby it it nova grown common. It btt many fair, broad, long, and very frj!) green Leaves, •abich fpnng up out of the Ground very early, and ore greater, longer, and greener than the Leaves of any Oriental Jacinth, which do abide green from the middle of January, or beginning of February, to the end 0) May, at which tme they begin to fade, and the Stalk with the bead of fiot/iert, begmt to rife, fo that it will have fets or no Leaves at all, n the jlown arc blown. The Stalk is firong^ rounds fmonth and firm and rifes by flowering time, to be 2 or 3 feet high, bearing at the Top a great bitfli or fpike of flowers^ upon long Footfia/k; b Jeem at the firfl to be a great green Ear of Corn, for it is made/pike fafhion; which when the flower't are blown, it rifes up to be very high, lender or fmall at the Top of the nead, and broad fspread, and bujh'ng below, Jo that it is long in Jfoaering. The flowers open by degrees, for they flower firfi belot^ andfo gradually upwards, conjijting each of fix vibite Leaves, fspread open like a Star- Thefe flumers are Snow zcbttl without any line or flreak en the bjekfide, but no: nearfo large as thofe 0 Arabian kind, with a while Pointel or head in the piiJdle, befel xenb many white Tbredt Tipt with

•'ts. And the Seed is bl.;ck and rourii oined in the. Triangular heads.

The ninth, or Hungarian Star-flower, hi Bulbous, long and ;• and longer than the Roat i/fibefoji i •/l, for the majl prrt two joined teget.: hat grayi/b on the outjide. It een Leaves, viz. five or fix, and that before Winter, o hei upon the Ground, narrow and tj a fingers length, much refetitblh Clove Gilffleviert, but fom ;,nd fo abide above Ground; front the midfi of tc. the next Spring, about April, when the Leaves are decaying, rifes up a Stafk, about half a Bst bearing at its Top, a fpike of many id. eonfijing of Jix Leaves apiece, with green lines djivn their bucks, very like to the firfi or Coat-won Star-flower, which fbem themfeives open itt M.iy.

XII. The tenth, or Great White Spiked Star-flower. // has a large Bulbous Raot, ufually larger and whiter on the outjide than that of the greateft -, at Seß X. aforegoing: and it its form and manner of growing if much like the fame eighth kind, it Jfrings nh upfo cjrly, W are its Leaves fo green or large; but it has broad, long, hollow, whitijh green Leaves, pointed at the end; from among which rifes up the Stalk, ahieb is flrong, and from a Foot and half to three Feet high, mitreon <n the Top grows a greatfpih orbuffj of Star-flowers, Jlanding fpikcfafhion, fotae' what like the eighth Species aforenamed, fi in the fame manner by degrees, beginning firfi below, and gradually upwards to the very Top. But it if not fo thick Jet with thefe Star like flowers, nor fo far fspread at the bottom, as that kind, nor are the flowers fo white, but each of their Le.:- line or fireak of green down their backs, and their edges on both fidet are White. After the fit are pafi, come Triangular heads like the mhers, containing within them fitch like black Seed.

XIII. The eleventh, or Great Green Star-Row-er Itt Root it yel/nwifj), (earthing like to the eighth Species at §e&. X. aforegoing. It hat many whitijh green Leaves, long and narrow, fspread up- en the Ground, •which fpring up in the beginning of the Tear, and abide untill May: and. then withering away, the Stalk fprings up alnoft at high at that greatefi white Star-flower, having iwty , yellowijh green Starlike flowers, but fmathr* and growing more Jparfedly about the Stalk ufo** Jhsrt b'oottalks, but in a reafoneble long fptkf" head; after tchich comes the Seed, •which is li^e that m the liifl SeUion aforegoing.

XIV. The twelfth, or Dwarf Yellow Star-flower. Itt Root is Bulbous, white, and covered with an Afh colored him. It fendt up one itly Leaf, two or three inches long, which is narrow), of a tabitijk color, and of an Add Ti;fte. A.4" to mbich rifes up a fmall Stalk, about two inches high, having one or two Leaves thereon -, between which come forth finntl Starlike Jlowers, yellow within, and of a gretnijh pserpie without. Jlowers being pafi, their come Triangular bead* i in which k contained Jmall reddijb Seed.

XV. The Placet. The Titles or Names of n"- ny of them fhew their Original or Native Pl^{nl} but with us in England they aie all Nuttt up in Gardens. The firft gtows Wild in Gen ffanderr and other Foreign as aNb «* ffteral parts of Our Land. The fconJ, - fays, he found in the Corn-fields L

•, but they are also generally Planted in Gardens.

XVI. *TheTmei. The Arabia Bpwas* in and sometimes in June. The Ethiopian flowers in August, or the end thereof *TiefmallSpanfo* flows in April and AUy. The Acv/W^/z, tho it oftentimes begins to Spring out of the Ground In November, but most usually in January, yet u Homers not till 11,^ and the Seed is ripe m July. Hie Hungarian flowers in ill-!), and some times w. All the tell m the middle or and sometimes sooner, to June, and the seed is ripe in the Months following.

XVII. *17w Cultivation.* It is to be observed, 1. That the ROOTS of theft Plants loofe their Fibres quickly, and they rmy be taken up out of the Ground, as soon as their Stalks are dry, and) kept till the end <\$ September, except thofeor he Yellow, which will not endure out of the Earth, but a Htde BUM.

XVIII. 2. As theft Plants are only or chietly ly their Bulbs, which encrease in a djiicc in the Summer time j ib they are to be Planted in an Earth c<<mpofed of two thirds doud, and one third light E;irth full of Salts, iirri as are some blackih Sands, which by the productions they yieL, you may caGly find have a great deal of fuhltauce irt them,

XIX. j. The Arabian, *JEtbiopun, Spanish cn.i Neapolitan,* or others which come from hot Countries, as they are tender and will not endure our long, coU, and frofty Winters, fo they onghtto be Plained in Boxes, in rich, hot, dry Sandy Earth, and Houfed in Winter, and are to be expofed to greateft. heat of the Sun, for which reafon TM.y are rather to be put in Pots or Boxes, than into the firm Ground; and fo they are eay to be removed from p! ice to place, and putthcrewhitch belt tints with their Natures.

XX. 4. The Time of Planting the Bulbs is in the Month of *September:* they are to be put into the Earth i inches deep, and to be well watered when you thinlt thty want ir. The Er/Aw, may be fer among other tender Roots, which require to be covered and defended ftoroFroib in Winter: all the reft are hardy, and may he lit in any place, among Other Roots which loofe their fibres-

XXI. 5. Thole kinds which are very apt to beaffected with cold, you are to be very carefulof when Winter approaches, and to place them in your Geen Houfe, that the Cold and Froft may not hurt or injure them. Thefe Star-flowers will not bear to be often tranfplan.ed: and when you do it, you muft flay, till its flower is quite paf, and its Seed ripe, and then being removed at the Time mentioned, they will (hoot forth new Roots.

XXII. Their *Qualities, Specification, Preparation, and Virtues,* as Phyfically considered, Authors have taken no notice of; nor are they known to have any Medical properties', but are rather of Ornamental ufe, for the adorning of Gardens,

For which caufe, and the lakes of fueh as are admirers of all forts of flowers, we have inferred t t l i e m in this Our Herbal, that it might not have a deficiency in thoe things, which a great many Ladys and Gentlemen lo lingularly affett.

XXIII. *YctTragus fay^* that the Roots of the Star-flower (I fuppofe he means thote of the common kind) jolted in hot Embers, and made into a Gitaphm with Honey, and fo applied, heals •jd earing Ulcers,, and ibftens and ddcufles barf rumors. By their *Signature,* they may be firpofed co be good againtt *Scrcphulovi* and *SftitmotH Fumon,* and Ulcers of the *Kings-Evil.*

XXIV. *M&tiholiM* lays, that the firft or Com" Dion kind, are much eaten by poor people in *Jiffy,* both raw and rofted, being iweerer in Tafte ihan any Cheltnut, and lerve as weil for a neceffary food for the Belly, as for delight nud Ornament in the Garden: But whether any of the reft may befo ufed, is as yet unknown.

VII. Thi fourth, or Yellow Creeping
 of Virginia. Its R t is Stringy, creeping
 Ground, ihi fprtodjgg xnh. It rises up with a
 fldng round Stalk 1 or % feet high, bearing at
 She joints two jar broad Leaves, like the Leaves
 of it fmall H05 Soils, hut more pointedet the ends,
 and border in feeling, being fitU ofYeitits: sttbe
 Top of iheStalk whiebfeldo. so.it.grews
 one large flower, (rifingout o) a green husk, made
 tfKine or Ten *J tompafid of many
 long end narrow yellow Leaves, with a brmmjh
 Thrum in the middle: which being paji, there fel-
 ted Hie tr- that of a fmall bios Soils.

VIII. The fKih, or Yellow Starwort of Virgi-
 nia with a SKilis^v Stalk, hs foot is knobbed, and
 Kcmdy, with ;• vernl long Strings .idj'inmg thereto,
 and escreajes much at the fides, but creeps not,
 lofting in the Ground. It grows to be
 6 or 7 feel high, with many St e lower
 farts their to the h.ill, is round, hard,
 and Jtrcng, ihe other part ufwards, having a
 fmall film or skin en four fides thereof (as is to
 be (een infomeother Plants) up to the Top, which
 branches nut, bid • /aljmjl. 'Jlawers, as if
 they were Tufts at thefirji, but being blown open,
 each flower is a yel&rw Star, eonfifling of y or 6
 fmall and long yellow Leaves, with fmall, ihiek,
 yellow Pointels in the middle, each having a black-
 ijh 1, p or Point rr/mbing flowers, nhich after-
 wards turn to be flat Seed, broad at the head,
 which are fo fingly Jet together, that they refom-
 ble the bead of Seed PJ a Ranunculus, but greater.
 The Leaves fiatld fin'ly on a fmall footstalk, on
 each fide of the Stalk, bting very like to the former,
 of a dead or Ju/len-g'een color, yet not altogether fo
 large ar. i ••• little longer pointed, and
 more rough in handling.

IX. The fixth, or **Laffer Yellow** Starwort of
 Virginia I cwjiffj of feveral white and
 Jong hardijh Strmgv, with fmall fibres adjoining
 to them, abiding many years, a; d cnue. ifing tijfelj
 h the fides. This as alfv the two former Virginia
 kinds at Sea. **VII. and VIII. hofi** alt their Stalks
 4td Leaves every year, and •• the next
 Spring from the Old Scot, ii grows up but with
 one upright frn.ill round Stiff Stalk 4 or 5 v; i
 high, bearing tuofair, green, long, faning Leaves
 at every feint, dented about the edges, but jkalter
 than the former, flinding en fmall tbotjalks, and
 fomewhat bat : Hg. At every joint Kith
 the Leaves m both fides, from the very bottom,
 file forth BrSnches half a yard long at leaft with
 r like Leavti on them. At the Top of each
 tlk and Branch, grows one jlcKir, vsmfe fmall,
 found, green button Under it, has feveral fmall
 i'een Leaves en the bead thereof, out of which
 breaks the jlovser, eenfifing of a dozen yellow fmall
 ond long Leaves, encompajing a middle deep yellow
 Thrum. The Seed, b) reajatt is flowers IMS with
 ** in England, bat net beeft obfti-ved.

X. The Icvnth, or more early broad Leav'd
 PurpliNi **Virginian** Star wort. Us Root is bard and
 Woody at its bead, fendng forth long whitifli
 Strings, and abid*s ill Winter with green Leaves

upon it, when the Slates arc withered, and
 Its Leaves landing upon fHon \mfstalkt, grev
 fingly on the - •/, fiuff, brown grer.ijfi
 Stalks if ajtird high, thfy are broad and roan I
 at the Bottom, gruwmg narrower towards tbe Peiftj
 an I a link dented about the edges, of d frefhgreen
 color on the upper jutt, and fomeibing jelktaijb un-
 derneath. Each great Stalk towards the I
 Branches f-nh into JUiwrs, which jl, ind in a,
 Tuft or Spike, votib ji veral fig ill green Leaves
 be lota them on the Stalk : and the flewers being
 many, fet on fever. I! fmall Branches, have .I fmall
 greenijh Scaly husk, and a fmall pals Purpljtii
 ihwer coming out of it, cunfijhng J feveral fmall
 LeaVes hid open like a Star, wiib feveral pale
 yellow Thirds rifir.g up like a Thrum, which turn
 Jaaw, m; ih fmall Seed therein.

XL Tht eighth, or later flowering narrow
 LeavM Starwort of Virginia. Its Rwt is com-
 pofed of feveral long white Strings, which lives
 long and cacreatet much, loofing all its Stalks in
 the Winter, but keeping a Yuft of green Leaves
 all the cold feifon, till it fhvots forth ne'J> Stalks
 tbe next Spring, li grows up with many Stalks,
 and higher than any oj the others, bearing fingle
 Leaves at every jeint, which are long and narrow,
 without any dents on their edges; and without any
 bwtfleik at the bottom. At every j^int, from the
 middle upwards, it floots out very long Branches,
 and they oftentimes branched again: at eaelt
 j > iit whereof fland Jingle Leives, but much
 Jmaier, and thicker fes than below. The bhwers,
 'jl.in-1 fingly at the joints and Tops of every Stalk
 and branch, which are fmall and Starlike in form,
 ; lie white color, with a Jingle Purple Thrum
 in the middle, rifing out of a fnali green husk,
 which turn into D^wn like the former.

XII. The ninth, or **Lefler Purple** Starwort.
 Its Rout eonfijh of a bujh of Strings and fmall
 fibres \$ pom which rife up many Jlcnder, ftraighr,
 upright Stalks half a yard high, each Stalk fet with
 many Leaves up to tbe Top, longer and rtrrmef
 than any of the Blew or Purple Starworts, andjome-
 thing like fo the Leaves of Lioaria, or Toid-t'tax.
 As the Top of each Stalk, Jiand three or four flow-
 ers, eonfifling of many fmall Leaves in a Starlike
 form, of a very pale blewijb color, with a yellow.

TL > rum in the middle, which J > afcs into Down and
 is carried axMf with the Wind us the ethers are

XIII. The Places. The **riht,** iccond and ninth
 grow^ in Germany, France and Italy, but with us
 only in Gardens. The third grows in many places
 in England, in moift and fhady grounds, Lutisal-
 ib Nutft up in Gardens, /ill the refit grow in
 Virginia, as their Titles declare, as alfo in feveral
 other parts oi'Vloridj.

XIV. The limes. The three fitft and the lift
 or ninth, flower in the Summer Months, viz. in
 June and July: The fourth and fifth Howr in
 July, the fixth id Augufi, the **fcyenth** v; the
 end of Augufi, or later if **rite** year prove not
 warm; and the tigliih, much 7atir; vis, fbme-
 times not tilt the end ot **OBober**^ or beginning of
 Kovember, but yx fometimes a Month fooner if
 the fbfort be warm.

XV. The Qualities; They are temperate in re-
 pefte to heat or coldnels, diynefs or moitruce, di-
 gelHve and rriaturative.

XVI. The Specification. Stanwrt is dedicated
 to the Cure of Buboes and othLT Tumors in the
 Groin, as Galen faith, whence cams the Names
 Bubohium and Inguinalts. It aKb abates Infiama'
 tionsand eafes pain.

XVII. Tfx Preparation! You may make there-
 I ^A from.

im. i. A. Liquid Juice of the Herb. 2- nn Oil or Ointment of the Herb. 3. A Gitaplafm\>f the herb. J.. A DeceSm of the Purple Leaves of the Decort :i Water.

The Virtues.

XVIII. *The Liquid Juice of the Herb* Bathed warm, or fomented upon places affected, it abates inflammations, abateth Tumors, and eases pains in the part, particularly, it is of special use in Buboes and other Swellings of the Groin: The Throat being all outwardly fomented with it, and inwardly Gargled with the same, it is laid to be profitable against Inflammations of those parts, and the Cluinfey. It is also good against the Piles or Inflammation of the Fundament, and the falling out of the *l/Btftttw* Retfum.*

XIX. *The Oil or Ointment of the Green Herb, and Hogt Ltr.t.* It cools Inflammations of the Fundament, also Inflammation of the Eyes, and the bitings of Mad Dogs, as *Cratevas* says. It consumes Swellings of the Throat, *Sciophub's*, CV. being anointed therewith; but for these purposes I should advise to chuse this fifth Species at Sett. *VJA* because of its *Signature* in the Root (which if *Crollius* is to be believed, is much to be confidai-d.) It is also good against Buboes in the Groin, according to *Galens* Opinion.

XX. *The Cataplapi of the Green Herb.* Applied it is good for all the purposes of the Liquid Juice, or Oil or Ointment, more especially if it be applied immediately after the fomentation or **QaQion**. It has not only a digestive, but a cooling quality, and is very good to iuppurate Venereal Buboes in the Groin, as all Antiquity has affirmed. It also cures or gives ease in the Piles, and in *z fieus in Ana*, after fomentation of Uction as aforefaid being applied.

XXI. *The Decotion of the Leasts of the ?ur- Hmen m Water.* It is good for the Pains and Sores in the Groin (applying after it, the Oil, Ointment or Cataplafm) and gives relief In a *Slumfry*, abating and taking away the Inflammation and Swelling in those parts. Drink it takes away the heat and burning of the Stomach, and is good to cure the *F.piepfy* or Falling Sides in Children. The Eyta being bathed therewith, and King also often in the day time, put into them, it abates their Inflammation, cools them and eases their pain.

CHAP. DCLXV.

of STAR - WORT Sea and Water.

I. **THE Names.** It is called in Greek *ytact** by *Diofeorids*: and in Latine, *Tripotum*: in English, *Sea Starwort*,

II. *The Kinds.* Authors make six or more kinds hereof, we shall only Treat of those which are most Common with us, *vis- i- i'ripaJium* >j:ut, five vul&iirey, *Anthyllit x.ijar i'orji*; *Amctli Specia pafujiris Column**, The Common greater Sea Starwort. 2. *Tripotum vufare minus*; *Am- minor Cerfy* The Common lesser Sea Starwort. 3. *Tripotium minimum*, *Anthyllh brevior*

Cvrdi, *Ynfotium minus Lrcermanicum*, The Sea Starwort of Germany. 4. *Sietari* Aquatt'l AVatet* Stir wort.

Tlx DejtriphOfis.

III. *The &ft, or Our Common greater Sea Starwort.* Its Root is composed of many Strings, and many small Ur tibret, tobief^gro and flitk fafi in the Mud of the Marjib DttO where it grows. It has many long and somewhat broad Leaves rising from the Root next the £**** *JmooiKfat*, and thick, and of a green color Somewhat like to the Leaves of *Donas* wort, but much lesser. From among *fc*

Satrmrt Sea Great.

up a smooth herby, or fleshy green Stem, 1- 2 feet high, branched towards the left, with smaller Branches, with fleshy like Leaves as grow below, 1st Order. The flowers 1 at the Tops, are somewhat larger than those of the Amek or Italian Starworts, in the Chapter, and almost of the same color, the outer border of the Leaves is purple, the middle yellow, which in the flowering, turns into white, which seed it contains, it blown away with the wind.

IV. *Gerard* describes it after this manner Root is long and Threddy. The Leaves are long and large somewhat jointed, rowed, of a shining green color, the leaves are like the leaves of Woad. It rises up a Stalk two Cubits high or towjrdi the Top is divided into many parts

garniffhed with many fiowrs like Camera il, yellow in tto middle, and Jet abort, or bordered mtb fad! biewilb Leaves, as in Camomil flown, which turn into a whitijh rough DWw, thai flies jtui'i zoiih the Wind.

V. The fecond, or Common lctTer Sea Snwort. *This is in all things like unto the former plater, b:tt much teffer and loner, in iti Root, Jr.:/, Stalk, and Ihmer-, mi m its Originalar Native Shces, his been obfaved not to exceed the irtasntfi of the fmall Conyza, orFleahane.*

¹ VI. The third, or fmall Sea Saiuwott of Germany. *Tbii is alfo very like unto the toft, but yet lift than it, having a farther Stalk and narrower Leave*: Tfe flower it alfo /mail, and of a mure Furplttfi color.*

MI. The fourth, or Water Sumort. *It long tibrouf fiwtf, vibicb fendf forth feveraljeeak, /lender, flexible State, bendipg tee end fro, in the Water, full of piats, l " " ih* botms " " !.h* Tops, having two fmall fine Leaves, almoW like ihf. of Vennei (whencefame hive en/I'd it Water Fennel,? Jet ^{at} evrry om: of them: and at Top of each Branch a fmall white Werner, cenfiftin& of eight Leaves, whit b when laid open are in form Of a Star, whence the Name. Gerard fays, it has many fmall Graffy Stems like Tl.fi.ls, coming from the bottom of rty Water, to the upper face of tie fame, upon which grow fmall double flowers of a greenijh Herby color. 1 bit | 1 > n ion in Gerard mill have to be a Water Chkkvoeed, having fays he long narrow Leaves <f every joi/ir, and half a dozen or more lyutg defc together at the Top of the Water, i?i (ajbio/l of a Star.*

VIII. *The Places.* The two (ift grow in the Ditches of the Salt Water Marflxs near the SCJ Cojjis, in many pins of this Lund: and the Firt is ilarcclly to be mifs'd in any Sai.t Marlli, if you look welt for tr. The lecond Lobel fays grows near the Mouih of the River Yadu : or ?o in Italy. Gerard fays, thefe Herbs grow plentifully along the Engliffi Coaft.r in many Places; as by the Fort agalnftGr<n</&rfj in the Ijle of Sheppy in fveral parrs; in a JAarfh under the Town Walls of Harwich; in the Marjh by Lee m Effex-, in a Morjh between the ifle oj Sheppy and Sandwich, epecially where the Tide or Water Ebbs and Flows; and being brought into Gardens, they fiouriOl a long time, but grow very great and rank, changing their greater Roots into Strings. The' fourth grows in rhe very Water it felf in Watery Ditches, and fliaUow RiLLs or running Springs, and in orher moift and plathy places.

IX. *TIV Times.* They Mower in the Summer Months, vis. in May, June, and July, for the moft part,

X. *The ^uatitiet.* Sea Starwort or Tnpohuni is as Gattn Ciys, hot in the third degree: it is Afo drying in the fjme degree, and as *Diofcoridei* fays, it is hot is Tafte and threet in Smell: and that it purges the Belly, which yet *Label denys*: but is truly Mexipharmick, for which realbn it is put into Antidotes againlt Poifon.

XL *The Specification.* It is fingular good to heal frefh green Wounds, as alfo to cle3nfe and heal Old Sores and Ulcers, to Cure inward bruif<& and hurts, and to refill Poifon,

XII. *TIK Preparations.* You may have therefrom. 1. A Ljqaid Juice of the Herb and Root. 2. A Yonder of the Root. 3. An Ointment or Balfom. 4. A Cataphfm of the Leaves.

Tbs Virtue s.

XIII. *Tfe Liquid Juice of Herb and Root.* *Ui* jetted into Green Wounds or hollow Sores aiid Ulcers, it cleanfe.i, dm, and heals them, and mixed with Honey or Sugar, and fowallowed, it is good to heal any inward Wound, Ulcer, or Bruiie, to help again it Coughs, Colds, and Hourfeneis, and other Dittempers of the Brest and Lungs.

XIV. *The Pouder of the Root.* Taken to two Drams in any proper, Vehicle it provokes Urine, and is good to cleanfe the Reins, Ureters, and Bladder of any Slimy or Tarrarous matter iotig'd in them. It refills poifon, and therefore is put into Antidotes for the fame purpose. *Dio/coridet* liiys it purges, but *Pena* and *Lobel* deny it; yet it is certain it expels watery humors from the Bowels, conefts Wind, and gives eaife in the Gripping of the Guts, by difcharging an Acrimonious Water from the fame, epecially in Dropfies.

XV. *Tffe Ointment or Bntfam.* They have the Virtues of rhe Liquid Juice, in healing fimple Green Wounds and Ulcers, pnt3 eafe pain proceeding of cold in the Nervous parts, being applied and bound on upon the fame.

XVI. *The Caiaphfm of the Green Herb.* The Leaves being only bruiled and bound to the place, heal Green Wounds after a fingular manner, which Auihots iay, has been confirmed by Experience.

C H A P . DCLXVI.

Of STAVESACRE :

OR,

LOUSE - WORT .

THE Names. It is called by the Arabians, *Alberas*; *ILibebas*, *Mtnbasagl*, *Aluicbezgi*; *Muihuzagi*, and *MMesegi*: in Greek, 27i?if dyc/a , buibyGj/^H, *'ArnQittlyela*: in La tine, *Siaphii agria*, *PeJieularis*, *Peduneularit*, and *Pituitaria* (fte ditla, i viribus quat habct pedicttloi cneando, tV Tamtam educendo:) and in Engliff), *Slavefacre*, and *Loufe-wort*.

II. *Tse Kindt*, it is a iingular Plant *fin generis*, which at ^his day, is called by the Natural Greeks, *-kewwWi* or more properly *tk&xmuut*, i.e. *Granum Pedicularium* *, and thereupon *Cordus* on *Diofcorides* calls it *Pthiroltonon*: *Pliny lib. a6. cap. 13.* calls it *Uv,i Taminia*; but *lib. 23. tap. 1.* he fays it is corruptly fo called.

The Dcfcriptions.

III. *Its & <x>i Is long and Woody, periffing every year, after it his born Seed. It rifet up with a Jhort, but jirong blackifh green Stalk, fspreadini it felf forth divert ways: on which do grow great large Leaver, cut at the edges into five or*

Ofcers in the Mouih and Throar, by fn¹¹
therewith.

XIV. The Ponder of the Seed. Strewed ^|
over-run with Lice jrd Nits, it kills ana
deflrojs them. Mixt with Vinegar or Wine, >
is good to th tubKd upon Loufy Heads, j"
Louly Appan.l, and to drirs; away and detioj
Lice, Crab-lice, 6fc

XV. *The Apophlegmaifni.* The Seed chewed in rhe "Mouth alone, or mixed with a few *tins* of the Root of *Pyretbrum* or *?eUilory of Spain*, draws away abundance of Rheum from the Head, Brain, Nerves, F.yes, Nofe, Jaws and Teeth, and thereby eafes the Tooth-ach, and the pains and dittempers of thole other parts.

XVI. *The Ointment.* The Seed in Pointer mix-
*bd with Oil or Hogslard, and irattle into an Ointment, is good "againtt Itch, Scurff, Morphew, ScabSj Ecprofie, Lice, Crab-Lice, and other Vermin, being anointed morning and night on the parts affected, after they have been iirit bathed with the *Deeoition*.

XVII. *The Pa lie.* The Seed beaten with Meal, 3tJ made up into Pafte with a little Honey, has ;i; Virtues of the former Ointment and Elefruary : and laid in places where Kjts and Mice frequent, will eflefuahly kill or rid the place of thole kind of Vermin, by their eating thereof.

XVIII. *Nats.* Tie Seeds are very truly dangerous to be taken inwardly, unlesf prepircd,correfcted, and given by a very skilful buid ; and therefore, my Advice is, that fbch as are ignorant in PlyGck, flould forbear their internal uie, for that many times Death enfues upon the taking of them : but as to all their External ufes, they are effectual and iife enough.

Stitciffloort Great.

C H A P . DCLXVH.

Of S T I T C H - W O R T ,

I. *~r*HE Names.* It has no known Greek Name, yet fome, as *DoJondus* and *Lobel*, call it **o*.irur*, *VtutH'Q'* in Latine, *Gramen J'rucantbemum* *DdAKUF tuchfij*; *Gramen Yloridum Cumtrarij*; *GramfnyEufrafla Tritgi-*, *Gramen alterum Matt'tiffiiy Eitfrafia major Loniceri-*, *CaryopbyUts ariMtfii Btiubini\$ pnd.* in Englfb, *Stitch-wi'rt*. But whj *DodoK*ts* and *Label*, or *Ruellim* flould call ir *Hahftium*,\i. e. *tola Offea*, or *Allbone*, there is little reafon for, feeing it is one of the moll tender Herbs, and has no hardnels at all in it.

II. *The Kin3s.* "Tfygfe are two forts of this Plant, viz. I. *Gramefi Lcuca/titlxmum majas*, *Gramen flyridim mtyMr*, *tyryephylltis nrvenj/s glaber fore major*, *Bwbim*, The greater *Stitchwort*. j. *Gramen Leucambemson ?ninus^ GrsutfM floridum muns*, *Ciiry< Jpbyl!ifs anvnfisglaber fiarc miner Bahim*, The (eflw *Stichwort*. 'But why *Bakbinus* flould account them in the kindred of the *CaryephyHi*, I fee no reafon ; nor yet why they flould M accounted any Sj»cies of the *Grtim'ina*, there is is liule argument, for that they differ fo much in • jrm from them.

The Decriptioffs.

III. The firft, or greater *StircKworr*, *bat a Rm tvbich is /mall, pointed and TbrceddyQkins or Creeps in the Ground Alt jjbont, with many JmallYthres adjoining to it. ffaflf wbeme rife up ftvtrd*

round flender Stalks, fearce able to/ufiain themfelfvet, tut by the help of hedges, or other things which grow or fiand near //, being full of joints, from ztibieb two /mail, long, hard, rough and pointed green Leaves Spring^ viithouT any Yootftalb. At theTops of the Stalks and Brunches: come forth many fmdtjioxsiers, confifting of white Leaves, and in form of a Star, with fome white Threds in their middles. Of this fon; there hat been fame Varieties obferved, as txell in the StalAs as in the Leaves and flowers -, fame Flams growing greater or higher than others; in fame the Leaves larger, and in others the flowers being greater «r lejjer, and the Tbred in the middle, fame being paler, and fome redder than others.

The Seed is contained in fmsll beads, fomewbat long and jharp at their upper exds, and when it is ripe, it is very fmall and broken,

IV. The lecond, or leQer *Stitchworr*. *This in its Roots, StalAs, Leaves and i'loaersf grows very like unto the former, its chief difference being in that it is lejfer. the Leaves kjifer^ the blowers fmailer, and each Leaf divided us it v;ere mo two, mating it feem to have more Leaves than the former. Oterwife tn the fhapc of the Leaves and flowers they are much the fame-, the Leaves arc orderly plated by couples together, and in good proportion being of a whitjh color: and the jbners are made in form of a Slur, which when they are faded the Seed follows, which is endofed in knobs or fmall round heads, like Lin-Seed, but not fo abfolutely round; andibe Chives or Threds in the middle of the flower, arc fometimes of a reddijh or bkchiib color. In this leffer Species there is alfo fome i. verfity m the Statts, growing more upright „ elfe htng upon the ground, and in the fl'rs fome having uhtte Tbred in the middle Tipt with*

Stichwort Small.

black, so thjt it makes the whole flower seem to be bluet, or elfc they are of a pale ycltow

V. *The VleuM.* They grow in the borders of Fields upon, Bank (ides and under Hedges, almofl every where. The tirt kind grows more ufually der Hedges, and upon dry Banks of Ditches, the like. The fecond is more Common in >m Fields, and elfewbere, in the more open and hampion Grounds.

VI. *The Times.* The firft fioweis a Month earlier than the fecond, which is in *Afrit*. The fecond flowers noc until *May* or *June*. But when they begin to flower, they continue flowering for about two Months together running.

VII. *The Qualities.* Stichwort is hot and dry in the firft degree, a little (harp and biting as *Galen* fays, and in its ufe, raj like to Millet, and of an Anodyn Property.

VIII. *TJ>e Specification.* It is frid 10 eafe pains and Hitches in the fides, and to take away the Jimiiefs of the Eyes, or clear the Eye-fight.

IX. *The Preparations.* You may make thereom. i. A *Liquid Juice* cfthe whole Plant, i. *Poudir* cf the Herb. 3. A *Fonder* of the Seed.

The Virtues.

X. *The Liquid Juke.* It is much commended to cleat the tyes of Dimnefs, and to take off Films which begin to grow over the Sight, being daily three or four times a day djopt into them.

XI. *The Ponder of the Herb.* It is accounted ji, to help Stitches and Pains in the fitics, being drank in Whits; Wine iiom a Dram w 1 Drarrji:

fome advife it to be taken with the Pouder oi *Acerni*.

XII. *The Pouderefihe Seel* It may be given from a dram to 2 drams morning and evening, 1" White Port or *Lisbon* Wines, for the ibrmer potpofes and intentions. Some fay drank 2 or J times a day for many days together, that it caufo trukfull m Women,

t 'THE Names. It is called by the Arabians,

X *Ajlocbodr*, *Ajfoehodes*; *Ajhorados*, *Afiuchudes*: in Greek, by *Diojwridcs* 't-v'fi • " } *Galen* £H&2t: in Latine *Stackus* and by molt *Stirchides* i a!ij *Sigch.u Arabica*, (becaufe the belt was brought out of *Arabia*, *Diqfaridts* lays, it rook the Name *Stashar*, from the Iflands *Stcn-hades*, (over againit *Muffilid*) where it grew in great plenty • in Englifh, *Stachas*^ *Caffidony*, *Stachadove* a^{nl}* *French Lavender*.

II. *The Kinds.* There are two principal for* of this Plant, viz. 1- *Slarchas* properly fo called, of which we fhall Treat in (his Chapter, 2- *StchasQitriria Cbryfocome*, *Yellow Stoechas*, *Gold Locks*, or *Golden Tufts*, called alfo *Ye*^{uuw} *Tufts*, of which we have already Tre

in *Owp- lit.* aforegoing: in which there is a grols error committed by tht; Pr^{nl} ter, in the Title of the *Jirfti figtre*, page 47*: col. 2. which is there, *True Gold Locks of P' & condes*, whereas that being the Figure of the fecond Species, its Title ought to be, *Teltn*^T »J' or *Yellow Ceffidony*, and So you arc entreated w Correfit it with your Pen. Of the *Sttechas P* & perly io called, of which we Treat in this place, there are many kinds, but thofe which are CB«W to be found in our Gardens, are thefe following, viz. 1. *Stteebds V^Igdrist*, *Sttechas MattblieH Sixths** *Arabia*; *Sta-chas purpurea*, Our Common *Sttechas* or *French Lavender*. 2. *Vulgaris flore albo Baubin't*, Our Common I with White Flowers. 3. *Stxibat longwribus* «" *gtilis CJujij*; *Sttrebas nudis Calkulis fummis b^l bet*); *Siechiis eapituis foltatis Lugdunetifa*» *Stachas caliculis non foltatis B<tuhtm*, *Sttech*[^] *Caffidony* or *French Lavender* with long *Leav*^a *Heads*. 4. *Sttecbas folio ferrate, folio crifpo Cluj'h* *Stoechas*, or *French Lavender* with denied *Leaves*. j. *Stachaspwurea tidorata*, *Sweet Purple SECCMS*

The Descriptions.

III. The firft, 01 Our Common *Sttecbas* of *French Lavender*. *Us Root is /omevihn* «OTH and will *Jhircefy* abide our *Cold Winter** 4*^y . bat *fiwefd* and *Seeded*, except in *Jim t*[?] } £ unlejs an *efpcciat* care be taken of it- A³ grows with us, it is a more tender *Tla* *Lavender*, ^Lthe whole Plant is *fontething* but nothing ^mud> as *Lavender*; it *grott*;^ Me an heri than a *Bujh* or *Shrub*, and is

above half a yard high. I' has long, narrow, mhitijh geecn Uavei like unto Lavender, but Jojterand fmatkr, fet at feveral difiunces about tht Si'i;,' which fpreod into feveral Branches: ,u the Tops of whch come forth long end round, andjmctimet four fjuare heads, of a darkgreen-

,n-v, unto the heads. And the heads of ihefe are not fully fo Urge as in the other^ but longer having divers hard, fiiff, and longer skinny pitr-p/tjb Leitvet, fifing up above thofc heads^ than it any time are Jeen in any of the former; -jibich in fame places have a Jhcw offame Jhort pieces, like unto the skinny Leaves, of a perfie or blew color. 'Hie Flowers and Seed are nlfo like tlte jirft, and Jo is its Jmell or cdour.

Steechas common or Caffidsny.

Vli. The fourth or Steechas or French Lavender with dented Leaves. Its Rent is much like the Knots rf the former kinds. And it has Juch like Stalks, icithfquarc, brittle, lender, hoary branches, on which grow very long narrow Leaves, nicked round about the edges, or Toothed like a Saw, net much unlike xhofe of Lavender Cotton: of theft Leaves many grow together, and they are fo dented or notched about the edges, that they appear CurPd or Crumpled, green on the upper fide and hoary underneath, of a hot tafie, fomewhat bitter, TIJC Tops of ihe Branches end in fame; what long /quart Stalks, which are naked and without Leaves unto the jpiked heads, tohich are Scaly, flenier and longer than any of ibofe before defcribed. The fiowrs are llike unto thofe wfo% but of a more purple color, and the Seed is without any difference- At the Tops of the heads; comes forth alfo, fuch like skinny Leaves^ of a blewijh purple color like the former.

VIII. The fifth or Sweet Purple Steechas. bt Root is woody, hard, long7 and bltie.kifh: front whence (hoot forth moody and hoary branches, on which do groa many long and narrow Letves, of a dark green color on the upper tide, and a intle hairy withall, but of an hoary ubitc underneath, and very aoolly, a little dented about the edges, or rather rough. It rifies up to be about half a yard high, leaning down its branches^ jbreding it felf more in compafs than it extends us Jllf in height. At the Tops of the Branches comes forth fomctimet but one flower or beady but more often two long heads together, compofid iff many Scales, at the Tops whereofft and the flowers, which are nothing but long TJ)rums or T)reds, of en excellent purple color, and ve*y sweet i/i jincll, being very plea/ant to the fight. After ihe jlowers are pafi, follows the Seed wrapped up in Doixn, within thofc Scaly Heads, fomewhat like to the fmsll Pine TbtUe Seed, Thk Ylant Parkinfon thinks ought to be placed with the Jacea'a cr Knapweeds, as being a Species of them, rather than here with the Sceechas's; but if you confider the form of the leaf and manner of its growing, it fcems to be rather of the kindred of the Steechas^, than any thing elfe, for U!";J reafon it is put here.

• « isatfo a j, and die Plague, a. r Infestkws it has i quality opwiiiv, for which j, good againft *ofc <l-teafe cfthc ! efiuce taken to or another proper and ibengthens all p mva rd .P" .asalforhev.

frime of the IW,.. MefvZ fiys, it d purges, and refolves all ObfruGioiw of the Lnxr, SpUen and other 1^ b ^ hinders putretai and correftu their inL-mp.uture.
* " • 1 w kffeace, h has all the former Vir- t<S, bebles which it Ihengihcns the Brain J, i^etyti, Hejrr, and all other inward pirts, cor- re<s and expels Hcgm, and Mjrcholy, com- J?"* ' irs the Hejrr, revives the apmrs, and is ettetual againft all colJ griefs in any part of the body, all Aches or Pains whether internal, as CoUdt^ or externJI as botits, &tt by taking it ujwudly morning and night from one npoonhil to two m any tit Vehicle; and outwardly bathing with it, the pjrts aftened. Authors wv, that \$t*ek v has i t athactidt tjcicity, but I could never rind it i and therefore they fay or ad-

to be given with Pinegai of Squills (either the Juitt; or EflinCc) agaiiitt Vertigo's, Epileptic;, UK, and other pains of the Head, AS allof of tje Sromach: and given with Lapis Kyaliesu, or it prevails againit Melancholy, and terrors and \ -panying the lame: fo alfo, ^"kenwih Juice otBuglofs and Pippins; it takes Sway the oppreffioa i<t ddnests at heart-

XVI. The Syrup. It has all the Virtues of the Liquid Jtiks. and is a more excellent Pectoral, more efpedally if it is made with Clarified Honey, or Sugar Candy; it is truly an excellent thing f' gdnlt all diflemper of the Brdt and Lungs: and ufed as a Vehicle to take either the Juice or meats in, it is not only efle&ua! for all the pui- re intLided for; but io mixed, diey pre- vail agauift all forts &f Agues, whether Quotidian, Tertian, or Quartan, more efpecially wheretjini abounds. But they are did to be luirftuTOr &<> as are hot and dry, and of a Cholerick habit of Body, caufing in fuch both Thirlt and Fainting. I his Syrup may be made of the Clarified Juice; M o: the heads, and flowers boiled in Water, according to the ufujl method.

XVII. The i'cu.hr ofthe Herb, or of the tiedct and tloans. It has all the Virtues of the Juice, Effence, Decoftion and Syrupy but operates nor with that fpeed, by realbn of the grofinels of its pjrrs, and being dog'd with fo many Earthy panicles. If it has any Githartick Qjialit? in it, it is very weak and flow, 'aaj therefore they &' wife it to be mixt wi; hldr, or Ch(- huh, or Sai Gemma, or Vmum SeiJiticwfi to ex- cite its purgative property and quicken ir. They is made ftronger, if it is before-hand In- rufed in Whey, or in Wine, or Juice oi HppioSj with a few ruiibos of the Sun. The Vote is from half a Dram to i Drams, moroing and evening in the Syrup, or other convenient Ve- hicle.

XVIII. The Peco&ioa or Infufion in Wiry, or Water. It has all the Virtues of the Juice, Effence, Syrup, and Ponder; but much weaker, and therefore is given in the larger quan* tit/, as to halia Pin: or more, and if they defig¹¹ it'to Purge, it ismixr with fbrjeofrhe aforenamed Cathartlcks, by which it is made the more forc* i le. It provokes Urine and ihe Terms, and cleanfes the Urinary parts.

XIX. The Oil by Infohtion or T>ecollisn. I^f is agairlr. Aclies, and pains from a cold cauft, dji- in Crimps and Convulfions of (hj and prevails againft Faifies, ai» Othti knefiffi aflriding theextreym pJ¹¹: anointed upon the Region of xbs\$ Womb, or put up with a Peflary, it is good for the pains and cold dilbmpers ot that Bowel.

XX. The tuit.es of thir Herb or heals fartf- Tjken up the Noltrils through a tunnel, it¹⁵ good againft colds in the head, and opens f^oP* p.jges of the bead and brain. Received in the lame manner into the Fats, ic is good agaipft pains there, as aifo againft thicknefi of Hearing) and Deafnds: and fo taken up the Womb, i' comforts and Ihengthens a cold and moilt Womb, and fomerimes induces rhe Terms.

XXI. The Acid Tmtiure. Taken to a Grateful Acidity in any proper Vehicle, it prevails againft the Plague, Spotted Fever, and all forts of Mal- lign and Petti lential Di (cafes. It fuppreffes Va- pors in Women, and is good againft Fits of the Mother. It Itrengrhens the Stomach, and caufes a good Appetite and Digolliion, and is indeed an excellent thing againft the biting of a Mad Dog, both inwardly taken and outwardly applye^-

XXII. The Spirituous TinUure. It comforts 3 cold and weak Sromach, is good againft Fainting and Swooning Fits, prevails agaijlt the ?M& and cold Uilcafes of ihe Nerves and is (ingularly good againft ^e Colkk, Griping* oi' the Guts and Bloody Flux. Dofe a Spoonful at a time in the aioregoing Syrup

XXIII. V*

jva.ill. The Ouy i'mitirc of Heads and K«»-res. Inwardly taken from 10 to 5° Drops, and butwatdly applied it is good aguintl the fame, and all cold and moift diltempets of the Nerves: It gives cafes in the Sciatica and Gout from a cold caifej and eafes pains and aches in any part or the body being anointed thereon. Inwardly taken k provokes the Terms, facilitates the binh, caiiies due cleaning after delivery, gives tale in Atrerpains ai< in the Colick, is profitable againlT hand, Gravel, S^one, or Tismous nutter in the Kems and Bladder cafe the Strangury, and ctanfei all the Urinary' Veffels from Heterogeneous matter

' i & f t i S W ^ has allUhe Virtues of the EfenOB. and Spirituous Tincture, but much more p i t .nd^ Cordial and may be TM from half a Spoonful to K # * ^ S 2 t o f f the former Syrup, againft Melancholy Vert go s, Epikpfies, Palpi<^io.iol the heart, *£**£*£• eafc of the Head, Brain, Nerves, undlifteni.

XXV The Dipiled Oil from the beads and flowers.' k is w> ways inferior to the Oils of Lavender, Rolemary, Pennyroyal, Angelica, Oranges, or Limons. A potent Medicament againft the P-illie Convulfions, Catarrite, Colick, hpilepfy, and all cold and moift dtfeafes of rthe Head, Brain, Nerves, Reins, and Womb. It may be given from gut. in. to vj. er viij. in any proper Vehicle: or it maybedropt uponpoudered Su and well mixr with the firm-, ^nd given tea Glafs of Wine morning and nighr. It wonderLilly comfons and ttwngiheis the Womb, is good agamft Barrcnnefs, provokes the Terms, fauhmtes the Birth, brings away the After birth caies After-Twins, fuppreffes Vapors, and prevails againft fits of the Mother; and has allo M the other \irtues of the Juice, Effence, Decoa^n, byrup, Tinctures and Spirit .fbrefaid, being cautiously given as the tamed Phyfian Ihall direEl

la the YeUow Steechas, or Gold Locks, in Chap. W. ** aforementioned, wbofc Qualities Properties and Virtues, tbt? they m,;y be fomelbing tike to tbcfe, and mayferve to maf of the fame Intentions and Puqifcs; yet tis ecruin, Vis nothing fo effdhtd as the True Steechas, of ^>ich We have Treated in this Chapter.

CHAP DCLXLX.

0/STOGK-GILLffLOWERS

Gtirdm.

I. T t f E Times. This Plant is called in Greek, and U, fhbd'm Latine, Leucomm: and in bnglith SttchGilliflower.

II The Kinds. We make but three genenck kinds hereof, war- i- Uuainmt Horte.nje, Garden Stock-GUliflowers, of which in rbis Chapter. «. Lattoium Moris*** Sea Stock-Gilliftower, of Which in Ck&tfo. next following. £ L M » Murdlc Lcucoium LutetiM, Keirt, Wall Stock-Gilliflower, or Wall flower, of which in its proper place in the Alphabet, W.

III The Garden Kinds. Thefe are fiift fmgk \jeuwwm fimfoxjtuvum cotorum dtverjo-

r/m, Single Gai Gilliflowers of feveral colors. 2. Leucowmfativam alhidti Luteum f.m.-plex, The figle pale yellow Scock-G i 11 ihQiver. *. Lcucoium McUncbeicwr, The D.:rk or Dull jingle yellow Stadt'Gilliflowet. 4. Lcucaij alter nun genus flore fupiiici, Another kind of (ingle Stok-Gilltriower. Secondly the Douleum kinds as, 5, Lcucoium jlore plejto dtverforwit colerum, DQU-ble Stock-Gillifloweis of divers colors.. 6, Leuc-ccium fmivum hitifum jlore plena. The double yellow Stock-Gill rlower. 7. Lcuclium fiore plena variegatam, The double fringed Stock-GilliHower. 8. heuemum alterum Jiore pleno, The other double Stock-Gilliilower, of all which in Order.

The Defcriptions.

IV. The firfl, or fingle Garden Stock-Gillflower of feveral colors. Us Root is long, white and Woody, fpreading divers vmyt: Thefe jingle Stoci-Gilhjlowcrs the" they differ in the color I: flowers, yet are in leaf and manner of grouting one fo like unto another, thai until they come to fioiaer, ihe one colored cannot be known, from another Stock; that which bears red floviens eanot toi from that which bears purple, nor either of them from tbet which bears white: and therefore One Befcriptiop of the Vlani mill It rife: up tvith round Woody tabitifb Statif^ two,

Stock-Gilliflower Common.

three, feet or more high \ on -which grata long and nit very broad, Jbft, and tohitifh or g*,iy-.J)) green Leaves, fomethwg round pointed, and parted into divers branches, at the Tops of which grow tunny flowers one above another, fmWing very fiteet, coniffing of four fmal!, Umg)l round printed Leaves, fi.wding in fmall long basis

B whir?'

turn into long and fiat Feds, two, three four, and fomtimes jive inches or more long, in which is contained fist, round, rcdjili Seed, with grayilh Rings or Circles about tb?m, tying flat all along the middle Rib or Pod on both fides. There is great Variety in the colors of tht flow- vrs : fur fome ere wholly of <i pure white to/or: ethers of a mnfi excellent Crtmfoa red color: ethers /igain of a far red color, but not jo bright or lively <ts the other: /ante of a Purp/ijh c,r Violet color, without any Jpat, mark, or line in them at all. There are again of all thejc colors, very variably mixed, as Wirite mixed with great orjmall Jpcts, fi rakes or lines, of a pare or bright red -, or dark red and while with purple fspots and lines: And of either of them, wh/e flavors are almoji half white, and half red; or half white, and half purple: The red of both forts, and the Purple itlfo in the Jane manner /potted, striped and marked with white, differing neitivr in jorm, nor fiib))<wce in any other point.

V. Tlic iocond, or finge pale yellow Stock-Gill irtuwer. This is of no gre.it regard hit only for its rarity and diverfity there being but little d. " t bh fond from the former , whether as tn its magnitude, leaves, or flowers, or manner of growing -, only this has greener leaves, and a pale yellow flower, elmojl white; but in all other rifpeSs alrke.

VI. The third, or Dark, Dull fingle yellow Stock-GiUiflower. TW* h'ems to be ,I Wild land of this Phmt, iind his like Roots with the former, but larger, longer, and greener Leaves than any of them, unevenly gafht or finuited on both edges, lying on the Ground, and a little rough or hairy withal, i'rom among which rife up the Stalks a yard or more high, and hairy likeaife, bearing thereon, here and rftert, fomefach like Leaves as are beioix, bat ftaller -, and #t the Top a grejt number of jlouxrs, as large or Iwger thin tny of the former fingle funds, aide of fvir targe Leaves apiece, (landing in juch like h/jg busks, but of a dar\ dull or fu/len yellowfb coler : after which come hxg rwn&ijh Fads, to tvhieb lye j'vmwhxt long but rounder and £ reater Sud than in any other Stock-GiltflcHcer, and newer both h: Pods and Seed unto the HefpertSt or Danes Violet. The Root of this does not ufually penfi afitr Sfid bearing tho' fomr-timesil dues.

VII. The fourth oc other fingle kind of Stock-Gilltiower. Us Root is Hie to allthej; 'rmrr, and dyes every Winter for the mnji party after h bn h-n; bloxoers tind Seed, betng Jeldom pfervered. This kind difjcri neither in jerm of Leaves, Stiilis, or flowers from the formi\ jzving thtt it oftentimes grows flinch larger and iaHt.r ^fp this niojiever

the both theft- growing tgrthsr, Jhali / dijcern the difference; only it bears jily, either White, Red or Purple, that is, of One color, without mixture ef other cofott W the tap which arc either jingle 'like unto the ferme>\ r very thick, and double, like untu the next following\ but larger, and grewing wilb a greater fj) ore ofklowrs on the long Stalk, but this IT to be underflood, that thefe kind of Plums which bc?ri double-flowers, as they bear no Sre.l the double jlmcr'd proceeding from the Seed of this fingle Jlotfer^ (which of all the fingle JhwerW kinds, is that only whofe Seed gives both fingle and double fiovaers) is veryfelddmenerenf by jlipi or cut flags (as the next double kind ts) DCCiwJe thn jbrt dyes every Winter Jor the nwfl p<:rt ; but •s to be produced every yejr, from the Seed of this jingle kina\ a-bkb fromjfcueujly bring! forth. Jvme

"<"i jtag ' ;, end joxe doubleflour'J, cannot be dijlinguiffj one fjom M viz. which willbefingk,anlyfoiehwil bedctil 'hy lire Jeen in flower, or in hud at lea ft \ fa which reJfon the Seed of this Jingle kind is ahigtv '••• trfaved; which is the enly any to prejerre n Species. But of the Sued of any ofthe former Jingle kinds, never any double /owers were ever know* to be produced, and therefore you ought to be care- full ;Jl frvjtg the Seed, to dij)ing:tijh tt^rom tht Seeds of thojc.

VIII. The fifth or Double Stock-Gillflower of Divers colors. This kind tthich bean only ic.itbte flowers, grows not Jo great>> nor Jf reads its brunch es Jo far, nor are tit Leaves Jo large as ilie deuole flowered of the former fingle kind, but is in # things fm-illcr, and lower, and yet is Woody «* Shrubby like that; bcinnng its floors in 'he hfJ manner, ruj/j uP,r, a lung Stalk, one above eitothr, and very double, but not Jo large as thojc Jr/frac double, abbf it grows in a fcrul fm.\ which trf wholly cither White, or (bit, ar tafpie, Uitbei/t ••xture, or elfe mixed with Spots and Stripe**

jingle flowers of the fir\$ kind, but variably, and not in til phces alike, never beerti Seed, but is in be enereafed by the cuttings of • ymng Sprouts or Bmm bet only, taken in a fit Sea-Jon. i his kind perifhes not, as the former double kind does, provided it be defended in Winter p^f the Extremities tf t'roffji, and Cold hsrth ** North Eafl Windt, und from the Snow failing & rcjhng upon it. The firmer Snxk.GiL:ti-wer 4 divers colors, rmjed from the Seeds of the f'g^le kind at Sect. VII. above, are in all pans fo fit & the fingle, end fo well known, that they need & Defeription. The chief difference conjifls itt ')c flowers, which in this double kind are large, tbi& and double, bearing many upon one branch, attdf*¹ Stalk having many branches of jlsuicrs, which ** either of a faider or lighter purple color, i • paler, or deeper reddijlj Murrey. Then i' a>X one vfoich hat greener Leaves than any of the fin bearing pure white flowert: but dLtbffk (& ^ fiid before) come from the Seeds of the Jingle & at Seih VII. afnrcmentw/iM

IX. The fixih, or Double Yellow Stock-Gill* flower, it has long Leaves Jomeabtt h*ry ff white, like unto the Stock-Gitliflouiers, the Sw*J and Branches being alfo like the Jame (and *f Green like untv the Wall-flower, to which e/fti¹ migh have been referred.) The flowers art i² and double of a pale yellow color.The whole P^K is tender, as the double Stockgillflwrs are, * ought carefully to be prejerv'd in Winter front t«* Cold, and that rather more than the next don¹ left they perijb.

X. The feventh, or Double Striped Yell* Stock-Gillflowers. It is in all things like ¹f former fingle Striped, and has the Jame diverM of Colours, only differing in that the Hewers • / <w are all firiped or marked more or left "fi white, which adds very much to their beauty "m ejelem.

XL The eighth, or other Double Stock (M> flower. This has no fingle of the kind, and Ujv, Jcr in oil the parts thereof, than tbt'fc raiftdj^ Seeds • the Vlmeers are alfo Jmaller but thick 4f double, ef the fame or like colors with the Wffi both for fingle colors and mixed; many of « much more, and better f.riped with uhhte t8* thofe ofthejormer kind,

XII. the Places. They grow with us only " Gjrdcns, and that almojt throughout all fail*¹. liut it is faid that feme of the fingle: ki'A *v

Foreign Countries and Warm Climates grow Wild

XIII. *The Times.* They begin to flourish in *April*, and are in their greatest Glory in *May* and *June*; but many of them continue (towering all the Summer, till they are checked by Frosts. Some of the single kinds will continue to flourish in the same manner all the Year through, in the most temperate and warm Countries, and Cold Winds. The single kind at *July* and *August* will flourish in the same manner, as well as the double kinds, till the cold Weather or rainy Season. The double as well as the single are of the right kind, is to be sown at the hull of the *Seed*, your flower Nursery, not too early, if they are sown in hotbeds, in the first drills, drawn across, and then covered with One; hand after the Seed is sown) as thin as

XIV* *The Cultivation.* * Being sown in their proper Seasons, when the Plants are grown up to be about 4 or 5 Inches high, you ought (in some rainy Seasons) pull them up, then turn the Bed over where they grew, and let them again in Rows at convenient distances. After they have had some time, and begin to grow high, take them up again as before, and set them again the second time - by this means they will become more hardy, not grow so high, and spread out more into Branches, have more strength to endure Winter, and at Spring, be far better Plants to receive, than those which run up to a great height with long Stalks, which are seldom able to endure the

Among those raised from Seed, you will have many with double Flowers, which may be perceived in the buds, which will be rounder and larger than those which will prove to be single: these double ones you ought to remove into your Garden taking them up carefully, not breaking the Roots and with some Earth about them, which being a while shaded and watered, will grow and bear flowers, as well as if they had not been at all removed. Those with single flowers must stand for Seed, which is to be sown every year to preserve the kinds; for after they have their Flowers both double and single commonly die.

XVI 3 The other sort of double Stock-Gilliflowers, which bear no Seed, nor have any single of the kind, are to be increased by slips only. These double kinds, being not only more apt to grow but also continue longer than those which are raised from Seed, but as it is in Carnations and Quince Gilliflowers, so it is in these, the former sets, being more easily obtained, has caused the latter from Seed, to be neglected and almost quite forgotten, so that one Plant from letting is a much more noble kind, and worth five of those raised from Seed.

XVII 4. Some think that the Double kind raised from Seed, are not to be preserved longer than their first year of bearing flowers, but that is a mistake - for many of those double Plants have been raised from the slips or cuttings of this kind, as well as the other. This is true, the Old Plant begins to flower, dies commonly the next Winter; but the cutting will grow, and bear the next Spring following, almost as well as those raised from Seed, which is to be done in this manner following.

XVIII 1. Make choice of such Branches as do

not bear Flowers, which cut off some distance from the Stock, so that they be not too long - then hit down the bark at the end of the slip, about half an Inch, in 3 or 4 places, equally distant from each other, according to the bigness thereof, which peel as far as it is ill, and turn up; then cut off the naked woody part close to the Kind which is turned up: make a wide Hole in the Earth, and lay the slip therein 3 Fingers deep, with the bark spread open, round about the end thereof: then cover it, which let lie undisturbed for some time, and watered, if the Ground is any thing good, will grow and prosper very well. This certainly is the best and most absolute way to raise double Stocks of any of the kinds: and in like manner you may cut and set Slips of *Waltjouiery*, or of any other Woody Plant, which will grow of Hips. They may also be increased by laying the slips after the manner of *Carnations* and *Chrysanthemums*.

XIX. 6. When the Plants begin to rise out of the Earth from Seed, you ought to secure them from Frosts, and Cold Nipping Easterly Winds, by covering them with dry Dung, Mats, or Glasses. If you cover them with Glasses in order to forward their growth, take care not to uncover them all at once: for after having been enclosed in a Warm place for some time, if you expose them to the Air too suddenly, you run the hazard of killing them: whereas if you gradually expose them to the Air, they will the better encounter the hard (heat thereof, and gather a sufficient Strength, so as the more easily to admit of a Transplantation.

XX. 7. The fourth single Stock, which we preserve for Seed, we always retrench in its Pods, tearing no more to ripen than we think fit for our necessity: so will the remaining Seed be fairer, larger, and stronger, and make more noble and beautiful production of Flowers. It ought also to be gathered when the Pods are quite dry, and begin to open of themselves; for the Seed being then in no danger of shrinking, you may sow it with expectation of excellent Plants.

XXI. 8. Before you plant your young Stocks, do not set them immediately in the designed places for them, but fill whole Beds with them, placing them at half a Foot distance one from another, where they continue as in a flower Nursery. The Stocks begin to discover themselves towards the latter end of *September*, if planted in season: sometimes it is later, and now and then not before Winter. For they are in no danger, unless they be double, and since Nature has not imparted to them all that advantage, this Method is taken; that having raised them, and found out which of them are double, we may order them according to the following Directions.

XXII. 9. As soon as the Stock appears to be double, prepare Pots or Boxes 16 Inches wide every way, which fill with one half Earth, the other half Old Mould mingled together, and press'd down with your hands, left it mould chance to sink after the Flowers are planted, and to make an unevenness in the superficies, which ought to be avoided: fill the Pots, &c. no higher than within four inches of the Top, for the Vacancy which is left is to receive the Foot of the Gilliflower, which we draw up either in Turf, or with no more than its Roots.

XXIII. 10. If it is raised with the Turf or Earth about it, then sink a Spade down, within 4 inches of the Matter Stem, and plucking the Spade up, do the same on the other side, directing it so, that it may go hoping under the Roots, and at every turn heave the flower a little by

fome ftmll bbocki of the Spade at iht Top of the handle. Now obferve, if the Roots of the dower be quite difingged from the Earth; if fo, tjruf down your hands on both fides of the Turf, and with your fingers opened or ltretch'd a? wide as poifiblt; raife up the whole; and before it is ihicud in the Por, Tub, oiCjfe deGned, let anotherperfon be rdwy tutui off thiofe ends of Roots which are too long for the Turf.

XXIV. 11. Then fet the Foot of the Stock in s dt-figt'd Place, direttly in the middle of the Viuil-1, taking oire chat the Turf or Eaith fall not afunder from ii: But if it chanches to be disjoint a little, keep one hand dofe upon it, and iiii the othtr take Ionic of the Compounded Earth as before dtrefteJ, with which cover the Tarf all round, preffing it g^nily down, and fo fill up the Pot * irhui an Inch of the Top, tatting pure Mould o-it, and uniting the (uperliries as evenly as may ^v which dons, Wattt the Plant, and ivBiovc ii ^r iht bade, till it has taken Root again, after ^{into} hich place it in the Sun, in the Fl:ce where you efign it (hall ftand.

XXV. 1i. If you don't defign to PJant your stocks with the Turfs about them.- then only pluck them up by the largeit Stem, and carefully clip the Hoots which are too long, after which Plant them, according to the Method before precribed.

XXVI. i?. Since we only ufe that Seed, which is of the belt kind, you mult take care, before Winter comes, to have fome of the Produ- on in Pots, to the end you may be able to lave the Seed the year following: for know, that Stock-Gillirlowers are only in Preparation (the tlrlt year after they are Planted) to produce Flowers and Seeds ihe year following-, fo that without this care, you will often be unfurnished.

XXVII. 14. We Plant them in PotsorCafcs, itber, 1. becaufe we defign they Ihould continue there always, or, 2. with an intent to remove them ^{gun} in the Spring, to replant them in the borders, [^]tbtr parts of the Garden, where they day ^{the} belt ihow. But when we would have ^{them} remain long in rlower, we place them ⁱⁿ Pots tTc. that itrey may be removed upon ocaafion, into the fhade: and it' Uic Pots tire of right ^{the} tieh Ware, and of handtbmt: (i/., and placed ⁱⁿ good order, they will be a fingulai Oument to the Garden.

XXVIII. 1?. In cafe the Stocks are not marked the firft year, after they are Planted, fo that you cannot judge whether they will be fingle or double i you "mutt be careful during the Winter, to prderve them with a covering from hard Frofts and Cold North and North-Fatt Winds, which might polfibly Kill them. And thote which are in rots are 10 be fecured from tffe fame r-knees, either in Green-Houfe, or in fome othe: place, of a Southern Scituaion, which is waim and not moilt.

XXIX. 16. Stocks onght to be Sown "n Ho, Beds, as we have declared at SeS. XIII. aforego ing, but you may Sow them in the KudedGrottn* alia, which is well Till'i, hut then it ought no to be done till the middle ot Afrit or later, b; reafon of the Cold Weather, which is not ove: ^{times} before that rime; but whether they be Sown in* Hot Beds, or in Hakei Qrwd, they ought to be fufficiently Watered and Weeded, ilia nothing may hurt their growth.

XXX. 17. The flowers fet in Pots to be DIC fery'd from Frofts, and Cold Weather, are thus t be removed. Dig a Holu with a Spade or larg

rowel, about as broad anddctp as a HatCrowBs then lay your hand fet upon the fuperficies of the tarth ill the Pot, in fuch a manner, that we iower part of the Stem, may be jult in the mid^{le}. If your fingers-, turn the Pot upfide down, aiw hake it a little, til! you perceive the Firth to efceud-, bring your kind down a little, uke ax [^] ot quite oft, and holding the Plant in ^{our} h:inds. cany it gently to the Hole 11'g f^{or} t, where having pbe'd it as it ought to V, hn the whole up with Earth, and water it, and which, you will iind it thrive and rburifli to your, ^{at} iatftaftion.

XXXI. *The Klines.* According to Authors, they are of the fame dualities, Specification ami Virtues of the Wallflower, of which in Us props* place; and as their Natures are much the iame, Co they are efteemed as *ESeEtsgi* to all inrentions and purpofes;- they are hot and dry in the *to** degree, AbRtiffive, Anodyn, Hcpitick, Splenetia, Nephricick, Hylkrick, and Neurouck, and ot tfin and fuhtil parts.

XXXII. *The. Spicifaf'ian.* The Fioivers • he hardncfe and t>ins of the Womb, prow Terms, expel the Birth, Afterbirth ami Child, opeu Oblhuflions of Liver and ^{cleanft} the Reins and Uiirary pjffjges, P^ro^voJ? Urine, help in the Strangury, and are faid to aai Irengdi to Hiralytick Members.

XXXIII. *The Preparatimt.* You may mSS therefrom, i- 4 *Liquid Juke or Effence of the ficjdsofFateers, rather thin of the green Lezvu-2. A DeccoSion of the fame in Wine, 3- A Pw der of the Seed. 4. A Gargarifm. J. An OpPa tbalmkk. 6. A Drilled Water of the Heads <9 t'iatcers. 7. A Caiatfajm.*

The Virtues:

XXXIV. *The Liquid Juke or Effefix.* According to *Galen*, they are of a cleaiiffing quality* m dot thin puts; they open the ObKruct)O"^s« Liver, Spleen, Keins, and Womb, provoke tW Terms, help the liardnefs and pain of theW ^{qtpd} Birth, and Afterbirth, and Dead CnuA IrengtUui and relore ihe Vifceu, and any extenOJ part weakned by the Palfic, oveftraining or any <* cher Accident. Drop'd into the Eyes, they clean⁸ thum from Mifts and Clouds, which fern to W* der the fight; and take away iuch hlms, wJ are beginning to grow over the Eye. Dofe ^{Spoonfuls} or more morning and night, in a t of the Diftilled Water fweetned with Sugar; ^{oi} with *Syuput de Althm* in cafe of the Stone 0 Gravel, or other Tarcarus matter in Keins & Bladder.

XXXV. *The Detoaien of the Heads* ^{in Wine.} It may be made of them either or Dry; it rettifies the Indifpofition and h3 of the Livet and Spleen, and has all the Vir the Juice or Effence. Dofe from a quarter to J a Pint morning and night.

XXXVI. *The fonder of the Seed.* It, h^{as} the Virtues of the Juke, Fflence and Decccclion: may be given from a Dram to two Drams, rn up into an EleEbary, with Kob, or Pulp ^o //, nper Berries^ or any other proper Vehicle, has Abterfive, Diureiick, Hjlterick, and ^{fti}uiftive qualities.

XXXVII. *The Gargarijm.* It is made of ^{1D}V Decoation of the Heads of Flowers in V!&&%* and fweetned with a third part of Honey,

an eighth part of jioch Alum diflolwd J" * * * « goodto heal Ukets Ui the Mouth and Tbroar, they being often Gargled therewith. A Decoawi « the Roots in V'irriar is held good for ihchaSneft of the Spleen, bung outwardly applyed, wliiitt feme of the termer PreparadoiS =æ given in-

T/c Descriptions.

III. The firft or Purple Sea Stock-GtUi flower It bat a very hug rvugb root, thruftixg it /elf tipt into the Earth ^ from zebieb rife up tbicA, fitt% Jofi and beary Staiks, The leaves cmirtg forth from the Staf;s next the Ground, are long, foft, tbicA, full of fitter, covered with a doieney honri- nsfs, and finaund fomewhat deep on forth fides, the Stalk it Jrt here and there tviib like Lcavet, but teffer* l)# Flowers grow at the topt of the Stalks, compad of four /mall kavct, of a light Purple Colour. 1 ~be Seed « cont dined in long crook- cdCcds^ like theft of the Garden Stock-GillifloKcr,

IV. The feoRd, or Levant Stock-Gill i flower. Its root if tafv/c, and grows deep into the Ground, fpreaJirg it fr/j about, eroieirg woody when it is in Seed.) but penjbing afterwards. It rifes up at firj} viith fevcrtil long and fomewhat broad leaves, a link unevenly dffited or waved ehout the edge*, tehkh fc cantimtc ibe firjl Tear after &exwng< Tie Stalk rifes up the next Tear \u be about tuo Feet high or more, bearing ail thofe leaves en it which it fufi had, which So then grou> left finuatedor w- ved than before. At the top (lands many V/meri tOaek of font Leaves a peice, of a delafd "Purple Colour ; having hut a little jmccl, tobkb turn into very losg and narrow fiat Yeds, in which are con' tained .fat Seed, like that ef the common Garden Sttsek-GHUJfrnner, b*i much larger, and of a dark or blactiith brown colour.

V. The third, or broad leavJ Sea Stock-GiUi- flower. If kw a long root, running very deep into the Earth, with avajl number of Fibres or Strings coming front the fame - Vrom which fprng forth Wiiny boiiry leaves lying upon the Ground JIiorter and broader than theft; cf the other Sea kinds ; harder a/fp in feeling^ and as it were rugged, more hairy, an&f.nety dented about t}ie edges, from among which, rife up feveral round hairy StalAs, about a Foot high, bearing at tixtr tops feveral V/owcrs of a purpUfh blew colour, much like thofe of the Garden; after which follow fmall long Pods with brommfhtai Seed in them.

VI. Thtfoanh, 01 Great Sea Scock-Giltiflower. Its Root « long, naming deep into the Ground, with many branches fpringing from the fame. It has divers long thick-booty leaves, lying on t}x Ground for the fit(I Tear ; fame of ihem being cut in on the one eidge, and feme on both, with but one gajb, and fame not at all. The Sta/A rifes up the next Year about a Foot high or more, which fspreadt it felf into divers branches, yet all cf them weak, and rather bending downwards, than Jhnding tip- right; on which grow but jexv haves, little or no. thing dentedor'cut in ; at the tops of which, grow feveral Flotoers of a pale purple Color, drawing near to the Color of Red Wine Leet, xuhieb fmell fleeter afier^ the Sun is dotxn, than in the day- time. The Cods which follow, are long andfome* what fiat^ with reidilh Hat Seed in them.

VII. The fifth, wGreiteftSeaSiock-Gillitiower. Irs Roi-t is uHITE, hard, long^ end j'preaing inv iniiny Branches, which abides mot after int. uxiell- et Seed, but periffhes at the otther Sea kinds dv. It h,u divers long, thick, mhiti /h fofi leaves lying upon the Ground, one within another tn a round compifu and are differ than the other Se.i fo_r,ds, or thofe of the Garden kinds in we fanner Chap- er, jagged alfv, or cut in evenly on both (Ucs. into ietf dents, net much unlike to tlx: Snagg'i of a tucks

Bucks Horn, which makes it jcem the more beautiful. Thus it abides for the firji 7ear, but the next Tear i: bears or fend forth a hoary white StjJA, three Yect high « man, fpreading it jeif out into many Branches^ pretty thick, but weak, fcarcety able to Hani upright; on which grow Hj/rower leaves, little < jr nothing jagged about the edges. At vibofe tops grow a great number of Yloteeri one above afether, fir a great length together i each Viewer confining of four Wood, pointed letaist a peice, not altogether fo fweet at thofe of the Garden Stocks, but jomewlm larger, and of a pale blewijh purple color^ almoji like the color of a Dove or Pidgeon j After which, come forth long Seed pods like the others, with Seeds lying in a double rota in the fame manner, but larger, and of a darker color.

VIII. Thefixth, orfinalSeaStock-Gilliflower. Its Root k woody like the other, and peri/bes after Seeding time, ibit ha* more upright Stalkr than any of the former^ divided from the bottom into

Stock-Gilliflower Sea-Small.

many Branches, an tobieb grata foft woolly leaves, mailer, narrower and teffer jugged, than thofe of the Great Sea-Stock. The Mowers which grew at the tops of the Branches, are fmitller than the others tehichgrow lower, but confift of jour Leaves only like the reji - of a frejh red or Crimfon color^ ibich upon ikeir fading, feem yet to be deeper ; d having a weaker Smell than thofe of the otbei ,/ • After which, in their places, come forth long Hh "™ B& arc contained the like redSecd.

IX. The Yhce*. The firft was gathered by Mi- firtwa* Bonier up >n thu Rocks at Aberdovy, in Merhnetbfhtre in W, l., and poffibty may be

found near the Sea-fhore about Colchefier, alto in • of Man, near IVeft' Cbrflcr, and near io ?rejl9t in Oldernejs, Torkjbtm: All the reit ate t'our.d growing on the Sca-Coaftsof the Lrjanf, and other Forreign Countries, but with us they grow only in Gardens.

X. The Times. They all Rowa all the Summer Months, from May, through all June, In') and At:g:iJ} •, and the Seed comes co rj^iiei¹¹ lets than a Month after.

XI. The Qualities, Specification, Vreparatims and Virtues oftheſe, are accounted die lime with thofe of the Garden Kinds, treated of in the former Chapter, faving that they have not altogether ib fweet a Smell; but in Galens Judgment they have all of them a cleanfing property, and are ot thin and fubtil parts-

The Descriptions.

III. The **firft** or finall Stone-Crop, or Wall-Pepper. *It Nu a I6*g, '2 v "v, jSnwi w firing?* iwjiinj /www Wv EW& sat very deep. It grows like the other Sn-nr-Oops, with very many and flenjer Stalks, arid fnal raiudijb fat thick kjvrs jti thick upon than ; at the topi of which, groto fmvll pale yellow flatters in Tufts, at ilf

fiinguiſhed in ſome mea/ure by its form, being a final/ Plant, aniuuSuiksvery thick jet with ſmall, fat, or thick leaves as aforeſuti, its Ro.»(ffrtngmg Up from its fibres, axd fo fprcadmg very far, quikkh t.iktini; up much Ground.

IV. The fecond, or Iilipid Scone Crop, or Wall-Pepper. *J/ *f a finall Plant like the former fr-ovoittg altogether like it, in Leaf, Stalks, and flowers^ which are at thefc, yellowijb : and is only difiinguijxd h fa ~Tafle from the fir fl •, thin being nothing biting, but at it were unfawry^ and with- jty Tape.*

V. The third, or Summer Stone-Crop. *Us ••••• • fnall, fibrous andpcrficirig. tt bat on jmall Stalks, wbcf) fpread them/elves out into many Branches, m.iny thicks round, bng and juicy heaves, fet togei her without any order •, the Bi-anch-ii i'ring flared with many yellow flowers at their Tops.*

Stone Crop White Flowered:

A NU

Tricky Madam Common Greater.

tl. The fourth, or Greater White **waJ** Stone Crop, with round pointed Leaves. *UsR,-at creeps Itkc the rrl!, and us Leaves pt'rijTi with its Stalks every 7'fjr. It creeps upon the Ground in the jame manner at the etlvrs do, with fiendr Stalks and long round Leaves upon them, of a b'a:-ifl} green color, not Jbarp, hut round painted^ fgeming like Wheat - Carni. or Pitie Apple Ke/i. ncls i being ~~soffly~~ ft thereon: tit the tops if wbieb, ~~fiandil~~ ~~the~~ ~~Star~~ ~~ike~~ ~~flowers,~~ **ULL** Tufts, or fparfed Umbels. This very miith re-fembles ike Greater Prick-Madam, in Chap. 573. Seft. J. aforegoing, and differs chiefly from that in the blowers •, theft here being mhhte, thofe being yellow: And therefore the Cut hcreptaced, mayin-differently ferve for both Species.*

VII. The fifth, or (mailer White Flower'd Stone-Crop. // in its Roots, Stalks, Branches, Leaves and Eferof>, are like the lafi, but it grows lower, and htu a greater fiore of thefeſmall round Leaves like Wheat Corns^ mhch are thicker fit thereon^ it differing in nothing el ft therefrom.

VIII. The lixth, or Stone - Crop wiith Turning heads, hs Root in Me manner at the former, creeps and flioots forth in divers places. This batfuch like Stalks with Leaves thereof, as that at Seft. VI. above ; fo that it it hard to dijlinguiſh this Plant from that^ or the Greater Prick-Madam in Chap. 578. Seft. ; aforegoing of this Book, un til it comes tu tloivr, which then may be difcer-eed to differ from them, only in the turning of its Tops of yellow tfowers, which turn or bend like the Tail of a Scorpion (whence the Name ;) or other Herbs which are refembied to it. Lobel hoi another whofe Heads turn not, which be calls Hacmatodes.

IX. The feventh, or Field, or M-irrh Srone-Crop. *Us Root is long, /lender, creeping and jf-brous like the former Kinds ^ which jettds up J'ever-ralrcddijh Stalks fet with ſmall fat long Leaves;^ fomethmg hairy, and much greener than any of the former. The flowers are ſmall, fiandmg like Stars, many in a Tuft together, of a pale red or Carnation color. It abides green all the Winter and bat tu little Tafte^ or any of the five former.'*

X. *The Places.* The firll tho' it grows naturally on Old Brick, Stone, and Mud Walls, and other Barren, Waft and UntUl'd places, yet it Is generally nurit up alib in Gardens -, as are **alfo** many of the following forts. The next fivegrow cither on Mud or Stone, or **Brick Walls**, or among Rub-biſh ; as alfo in Sandy, Gravelly, Barren and Un-rillM Places; and ottntimts upon the fides of old Tiled Houfes and Penthoufes \$ but the laft grows only in moitt Meadows and Marthes.

XI. *The Times.* They all Flower in the Sum-met Months, viz. *June, July* and *Auguſt*^ and ſomeimes in *May*; and the Leaves of many of them continue Green all the Winter.

XII. *The Qualities, Specification, Preparations and Virtues* of the *Six laj} Kinds*, are in all re-ſpech the iame with thofe of *Prick-Madam* in Chap. 578. from SeS. IX. ad Set/. XVIII, induce to which we refer you.

The Virtues of the Firſt Kind^ viz.

Stom-Qro\$ Biting, Or, Wall-Peptr.

X.III. *Vie Qualities.* It is hot and dry in the fourth Degree, exulcerating the Skin, and railing Blilttrs on it, if applied thereto-, and will do it as firongiy as *Ranunculus* or *Crowfat*, And in-waidly taken, it is Emetkk.

XIV. *He Spedjagimr.* It canfes the Stomach of grofs and tough Hegm, and is laid to cure Quartan Agues, asatibSLrurtu, ot Scrophula, and the Sciatica, by external application.

XV. *'Flic Preparations.* You may have there from, i. A *Liquid Juke.* 2. A *Syrup.* 3. An *Oil by Peco&ion or injoUiwii.* 4. A *Catpbfm of thekitrb.*

The Virtues.

XVI. *The Liquid Juke.* Taken to a Spoonful Or two, mixt with asmuch **Vinegar**, in fame pto- per Vehicle, it provokes Vomiting, and fo by educing thick tough Flegmaad other clammy Humors, irconducts to the Cute of old Qujrian Agues, **the Kings Evii**, and tue **Sciatica**, and other Oouonick **Difeafcs, orfbehcs** have been of long continuance. And it is laid to expel Poitbn, OI the force ot say Venomous Herbs, as or the Aconite, **tic But Varkinj** **meat** j« *fumpferu*, yet [know ho reacion k>t that precaution, provided it be not taken in too greira Do ft

XVII *TheSyrupjefbeJui.ee*, or *Green Herb*, It is made with Vinegar and Honey, and has all the Virtues of the *Liquid Juice.* Dofe two or three fpoonfuls or more, according to Age and Strength, in the Morning rafting.

\ WH. *the Oil by Deccltwnor In/olatbn.* It is food againft all cold and moift Difeafes of the **Serves** and Joints, as Aches or Pains, Gouts, Sciaric3, Over-arainings, Palfies, Convulfions, Cramps, Strumous Knots or Kernels in the Neck, Throat, and under the Chin or Jaws, or other parts of the Body ; and anointed upon the Piles it gives them preferu eafe, and in a fnoit time cures them.

XIX. *The Cataplafm.* Made of the Green Herb and jpplyed, it draws ftronglyj rjifes Blisters and exulcerates, and therefore is very profitable being applied to any vehement or excream Gout or Sciatica (and cures thofe Difeafes by drawing **forth** the MorbiJitk Humor. If it is made into a Cata- plafm by boiliing it **with** Hogs-Lard, adding a little Crumbs of Bread, and applied to Scrophulous fwelliogs, ktiotsand kernels in the Neck, or other parts, it is laid todilcufs, difflblve, or take them away.

0 / SUCCORY Gardes and Wild,

I. TP/yf j>W;; It is ailed in Greek by' (which laft Greek Name figniKi E^«» f as Smrory . •) in Latine, Gcterium, alto Gtf»« CrcAww, as Horace h's it XJ* i- uif ;<jjaint GlivA,

Me Gtherea, iefefque malve- Ic is alfo called in Latin W w * , but more proper Name (in my Opinioa) for and in F-tigtifti Succory and Gcooiy.

H, : (. There are t. i. Xt', umHortenfe, Garden Succary. 2. C« «W/«, Red Flowered Ciehory j. Cuborium Syheftre, «^i<^xi«« n/cw Hf«^, «' crnticum •, Amfygid, l'W ". 8. or rather Ambübei* according *' £>^»T, and ibme truer Copies j Wild Ciehory Succory.

Tjje Descriptions.

III. The firft, or Garden Succory. I tough, long and white, continuing marry Tears ;, wb'ub, ai alfo from every parr, does [Sue P •when cue or brofxtt^ a bitter Milky Juice. >*

Succory Garden, Broad Leaved.

tftvoa font, the om-wish broad Leaves, the other with narrow Leaves deeply cut or gqfht in on both
 The first with broad Leaves is fiiM-bing like unto a narrower, among »/«#rtje up Stalks on which & vutonjmak kr. The Stalk divides its felj rewards tbctapta- to many Branchet, egtobitb da grm Jft/1 blew • rs confiHns of manvj * <fter which

, v very bard to dtilwgkijb^{th*^m} ff: Jf P, live 4111ft blaekijhfiat
 Seed'very like unto Mack Lett*{« the Seed of the Garden Succory isjvhnb.

IV. The second, or red Flowered Succory. This ft tb n with the narrow Leaves Us Rx>t is Me Tbi } I and a •

Succory Garden Narrow Leaved.

Stalks The Flowers are like the finger, with this only difference, that ibefe arc of a pde red decayed color, which mny times degenerates and turns to be b/ev>, being prod-Iced from the Seed of ibis red Kind. Of this fort, there ts one also which bears white thwers, not diprtng elf? but the Seed of this white Kind, at mil or of the red Kind, aillfometimt give bkviſtawerd Wants- r,»i i, inform like 10 the Seed of the broad leaved Garden Succory.

V. The third, or Wild Cidiory or Succory hs Root is u*i«* but more hard and madif than the former. It bat divers lovſ Leaves lying up- *n the Ground, very much cut in or torn on the edgeson both fides, even n ihemMle rtb, end,** if a Point. Sometimes,t ts found tohrje a red liib or Vein down the middle of the itwJ, rifet up a bard, round, no many Branches, jetwJ

Succor] Wild.

hfs divided Leaves on thrm, up to the taps, /land the flowers, both for form and. Color like, ~ the first Garden Kind, viz. 6/ea, after which co. likefajbian'd Seed.

VI. The Places. The first two grow with only in Gardens j but the second ibrt has been found growing wild in Italy, and that with white Flowers Wild in Germany. The third is found growing Wild in many plac« in England, in wafte., unrili'd and barrenGrounds.

VII. The Times. They are all Sown in the Spring, and quickly come up, Flowering in the Summer Months, and Seeding in Augufl or Harvft time, and then dies down; but being Sown in July, it remiins till Winter\ at which time it is taken up by the Roots, and lard in che Sun or Air for the fpace of two Hours : after which time it will be tough, and may be wrapped up in aheap, and buried in the Earth with the Roots upwards, fo as no Earth can get within it (which ir it fliould, it would become rotten :) and lit thus covered, it may be taken up again, when occaſion tor its life requires it. and fo to be ufed ia SaUets A\ the Winter, and then is called whittled Succory: Farkinfan fays, it is ufually buried ;i while in Sand, and ib growswhiie, By which means it becomes both more tender in the Eating, and alfo loofes Tome part of its bitternefs.

VIII. Tlie Qualifier. Succory is temperate in refpeft to heat or cold, or rather hot in the beginning of the first Degree, and drying in the lame j Aperitive, Abfterfive, Diuretick, and a little Binding l Stomatck, Hepatick, Splenetick and Nephritick.

IX. TZv Specification, Vreparations, Virtues and Vfes, are altogether the lame with thofe of Endive, in Chap 244. Seil IX. ad XVIII. to which we icier you. But as Succory is Ids cold, and morediyng than Endive, fo it is more opening.

X. *The Decoction of Roots or Leant*, in Wine or Water, drank every Morning fasting to a Fine more or less, expels Flegmatick and Choleric Humors out of the Stomach and Bowels, opens the Obstructions of Liver, Spleen, Gall, Kidneys and Womb, and is profitable against the yellow Jaundice, heat of the Reins, fluxions and falding of Urine: It prevails also against the Cachexia, or evil Disposition of the Body, Dropsies, &c. It acts by long Sicknesses, and is of use to lingering and long continued Agues, Peccantial fevers, tainting, Swooning, and other Passions of the Heart.

Xt. *The Juice or Effence* have all the former Virtues, and besides being outwardly applied, abate Inflammations in any part, chiefly in the Eyes; are profitable against Ant-homes fire, IV heals, Pimples, or other Breakings out of Peccantial Sores, being mixed with Wine Vinegar and so applied. Dose a quarter of a Pint, more or less Morning and Night, either alone, or mixt with any fit Vehicle.

XII. *The Diffilled Water*. All the former Virtues are ascribed to it, but in a much milder or lower Degree. It is good for sore Eyes, being red or inflamed; and for Nephritis, or Breasts, which are hard and pained through abundance of Milk.

XIII. *The Wild Succory*, as it is more bitter, so it is more Opening and Abstergeive, and also a greater strengthener of the Stomach, Liver, and other Bowels.

CHAPTER DCLXXIV.

OF SUCCORY *Ba&afd.*

THE *Kama*. It is called in Greek, *Καμα*; in Latin, *Gchorium Xetibus*, and *Gchorium Sylvestris Jortibus luteis*. Pseudo-Gchorium: and in English, it is called *Succory*.

11. "D(Kinds. Out of the great Number which Authors have preferred us with, we shall only give you the seven following, viz. 1. *Gchorium Outturn Gerardi* is of Tubercle mountain; prattist Intern -, *Hleraeium pratense asperum Gefneri*; *Iambus Syheflrsfrve Gchorium Sylvestris* ere Intro Tbalij; *Gcberia Tertia Jbre Imco Tragj*, *lafluriola alters Gcfaoim*, Rough yellow, or Baftard Succory. 2. *Cichorium pratense luteum* hedypneii dilium; *Gchorium prjtesift luieum L*v:ut Btiuhini fff Lobelij*; *tledypnoit Flimj* A[>h*Cii Theepbrafi\ Eitdivia Syhefiru Ctfidph m I DM; *Lcoms Gchoriznta Gerardi*. Smooth Yellow or Baftard Succory. 3. *Gchorium duke* "Ktapottanum j *Sonchut Ijtifoius leviter hirfutus fcixhim* 5 *Ctchorium Sylvestris asperum jhmeK*, five, *Qkborium Dulce* \ Sweet Yellow, or Balhrd Succory of Naples. 4. *Gchoriwi Mentami* ^JP^ ~ rum; *iYttitium nonum*, vel *Hieracium Intubaceum ajprutn Teberitdmomam*, *Nierncium asperum Gerardi*, Our Hough Mountain Succory. 5. *Crcbanutn xomenosofum fatidum*, longer ill Tcented hoary Succory. 6. *Ckhorium Yerrucarium l&al-tbiol'i*; *Zacyntbd C/uJSj Vf Math* >«lt, *Verrutarhi* :i jpeciet Gefneri -, *CbondriVa Verrpcuria fo, Ju UKub.teris vindibus* -, *UiotidritU jpeets C~ yjZ/jri*, Win Succory. 7. *Hypechtns Ferccll'ti*, *Ctchoriym PorciKint*; *Hieretiwb minus den't Lco'tti* fltkjffpro *Bauhifli* j Swines Succory.

The Defertptivns.

UI. The foil, or Rough Yellow, or BatW Succory. *Us Root is bard, rough, and */?</£ 't bai longer and rougher Leaves than thoj' former Wild Succory; in end fort with jew ^T^ C.tts 41 till; in others li;e unio, 7^ TM: and Divijio/U. The Stalks rife up to Hi 3^ Meet high, rough and welled, divided into fever Branches, with fmaller Leaves, ettjbem, and ley jagged; bearing /mail yellow Lcnirs like unto " Hivvkweed, at the enk of every one ••, obi* they arc ripe turn into l)smn with afmall long??' l loxeifh Seed faff tied thereto, and are both carti% «Mÿ D I ind.*

IV. The fecord, or frifooth Yellow, or Succoy. *Its Reel is long, pretty thick, tapir* mitb jeveral bibres, and full of a bitter it ha* long and large Leaves at frifooth Succory, but of a u ti .w-. cut in on the edge* but not fo much nor fo deep .w the former. *" Stalks rife not up fe-bigb, nor are fo much branch ed, and the Le<i - fefs cut in, <"" towards i fa r nothing at all. The gret- Heads kbit the tops of the branches, v* are larger and mure double, fomtbing iikctbofi °s Dandelion. tftfr, which turn <'I \ and the Seed therewith are blown S with the Wind.*

V. The imrd, or Sweet Yltow, or Succory of Naples, *Us Rout is long and blac the ouOde, and white within; fo full of a Milk (without any Bitternefs at all) as if t rest of the i'Lni, that it will grow hard Gum, if it be not rubbed ainy, but fuffered * abide far fote fnali time. This in the t'or/S^ Divifw of the Lciwes^ is very like unto ufual Wild Succory, yet w>t fo deeply gafht, in feeling, covered with a fine foy rinefs, not rough at all, and of a dark green The Stalk rifes up to be two feet or more round, firm, and tabitfb^ because of the thereon; fomctimes breaking out into towardt the top; fet with fhorter, fomewhat bread? and more divided Leaves than below, clefuitg Stalks til the bottoms-; having si their topsg^ Hairy Heads or Husks, and gold yellow K W * long hairy Husks, like unto the Hawkwee^ which growing grttr when they are ripe, COK tain tcithin them fmall long brown'ifh Seed, Q^! j a fine white Cewj on them, both tobicb are caW^ away with the Wind.*

VI. The fourth, or OUT Rongh Mountain Succory, *its Root confifts of many long Strings, IV^L fends forth fevcral long narrow Leaves tit*^ j^J Ground, very fharpdy dented about the edges, net divided or cut in at all, and rough alfo all c from among mhkb% rifes -up a Stalk branched /fl" with fuch like Leaves fet thereon, and diver'<" double yellow flowers at the tops, very K& j^ thfe of Dandelion, which turn into Dovin eu *? reji, and blowrt away with the Wind.*

VII. The fifth, or frong ill fented hoary Sitcory. *It hat a pretty hug thick Root, *** rt fends forth feveral weak, rcund, hairy or wW Stalks, about tu:o beet high or more, bnvingj^- large long hairy or hoary leaves next the G&W* deeply gafht in on both fides, net much utility. ••? E coty Leaves, parted into many Brashes, wityy jer Leaves thereon than thojc Vefow, «* k* i cut in alfo .u the tops of ixhkb Branches, J^l*

many pale ye/lew Pitmen in green Husks, much like to Groundfel, abich quickly fade in like manner, turning into Down, which with the Sired is carried <iw,y with the Winl This Plant hat a liron III Smell, which is yet more in the hotter m of the Tear, from whence cam the Epibite, Foedum.

VIII. The forth, or Wart Succory. Its Root is Small and firing ' 7 Tejr a Jur s fed lime, end never sbi :ir, unles 'Hpnngs upfrom the Si tumtl. It Springs up, and Leaves next the Grou>: divided on the edges into deep Vents, but not dufshesfome- t&ngtrftm>&g Succory Leaves. The Stalks en ate/, and &M* ihmjehts into fome leffer Bribes, with 0 Small long Leaf at every Joint, broad belm, and encomp^ng it at bottom. The FLwers grow fewrly « the Tops and upper Joints of the Branches, upon fart ioot(ialks being Jmali -ud yelhm, emfted of manyfmatl yd-low Leaves, broad, feinted, and nickt in, which turn not into Devrn as the former forts da; but into frndl round and flat hard Heads, parted at the Brims intpfever.it Hunches or Knob, like unto Warts, with a little TUjt or Crown in the middle; in i-ach Knob or Wart wheseof, is contained a Ker-nel or Sad.

IX- The feventfi, or Swires Succory. It hat a fndl and long Root, from whence SPⁿⁱ! f^{er}b Se-veral long and rough Leaver lying on the Ground, fmaUer at the bottom, and brevier tomrds their

Stsines Succory.

...ly, unevenly mixed or dotted on the edges. The heads are ... several long Husks, about 5 or 6 inches high, bearing every one a large yellow flower, like unto Hawkweed. The Plant hath often small hairs on a Sprout of the flowerbeds, but Gerard and Johnston account it among the safe

ber of the Succories. There is another of this fort, whose Leavtt are smooth and narrower, differing but little in any thing else.

X. The Places. The &tt, fecond and fourth, are many times found in our Meadows and other moist Grounds, The fifth is often found in Sandy Grounds, and hy Woods and Hedge sides. The third Gohmna found growing on Hills in the Kingdom of Naples, and the !mb is said cogiow in the Ifiand Zatyntba, fiom v.liich pUces they have been brought to us, and are nurr tjp in our Gardens. Thelevemhgrowsalroadin the Fields, and in waftc Grounds and Laies in divers places of England.

XI. Tffe Timrt. They all Flower and Seed about the fame time with the oier Succories-^ except the fecond, which Flowers earlier than all the reft,

XII. The Qualities, Specification^ Preparations and Virtues of these, are the fame with thole of our Common Succory, ro which you are referred. This is also to be noted, that in Naples and other pans of Italy, the Neapolitan kind is uisd instead of the True Succory, U being very like to it in its term.

XIII. The Wart Succory. Authors fay it is Tory good for the Curing or taking away of Warts. And this they fay it does, by eatingiheHerb as a Sallet; or by taking at Bed-time a Dram of the Seed in Pouder in Whkc-Wine, for certain Ds'ys together; fo also the Pouder of the Leaves given to a Dram in die fame manner. Bud think there is not much in all this; if there be any Virtue of this Kind in this Plant, it will be bell manifested, and noiftly exert its power in that kind, by an external Application to the parts affeeted, after this manner. Take the exprefed Juice of the Plant, andheatitalmoltfcaldughot, with which barh the Warts 3 or 4 times a day or oftner, letting it dry in after every time of Bathing; and continue this fo long till the Warts arewafted away. This fays PENA, will cerrainly extirpate them, as he and divers others had found by Experience. The said Juice being taken in Wine, is laid to be helpful also againft the biting of mad Dogs.

C H A P . DCLXXV.

Of S U C C O R Y Gitm.

I. T"* HE Names. It is called in Arabick, Gei-J_ darel, C-daron, and Amiron: in Greek, JWf-- in Lacine, Chondrilla : and in Englifli, Gum Suecoy. »

II. The Kinds. Authors make thirteen or fourteen forts thereof, moftofwhichaj-eperfeftStrangers to us. Sun-Vlwer Lejjer.

whole Plant, and every part thereof, has a strong exultant Scent, much like to that of Turpentine, and the Heads and middle parts of the Stalks where the Leaves stand) give out a soft thin, fair, and clear Resin or Turpentine, but in small quantity, as it were in drops, in the hot and dry time of the Year, so the Juice is Colour, Smell and Taste, with clear Venice Turpentine, or French Turpentine, that it cannot be known from it.

IV. The Second, is called Sun Flower, or Male of Peru. This is its Root, Stalk, Leaves, Yhwers, Seed, Turpentine, and the growing, is like the former, save that it is attoged from the lower, the Leaves more jagged, and more in number. It is either without Branches, or with many Branches, with a black, or with a white Seed, the form of the Leaves and Flowers differing but only in the greatness or smallness, as has been just now said. Gerard seems to make this to be twofold, viz. 1. The Male. 2. The Female.

I. The Male kind he first mentions in its Root, as firm as it has perfected its Seed, long thick, hard, and of a woody substance, with a grey or white outward thereto. From whence a grey or white Juice issues forth, which is the same as that which is called Turpentine. In its Nature Country of Peru, for such as in England, it attains

J>IWTJ. 1« thrummed middle pan is blacker than that oftbe first or greater before Described: And the wliole Ylover is encompassed about lihmise vuib divers fuch Ruffet Leaves, at they which grow lower upon the Stalks, but leffer and narrower. The Plant and every part thereof fine Us of Turpentine, and the Yhwcr yields most clear Turpentine. The Seed is long and black, with certain Umg Streaks of white running along the same. 11. The Female kind bet also a thick and woody Root, from wher rSiMP ajiraight Stem, dividing it self mUont Jre BrincbU / < ff / f W pointed, and fl.ghtly indemed about the edges. The Mowers grow at the tops of the Branches, of a faint yellow color, the middle part being of a deeper color tending to blackness, of the formed shape of a Single Marigold, the Magnitude executed. This Plant sayt another Author, /boots out into many Stems, and a great many Branches requiring Zry much room, Jo that it is apt to choak other Flowers tabieb grow near it: tor which reason, when it is arrived to a reasonable height, and More it is full ereen, it M to be dipt with a Garden pur of Sciiart to retrembthofe Branches nhch spread too much andft«h avjboot up toohkb.

V. Of the first or Greater Sun-Flower at Sept. Ill abo»e, Gerard gives us another kind of Defcription 'which becaufe it is something remarkable, W(will also give you here. In Root (heftys)

of a brewn colour, on which grew little Leaves fci by Qouphs, thick, fat, end full of Juice* covered mer Jitb a fofi Down, from fiofc fafoms come forth other kffir heaves. Tbefi Lewes *r* a ht-Ue whiter and longer, and not fa Jothnk tm-ber*s the fifmr, but Je mrc Woolly. The Flouer is alfo {omethi*g [°W?? «"*£* wh"£ Color, in Snd amM* the &fj£&e™": £ fine Pieces or Grounds, it is a tittle Swee, but in fome other Soils little or nothing at all :4*d •rsjke is of an Apnngenl and Aujlere Tojle

* * K or Creeping Sun-FW wich

fpreais much under Ground and the «« Jg upon the Ground, much like unto Wild Thym., wtb fuch like fmall Leaves, fit upon reddijb Brands very thick, or as it mere in a ^f^ of a dark green Coltmr, and a tittle hairy Uich are alittlebnger ^hiemnto ornear rfK which grow three or four together,

each one on a pretty long hairy VoctJU.% confVng of five finall yellow Leaves like unto the other, and fomethir.g Svsect.

VI. The fourth, or Yellow Creeping, or Dwarf-Sun-Flower of Gcrow ny. hiRostUfiendtr^ I Voady, and jbmelthing red. the riant is jaid to be much like to a Cilbs, but leffer by much, <md creeping upon the Ground unkjs it be profd up, hatting a multitude of twiggy Branches, fender and fine, en

Sim - Flower Creeping of Germany,
I'cllorv and White.

nbbk grow Leaves leffer than theſe of Ledon or Ciltus, and very like to our Englifh Whire Creeping, or Dwarf Sun-Flower, ac SeS. IV. above ; of a full or mucihginout Juicy Subfiancc, and flight ly haired ; The tlouers are like unto little Refes, or the Wild Tanfic bbuser of a yellow Color.

VII. The fifth, or White Dwarf, or Creeping Sun - Flower of Germany. This in its Roots, Branches, Leaver, Viewers, and manner of grow-ing, is f» lskt lff l"fi Dtſcribed^ that they are not to be dtftingviJbeA a/under till the time cf tieowering the HiW'sin this being White^ whereas in the former they are Teltotn -, ibis being the chief, or only difference.

VIII. The Places. The firft and fecond grow in feveral places of England, but eſpecially in Kent^ in almolt evay Trail thereof rthroughoui, which in fome plates is greater than in fome others, yet tharwith the white Flowers is not altogether fo common as thole with the yellow. Gerard (ays he has found them in many places in Kif«, upon the Chalky Banks, about Gravefciti ayd Sjutbjlect;

A jy, the molt pare all the way from choice to Canterbury and Dover. The fourth and fifth differ not much from our tnglijb, and I am told, have been found in fevfial parts or this Kingdom, and by i^1011 ^ Ao Altrediaer our £"£/'&

Species, some have thought them to be the same, the difference arising chiefly from the Soil. The third grows in rough, dry, and Sunny place; in plain Fields, and upon Mountains. *Oufiut* says he found it upon the highest Alps or Mountains of *Aufirm* and *Stiria*, and as some think, is the third here described, which, is the most useful for growing in *England*.

IX. *The Times*. They all Flower in the Summer Months, from the beginning of *July* to the end of *August*; but the Flowers soon fade, seldom enduring above a day or two, perishing fell Seed in some in *August* after.

X. *The Virtues*. They are hot and dry in the first Degree, Abusive, Astringent; Vulnerary and Artificer.

XI. *The Specifics*. They stop Fluxes of all Catarrhs, or Defluxions of the Cum, all bleedings whether inward or outward, Spitting or Pilling of Blood, Bloody-Flux, Overflowing of the Terms, Whites, &c. cure Sore Mouths, and Ulcers in the lower part of the Body, heal the Wound, and helps the Bile in any Creature.

XII. *The Preparations*. You may have therefrom, 1. A *Liquid Juice* or *Efface*. 2. A *IV* *coctim* in *Wine*. 3. A *B, ilf* of *Ointment*. 4. A *Cataplasma*. 5. A *Digested Water*.

The Virtues.

XIII. *The Liquid Juice* or *Efficace*. Taken from two Spoonfuls to three or more, in proper Vehicle, as *Barbar Wine*, or any other Styptic red *Wine*, they (top all bleedings, whether inward or outward; Spitting or Pilling of Blood, Bloody-Flux, the Overflowing of the Terms and Whites, Ourrhes, or Defluxions of Rheum, and all other Fluxes of the Bowels whatsoever. Mixt with *Wine*, they are profitable to wash, cleanse and heal Sore and Ulcerated Mouths, Throats, as also Ulcers in the private Parts of Man or Woman, or in the Legs, Thighs, or in any other part of the Body. Green Wounds being washed with them, it stops the Blood, dilutes them, and speeds healing, and conglutinates their Lips, Consolidates, Binding and Strengthening the part, or any oilier place weakened by any Accident. And Cloths dipped into them, and applied to Wounds made by the Stinging or Biting of any Poisonous Creature, it binds the Poison from spreading, and draws it forth more especially if they be taken inwardly at the same time.

XIV. *The Decolion in Wine*. It has all the former Virtues, and may well be used to all the same Intentions, but as it is weaker, so it is to be given in a larger Dose, as to 4, 6, or 8 Ounces. This as well as the Juice and Efface, being taken inwardly for some considerable time, is laid to be profitable in Curing Ruptures of the Bowels.

XV. *The Balsam* or *Ointment*. It is Vulnerary, cleanses and heals Ulcers, Consolidates Wounds, and quickly heals them; strengthening all the parts it is applied to.

XVI. *The Cataplasma*. Applied to the Biting or Stinging of any Venipos Creature, it draws out the Poison, and applied to the Gout, otany weakned Limb or Joint, it eases the pain, and strengthens the part as Sifted.

XVII. *The Distilled Water*. It softens and whitens the Skin, and Beautifies the Face and other parts to which it is applied, being used several times a day.

CHAPTER. DCLXXIX.

! Of SWEET-GAUL

1-TP. fVE *Kames*. It may be called in Greek, TS.

JL 'PJ@-, *y&&: in Latine, ZtW *Sykcfiris*. and in English *Sweet-Gaul*.

II, lbs *Kinds*. 111 e ems ro he a figu lar Species, y i' generis; yet Authors describe the two following, viz. 1. *Rhus Syhe Jlrh* Anglus, *Myrtus Anglicana*, *Myrtus Brabantica* Lobelij; *ffseudomyrfnc Gerardi* 5 R6. vr *Syfoejlr* alt era *Lugdunfiss RhidP* *Herba Plinij Clusio*; *Dryophonm Plinij Ruel-Ht*; *Myrtus Kemoralis*, hUagnxs *Cordi*; El* > i&-nus *Theophrasti Bellonio*; *Qiameitagnus Dodsntt*; *fflyrtxs Betgarum* Lobelij; Our Common Sweet-Gaul. 2. *Rhm Syvepris* Plinij *Dodoneo*, *Rhcf Plinij Jtiyrtifolia* Lobelia; *Dryophonen Plinij* £ > - *bufdam*: The Myrtle-Lea Vd Sweet-Gaul.

The Descriptions.

III. The first, or our Common Sweet Gaul, the Root is hard and moody; from whence rises up a few Shrub or woody Bush, not above a Tori high Spreading slender Branches, with many brotch yd- green Leaves, somewhat long, narrow, thick, fattish and rotundly pointed, resembling in femejarl both Box and Myrtle Leaves, but smelling strong isnd J'x Keet, The flowers are yellow, and Jami on Jhort Jidks, eewittg forth at the Joints, awll the Leaves in Jntall Tufts, many Jtt together which being paff, the fid Stalks are pleiitjuty fiored with yeh'ovijb cornered Seed, bedewed vsitb a dummy Moisture, of ft very bitter unpleasins T < ij?e, but jfoxg Jwct Smell.

IV. Gerara describes it after this manner. The Root is of a hard and woody Substance, which produces a low and little Shrub or moody Plant, having many brown and hard Branches, upon which grow Leaves something long, hard, ibicA, end oft out, of an hot, or Aromntkh Savour or Smell, femethiag dht that of Myrtle, bront among the Branches come forth ether little ones, an which do grow f&zny Spoky Ears or Tufts, full of small Flowers: after which come great fiore of square or cornered Seedclustering together, of a Jlong and bitter Tije.

V. The second, or Myrtle-Lea'd Sweet-Gaul. This hat also a hard and woody Rest, sprcad many Knys in the Ground, trith many fibres adjoining to it: from whence Springs up a low shrubby fort of Plant, having many slender Branches with Leaves jet thereon, every one of the largemfs of the broit. TVlyrtle-L'ul, end. landing by couples; bur not fi clofely, or uluiayi juft eppofite one to another, 7" > fo many together, Jmooth or even, and net dented about the edges. At the ends if which, come for many small pitr!ij) > red Tbrcad, f-t tpsn, nrftesc- it oj a jmulu bead, fit one above auethf; b eferasrtb turn into a round and JomC'oihat fiat crjled black Berry, containing iWsan, jmm, white, and roxph Seed, not much unlike to Orapf Stones. Ibis ihint in fyve places dyet every inf doron to the Ground, Springing again the next tear, for xebich eause in these places it never Seeds nof Homers: A'cr here in England does it ever JUnvf from its fir Tears floating, but the next Tear i> tinnrs m many places of this Land, tJx* Jelsst

J S its Std.

VI. Tht

VI. The Placet. The first grows in many places of England, as well as in Brabant and Flanders, ...sr places beyond Sea, and therefore Label as well havecallM it Anglican Brabanttea, it being truly a Native of our Country, rho¹ pol- fibly he might nor know fo much. It grows \n Ha'rtforMirc, Kent, S*/\r, Colebrmk^ana mat WWindfor-Per* \ :salfoiofeveral Marthy, "Plahv Moilt and Fenny Grounds, as m Bedfard- fhirel'c,mhni£,forc, ifle of I l«fl»re and lie Fenny Countries thereabouts-, of which thereis fuch (tore, that they rsake Faggo^ Btul- hes or Sheaves thereof, to burn and heat their Ovens and kindle Fifeswitbal, as they do of Sedge. It is also found growing in most places where Snfey grows- for which reafon it is commonly found • promifououily in Sedge iheaves, which to heat their Ovens wiAatLwi in Nor- i Towns and Matket-Places o; :sally carried by Water, Cc. a Native in feveral Cijuntries in the ^a, as the South parts but with us it is on- This is chat oi

VII The Times. They Flower in May and /»»»?, and their Seed is ripe in July and Augujl

VIII. The Qualities. They ate hoc and dry in the fecond degree, Abftrive, Aftingenr, Aufere and Sryptick; difcuflinK Wind, (leptalick, Neurotick; and as fome think Narcowk.

IX- The Specification. The first kind is only or dieHv ufed: it is good to dry up Humors in the Belly and Stomach, to kill Worms m thoe parts, to ttreShen the Brain and Netws, and to m-

S The f i i f t o f t h e t w o S p e - In ufe, the Preparations will chiefly to rj,at; and there is a peculiar ufe «• fe^bich in fome places arc it, as wirhiW * * « * « « » Leaves or i>eed

The Virtues.

XI The Ale or Beer. It preserves the Diink from froiling, or growing fome like Hops and S s U Drink very ttong, and by reafon of its riling Bttternets ff"!^* rloilant Taftc or FarweC As it apkes the Drink to be fronger, fo it may bemoreapt to get into the Head, and make PeoDleDrunks but it only affeOs the Brain by its SnenRtb, not by any ill QuaUif which is m it, as fome^uthorsfewi to hint, kbeing 3 true ftrength- S^tttheSwmch and Nerves.. And fofirit is an Amifrorhmick as aU Stomad^daaic 5 the Scurvy being afled by the Cks-the, Stomach Difiafe, and tor which they tssw a^ other name.

...i comforts and fe ... wealy Healk, ... the Scurvy in its beginning, ... by the Morning taking, ... Meitbiolf* denies it j, yet Dodo/itm- and Fubfius affirm it, and that it is the true Vizzetoxttum. We have with us, 1. Afclepias five V. toxkum Ware albs, Swallow-Wort white Roweim. 2. Afckpisj feu VutKetKihm flare Jiigro, Swallow- Wort black Flower'd- 3. Afdeviaf Cretica^m/ low

conihnr in taking it, have with iome difficuky left it off

XIII. The Infufion in Wine. It has all the Vir- tues of the former Decoftion, and may be raken in the fame Dofe and manner; bar as it is only a cold Infufion, fo it is much more graceful to the Sto- mach and Bowels, refitting Poifon, and ftrengthen- ing them after an admirable manner.

XIV. The "Tinsure of the Leaves and fruity or Seed- This is much better in a cold Scurvy, than either of tie former, and more porenr againft Cramps, Convulfions, Palfies, and other Jold and moift JDifeafesof the Head, Brai% Nerves, Joints and Vifcera. It allb prevails againlt Poitbn, ve- hement pains in the Bowels, or ?*y extream part of the Body, Coughs, Colds, Afthma'a, Phthificks, Hoaricnels, WheeziDg and lhortnefi of Breath, (lops Vomiting, and gives relief in extream Hear- Sicknefes, Palpitations, Faintings, Swooningsand the like : Dofi; 2, 3, or 4 Spoonfuls m a Small GlasofWine.

XV. The Pander of the Leaves or Seed. It is given from half a Dram to Dram, for alt the put- pofes aforementioned, being an excellent Stoma- tick : but its cbideft ufe is for killing Worms in Children; asalso in lildur Perfons.

XVI. Nota 1. In thofe places where it plenci- fally grows, asaJfo in other places to which it is carried, the Counny People lay it in Wardrobes, Chefts, Trunks, PræT's, and the like, to keep Woollen Cloths from Moths, Worms, &c. and to give them a good fcentand plealant Smell.

XII. Net'a 2. The Rhus Pllntj Mynijefia, or fecond Species ^ tho' we make little or no ufs of it, (becaue we have it no great plenty) yet Pliny fays it kills Moths, andiefitts Poifon.

CHAP. DCLXXX.

Of SWALLOW - WORT.

OS,

SILK - WORT.

l.-T^NIE Krwies. It is called in Greek, A ... X TM« («h Mfcukpia) alfo Kievior quaji Hedc- rula- and K<*>fuwo7, HcdntfoVmm; andfo Ruel- litu calls it Hederalk: and yet the Leaf is not at all like Ivy, but are rather like unco Bay-Leaves, fa- vine that thefe are (harper pointed. In Larine AfclepUs alfo, and Vbuctoxieum, (which is a ge- lwr.ll Word for any Counter-Poifon -, foi' Vriettox- icum qut* Ak&pbarmicum diium, Of quod Mi infignn a&verftrt vcnrnt vis infix. It was atfo an- ciently called ffirundmarla, (as were alfo Chcl'ido- mum majvs & minut) becaufi die pointed .Cods when they are open, and the Silk appears our of them, do fomewhat iefemble a Swallow Flying. In Rnglifhj Swalloiti-Wort, Silk-Wort, and by ibme, Silken Cifley-

\\ The Kinds. It is doubtkfs the true Afckpi- a* of D'wforides, tho'li^w/^j doubts of it, and Meitbiolf* denies it j, yet Dodo/itm- and Fubfius affirm it, and that it is the true Vizzetoxttum. We have with us, 1. Afclepias five V. toxkum Ware albs, Swallow-Wort white Roweim. 2. Afckpisj feu VutKetKihm flare Jiigro, Swallow- Wort black Flower'd- 3. Afdeviaf Cretica^m/ low

low-Woit of Candy, *fakivs Culumna*, took die *I'alian Afckpias* to be rather *Apocynum Diofcori-* and *Load* calls the Black Swallow-Won *JV rtploLa minor* (becaufe U clammers like a *Periplint*) bur thefe are HOI only improper N-imes, but allb fetfe Rimes as to the Plants they reprezent; for there is this fpechl differencebetween *Apocynum* and *Afdtphu*, that the hilt io all its Species hasa Foifonous Milky Juice, whereas the tatter, or Swjllaw-Worthas none, but is the true *Antidctt*; ct *Counte^Poifon* to the *Apocynum*.

 them Seeds and Silk, ai in the former.

VII. 77w Places. They grow Wild in rough
 and untill'd Fhces, and on Mountains in Italy and
 the Southern pans of frame, and in other hot
 Countries; and the bit is found grfiwing In Cantfy,
 from whence the Seed has fen krotight to us •.
 But here in England they are only Nu;ft up in Gar-
 denSj where they thrive admirably Wtl.

VHt. The Tones. They all Flcvrtf in *e Months
 of June and July, bur fometirifS (as the Seafou
 may be tor Colduels) not till Avgxjfi and their
 Cods wiith Seed, are ripe about a Month aiter-
 WaiJ5- Uie empty Husks abiding on the dry
 Brjnches, when the Silk andSe^d ure g.o:hj, king
 either fallen on the Groundj or blow away with
 the Wind.

IX. The Qualities. The Roots of thefe Plants
 aife only, or rather chiefly uied. Tlwy are hot and
 dry in the fecond Degree, Aperitive, AbfteriuT.
 Diuretick, Vulnerary, Peftoial, Cardlack, Hyfte-
 rkk, and Alexipharmick.

X. The Specification. They are a Sovereign
 Cure for aQ forts of Vegetable and Animal Poifons,
 but in particular tor thu Poilon of Apotynxm, or
 Degi-Bane, (this beihg the Counter-Poifon of An-
 tidote agatnt it:) as alfo the Sitings of Mad
 Dogs, &c It cures alfothc Plague or Peltilence,
 and all forts of Pdrjential Diieafes, Faintings,
 Swooning, Convulfions, Fits of the Mother, Coughs,
 Colds, Afthma's, PhthiGcks, and all other Oh-
 ftitutions and Diieales of the Lungs; Obftuacions
 of Urine, Dropfy, Jaundice, Epilepfy, Pains of
 Ae Mother j provokes Urine and ihe Terms, ea-
 fes the Colick and GTipings of the Guts, kills
 Worms in the Belly, and is of goodule toclca^fs
 and heal all Putrid, Filthy and rottan Ulcers in
 "hat patt of the Body fever.

XL The Preparations, Vrtiif the Roots are
 prepared, i. A Dco&io/t i/t Wine. 2. A Pouder,
 3- An Ointment or Balfam. 4. A Tintfure. From
 the Leaves and Flowersare made, 5. A Catapafm.
 From the Down, 6. Dry Pledgets.

the Virum.

^ 11. The TieceS'wn of the Roots in Wine. It isa
 Peculiar Cure againft the Poifon of Apocynum, or
 Oegt-Ba«e_y, or Wwlfs-h&nc, or any other Vegeable
 •oifon ^ as alfo againft the Biings of Mad Dogs,
 ** the Biting OI Stinging of any other Venomous

Greasure. It gives eife in the Col lick, and rfie
 Griping of the Guts. It prevails aganttrterf ig •
 or Peftiience, S-potred Fever^ PtsrpUs, <j)leii(ufi.)
 Mc:illes, Small P-K, and all other (brts of Malign
 and Peiltlailial Dffctmptts, TJJeDtc^ .^.*;!!;.,
 Ittong in White WIK, and rakcn for fevetal dsy?
 together, a Pint at a time, and Sweating prefer)ly

 Bruifes, Bletd-tngs, anJ tin: like.

XIII. The i'oisder of tlx Heafr. h bis all the
 former Virtues, much excelling the Decottian, and
 may be given to 3 Dram or Dram and half in Ca-
 nary or White Listen^ Morning and Night. It is
 good againft Fainting, Swooning, and other Paffids
 of the Heart: Taken wirh ^bgy-Seed it heVps a-
 gainft the Falling-Sickefe; with Pouder oi White
 Dittany Roots, it kills Worms in the Belly, and
 prevails agaiilt Melancholy.

XIV. The Om; me nt or half am. ThePoudwtwo
 Drjms, mixed with fix Drams of JIH^ Vulnerary
 Oinrmenr, or Bn/fama^Tobncco,U.Q- Ceanies, in-
 carnates and heals Wounds, and old Putrid and
 Rotten Ulcers, beyond ih 11 of I or of
 of any other Vegeable wrmtlbever.

XV. The Tmlure. It has all the Virtues of
 Decoction and Pouder, excelling them ten times
 iu Virtue and Goodncis. Dofe a SpouDtiiL

XVI. The Gitnp/ttjm of Leave* and Flowers. It
 cures hard Tumors in Woincns Breatls, as alib
 running Soresand foul Ulcers in the lame parts.

XVII. Dry Pledget! if the Silk or Dewx. Ap-
 plied to old running Sores and Ulcers after dean-
 fins;, it drys them, and in a (hort time after heals
 thech.

CHAP, DCLXXXI

Of t A N T S I E "Garden.

I. HpHK TSbatt. ItiscalledinGreek, 'A

X in Latine, Tanacetum, Athana/tii •• intng-
 lifh, Tanfie.

II. The Kinds. Authors make many kinds of
 this Plantj but thefe four arc thofe which are
 chiefly known to iis, viz. I. Atbanafia Vulgaris,
 'Pdiicctum Vulgare, Our Common Garden Tanfie.

1. Athmafisi Crifpa, Tanacetum Sativa Anglic a ^
 Tanacetum Crippum, Crifped or Curled Tanfie.
5. Tanacetum Verficolor, TanEe Party-Coloured.
4. TonMSttrm Lunitginofum, Woolly Tarjfic.

The Description.

V. The firrt of the Manured, or our common Manured Tare. *Us Root it final), with a great number of Striltgt, tndperifyes every tear. , It rifes up with divers jqu.ire htilks, /onetimes uw beet or more Mffg, (mangling theinfelves one teitb another, that they fand in the Held without need of any Proper Stay. The Leaves are ainged, thicker fit together than in the Wild Kindt, and growing ori- both fides of a middif Rib 5 the end of which, runt out into a divided Tendre! or Clujper, which are larger nlfio than thoft in the Wild Kinds. The Flowers grow IKV together, ,md are long and*

Tare or Vetch, Manured.

row, *fa dark Ftrple Color, and the Codi which fucceede them are long andfomewhat broad, in which he 5 or bjlatbhckiJbSeed^ but in some Grayifo.

VI. Gerard decribes it thus, *it hat flend.tr jour fqtare Stalks, almoft three Feet long. The Leaves are long, with daffing Tndrels at ikir ends, which ar'i wade up tsith many little Leaves, growiffg upon a middle Rib; every one ofmhkh it greater,-broader, and thicker than that of the L*

III. The Viewers are like to those of the Garden Bean, but of a black Purple Color. The Cods die broad, Jmoll and long containing for the most part, or 6 Grains in each, of a blackish color. It attif J, and of no very pleasing Taste.

VII. The second Manured, or white Manured Tare or Vetch. This in its Root, Stalks, Winged Leaves, fashion of its Vloers, or their Color, Cods, Form and manner of growing, nor jarceiy in any thing else, differs from the Common Tare before dejerbed, fav'ng, that this grows higher -7 the are not so thick, and the fruit is larger and rounder, and of a very dor white Color, more like to Peafe than Tares.

Defcription of the Wild Kinds:

VIII. The first of the Wild Kinds, or die Great wild Hedg; Tare or Vach. T/J« has a creeping end hving Root, growing much like to the first Manured Tare, but is larger in the Si-c, and number Leaves. Us Suits are crested being, i- 2 Jnd \$ feet in hi commonly a dozen growing upsn one Rib, which ends in a Winding Tcndrei: Earn peculiar Leaves brosd- er towards the bottom, and jharper : 'wards she top, which ends not Jim, but fomewlut parted. Out of the bofaat of the LCJVU, towards the tops of the Stal/s, grow (on fwtv toetjalks) tico, three, or more, pretty large P-afe fa(hwned blevufh Yxrp flowers, which are fomewbat larg, but jhorter than tte former. The fitceeding Cods are like the firjl, but Jborter and teffer, and. of J black, color when ripe, tehieh then jiy open of ihcmfchs, and shew their contained Seed or Grains of a bluckijh Olor nlf. This fant Tiagus judges to be the Apbace Dioitaaidis.

Tares Wild Small.

IX. The second, or **finall WI & Wild Tare** Vetch- Its Root is perenniil, IU many of the Wild Kinds be- It fends up Crctld Branches about a boot and half high, growing in Form Hie unto the ether, having thereat, fuch like Winged Leaves as the former, but whiter, having a kind of hoary i^own upon them. The Flowers which grow on jlwrt kooifrfb% cut of the- Bojoms of the Leaves towards the tops of the Stalks .md Branches, are of a whilifh Cnlcr, with dark Purple Veins running thro' thm. > "••" Cads are like those of the Common Tare, end tU Sccl jt fl, it like them alj'o.

X. The third, or Tufted Tare or Vetch, m Root creeps under Ground far about, fiooting out new Brunches every I'r.ir. the old oms being perijh- ej. It has Juch Mr trailing Brunches <u the othen have, but weaker?, the WingedLeitves are t number^ 12, 16, ac or more, Jet on <; Rib-, 'onger and narrotecr than the former, and flanding more upright, but th-'y are not achaysfct exaffly oppofit mother, but unequally. The tIOKers lite' wife which fiind upon long naked i'ootfhilks, are more in number, jomenma twenty together, but mething Me to the timers \$ ichis, or Cocks-head, and of a bright bkwwl purple Color, and fcmctmet of a dark Purple t>it> fame a' m. The Cods are tel:g, containing them black Seed.

XI. The fourth, or the greater Wild Tare or Vetch. Us Root is fmall, andpenfoes every Tear- It hat a. few fiender Cn-fied Stalks lying w» tut Ground, if it finds xjtbng on which it can dift or take bold. At the joints come forth Winged Leant*, many fmall ones being Jet on both fiat* /f a middle Rib, tdrich ends in a Claffer, but leffer than those of Lentils or the Manured Tare- The t'owers are Purple, in form like tfoe of tat Tare, and gram ufudly but one at a Joint. ijf*f which come Jaall long black Cods, leffer than nojj of the' Common Tare. The Seed or Grams arc a'f' lefs, and round, not flat es those of Tares are.

XI. The fifth, or Leffer Wild Tare or Vetch Itt Root is fibruus, mA has feveral fmall Kernels hanging among them. II)is differs I from the former but in itt fntaB/teJi, ext thatjbh has abitijh Ffotoen (hndng in Tufts & the tops of the Stalks, lie Cods ahich folio®, rtrr .u;-l j. mething hairy, and the Seed v Grjimt aihii. Irhit'fsh.

XII I. The Places. The two firft ki nds are Sow" iir Reids ior their profir of Reding Cattd, either with the Grain or Straw, or both; and ofrhcGis¹ the poora Ion ol People in many Countries, force to mike Brta 1. C :ikcs. Puddings, £?>. Wild kirrds :irt **found** by Hedge-Sides, hi 1 and moitt Grounds, and among Buffhes in pans of this Kingdom-, for tlity wili grow iris Ground or Soil whatibevtr. The tourh and fif of the Wild Kinds are often found in the fields 3' mong Corn, where they will in a rainy **SeauHj** qukkty **overfpreadir**, and kill it, or any othef • they grow by.

XIV. The Times. The Manured, and rhe three iirtt Wild Kinds, Flower in May and June ; iburrh and fifth in July, and the Cods or ti are tipein Augfi or sejieother.

XV. Thw are temperate in i fpeft to heat or cold, diinels or moitture •, Alu genr, Gltinative, "Vulnerary, and Rdloraiive.

XVI. Theyikip.H«ei cure running Ulcers and Cankers which are to **Gangrene**.

XVII The Preparations. V.u unf make « them, T. Bread, GHet and Puddix&s. 'I f& j. A Metier Hover. 4. A

'the Virtues

StVUT The Br[^], Cakes, tuJiing, etc. They ftenvidcani uled cotilhndy in many t- the poorer fort of People; which tho courie I ' aod (bmcthing hard of Digestion, yet nourilii much: And in many other rtaces they are ibrcd'to be eaten by all fons oi l'cuplc, in times of Famine.

XIX. Tfc Totage. Iusnndeby Siting them Toff in Water, then adding thereto Meal, Po k, Cabbage, CToUVorts, and other Herbs; or Milk. Itnourilhes very much, rdiorcs in Coniomptions, and flops Fluxes of the Bowels.

(uUy to Bleeding Wounds, and old —S it flops the Bluing, and the Hux of Humors the pare, more rfpccially,, if a eight* ^ [mh f a n V Roch Alumin nne Poudct be added to it

XXJ Tjff QaapU/u. It is made oi the Meal or Flower being mixed with Milk, Ol Smiths Foree Water. Being applyed to running Sores or Ulcers, it ttops the Deiixion, deanfes them, and prevents a Gangrene if approachng; and being laid wurm all over the whole Body, it flopsRuxes of the Bowels.

XX.il. AW. The foanh and fifth of the wild Kinds, are Pulfes wich which Duves or Pigeons arc much delighted: And altho'the Fowls are wild, yet where the Dove-Houfes are feved here-Whb, they will refoit to the iama and in fome little time become Tame wich l he reft And there-iore in iome Countries, whole Fields are Sown with them to ferue tbi that uie.

CHAP. DCLXXXIV.

Of T A R E Everlajiing.

The Name It is caUed in Greek, Aa9v1- uJi& • n Latine, Lmhyrui ferennh -, in English, Tare Everlasting. **M** W ^ two folts hereof, **1.** lutea s Vticia perennis, " " V litteo; Tare Everhft'ng, properly fo called, a cia Syfoeftris perennis, Ticu Sylvejiris vulg[^] Strangle Tare, and Common Wild Tare.

The Descriptions.

III Thefirst, orTateEverlasting- Its Root h Small and rough* running infinity ^{TM £ TM >} Scarcely to be depoyed. It is a ramping W lid Tare or Vetch, and is the most pernicious Herb that can grow on the Earth, for Corn or any other f^{TM&%} by over-running, gangling as it were, and kilwg them : It fends forth long rough trailing Stalks btumgfmalL long, and fiarp pointed Leaves jet on ihtmUc oppofiuio another at due f <"%?"* Tendrcs or Oafpers at the ends 4it* * J * * " : The flowers stand upon pretty long lootfiath'proceeding from the Bofoms of the Leaves, ffff many lp'n a Stalk, and yellow lafurahxh came Small round Cod* with bUclufb fmall Grains with them,

Tare or Vetch, Everlasting.

IV. Gerard describes it thus. // Roots are very Small, long, tough, and in Number infinite -, tnjo- much, that being once gotten into a Ground, it is almoft impoffible to root it forth, unlefs the Earth be digged up teftb the Roots, and both eafy into d River or Burned, from tbefe Roots Spring divers very fmall ramping Stalks, tough, and leaning this way and that way, not able to ftand of them- felves without the help of Preps, or fomeihing ftand- ing by them to be a Support. The Leaves are very thin, and fharp pointed. The Flowers grow along the- Leaves, in form like Peaft Blojfoms, but of a bright yellow Color. Tioubtlefs this is one of the mofl hurtful and pernicious Weeds that grows, to all manner oj green Herbs, or anylVoodnbatfoever. Johnfon fays, for the refemblance it has to Aphaca, he ufis to call it Aphacoides.

V. The feccmd, or Strangle Tare, or Common Wild Tare. Its R^t is long, /lender and flringy, from whence fprings up many jlender v>e<ik Srottebeti The Leaves arcMtnged, and much fmnller than if the Common Manured Tare, round ar broad pointed, and Sometimes dented in in the middle of the end, ijiandng upon a middle Rib, which ends in clapping Tendrels. The Flowers are oj'e Purple Color, and commonly grow but one at a joint upotthort Foot- after which come long, fat, Jbarp panted Cods, which contain for the mnjl pdrt, 9 or 10 Grains or Seeds in each. lit fome Countries this Plant is called Tine ; it is a ramping Herb, like id the Common Tare, climbing up upon C»m, if it chances to grew among it, iind will then prefs or bear it down to the Ground, and overgrows the Same in fuch a manner, that it jlrangks, Spoils ani Hills it, notonlyWheat, but all other Grain vshatjoever, So that among Country farmers it is htter known than defirel VI, Tbt

»
1

VJ. *The Places.* The firft is generally found in Fields and Orchards, and other like places * alfoin Gtaffy Pulhires, Borders of Fields, and in Corn Lands almoit every were : It is found oftner than the Owners of Grounds would have it, being a kind of Plague, or mighty Incumbrance to any place where it once gets tooting- The fecond grows generally in Plowed Lands, where ir becomes rhe Husband Mans Venation in hurting and deitroying his Corn. But both thefe Plants will grow in any Ground or S^A whatfoever.

VII. *The Times.* They Flower in the latter end of A^ay, thro' all June, and fomerimes in tome pate of July; and the Grain is ripe in Auguji and September, fooner or later, according to its time

VIII. *The Realities, Specification Preparations ani Virtues* of thefc, are the lime with thofe of the Ojwmon Alanured Tare, in the former Chapter, ij that nomore need befaid of thsan in this place. The Grain may be made into Meal or ttower^ or hoi Id into Piirage and eaten, as other Pulles are, but thtie are ot a thicker Confiftenoe, and theiefore may be thought to nourifh very mucli: Without doubt in time of Famine it would bean acceptable Food •, at other times they are not eaten, but the Grain, as allb the Straw, are Food for Cartel, as nourilbing them exceedingly.

CHAP. DCLXXXV.

Of TARRAGON.

I. *p7/E Name*. It has no Gteek Name that X we know of, but ir is called in Latinc, *Tragum* -, *Tragum vulgare Clufij* ; *Torchon* ; *Draco* ; *Draunculits Horienfis* ; *Draco ilonenfis* ; and in Fnglith, *Tsrragont*

II. *The Kinds.* It is *Sritgufar'u fuigencrit*, thio' fomc h^ve held it not to be an Herb of its own Kind: And *Rue/Hut* was of that vain and felfe Opinion, That it was firft produced by putting Liiiiieed into the Root of a Raiiidi, or of an Onion being opened, and fo fet into the Ground, vch when it i prings up, brings tortb this Herb *lorragea*; which Folly, *Maith'wlus* ly certain experience fays has been found ralfe-

The Descriptois.

III. *hsSxot* is while jindcreeps about unitrGrcuni^ by which it much increafis. it has many long^ narrow, fharp pained green Leaves, fomeimej of a dark green, and femctimes of a more light Color, grvvtiing upon jbori /ender Footfialh; which arc fo Mifmerout, at even to bide in a manner the Stalks iBlafctvts, which <tre of ijxjhne Color, round end bin tie. femetim two Feet »r wort high-, at the lops of whhh tome forth long flender Spikes-, of fmnlllyellowifii ¥1 awj, which feldom give any good Seed, but aittfynrcbaffyHiatter, which it difperfcj vinthe Wind, the whitc Herb is of a jx>t and biting tajie.

IV. *Grard* defcrtbt^ it after this manner, hi k^<: is long «nd fibrous creeping far abroad under

Tarragon*

Ground, at io the Roots of Quich-Grafs, by which freuting up, it inereajet, yielding no Seed at all-it has long ;>r.d n.irrew Leaves ij a deep green Color, longer than thofe of our Common Garden Hyflbp^, with flittder found bmue Stalks, about two Cubits high. Round the Branches Spring forth little round Flomcrt, abich never perfeSly open, of a yellow Color mixed with bl-->h like thgfc of Common Wormwood : after vahic» Succeeds a certain Chaffy or Y>ujly matter as U vaett-, which flys away with the Wind.

V. *The Places.* For all that I know it is a Native of England, and grows with us only in Gardens, where (if the Ground is good) it admirably

VI. *The Times.* It is green all the Months, and a great pan of Autumn, and flov^ eis in July,

VII. *The Qualities.* It is hot and Jrv in the end of the lecond Degree : Aperitive, ;Ulri^n^> Attraftii-e, Digeftive, DifcuflyW Diurctiefc and riaumatick; Stomatick, Ctehafick, Neurotick, Bardiack, Splenecick, Nefhtftide, Arthritick a^nd Uyftericki knimenagogtck, Sudorifick, and Alex^ pharmick.

VIII. *The Specification.* It rtifh Vomiiinp. •*» Stores Appetite loir, cures Convulfions, Trembling and Weaknds of the Limbs or pictSi is proStableagiinlt a Latcoblgtmaria.. Eds Wind, givts tafe in the Cliolick, proVOS< Urine and the Terms in Women •, and is an admirable Remedy againit ihe Scurvy in a cold H>Wt of Body.

IX. *W>e Trippercatiks.* You may have tht^K-6wn, i. A liipidjmtz. n. AnEjfrnce. 3. Deeoilienn W.ne. 4. A DifitfoJVater. Spirituous finflure. 6. AnAcdTmSure. Oily I trttiu: 8. A Bjljim. ?.

The Virtues.

X. *Ti>e Liquid Juice*. It is an Antidote againft a Bold Scurvy, prevails agaiilt an incipient *Let/co** *jWeg/iwU*, R good agvllil Riintiugs, U&iknefs Stomach, wane o; Appetiterand Digcltion; WM, or Stoppage of Urine, thro' Scones, Gravel, Sand or Tartarous matter obltrufing the Urinary FaGages. Dofe one or two Spoonfuls in a Qais of Wiiiie *Libefl*, or other Diuretick Winy Morningand Night.

XL *He Etfixe*. It has all (lie Virtues of the Juice, bur more potent, warming and comforting the Stomach and Vitcera \ it dilculies and expels Wind gives tale in the Cbolck. is profitable againtt Convulfions and Pathos, refills Vomiting, caufes Appetite, and admirably provokes the Terras in Women. Dofe one or two Spoonfuls in Wine asaforefaid.

XII. *The ViccoSkn in Wise*, I, has all the Virtues of the Juice and Effence, but much weaker, and therefore may be given to half a Pint at a time, iwectned with *Syrup of Clovegilflowers, Violets*, or *M<>ft> Ma/tow*. It twis inward Wounds, and being drunk conitantly at Fhykal Hours, ir difpo lbs old running Sores and Ulcers to heal; more cfpecially if they ta uuuv.iidly vrgfhed therewith, ^eing nrtf iweerned with a iittle Honey.

XIII. *TheJJJiiiiiid W'ier*. It is ibtnetimes ufed as a Cofmetick to Beaudfie the *Fasx* and Skin, and to take away die D^lccdiitions thereof i which it does more efleluually., if either *Sal Prunella*, or *Saccharum Saturni*, (half an Ounce of either of them to a Pint of the Water) be diffolveil therein. Inwardly taken, it has the Virtues of the Juice and fctieice, but in a the weaker degree_ however it is profitable in Obltrufions of the Reins and Blad- : it be taken 3 or 4 Ounces at a time, iwectned with *Syrup of Marjh Maitomi*.

XIV. *The Spirituous Tinfure*. Ir comforts and warms the Stomach, ftrenghens it, and caufes a good Digettion: And after due purging off rhe MorbificK matter, u is very profitable againft the Pallie, Colick, Gout, Droply and Scurvy, reftoring after an excellent manner, the depiaved Tone oi the Vitcera. Dofe one or two Spoonfuls at a timu in a Glals of Wine, or well fweetned with *Syrupus it Alhtw* \ and this, Morning, Noon, and Night.

XV. *TJf Acid TmSure*. It is Antifebritick, Antipeftilentbl, and Antifcorbutick -, it cools all praernatunil Heats, expels Poifon, and is Angularly Alexipharmick, refilling not only Vegetable Poifons, as thofe of Henbane, Moriks-hood, N%ht-Iliade, Wolfsbane, ESV, but alfo Animal Poifons, as thofe of the Bitiags of Serpents, as Vipers, Kaule-Snakes, Mad Dogs, &c. and the Stingings of Hornets, Scorpions, at. Dofe fo much as to give the Vehicle (which ought in this cafe to be tome ton of Afexipharmick Wine) a pretty (harp acid tifte, fo as it may be tolerably drunk.

XVI *TbeQjty TittSure*. It is profitably given ngand the Strangury, Stone, Gravel, Sand, and Turutous matter in'the Reins, Ureters and Blad-¹¹-r^ it rakes aivjy die heat and raiding of ilie Urine, gives Life in the pains of the Back, and •ltrenghliens it •, is good agjinf the Colick, and of linguiar ult; In inward Convulfions, as a lib in PJI-fies, being taken from i; ,tu?cor4odrops(accord-flSg to Age and Circumlbnces) in any appropriate Liquor, Morning and Evening. Anointed with alio outwardly any paineJ, cold, weak, oTbehum-

med parr, it gives ejlc to the (amt, aiid in a fhorr lime rdte-rcs and ltrenghens ir.

XVJL *Jit Baljtix*. Take *Chio T;irptmixt 4 Ounces, Balfam of Pera 1 Ouness, Bees Wax on, 1 Ounce-*, melt ami mix tixat well whether^ tbtth add of rhe former Oily TittStn an Ounce and hf ; mix and Jiir them till the AU/s is colJ. Applied to any weak part it (treiighens)t, and cafes pjins proceeding from a cold Caute: It all cures fimple green Wounds, many times at once drefing : *Aiib* old running Sores, putrid and rotten Ulcers, &c. itcleanles, incarnates, and heals them up in a (hort time. Inwardly tjke a Oramor moreat a time, it cures the Bloody Hux, and Ulcers of the Inteltines; flops the whites in Women, and a Gonorrhbaa in Men, after due cleanfing with other proper Medicines.

XVIII. *The Snliet*. It is commonly mixed with cold Herbs, as *Lftticr, Purjl,tn<s*, ro temper tfir Coldnels, and make them more agrcuable to the Stomach and Howds, and withal it gives them a more grateful or plealant flavor, and makes them more Stomatid.

XIX. *Kola*. Authors I mull confsfs hive faid little or nothing of this Herbj but rinding by its Grateful Smell and Taft, that theremuft beibnaetiling more ihan ordinary in it, I was refolved to make fume Trials of it in the Practice of Plvyfkk, and accordingly at feveral times, have made all the Preparations of it before named j which after fome \ejrs ufing of thtm, havefound than kr.ericial lor curing, helping, or giving relief in all or molt of the Dileafesaio rementioned , lb tiat whatever I have here laid of it, h truly from tnjr own Expetience.

AfTes Thiftle.

VII. The fourth, or another Narrow - Leart W4y - Thiftle. Its Root, i'orm and manner of Groining, is much like the former, bar it differs in 'bit, that the Leaves hereof are longer, narrower, wore gaslit, or rent in on tht edges, and not hairy, b7r /meet!) all the Leaj eotr. It h;s Heads of Hoo • are Purple like the other, bat fame-times tebhe, in its Prickles differing link or nothing from ether Tbiftlest and when the flowers an- pSji, there remains the Down and Seed, like as in all others of the Species.

VIII. The fifth, or the Gentle-Way Thittle. bs Root, Stalk, and manner of Growing, is very hke the former, but it differs chiefly in the Heads, which grow many together, and are but thinly fet with Prickles, nothing near fs> much as some of the others-, but the Leaves are more j'tgged, and fet very thick, with Jhort Prickles, the Stalks are round, and a little prickly, but not filmed iu theform, and at the tops of the Stalks and Branchet are fealy Headi, of like Purpie Viewers, containing within them Down anJSeid.

IX. The sixti, ..MluAffcsKirang Thiftle. Its Root ialmut a loot long, thick and bljek, mkbjbmj Wires adjoining to it. It h/u many long Leaves, fet on cornered Woolly Stalks, which grow fame-times alxotl to <t Ala/is height, but not Branched at •ill\$ the Leaves Jeeming like Branches, being a foot or more long, and inucb divided into many other IA atwj, fomic long or narrow, others fmaller and fhorthe \ jet with them at certain spjees, each ending w a (burp Jong Prickle, hrom the upper Joints of the Stalks tetbt tht: Leaves, and at the tops also, come forth Woolly Heads tipanfmall loalfalks, fet with lung Prickles 5 from the midjl whereof, tbrusl forth feveral bright redJish Purple Threads, which "re the Vhvien, which being pajl away, there remains the Down containing the Stcd, in like manner «' inoierih'fikt.

X. The feventh, or the Lancing Thiftle. Its Root is white ond thick, no! growing very dtrp. It rifes Up with divers flender Stalks, fometimts >iL mojl to a Mans height, tiibofffrhng and narrow Leaves are made npofptMjfparrs, finally cut in or divided into many jmJl point'1, wish a jliort I'M-fialk encompassing the Stalk at tffe lower end. At the tops grata jingle, /a/y, green, Prickly H from whose middle comet forth theFhwer* tc fame is Purp.fb, in fume Whitish, and in very Red, or of a bright Crimfon Color, which confisofa great number of long Threads like t Ihrum. After the totxers are p.sfi, there remains the Down, in which U continued the Seed, which is (mall, fmeoth, and reiiifb.

XI. The eighth, or Broad Leay'd Field- Thittle. Its Root is foneihing ilong and thick, abiding j. vcral Years, which fend forth fevera! large and long Leaves, cut in on the edges, and every port finely denied, and Jet with jmdll Prickics which are very tender, of a whitifi) green Color. Tbcfe which grow up higher upon the Stalks are fmalrk, two of them fit together at a Joint, where they fo entom-pafs the Stalls thjt they wilt contain or bold Water in them. At the tops upon long Stalks, grow fingle green Prickly Heads, out of which come pale Coloured Thrums, encompassing a fete Purple Thircads in the middle. A fter i bey are f.:Jed and gone, there remains the Down, us i/i all other Tbiftles^ in which is exained fmall whitijb Seed, fmcthtng larger than that of Cyanus, Corn - Flower, or Btew-Bottle.

XII. The Niuih, or Yellow Jigg'd Meadow-Thittle. Its Root is great, long, crooked and fpreading in the Earth. It hat very large Leaves, almoft a foot long, and fometehat broad, cut in oit both fides into 4 0 / * ; deep Gasfes, even to the middle Rib, and fet with Prickles at the Dents of the Edges. Front whence rifes up a Jlraked Stalk about two feet high, fet with a few kffer Leaves, at the tops whereof, (landfeveral fmail green Prickly heads, out of wh'ofe middles come yellow Threads or T) >rums, which Jfterwaris yield Down, in which is emloed the Seed.

XIII. The tenth, or the Bulbed Field Thiftle. Its Root is compofed of feveral Tuberous fmall long Clogs, like unto thofe of the Afphodil, fjlnedtoegelber at the Head. The Le,rves are whitijf), of an Hand breadth long, fometbing fat and thick, cut in on the edges, but not very deep, armed at every Dent with fmall sharp Pritkles. The Stalk, is about aXird high, hairy andfteniir, with fern or no Leaves thereon, at the top of which, there are barmlrfs Prhklly Heads, fianding upon long toot-Stalks, out of which come pale Purplijh Tiireads or Thrums, and after them much Down, in which the Seed it contained.

XIV. The elveventh, or Meadow-Thiftle with Aiphodil ROOB. It* Root confijs of feveral, or many long blackifb Tuberous Clogs, like unto thofe of the Afphodil or Peony, which are fjlned together at the Head, which after Seed time, wither and perifh every leer, from whence come forth feveral thick, long, pale, green Leaves, cut into many parts, and armed with fharp Prickles on all lider, evt:ry Prick ending in three Points \ from among them rift's up a fmall' Stalk, a little branched, with one orlxeo Prickly Heads at the top of every Branch, sut oj which come purpiijb Threads or TJirurns which are the Ylowers, and after themth Down, enelofing fmall long Seed.

XV. The twelfth, or the many Headed Meadow Thiftle:. Its Root k long, hard and woody. It hat but few Leaves lying upon the Ground, being both Jhort and mrrm, armed with Jhirj> and long

Prickles. The Stalk is round, Jiraked, and without Prtcklet, Spreading it feif into severall Branches, bearing many fmall beadi with Threads or Thrstms of a purplijlt Ct/ler eomng out of their middle, which conyYuue the Flomer, which Heads are fet with large and sbarp Prickles, after which is the Seed inelofed in the Down, at the rest at c.

XVI. Polyccephaloi alter. There is another many He.tded Thiiftle; whoft Root » bard and woody. If! Wti/A b.u neither Him or Prickle, but branched forth imo divers parts, and they again into other Smaller Branches, otnahkh pandmany Heads, and Smaller ones under them, with feveral fmallprickles about them, out of which rife, purplijb **Thready** Flowers as in the other. The Leaves are but few on the Stalks, being fhort and narrow, but at thick Jet with Prickles, at the feconi or mofi Prickly Thittle, at Seft. V. above.

XVII. The thirteenth, or Marfh, ormoiftMeadow Thiftle. Its Root it fngle, the Stalks about 4 »rt or more high, ftrait and full of prickles, thick fit with dark green Leaves, unevenly waved, and Jomaimes more deeply cut in on the edges, having a jew prickles at them, and branched towards the tfl> nab many fmall Heads upon jlettocr i'oot-Jfa, w,bich bear purple Thrum t'lowers; and turn two Down, in which the Seed «involved, like a< m other Tbifles.

XVIII. The fourteenth, O1 Oare-Land, or Masked Thiftle. Us Root is/mail end long, periling at the appoaeb of Winter. It ha* an upright Stalk, and riffs up in Corn and Oat-Lands, feme-

Thiftte Oate-Land: Or^ Musked.

nesto « flf^{ant} Height, but it foa/td growing vcr in cthtr pnces; on which do grow bread, j£ P^{nc},^h Jnd LCTVCS, fa round the Stalk end Branches, the tops art branched out with many

Jhen Stalks, into at many Jhort Heads yi7 elaft igher, out 0/ which came the Flowers, conlijingof **Threads** or Thrums, at in (be other ThijUct-, of mbich fame will be Write, fame of a White Color tending to Purple, and oH>ers of a p*k Purple Color tending to blujh, of a moft plesfsnt Sweet Smell; and in feme ptJiti fmgling f< like Musk, which being faded, Doiony Heads fue- need, in which vbe Seed is contained.

XIX. The fifteenth, or Greater Broad Spear-Thiftle. Its Stalk is armed with Prickles lite w" ny other Wild ThiiRlcs; and the Leaves fit thereon are very long, cut in or divided on the

Thiftle Spear, Broad Greater.

edges, ift 2 or 3 places, fet at diftiwees one fa another; and the feverat parts cut into tvr 6 points or corners, fharply armed, the end being long and narrow^ pointed like the Head of a Ja^{ve} lin or Pike, (whence came the Name :) Ty Viewers are purplifh in fealy prickly Heads, 4' ter which conies the 'Seed wrapped up in Down, & in other Thiftles.

XX. The Places. All theft Thirties Grow Wild by Way-Sides, in Fields, Meadows, Orchards, Gardens, and in Coin Lands in molt places of this Kingdom, as alfo in many other places beyond Sea; alfo on Heaths, Greens, and waftepw' ces up and down atmoft every where. The [&tm tecnth grows in moift Meadows; and the fourteenth in Oat - Lands, and other Corn - Lands. Gerard fays, it grows in the Fields about Cant-brid; and I have feen it in fome other place* adjacent to it.

XXI. The Times. They all Flower from trie Beginning of June to the end of Augujf, and their Sidi ipe in fngme little time after.

XXII. *The Nudities.* Thiitks according to Galen ate hot and dry jnthefecond Degree: They ate alfo Aperitive, Diurerick, Stomanck and Ne-

xxli. *The Specification.* They help i l f f ny, or ftoppage of Urine rake awiy the rank or 'evil Smdl of the Arm-holes, or whole Body, Cure a Sticking Biwthj and make Hair grow again upon BiId places.

XXIV. *the yn'rauom* You may have, I. A *Liquid Juke or Efface cftbe* * * * * £

XXV. *A Description of the Leaves and Heads of Primery when juft above, as Water.* It has the Virtues of the Juice and Effence; but much weaker; made of the former Decodion of the Root, and may be taken in the fame qu[^] ^ £. It is certainly an Antidote againit the Scurvy in a Cold Head of Body.

The Virtues.

XXVII. *A Description of the Leaves and Heads of Primery when juft above, as Water.* It has the Virtues of the Juice and Effence; but much weaker; made of the former Decodion of the Root, and may be taken in the fame qu[^] ^ £. It is certainly an Antidote againit the Scurvy in a Cold Head of Body.

XXVIII. *The Effence of the whole Plant when juft beginning to Itowr.* mji,w& ..>,»*, ~,™ u/. It has all the former Virtues, but more effectual to comfort and frengthen a cold and weak Stomach, and to relift a Cold Scurvy, as alfo to caufe a Sweet Breath, more than any of the former Preparations. Dofe 2 or 3 Spoonfuls, fweetnedwith

ai1^ XI^r *Ee*htfkatory. Pliny fiys, thiat being chewed in the Mouth, it cures a Stinking Breath. But this 1 fuppose is fuch an offensive Breath as is caufedby Ittinking or rot ten Teeth, orlbmeSoreor Ulcer in the Gums and Mouth, it drawing away .i. great deal of Rheum, Purulent and Putrid Stinking matter from die fame. •

XXX. *V>e Qatapkjm of the Rort.* piofcondes fays, that being applyed, it correfts the Stinking and Filthy Smell of the Arm-Pits, and of the whole Body.

C H A P . DCLXXXVU1.

Of THISTLE *Bleftd* .

O R,

Cardnm BenediSius.

I. *T* *HE Names.* It has no Greek Name that we know o^ but it may well enough be called, 'Arj.%t i^Hfuf' in LatVne, *Curium Bened&uss* and in Englifh *Eleffed Tbifile*.- But we oftner call it by the Latins Name, as *Gtrduus*, and *Qarduus EencdiSus*.

II. *The Kinds.* It is a fingiitar Plant of the Species; but feme will have it to be a fort of *Atrahyli^* or *Wild Bnflard Saffron*, which I can fearcely admit of.

The Defcriptionf.

III. *Its Root it wfe, long and Fibrous, periling every tear after it has given Seed. It has wi-ny weak tender Branches, lying for the mofi part*

Tbifile Bit fed:

O R,

Carduus Benediffcus.

an the Grtund, on which are fet long and narrow Leaves, much cut in or waved on the edges, which are hairy or rough in handling, yet without any hard orfiwrp Prickles at all, fo that the tndtreji band may

may touch them without burnt : *i>tu ibije n* £* < & > ttttrds the tops of the Stalks are jomevshat naire prickly-, and ike heads tchiib grew on the re/a/Branches, areJomeahftflHirp-jet with Prickles like a Thiitle. The blower isyel-we, nbtcb being piji awiy, the Head endofes a eeffy w fioctof damn, in which is con-i < iin < d (as in all other Thirties) the Seed, which is bhchjh, long and rounds with a ft, to flairs on the Head thvteoj.

IV. Gerard dtferibes it after this manner. *Tl>e licet is white an' parted into Strings. The Stalks lire raugly round and pliable, which being parted iriio BraAbeii do lye jt<it on the Ground. The Leaves, are pgged round their edges, and full of VtrmkfiFnckies. The heads on the tops of the Sralks, are alfo Jet with Prickles, and enuonced with jharp ,wd pricking Leaves, cat of vihich comes j'irih a ycttovo lUwer •, I be Seed is long, undfctwith white hairs like a Bard, The whole licrb^ Leaves "a' ai/o tat ilead^ ore covered with a loft and thin Down.*

V. The Placet. It grows with us only hi Gardens, where it HouiUhes admiralty well; but in jiiu Itjnd Lewnvs, [n the Mediterranean, whtte ir grows narually, it grows wild in Champion ndsand Fields, as Ktrrus L^il,mns fays.

VI. The Times. It Flowers in July and Avguft, in wliich rimes it is to be gathered lor Medicinal Uks j and then it will keep good a whole Year or longer.

VII. The Klines. It is hot and 'dry in 'he fecond Degree, Abifefivc, Aperitive, Diuretick, Anodya a;id Aleiipharmnid,

VIII. The Specification. It kgood agjilift Agues, Malign and Pefilcmial Fevers, recent Surfeits, Flewifies, Stone, Gravel, Vertigo's, and the Bitings ot Mad DogS, and other Venomous Creatures,

IX. The Preparations. You may have therefrom, T. A Liquid Juke. 2. AbecoSion. 3. A Potticr of the Leaves. 4. An ExtraQ. j. A Cataphjn. /. The Down within ibt teadt. 7. A \ Water, Rog-r Dixon^ A/iipejiiental Svdarifick. The H<b is chiefly uied.

The Virtues.

X. The Liquid Juke. Put into the Eyes it dejis the Sight, taking away Blood-fhot and rednds -7 dropt into the Eat ir eafesthe pain thereof: It kills Worms in the Belly, and given from an Ounce to two Ounces, in any proper Vehicle, it is good againft Quartan Agues an;I the Ftoguu •, as ailo teent Surfeits, and admirably deanfw a foul Stortiich.

XI. T))c Wttffiiin in Wine, Nv/fv, or Poffet-Drink. It is good againft Agues of long continuance, and Pdtduital Fevers, which If tlm dy given, it has the greattt Etfefls ; and is ylfo profirable agairlt Pieurifies, and Sijtches in the Side. It is good agiiiilt a Vertigo, and Desfiiefs, and lhengthens the Memory. It provokes the Terms in Wo- , is/gnod !;gainlt the Strangury, as alfo Sand and Gravel in the Urinary pares.

XII. I ir. Vender .j l ht I r.ives. I c Hops Bleed-jng at Nofe, and is g(ven trom bait .I Dram to a an, againttall the arenamed Difeales. It is budoiikh, and tints all forts of Agues, being givenlometewHonrsbeibre the coming of the fit,

JUU. ih ExtraU. It has aU the former Virtues, au J being give horn half a Dram to a Dram

or more, it p;mkui,trlly is iiiid to cure the (Quartan Ague') kill Wonns in the Bowels, and is a Specjhck againft rhe Lues, or trench iW.

XIV. The Citaplafm. Made of the Green Fkib. and applyeii, it is good againft hot Tumors, Fry-fipelas, Botches, Boils, Plague Sores, the bitings of Mad DogS-, Serpents, Spiders, Stinging of Venomous Creatures, ifc. But made up with Hogs Lard and Wheat Meal, andapplied, itcnefSmfr-born or rebellious Ulcers. The Cataphjm made of the Juke with Ord'us Meal, is profitable alib againlr Gangrenes.

XV. Tl>t; Da-jn within the Heads. Applied to fimpfe Green Wounds it flops the Blood, and preftntly heals them: Applied to Ulcers after Clean-ing and ljicam< ;iig, ir caufes a fpeedy Cure.

XVI. The Dijittica Water. Ir is faid to have all the Virtues of the Deefrion, but is nothing near fo effectual, tho'much morepie;ifom to betaken. It is efieemed a peculiar thing ibr the Eyes, and help theirSorenefs, and a Dimneisof Sight.

XVII. Roger DixonV Amjpefti/erttal iudort-fik. Take Leaves oj CarduusBtneidiftuSfl^'^^' bious ; Rocctej Bitterbuil of each 4 Ounces \$ Py' J<.: DrinA 1 Quarts ; make <1 DcccUwn ajtd firiuu vui. If you have not Poflet-Drink, you may make it with thin Watra-Grue!. With ihisDrink, he told me, lie Cured many Hundreds of th° Plague (when the hilt Great Plague was in Londn, Anno J665.) who, by drinking largely of ir, wlll Cured (many of rhem) in the (pace of twenty lour Hours, when nothing but Death was expelred - and thereby he alioltayed Peftilential Vomitings and LooleTtefles. Itproducesa potent Sweating an Hour or two: In the Sweating, he gave the Sick Mutton or Chicken Broth, or lome proper Aiexi-pharraick Poffet-Driiik, wiping tbeSweat from the Face and Neck with warm Cloths, but forbearing to Shift the Patient \$ and this Courfe he took evry Day, till the Malignity of the Difeale waswholiy roottd our.

 from, 1. A Liquid Juki or K/jhuc, 2. A 'De-
 coUi\$n of the Herb, Boats and Headt. 3. A Fender
 of the Seed. 4. A Diftilcd Water. 5. 4
 of the young Stalks.

The Virtues.

X. *The Juice cr h(fenee.* They are thought 1.
 be as effetual as *Cerdaus tmeitSut*, for all the
 fitne purpoies, viz. for Agues, Inietitious Difej-
 fes. Malign and Peftilential Fevers, and the In-
 feaion of the Plague, both to prevent and cuts it.
 They open Obltru&ions of Storoach, Liver, Spit.
 Kti^s and Womb, ate good againft Hypochondri-
 ack Melancholy, Scurvy, Dropfy, Jaundice and
 Gout: They eafe pains in the Sides, Stitches, aid
 are profitable agauifi the Colick and Gripingsoi
 the Guts. Dole (rom 2 to 4 Spoonfuls, Morning
 and Night, in 3 GlafsosMullUCanary.

XI. *The DecoOien in Water or VojJ'et-Dii/iL*
 It has all the other Virtues before fpecUkd, but
 mufl begiven to halfa Pint or more, Mornitigand
 Night, mijed with a little Mull'd Canary, or
 White Port Wine.

XII. *The fyuder of the Seed.* It may be given
 to a Dram Morning and Night, in any convenient
 Vehicle. It is laid to be as good, if not more
 powerful for the Cure or help of all the afore-
 named Difcafes.

XIII. *The DifUled Water.* It 5s good againft
 all inward Fevets and the like* to allay the heat
 and inflammation of the Stomach, L5VL\ Spleen,
 Reins and Womb -, and hefides is often applied
 outwardly with Cloths or Spurges, to the Kegi-
 ons of the Liver and Heart, to tool the hot Di-
 flempeis of thofe parts, and to retift Fainting and
 Swooning Fits.

XIV. *The SaUei.* It is nude of the young
 Stalks peeled and dreSed, as the S;alks of otha
 Chsrdsns and Wild Artichokes are, which being
 eaten, areCiid to increafe Milk in Nuiles Breafts.

Throat-Wort fmall, Common.

The

The Descriptions.

III. The first, or lesser Throat-Wort or Canterbury-Bells. The Root *klaffing*, Shooting up afresh every -ie.tr. It haifmailer Leaves, and nothing fo bread an the great Kind, but long, and little or nothing dented about t)x edges. The Si.i lkt arefiuare, end brownifh if it bears purple Flowers, but green if it bears white Flowers, -which in Form are alike, and grow in a Suib or Tuft thick Jet together, wore than ,my of the others, and fmaller alfo, being not much bigger than the Flowers of the Yield or Garden Rampions.

IV. The second, or greater Throat-Won, or Canterbury - Bells. Its Root « hard end white, Spreading it Jeifout into many Branches under Ground, not perijhiag every Year(tbo~ it loafes all its Leaves in Winter) bat abiding many Tears, and increafing into fever al Heads or Knobs, from whence Spring up new Leaves and Branches. It hoi many large and rough Leaves, Something tike unto **Ncftk** Leaves, being bread and round at the bottom, and printed at the end, and notched or dented on the edges, every oncfiandmg on a large Footjialk. from among theje Leaves rfe up divers Jijuaere rough Stalks, divided at the top into feveral Branches, on tohichgrov) the like Leaves at at bet torn, but **Uffcr** towards the ends of the Branches jand the Viewers intermixed with Some longer Beads, every one in its Several Husk, which arc hollois, long and round, like a hell or Cup, wide open at the Mouth, and cut at the Brim intofoeCorners or Divijiens, fowhaileffcrihantheCovcatxy Belli, in 6m. LXIV. Sea. V. aforegoing; which in Some Plants are of a pure white, in fame whirifh, and in others of a fair, deep, Purple color, and in other feme paler. After Ox tloaers are pafit, come fmaller androunder heads than in the Coventry-Bells, wntmniitg fiat Seed, but binder, and not fo red tu thofe.

V. The third, or greater Throat-Wort, or Canterbury-Bells. Its Root is like the lafi beforegoing, nor doeffit differ in any thing tberefrm, but inthe duplicity of its Flower-, and there it of both white and Purple Kinds, a double FloKcr'd Species, which **have** dvublc white Flowers, and double Purple or Blew.

VI The fourth, or greater Dutch Throat-Wort. Its Root « pretty Urge, Spreading under Ground, andLu m,wy libra adjoining. It riSes up with feveral Brjnclx&r Stalks, which art tall, great and hairy, withfeveral Leaves fa thereon at difUnees, fometimes Jingiy, and Sometimes nw together upon Short tbeftalAs, which are pretty long, bro,tdifb at bottom, and jd growing gradually to a ftarp Point, and are notched like a Saw on the edge's, not much unlike ihofeofthegreaterTtooil-WQH at Seft. IV. above, faving that **theft** are much greater bothin the Leaves and Stalks. The Flowers an- of a Furplijh blew color, and almefl ai Urge as ihofe of the Coventry-Bells: In ell other particulars it agrees with the former greater Kind.

VII. The filch, or Giants Throat-Wort, or Canterbury-BeUs. Its Root is greet, thick and white, not periling Annually, but abiding many Tears. Ti>itho'jt has aGigantir.c Kai'ic, yet fearcely ever grows hig)xr than the feeond S^{anf} aforegoing. Its Leaves are not fo rough^ but as large, and denied about the edges, yiraitAaf larger pointed, and of a frefber green' color. the Stalks bear fuch like Leaves W. t!*m, more thinly or dijperfeihS^{cl}-> ^{1w}ving a Flower; at the bat **tern** of every Leaf from the middle upwards, being fomewhjt like we great Throat-Won in **Itm**, bm oj a fait or bleak rcd dijlt>

purple color, turning their Brims or Cornet i tie backward, with a Forked Clapper inthe » which is eminent and yellow. **The Seed*** and plentiful in the Heads, **toibich** will abide 1 Winter upvn the Stalks, until all the Seed Jhed, the Heads remaining Seen like torn Ra^f thin pieces of S-kin eaten with Worms. Ta another of tbit Species, bui it differs in nolhi this now Defer/bed, but in its tl?zccr, b Whne.

VIII. The fix th, or late Flowering, Throat- Vfh or Canterbury Bells. Its Rwt is thick and biw its Aiwr Leaves are Downy, dark, green, and ff-ty foft in handling, broad at bottom and Small, JR& jbarpat the point, unevenly waved or notched OPM* the edge4 The Stalk rifes up te be about 5 Vtf high, t>eix&Jofr, and almoj) woolly like the leavis Spread out into fmit Brandies at the top, many bell-fafbionei **tflliteri**, tike the firft fort (at Sett. IV.) but fmaller.-r, and of a pa ijh tr purplijh AJh color, which by reafon of; >•<•• late Blcvoering, gave occafionfor the **Maw**.

IX. The fiveurfe. or rich Crimfon Thio*t-N°it of America, or Cardinals flower. This &«* Plant has a white Root, xohichSpreads it S^{el, dm} ways under Ground, anijends S^{OTS^} ^{„llw/} ^"J Leaves, which are Spread round about the »w thereof, each of which is Something broad and <#> pointed at the end, and finely fnipt about the tagt- tro/s the midjl of which rifei up a round hollow Siali> two Feet high at leafi, befir ">ith divers Such L^{^e5} at grow below, but longer below than above, ^ Spreading it felfeta at top abundantly, every hta&y bearing divers green Leaves on them, andonect Foot of every one of them alfo, the tops wheref end in a very large Tuft of Flowers, with a green Leaf at the foot of the Stalk of every er, each Feotjialk being about an inch long, bearing a round green busk, divided into five long Leaves if Points turned downwards; andintbemidjioffvoy one of them, a mofi Rich Crimfon coloured Fh^{^f}, ending in five lottg narrow Leaves, fianding **\$ them fore-right, but ; of them falling dawn, *»" a long Vmbone or Peinile, fet as it were at thes? back, bigger below, and fmaller above, with &S^m Head at top, being of a little paler color (ban tut Flower, but of no Smell at all-, admirable only M the fo great a Bufb of Orient red Crintfon Flowers-The Seed is incited in Small Heads, onthin tfyf* green busks whcb held the Flowers, which is very tike to the Seed Veffels of the Coventry-Bells, <^* is fm.ill, and of abrotenijb color.

X. The Places. The firft has been found #0*ⁿ ing in the Meadow next to Dittonh ferry, as y^{ou} eoiolVindfor; upon the Chalky Hills nezi Grew bih'm Kent; anjtfn a Field by the Highway, g^T ing from thence to Dartferd; in **fbitt'n'wtbsM-P*** TM mtfex; 2tii)nSion-Meadow near Bramfri, not tar rotm London, The fecondgrowsplentifully i" Woods and Hedge-row sin Kent, ahouiCanierbstry, Sittingbourn, Grave/end, Southjleet and Green-hith; eipeecially undir Ccblwm Park-Hall, leading from Southjteet to Rethefir; at Eltham, about HW fjik Mi far homGrcemcich, and in molt Pltu^{^5} about Watford and Bufhy, and pirrs j tfeetB. VetoQionin Water andWmc. 4. A Decoded Oil-
%. A Pouder. 6. A Cttitplafig. 7. A Difitnd
Water. 8. A Spirit. 9. AVifilledOil. 10. Fo-
teltates or Powers. 11. A Spirituous TinSuff¹
12. An Acid TinQure. 13. An Oily TinQun.

The Virtues*

XIV, *The Liquid Juice.* Bathed upon Warts
ittakesihera away •> it diicufles cold Tumors, an<

cafes l'ijl:i in any part proceeding from a coid Cuufe, by applying it to the Pl:ce : And fuufr up the Noftrials as an Errhine, it purges the Head and Brain of cold pituitous Humors which caufe Apj-plexie.; Lethargies, Vertigo's, Palfies, dull Sight, weakads of the Memory, Hejd-achs, Megrim, ©V.

XV. *The EJfuite.* Gitenfrom one Spoonful to two Spoonfuls or more, in the *Dijlilled Water*, or Qdwr proper Vehicle, it caufes an expektoration of Flegm (Co alfo if it is taken with Honey, Salr and Vinegar:) It is good for the Spleen, Ihorners of Breath, and difficulty of breathing) kills Worms ip the Belly, provokes Urine and ilie Terms, facilitates both Birth and After-birth, expells the dead Child - and being bathed upon recent Tumors, it difcuies them.

XVI. *"the Dccdiior? in Water or Wine, or in a mixture of both.* It has the Virtues of the *EJfenee* aforegoing, but as it has not rhe fame frengtb, fo it ought to be given in a much larger quantity, as to half a Pint at a time, mote or lets ; it helps fuch as are dull Sighted, have a bid Memory, and an ill Digeftion, becaufe it warms, comforts, and frengthens the Tone thereof

XVII. *The Dccolled Oil.* It is Anodyne, eafes all Aches and Pains in any part, as alfo painful Tumors, Gout, *Cfc.* arifing from cold and moift Caufes, being bathed Mommgand Night upon the parrs aflc&toi before rhe Fire : It eafes Gripping pains in the fit of the Spleen, and is effect ja I be Cramp.

XVIII *The tender of thv Ltavrr nnJ Heads.* tiled as in Errhine, it cleanfes the Head and Brain of cold am! moift Recrements, which are rhecautes of many Difeafo- It is of good ufe in Meats and Broths, to warm ind comfort a cold *nv.A* moiftStomach, to help DigelHon, and expel *VtM.* If gi-^{*}ven to three Drams (I fhould think tvfo Drarrs ret be enough) in *Oxymcl* fafting, ir is laid to purge Choler and other fharp Humors, and help fudi as have the Gout, and is profitable for fuch as have an Apoplexy, Falling-SickwS or LethaTgy. Given to a Dram, or Drim and half every Morning fjltng in Mead, ot Oxvmd, irhrHigs down a great Belly, and takes away the hard nets thereof. It is good againlf. the fwelling and pain of the Spleen, pains in the Reins and Hips; eafes pains in tie Eyes, and helps fuch as arc Blear-Ey'd. Given to two Drams in White Port or *Lisbon* Wine, it provokes Urine, gives eafe in the Strangury, and expei^Sand, Gravel, and Tamrous Slime in the Reins and Bladder: Mixt with a douhle or treble quantity of Honey, and given in *Anified-Witie*^ it is comfortable to the Head anJBtomach, expells Wind, eafes the Strangury, and S&eps a dry Cough.

XIX. *Ibt Gstaptefm.* The Leaves beaten into a pulp in a Stone or Brafimortar, adding a fufficent quantity of the *Liquid Juke*, and brought to a Comittenc/ with Bean or Wheat-Flower, or white BreadjCifcs the pain, and difcuifts the Tumor in the Cods which are much tumilkd or fwoln: So alfo applied to the Forehead and Temples, it eafes the Megrim, Headach, andhelps other Dileafesof thofe parts.

XX. *The RiflMed Water.* It has the Virtues of *Juke* and *Ejfrme*, but much weaker : Mixed With *Vinegar of Rofes*, and applied as an *Epitbem* to the Forehead and Temples, it is laid to eafe the raging pain of the Headach and Megrim •, help againft the Vertigo, and abate the raging in Fren-fces and Deliriums. Given inwardly to 4 or .6 Ounces with 40 or 60 Drops *I'artari Per deliquium*, it is Qid to break the Stone in the Bladder; ac leift it potently cleanfes the Urinary

pans of Sand, Grave), and TUKUIOUS odg'd in thole parts.

XXI. *Tin- S'irit.* Given to a Spoonful or morj, at a time, either alone tvell duicicel wicti Sugar, or *Syrup of Clovtgiltijotxeri*, or in j Glafs of generous Canary, it very much comforts the Stomach, warms and Irerighctw it, is good against palpitation of the Heart, Sicknefs at Hart, Fjningring *zni*. Swooning Fits, and other ii Ventricle.

XXII. *The DiflilledOil.* h is of excellent ufe fur all cold and moil DILLUICS of the Head, Brain anti Nerves; and therefore is a molt p againft Convulfions, Cramps, Apoplexies, Epitexpies, Vertigo's, Lethargies, Paliiesand Agues. Dole from 4 Drops to io, according ro Age and rhe exigency or the Difcaie, being dropt into fine S and then mixt with fome proper Vehicle to fwallow it down in.

XXIII. *The Poteftates or Powers.* They all the Virtues of rhe *Effenee*^ *Oil did Spijt*, are very fubtil, and penetrate more than either of them i (and in my Opinion) are better 10 be given in Vertigo's, Lethargies, Convulfions, Apoplexies, Epilepfies, Palfws, Gout, &c. and much more fec'tual than the *Effence* or *Spirit*, and morei a re than tie *O!* ft* outward application. Dote from -in to 60 Drops or more in Canary, or any quta convenient VdiicleMoininganiNight, to beufed with a *Continuant* io long as the neceffity of the *Diiiafe* fjiall require-

XXIV. *The Spirituous TinHure.* It is Cephlick, Neurotick, StomaticJi and Hylererick, good againft all ihe cold and moift affections of thofe parts; wjrmng, comforting and itrengthening [hiin, and reftoring their Tone when proftigated or hurt. Dofe from 30 to jo Drops in Wintj or fome other fit Vehicle, which may heft agree with the Stomach of the Fattenr.

XXV. *Jbn Acid Tinthre.* Ic is an *JUexifharacon*, good againft the Pljgue or Pettitoice, and all lbrrs of Peftilential Difeafcs, by defending the Heart, and deftroying rhe very Effence oj^the Malignity : It is alfo good againft the biting^of Sex-pen ts or Mad Dogs, or liny other Venomous Cre-iturc, by deftroytng the ferment of the Poilon, and fo putting a flop to its Carrete, that it may not infeEt the Olood, and contaminate the Vital aid Animal Spirits. Dole fo many Drops as to make the Vehicle, as Canary or other Wine, pleafmty Iharp, and to be repeated 5 or 4 times a day as neceftity may require.

XXVI *The Oily Tm&vre.* It is a Nephritick, and powerfully opens all Obftrufions of the Reins, Uretersand Bladder, as alfoof the Womb: h gives eafe in the Strangury, provokes Urine, and cleanfes rhe Urinary paffages of all lbrrs of Hetrogene matters; and many tiroes c.irriesofr^by Urine, the MorVukk cauft of Palfcs, Lethargies, Apoplexies, Epileptics, Kcumjtims and Gours -. It opens Obftrueries of the Womb, provokes the Terms, facilitates the Birth, gives eafe in the Collick, and fuppreffes Vapors, whether arifing from the Stomach, Spleen or Womb. Dofe from 6 Drops to ro, if, or 20, in any proper mixture, as the Age and Nature of the Difeafe may require.

CHAP. DCXCVI.

Of THYME - WILD :

o R,

MOIHEK-TfiJME.

THE Names. It is called by the Ar: fifrmfl : in Greek 'i M se>- to) in Laiine, Serf ilium, and fryJlum, Thymum Sylvrjire : and in Englifh, H/<J Wether Thyme* or Mocker

11. There are ma of this ioUow- ^3l only •

tion Thyme, and not of Jo fad a green color •
 ittt t'lowersgrow in randies towards the tops of the
 Stalks and Branches, end the Smell of the whole
 Plant is very near to that of Musk, from which it
 took its Name.

VII. The fifth, or Gilded, or Changeable
 colored Wild Thyme. The difference of this
 Species from the common Wild kind, confijs chiefly
 in t]e variable mixture of Green andJellovi, in the
 Leavcs of tbii Thyme; for the green Leaves thereof
 are in fame striped, andinthers edgedicith a Gold
 yellow color, which hoi given occafwn to its Gilded
 or Oiangcable colored Name.

VIII. The Places. In many Fortcign Countries
 where the Climates are warm, as Syria, Greece,
 &et. Spain, Italy, &c. they are iaid to grow

with us in England, they are all Nurlt up in Gar-
 dens: However the third Species I have found
 growing in many Counties of our Lar;d; as in
 •Norfolk, Cambridgebire, Eijfex, Kent, Surry, &c.
 That with white Flowers which is the more rare,
 has been found growing on Bujfy **Htttb**, in Digw-
 M.eadoios by Hatjield.

IX. The Times. They Flourift] all the Summer
 long, bur their Flowering time is chiefly in JMnt
 and July.

X The Qualities, Specific.itisn. Preparations
 eniTirtues Of thcJe Mather-Thyme Plants, are al-
 together the lame with thole fpecified of Garden-
 Thyme in the fotmet Chapter -, not is chere any
 manifdt difference between them as to their Force,
 Strength and EffeSbs, ft that we need fiy no more
 thereof in this place.

CHAP. DCXCIX.

O / T O B A C C O *Engljb.*

I. ~T^ HK Names. It has no Wtibick nor Greek
 L Nime ihit we know of, lieing a Plant un-
 known to the Ancients; but our Moderns have cal-
 led it in Latine *VetutA* (which is (aid to be the pro-
 per Indian Name) and *Nicotians*, (from one **Mew**
 a *Fretch-Min*, Refident in *Portugal*, whofirtfent
 ittotheQuecnoft>-j/r^, from whence it wasalfo
 called *Herba Jcgina*;) It was alfo called *Tobacco*,
 as (irtt coming to us from an iland of that Name in
 ihIndies: Label accounts it a kind tihyof-
 us or *Henbane*, and therefore called it *Hyofcy-*
 s *Luiens*, and *Hyofcyamttis ditbius*, as being a
 Jeltow or doubtful kind of *Henbane*. We in
 Englifh call it *Tobacco*.

fl. The Kinds. It is either 1. En^lifli, called
 P««« *Anglicum*, *Nicotians Anglic^* Enelifh *To-*
bacco, of which In this Chapter. 2. Or *Pttutf*
Indium, *Pctum Amertcanum*, *Pet urn Htipamcum*,
Nicotian Mexican* vel Peruwtdtia*, *Nicetuna*
 1 *yirgimamii* Indian or American *Tobacco*, ofwhich

the *Defcriptians.*

III. Its Root is neither fogreat mr woody in that
 t] the indian Kindt, ami perifhes every Tear tv/uh
 tie Frolis in Winter, hut generally coves up a^asn
 of the Seed, which is J)jed of its ote.i accord. It
 rizes up with a thick round Stiilk, about two beet
 high, on which do grow thick, fit, tt/iJ jiejhjy green
 Leaves, nothing Jo large as the other Iiidiin K/nJs,
 neither jor length nor breadth, a little reund<(h
 pointed^ and Jmooth on the edges. The StitilA h
 branched tm vr.rimify, bearing at the tops oj each
 Branch JcvcmI b/etuers, Jet in green Hjsks like the

^obacco Engljb.

the brims of the Hutkt, round pointed alfp, and of
 a gretnifh yllow color. The Seed nbicbfqlhws is
 notfo bright as the Spanifh or Virginian, but lar-
 ger than it, and contained in the like large Heads,

IV. Gerard decribes ic thus, Its Root isfmall
 and thready, it grows to the height of two Cubits:
 the Sulk is thick, fat and great, Jull of a Jpongy
 Pith, and is Jpread out into Jevera! Branches, fet
 with fsmooth and even Leaves, thick, and Jxil of
 Juice. The Yfovert grow at the tops of the Bmueb-
 es, orderly placed, oj a pale yellow coh, Jonte-
 thing lejfer than thuje of the Black Henbane. Th
 Cups in which the blowers do jjand^ are i'tke, but
 lejj'fr, tenderer, and teithout jbarp points, in which
 ftands the HusAor Head, Jomethmg roiydy jull
 of very Jmall Seed, net much unlike iS; Seed of
 Marjoram.

V. The Places. This was brought into Europe
 in Seed by *Nicot*, with the Seed allb of them!*
Indian or American Tobacco, ofwhich this our pre-
 lim Plant is certainly a Species Label thought it

to participate both of *Hrnbtime* and *Tobacco*, from whence he was Induced to give it chofe rarrriailar Names; but it is ufed by many inlcad of *Tobaeae*, and is alfo cdlud by the lame Name, being Hilt brought (as it is thought) from fome parts of *Bra- JI*, which is probable from *Nicotj* Agency in *Vor- Tug,i*, to whofe King the whole /; .;ntry was fubjeft. It is alfo faki to de lirour. frimdiidj (an litatid in the *Ncfi Indict*) :wi hom *Virginia*, :tnJ fuvoral other plaa ken in Pipi; JS other *Tolacat*, i,s 'u work the lame effects, of Dtifnl the Stomach, reviving ihc Spirits, andllrengtlwn- ing the whole Man (in fuch as be accuftomed to *Tcbicco*) as the r/w *Sj'aaffi* or *Pirtiaain* do. It is pl.mted in our Gardens in *EngianL* and is more familiar M ith us than the other *Indian Kinds* are. Being Sown here, ir profpers exceedingly, info- much tint it is not aiic IO bedeltroyal where it once has Sown it fell;

VI. *TheTintes*. *farkinfon* lays ir eirly give? ripe Seed, whereas the other *hdaift'iCmtd* feidom do. It Mowers from the beginning of *June*, to the end of *Autxft* or liter, aid oftentimes till the *Autumn* is far (pent; ti:e Si ng in the mt:in time.

II. *The Qualities*. Tho' fame thought this Plant to be cold, yet *L&bel* is of Opinion that it is hoi, befaufe of its biting tilre, and it is praba- ble (o be *WT* and dry in the fecomi Degree: It is *Aperitive*, *Abfterfive*, *iiftrmguit*, *Vulnerary*, *Emetick*, *Cathartick* and *S-jlivatick*,

Viri. *The Speeijiaifra*. It caufesan explora- tion or tough Hegm qitofrheStoi t.ungS; nkilii W.wms in the Stomach and Belly, and cafes Griping pains in the Bowels, provokes Urine, ckanfes the Urinary paffages; is good a gain ft Tu- mors, Apoftems, Botches, Boils, Scabs, inveterate ukers, Kin fieS and the like.

IX. *TheYrtp&ajioat*, You miy make ihere- from, \ A *Liquid take of the Herb*. 3. *ASyrup of the fame*, i. *The Seed*. 4. *An Qimmer.t*. 5. A .ff *the Lenvet*, and *Sialkt*. 6. *The wMe* .A *CelapUfm of the l.e.;vn*. S. A *Dt&xied Water*, y. A *Liquor*, la. A *Ucccfion* ., *Leavet and Stalks*, it. *The AJhet*. 12. *The cut Leaves for Smgakiisg*.

the Virtues.

X. *71>e Liquid Juice*. *Purkinfen* fays that it is effec"na[to cure the Dropfy, by taking 4 or ; Ounces of the *Juice* falling, whicli will frongly purge the Body both upwards and downwards. I Eovebid no experience of it, but 'risveij probable th:tt it mav cure the Diopfy, ii'given by a wife Hand Jpd in a due Dofc. I fhould be afraid to give 4 or s Ounces at a time, by rrafdti or its V: hut it is a continued ufe of it, beginning with a Imall quantity, and gradually increafing it, that muft determine how much may be Ijfelij given at a ifimt, *Monjrdut* lays it is an *Akxiopharmkon* a- ft rtie Stinging or Biting of any Venomous ature, being immediately applied to the hurt place.

XI. *The Syrup of the fame*. It is found by good Rpxperience to tpeptorate tough Flcgm out of the Stomach and Lungs. It kills Worms in the Stomach and ikilly, ftifes die Head-ach and Megrim, as all> the Cholick and Griping puins in the Boiv-cls; tho' for Some ttmut may fern rocaufemore trouble in thcm, and diffitea the Stomach. It is —C L, > . thofe who JJave xbe Storj (or *Gnv^i* in

Bladder, to caie their paia, e and provoks Urine,

XH. *The Sad*. It is Tail to be more efi to c-ale theTooihacli, then any *Henbane* &.

XIII. *The Ointment*. *Take of the 1 4 h.indfuh, bruife II, and add tt it Oh %&?ri; bo. till the growscripp^ andtbcOil'ml!*

CHAP. DCC.

OF TOOTH - WORT :
 Ƴ
 OX,

TOOTH - RAPE

I. J-T* U E N < O > ». It has no Greek Name that is known, being a Plant the Ancients were ignorant of - our modern Authors have called it in Latino *Deittarto*, (from the likeness of its Roots to Teeth) also *Denfillaria* ; by some *Sauamana* and *S<ju<imat, a* also *Radix Sfiamata*, (from its likeness to Scales) in English *Toothwort*, *Teab-Xape*, or *Toothed-Lungwort*.

II. *The Kinds*. There are several sorts or *Toothworts* which are nothing or Kin, or have no relation to one to another, excepting in their Names; as the *Dentaria*, commonly called *Coralteerts*, of which we have already spoken at large, in Q) d) i%2. foregoing, which are no Species of the Plant we here intend. The *Tooth-Worts* in this place are of another form and purport, and are chiefly two, viz. 1. *Pentaria*, *Dentaria major* *Matbiali*, *Anblatum Dodoijti*, *Arachtdmn Cafal t'i*; *Mgleihms Plinij Gefncro*; *Squmaria* -, *Sauanatia* • *R.tdi.v Squamata*. *Orobanche raSeetktta* - *fc-yV* The greater *Tooth-Wort*, *Tooth-Rape*, or *Toothed-Lungwort*. 2- *Dentaria minor*, *Dentilalaria* *Dentark* " *AfvMi&i* *Aphyllus Clitij*, *Dentaria Corallgi& radice*, The lesser *Tooth-Wort*, *Tooth-Uape* or *Toothed Lungwort*.

The Descriptions.

III. *The first*, or the greater *Tooth-Wort*, *Tooth-rape* or *Toothed Lungwort*. It has for its Root *small Scales*, (if they may be so called,) like as the *Stalks* or *branches* have, which *cottijl* likewise, (*) if blackish purple, forming thick *Scales*, lying

Tooth-Wort Greater.

pretty doze together, compact upon another. In the beginning of the Spring, there rise out of the tops of these scaly Branches, tender and brittle flippy Scales, about a span in length, without any Leaves, but bearing many whitish purple gaping Flowers and blackish inward, standing in Husks, in which afterwards grow up small Vessels, with small Seed in them.

IV. *Gerard describes it after* [his manner. There is often found among the Mushrooms, a certain kind of Excrecence confining of a Gelly, or Mushroom-like substance like that of the Mushroom. It rises forth of the Ground, in term of it into *Orobanche* or *Broom-Rape*, and also in substance having a tender, thick, tuberous, or mushroom-like body confining as it were of Scales like unto Teeth, (whence it took its Name) of a dusky shining color, tending to Purple. The Stalk rises up in the middle, garnished with little gaping hollow fluted, like those of *Satyrium* -, on their outside of an overworn white color. The whole Plant resembles a rude form of that Gelly or *Slimy Matter* found, in the Yields, which is called the *wiling* of *Srars*, or *Ignis Fatiuus*. Its Root is small and tender.

V. The second, or lesser *Tooth-Wort*, *Tooth-Rape*, or *Toothed-Lungwort*. Its Root is small, less scaly, and more white and transparent, diversely variegated like *Coral*, white of color, full of juice and without any Fibres annexed to it. The Stalk is in like manner without Leaves, having whitish purple flowers at the top, sometimes but two or three, and sometimes many more, but varying in some places, as being of a more purplish color. Gerard says, that this differs not from the former, saying that it is altogether the same, but in most other respects alike.

VI. *The Places*. They grow most commonly under Trees where they have much shadow. Gerard says they grow at the bottoms of Elm Trees, and such like, in shady places. He found them growing in a Lane called *Ea* (• *Lane*, going from *Middfionem Kent*, unto *Cocks-Heat* *balfajMiie* from the Town, and in other places thereof; as also in the Fields about *Croydon*, especially at 3 place called *Grouts*; and in 3 Wood in *Kent* called *Row*, or *Rough-hill*, near *Grayfoot*, also near *Harwood* in *Lincolnshire*, in 3 Wood called *Talbot-Bank*, a Mile from *Whanley*.

VII. *The Times*. They spring up and grow through all the Summer Months, and flower in May and June •, and sometimes they are found in flower in July and August.

VIII. *As to their Qualities, Specification, Preparations and Virtues*, Authors have said nothing; but from the use our Country People make of them, it is probable that they may be Cooling, Drying, Aperitive, Abstergitive, Astringent and Pulmonick, or appropriated to the Lungs, for which reason they have called it *Ingentwort*, which Authors have distinguished (as a forementioned) into the greater or lesser kinds.

IX. *The Decoction in Wine or Water*. Being well sweetened with Honey, it is good to open Obstructions of the Lungs, to loosen and expectorate thick rough Phlegm which huffs them up, and causes Hoarseness, Wheezing, (shortness of Breath, and difficulty of Breathing) and therefore may be of good use in *Asthma's*, *Phthicks*, and other like Diseases of those parts, proceeding from Repletion.

CHAP. DCCI

T O R M E N T I L

OR,

S E T F O I L.

T Names. It has not been writ of by any of the Antient Greek or Latine Authors, yet some of our Moderns have given it a Greek Name from its form, or number of Leaves, viz. *iivUfHMM, Utptaplryllum*, from whence it has been called in Latine *Septifolium*, in English *Setfoil*, or *Seve/t-Leav'd Grafs*; which is not properly so, for it has not seven Leaves, but each Leaf for the most part is divided into seven parts or very eminent divisions, so that each part looks as if it were a particular Leaf. It is also called in Latine *Tormentula*, and by some *Stellaria*, from the form of the Leaves, and by others *Confolida ruort.* from the effects and color of the Roots, and in English *Tormentil*.

II. *The Kinds.* There are several Species of it, as we shall only treat of two, which are most common with us, viz. 1. *Tormentilla vulgaris, renophyllum commune, Tormentilla minor*, Our Common Tormentil or Setfoil. 2. *Tormentilla major, Pentaptyllum majus, Tormentilla vulgaris War, Tormentilla Alpisa Gmerarn*, The greater Tormentil or Setfoil.

The Description;

The first, or our Common Tormentil or setfoil. Its Root is smaller than Bittort, but blacker without, and somewhat thick, and not so

Tormentil Common.

red within, and sometimes a little crooked. many blackish fibres adjoining. This Plant unlike to Cinkfoii, (but many mistake it for some. It has many reddish slender weak joints rising up from the Root, which lie upon the Earth or rather leaning than usually upright, with short Leaves which stand chiefly to the Stalks the same of Cinkfoii do, with the Pedicels or stalks encompassing the Branches at divers places but those which grow next to the Ground rise upon long root stalks, each of which has Leaves of five or six into the Leaves of Cinkfoii, but something larger and narrower and dented about the edges, and them divided into but five Leaves or parts, & many of them into seven, from whence it took its Name of Setfoil. And standing round about the Root in the division like a Star, thereby obtained its Name also of Stellaria; yet some Stalks have Leaves sometimes, and some eight, and some the Verticity of the Soil are pleased to flourish. At the tops of the Branches, come forth several yellow Hovers, resembling the eye of a fat Lark, exactly like that of Cinkfoii but smaller.

IV. The second; or greater Tormentil or Setfoil. Its Root is black without, reddish within, at the top of the tuberosity or knobby. As this (with the other) may be accounted among the Species of Setfoil it brings forth many Stalks slender and

Tormentil Greater.

farcefy able to lift itself up. or rather lean upwards, the leaves are smaller than Cinkfoii, yet are sometimes five in number, but for the most part five or six (as before) a little smaller about the edges, and the blackish grew in the top of the stalks, exactly like to that of Cinkfoii. This differs but very

Stk from the former, but only in the *Magnitude*
 • Leaves and Roots, which are much greater
 "id redder, and ej a livelier Stseli, bat in all things
 elfe alike.

V. *The Places.* The first grows as well in Woods and fiady places, as in open Champion G d s , and about the Borders of fields in rruny s of this Kingdom. The second grows in such like toces, but delights chiefly in a richer, and famed naesa more iandy Soil: They are both Planted ilfo in many Gardens.

VI. *Tbtimet.* They Flower alt the Summer Months, as from *May* to the end oi *Augufl*.

VII. *The Qualities.* It is very little hot, fcarce-ly in the first Degree, but dry in the third; Af hinge nr, Abltetfive, Vulnerary, Stomarick, Cardiack, Sudorifick, and Alexipharmick, of very thin and fubtil parts.

VIII. *The Specification.* It prevails again ft the Plague, and nil manner of Malign and Peltiulit Dialcafc, expels Poifon, and defends the Hear. It cures Agues, the Bloody-Flux, and all oier Fluxes of the Bowels; also Spitting, Vomiting and Pi (ling of Blood, and Hops ihe overflowing of the Terms in Women, and rhe Defimdon of I lumors to any Wound, Sore or Ulcer. Opens Ohfruttrions of the Lungs, Liver and Spleen, and is of excellent use in the Cure of the Jaundice, and to heal iimpte green Wounds in any part.

IX. *The Preparations.* You may make therefrom, 1. A *Liquid Juice of the whole Flam.* 2. An *Effence of the fame.* 3. A *DeoSwx of iht Root, or Root end Leaver.* 4. A *Yonder of the Root.* .: A *Biiljdm.* 6. A *Cstaplafm.* 7. A *Di-filted Water.* 8; A *SpiritMus TinQurc.*

The Virtues.

X. *"the Liquid Juice of the whole Plant.* It il Kluxes of Blood or Humors in Man or Woman, whether at Nose, Mouth, Belly, or any Wound it] aoy pare \ refills all Poifon, and the fLijue or Peffilence it telt, and all Pettrilential Dilwfts, and fiich as are Infectious, as the Mealies, Small Pox. Purples, Spotted Fever, by expelling thro' a gentle *Diphorejts*, the malignity from the Heart. Dofe 5 or 4 Spoonfuls Morning and Night, in a Glafi of Mull'd Sack, or other Styptick or 6c Wine.

XI. *The Ejjence.* It has all the former Virtues with advantage, as being the more efficacious MediCuneat. It cures Agues, being given fome Hours before the coming of the Fit, and the Patient laid vrn to Sweat thereupon, being repeated for feme nfiderahle time. Ic is an cteftual Antidote or Counter-Poifon, AntipeltHenrial, and a Cure for the yellow Jaundice. There is fcarce-ly any more effe&ual Remedy againtt the Bfoody-Flux, or any other Flux pf the Belly; ic Itrengthens the Stomach, flops Choleric Vomitings, helps the difcnly of the Blood, and opens Ohfruttrions of Stomach, Lungs, Liver and Spleen. It is good againtt Fumes, Vapors, and lower or birter Belchings, and loathing of the Stomach: It is profitable againtt the malignity of Venereal Difrafes, and cures the JL««, becaufe it fo mightily refifts Pu-Htijilion. It lengthens the Womb, flops all its Fluxes, and prevents MHcarriage. It is good againtt Ruptures or Bindings, and to cure ull fores of fituple Wounds in what part foeyer, whether 'ward or ounvard. Dropt into the Eyes, it cures Sores and >Ulcers there ^ Uops Fluxions of hot and >Rheums, eaiefthepain, and dears the Sight.

It makes a good Injeftion ior ibul, corrupt, and rotten Sores and Ulcers in any part, chiefly in the Mouth, Throat, JIIVS, and privy Parts of Manor Woman. And is of fingular life for the Cute of the Kings-Fvil, being inwardly taken and Ounvardiy applied: Mixed with Vinegar, and applied ro Sores, Ulcers and Scabs in the Head, and other parts, it quickly heals them. It is effectual again ft the Hemorrhoides or Piles, they hein; bathed and fomented therewith warm; and is proflrable againtt the Whites or Ktds being inwardly taken, aid outwardly applied, by iujetting it up the Womb wiith a Womb Syringe. Dofe 3 or 4 Spoonfuls Morning, Noon and Night, in fome proper Wine or Liquor.

XII. *The DeccoUion in Wine-* It has all the Virtues of the *Juke* and *Effence*, but nor altogether fo potent, ;md therefore mult be taken in greater quantities, as to half a Pint at a time or more: Mixt with Honey and Alum, it makes a good Lotion xo cleanfe, dry and heal, old *filthy* corrupt running Sores and Ulcers in any part: And *Andreas Valejiur&ys*, that die *Deccdlion of the Root* is no le£ effectual to Cure the *Frnreb-Pox, xhm Quajactm* or *China*, becaufe it fo mightily refills Putrefaction, tiled as a Bath, it is an effectual remedy agiinit Abortion, in Women who are ape to Mifcarry.

XIII. *"the Ponder of the Root.* It is Styptick, and has the Virtues of *the Juke an& Ejjence* being given in any proper Styptick Wine, or other like Vehicle, ir^m a D/am to 3. Dram and half, Morning and Evening for fome time. Strewed upon moit running Sores and Ulcers, ir drys them, and induces rheit healing; and fo much the more, if mixed with a quarter part *OX-Scam>nony in Poudcr.* *Lobel* lays, that *Rondeletius* used it in the ftead, or in the fame manner, as he used *Hermodtflils fa* Joint-achs. Taken in *Juke of Phntane*, ir is Cjid to kill Worms in Cbildten, Cure Ruptures, and difcufs and heal Contufions from Falls, &c. being inwardly taken, and ourwardly applied

XIV. *The Balfom. Take of the Pondert^ Ounces, Oil Olhe 3 Ounces, Balfim of Peru 2 S^nces Bees Wax two Ounces and a huff; melt, mix', 4 make a B-ilfant.* Applied to the Reins, iteafest! \ pain thereof, and helps fuch as cannot hold their Water₅ eafes the Gout in any parr, is profitable againtt the Piles, and diftblves ail Knots, Kernels and Tumors in the Neck, £7V. from the Kings-Evil, and heals the Sores and Ulcers proceeding from the lime.

XV. *The CatapLifm made of the Roots and Leaves.* It difculles fimple recent Contufions, gives call- in the Gout, reprtfics the Flux of Humors to any part; and is profitable to dhTolve or difcufs Tumors, Swellings or Kernels in the Neck, caufed by the Kings-Evil, or fupcr-abundance of F>vil Humors.

XVI. *T f e M W B W . Take the Herb and Root, brtiife them well, JJeptbem in Wine far 24 Hours or more, and then draw off the Water in BalntO.* It has the Virtues of the juice and Hfience, but much wejker in its Effest, and may be given dulcified with fine Sugar, irom a quarter to half a Pint. If ir is given with 2 Drams of *Venice-Treacle* or *Mithridate* diftblved in ir, and the Patient (hcing in a Naked Boi) put to Sweat thereupon, it will potently provoke Sweat, and fo expel the Poifon, and defend *be,H<rt and Vitals rrom the Malignity and Inefefhon of the Plague or Peltilence, and from the danger of any Pellilenti;il ot Infectious Difeafe, It is good ro give eafe in the Piles or Hemorrhoids, by Dathina them therewith; and if a little *Camphir* be diiloU

ved in it, and Lapis TutU, or Caliminaris in fine Pouder, be mixed Therewith, it becomes a good Ophthalmuk-Waftl for Bleared, Sore, and running Eyes. But if the Rijiilled Water be mixed with Levigated Ponder of Amber, or Catechu, and fo drank, it flops the overflowing of the Terms, and Whites in Women.

XVU. The Spirituous Tindure > It has the Virtues of the Juke, Effence and Paudo; is more Cordial, adds Life or Aftivhy to the Spirits; warms and comforts the Stomach, Bowels, Womb and Blood ; ftrenghens the Vifcera, reiih Poiibn, and the Infe&ion and Malignity of Peftilential Difcafesi fortifies the Hart, andis^ood againlt Con- vulffions, fainting and fwooning Fits, Vapors, Fits of the Mother Uc. Dofe from ;o to IOQ Drops, in a GUfs of Mull'd Sack, or fome other gene- tious Wine.

VIII The Phccs. The fiift and fecond grows in France, Germany, Italy and England, but only in Gardens. And Diofcorides fays, that the fifth is found in his time, and not Wild in Greece, or any other place that ever he heard of. The third grows in the more Northern parts of America, as Canada, New-England, Virginia, &c. for which reason I put it in this ... Planter? at some time or other, and it is one of them Plantations.

IX. The Times- They Howtr in June and Jy, and their Seed is ripe in fome little time after; hut the other two Flowering later with us, fefdmpert their Seed here.

X. The Qualities. The fiift (which is chiefly iifed) is according to Galen, temperate in refpea to heat or cold, drynefs or moiiture. They are Aperitive, Anodyn, Diuretick, Vulnerary, Hyfterick, and Alexipharmick.

XI. lie Specification. It cures Difeales of the Eyes, difcufles Tumors and Contuitions, hells Wounds and Ulcers, eafes the Gout and other pains; provokes the Terms, as alfo the Loches when ftopr, and is prevalent againft thebitiegs of Vipersand other Serpents, as alfofgeveseafeio the Strangury, and other itoppages of Urine,

XII- The Preparations. You may make there- DeeoS'wn in Wne or Water, j- An Oxymcl. 4. A Pouder of the Seed. ;. An Oil by infebt'wnar DecoSion. 6. A Balfam. 7. ADifilled Water.

The Virtues.

XIII. The Liquid Juke or Eftncc They may be given to 4 or 6 Spoonfuls alone, or in Wine, or other fit Vehicle, it eafes the pains of the Spktn and Hypochonders, opens Obltruftions of the Vifcera, provokes Urine and the Terms, as alfo the Loches when ltopt; gives eafe in the Strangury, orheatand fcaliling of Urine, and is good agiinit the bitingsof Vipersand Serpents, or of other Venomous Creatures. Any fimple Wound, Sore or Ulcer, being wafhed herewith, it cleanfes, dries, and induces the healing ; difcuflesTumorsandiccent Conruftions, and gives eafe to external pains: Both Diofcorides and Galen, commend this Plane in particular, againft the bitings or flinging of any Serptnr, or othei Venomous Creature. The Juice isaifo good to walk the breakings out with Scurf, or Scabs of Childrens Heads, or any ottit' ->ir'; and to wafh places bitten or (lung, &c. as. 1- ' • lib. 11. cap. 21. advifes.

XIV. The Decoffion in Wine or Water. It h? 1 all the former Virtues, but becaufe weaker, may be given Morning, Noon and Night, to halt a Pint or more; outwardly alfo, applying it by Bathing or Fomentation, to th y arts affieted.

XV. The Oxymeii. It Wmade of a Dcco&pn of the Herb, Fkwers and Seed in Vinegar, and then cmfleated viitb Honey. This being drank, is a fpecial remedy forfuch as are bitten or ftungwith any Venomous Creatuie.

XVI. The Pouder of the Seed. This is of moft force with Galen, who appoints it to be put into Treacle or Aliiibridate, againtt all Diirafes for which the Herb is good. It is indeed fingulat good againft the Pleurifie, heat, fcalding, and ftoppage of Urine, and the Strangury: It is profitable againft the Epilepfy, Vapors, and Hylterick Fits. Dofc two Drams or more, in ibme fit Vehicle.

XVII. The Oil by Infolation or DecoQwn of the Leaves, Heads andFlewers. It is excellent to difcufs all hard Swellings, or Wen4like Tumors in any part of the Body; to allay Infla mat ions, digeli Soresand Ulcers, bringing them tojriaturiry., then cleaning them from their putrid Maher, and. healing them in fuch a manner as is to be admired: Ic heals alfo green Wounds, as well as old Ulcers -, helps Contuitions, and eafes pains of the Gout -, as alfo Pains and Aches in any parr, Stitches, Cramps Lamecel of the Joints, &c.

XVIII. *The Balsam.* It is made of the former Oil, by adding to it a proportional quantity of Ch'w Turpentine and Bees Wax. It has all the Virtues of the Oil affretad to advantage, and is a more excellent Vulnerary and Arrhririck, being applied.

XIX- *The Dijiilled Water.* It is good to clear the Skjn, and dry up Scabs and running Sores in Cbildrens Heads. If it is mixed with 3 014 times the quantity of the Juice 01 EIfence, and taken to 4 Ounces at a rime or more, it is good againft the Droply j and taken and continued for some time, it leSbns, and at length cures the Fits of Tertian and Quartan Agues. It allo Hops all forts of Fluxes of Blood, as Vomiting, Spitting and Filling of Blood j and is good againft inward Bruifes, caused by Falls, *ffl*

XX. *AOIJ.* Tbeflft ismoftufedbeaufemott common j but the ibcond is the moft e9e£hral of them all- It is ufed alfo to be laid up in Chefts and PrefeSj to keep Moths from Garments.

hairy Stalk, spreading it self out into several Brackets on which grow many . . . three pined together like thistle (the fern!) Trefoils. The Piemen erne at the very Point; of the Staikt and Branches, consisting of a roagfi-Knap, or &tjh hf Hurs or Down, like that of Alopecaros or rox-tail, of a whirijh cokr lending to a light BUsh, with little white Ybwens among the Downmths.

Xlii. The ninth, or Small yellow Trefoil. It hat a small lttner and fibrous Root, from whence rise up smooth, slender weak Stalks, about a Cubit high, set with few Leaves on them, which are small and round pointed, and sometimes dented in the middle of the end, Itself inform of an Heart, (nor much unlike to the Common Meadow Trefoil,) each standing severally on their own short looifilks. The Vlowen come forth at the tops of their Stalks and Branches, made at a mere of broixifb yellow Scales, laid vnc upon another, well resembling an Hop, of which it took one of us A'JWJ, viz. Lupulus Sylvaticus. Johnbn m Gerard Jjys, that the Heads are pretty large and yellow, which afterwards become of a brownish color, and somewhat resemble an Hop, whence Thalius called it Lupulus Sylvaticus, or Tritolium Luteum altertum Lunulinutn; but Dbdonxus, Tnfolhun agrarium, Field Trefoil. Vie llovsert being pall away, are followed h^{ma}9 l^{tlc} eroohei cinderig Seeds.

XIV. The tenth, or smallest yellow Trefoil. Its Root is small and thready, which lends forth a few weak slender Stalks, (but little bigger than small Rufoes) lying on the Ground, on which grow small Trefoil Leaves, sometimes mere than three on a small RotfMk, *nd sometimes a very little dented about the edges. The llovert are small

Trefoil Yellow, *Small.*

and wllowijh, fct chfe .ml r-anj together, iifler which follow fmuli, bUckith., fiat, mdcrcokeiSeedt in Hush, lihnoft like a Medica, or Claver. It has two little Leaves of each at the bottom of the thr-c Leavd tool/I ill A; as its Leaves are much smaller than the former, so the yellow Heads are also much lesser.

XV. The Places. These are all Mead and Piant with us, but the third and burri are Sows in Fields in Italy, and in the Netherlands, and several other parts beyond the Sea, or, vⁱii u they make an excellent Fowl for Cartel, as wtl \ Fatten them, as to give good store of Milk where they are manured, they come up ranker than they do in our Meadows where they grow Wild and of their own accord; as also OIHK- (Houcains and Hills of Spain and German. The leventh is laid to grow in Anib'u, and is by Centerarits tilled in Hedica Arabia, but it is common with us in England. The eighth and ninth grows almost every where throughout our Land, in dry Grounds, as all's among Corn, especially among Burly, and likewise in Barren Riffures in moli places.

XVI. The Times. They are first and secondly pretty early in the Spring, and Hoivtr in June[^] July and August, perfecting their Seed in the mean time.

XVII. The Vitalities. They are temperate in respect to heat or cold, and dry in the highest Degree: Aperitive, Digestive, Anodyn, Vulnerary, Diuretick and Aleypharmick.

XVIII. The Specifications. They are used to clear the Eye-Sight, abate Inflammations, ease Pains, tie up Wounds, help the Strangury, Hop the Whites in Women, and resist the Poison of Venomous Creatures, and cure all Sorts of H.

XIX. The Preparations. You may have therefrom, 1. A Liquid Juice or Kffence. 2. A Juice in Wine or Water. 3. A Powder of the Seed. 4. A Decocted Oil. 5. A Otaplafm. 6. The Afbes of the whole Plant.

T/JC Virtues.

XX. *The Liquid Juice or Effexce.* Taken to S or 6 Spoonfuls, they open Obstructions of the Viscera, cleanse the Bowels of slimy Humors which stick to them; help against the bitings of Vipers, and other Venomous Creatures -, provoke Urine, give ease in the Stranguity, (top the Whites in Women, as also Fluxes or the Belly, after it has been cleansed. It heals Wounds by washing with it, cools Inflammation; and eases Pain. Dropt into the Eyes, it allays the heat, takes away the Blood-shot, and clears them of any Film which begins to grow over them.

XXI. *The Decodion in Wine or Water.* It has all the former Virtues, but as it is weaker, must be taken to half a Pint or more. Morning, Noon, and Night.

XXII. *The Powder of the Seed.* Pena says it is or is powerful a drying and binding Faculty, that it will wonderfully stop the Running of the Reins: Dose from a Dram to two Drams, Morning and Night. It is also profitably used in all foul and hollow Ulcers, (being first cleansed) to incarnate, and then to cicatrize or heal them. It is also said to be good against Kuptures, and cure spitting of Blood.

XXIII. *The Decodion of the whole Plant.* It is good against recent Conductions, the bitings of Serpents, or of any other Venomous Creature - abate Inflammations, ease pain, and diuine Tumors being applied.

XXIV. *The Cataplasma.* Applied to the Share, it allays Intumescences thereof; and eases Pains in any part. The Herb being bruised, and heat between two Pewter-plates, and applied hot to the Share, it is said to ease them to make Warer in a Stranguity. It dissolves Tumors and recent Contusions, and cures them. A lib applied to the biting of a Viper, or other Serpent, Mad Dog, &c. it is said to draw out the Poison, and prevent farther

^N S.V. T7 « *A Method of the Heads.* They are good applied to the Hemorrhoids or Piles, to stop their Bleeding, and ease the Pain: And have also been found profitable, being applied to a *Procedentia Ani*, or drawing out of the Fundament.

C H A P . DCCVL

Of T R E F O I L Codded :

or,

Pease Chwer.

I. **THE Names.* It is called in Greek, Trifolium.

X AW, xKitJn: in Latine, *Trifolium Siliquifolium* - and in English, *Codded Trefoil, Pease Trefoil, or Pease Clover.*

II. *The Kind;* Of this Plant we first take notice only of these following, viz. *t. Trifolium Siliquifolium majus*, The greater Codded Trefoil, *t. Trifolium Siliquifolium minus*, The lesser Codded Trefoil.

The Description.

III. *The first, or greater Codded Trefoil.* It is a low and branched plant, which rises up with a Stalk a Foot or two high, which is spread out into many Branches, thick set with Trefoil leaves upon short stalks, small and pointed, very little differing from the Common

Trefoil Codded, Greater.

Meadow Trefoil, (with lesser Leaves at the bottom of the stalk) but in their flowers they differ much, and of a grayish color. The flowers are in small tufts of a fair yellow color, not much unlike to the Broom, but lesser after to be come fevers, four or five, more or less, in which is round Seed. & to the Stalk, Branches and Leaves, have a little fest downiness upon them. flowers grow clustering together on the Stalks, which being paid away, the Cods

IV. *The second, lesser Codded Trefoil* in in Stalks, Branches, and manner of growth, is very much like to the last described; but the leaves are much less, the former being four times as large as these. The leaves are as they are four times as large as these. They grow in tufts, being also pointed, so they grow in tufts, having the leaves growing out below them, at the bottoms of the leaves, they all of them having a little downiness upon them. Their flowers come out lots of the Stalks and Branches in a Tuft or being of a yellow color and almost as they are going, giving in till they are dried, and few number having generally but 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Trefoil Codded, Lefler.

V *The Places.* They are all of them found growing in our fields and Pastures, in such as are Icnil and of good Soil, almost every where

VI *The Tmet.* They all Flower and Seed from *M_M* TO the end Of Summer.

VII *The Qualities, Specification, preparation**
I *ir_mues*, are *e lame with those declared in the list Chapter, to which you are referred ; fo that no more need to be Cud of them in this place.

CHAP. DCCVII.

Of TREFOIL *Marjh* :

O R,

BUCK-BEANS

THE *n* *Jfc it* » *s fii d* » *te* the *Marjh* which the Latifts call *Trz/ot*; * *YduAtJum* . *mjelat* re- *Trifo/rJm hiranw*, alfo *Tn/rfiw* *J-Themmonian*; *Meniantbes Ptl^{re}* *jULul* *Ructi-licans*. *Takr**TM*''''* makes two Tifli* *Pl&fnvetP+* *Buck-*

?he *lefei Marjh-Tietod* ar *Buck-Beans*, whole *Deicrptions* follow.

The Descriptionts.

III. The first, or greater *Ma[fli-Trefoil, £> / Buck-Beans*. // *Rat¹ K A>® tf/7< / twif/f*, *creeping in the Mud a/1 about, and floating up afrcj)* *i/t ill feveral Joints.* It rises up in a *spongy flexible Stalk* *ha/fa Tardhigh* or more *x[^]th jivcral* *Jmooll lh;ck* and somevbat *brand dark green* Leaves fit thereon, at far *dijhinces*, three *ejtayi fla/dittg* together an a long *b'ootflalk*. Itram the middle of the *Stalks* up to the tops, *tomes forth a long Bufn* or *Spike*, of *Jive pile bufli l'fimbres*, each of them confining of five round pointed leaves, with a long thick pointed *XJmbane intbcmiddle[^]* *wbith together*

Trefoil Marlh, Greater.

O R,

Buck-Bems.

with the Leaves thereof, are *emerei* with a fine hairy *Down* or *Frist*, which adds a greater *Beauty* to it i which *afar* they are *fast*, *findl round Heads* come in their places, containing in them *brommjh* yellow bitter *Seed*.

IV. *Gerard* *deiaibes* it after this manner. *Its Roots* *creep* *divers* *mays* in the *Marjh* *miry* *Ground*, being full of *Joints*, while *wbin*, full of *fores* and *spongy*, *fending forth* *feveral* *by-Shoots*, *Stalks* and *Leaves*, by which means it much *increafes*, and largely *nultiplies* its *felf*. This great *Mirth* *Tie-foil* has *thick* *fat* *Stalks*, *weak* and *tender*, full of a *spongy* *Y^{er}!* -> *ver* *y* *faootb*, and of *"bout* a *Cubit* long > on which grow *Leaves* *muckhke* to those *ej* the *Garden* *Bean*, fit upon long *Footfialks*, three together, like in manner to *dm* other *Trefoils*, *fmooth*, *foiling*, and of a *deep* *green* *color*; from among which, towards the top *Of th* *Stalk*, grows

out

out a Bufti vfh'caier-like i'lovers, of a white color, d-:fl>t ever flightly with a Wajh of light **Carnation**, after tich follows the Seed, contained in Jsmall tyatottj or knobby Husks^ of a brown yellowj/b color, like unto Millet, and of a bitter Tafie.

V. Thefecond, tfrleffecMaifli-Trefoil^Buck-Beans. // **differs** not in its Roots, Sulks, Ijeaves, i'loteers^ Seed, and mariner of **greteag**, from the former or greater kind, but only in its **Magnitude**, Shis fmalier Species (if it be a different fert) being only left s But j'ome Authors think, and I am almoft of the J'ame Opinion, **that** they are both of them but one and the **fixe** Plant and Kind, and that the difieri-net between them of greater and kffer% arijes chWfy from the Clime or Country, ffact of growings and quality of the Soil,

VI **the Places**. Mjrfh Trefoil grows only in wet and mooriffi Grounds, and will not thrive out of them, but will quickly grow nnk and withe:: and therefore r> to be **fought** t^r in Mirth ami Fenny places, and may be round in a boggy Soil, almolt **every** where.

VII. **The Times**. It Flowers liwn June to the end of July, and fometimes in Auguji, the **Seed** ripening in the **mean Eealbn**.

XIII **The Qualitirt**. It is hot and dty in the firft Degree, Aperitive, **Abflerfive**, Dinretick, Anodyn, **Peofal**, Hepatick, **Splenetkk**, Nephritick, Arrhritick, and Hyllerick.

IX. **The Specification**. U is an experimental Prefervative, and Cure of the Gout and kheimatiffm, whether in Old or Young •, opens Oi'ltructions ot'StomJch, Lungs, Liver, Spleen and Womb; **reffis** Hypochondriack Melancholy, and is excellent aginjft Afthma's, Coughs, and other Dirtcmp«s oi the Lungs.

X. **The Preparations**. You may make therefrom, i. A **Liquid Juki** or **Ejfenr**. 2. A **Syrup of the fame**. ^ A **Decoilon**. er rather **Infufwn**^ in Wine cr Water. 4. A **Pouder of the Seed**,

The Virtues,

XI. **The Liquid Juice** or **F[Trnre**. Taken **lo- rdly** from 3 Spoonfuls to 6, in any convenient Vehicle Morning and Night, tor lome confiderable time, > deltroys che very FJTnceot ihe Gout; it not ordy cures Gouts and Rheumail'ms, butisalso a prefervative from the fame, and **prevents** their r^rum agam; ih'u Plant lieing found to be the greatdt of all **Simple PegeoWe AUentiirc** Productions, for the looring out thofe Difeales. The **Effence** cures Hypochondriack Melancholy in Men, and Yaporsgnd **Fits** of the Mother in Women, and powerfi **ily** opens all Obftruffions of the Vilcera, chieHy ofthe Stomach, Lungs, Liver, Spleen, Mefentery, Reins arid Womb; and therefore is a remedy againit the Difeafs of J' kofe **parts** caufed thereby; for by removing rhe Obltruttive matter, anJ rdtoring **tie** Tone oi **the** Bonds it quickly brings Meahli to fuel) Difeaied **Bodies**. **Tr»K** Preparations have bttir found alfo ex peri mentally good to ftr>p a (pitting of Blood.

XII. **The Syrup of the Jamc**. It Jus **the** former Virtues, but ischieltly adapted to Olitmtffions and Diftempers of iht Lung<, ,IJ AiHima's, Coughs, Colds, Hoarfenefs, Phth lick, Whctzings, lol- d Voice, L'f. being given for Ibjnu cotifidcrable tiniL, Morning and **WJWC**, as **before diieSed**.

XliJ. **The DeeaSioH**, or **ratfo-r Infufion in Wine** ot **Water**. It has **all the Virtues** erfthejnee. **Eftnce** aid Syrup; Ut if ic is given againitthe Gout, Khconu- rilh), Melancholy, and fuch like Dileaiies, it ought to

be made in Water; but if againft Difeafs of the Stomach, Mefentery or **Reins**, in White Port or **Lisbon** Wine. It may be given **haifa** Pint or more at a time, Morning, Noon and Night, either (Imply alone, or dulcified with Sugar, as **the** **Pli** tient likes belt.

XIV, **The Pouder fiff the Seed**. It may be given from two Scruples ro a Dram and half, or four Scruples, mixed with **Syrup of Citmegiiliftoters** « **Syrup** (if tiyffop, or tor want of them with a li choice Honey, Morning, Noon, and Night, Aft firm's, Coughs, **Phthtfficks**, flionnelsof difficulty of Breathing, and othe-r **DifeaXes** «t the Brett and Lungs; for it cuts tough Fiegm and grofs Humors, and makes **them ea.fi*** to pefforated •, thereby tlcjnfiing^hc Stomach-LungSt Liver, Splutn and' **Meferjiery**, and ttreoghtung thtm withal againit **their** **Habiroal** **W k f I S**

CH A P . DCCVni.

Of T R E F O I L Feafe.

I. **HP HE Names**. It is called in Greek,

J. in Latine, **Lotus**, and in tnglifli, **Trefoil**.

II. **The Kinds**. **Dicferidrs** and **Galen** make two kinds of **Lotus**, viz. Ai?(Ei<tif& **Lote** **bjn.i**, which is our T«EU*AI totgc **Trifonum**^ **return**, Sweet or Garden trefoil, of which jveM^ already difcourfed largely in **Chap. CCCC- 704**. T ^ to be A*7©- «>ai'©, **Lotus Syveflrit**, **Trip**^* **Sy/wftre**, The Wild Lotus, or **Feafe Trefoil**, <> which wt fiial treat in this Chapter.

III. **The Kinds of the Veafc Trefoil**. Authors make the beft part of twenty Species of them, molt oi' which are perfett Strangers in our &? try, and not to be lien of us (**nnlep** a great T « « " ler) in many j\gcs. We (halt 0% take nonceoi **Hich** as grow either in our **Gardens**, **Wald** ba in the Fields, which are the fix following, viz- 1. **Lotus edulis Creticus**, **Lotopifup** ?on^ \ Ltft **Cretica Bauhini**, **Trifoiium Fiji** genus. The common Candy Peafe **Trefoil**. 2 **Lotus Pifii-t** • **pr**, **Trifoiium tid'merrhoidalt** **WJUS**. The Peafe or Pile- Trefoil. ? **Lttus Fi/ntas** « " - / **Trifoiium**, **UtKorrhoidiltc** minus. The lefler ¥& & or rile Trefoil. 4. **Lent*** **comicularft** **Kirby** homed Trefoil. 5. "**Uiut** **cermcuUWJ%** **nor pilofus**, The klTer hairy homed **Trefoil**. 6. **Lotus cornicuhttis incanus**, **Trifohum** **la turn vulgiitiffimum**, The common hoary **Trefoil**. 7. **Lotus Siliquadratis**, vel **SittqM*** •*.&' **Trifolium** **SUSiquofinfafbreut** > > i **Crimfon**, or fquare Codded Trefoil,

The "Deferiptions.

IV. The fitft, or commo[i;t'an(ly Peafe **its** Root is Jmtll, fibrousem^ Annual, vihic forth jeveral fit tide r Stalks, **Jet** u-tfh ft **green** Leaves at Jeveral dijlanecs, **tbret efa*** **growing together** en a iwftia/L which jre frffh little thuk, end painted. **The** **flown** are ycllm but like unto **W/Peafe** **Blofibms**, v/hnbare]m^ cceeded by **rcundijb** Cods a little **crooked**, and & great in **relpeff** to the **Jmallnejt** if the **W*** * * **sn** which are contained round Peafe of a **Jtict**

the CdJ an the upperfide, and two other fach like
Films all along on the Cod on its underfide, tsbkfJ
makei it jeem four Square; tn which Cads art C6A-
taxed round difcoldared Pea?!, -i little Smaller ani
border thin our Common Peafe.

XI. The Places. The iirit is a Native of CW-
dy, it growing among their Corn, and in the Bor-
ders of their Fields; but with us it is only Nurtl
up in Gardens. The third is a Stranger, and only
a Garden Plant with us. The feventh is a Garden
Plant alto, and we Cultivate it chiefly for thJ
Beauty of its Flowers. Thefecond, fourth, fifth
and fixth, grow Wild, and are oftenfbundin ma-
ny of our Fields or Meadows.

XII. The Times. They Flower m the Summer
Months, in June and July, when the other Tre'
foils Flower, and their Seed is ripe in the Month
following, or not long after ine falling of the
FJoveer,

XIII. The Qualities. They are all Temperateirf
Ipxt to thefirt Qualities; Aperitive, AMe "
Diuretick, Ntiphritick, and Lithontriptick.

'fdil is Anodyn and Dilcuifiive.

XIV. The Specification. Thefirtfisi
and rdtorative in Consumptions. The Pile Tre-
foil is approved for curing the Hemorrhoids of
Piles i but all thaSpecies open Obttruaions, cleanft
the Urinary paffages, and are profitable again"
Sand, Gravel, and Stone in the Reins and Bladder.

XV. The Preparations. You may have trofi
the firt and ieventh, i. A Pultage of the Pittfe, or
kind of thick Pottage, 2. A DecoSion of theS^mi
in Water. 3. A DecoSion of the Grains af^all tht
other kinds, as olfo of the whole Plants iiiiWfi(ert
4. APouder of the dried Herb, of any of ibe kindi,
5. A juice or Ejenceofthe whole Vlut.

the fctutft

XVI. the Pultage made of the Peefe oj the firtf
orjevemb Mind. It ismadewiith Water, inwhicW
the Pcafe are boiled till they break ; then the Pot'
tage is ltrained thro' a hair wooden Sieve ; afcet
which it is mixed with Milk or Cream, or eaten
without, being made iavory with a little Peppe^
Sik and Butler: Some weak Stomachs which can-
not away with Milk, may put into it a proporti-
onal quantity of Wine, and then make it plealiim
with Sugar. Often eaten it nourifhes, reftores in
Consumptions, and makes Fat and Flefhy : Italfo
cleafes the Reins, Ureters and Bladder, ofTarta-
rous matter lodg'd in thofe parts.

XVII. The Decctfion of the Pnfe of alt the fond^
or of the whole Plants in Water. Let it be madff
very ltrong, and then mixt with a half part o^
White-Port Wine, and fo drank. It opens Ob-
ttrufions of the Urinary parrs, helps the Strangu-
ry, and cleafes thole Veffels from Slime, Sand,
Gravel, Stones or Tartarous matter jodged in them,
being often ufed.

y^VULthePouder of the driedHerb /if any cf
the kinds. It may be given from half a Dram to 2
Dram and half in White-Wine, tor all thepurpo'
fes aforenamed. The Ponder of tht Pile Trefeil

given 10 the lame quantity in ted Wine, is laid to be of good effect againſt the Hemorrhoids or Piles: But I ſuppoſe it ought to be taken For ſome conſiderable time; I have had no experience of it, but the Learned about Montpellier affirm it.

XIX. *The Liquid Juice or Effence of the above Plants.* They are more effectual to all the intentions and purpoſes aforementioned, than many other laid Preparations and may be given either two or three times, either alone, or mixt with ſome proper Viſcous, or a Decoction of *Parſley Rents*, and then ſweetened with Sugar, to be taken Morning and Night, ſo long as the *Prudential Phyſitian* (hall order or direct. The *Juice* and *Effence*, ſerving in *Conſumptions*, giving relief in the *Stone*, &c. are of excellent uſe to breed plenty of Milk in *Nude Breasts*.

O « A P. DCCIX.

Of TREFOILS Strawberry, a kind Starry.

I. *Trifolium* Names. We know no Greek Name belonging to cheſe Plants: The firſt

led in Latine, *Trifolium fragiferum*. In Engliſh, *Strawberry Trefoil*. The ſecond not mentioned by any Greek Authors, may be called *Trifolium Stellatum*, *Trifolium Stellare*, in Engliſh, *Starry Trefoil*, and *Starry Headed Trefoil*.

II. *The Kinds.* Of the firſt or Strawberry Trefoil, we have but one Kind growing with us, viz. *Trifolium fragiferum Gerardi*. The ſecond *Trifolium fragiferum trijueux*, becauſe it alſo grows in *France*; and ſome call it *Trifolium Veſticarim*. The third is called, *Trifolium Stellatum Gerardi*, *Trifolium eapitula Stellatum*; ſmooth headed Trefoil.

Ibe Deſcription.

III. The firſt, or Strawberry Trefoil. *Its Root ſpread themſelves with many Ung Fibres, and it grows up with ſeveral Stalks and broad pointed Trefoil Leaves upon them, being dented in, in the middle of their broad ends, making each Leaf in form much like a Heart, or not much differing from the Leaves of the Trifolium Cordatum, or Heart Trefoil, growing upon long ſoft ſtalks; which Stalks are bare towards the tops, where grew ſmall round Heads, with ſmall bluſh Flowers, riſing cut of their Husks, which are like ſmall Bladders nyde of thin Skim after the Flowers are paſt, the Bladders well ſomewhat bigger, and turn down a little, forming a Head like a Strawberry, which may red Grains ſe together but greater in each Husk, wherein is contained a few ſmall yellow Seeds.*

IV. *Johnſon Gerard*, deſcribes it after this manner. *The Roots, Stalks and Leaves, of this pretty Trefoil, do not much differ from the common xvliue Meadow Trefoil, but there is ſome difference in the Viewers and Seed: For the flowers of this are full, grox thick together, and are of a vibrant luſh color, after which follow Heads nude of thin Bladders or thin Skim, in ſuch like man-*

Trefoil Strawberry.

ner as they reſemble a Strawberry or Strawberry Trefoil, and they are of a greyiſh color, here ana. marked with red: The Leaves are ſhap'd like a Heart, and the Stalks are four Inches high.

V. The ſecond, or ſmooth Starry Trefoil, (for there is a rough fort of it in Spain, not much differing from this, which I ſhall ſpeak of hereafter) It has a thick Root, with ſeveral fibres adjoining from which riſe up ſeveral ſtalks, which are hairy, and come in ſeveral Branches: The Leaves are of a Trefoil ſhion, ſtand upon long ſoft ſtalks, and are ſhap'd like a Heart, in France, are found to be in form of an Heart, with ſmall ſharp pointed Leaves at the butt of the Footſtalks, next to the ſtalks the Leaves are green of color, and ſharp, but ſmooth about the edges, which grow on the tops of the Stalks ſhort and green, with ſmall purple Flowers, like theſe of the *Cucurbit* letſer; *Jianding* ſharp Leys, id'icL do very much reſemble the former if the Flowers bring fallen, the Heads grow ſmaller, harder, and more friable, opening a little, but not much. Ibe Seed is uſed by Miller, but ſomewhat rounder.

VI. *The PlaetR* The firſt grows in the Low Countries, and other (places) them, as well as with us. It grows here in *Sati-Maiſhes*, as in *Hartford Salt Maif* and in ſome below *Partita*, and the ſecond *Johnſon* obſerved in *J-*

Maifli; and i have sien them both
r pjrrsand places of this Kingdom,

VII. *T?e Times.* The first flowers in
and *Agfij*, and the Seed is ripe not long alter.
JJu fecond Flowers in June and July, and the
Seed is ripe in July and August.

VIII. *The Vertities, Specificacions, Preparations*

I *Virtues*, are the lame with the Common A<:t-
? *Trefoils*, in C&* 705. aforegoing, to which
•^e refer y^{ou}) & tB3t n0 mort: nnt:tsi ^ fa(1 of
hem here.

CHAP. DCCX.

O/TREFOIL Tree -•

O R,

Cytifus j and Bean Trefoil.

Tiff Names. It is called in Greek Kuwsr-
in Latine *Cyifm a Cythtio litfula*, as May
lays; and in Englifi *Trefoil*.

II. *The Kinds.* Authors make 15 or 16 feveral
Species of this Plant, inoft of which are perfect
Strangers to us, and not to be fen unleis we Travel
many Foreign Countries; we (hall only describe
fuch as are Nurft up in our Gardens, which
3re the five following, *vis.* 1. *Cytifus Uiofcoridis*
& *Galen*, *Cytifus mStranibt*, (Ib called becaue it
WIS first tiroight to light by one *Bartbelomeits*
M-irantba of *Jsh&les*;) *Cytifm Cornutm*^ *Cytifus*
iMnaius & *Cytifus verus*. The true Tree Trefoil
of *Diofcorides* and *Galen*, or Horned Tree Trefoil.
2. *Cytifus vulgarity* *Cytifus vulgatie*, *Cytifus pin-*
njtus Qffr.rdi, The common Tree Trefoil, as being
ihe most common with us in England. 3. *Cytifus*
inc.inus Germamats, *Cytifus hirfutits Gerardi*;
Cytifus albus Syfoeflru Cordi •, The German hoary
Tree Trefoil.- 4. *Cytifus Hifpanicus arborcus*^
Cytifus quartus Hfytmicus Clufij, The Spanilh
Tree Trefoil. J. *Cytifus Hifpamcus incanus fex-*
tia Clufij; *Cytifus incanus Gerardi*, The low Spa-
nilh hoary Tree Trefoil.

III. And becaufe the *Bean-Trefoil* is a *Tree*
Trefoil, tho' it be no *Cytifus*, we fhall add it
to the rest in this place, to avoid rmking a *New*
Title or *Chapter*. It is called in Greek, *'Avdyvw*
*£ *i*>uf@- I-nf@-*, *Anagyrit altera*, (hecaufe
there is another *Anagyris*, or *Bean-Trefoil*,
hich is Stinking.) in Latine *Laburnum*, and
Englilh *Bea/i-Trefoil*, or *Tree bean-Trefoil*^
•and this is twofoid, *vis.* 1. *Anagyris non fvtidii*
major, five *Laburnum majm*, The greater Tree
Bean-Trefoil. 2. *An.igyris not fatidd minor*, five
Laburnum minus, the lelTci Tree Bean Trefoil.
As for the *Anagyris fti-tid.i*, we have nothing to
fay to it here, becaufe it grows only in very hot
Countries, and fo is 2 perfect Stranger in our
Clime.

The Descriptions.

IV. The first, or True Tree TreFoii of *Diofcorides*
and *Galen*, or Horned TrefoiL *Its Root is hird*
iswdy, running out federal nays under Ground .
1} rifts up to be 4 or j Yea high or more, (accord-
*ing, as it likes the Si>i!,) the Stalk being as thick a**

Trefoil Tree, *True.*

a *Mans Thumb*, covered with a *whiiifo Bsrk*, and
fprea&ng it stiftorb very fir into max mbitsjb*
Branches, bifet in namy places nitb/mw Leaves,
three always standing together span one small flwrt
ieotfidlk, tehhb are rounder and whiter than the

Trefoil Tree, *True.-.*

CHAP. DCCXI.

Of T U F T S Garden.

I-HP HE Names. This Plant is called in GreeVj

J. 0*Ja:i, *j 9**at< rfluyp, and fatmm •xtm&ii : in Latiie, J'Wajpj Hprteafc if Yhtajpi Umbella- turn : in Englilli, Garden Tufts.

II. The Kinds. We obcrve but two forts of this Planrin ourGardeus, viz. 1. TbiapfiCreticum, "iblapfi Umbclalum; fiorcalbo t? Purpureo., Cin- dy Tutts white and purple; it is a Flower of thw large kind, and ierves for an Ornament to great Parterres. 2. ThLifpi Baticum, Thiafpi Mirinum; Spaniih Tufts, or Spanilh Sea-Tufts.

The Defcriptiois.

III. The firft, or Candy Tufts, white and pur- ple. Its Root ft [mall and thready, is like that of the Treacle Muftard, enduring many Tears, which /ends up Stalks about a Yoot or more high, <.

or fspread out into fevtral Brandvt, each of which bears Leaves of about two Inches long, without t'oot- ftats, targe at bottom, indented round the idges^ and pointed at their taps. At the • of its Sulk grow very fmall Mowers, compofed of four Leaves^ ib the form of a Oq/s. In the middle of each Cup rifes a Style, which becomes <i Fruit, round at top, border'd with a Wing or little Leaf, and divided into two Chjnsbtrs, which are filled with flat Seeds, that at firft are red, but afterwards wbtM they become ripe turn black.

IV. The fecond, or Spa nidi Sea -Tufts, are very much like the former, which fends forth fume Leaves (before its Stalks,) which are a little r.hch'd or finely denied about the edges -, but it divides or jpraisds not it felfout into Branches as the former dues, but has at its top an Umbel of futrpHJk Hom- ers like unto the former, but with paler yelloy^ Seed.

V. The Places. The firft grows in Cania; the fecond in Spain, not far from the Sea-side, but with, usrhey both are Nurftupin Gardens,

VI. Ihe Times. TheyFloweraboutthemiddle or end of June^ or beginning of Julyj and the Seed is ripe not long after.

OBSERVATIONS.

VII. Obf. 1. This Plant (of which thereare many forts, bur) two Kindsof which we Sow only in our Gardens, is propagated by its Seed which is Sown in September, in open Grounds, or in hot Beds: It is fown in Drills, on the edges of our Beds or Borders, or eife in little Circles, at one, two, or three Feet diftance, to make a (how the rlrft Year, after which the Plants produce their Seed and dye, and are accounted hatdy Annuals.

VIII. Obf. i. If you Sow the Seed in open iStwoinr] .v ,ai!s>h'.w.KejiPonji.ltef1.v<ll.digr .ami let out by Lines, which (hould lik^wife be feat- tet'd over with Mould about an Inch thick, and laid afterwards very even. After having drawn Hills length-ways and croft-ways, you may Sow the Seed, yer but very thin to the end, that yout Flowers may be the finer, and not fubj&it to fade -.

The Flowers in Beds, have sometimes occasion for Watering, especially when the Seatai happens to be ferenc and dry, and therefore you must be (tire to do it, as oft as need requires it.

IX. *Obf.* 7. \ you Sow the S'JCJ in hot Beds, you must wait till hV which is the Time you ought 10 make them, observing in Sowing the method before prescribed : When *March* is come, and VU think the Plants have strengih enough to tear T ran (planting, then take them out of the pl here they are, and place them in ttofewneres Say bear Flowers. The Plains which are Sr.vn it; *September*, are nor to be mei Tranf I than those Sown u Beds \$ and ib y-u refare plices ib other tlowas, much more

X. *Obf.* 4. When you Tnnfpbnr thtm, put them among Flowers of the targe kind, iieds with them, or at lejftauorn the middle Borders, by which means they will be fct oft, fb that being planted regulaily, and interm:xt with other Hovers in the fame Row, few things can be mere plealint to the Sight. As to any particular fort of Earth in which they should be Planted, nothing need be iaied 5 put into good MoulJ, du-y will «na"mly thrive.

XI *Obf.* *. As soon as you liavt: Planted them, yoi mult Water thtm, for that rufcw tin Jye dofer to their Roots, whereby they will the moie aptly receive their *Pabiatm*, To as to grow very fair: And as these Flowers are Enemite, io Weeds, or Weeds Enemies to them, which are apt tochw k them up, you must theidbre take care to tree du-m ttereiom, and to Water them as yon l fi

XII. *Obf.* 6. When afier Sowingiheyfirt begin to peep out of the Ground, ttolb many times happen, which would certairly much hurt them ^ ttilefore defend them, by coveting them with Urge dry Dung ot Straw, and to lee it tye over them all the Vpnter, if Sown in open Grounds: B in hot Reds, then cover them with Srrow-ri and ibey will then do well : But if there happen only white holts, you need not to cover them out l a Nights, and uncova them the next Morning.

XIII. *The 'jialilits, Sprci&aiion, Preparations and l'irtuts*, ate the ijme wtili out *Qenanum MafiarJ*, in *Chap.* j n . fjving that this Plant is not ib Hneotlv acu^, iiot and (harp -y and therefore may be afed with the mote pleafuic.

C H A P . DCCXII.

Of the TUBEROSE .

I. n p W £ JYJW«. Tho' ithas no known *Greek* Name, being an *Indian* Plant, yet being thought to be of (he kindred of the *Jacisbt*, it may properly enough be called C^-^K hJi^t: in *Greski* and in *Latine*, *Hjaarnhm India***, but our Modern Authors call it fimply, *i Radix lubeml.t*, aid i'lcj *Indicm rudicc Fubci* JiiEngilh, *lit ljjbfirofr*, fo called betaufe its Root is Tuocrous.

H. Tj>e *Kinds*, tt is the Opinion of almoft all Authors, that it is a Speties of the *Jvcintbs*, bat whether it is the *Ameriui Jacinth.*, of which we have diicoutfcU belyrc \a *Chap.* JJI, is very much

to be doubted , hecaufe of the difcrepancy Icems to *he* in the Flowet, as alii; in foments^l particulars : Befides Authorsddcribe of that Plant, whereas this icems to be a f of its own I

The Defcription.

III. *Its Root h thick arJ Tu'i* fame i'tbrcs er < iffuittgfrom it : f dvm this ROMflwot fan} , about half a knot &lg, 'fir.tit, fmoi pointed Jt the end; in a Stem, three or Jour tht fc; th/cknefs of ones tittle finger. On the top = («* Stem or Sim men come forth like LuWJ /ingle Le.ivJ, ,M,7 (J...prd like a Pipe "> pointed or notuh d in fix places, and, like a Bel. At the bottom of the \lwzr njtj I

1/ Seed of the fjnre c .

IV. *The Placer*. It is Did to be Oi hti'ian Plant, but now alm< with it. It is brought to S^ rally out of *Italy* .xy thrive anJ p^ipr exceedingly-, whkh when we have them, » Plant them in Pots, and Co ptace thtm in our G** dens, that they may lie houfed in Winter, orwh*- the Seafon grows cold.

V. *The Tirnrs*. It the Scifon is warm anJ temperate, the Roots may be Planttd in *VebrunfJ/* <^ Mnch, and then they will pulnUy FioW^T >^ June, Js4l^ or *Anguji*; hue it you Plant' M'iy, they will then Flowet HI *Autumn*, vU III or *September*,

OBSERVATIONS.

VI. *Obf.* 1. The *Tuherofi* delights wond ly in iju.it, for which reafbo, it never bears w Flowers in our cold (.oumries, as it does in >^ Native hotter Climates; wherefore we ougb tepofe it in fuch places where the hear, or sun more fentiMy ielr.

VII. *Obf.* 2. Chute fuch Roots as are haid W firm, which you may know by feeling ^m ^ e your Thumb and Fore-ringer, refufing^fuch a s ^ fol'r, and incline to he rotten, which is &&^ by running your Nail into the lids of the it the SuhftMce is not white, rejekt it, and I others-

\ III. *Obf.* 7. Then chute middle fiz'd which till (within j Inches of the tops) with/ made of two third;; of Mould, and ore 'h'ra Kitchen Garden Earth well mixr tcegeh<i which fet tie *Tttbtmfe* Roots an Inch deep, ving theother parr, whichcoverwnhpureM⁰ .ss to receive the heat of the Sun, which will by means the more ealily penetrate to the Roots.

IX. *Obf.* 4. Of the T L I L r P, or Turks-Cap.

innijE Names. It has no Greek nor Lame

A. Name that vre know of, bur Authors have Latintz'd a Name for ir, and call it *Tulipa*, from the *Turkifh* Woid ~fuΛ?an_y which is the Njme trie *Turks* g've their lkzd-Tyrce_i or GJ/1^J and we in *Englijh*, in conformity to rhis Njme, call it theT*///), which is much like a *Turks-Cap*.

II. *The Kintls.* Some as ttqdonxm^ and MJT-thiolte Lp>n *Diofcoridet*, refer ir to the nvnit, or •xrnZr *Tbeophrastu*, in lib. 7, cap. 13. as if it was a kind of *Wild Hyacinth* ; but in the place cited, v* gives us neither its Form nor Qualt- v the Name; but I fuppofe they might atmtrate ir to lie a Species of fome of thofeFlams, becatifeontsBulbousRoot. *Gfticr* tirli oi all, and afrer him *Camerarhu*, *Clajim* and Lo,Vl, wlrh margr others finet, referittoiheSjjffj rion *Diofcoridcs*, which leems to lw the very irurh it fz\A for thefe following Reafons. I. From its plact. . . •-r that it grows freouently and

plentifully in many parts of *Greece*, ml the *Lcifer Ajtit.*, and fo nadouLt could not but ' . . . ly known both to *Tbeopbrafius* and *Diofcorielet*. Ii. *Yrom the V«rm of the Ybnt.* The *Satyrioit Diefcaridis* commonly bore three Leaves on a Stalk, not much unlike to a *Lilly*; (ours his fornetimes three, rarelyfourorfiveO whereof fome are oftentimes leen to be red in the firtt Springing, and allb upon rhc Decaying, tftpecially in a dry riite, and a dry Ground. HI. *trem the form ofthe Rsoit. DiofeoriJfi'sSatyrw/?* hi) sa round Root, and as white within as the white of an F.egg, as the *Tulip* has, covered with abrownCoat, havinga fweeiifh, but iieg unpleafant **Tafie**. IV. *Vromihe form of it slower.* Thofe whidi have red Flowers, may very well agree with that Specieicalled *Eryfkronium*, which (ee in *Matthiolum* upon *Diofvridtr*, page 637, and *Bodszs* his Comment on *'Ibtimrajbu*, lib. p. pji^e 117 r. which *Cjmcraitt* in his Kpitome, *Lsbd* and others, tUllo-Nercijfts, hecauteithas Tome relemblance of the *Lily* in the Leaf, Flower and I the *Narcijfus* or *Dtfledi?* in its Roor.

V. *Fronthe•futilities.* For'hatfomevTy Leirned Phyticians have affirmed to me, and that irom Ex- plriince fas they fty,) that the *Tulip Roots* have the Cime Virrutt which *Diofcoridet'sSatyrinn*, and *fheepbrafiu's Herba qium Inhs aitulerat* have, and that not interior to the fime. The greateft dufetnee wiih *D>ofcoriits*, is in the Seed, which yet I think, (confidering the ufual way of fpeaking) is none at all: For, as he fays, it is- fomething like to *Linfed* -, fo we often lay of many other things, which are tiir from being exactly like the fame. The SteJ of the TWip is Hattith, hard and (liining, and agrees well enough (generally fpeaking,) to *Ytax* of *LnyftA_n*, altho* q_ another Color, and larger as *D'wfcoridet* him lei f lays: But if there Iould be a miltake in the Writing of *h*, *Lini^ flax*, for K«« vel Afeim, *Lillu Lilly*, (13 was eafy in Coppying Manutaipst, before the Myftetv of *Printnigms* invented i) the flip ot the Pen being both eafy and likely,) then it is out of all doubt,

that these two Plants, or Plant going by two Names, viz. *Satyron* and *Tulipe*, and the fame, VI. *Lujly*. if this *Our Tulip*, be not the true *Satyron* or *Dioscorid*, we know nothing this Day in the World that can answer to it, which has but one fine Bulb as this has; the being in truth, nothing of kin to it. There are, (as Authors will have it) three remarkable Kinds of the *Tulip*, (which yet have only three of the time of their flowering, viz. 1. The *Præcox*, or *fracotes*, which the *Turks* call *Caffa Late*. 2. The *AU-Jia*, or *Medid*, the middle flowering Tulips. 3. The *Serotin*, or *Serotine*, the late flowering Tulipt, which the *Turks* call *Gnw L*. All rebe; *nkch*, *impiut* calls by the name of *Ctefate* and we only *Tulips*. Or these three Seasons of *Tulips*, there are now Varieties, of all which, Me *Generel Defcription* will be enough to give you the full of all those various Flowers; after which, we will give you the Principal of all those Varieties. As they were formerly taken notice of, and the Names they were known by, Mr. *Parkitt* says. As they are now called by the modern *NJITKS* they are called by, from Mr. *Rea*. These Varieties chiefly consist of Colours, produced by their often Sowing of their Seed, Planting and Re-planting them, which various Colourings are to be admitted in them, beyond what can be found in any other Flower in the World betides; every Year a new rare variety, which was never seen or observed before. In *Media*, which flows between the early and late Flowering, some will not have to be a Species by itself, because they rather partake with the *Media* than with the *Praæxu*, as well in the color of its leaf, being of the same Greenness, as in the bigness and height of its Stalk and Mower, being as high and large as the *Serotin* as also because the Seed of a *Media Tulip*, never brings forth a *Præcox*, but many times a *Serena*, as again, a *Serota* Seed many times brings forth a *Media Tulip*, never a *Præcox*. But because the *Media Tulip* is taken as a Species by most Authors, we shall not here break the Order, but treat of them as they are generally Heaved".

The Central Descriptions.

HI. lit Root being tall grown it round, and somewhat great, jointed and pointed at the top, and broader, yet rounder at the bottom; with a certain emblem of buming out in one side, at the Root of the Cotchium, but not so long or great, it has also a teneft on the feet, (if it has born a Flower) the it, ilk grew: Yor the? in the time of its first Stringing up, until it sheds its Buis for blotsert, the Stalk which with the Leaves thereon, rise up out of the middle of the Root; yet when the Stalk is risen up, and fans the B. il for Fleecer*, it to one side, making an impreffion therein. This Root is covered over with a brownish thin Coat or Skin like an Onion, having a little vsoollittes at the bottom, but white and firm within; yet composed of many Coats, one cleaving in, or unfolding within another, like as the Root of a Daffodil, or Narcissus, of a reasonable good taste, not very sweet, but not so sharp as the leaf is unpleasent. from this lies a little Sprout out of the Ground, with a folded Membrum amber. This, or the first, or the second, together, until it be an Inch or two above the Ground, the bud then opens

first, which in time like to opening itself, through third, and jointed - and fifth - err Leaves are target upper, 4th fair, thick, broad, long, and hollow like a (1 and sometimes crumpled on the edges, which is either or filling thereon a long time, they are of a Willms or pale ahiliJJ green color, (but the Medix and Seiotin. T, more green) covered over as it-men talinefs, or hpunnffs, aish nEjt orjhew of rednefs towards the bottom if the lx < rats, and the edgx :: bly white, (which are /Y> priaetpdi Notes in a Prt-cox, and dif Ungutft from a Media « Serorinal The Stalk with the lomer, rises » P in the middle, a; it were thro' thejt Leaves, un'cb in time j and one above another, encompassing it at certain unequal Hfiances, which is often observed 10 bend it frlj crookedly, j " " ; a, towards the Ground, as if it would thrust its n thereinto, but turning tip its Head agift, a then cants to be the yloxr, liiniis afrerwrjdj u? right. This Stalk is in the Præcox, fomi Mts BU T 3 or 4 Inches high, sometimes hly * h-m, times - 1 foot high -, but in the Mridia: and much higher, carrying for the mcl part, but t'lewer on the top thereof, not much unlike " wffing of six Leaves, gn at the Ji'U trvsardi changing into divers ant fundry colors, making manifold Varieties. The buttons of the Leaves of the Præcox, sometimes, but tr. ojl < jf ally of the Media", being as variable m the F W

reft Year acting with the Mothef-Plant in color as aU the Ofliets of T*% do for the moft mrt • For ahlio' the your.g Off-fett of fome do fary from the main Root, even whilft ic grows with them, yet being feparared, it will be of the fame color with the Mother-Plant-

V Obf. 2. There grows oftentimes in the Mcdix, and fomctimes alfo in the IV,r«m tho' burfeldom, a toll Bulb or Root, hard above Ground, at the bottom of the Stalk, and between IE and the lower Leaf; which when the Smk is dry and is ripe, being put imo the Ground, will bring fonh in time, a blower like unto tbe Mother-Plant, of which it came.

VI Obf. ?• The Flowers alfo of Tulips confil commonly of fix Leaves; but fomctimes they are ieen to have 8 or 10, or more Leaves; but mually thiofe Roots beat but their ordinary number of fix Leaves the next Year. The Head for Seed, is then foi the moft part four fquare or cornered, which at all other times is but three cornered - or when ibe Rower wants a Leaf or two, as ibmetimes alfo it does, it is then flat, having bur two corners or edges.

VII Obf. 4- The form of the Flower is alfo very variable, for the Leaves of fome Tulips are all (harp pointed, or all blunt and roind pointed -, and fome the three outermost, (harp pointed, and the three inner round pointed, and fome conrran-wifc. Again, force have all the Leaves of the Flowers, long and narrow -, and fome again have hem broader and (horter. Some Pratoees have ihr Flowers very large and great, eual to thole of the Media or Scrotina^ which molt commonly are the largelt -, and others hate them as imall as the Bolonia Tulip.

VIII Obf. 7 The bottoms of the Leaves of the Rowers are alfo variably diverged, and fo are both the Chives and Pendants which hang loofe on their tops within : And by the difference of the bottoms or Chives, many Flowers jre diltinguittid, which otherwife are very like in color, and alike alfo marked.

IX. Obf. 6. In the Smell alfo there is fome diverfity •/ for thai the Flowers of foine jcreflo Smdl at all, fome a fmall bcent, nor offenfive i foms a little fweetifh, and fome very iweet: And fome again have a itrong ill SdadL which arc not to be diftinguifhed by Writ ng but by ones own lnelling to them. The Seeds of iweet lme ling Plants, many times do not i^low, Theri Mo* = t - Plants; no more in their findl, ^hiu they do in their color.

X. Obf. 7. When rhe Flower has been for fevcrat Years of oneintirecolor,yet;iftenv.jlL' aticred very much, as if it had not been rl; Plant, as from a Purple or Stamel, it h.:• variably either parted or mixed, or ftriped white, either in part, or thro' the whole Flower -, in a red or yellow, that it has had rtd 01 yellow edges', or red or yellow Spots or Streaks, Veins, Lints or Flames, running thro' the red or yellow cole;; fom Climes three Leaves have been equally parted in the middle with red and yellow, the oihcr ihrii- remaining of one color : In fome the red has fome yellow in it; and the yellow fbmer.d S;>os in it alib. Thefi proceeding from fuch Roots as bad ken for feveral Vtjrs or one conlrant color, Chew the vn-:k-neis and decay of thofc Roots; and that iliis extraordinary Beauty of the Flower, is but as the Blaze of a Light, or Candle juft upon its going ouc 5 and by this means declares to them, that it is upon taking its Farewell, and can do no moie Jbrvice.

XL Obf. 3. That the chief differences (fetting iie Seaibis of Flowering) confit in the and Magnitude of the Leaves, as fome great and large, fome fmalkr^ ibme long and pointed, others broad and blunt- I. In the colots, with jveral mixtures, marks, and variableneft I changing, as has been before declared. Thislarge : the Obfervaiions appendent to it, may w&U ferye lor all the Sea Ions of Tulips, whether Prfcocer, AU-d'u or Serotina, concerning their tpringing up, form and bearing; there being no other great Varieties befides worjh rlu; noting.

XII- Mr. Red defcribes the "JV//> after this manner, in his llora, pag. 47. The Roots an rounder and bigger than others, mhofe bt> rifms us large, round, with a woolly eminence on one fide, whence the Yibrescotne forth; and on.the (thcrfide of fuch at have born Flowers, there Channel where the Stalkgrew, which Icarlyfhifts jiom fide to fide, arifing every Tear a '. 'em from the afore) tee, •which is in the bottom of every Root, but more in fame than in others. The? iwwj .ire sharp at their upper end, and if they zwill bear Ylowrs the next lear are forked, and (hew forth tw Points to put forth two Leaves; bat if they will not bear Wowert, then they appear but wish one Foint : Theft Roots are alfo cempofed of feveral thick Skins, folded one upon another, and at Lift are covered with a brown Coitt, pfbich is every Tear renewed, the old being cafi off Thcfe, whether they be the Prxcoces, Media or Serorinat, fpring eut if the Ground with Leaves folded one zuitiip another, and opening by degrees become broad, thick, long- and hollow, turning up their edges, and holding Water falling thereon •, commonlythree in number, but fomctimes in old Rootel Plants four or five, of a whhifl> green coh, with ml>itcr edges, chiefly in the Prxcoces, by which they are known from the Mediae or Serorina.; vtbefe Leaves are of a fresher green. The Stalk with the tfocter, comes up in the middle of the Leaves, which rife up with it, and eneoispafs tt at unequal di ft ahces, many of the Pncoces bending to the Ground, but before they Flower, are 'drawn upright by the Sun, at all the reft are. They all bear (ufually) but one Flower on a StalA, which Stalk in the Fx-coces is not above a foot high, and rnany of lower, but in the Media: and Serofint' much higher Jlands upright, and at its top h<u a Homer compvedof fix Leaves, green at firft andclofed, which by the influence of the Sun Beams opens, changes into divers Glorious colors variously mixed, edged piped, feathered, guarded, &gotted> marbled, fta-

yM-lphfervations. i. The **Tulip** is a Plant
 whole Bulb is of a whitifh brown outwards, al-
 moft round, and compofed of feveral **finall** white
 coverings, which, are laid one upon another, ffrom
 which Bulb comes forth pretty large Leaves, of
 "about 6 lochesor more, long, waved on their edges,
 artdendinginaPoinii out of whole middle, comes
 forth a Sulk a Foot more or lets, long, which at
 its top produces a Rower, in form of a Cup, fome-
 times or one color, fometimes of another, which
 has lix Leaves, in whofe middle riles up a **Pointcl**,
 (with fix Chives about it,) which in time becomes
 an olilong Fraitj opening on three fides, with fix
 rows, **fill'd** wihriJt Seeds, of a roundifh Figure,
 and lttddiftwrolor. i. Oi the fix Leaves of the
 blowers, the **three** innermolt aie generally larger
 than the three outward ones, and their form it it
 is more Beautiful than,when (harp, and
 their buitoms ought alfo to be proportion'd to
 thtir tops; where alfo the Cup is leaf Convex,
 it is pieterrable to that which is very much fo.
 .. It its form and green are of a middlingbignefs
 it is good, as well as when they have a requifite
 lugencls; fo alfo if its green isa little fizled, or
 accompanied with iinail Hreaks. Its bottomisal-
 lb much taken notice orj b^caufethe Stripes which
 arik iiom thence, ate generally the rneft colors.
 And therefore a **Tulip** is not to be judg'd of at
 its rutt opening, you ought to wait 2 or 3 **Days**,
 before you can judge rightly of it. 4. If it opens
 with it* Leaves turned either inwards or outwards,
 tis not 10 be valued, no more than when its Leaves
 are too finall or too thin : And of the letter forts
 of **Tulips**, thoft are molt to be clteemed, whole

color is Ltiltrous, and looks like Sartin ; or of a
 Hame coloured Red upon a white Ground ; oi di-
 vers colors with Shadings, and yellow Ittipw
 with graf. ; Thofe **Tulips** look only agreeable
 ! ye, whofe Scripts are not coniuftcdly Wa^l
 ded, but are well or inniftctly feparated one now
 another, and to add to their perteaion, it >^s REⁿ
 ceflary their Thrums mould be of a brown color,
 but 'tis no matter how their Chives are. 1TM
 flowers are fometimes incommoded with V
 but 'tis only for want of Care, for if they areweU
 managed or looki affer, they aie never fubjett to
 sfeft.

XCI. ... is of the Size and Fashion of the Drakewoods. The Flower is of a pale

pale Both almost white, prettily marked with many

ihc human and Chives of a pale yellow.

XCVI. ... It is the last Flower of any of the Princes; has a strong upright Stalk, a fair Flower, large and well formed, of a pale Red color, with many Veins and marks of Crimson, circling and guiding, and great Stripes of

white. The bottom and Chives are both blew; which is feldom found in a *Precox*.

XCVII. %%. *Paragon Iterant*. It is a pretty pleaGng early *Tulip*.

XCVIII. ^4. *Paragon GrebbcrL* It is a fine early Flower, very well irtped upon Carnation with white; the bottom and Chives are of a pale yellow.

XCIX. ;j. *Pahovanieyien*. It ought to be the first of the feathered and variegated Kinds, in :! <t'Antiquity and Colors, which are red and yellow. In the younger Roots well placed, feathered and striped; but commonly the Flowers of the older Hoots are more yellow than red, and often all yellow, as the bottoms and Chives are.

C. 76. *Pcnjhot*. It is a fitting Flower, of a fair shining blewish red color, sometimes well marked, with greater and lesser Stripes of white throughout every Leaf: But if the red has the Mattery, it will quickly run all over the Flower. The bottom is white, and the Chives are yellow.

CI. 37. *Pretty Betty*. Iris a good *Edger*-, the Flower is of a bright Crimfoil, with pale Butter colored edges, which soon turn white. It has a Star-pointed bottom, of the color of the edges, and blew Chives,

til. 38. *Princfr*. It is something like the *Petjbot*, but of a more blewish red color; some- times well lhiped and leathered with white. The bottom and Chives are of a pale yellow.

CHI. 37- *Reh&uM*. It is a strong healthy Flower, of a dark red color, with many fine Stripes of white, but commonly the red has the Mattery -, and in the Season be hot, will soon run over the white. The bottom is of a pale yellow, and the Chives of a dusky brown.

CIV. 40- *Retrocede*. It is an early *Tulip*, but of no extraordinary account.

CV. 41. *Superintendent*. It is a Flower of good account, rises higher than ordinarily others do; the Flower is fair and large, excellent marked with Violet, Purple and good White: the bottom and Chives being of a pale yellow.

CVI. 42. *Ugefi*<t. It is a good, but common early *Tulip*.

CVH. 43. *Venetian*. It is another ready *Tulip*, but more esteemed than the former.

CVIII. 44. *Vke-Roy*. It is an old Flower, of a Violet Purple color, edged, feathered, and striped with white: the bottom and Chives of a greenish yellow. They often add *Paragon* to the Name of this Flower, as if it were a different Kind, when it is but the same better marked than usual.

(IX. 45. *Violet Ratgait*. It is a reasonable fair Flower, with a woolly stalk, and (harp pointed Leaves, of a Violet Purple color, with large Snow white edges. The bottom and Chives both

yellow. CX. 46. *Violet de Rcmoit*. It grows taller than the last, with a smooth stalk, and a fair large Flower, of a rich Violet Purple color, with large and well divided Snow white edges, a white bottom, and black Chives.

CXf. 47- *Unique of Delf*. It is a pretty pleafine early *Tulip*.

CXI. 48. *Witten-Roa Hodie*. It is another good sort of early *Tulip*.

CXIII. 49. *Winter-Bute*. It is so called, in respect that it flowers commonly in Winter, that is in February, or before the Tenth of March at which time the Spring begins. It has a very low stalk, and bears a flint leaf'd Flower, of a deep red color, with large yellow edges, a round yellow bottom, and brown Chives.

II. TULIPS MEDI&, Middle flowering Tulips.

First from Mr. PARKINSON.

CXIV. *TuBfx Ma&t*, the *Middle Vkwering Tulips*. These begin to Flower about a Month utter the *Early Tulips*; yet ft-mt longer after, and iome fooner : And in the variety of the colors of the *Media*, such Mixtures and Varieties are to be observed, which can never be seen in the *Practices*, as there are some in the *Prsects*, which are not in the *Media*. But the Varieties in the *Mediant*, far grater, which chiefly happens from the Sowing of the Seed •, for which Keafon, it is vry difficult for any one to come to the Knowledge of all their Distinctions i bur the moit remarkable are iheie following.

Tulips Mediae atle :

The mean Flowering White Tulips.

CXV. i. *Nhea, junio albo vtllutto*. The Snow white *Tulip*, with a white or yellow bottom.

CXVI. 2. *Argent^ quaftaiba eintracci fundo Mefctxc^ purpleis Stammbui*. Silver colored, which is a voj pale 01 whicift Afh color, with a yellowifti bottom, and purple Chives.

CXVII. 3. *Margriina ah, earned ditutijima*. Pearl colored with a diluted bluft.

CXVIII. 4. *Alba, junio caruleo vel nigro*. A white with a blew or black botcom.

(XIX. j. *Albida*. Ctearn colored, or light Straw colored.

CXX. 6. *AlbaoritRubris*. A whirewithRed edges.

CXXI. 7. *AlbaorisPstrpxreis*. A white with Purple edges.

CXXII. 8. *Albaoris Coccineis*. Awhite with Crimfon edges. These three laft Torts do hold their Edges confant in fome, but well ipread in others.

CXXIII. 9. *Albia primvut, deinde abidhr^ oris Purpureis, & vertis intri respickmibm ; nobit dsSa Haekqtnav*. A pale or whitifh yellow, which after a few Days grows more white, with Putplifh red edges, and fbme Streaks running inwards from the edges, which we call an *Hackney-Tulip*.

CXXIV. 10. *Alba, cohre Saitgutneo variara, fund* albiffimo vet aim*. White., mixed with a Blood-red color very variably \ the bottom either of a pure white, or fome other color,

CXXV. 11. *Aiba^ radintim difpojita^litmmis, Maculis Commit*. A White [beamed with Crimfon Flames and Spots, throughout the whole Flower.

CXXVI. IX. *Alba, Purpurca rubedine plumt- t<t, dverfarum fpecierum^ qua cum juperiore^ vel aibo, vel luteo^ vel parvo ctruko coijiant fund*, &c.* A White plumed or Speckled with a reddilh Purple, More or lets, ofdivera forts, with white, yellow, or blew bottoms; all which do hold their Marks conllanc, and do not fpread their colors, but (hew fairer after they have flood Blown or fovy Days.

CCC. vii. *Pjragch hifgin*. It is an ordinary Flower, a little marked and striped about the edges, with an *lfabdU* color, and pale yellow, *3A* sometimes over all the Flower; it has a [greenish] dark bottom, and faded blew chives.

CCCVIII. 11?. *ParjgonYlortjon* - it is a good Flower, Leaves sharp pointed, variably striped and marked with *lfablth*, *PCJCII* color, and Milk white: bottom blew, chives dark violet Purple.

CCCIX. 120. *Paragon ie tyfla*. It is like the *Jycobeo rtffified*, but a better Flower, well striped and marked with the same deep red color, and good white: the bottom and chives yellow.

CCCX. 121. *Pjret*. It is of tawny fame all green, unless a little whitish toward the sides of the Leaves, others have the Leaves half folded, green in the middle, and the sides almost white: But there is one Noble kind hereof which is called

CCCXI. 122. *Parct-Koble*. It grows rattled fringed, the green Leaves rent in the sides, the Flower large, and formed somewhat like the hit, only it has Spurton the sides of the Leaves, which are of a dark brown color, and lighter by degrees to the middle, which is of a whitish green color, very (range in Fashion and colors from all others. The bottoms and chives of all the *PJ/T//*, are of a pale greenish yellow color.

CCCXII. 123. *P-I/I Qudmjrd*. It is an old Flower of a faded reddish color, fixedness well marked with brighter Red and Straw color. It is common and unobscured: the bottom and chives both blew.

CCCXIII. 124. *P-J/> Beline*, it differs from the *Beline* chiefly in its colors, which in this are like *giedeline*, some carnation, and much white, well placed and parted: the bottom and chives both blew.

CCCXIV. 1:5. *PufiRoftc*. It is a fine round Flower, variably marked upon a pale Rose color, with crimson, and some Vein? of Straw color, resembling a well watered *Tabby*: the bottom and chives pale yellow.

CCLXV. 126. *Paft Bell Tew*, or *Numero unc*. It is an old Flower, agitated and troubled with *gedeline* and white, but unobscured; the bottom and chives of a dark blew, dulled with yellow.

CCCXVI. 127. *Pf/> GtaJet White* It is in all things like the *Agat Vmmt Vin*, or *Y<ijs dta-dtl*, but that the white in this flower has the Maftery, and therefore much more esteemed than that.

CCCXVII. 128. *?afs Zeabiam of Par it*. It is the bell of all the *Zeaboms*. The Flower is fair, of a deep Purple color, very well marked with white: the bottom blew, with dark Purple

CCCXVIII. 129. *Perl* It is an old Flower, of 4 bright carnation color, marked and striped

with more or less white. The Leaves or the Flower are twined, and Hand different from others, the bottom and chives a pale yellow.

CCCXIX. no. *PtUUm*. When it is right it is a pretty Flower, of a good carnation color, marked thick with smaller and greater Stripes or white: the bottom and chives of a faded blew color.

CCCXX. 131. *Pempesa*. It is a fair Flower, constantly well marked with fine carnation and pure white: the bottom and chives blew.

• CCCXXI. U7. *Prudent*. It is a lighter and ladder yellow; the bottom and Violet

CCCXXII. 133. *Vrefient to* a better flower than the former, nearly with uniform and white.

CCCXXIII. 134. *Prince of Orange* a good Orange color, striped with which color the bottom and chives are

CCCXXIV. 13 j. *Friaceft* production from the *Wanders Widow*, from it only, in that the Loves of the flower are lifted about the tides with white.

CCCXXV. 1?6. *Princeji Turgand* best of all the Species of the *Widens*. It is well marked with two purples, white, which commonly has the bottom torn and chives are like those of the

CCCXXVI. 157. *Pluto*. It is a Flower, of a Sooty Orange color, edged with darker and lighter yellow, a faded bottom and hewed chives.

CCCXXVII. 138. ?* *la*; or *Angelica*, It is a large long of a deep reddish purple color, taked and marked with white: the bottom and chives of purple color

CCCXXVIII. no. *Forogcn Alette* a fingular good Flower, composed with and white.

CCCXXIX. 140. *Prelate Krewn-F* is a fine Flower, of a brown purple color, marked with white, and notably differing with others

CCCXXX. Hi. *Portugal Koble*. It is a small, yet a Noble Flower, finely marked with small Lines of cinnamon color, and pale color, with a dark bottom and black chives.

CCCXXXI. 141. *Vntcut*. It is a pretty Flower, well marked with deeper and lighter and pale yellow: a dark bottom, and purple chives.

CCCXXXII. *itre/erpiM*. The tops of its Leaves are of the color of the *Metrae/e*, low towards the sides, marked and whipt with a very brown dark Purple. The bottom yellowish, the chives purple,

CCCXXXIII. 144. *ibtm* cr, It is a cobrtd, railed from Sted, ctecm.

CCCXXXIV. i4J- &t/8li**te. It is a Flower, Role colored, variably (potted) with white, which commonly has the bottom and chives are blew.

CCCXXXV. 146. *Swift of Portugal* tall large long Leaved Flower, of a Rich color, with some Marks about the edge of Leaves, of a deep red, striped with straw and Lifts of Straw color through every thereof; with a large round yellow Straw colored chives. There we

but this is the heft, the others being left ind not fo well colored.

CCCXXXVI. 147. *Sempr Axgtjtne*. Itw.is formerly of much etfecm, but its Flower is not very laree, but well Vemul and Striped with deep crimfon, and pale yellow. The bottom and chives a dark Violet Purpie.

CCCXXXVII. 148- *Sufinna*. It is a pita ing deisluful Flower, of a comely Fomn the o bright carnation and Snow w hi r,, from its hrtt opening, well parted and divided. The bottom « gteenifh chives.

CCCXXXVIII. 149. *Snail Flowed with Jong and very ranow fliarp Kd Leaves, at firit opening rw.iU « the fi.'ls which after open and fpread flat, s like a 7 Sh Bx Points of a reddilh ^ r //, color, itri ped towards the bottom with white. The bot- tom n'd chives are both pale yellow.*

CCCXXXIX. 150. *Si&faund*. In s a good Flower, of a crimfon color, inrcrfperied with

CCCXL. 151. *Tvandart*. It is like 1 lie' 4 * * R * * « i ol a neav T da B redtiim con- lor the Leaves edged with a Smoikiy Dove color, and ibmetimesa titie marked with white; the bottom and chives black.

CCCXLI. 172. *Tudart Rcyal* It is better than the former, the Flower is of a fad red color, whiprahour the edges with crimfon, and ltriped with pale yellow. The bottom and chives are black

CCCXLII. 173. *TnumpUnt*, It is 3 final ICT Rower than *General Gaud**; the Stalk is weak, and the colors good crimfon and white, but vey unconllanr. The bottom and chives blew.

CCCXLIII. 174. *Turbant*. Itisalirge round hollow Leav'd Flower, often with eight or more T.eives of a rcJdiih Peach color, Flamed up the midde'tand fides with crimfoo. The bottom blew, with dark brown chives.

CCCXLIV. 175. *Tre/cordTie*. It is Flefb colored, pile yellow, and WAeiU^ the bottom and chives arealfo a pak yell

CCCXLV. 156. *UiweA in Ovif*. It is a tine Flowet, made up with .1 earious Mixture^ or inter- pofition of carnation and wi

CCCXLVI. 157- ' ' / ' - « " as a handfome round Flower, of a deep (liintng crimfon color, variably fpread with white; bur. ir the rtd has the Mattery, it foon runs over the white; the bot- tom MA chives are blew.

CCCXLVII. 158. *Vefia RtwuL* or *Nempdre*. It is a betrerand more confant FLOWLT than the Jaft being carnatLon, ctirmfou and white. When die Flown marks well, the bottom is white, and the chives blew. * - " w

CCCXLVIII. 159- *Vujftr^*. It is one of the firft'Blown of the *Medu*, amf is; of a Violet Purple color, ftmsttmes well maikol with white. The bottom and chives arc a pale yellow.

CCCXLIX. 160. *ftAww*, or *PVAw/ Tultfi*. h is a good Flower, of a deepdatk Velvet Purple color marked with fome lighter Purple and white Stripes, efpeciallyin thetopsot me Leaves. The hottom' and chives are black.

CCCL. 161. *Zeahm*. It is of divers forts, the moft ordinary is of a fad blewifh red color j Wi m e s a lU t e marked with white, very un-

are the bottom and chives are a fid purple-

CCCLI. 162. *W * * ^ ^* It IS at firft Striped and Veined through

CCCLII. 163. *hln* It will decline and white; but if the beaon u hot, It will

run, and be fubber'd ail over. The bottom and chives are both biew.

CCCLIII. 164. *ZwemanGarft*, or *Chamoki*. It is an old Flower of a deep Peach color, chame- leted, and ftriped with red and white. The bot- tom is blew, and the chives purple.

III. Of the SEROTINÆ:

O R;

Late Flowering Tulips.

CCCLIV. Theft are declared in the *Gmcrul Defcript'wn*, fo that there is no need of reputed the fame things again; and they begin to Flowner much about the time when the *Media* are paff: The gre;t;:fr thing in thefe, is the Mixtureot their colors, in which there are no fuch plentiful Vari- is in the two trmei forts. The chief of which, (Flowering from the middle of *May* to the middle of *Jun*^ and lometimes longer.j arc thefe few following.

First from Mr. PARKINSON.

CCCLV. 1- *Roftj intenfor, nut ronijior*. h Rofe-colored, deeper or pjler.

CCCLVI. 1. *Rulm vu/gttris, ant Saturittior, ff ouaji nigricjts fiatdu iateo vit i!S^t vel ntgro Orbe.*, W^w incliija : *Oeulut Svvis dida*. An ordi- nary red, or more deep, Jike black Blood, with 3 black or yellow bottom, or black circled with yellow, called the *Suns Eye*.

CCCLVII. 7. *Lutea communn*. Tiiecommon or ordinary yellow *Tulip*.

CCCLVIII. 4. *Lutca oris rubrit*. A yellow *Tulip* with red edges'.

CCCLIX. 5. *Lutea gulth Sengu'tneis, fundo nigro, vei vario*. A yellow with red Spots and Veins, the bottom black, or various colored.

Secondly, from Mr. R E A.

CCCLX. i. *A.g'it Romane*. It is an old Flow- er, molt pale Rofe colored, fometimes well mark- ed' about the edges with crimfon, and ftriped with white.

CCCLXI. 2. *Grtfoand*. Ir is a to;!' fmsll Flower, of 2 dark red color, ftriped and feathered with pale yellow at firrt, which after turns white: the borrom.' and ohives both blew.

CCCLXII. 3. *Marire liarlm*. It is an ordi- nary Flower, molt a Flefb color, marked with *ifobella*, and fometimes a little white: the bot- tom and chivei a dark blew.

CCCLXIII. 4. *Paragon Mulleri*. It is a bright carnation, and fomttimes well ftriped wirh white : the bottom and chives blew.

CCCLXIV. 5. *Fato Madam, yellow Qvam; andQvten /;trance*. It is now a common Flow- er, of a good full red color, marked and crowned on the tops of the Leaves with gotri yellow : the bottom and chives are yellow.

CCCLXV. 6. *Vrmec de la More*. It is a fine Flower, as rareas the former is common; well mark- ed with a deeper and lighter cinnamon color, and pale yellow; with ablew bottom and black chives.

CCCLXVI. 7. Star of Vent*. It is a largt; Flower, of a good carnation color, marked and veined with pale yellow at firft, which after turns white : the Koticm and chives both blew.

CCCLXVII. 8. 'fyebriis. It is a large ftrong Flower, of a dark, dsqj red color, like that called De Ray, with imall Veins or Peach color, a fmall pale veltow bottom, and dark brown chives.

CCCLXVIII. 9. Tumca Marioah. Itjs an interim kind of the Paio Madjn.; or ydku: Crown. The Flower is more yellow rhjn red, tor which r&ifon Jbme call it the i'ooit Coal, the bortom and chives are yellow.

CCCLXIX. ro. ZeMsm. Seroti/ra, It is weak Stalked low Flower, ofa Jeep red color, feathered and marked with fome gtoline at firft, a pale yellow, which after turns white : ti rom >yd chives are a dark blew.

CCCLXX. The Places. The Tulip is an Aji* ti r Turkijb Rower, ririt (ent to us from iVA tnnia, GmftagtinopJe, and other pans of Turfy, and therefore called / , and Turks Cap : In the Woods and Reids ot Dalmafya, OtMadaeia, Bhhmia, Steppe, alii* in Mace-duKu, jhrjeia and Tfipatu, they are hid to grow naturally Wild, but with us only in G:mi.

CCCLXXI. TheTimes. The Yrtcoat Flower with us in February, (it the Winter is mildj and ali Mareb, and IbmeEimes in a warm Winter in January. The Med'u Flower all April, and ibme pan of the beginning of Miy. The Scrotint Flower from the middle of May, fometimes to the mid-dte oi'Jitae •, bur it the Seaibns are cold, tiey fumetimes Flower a Month longer. However, they are an Ornament to our Gardens for more than three complete Months.

^CULTURE.

CCCLXXH. For 'the Jtoice of Seed to Saw. Qttfr.; tjys the mile Pwox gives the greateli Variety ol co'ors, (fcarcely \o bom the Red ;) but it the Wliie has any mixture of Red or Purple in it, the Variety is more eminent. Next to the White, the Purple is (aid to be the belt, and the next theteto is the Purple with white edges ; and lb likewfc the Red with yellow edges ^ each or' them will bring moft ot their own colors.

CCCLXXIII. The Seed of the bed Meig is to betaken from tbofc which are light colored, rather White than Yellowj and rather Purple than Red •, yea White not Yellow; and Purple not Red; But or theie again, rhe Sported are the belt, and the more Spotted the better. Hut withaE, ani in ail thefo, refpeft the ground or bottom or the Flower, twhich in a i'mox cannot be, for they feldom hjveany othergroundilui'.yellow -, which if ILK Flower be white, or whitilh fported or edged, and Ittaketl, and the bottom bliiw or purple, (as in the ifc/u s, aiid Cloth of SihierJ is beyond all other the muit otcellelu, and yields the greateit, choicest, and molt plcafcoi Variety. The Seed ot tneaot Beauties, will yicIJ foua n .t Variety. The Seed ot the red or • Tulip, or their divers Mixtures, arc not worth the Sowing.

(.XXIV. TheSeed of the Sf«//s, (which ate feldom iirn with any Iboqjx Bcautiul Viii- <j oi colors) cart bring forth no rarities \ and tor the Kui.jii klotL- ipecciiiel, little or no dverfity 31 ill.

CCCLXXV. Therctbre to ba«a T*fy you mly rcaini'u'y expett Beauti-

ful Flowers; your kft way will be to leave Tome for Seud, which are very nne and large, to me end, that being of a Noble Kind, you may ranorally hope tor fomethng excellent from tlit^i and yet in this matter, Nature ibme times deceives our gre;Uct expc&attons.

CCCLXXVI. tor Seeds, be fure to choice of fuch Flowers as ti ve the frongeft Stalks, and the Seed VclTd three comered, ot fuch as are mott conftanly well mavkei. and tuch as have the bottoms and chives either blew or p'f 4 pte, (which is raidy to k-round inrheP««1*Y ixtioms ate commonly eitjier white or yellow j yet tlverc is one excellent kind, vis.w O«nr, dtferibed in SeS. XCVI. aforegoing, whjen aptly marks with three colors, and has the bottom and chives both blew, trotn the Seed ofwluW, many fine Varieties may be railed : :tnd next t this, are the lbrtzamitte%, Xiriftim, Cre«j^'^ Admiral Kncufen, and Vtnjhot •, the reft ot

Marked Prtcocet, may produce ioll«a Varieties, tho not like the Omen : But Seeds the Vice %•, and Varieties ot E4geri, Hdrom duce better than their Originals.

(CC LXXVII. The Seed of the Meiid many more excellent Vartities, as that ^cn tr o the Angelica, Amcrs I'Jeva, all the Cinbaga, Cedo AsuW, Oiaiu, Darety of tioW* florifim Person, General Botfon^ Ja Tudart-Styal, lurgicna ?rinccj's% Yirgi fcler b others; thefa here named, being w] ed with different colors, with blew or purp toms and chives, are not apt to run, bucwil conltant ro the iaft.

CCCLXXVIII. But tho' we make choi«° the heft Rowets ior Seed, jret often times we »» oi our purpofe, becjuie fome times tbe Roots l'o their Fibres, and the Staib dry before il- comes to be hatf ripe. To pitrebt which, r choice of the frongelt Roots you have, of Flowers you defign tor Seed, and let th-m r pan ot the Garden molt expofed to the Su> {even Inches in the Ground, by which you will gain good ripe Seed, from aimot

CCCLXXIX. About the middle of >£• foonet or later, as the Seafon is hon« pi COIOP, the Seed will be ready tor gathering, which BW be known by the drinefs of tje Stalks, and op^ ing oi die Seed Ytflels, which gather, (*%£ up (he RootsJ letting ilie Set J remain m ihe^°jj until the end ot September, and then they tf^jf taken out, which being ckanfed from thf and Sowed in tk:ds of tine Sitted Earth, ef, he more ordinary ibrts.

Cl CLXXX- Tie rime and manntrof he Seed is next to be conititeld. Sow th a the Sprir.g, if you 'nope rot any good >1 <1w_> but in the Autum.i, "or prefently after 1 n e ^ t through ripe and dry; yet if you Sow them n^ ill ihc ei;d ot O&ci>'cr, they will come I «tlic worfe, but the better. Fot it i? that our early Sowing cauiies them to fpring ot the Ground too eatly, lb that if a llurp Spring chances to follow, it may hawm J Jpoiling, it not of all, yet of moft part ot Sited.

CCCLXXXI. The rime Years Seed b j^ wth we commonly Sow, but it the Stea i* Ywrsold, and (hat it was at (nil good SeWi kept, being thenSowM, it will thrive an" wdl wougli, etpccially it it was perku'y ^ and well gathered , anJ in Sowing it, y^ou ^ j oblerve not to Sow it 100 thick, for if l'ne lyes one upon another, that it hai not room

its sprouting, to enter and take Root in the Earth, it will presently perish.

CCCLXXXH. Some prefer down the Ground in which they intend to Sow the Seed, then put the Seed thereon, and cover it an Inch over with Sifted Earth, because they lay the Nature of *Ubiting Tuip* Roots, is to run deep into the Earth every Year more *dun* other, which this fathers of the Ground at bottom prevents, by which they think the Root increases the better, but doubtless it is not the best way, for this thickness of the Earth does cause these young Roots to be long before they grow great, and hinders their thriving: For in a loose Earth they grow rather and greater, and thrive much better: And although the Roots may run deeper in such a loose Earth, yet that Fault may yearly be helped by Transplanting, and so they may be raised high enough.

CCCLXXXI. The Ground therefore must be selected, for the riner, softer, and richer the Mould is, the easier will be the increase and Valiery. It is to be Sifted from all Stones and Rubbish, and it ought to be either of itself a fat Earth, or else made in good thorough rotten Dung.

CCCLXXX [V. Some of the draiceful Flowers, ought to be Sow'd in Boxes, fill'd with the (inert) Earth that can be gotten, in respect that the young Roots are apt to run deep into the Earth, to that in Beds many of them will be lost: Sow them not too thick, nor cover them above a Fingers thickness with Mould, (as is before noted.) In *ijtach* following, they will come up with small Leaves like Grass; in *April* Weed and Water them, as often as need requires.

CCCLXXXV. Some remove not their *Txlipi* once, from Sowing the Seed to their flowering; but this rule is not to be followed. About the end of June, two Years after their Sowing, they are to be taken up, and the small Roots cleaned, and set again in Rows at a wider distance, and so every other Year, till they bear Flowers, it will altering the Ground with fresh Earth, and Sifted compost, before you set them again. And to avoid footing them, you must take them up whilst their Leaf and Stalk are fresh, and not withered.

CCCLXXXVI. And though the Leaves in the first Year are but like to the ordinary Grass Blades, yet the second Year they will be bigger, and so by degrees every Year larger and larger. The Leaves of the *Vrxoces* while they are young, may be discerned from the *Medi*, in that they wholly stand up above Ground, (hewing their small Footstalks, whereas the Leaves of the *Media* and *Seroim* do never wholly appear out of the Ground, but the lower part which is broad, abides under the upper face of the Earth. Thus by Tran [planting the Seedling Roots] in the Year, (and some of them every Year, as you will see cause for the same) in the thirtieth Season, as about *Akdfinmer*, or latter part of *July*, or beginning of *August*, you will (according to your Soil and Seed) have them in a due time come to bearing. It will be 6 or 7 Years; More the *Prttces* will bear Flowers, but the *Prttces* will bear in the fifth or sixth Year after Sowing, (rarely in the fourth Year, unless the Soil is very Rich, and then they are none of the best Flowers:) Again, some of the *Media* will not Flower till the seventh or eighth Year after, and some weakly Roots not to the tenth Year, which I think are not worth the preserving. This you are also to Note, That as your Roots grow bigger in Re-planting them, you must give them more loam and distance one from another, till they should rot, and by that means hinder their Growth.

CCCLXXXVII. As many line Flowers may be raised from the Seed of those well milked, as mentioned; so such as have a good Collection of *Mode*; or Sdf-colors, observing what colors are apt to change, and by the bottoms running up into the Leaves, become well marked with several colors: I say by Sowing the Seeds of such, the Pioduff may possibly be altered to a peilation: And though at first they may come wholly of one color, yet if they be *Orange*, *Sulphur*, *littir*, *Dime*, *Greecine*, *Ijaella* or *Shtnrzey*, or any other lighter or trancolor, they are to be esteemed, for in a Year or two, many such have changed into good marked Bowers, and so continued in all their increase.

CCCLXXXVIII. To hasten which change, let such of your colors as are Strong and Luxuriant, be set in lean and hungry, but fresh Earth; and the next Year after, in that which is Fat and well Manured; and so yearly removed to contrary Soils, till you obtain the end desired.

CCCLXXXIX. The like course is to be taken with Off-sets, so cause them to alter from the Original, as is daily done. For the *General Buk* a member from the *Brown Arvers*, the *Cede Kulli* from the *Zi-ab/o/x*; and many fine Floweis from the *Brabac*, *Tourl*, and *Wtd&wt*.

CCCXC. The Seed of the *Prttces* does not thrive and come forward so fast as that of the *Wli* (and *Sirtitt*; nor does it greatly Oit-lift its running down, as that of the *Media* does) which usually leaves a small Root in the Head of the other (which is run down) every Year; and besides as they are more tender, so they require more care and attendance than the *MsdU*, and therefore are the more to be valued.

CCCXCI. And this is a certain and general rule in all *Tulips* that all the while they bear but one Leaf, they will not bear Flowers, whether they be Seedlings, or the Off-sets of older Roots, or the Roots themselves, which have already born Flowers: But when they show a second Leaf, breaking out of the Grit, it is a certain Sign that it will then bear a Flower, unless some Casualty or Accident hinder it; as Frost or Rain, to nip off the Bud, or some other untimely chance befall it. The time of 5, 6, 7, or more Years, to wait in expectation of Mowers, is a little long indeed; but if you take care to have good Soil from the better sorts of *Tulips*, you will be sufficiently recompensed for your Patience, from the great abundance of choice Flowers, which they will then produce.

Of the Roots.

CCCXCII. When you Set or Plant the Roots of your best bearing *Talipi*, if the Ground is either cold, or lies too open to the cold Northern Air, it will be well to Plane them somewhat deeper in the Earth, by which they will be the better detended, and not be so liable to be pierced by Colds or Frosts, for deep Snows and hard Frosts are apt to pierce the *Prttces*, and them chiefly, if they be too near the upper Part of the Ground, and therefore many cover their Ground before Winter, with either fresh, or old rotten Dung, which will admirably preserve them. -The like you may do with *Seedlings*, to cause them to come on the forwarder, so it be after the first Years Sowing, but not till then.

• XCCXCiii. If you remove the Roots after they have shot out their Fibres, or small Strings, which grow

Tow uniitr the great found Roots, (which is from 'reptmhr, till they hs in Flower) ti will I c v^{iy} angrousto them: for by removing ticsn when hey I. fail hoJ in the Rarth. you binder them for flowering thft Year, and it r-iy be the next Year too, and hazard their periffiirfg with.ti. Bui after they are rifen to flower iiMy take them up if you pita ft, and n n w iih-out danger, unlnds it be a Young baring Root, which in io doing, you w;! much hind Km. the Earth to the bottom of the Ro<t, to fiwl,⁰ the cauft, and it the Root is moiii and Cwi I^l I j rhelp: Bui it I " -i, iliw tu letovwea, bypmttaton uouusoi⁰^1"

with dry Sand, and covering it as in the before, looverg the plant fimehat open, and it hat downwards the fides. In box Ew- take off the Pot, and take up the Hoot us locn as the

are gone, and keep it in VVool wet in *OilOhyc*, near the Fire: Afterwards fet it agⁱⁿ, according to the directions in the former *?ar,tgraph QiScUion*. By this means many choice Mowers or Roots have I cen faved, which otherwife had been undoubtedly lost.

CCCCVI. Contrariwife, we purpofey make fome Roots Sick, by uking them up a little before they begin 10 Flower, and laying them in the bun, to abate their Luxury, and caufe them w be better marked the next Year following. This has been often done with the *Ar* ft***, * # j^c *Toistkron^jtOudiMrd, ZirAur, Widm* fitch like ordinary Howes, by which means fome Of them wilt come to he very well rrmked o a, that they might be taken to be much better Flowers than indeed they are.

CCCCVII. When you Plant your heft *Tulips*, you muft Yearly mate a provi&n of Manured, trefli light, &nd> Earth, to wake new Beds tor them • or by raking away thai in which they grow, and LppWing ** place with thfc new r^vifion: vZ *Irialipste* let twice in the fame hirth, they will bnguilh and ducay tor wane ot agreeable Nourishment. But if you have fiore ot *Neati-Viuni mixed with Sand, which has him on an heap law or three Tears*: If this 1 Uv be Sifted, and in *Auguf* well mixed with die Earth of your Bed, and the Ait be any thing good and temperate, it will be iufficient. By this very means, Mr. *Rea* fays that he had fa his belt TWite, for twenty Years finceffivejy in one Bed, and .hat they p apered to his Wilh, and ottenmes beyond his

CCCCVIII. Some Gardeners give us another kind of Compojt, which they make after rhismaner *Take an hundred Bu^sof ytUta Sani%* TM*urfcorc BtftU ofred Mould well melt«W,* *Tbrcehorc Bvjhelsej Kiuhn-G*rdenEarth, WWJ* _—; *Jitcftber teitb a Shovel-, ani after a Months w t&etbir, ?*fi it thro' <x Sknen, that the Mixtumaay be wellmde; and thus Sireen a once a Mnth, fir* TM *o' H Months together abich then keep far u/e.* The more this kavch paifes thro the Skteen, the lighter and better it will become, and the more agreeable to your Flowers.

CCCCIX. Before this *Compojt*, or *Compound Farb* is laid on the Natural Soil of your Beds, you are to confider, that if the Soil be wee or moilt fboth which are Enemies to iheTV/pJyou mult'make it dry, or dig Ac: Bed you defigt. taking out a Foot and halt of the Earth, arid then filling it up again with this *Compound tARTH mix. ed with an equal quantity ofSand*; but it the Soil of the Garden be naturally dry, light and findy, then you may fajEgjehe fotmer trouble of digging up and removing rffefc^nd only cover it with the Hid prepared EarthMpiK halt a toot thick.

Of the BULBS, nad young BULB - Roots.

CCCCX. YourBedsorParterries deGned, being thus prepared, you may th.n Plant upon them your *Bulk* or *Toung BM**> as before directed, taking care, that each *Bulb* or *Toung Boat* be well covered about three Inches deep, with Earth.on all fides, which may be done from the middle of *OQober* to the end ot *December*.

CCCCXI As foon as ever they are put into the Ground, you muft m« n«Uft to m<frTM* large Sliaw, or dried Dung as is before hinted,

ro Il:cure them from Froh, and feverecoId Weather; but then they mult be uncovered again, as foon as the Froft and Cold is gone.

CGCCXII. When *AWcb* is come, and you perceive that they begin to (hoot, take care to Water them if the Sealbn is dry, and you fee that they require it •, but how much, or how long you muft Water them, iswhollytobe left to your own difcretion. AndifWeedsgrow, let them be continually jiluckt up, becaufthey w3l (iffuffered) draw the Nourifhtnenrfrom the Roots of your Flowers.

CCGeXni. *Thek Bulbi* of the *Tulip* Roots, are to tcmain in the Karrh For one Year only, during which lime, they muft be carefully Cultivated, but at a Years end they muft be removed in ihe following manner.

CCCCXIV. Take a Dif-plaming Scoop, which tlirult into the Ground at a convenient diftance from the *Bulbs*^ and a littlebelowthetrFibres, bywhicll means, you will be able to take them up fafi without Wounding; thun ftpante the Earth from ;hun, and continue ib to do, till they are all difplanted.

CCCCXV. The *Bulbs* being out of the Earth, and made clean from the Earth flicking to them, cirry them into an open place in the fhade, (lor thele Roots are fo tender, that they will not endure the Sun, the Icatt heat being apt to dry them too much;) and !« fure that they be not heaped up one upon another; for thereby it may happen, that thofe underneath may be heated, which would certainly do them harm, becauleitmightgivetno- tion to the Sprour.

CCCCXVI. When the Seafon for Planting the *Bulb*, or *loung Root* is come, you muft manage it as is before directed, after having ieparated the SuLkeis, which you are to Plant in a Nurfery trade of the lame Earth, as we have ordered for theiWAitfel^ at SVtf.40.8, ^oj.and 410, aforegoing.

Of the Suckers of a Tulip- BULB.

CCCCXVII. Tho' the Suckers of *Tulip-Buibt* are Planted chiefly for the increafe of the kind, and not to much tor Ornament, fo that there need not befo much care to fit particular Beds for them, as for their *Bulbs* -7 yet they ought to be Planted orderly and in Rows, and at 5 or 6 Inches dilbnce one from another, and two Inches deep in the Ground, covering them fsmoothly with your Hand; after which, you are to take the lame care of them as you do of your *Bulbs*.

CCCCXVIII. How long they are to continue in the Ground, is-the next Confideration: Some fay, two Years, for that fay they, the first Year they only iprout, and the fecond Year they multiply; Others fay three Years, for that the third Year they come to fuch a Perfection as to produce Flowers, which leems 10 liemoftConfenuncotis to the Nature and Property of thefe Plants.

CCCCXIX. Te prevent *thefe* Suckers growing dry- Fiomthe timeof feparating themfrom theu *Bulbs*, to the time of their Re-planting, you muft put them intoMofs, in fome open place, till you Plant them again; and fb ufed, they will thrive admirably.

Of the Flowers.

CCCCXX. The 7V/>whofe Cup iscraft Convex, is prelerable to that which is very much Convex j a flat Form is fiid to be more Beautiful than a (harp, the bottom beingalfo proporri'd to the top ; tor the bottom is much tiken notice of, becaufe [he Stripes or Senkes which ariie trom ir, are genenllv of the fineS colors.

CCCCXXI If its Forai and Green is of a midling bignefs, hasartsjuifirelargetnels, and the green appears a litde frizzled, oraccompanied wirhmall Streaks; if its color or colors are Luthous, and appear like Sattm, or of a Flame colored KeJ upon a White Ground ^ or is of dlvtis colors with Shadings, or yellow striped with greif ; **Qich** as rthfe are ettemed, and accounted of the better bind* i and Ib much the more, if the color is not cenruiddly blended, but its Stripes are wellcparated, looking agreeable to the Eye.

CCCCXXJf The color ot the chives are not much material, in rcfpect to its Beauty ; but a good *Tulip* ought to have its Thrums of a brown color, and not yellow ; And the/ it may appeal fne at us iirt opening, you ought to fuspend your Judgment concerning the lame, as to its Good nets and Value, till 2 or jdaysbepalt, before you can rightly make an Eftimation : But this is certain, that in a wdltrm'd *Tulip*, die ihree inner Leaves ought to be larger than tie three outward: And that when it opens, if ir be with its Leaves turn'd L-ithur inwards or outwards, or that its Leaves are too ftmll or thm, it is of no account oi value ai all-

CCCCXXIII. *The Qualities.* They aretemperatein refpect to heat or cold, dtinefiormoiluro; but at molt are only molt in the beginning of riie firtr degree , Aperitive, Stomatick, Chylick, Analeptick. and Spermatogenetic.

Tulip Baftard.

The Descriptions.

III. The firft, or Armenian Tulip, much differ-
 ing from thofe in the former Chapter, its Root it
 Bulbous (at other **TAp-Roett** are,) and fomewhat
 larger than the **Knf** of the fourth Kind, or yellow
 Bolonian **jaliouiftg**. It bears three, (femetimes
 feur) fmall, long, and Jomew} > at narrow green
 Leaves, altogether at one Joint or place, the Stalk
 being Naked without Leaxics, and not high. As itt
 r,jp it beirts one Flower, which is fmall, and like to
 an ordinary Tulip, but fomewhat more yellow,
 ending to an Orange color, with a black bottom.

IV. The fecond, or greater red Bolonian Tulip.
 In foot is plainly fcen to be differing from ail
 others; for it is longer, and hat not fo plain an
 Eminence at the bottom thereof, at the former
 Tulips have, but more efpecialy, "becaufe the top
 'is plentifully fiored with a ycllowifl) Silk-like
Wcollinefs; its out fide, or Skin of it alfo, it of a
 brighter or paler red, not fo cafic to be peeled t>ff
 and it runs under Ground both down-right and fide-
 v/ay, (more efpectdly in a. CoxntruSad and Air

... will increase abundantly, tho' not jo in our London Air, and R>rc't Gi

... the yellow Bolotian Tu ft. VI.) ... Voets out if the broad ami long Leaves, but neither f> broad, >wr of fa tohite or Mealy a green color, as other Tulips, but more dark than the Setocirut, or late Flowering Tulips* jo thai this way eastlybe difcernedby its Leaf, from any ether Tulip alive Ground-, by jnch as are sfoWd in thest blowers. U bears three Lewes uppn its Stalk, (very rarely four) and at the top cf the Stalk (which is not long) a llower, like 10 the Tulips, but that its Leaves are always long, andfomeihng narrow, having a large black bottom, made like a/ito a I. herein, tchose point rifes up to the middle of the Lcpf, higher than in any ether TUIT ... aw is <>J i

red color, nothing Jo lively as in the forma ... or Late Red Tulips, yet Jute;-; ... be ncjl ... than any of tlxm, and ncareji to the yellnta Bolonian Tuhpjo/euing, tahichhastnucbthe fume Smell.

V. The tliiid, or Dwarf red Bergonio Tulip, grwtei ... Thejc differ very little from she laji dr. ... roiaq that they are Kitch lejs, and faallcr in all their parts, and therefore art called Dwarfs, in refpcS of them, cf mkb there is a greater and a ljjicr: They lake their denomination or Name, from the place from whence they came to us.

VI. The fourth, or yellow Bolotrian Tulip. The Roit' of this Tulip may be easth known from the former Red, (or tny other kind,) that it jelJom canti to be fo large or big. is not fo Woolly at the top, and the Skin or oujide is Jewiething paler, harder^ andfiwper pointed-, but its bottc-m is like the former Red, and not fo eminent at the Early or Late Tulips, It bears much longer and narrower Leaves than any (exctjit the Narbone and Perfian, at Seft. Xlif. and XV. following,) and of a. xcbitib green cobr: I/ bears fometimrs but one l'lowcr on a Stalk, fometimes itco, and fometimes, {ho' rarely, three, but fntdler \ which are wholly ytiloa, more open than the other kinds, and fine I-lingJ-Kcct. the Head for Seed is fmaller than in others, and bat met that Crown at the Head thereof fur xshich rafon the Seed is also fmaller, but like to the Seed of ether forts.

VII. The fifth, or firail Italian Party colored Tulip. From its small Bulbous Rcot, it fends forth Leaves, ivbkh a>e fnall, hng, and narrow, of a dark green color, fomethng like t» the Leaves of an Hyacinth. Us Viewer is /mall also, cmfiflitig cf fix Leaves, three cf which arc wholly of a, red color, and tfiree wholly cf a yellow.

VIII. Tilt lixih, or imall Tulip of Couftantino- Vhc Rvtt is very like to that of the yellow Bolonian Tulip, (at Stft. VI.) Jj i* a fnall Plant, beating for the mofi part frco Leaves un the Stalk, which are fair and broad, almcfi like to the Candy-Tulip, (at Seft. X.) The Stalk rifes to be about a hearing fometimes but one fnall VIOK- tr, but mofl ce>tmcn!y (we, cne below anefvr, and tire mi brgger than ihe blowers of the yellow Solonian Tulip, but differing in color -, fur this is on the outfide cf a Vurjilifb color, mixed with white and green; and on the in fide of a fair blufh color, the bottom and chives being yellow, and the Pendants or Tip? bhckifli.

IX. Th<: feveath, or Turkey - Caffa Tulip. Its Root is like to oiftrs of ttv Piictjccs, or Early Tulips, but differ from them in fame other things cr particulars. Us Leaves are a pale green, being as broad and large as tbafe of a PhicOX -, fometimes they are cruimcdor vsaved onthe edget, and fame

heir edges for a good breadth, . nip yctaiv color -, and in olhei parted wilb tebitifb yellow and green- telkrifes up Scarcely to the height of a r.:<ov and bears a b'faw-, not unlike t? the ! in foize Nf a reddifl} yellow color, teith a R*, ec-lor'd ground iir bi>it:>m -, and i *other colors, lie Seed is fo like to that ff_ ft Fraxoces, thatih not tobedtflingutjhedfror it,

X. Tliu eighth, or Candy Tulip. Us <<" ", fmdl, and finchtr.'like to the Narbone, a I yellowTulip, -: sUl. "k\, but a little bigger. P bears fair broad Letvet, of a gretnifi Stalk, bears t>:el'. 'e; <. <c< is larger, an.i more open than in (ami orverktmJ andis either wbclly white, or of a & ce ftes }?; i or elff variably wixt, cf white, with a fine reitj L Purple; the bottom's being yellow Kith < chives, tipt with hhchjh Pendants. ^ does d'JF Ctlllly thrive in this our cold Climate, and j not well, vnlefs agreat cars betaken of i

XI. The ninth, or Italian Tulip, greater am lefler. Their Rsott arc iikt to she yellow Bolonfn Itolip, but the Stalks rijs not up Jo high es " * j hi Leaves of both forts are writhed it at the edges, or made like a Wave cf the Sea, nearer the Ground. The i'fower is yellow » brown-fh or reddlj b on the back, and in the m of the three outcard Leaves, the edges tpe' low. Both thefc Kinds do much rejcmhle the bone Tulip, tni they differ cne from another TM nothing^ but that the one is greater and the & < lejfer. - , 1 t f

XII. The tenth, orPortugueze Tulip, < P ^ fhip'd Tulip. This Dwarf Tulip is of the m fomred with the greater and lejfer Italian PL v fere defcrsbed, <ta</ffeNarbonenfe, erD* f, ga Jo w Tulip following (there being no other a'jf.L is in this from them, bus that the fmr of W* " fame red Veins running in she Leaves therecj-

XIII. The deventrh, or Nailwne, or Dwarf*^ low Tulip. This is very like to the yellow nian (at Seft. VL above,) as well in its Rff*, its Leaf and Fiercer-, at alfo in the color < bring yellow. T;e only difference is, mt tt > " all rejpth lejfer and lower, and not fo Of < * " ncrf cafie toincrcJe bt the K^ot, i, s

XIV. The twelfth, or white Dwarf TUIM Root is tike the others, its Stalk hlmgrtW Dwarfs, and the Uoaer is also larger^ (bong "I white color,) than ether forts cf white TulipS) the Leaves thereof are narrower.

XV. The thirteenth, or PerfrinTulip. / * " % is fnall. covered with a thick, hard, black\ P^ bl or Skin, ml (h Waoffineft both at tot 'L and under the Shell, h: -it, hut is w^ TM nearly, to agree with tk ^JAfaaxi and Indian Tyj^ J in its Real, Leaf r. It rifts < " " f yji Ground at furj}, with one very hug ;, nJft > a' , -h Leaf, which when it is three or four Inches MLt does open it felf, and fheas forth an^ f i ^ - J f e vt Leaf (as long almoft at the former) breaAp nf ihe one file thereof, end after it'utbirdl; : fourh and a fifth, l' . e fhnter than other, which afterwards become ' . ,

C H A P . DCCXV.

O f T U R N E P Garden,

THE frames. It is called in Greek r=yj*A>;
 of the *Laacedaemonians*, r<m>: of the
 Boetians, C<unV in Utine, Raping pi. P<u>
 and in EngliUi, Tumefy and Jurn^s.

II. *TticKmds.* There are 1. *TjfcOarden hinds*,
 of which in this Chapter. 2. *Tfx Wild Kindt*, of
 which in Chap. yib. next following. Of theGard-
 den Kinds there is *t Rapurs rotundum album com-*
tr.um The common white round Turnep. 2. *R*-*
pum retunduwrubrum commune. The common red
 round Turnefj. 3. *Rapum longum vulgare*, The
 common long Turnep. 4. *Rapum luteum*, The
 yellow Turnep.

Turnep Garden round.

The Defcriptiens.

III. The fitlt, or common white round Turnep
 Its Root is round, (fometimes of a Globular, and
 fometimes of ajiatcr round form,) and of a white
 color both without and within, tilth a small Pigs-
 Tail like Root at its bottom, or underneath it :
 The rounder ~~the~~ faai to be the flronger or
 worjer ^ the flatter kinds the fweeter or better -,
 but there srt very good and fisieet tefled of both
 fert. ft-mn tbit Knot fpring up many Urge and
 long, rough, green Leaves, with deep and uneven
 on both edges ; from among thrfe Leaves,
 rizes up the Stalk, about tw> beet high, fspread at
 lop into many Branches, bearing thereon yellow
 llcwers, winch turn tr.to long Pods, with blackijb
 round Seed in them.

IV. The fecond, or common red round Turnep.
 Its Root ii <} a fair red color on feme parts of the
 outfide, the other parti being white like the for-
 me\ but of a pure white eolor throughout tuithia,
 at the jirji aljo h. This in its Leaves, Stalks,
 blowers and Seed, is exactly like the firfi Defcribed,
 but its Root is larger. This Mstthiolus fayt,
 grates in the Country of Anatnra, (where he had
 feen an infinite number of them) tofueh a bignefs,
 at to have weighed Yfty Pounds wight a piece,
 andfome an Hundred Bounds weight, (which k
 almoft incredible) but we fee this kind is apt to
 grim very big with us in our cold Climate \$ and
 therefore poffibly it tsay grow or extend it felf to
 a far greater Magnitude in ibdjfg warmer Climates,
 the_ Soil be'mE olfo agreeable to its Nature, and fa-
 cilitating fuch an extraordinary Produ&icn.

V. The third, or common long Turnep. Its
 Root is rounds but not Globular, and long, almoft
 in fome like dCylinder^ attdin others more peaked
 orSpearlike, being of a white color both on the out-
 fide and mfidr. The Leaves, Stalks, tlmatsr and
 Seed, are Hie to thofe of the fir ft defcribed.

VI. The fourth, or yellow Turnep. *hsRootk*
 like to the firft common kind, but changes to be more
 yellow, and in feme comes near to the color of a
 yellow Carrot; ctberwife whilft it is growing, in
 refpeQ to its Leaves, Stalkt, ihwers, and Seed, it
 is bard to be difcerncd from the firji common Gar-
 den Kind.

VII. The Places. The Tumef) is a Manured
 Plant, and grows with us only in Gardens, or
 Fields kupt on purpofe for the &me. Thofe which
 grow at *hackney*, near *London*, are leffer than ma-
 ny others, and are thought to be iweetet than any
 of the other Kinds which grow in *England*. They
 delight in a fat and ftndy, lighr, loofeEarth, and
 [here grow well.

VIII. The Times. They are Sown in the Sprlng,
 asatfo in the end of *Augitfi*. They Flower and
 Seed the fecond Year after they are Sown. *Ger-*
ard fayt, that thofe which Flower the firft Year
 are a degenerate Kind, which the People about
Nampteich in *i'hefhire*, call *Mad-nepi*, from their
 evil Clualit^s, in caufing 3 Vertigo and Frenzie,
 ot kind of Mitinets for Tome little while. But
Parkinfon fjys, that thefe *Mai-neps* are a Species
 of the *Parfnef*, as we have declared in *Chap. j^*
Sell- 7. aforegoing of chis Book.

IX. The Qualities. The Rocs are hot and
 moift in the firft degree, Ajwricive, Digestive
 Anodyn, Diicudive, Suppurative, Pefloral, Ne'
 phritick, Chylifick and Analeptkk. The Seed is
 hot and dry in the third degree, Aperm_{Te}, At-
 traftive, Digestive, Diutettk, Stomatick Pea<>

rai, Nepteitickand Atexipharmick; having much the same Virtues of Alitjiird-See Ji to whidi we Hull refer you.

X. The Specification of the Bruttons of the table Chyle and the Nuttfrms, Gouts, and Confumptions. XL Vbe I. Kmw JW. 3. A Liquid Juice by t. Rcw/t, wj<lf fry Btking fed Oil of tie Si

"the Virtues.

Vat is p p. It is a pleating Cyder, Ten other tuut [Hirt. It is lial, and freogihcoS the Stomach

XIII. SpirituiRaporumt, ThiSpiricoiTurneps,

it has much thj fame I inuti w'uh Spirit ct Wire, and may be jtone, or v> I ink Brandy to maim l" Bowels, and revive the Spirits. With it you miy make Funth with Wjter, Lime-Juice and Sugar, as you do with Bnndy, which being dunk, will have the fame Eftects -7 and if taken plentifully 01 : Pint at 3 time, 1. In the Morning Fitting, i. Half an Hour before Dinner. 3. At four in the Afternoon % mi 4. At Bed time, and bs continued in the fame manner lot 11 Weeks together, it will Cure z Pining COI tion- And may he ufed in Chytical Opt. for making TraAvrf, Ex/rjrfj, Cordial M Spirit*, Kc.

XIV. The Liquid Jmet or Saps. It is done by Expreffion out of either riw Turneps, or after they are Baked, or Boiled fott in their Skins; and this may be taken Simply as it i* exprifled out ^ or other wife made into an Ejjenee., or Sapa, and fc hept for farther uft. Theft Preparations are all Pefloral, Chylifick, Nutritive, and relate in deep Confumptions.

XV. Tbt DecoShn of the Rents. It is good againlt the Rickets in Children, Gouts, Rheuma liirjis, Qyrtan Agues, Aiihma's, Coughs, Wheezings, Shormefs of Breath, Consumptions; increafes Sced, expels Sand, Grand, and Tanarous nut ici in die Reins and Bladder, and provokes Uiiw being drank daily as the ulual Drink.

XVI. The Simple FUJJ ;, niAc b) Biting pr Boiling. If it is earen without Vinca or Salt, only ot it itlr, ot mixed with a little net Creim, or Milk, and librae pure fine white Brtail the Patient confines htmftlf to Live 6, 7, or 8 Weeks, eating no other Food, nwthe >k!h nor Fi(h, Pickles, Sawces, or Sw^i-Mear during itutlpjee of litre, and drinking intreraea, a iitng QccoSion >J Turiftpr, it el sully cures a llhcumitil'm and Goor, as alii the Scum and Cgnfumpcion, altho'the Patienni a nbkGjndition-, it is allo a ver

 pint

Joint, fuller of Branches, but otbenoije very like to Hypericon or Johns-Wort\ but the Branches are thinner Jet with Leaves, mad* fmaier and greener th,m thcfe of the former Tudafit, but greater than thofe of Hypericon, without any pcrforetiom or holes at all in them. The Viewers arc yellow, and greater than they, andfo are the Headier Berries toitbSred, but /potted with black Streaks on them: The Leaves andblosxaers bath, dog'rve a red Juice, like to that of Hypericon <r Johns-wort, byvhuht may be plainly known, at aljo difUnguifredfrom our common Tutlkn before iejinhel ^ The Stalks dye andperijh upon the coming en of Winter.

V. Thethird, or Tutlan or Naples Its Root, s Jibrcus and reddijl,, rohich finds forth reUJb or brmmfh round Stalks, not much above << tear high inith two erefted Strata like films all their whole length • it is fall of Branches, and mure bujhy than the lajl, but grows not fo tail at it, having two Leaves growing at every Joint, fo elofcly join-ed thereto et the bottom, that the Jud Stalks or Branches feem te run through tbtm-, yet arltlffer than the lafi dfferibed of Matthiohis, are fbarp pointed, of a freilier green color, and/month on the upperftTr, but white underneath, end having many [mull holes therein, Jo Jmall as fcarcely to be perceived-, and for the.mofl part are greater end broader towards the tops, thm they are below .- The bfewers at the tops rfthe Bunches, are of a paler ye/low color, and mam more /et together than in the other ^ abafigreen Husks wherein they ftand, have bhckijli Spots on them, which fo abide u>vn the Heads are fullof Seed. Both Leaves and flower yield a reddrjb or bloody Juice (as the others doj &eirrg brui/ed between ones fingers.

Vi. The Places. Thefirtl grows in many Groves, Woods, Forretts, Parks, and Woody-places, and by Hedge-fides in many parts of England; as by Roily in Eijfex, in the Woalds of Kent, Hampfiead-Wood, and many other places. The fecond is found growing about Brijiol and Bath, and feveral other parts of the Wefi-Country. The third is a Njtive of the Kingdom of Naples, but with us is ouly Murft up tn Gardens.

VII. The Times. They all Flower later rhan Hypericon or Afcyrum: They all flower in Jxfy or Auguft, the Seed orBerres, in the mean time growingripe. The Leaves become red in Autumn^ at which time their red Winey Juice may be pieft forth.

VIII. The Qualities. Tut/an is hor and dry in the fift Degree, Abfterfive, Aitringent, Vulnerary, and Cathartick.

IX. The Speeijieatiort. It feems to have all the Virtues of Hypericon and Afcyrum, viz. Johns and f Peters-Worts-, is good againlt the Gout and Scia-tica, heals BurniripWhfae, ftopsthe Bleeding of Wounds, heals lpeedil^iilJfajple Wounds, alfo Ulcers and Fiftula's.

X. The Preparations. You may have therefrom, i. A Liquid Juke or Ejjence from the Leaves^ ifowers and Berries. 2. An Infufwn of the fame in Water or Wine^ done as Tbca u made, ind to be drank in the fame manner. 5. A Ponder theSeed. 4. A WoundDrink. % ABal/amor

6. A Cataplafm of the frrijh Herb.

The Virtues.

XI. The Liquid Juice or Effenee. Two or three Spoonfulsof itgivenin B-irabar, ororher Stypick Jed Wine, (tops all forts of inward Bleeding in the Wounds, whether proceeding from inward Wounds,

or opining or the Mouths of the Vefels, or ;:uy oilitr Giuie whatfoever -. as Spitting and Vomking of Blood, the Bloody-Flu^ PiGing'Or' Blood, and die Overflowing of theTerms in Women, or of the Lochesin Child-Bjd. It has many other good Properties alt>, and is profitable againlt Ague*bnnd revets, and flops all forts of Fluxes of the Bowels ; jnd is of excellent ufe in curing a Gonorrhg-a^ Llniverfjls hsing premifed.

XII. The Ujuijon in IVater^ frc. Itismadeas Then, and drunk with a little double refined Sugir, in the ijmc manner. It has all thii-rbrmer Virtut (but wejkr) pliaib and gratiries theStfim I nifo Hr^ngtiicns ir ard all the other Bowels; j fides which, it is of good ufe in Hopping City rrhs.

1111. The Ponder of the Seed. It is very AI ilter-five, and purges Chclerick Humors as Diojeondes Dys; And bung raken to two Drams in Honey'd Waier, Mead, or New White-Port Wine, it is a fingular Remedy agiinf the Scatica and Gour, and other Like Kheumatick pains •, being alfo applyd to green Wounds, it prdLntly ltops their Bleeding.

XIV. TUWauni-Drink. Take of the Infufwn rfjhr Leaves, flowers and Berries, /omeo/them, or all of them, in Wine, or in half Water half Wine, •I quart: Of the Liquid Juice or EJJence a Pint; t>j Spirit oj Wine 3 Ouncesy Honey enough to give it a plejging Sweetnejs; mix and diffohe. It is a good Wound-Drink, being taken inwardly, (to half a Pint at a time) Morning, Noon, and Night. Outwardly ufed alfo as a Lotion, it cleanies Wounds, Ulcers and FiltuU's, and induces their ipeedy Healing.

XV. The Bai/nm or Oil. The Oil is made exactly as Oil of hypericon, in Chap. 4.05. SeS. 14. 1 j. T)je Ba/am% as that at Se3.16. of the fime Chapter. Or thus: Take of the Simple Oil ttot Pounds; Balsam cf Peru a Pounds QtioTurpentine half a Pound: melt^ and mix all very well together, and then add Chymical Oil of Oranges /ix Ounces: mix them-, and continue to fir them till nearly told. It has all the Virtues of the Simple and Compound Oils, and is excellent for any Pain or Grier proceeding from cold and moifure, Overtraining of the Joints, Weaknefs ot any othei parts, Contufions, Burnings, Punflures of the Mutcles, Nerves and Tendons \$ or any Wound, Hurt, or Ulcer, whether inward or outward, few other Medicaments being fuperior ro it. Dofe inwardly Irom a Dram to two Drams, drinking a Glafs of Sryprickred Wineafter it.

XVI. The Caiaplafm of the frejb Leaves. It cuies Burnings and Scald ings, and appl^d upon fresh made Wounds, it flops their Bleeding, more eiepecially if the Pouderof tbe dried Herb or Seed be firft plentifully ftreived upon them, and then it quiddy heals them. Gerard fays, rhar beinglaid uponBVokenShins,«andScabby Legs, irhtrjlsthem; as alfo many other Griefs of likekind.

THE DEDICATION.

defirable in its Kind, which will be, both to the *Britijb Ifles*, and to *Tour Majefly* alfo, not only an *Important Security*, but an *Everlafting Ornament of Glory*.

Surely *Madam*, You who could *Unite Hearts in an Eternal Bond of Friendfhip** was the molt fit Inftrument to *Unite Kingdoms* in one Bond of Intereft and Duty. To make, e thofe who were fo different in *Climate, Sovereignty* Religion and Manners, One People*, in the Bonds of *Nature and Affettion*: And to make them, *with one Joint Defign, Intention and Will*, to become *One United and Faithful People*, to fo Defirable and Generous a Miftrefs. But what might not be expected from fuch a Lady, *fo Great and fo Good a Queen? Whok Conjugal Friendfhip* was, and is ftill the *Wonder of Mankind*, (a Noble Pattern to all the Sex) which exceeded even to *Admiration*, whatever has been yet feen upon Earth : Who is it that has *Senfe and Gratitude* in his Soul, would not even lay down his Life for fuch a *Friend*?

When I confider the Admirable Hand of Providence, which has brought Your Majesty to the Throne of the *Britijh Kingdoms*, and has put their Crowns upon *Tour Imperial Head*, which has made *Glorious Tour Reign*, with a Series of *Wonderful Succelfes*, and even *Amazing Victories*, over the *Moft Formidable Tyrant tftbe Earthy* rendring his *mighty Attempts* againft You, *Vain and Foolijb* , notwithstanding his Confederacy with *Deftruftion*, his Covenant with *Death* and his Agreement with *Hell* i to the Delivering You and Your People out of *bis Snare*, and the Eftablifhina of *Tour jujl Title*, upon Everlafting Foundations, againft all *Pretenders whatfoever*: I humbly prostrate my felf to that Tremendous Being.

What can I fay, but that *GOD* is with You, and that You are an *Efpecial Objett* of his *Care*, who thus ftedfaftly holds *Tou* as in the *Palm of bis Hand*: *Tour Sincerity*, and *Generous Love* to Mankind, have prevail'd with that *Almighty Power*, who has given *Tou a Transcendent Portion of Wifdom*, to Conduft *Tou* through the *Labyrinths of Domimon and Government* ,* even whilft *Tou* have been *Fiehtino- if*, ~ *Publick Enemy* of all *EUROPE*, and putting a *uTokut hjsjms*, by which *Tow* have already Tamed the *Monternil ah* «n with *Shame* ^{and} *Contempt*^ and covered him with *Confufion of Face*.

What may I call the *hfirmments* of Your Warfare w' have made *Tea tbm* to prevail-? Who is it that has r

f H E " D E D I C A T I O N .

Feet upon the Necks of Tour Enemies, and given ton Strength to humble the Pride of the Lofty .? Who is it that has Eflablilhed Tour Strength, x.o break in Pieces the Iwincihle Powers, (as tley were Foolilhlly called,) by which You have given a Demonftration to the World, of that Phfhanity and Vanity-? Who is it that has thus made Tour Majefty to Triumph, and adorned you with the Palms of Vittory?

Tis the *Great and the Holy One, the Mighty God of Jacob*, who has done all thefe things for *Tod*; to whom I make *my Daily Addrefjes*, that he may yet Defend and Support the *Righteous Caufe* in which *Ton* are engaged ; *Direbl Tour Counfels* with Wifdom and Prudence ; *Proffer Tour Arms* wherever they are engaged > and that the *Angel of bis Prefence* may Attend and Conduit *Ton* in all *Tour Ways*: So that making *Ton* the *Refiorer of the Breaches*, You may Eftablifh fuch an Univerfal Peace in *Europeans* may Recognize *Tour Happy Reign*, and caufe it to thine with a moft R^plendent Luftre, to all Succeeding Ages of Time.

You Contemn *Madam*, the Poor and Little Artifices of *Tyrants*. You have a Soul too Great to think of fuch *Meannefs*, and a Spirit too Noble for the bare Thoughts of fuch *Depraved Vilenefs* : You aft with the Magnificence of Grandure, made Illuftrious with *Piety*, and an *Unbounded Goodnefs*, repleat with all the Ornaments of *Sincerity and Vertue*, by which You will Live in *After-Ages*, and *Tour Name* be made *Immortal*. So that inftead of the *Diadems'* being an Honour to *Tour Majefty*, You are become the Exalted Honour of *Royalty*, and the Glory of the *Purple* ; which makes *Tour'Sovereignty* Shine as the moft Splendid Bd^htnefs, among the *Heroes* of Time.

G O D has not only made You a *Great Eheen* > but even the *Greateft of Princes* ; and *Tour Early Piety*, as it has advanced *Ton* above the beft of *Women Kind* -, fo it has Exalted *Ton* above the *Greateft of Crowned Heads*. Your Vertues merit a perpetual *Encomium*, and *your Excelling Goodnefs to your People*, isjthat wljch is never to be forgotten ; whom you have been pleas'd to Oblige with *Tranfcedent ASs of Kindnefs*; fo Extraordinary and Superlative in their kind, as all *Succeeding Generations*, under an *Eternal Senfe of Gratitude*, will be forced for ever to acknowledge.

%Ox carry with *Ton Madam*, Majefty anci Honour, and *Tour.Sword* determines the *Sniccejfes. of War*, making with
 " *Thunder*, the World afraid j giving Laws as far as
Ton

Tour Dreaded Name does reach ; which makes the *Tyrants of the Earth*, those *Barbarous Murtherers of Mankind* to tremble, and affrightens the *Obfequiom Slaves to Vtllany*: *Tour Triumphs* are not in the Ruin of Nations and Kingdoms, not in Victories of Blood and Cruelty, not for Dominion and Sovereignty; but to give *Freedom and Eafeto Mankind*, and fet the World at Liberty.

May the High and the Lofty One, the *Almighty GOD*, He by whom *Kings* and *Queens* Reign, and *Princes* decree Juftice, give *Tour Majejiy* a Long and a Happy Life; may He Prolong it to an *Accmplifid Period*', for tije Good of *Tour People*, to whom *Tow* have (hewn *Tour Self* fo exceedinoly Kind. May he Blefs *Tow* with *Profperity*, and give *Tot* that *inward Confolation and Peace of Mind*, which may as Infinitely exceed all the Enjoyments of this Life, how Great and Magnificent foever, as the *Heavens are high above the Earth*, and make *Tour Great and Illaftrious Soul*, enjoy the Fullnefs of Satisfactions, to the *Ultimate* of whatever *Ton* can defire. So that *Crowning Tou* with *Glory and Honour* here, *Tou* may very late Afcend, as On Eagles Wings, to thofe Eternally Serene Habitations of Peace and Tranquility, where *Ton* may be for ever Tranfcendently Happy, So Ardently Prays

THE
P R E F A C E
O R,
INTRODUCTION.

CHAP. T. Of the W O R K it self.

W Pretend not here to an universal History of Plants, but chiefly to such as are most Known, and Virtuous, most Experimented, and Useful in Phyfick. This a Work highly of Use for Physicians, Chyrurgians, and Apothecaries, and for their Sakes, and the Publick Good it was principally Deigned and Intended.

II As to the Authors made use of in this Undertaking, we shall not be so vain as to enumerate them all, it would be to no Purpose and yet it will be Necessary for the Credit of the Book, to give you an Account of the Chief of those, in Treating of each Plant, whose Names we were obliged continually to turn over.

III The Authors we made most use of in Composing this Herbal, were these following, viz. Bauhinus, Bohnfeldius, Csesalpinus, Camerarius, Cuiusius, Dioscorides, Dodonaeus, Durantes, Fuchsius, Johnson on Gerard, Lobel and Pena, Lonicerus, Lugdunenfis, Matthioli, Parkinson, Ruelius, Schroder, Tabernaemontanus, Theophrastus, and Tragus. These, I say, were those which were chiefly consulted, and without whom, we passed not off from the Discourse of any Plant: But we cannot say these were all, for occasionally as it fell in our way, and where some particular Occurrences required it, we had recourse to many others, more than twice their number besides, without the Help of which we could not have so completely performed what we here Present you with all

IV As to the Historical Part, we could not much deviate, but were obliged to follow the most celebrated Authors of this Subject, viz. in their Names, Kinds, Descriptions, Places of Growth, and Times of Flowering and Seeding. In their Names, we have given you the most usual, and those chiefly by which the Plant (in all Ages) has been most known and called, whether Arabick, Greek, Latine, or English, in doing of which, we hope we have in some Measure reunited the Latine Nomenclature, which, even in all our Dictionaries, has been very Faulty and Imperfect.

V As to the Kinds of any Plant, we own we have not given you all that you will find in Parkinson, and many other Authors, because those which we have Omitted, an English Reader, may not possibly come to the Knowledge or Sight of in many Ages, they growing in Foreign and Far-distant Countries, Turkey, Persia, East India, the Moluccas, China, &c. Besides, having no known Virtues or Uses assigned to them, but only their Names and Descriptions, we thought they would only take up room and rather encumber the Book, than add any real Excellency or Advantage to it, considering it was chiefly designed for the Benefit and Use of the Practical Physician.

VI As to the Descriptions, we say they are the same as in other Authors, little or nothing differing from those in Bauhin, Cuiusius, Dodonaus, Fuchsius, Gerard, Johnson, Lugdunenfis, Matthioli, Parkinson, Tabernaemontanus, and Tragus: & we have almost every where reversed the Order of Describing; for whereas they many times begin at the top or upper parts of a Plant, and so go downwards to the Root, we on the contrary, generally begin at the Root, first Describing it, and so ascend upwards to its Stalks, Leaves, Branches, Flowers and Seed, or Fruit, which we take to be the most natural Order or Method.

VII As to the Places of the Growth of Plants they may be very uncertain, because, where they have been found to Grow in great plenty, in former Ages or Times, the spots of the same Plant is not to be found now. In some places where I have found several Plants to Grow as Natives of the same, when I was a Youth, now in my present declining Years, there are no remainders of them to be found. The Egyptian Arum, or Pseudocolocasia, which we now call the Carolina Eddo, (because there every where planted) did formerly Grow plentifully in Egypt, which I suppose was its Native place of Growth, and was there planted for their use in Meats, and for Food: Now our late Travellers say, it has not for some Ages been known to Grow thereat all. But 'tis possible that it has been neglected and disused: Yet I am of Opinion, that if it were diligently sought after, some remains of it might be found again. It grows in vast plenty

C H A P . III.

Of the Firft Qualities of *MEDICINES.*

I. ¹ T_p #E^E natalities of Medicaments are five-fold^A JL according, 1. To their Temperaments. 2. As they are Alteratives. 3. As they are Appropriate. 4. As they Diminish something. 5. As they Add or Restore something -, all which Qualities we come now to explicate in order.

II. The Temperaments of Medicaments are five-fold, confide red_o. 1. As they are perfectly Temperate, viz. neither Hot nor Cold, Dry nor Moift. 2. As they are Hot. 3. As they are Cold. 4. As they are Dry. 5. As they are Moift. In the four laſt of which, there are Jaïd to be 4 Degrees, receding from their principal, ver. gr. An Herb which is Hot, may be hot in the firſt, ſecond, tyrd, or fourth Degree of heat. Again, from the jour prime §²uaHties> theſe alſo proceed, viz. that a Medicament, 1. as it is Hot, may be hot and dry, or hot and moift. 2. As it is Cold^A alſo cold and dry, or cold and moift § and theſe like wife in* all the four De-grees of Temperature.

III. Temperate Medicaments are ſuch which work no change at all, in reſpett of heat, coldneſs^A dryneſs, or moift ure.

And theſe may be Temperate in ſome reſpett. 1. As being neither hot nor cold_o and yet may be moift or dry. 2. As being neither moift nor dry, and yet may be hot or cold. Their life ;>, where there are no apparent Exceſſes of the four other * Vitalities ^ to preſerve the Body Temperate^A conſerve Strength, and reſtore decayed Nature.

IV. Hot Medicaments (and ſo alſo Cold) are conſidered in reſpett of our Bodies, and not of themſelves : For thoſe Simples are called Hot, which heat our Bodies.

Their Uſes are, 1. To make the offending Humour thin, to be expelPd by Sweaty or thro*^{*} the Pores. 2. To help Coneottion. 5. To warm and comfort the Viſcera. 4. And by outward application, to diſcuſs Tumors. 5. Or ra'ife Blifters, make Cauteries, &c, according to the degrees of Heat.

V. Cold Medicaments are ſuch, as cool our Bodies being over-heat, by any adventitious or accidental Cauſes.

Their Uſes are, 1. To cool the Yarts or Bowels. 2. To condense Vapours. 3. To thicken Humours. 4. To abate the heat of fevers. 5. To refrejh the Spirits almoſt ſuffocatei. 6. Allay Inflammations. 7. B^eepreſs Sweating. 8. Eaſe violent Pains,

VI. Drying Medicaments, are ſuch as make dry the Parts overflowing with moiſture.

They are uſed^A 1. To flop Ylaxes. 2. To comfort and ſtrengthen Nature. 3. To confume a ſuperflinty of Humours. 4. To fortify the Bowels. 5. To reſtore in Conſumptions, where great fluxes of the Bowels have been.

VII. Moift Medicaments^A are ſuch as are oppo* fedto drying, which moiſten, looſen, are lenitive, and make ſlippery.

They dre uſed,* 1. To moiſt en an over dry and conſtipated Habit of Body. 2. To eaſe Coughing. 3. To help the roughneſs of the Wind-pipe. 4. To looſen the Belly. 5. To relax Parts contratted or hardned.

VIII. Things hot in the firſt Degree, gently warm the Bqdy being over cooled, and outwardly open the Pores. Hot in the ſecond Degree as much exceed the fir ſt 1 as the firſt exceed Temperature, and theſe cut tough Humours, open Obſtructions, and the Pores alſo outwardly. Hot in the third Degree, more powerfully beat, and are able (if much uſed) to* inflame the Body, and cauſe fevers, provoke Sweat exceedingly, and reſiſt the malignity of the Plague or Peſtilence^A and more powerfully aljo cut tough Humours. Hot in the fourth Degree, burn the Body if outwardly applyed, raïſe Blifters, corrode the Skin.

IX. Things cold in the firſt Degree, qualify the heat of the Stomach, and rejrejh the Spirit. Cold in the ſecond Degree, We chiefly of uſe to abate Inflammations. Cold in the third Degree, are Repercuiſſive, ani drive back the Matter, repreſs Sweat, and keep the Spirits from fainting. Cold in the fourth Degree, ſupify the Scnfes, eaſe violent Pains, and are uſed in extream Watchings.

X. Things dry in the firſt Degree, Strengthen. In the ſecond Degree, Bind. In the third Degree, ſtop Fluxes, and reſtore in Conſumptions. In the fourth Degre.e, ſtop Catarhs, and all Fluxes of Blood and Humours; are highly Stiptick* and dry up aſuper-abundancy of moiſture.

XI. Things moift in the firſt Degree, are oppoſed ſo drying in the ſame Degree : They moiſt en the Body, and Parts dried. In the ſecond degree, they Lenijy, looſen the Belly, and make ſlippery. In the third degree, they ſmooth the roughneſs of the Wind-pipe. In the fourth degree, they cure a conſtipation of tlye Bowels.

XII. Thus Medicines alter according tp their Temperature : Whoſe active Qualities are Heat and Cold § and by them Diſcaſes arc fold to be eradicated. The Paſſive are dryneſs and moiſture, ani they are ſubſervient to Nature.

CHAP. IV.

Of the Second Qualities.

I. Of the Second Qualities of Medicaments are such as are Alterative, which alter the Habit and Constitution of the Body, as it has a respect to the Blood, Lympha, Serum, and other Humours of the same; and these Alteratives are considered as they are Medicaments Internally used or Externally applyed.

II. Of Internal Alteratives Authors have made many Titles, but the Whole of the Matter is comprehended under the thirteen following Appellations, viz. 1. Aperitives. 2. Absterfives. 3. Attenuants. 4. Digestives. 5. Incisives. 6. Carminatives. 7. Anodyns. 8. Narcoticks. 9. Bechicks. 10. Solutives. 11. Attenuaters. 12. Coagulatives. 13. Confortatives.

III. Of External Alteratives, we have these following fourteen, viz. Stypticks, Hemopticks or Antihæmorrhagicks. 2. Anodyns. 3. Repercussives. 4. Diffusives. 5. Emollients. 6. Attrahives. 7. Suppuratives. 8. Corrosives, or Pyroticks. 9. Digestives. 10. Absterfives or Incarnatives. 11. Agglutinatives. 12. Cicatrizers or Hæmometicks: Of all which we shall treat.

Of INTERNAL ALTERATIVES.

IV. 1. APERITIVES. These are such as open the Passages of the Viscera, and remove the Obstructions, which are in the Bowels, and are distinguished into three Sorts, 1. Catharticks, which beat there can be no rarefaction, and therefore refraction, no opening of the obstructed Bowels.

V. 2. ABSTERSIVES. These are such as, which after opening Obstructions of the affected Parts, cleanse them, by taking away the Recrements which obstructed them, being the superfluities of the Blood, Lympha, and other Humours, and without which work be done in vain. They have a sharpness and tenuity of Substance, and it is not any great matter whether they be Hot or Cold by reason neither quality (if not excessive) hinder their Mwn. They also remove glutinous and clammy Humours in the Superficies, or adhering to the Pores of the Skin and Ulcers.

VI. 3. ASTRINGENTS. These are Binders, and are generally dry in the second and third Degrees, whether they be hot or cold; they are Stypticks, and in some measure constrict the Bowels, influxes, dry up Fluxes of Humours, help Catarrhs, and strengthen the Tone of the Stomach and other Bowels, when over Lax, or weakened long Defluxions, over much moisture, or the vehemency of any inveterate Disease, and are therefore often given in the end of a Cure.

VII. 4. DIGESTIVES. These are such as are used to digest the Matter of the Blood, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

mach, by which a good Chylus is made in order to the Sanguification, and Nourishment of the Body.

VIII. 5. INCISIVES. These are such as are used to cut and divide the Matter of the Blood, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

MUZ, reZuTbT, are of very thin and subtil Parts.

MUZ, reZuTbT, are of very thin and subtil Parts.

IX. 6. CARMINATIVES. These are such as are used to remove the Wind, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

X. 7. ANODYNS, or PAREGORICKS. These are eaters of Pain, which are not often Cure Diseases, yet are used in the first Degree, and are moderately hot.

and Disease are remaining, they are moderately hot, and are moderately hot, and are moderately hot.

XI. 8. COUGHES. These are such as are used to remove the Cough, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

XII. 9. BECHICKS. These are such as are used to remove the Cough, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

XIII. 10. SOLUTIVES. These are such as are used to remove the Obstructions, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

XIII. 10. SOLUTIVES. These are such as are used to remove the Obstructions, and are distinguished into three Sorts, 1. Attenuating, 2. Coagulating, 3. Conforting.

*Etions, they open the inferiour Du&us of the Bowels y as do Nitrotts Salts, Soluble-. Salt of Tartar, Oat-Meal, &c. and this they may io, altho' they may have some fmall Aft riff ion, and by reason of Subfiance, do not differ from thofe which are Ab-Jierfwe, but in degree. For thefe things which cleanfe the Pores and inward Paffages, have a great tenuity of Parts, and are moderately Afriflive, which cleanfe, and as it were fcemingly Purge the greater Paffages, yet withall firengthen the fame. Some things are Soluble by lenifying, as Fat things * and fome by wafhing and abfierfwn, a* Whey, Solutive Waters^ New Beer and Ale, &c.*

XIV. II. ATTENUATERS. *Thefe are fuch things as make thin, and are of hot and thin Parts,' andfo extenuate grofs and tough Humours, and are for the moftpart hot and dry in the fecond and third degrees, as things Sharp, Picquant, and Aromatical, generally they are fireong provokers of the Terms, becaufe they make the Blood and Lympha, more thin and fluid: They alfo facilitate the Delivery of Women in Labour, bringing forth both Birth and Afterbirth. Hereto belong Inciders of Vifcid Humours, which are more fireong. And Diffolvers of what is Grumous and Coagulated, as Sal Volatile Oleofum, and all Alcalious and Volatile Salts and Spirits. Alfo Extenuants, or wafiers of the Fat Subfiance, and Grofs Parts of the Body. And Laxatives, which are Solutives, and moderately hot, moiift, and thin. The ufe of Attenuating Medicines^ ii previouisly in order to open the ObdruSions of the Bowels, Lungs, and Womb.*

XV. 12. COAGULATIVES. *Thefe are fuch as make thick, being contrary to thofe things, which make thin or rarefy. They make Rheum and Hurfoursi tough and thick. -, and fo are * accounted either cold or temperate. They are gi* ven in Colds, Coughs, and vehement Catarrhs and Difillations, whereby the Flegm or Rheum being coagulated or thickned, it is made more fit for Experation! They alfo take away the fharpnefs of the Blood and Lympha, and thicken it, whereby they flop the overflowing of the Loches and Terms in Women, and perfectly prevail againfi a Diabetes. They alfo flop too much Sweating, and the dijpofition of the Spirits, which often happen to fuch as are Weak, and in Confumpt'wns.*

XVI. iv CONFORTATIVES, *Thefe ere Strengthened of the univerfal Man, of the Spiiits as well as the Body -, and are generally of hot, dry, afiringing, and fubtil Parts, that they may warm thofe Parts which are cold^ dry and confirm thofe which are weakned by too much moiifture, bind or fiop the too openefs of the Peres> by zvhich the Spirits are dijjipated \$ and of fubtil and volatile Parts, that they may unite with or join, the Natural, Vital, and Animal Spirits, to revive Aid exhilarate them. But fometimes, when the Body k weakned by heat and drynefs, cold things may become Confortatives, by overcoming thofe Qualities by which the Body ii weakned andfo voe fee the Spirits and Oils tf/Nitre, Salt, Sulphur,^ Vitriol, Lime juice, Juice of Limons, ©V. Confortatives in the higheft degree, where the Body has been weakned by Hetic and continual Fever, and other hot and dry Indijpofitions, riot eafily to be expreffed in few wrds.*

II. Of External ALTERATIVES.

XVII. t. STYPTICKS, HZEMOPTOICKS, or AntihxmorrhagickS.- *Thefe are fuch things, as fit op Bleeding in what part of the Body foever. They are for the mo ft part cold, at leafl temperate, exceeding drying and repulfive: for things which are cold, repel, and many of them coagulate', or thicken and fo if they have a crafftitude of Parts, as things acerb and aufiere. And Medicines vehemently drying^ ivbich are Afiringenty repel alfo, becaufe they thicken the blood and Lympha: Thefe^ if they be of thin parts, much conduce to Afriftion : Some Stypticks have a crafftitude of Body, for which reafon they then cannot eafily penetrate the more remote Parts, precluding the Paffages; therefore thofe which have a thinnefs of Subfiance, are rather to be chofen, unlefs the caufe Her in the fuperjicies^ as in all frefh and bleeding Wounds, Stypticks are indeed the higheji Afiringents, and Binders, and if joined with Narcoticks, tranfeend in the higheji degree.*

XVIII. 2. ANODYNS, or PAREGORICKS. *Thefe are eafers of Pain ^ and are ?moderately hot, viz. in the firft degree^ not much exceeding temperate, and of thin Parts, and rarefacient : So by opening the Pores, they Evacuate, Rarefy, Extenuate, Digeji, and ConccU; equally enco ant ring whatever Humour, is either jharp, cold, grofs\ or tough, inhering in the Pores, or near adjacent grieved Parts, which by reafon of the obilruUion of the Pores, could not find a way out ^ beftdes, they are aqueous or moiiftening, and aereal or of fubtil Subfiance, not in the leafl Afringent. But there are fome Cold Anodyns, which are fuch as give eafe in Tumours^ or Pains caufed from great heat. Again, Anodyns are /aid to be Proper or Improper. Proper, are fuch as we have already been fpeaking of: Improper, are fuch as they call Narcoticks, made of Opiates, Henbane, Hemlock^ Mandrwkes, Nightff)ade, &c.*

XIX. 3. REPERCUSSIVES. *Thefe are Repelling Medicaments, which drive back the Humour. They are generally cold and drying, and of grofs Parts*, for that which is cold, repels, and if it has a crafftitude of Parts alfo, it alts with more force, as that which is acerb or aufiere. Thofe things alfo repel which are Afringent, if they have alfo a tenuity of Parts, for the thinnefs of their Subfiance, does much conduce to Attrition. And therefore other things which are Afriftive, by reafon of the thicknefs of their Subfiance, cannot eafily penetrate the more remote Parts, precluding the Paffages. And hereto Defenfatives, and Intercipients may be reduced, being Cold, Afiringent, and Repulfive. Thefe^ by their Coldnefs, repel the Humour * and by their Afringency, firengthen the Part affli3ed.*

XX. 4. DISCUSSIVES. *Thefe are fuch as refolve the Matter contained in the Part They are moderately hot, with a tenuity of Parts, and very little rejiccant or drying : tor as Difcuflives rarefy and make thin, caufing the Matter to be dijjipated fo exceffive heat dr's conderfate and dry -7 where eta moderate heat ojer the Pores, or Paffages, and deeply penetrah tg, by the tenuity of its Subfiance, opens the Pores, attenuates the Matter^ and fo eafm the Pain. Their ufe therefore is, 1. To open the Pores, 2> To attenuate the Matter**

or make it thin and fluid. 3- An¹⁰ evacuate it for the moist part by Perforation.

XXI. 5. EMOLLIENTS. These are such things as mollify or soften any hard tumour or Part. These are generally hot and moist * hot in the first degree and moist in the first or second degree. Their heat is a little beyond the Proportion of Nature, and they are of thin and humid Parts, that they may pierce into the Matter and mollify or soften it. for which reason it is of use in Strumus or Scirrbus Tumours, Oedema's, and others of like Nature; to soften the hardness, and reduce it to its pristine heat: And these are either Common, or proper. 1. The Common are such whose general Operation is to soften hard Swellings, and such parts and places of the Body, as are hardened by Congelation. 2. The Proper, are such as are applied or appropriated to peculiar Humours which being either hot or cold, the Emollient must be opposite to them, in those active Properties, but retaining its due humidity.

XXII. 6. ATTRACTIVES. These are drawing Medicines, which attract or draw the Humours from the Center to the Circumference. They are hot, and of thin Parts: For that which is hot, attracts, and that more strongly, if it has combined with it a tenuity of Parts. Those which are hot and dry in the second degree, moderately attract if in the third, more effluently, but most those which are in the fourth, for the attraction it according to the strength or degree of heat: These some things attract specifically, and not by any manifest Quality, as Emetics, Catharticks, &c. These are contrary to Repellents, for their Nature it to drive from the Circumference to the Center but Attractives draw from the Center to the Circumference. They are of use in Wounds made by the Bites of Mad Dogs, Serpents, and other Poisonous Creatures; in Burnings, Venereal and Pustulent Tumours &c. where it is absolutely necessary to draw the Poison and Malignity outwards in order to the saving of Life.

XXIII. 7. SUPPURATIVES, or Maturatives. These turn into Matter confused Flesh, and Humours as also the Substance, of which many Tumours or Swellings consist and bring it to perfect ripeness. They are moderately hot, and next to Emollients, yet differing in that Suppuratives have an Emplastick faculty, where, by opening the Pores, they produce heat most like unto that of the Body, without any Consumption or Addition of the Humidity. These are friendly to Nature and conspire together with it, to bring the superfluous Matter to forth and to such a form, as that it may be separated and cast out and the affected Part thereby eased.

XXIV. 8. PYROTICKS, or CORROSIVES. These are threefold. 1. Catharticks. 2. Septicks. 3. Causticks, or Escharoticks. I. Catharticks, or Eaters. These are mainly strong, they by their corrosive Properties, consume Excrements and eat away proud and dead Flesh. II. Septicks. They are Corrosives, vehemently hot and dry, of thin parts and confidence which by their vehement heat, eliquate the Part, and recalled putrefaction, and their use is to draw Blisters, these are Vesicatories. III. Causticks, or Escharoticks. These are vehemently hot and burning being the strongest of all so that they consume all they come near. They cause Crufts upon the place they are applied

to, and are chiefly of use to make Issues, or open the skin.

XXV. 9. DIGESTIVES. These are a kind of Maturatives, which bring laudable or well digested Pus, or Matter, into Complex or confused Wounds, and ill natured Ulcers; without which the Pain can neither be taken away nor the Wound or Ulcer healed or a stop put to the eating, &c. Of these see largely discoursed in our his Chirurgica, where you may find a plentiful number of Prescripts in exemplification thereof.

XXVI. 10. ABSTERSIVES. These are Cleansers, which separate and remove the glutinous clammy, or putrid Matter adhering to Wounds and Ulcers, which hinders their healing. They have a power to exsiccate with tenuity of Substance, and they may be either hot or cold, nor is it of any great moment, which of them by reason neither Quality can hinder their action, except Excessive. Yet some count them chiefly hot and drying, with a certain thickness of Parts to compact the humours: And because they cannot be defined, by either heat or coldness since some of both forts cleanse, they are to be understood to have a terrene Substance, which may take away the filth with them and must have a certain roughness, or inferior Quality to carry away the compacted filth.

XXVII. 11. SARCOTICKS, or Incarnatives. These generate flesh in hollow Wounds and Ulcers, and fill up their cavities, as far as Nature will admit. They are hot in the first degree, a little Deterfive, and that without Biting or Astringent. Also moderately drying, under the second degree. And such as Impuritate or breed Fat, are Heating, Nourishing, Impulsive, Attractive Retentive, or Specifick as Hemp-Seed Powder of Sarcocol, Kernel of the Indian Nut. They dry, and change the Blood that comes to any part into flesh. Their degree of dryness must be according to the Part: If the Ulcer happens in a dry part of the Body, the Sarcotick must be very dry, and therefore some of them are drying, even in the fourth degree. But if the part of the Body is moist in which the Ulcer is, the Incarnatives are to be less drying: They ought not to exceed the first degree, unless the Ulcer be very moist. They breed not good Blood, nor correct the intemperature of the place affected, they only defend the Blood from ill Symptoms, and the Ulcer from Corruption in breeding Flesh, for Nature in breeding Flesh, produces either ferrous or purulent Excrements, and these Medicines which cleanse and consume those Excrements by their drying Quality, are laid to breed flesh, because by their help, Nature performs that Office.

XXVIII. 12. AGGLUTINATIVES. These are such as glue the Lips of Wounds, and separated Parts together. They are also called Symphitica, which is the reason that Comjry is called Symphitum, because of its glewing Quality. They are generally drying in the second degree and are in a mean between Incarnatives and Cicatrizers. They are not Astringent, but Astringent, and prohibit the flux of Humours, to the lips of Wounds, Ulcers, and Fistula's. They are temperate, in respect of heat and of a thick Substance. By their dryness, they absorb that humidity, which intervenes between the lips of Wounds, that thereby they may be conjoined: And that is the true

Cure of an Ulcer, which conjoins the fides of an *Ulcer, before brought together* And Ulcers require a greater degree of drying than Wounds, not only to consume what flows out, but also what remains liquid in the Flejh.

XXIX. 13. CICA TRIZERS, or Epulo ticks, These are fitch things as skin a Wound, Sore, or Ulcer. They dry and bind without biting; abforbizg the hunfrdity of the Flejh, co/2tr<:ffing // with a Skin, or a thin Callus like unto a Skin, am therefore are more drying than Incarnatives or Glutinatives: For these bind, contrail, confipate^ end indurate; being cold, andofa thick Sub fiance. There is also a sharp and biting Epulotick, which consumes dead Fle/h, as Cathereticks -5 and a third fort, which dries without afiritifion* The lafl part of the Cure of a Wound or Ulcer, is to cover it with Sfon, and reflore the place to its pripixie beauty: Now these Medicines meddle with the flejh^ no farther than only to convert it into Skin.

XXX. 14. COSMETICKS, or Beautifyers. These adorn the Body by adding beauty to it, by abfterging or cleaning it from defilements^ as Leprofie^ Leuce. Scabs, Itch, Pimples, Rednejs, Wrinkles, Freckles, Tellownefs, Tanning, Sunburning, and the like. Those which proceed from heat, are to be remedied by cooling things: If the defilement is impaUed in the^ Skin, extenuating Medicines are to be applyed -, if Freckles or Worms affetfit, the Skin itfelf is to be abfterged by Emplafers of Soap, or Oil of Tartar per deliquium, diluted with Watery ifLeprofie, Scabs, or Puftules, constantly breaking out, the Cuticula muft be taken off by Epifpaf ticks, 67V.

CHAP. V.

Of the Third Qualities*

I. *TP HE third Qualities of Medicines are fuch as X are Appropriate, that is to fay, which are appropriated to fome principal and noble Parts of the Body, Me knowledge of which Physicians have learned and obtained, either, 1. From the (ignatures of the Medicaments themfelves. 2. Or from a long ferief of Prattice and Experience. •

II. And therefore as Medicines are faid to be appropriate, to the moft noble and principal Parts of the Human Frame, fo from them they take their denominations or Names, and accordingly are faid to be, 1. Cephalicks. 2. Neuroticks. 3. Stomachicks. 4. Pulmonicks,* or Pe&orals. 5. Pleuiticks. 6. Cardiacks, or Cordials, j. Hepaticks. 8- Spleneticks. 9. T^efentericks, or Hypochondriacks. 10. Nephriticks. 11. Hyftericks. 12. Arthriticks. Of which in their reffpellive order.

III 1. CEPHALICKS. These Medi-ernes are faid to be appropriated to the Head, and have reffpelt chiefly to the Brain, the Medulla oblongata, and the Membranes called Pia & Dura Water, but have very little to do with the Tongue, for that is a very unruly Member. The Brain is the feat of Apprelwnfwfn, Judgment, and Memory, and by Nature moderately hot ^ and fo is very eafily ajjlitfed by either too much heat or cold, but

chiefly by the latter, and for the mojl part by too much moifture, and therefore the Medicaments appropriated to the Head and Brain, are generally hot and dry, and of very fubtil, thin, and volatile Parts, for othervoife they could have no affection upon thofe Parts. Tp thefe foine add Ptarmicks, and Sternutatories -, 'tis true, thefe will purge the Brain and Head from a world of pituitous, cold, and moiyl Recrements, but thefe, are not proper Cephalicks, for whit /bey eio^ is by the Jjrtxe of their violent heat, and jlrong attrallive power. Whether there be any cooling Gephalicks is a doubt^ if cooling things affeff the Head and Brain, they do it flmply, either by their cold ^tality, 'or by cooling other Parts over-heated, which by Sympathy or Content, affeff the Head.

IV. 2. NEUROTICKS. These are Nervous Medicaments, and are at/ hot a/zd^ dry^ from the fecond even to the fourthdegree, of a very thin Subjlance and penetrative Parts, without which they could not pierce and affell the Nerves, to cafe their extravagant Pains, as in Cramps and Convulfions, or to warm, comfort, and firengthen them, as in Palfies, &c. they ought to be very fubtil and volatile, that they may agree with the Animal Spirits, and as it were recuperate them. Tl^fir life is both Internal, given in fome proper vehicle •, and External, being apply ed to the Parts affeffed, and all along down the Spine or Back-Bone^ from whence all the Nerves of the extream Parts, as well as fome others fpring. They verf much agree in their Qualities with Cephalicks, becaufe the Root or Original of all the Nerves thro' the^ whole Body^ arife from th^ brain.

V. 3. STOMACHICKS, or Stomach Medicaments. These are fuch as open Obftrufions in the Stomach, cafe its Pains, and firengthen its Tone. They may be either hot or cold^ and fo affeS the Part, according w the Indifpofition which attends it. 1. When it is obfiruQed, the Appetite is diminijhed or depraved, with a kind of naufeousnefs concomitant: And this is remedied chiefly by acid Aperitives. 2. When it is pained, or there is a ficknefs at Stomach, it is* commonly from being either over-heated, and then cooling Stomachicks are to be given\ or over-cooled, and then hot Stoma* chicks are to be exhibited; or from vehemently acid or sharp Humours in it, and then Abforhents, or hxt Alcalies, will be chiefly of *ufe. 3. When its Tone is weakned, or hurt, then the Dige/lio/i is bad, the Concoffion is weak, and fo a bad Chylus is generated-, whence the Retentive Faculty is alfo many times profligated, adid whence proceed fometimes the Scurvy, and Rheumatick Pains, or the Gout -, and if it be of long continuance, it induces a Confumption, becaufe the Body will want & fuitable Nourifhment. And thefe things are ronedied (after due evacuation) by Stomaticks, - of a hot and dry Quality, of thin Parts, and Comfortative wthall, which have power to warm, comfort, and firengthen it, and have likewife an Afrivrgent property, which Jirengthens the Retentive Faculty.

VI. 4. PULMONICKS, ↑Pe ar a s. These are Medicaments appropriated - to the Lungs, and have regard either to the Part ojjiisled, or to the MMter ajjijfing. 1: Thofe which regard th^ Part affiied, are fuch as flop bleeding, if any Vejfel is broken in the Lungs, and by a kind of Styp tick Quality, have power to conglutinate or heal it -7 or if there be any Vleer in the Lungs, have the power of clean fin* it. and bed'm? it zciThjll which

is done by either a Balsamick property, or by a Specific of which Nature is Cinnabar of Antimony and all sweet Preparations of Mercury, which thring into the mass of Blood, and being dissolved in it give such a healing property to it, that by its continual passage thro' the Lungs, it does at length perfectly heal them. 2. Those which regard the Matter, and these are such as digest and thicken the Rheumatick or pituitous Matter, fluffing them (which causes Asthmicks, Wheezing, Hoarseness, loss of Yoke, Coughs, &c.) and cause it to be expetorated and those are they which are most usually called Pectorals, Be sides, they many times clear the Stomach of what sticks to it, causing it in some measure to be spit up.

VII. 5. PLEURITICKS. These are such things as are appropriated to the Pleura and generally give present ease to Fains and Swellings in the Sides, Stitches, the Pleurisie, Sec, and they are either Anodyns or Narcoticks. The Anodyns, are such things as are hot and dry, and abound with an admirable volatile Spirit and Salt, such as Salt of Urine, volatile Sal Armoniack, volatile Salt of Tartar, volatile Salts of Beans, Pearse and other Pulfesy as also Sal Volatile Oleofum. The Narcoticks, are such things as are made of the Wild or Corn Poppy Flozrs and Heads, and of Opium, so that Opiates, especially such as are repleat with volatile Sal Armoniack, Salt of liartflwrn, of Tartar, &c. all immediately affect the Pleura, and give present ease in the distaffellions thereof.

VIII. 6. CARDIACKS, or Cordials. These are Medicines appropriated to the Hearty the Fountain of Life, and Seat of the Vital Spirit, the Original of Innate Heat, and of Vigor and ASion. And therefore Cordials ought to abound with Subtilty and Volatility, to revive the Spirits, and with Heat to strengthen the Heart, and make it perform its action. These Cordials which revive and refresh the Spirits, must be Spirituous, as Wine, and Spirit of Wine: And those which strengthen the Heart, are either Hot, when its natural heat is decayed or waisted: Or Cold, when it is heat above Nature, by either Fevers or any violent Passion, or by toison, the first of which are Antisepticks. The second, Confortatives. The third, Alexipharmicks, or Antidotes against Poison.

IX. 7. HEPATICKS. These are Medicaments appropriated to the Liver. And these are considered in a three-fold respect. 1. As they open its Obstructions. 2. As they resist its Diseases. 3. As they strengthen it. As to the first, Hepatick Aperitives are to be chosen, which may open its Vessels, and keep them free from Obstruction, without which it is impossible that the Person should be Well, but must at long run fall into a Consumption: These cut and extenuate without any vehement heat, and yet cleanse. As to the second, Hepaticks opposite to the Disease afflicting the Liver; are to be chosen: So if there is an Inflammation, cooling, cleansing and extenuating things are to be used: If a Scirrhus, things softening and dissolving. With a Decoction of Juniper-berries in Water, drank for a Tear together as ordinary Drink, I cured a vastly great Scirrhus of the Liver, outwardly to be felt, hard, and as large as a great twopenny Loaf. As to the third. The Liver after all is to be strengthened and this is done Hepaticks, gently Altringent, for seeing its use is to help towards the perfection of the Bloody it needs some assistance to preserve its heat and strengthen it.

Yet the Liver requires not so great Afringents as the Stomach, because the passages of the Stomach are larger, and more open, than those of the Liver, so that if they be very Binding, they may be hurtful to the Liver, and cause Obstructions.

X. 8. SPLENETICKS. These are Medicines appropriated to the Spleen. Spleneticks are considered in a threefold respect also. 1. To such as open its Obstructions, when they are Aperitives, which ought to be so powerful, as to penetrate into its most inward recesses, for the whole Substance of the Spleen, is a kind of Animal Honeycomb. 2. To resist its Diseases and these in an Inflammation, ought to be cooling and discharging: In a Scirrhus, to be highly Resolutive, not in the least binding, and outwardly Emollients may be applied. 3. To strengthen it. And these are such as are temperate, in respect to heat or driness, yet they ought to have so much adstringency, as to confirm its natural and healthful Tone.

XL 9. MESENTERICKS or Hypochondriacks. These are Medicines dedicated to the Mesentery: Its grand failure is from Obstructions, which are either from viscid or clammy Humors or from Wind, which induce a profound Pining, or universal Consumption of the whole Man and in the end (if not removed) Death. Upon this Axle-tree, the whole Orb of Life turns and when it breaks, the Man sinks, and the Body returns to its first Principles. And therefore the most powerful Deobstruents or Aperients, are such as are deduced from Chalybeates: In the Animal, from Volatile Salts, as Sal Volatile Oleofum Sylvij and in the Vegetable Kingdom, such things as have power to dissolve congelation of the Juices, as Volatile Salts of Beans, and of Tartar, or to cut the viscid and clammy Matter as Creffes, Horfe Radish, Mustard, Rocket, in cold habits of Body, or Juices of Citron, Limons, or Lime Juice, and their Syrups, in hot Constitutions joined with other proper Aperients, which may have a power to penetrate into the most inward recesses of this Bowel. Add to these Carminatives, conjoined with Sylvij Spiritus Anticolicus, where Wind seems to have the predominancy.

XII. 10. NEPHRITICKS. These are Medicines appropriated to the Reins and Bladder. In the Reins, a Separation is made of the Serum from the Rhod, without which Man could not live and the Bladder, of a Sufficient magnitude is the receptacle to contain it. Therefore it is necessary by appropriate Medicaments, to keep those parts free, and free from Obstruction, and to retain the better perform their office. The Diseases of the Reins and Bladder are chiefly, 1. Obstructions by a tartarous or viscid Mucilage. 2. Stones, Gravel, or Sand. 3. Puffing. 4. Piffing. Blood. 5. Ulcers. The first, is cured by Aperients and Diureticks. The second, by Lithonripticks. The third by cooling Diureticks, as Sal Pruiellae dissolved in a Decoction of Linseed. The fourth, by Stypticks and Astringents, as Catechu, and Opiates prepared with the last, by Balsamicks, as Balsams of Turpentine, Peru, Capivij, Venice, Strasburg. Turpentine, and sweet prepared Mercury, which transeends all other things.

XIII. 11. HYSTERICKS. These are Medicines appropriated to the Womb: It is a Pan

Part which one would think had some Sense in it, he cause it is pleased and delighted with some things[^] as Aromaticks, Perfumes, and the like[^] and displeas'd (so as to fly from them) with stinking and ill-scented things, as Turds, Afla icetida, and other stinking things of like nature. Therefore since Vapours, Hyfterick Fits, and Hyft crick Convulsions, proceed from the Womb, those things which alleviate them, suppress the Humours, and reduce the Womb to its place, ease its Pains, and profligate it. Convulsive Motions are properly called Hygiencks; so Musk, Ambergrife, Aromaticks, applied to the Nose, induce Vapours, Fits, Convulsions, &c. Whereas applied to the place of Conception, suppress them all But Afla foetida, and other stinking things' applied below, bring those Diseases[^] whereas held to the Nose, or taken inwardly by the Mouth, they frustrate and Cure them. Medicines which provoke the Terms, or Loches, &c. or which suppress or stop them, are accounted Hyftericks -, but of them we shall treat in the fourth Qualities.

XIV. 12. ARTHRITICKS. These are Medicines appropriated to the Joints. And seeing that they consist chiefly of tendinous and nervous Parts', therefore they are chiefly composed of Neurotick Medicaments, which have a heating and drying Quality, gently astringent or binding, and without having a peculiar strength or Property: But because the Joints are the extreme parts of the Body, and more remote from the Vital Center, they require the stronger Medicaments. Pains are eased by Anodyne Arthriticks[^] mixed with Narcoticks', as a mixture of Camphir, and Spirit of Wine, with Opiates. Inflammations are abated by Arthritic Baths: And the Arthritic Tumour is removed either by Epispasticks, or Burning, or by the application of Arthritic Repercussives, mixed with Camphir or Opium, or both.

C H A P. VI

Of the Fourth Qualities.

I. THESE fourth Qualities of Medicaments are such as are Abstractive, to wit, such as by their Power or Operations, take away some thing from the Body, or from some of its Bowels or Parts

II. And these receive their Names from the variety of their Operations, which they each perform in the respective parts of the Body, to which they are adapted which are the Nine following, viz. 1. Emeticks. 2. Catharticks. 3. Salivaticks. 4. Ptarmicks. 5. Emmenagogicks. 6. Diureticks. 7. Lithontripticks. 8. Sudorificks. 9. Veneficks.

III. i. EMETICKS, Vomitories. These by giving a reluctance to the nervous Fibres of the Stomach, cause their Relaxation and Stimulation, whereby afterwards as the nauseousness encreases, those nervous Fibres before relaxed, suffer a kind of Convulsion, or Contraction and so eject the offending Matter upwards, or by the Mixture, whereby that Viscus, by such a discharge, comes to be separated to its pristine Health, Nor is the Stomach otherwise to be cleansed, for ten Catharticks, or

Purges, however, will not so well cleanse the Ventricle, as one proper and well-defigured Emetick. The Stomach therefore is to be cleansed upwards by Vomiting, the Entrails, or Intestines downwards by Purging, which according to the Law of Nature.

IV. 2. CATHARTICKS, or Purging Medicines. These peculiarly cleanse the Entrails, but will draw the Peccant Matter from all parts of the Body, as has been seen in some who have for many Months lost all the Uses of their extreme Parts, or Limbs, by violent and inveterate Rheumatisms, and Colicks; who by only Purging with proper Catharticks, have been perfectly restored for which purpose, the Pulvis Cornachini has been notoriously known. They remove Obstructions, not only by opening the Pores of the Skin, but the interior Duftus of the Bowels, as in those things Nitrous and Bitter, altho' they have some small affinity. They are also Absterfive in degree, for those things which open the Pores and cleanse the Puffages; may have a power of Attrition, and a great tenuity of Parts moderately hot, nitrous, and bitter, and so have a power of absterging and purging the great Arteries, but some purge by lubricating as Fat wings. Some by wafting and absterfion, as Whey impregnated, with Sena and Beets, And some by resolving, penetrating, and pricking, as several Salts.

V. 3. SALIVATICKS. These are flavivating or spitting Medicines, which resolving all the Lympha of the Body, into a pituitous or ferous Substance, it is conducted from all parts of the Body to the Head, and passing thro' the salivatick Glands, is spit forth. This is only or chiefly performed by Mercury, and some of its Preparations, which melting the coagulated Juices, and carrying them void it, causes this Operation. The order of it, and how it is to be performed, is not our Business here. They who would know more of this, may see what I have said at large upon this Subject, in the Third Edition of my Synopsis of Medicine, in my Ars Chirurgica, and in my Praxis Medica; the Second Edition of my Annotations upon Dr. Sydenham's Processus, lib. 3. cap. 28. f. 117. ad f. 118. to which I refer you.

VI. 4. PTARMICKS, or Errhines. These are for the most part hot and dry in the third degree, and are endowed with a very piercing Acrimony, by which they extremely irritate, or shrivel up as it were the Membranes of the Brain, (as Emeticks do the Tumcles of the Stomach) and by means whereof, the Head and Brain are cleansed or freed from their Recrements, and the viscid and pituitous Humour, or Matter, is expelled thro' the Noftrils, in a very extraordinary measure: If these Nafales, as some call them, cause Sneezing, they are then called Sternutatories. But proper Errhines, which only attract the decrements from the Brain, are of mighty use in curing Apoplexies, Lethargies, Megrims, Vertigoes, Epilepsies, and other Cephalick Diseases of like nature, proceeding from Cold and Moisture.

VII. 5. EMMENAGOGICKS. These are such as provoke or draw forth the Terms. They are hot in the third degree, and of soft parts, concoct and digest crude Humours, extenuate and incise the Glands and Toughs, and remove Obstructions, by opening and cleansing the Passages. They are all proper Diuretics, for that reason

tying them over with a Paper and Leather, to keep them from the Air.

X. SALTS ESSENTIAL i. Take a Plant when it is full of juice, in its flowering time, a sufficient quantity bruise it in a Wooden Mortar, and add a pretty deal of fair Water: Boil till half be consumed: Strain the Decoction by strongly pressing it out; and then Boil it to the thickness of Honey. 2. Take this mucilaginous Magma, put it into a Glass or glazed Vessel, and set it in a cold place for 8 or 10 Days; so will a Cry Hal Salt arise like Sal Gem, which gather, and wash it with the distilled Water from the same Plant, which dry and keep it for use. 3. Thus is made Salt of Carduus, Mugwort, Wormwood, and other bitter Herbs, but of other Herbs with much difficulty. 4. But such an yield a sweet Juice, give a plentiful quantity of Effential Salt, as the Sugar Cane: for Sugar is the Effential Salt of that Plant; so also do Fig, Raisins of the Sun, and other like sweet things, for Figs and Raisins, when old and dried, will shew some small quantity of that Effential Salt on their out sides, hard, dry, and of a white colour.

C H A P. IX.

Of Preparations Topical, or External

THO' Authors have multiplied the Titles of the Topical Preparations, yet the following are all that we think necessary for External Uses, or Outward Application.

- | | |
|---------------|----------------|
| 1. Lotions. | 5. Ppuders. |
| 2. Oils. | 6. Emplastres. |
| 3. Ointments. | 7. Cataplasms, |
| 4. Balfams. | 8. Clysters. |

L LOTIONS, or WASHES. T. Washes are made 1. Of fair Water. 2. Of Infusions, or Decoctions. 3. Of Wines. 4. Of Vinegars, of which a choice is to be made, according to the Purpose or Design for which it is intended. 11. The general Intentions of Lotions, or Washes, are fivefold, viz. 1. To beautify the Skin. 2. To ease Pain. 3. To disperse Tumours. 4. To cleanse old putrid Sores or Ulcers, j. To attract forth any Poison, Venom, or Malignity, in the Part. 111. For fair Water is used either simply by itself as hot as the Patient can bear it, either doct with it, or to let the whole Arm, or Leg, to lie in it for half an Hour, or 3 quarters of an Hour, more or less, which repeat as need may require, twice or thrice a Day: It opens the Pores, abates Inflammations, and absterges old putrid Sores and Ulcers, making them apt for healing. Or it is used with Castile or Genoua Soap, a quart of a Pound dissolved in 3 Gallons of it, by a gentle Heat. This opens the Pores, and absterges more plentifully. 1K Secondly, Infusions or Decoctions. These are made of such Herbs as are appropriate to the intention, and which the Physician

shall advise, in which also Castile or Genoua Soap may be dissolved, and may serve for easing of Pain, discharging of Tumours, &c. V. Thirdly, Wine simply of itself, is used to comfort and strengthen weak Parts, disperse Tumours, ease Pain, &c. by fomenting therewith as hot as the Patient can endure it, once, twice, or thrice a Day: And if it is of use (viz. Red Wine) to cure the falling-down of the fundament. But mixed with Camphir, a Dram or Dram and half dissolved in a little Brandy, to a quart of Wine, it will be yet more powerful to all those Intentions, as also to prevent a Mortification. VI fourthly, Vinegar, simply of itself, used hot, is excellent to ease Pain, stop Bleeding, and take away Deformities of the Skin, but used with Honey dissolved in it, it absterges putrid Ulcers, and heals Ulcers of the Mouth and Throat. If it is used with dissolved Camphir, and Saccharum Saturni, it not only cleanses the Skin, but cures most of its Deformities, and also beautifies it. These are some of the things which Lotions perform, and in imitation of these Examples, you may make a thousand others, which may be admirable Effects.

II. OILS. 7. They are made 1. by Expression. 2. By Infusion. 3. By Boiling. 11 Those which are made by Expression, are either Oil of Olive, which if it is made out of Ripe Olives, is said to be temperate, in respect of heat, coldness, dryness, or moisture, or Oils out of Nuts, as Oil of Almonds, Sweet and Bitter, of Wallnuts, Oil of Ben, which has that Property with it, never to grow Rancid; or Oils out of Seeds, as Aniseed, Linseed, Rapeseed, &c. 111 Oils by Infusion. Take Oil Olive, or rather Oil of Ben, a Gallon, of the Herbs or flowers, or Seeds you design to make the Oil of, 24 Handfuls well bruised, mix them, cover the Pot with a Paper, and let it in the Sun for 14 Days or more, stirring it every Day: Then having poured it over a gentle fire, press out the Oil from the Ingredients in a wooden Press. Repeat this Infusion with more bruised Ingredients, three times at least; at last pressing out the Oil as before, let it stand to settle or decant, and pour off the clear, which keep in Glass Bottles close stopp'd for use. Where note, that Oils by Infusion, ought to be made only of Herbs and Seeds which are hot and dry, & of very thin, subtil and volatile parts, as of Crane-bill Musked, Hyssop, Lavender, Marjoram, Mint, Rosemary, Sage, Savory, Southernwood, Thyme, Sec. Aniseeds, Carraways, Coriander, Cloves, Fennel, Mace, Nutmegs, Parsley-seed, &c. 1K Oils by Boiling. Take Oil Olive, a Gallon, of the Herbs, Flowers, Seeds, &c. bruised, 20 or 24 Handfuls: Boil all over a gentle fire to Consumption; and press out the Oil strongly in a wooden Press. Repeat this Infusion by Consumption, and expressing at least 3 times: Then letting it decant or settle for a Day or two, decant the clear Oil and keep it for use.

III. OINTMENTS and LINIMENTS.

1. Ointments are made three ways, viz. first by making the Ingredients into an Oil by the former Section. Secondly, Of the Ingredients themselves by Infusion. Thirdly, Of the Ingredients by Consumption or Boiling. 2. The first way, by making the Ointment of the Oil. Take a quart of Oil made of the designed Herbs, 2 parts of Strasburg, Venice, or Chio Turpentine, Bears Wax, of each 12 Ounces

Ounces: melt and mix them well together *Herbs, Flowers, Seeds, &c which are hot of very thin, subtil and volatil parts, bmfed, eight Handfuls, Hogs Lard, four Pounds: Beat them well, together in a Stone Mortar, with a Wooden Fettle i> put the Mass into a broad Stone or Earthen Glazed Pot, tye it over with a Paper, end infolate it for 14 Days, or for want of a fat Sun, digest it as long, in a mild Sand heat, that the Lard may be all that time perptly melted -, and whilfi hot, firain out the matter by peiffwg. Repeat this Infojation or Digestiwk, 3 or 4 times, in the fame manner •, and at length, take the exprejjed Subfiance, and 'add thereto; Venice or Strasburg Turpentine, Bees Wax, of each 8 Ounces : melt and mix them over a gentle fire without boiling, and keep the Ointment for use. 4. The third way⁵ by Coition or Boiling. 'Take of the bruifed infredients . 8 handfuls ; Hogs Lard, 4 Pounds, boil over a gemle Fire to Cnfpnefsy and firain out by frejging: Repeat this work 3 or 4 times •, and laffy; to the exprejjed Matter^ add Turpentine, Bees Wax, of each 8 Ounces -, boil and mix, and keep the Ointment for use. 5. Sometimes Pouders are added to Ointments for particular Ufes, the chief of which, are of Aloes , BirthwortRoots, Camphir, Coloquintida, Opium, Rdfin^ Scammony, Stave [acre, Tobacco, &c. of Minerals, Burnt-Alum, Burnt-Lead, Flowers of SuUphur, Mercurius Idulcis, Saccharum Saturni, Turbith Mineral, Red Precipitate, White Precipitate, Verdignfe, &c. 6. Liniments, They are Soft Ointments, and made in all respets as Ointments are, faving, that they are generally made without Wax, or with only the half quantity of Turpentine and Wax.*

IV. BALSAMS. 1. *Thcfe are Artificial, and made in iwitMjgh of the Natural, by mixing fuch Ingredients together as may confitute a body of equal Dcnfity or Subfiance.* 2- *Take Oil of the Ingredient youif would add to your Balsam, as firong Oil of typer icon, or firong Oil of the yellow of Orange Peels by Infolation, 10 Pints •, Oil of Nutmegs by Exprejfton, half an of Peru-, choice Chio Turpentine, of each 4 Pounds •, mix, melt over a gentle Fire, and keep it for use.* 3. *Take Oil of Ben,¹⁻² ^{phinis} \ ^{Chio} Turpentine, • 6 Pounds •, Balsam of Peru 5 Pounds^h Oil of Nutmegs, 4 Pounds : MIX and welt over a gentle Fire, and keep it clofe fiopt for use.*

V. P6UDERS. 1. *Thofe intended in this place, are only fuch as are for External use, applicable to the Eyes, fiopping Blood, Wounds, Ulcers, &c.* 2. *They are made of Ingredients, perfelly dned, and then reduced to a subtil kind of Mower, either by grinding in a Mill, or being in a Mortar, and fo paffed thro' a fine Scarce.* 3. *Fouders for the Eyes, as A lab after calar?d and levigated, or Lapis Calaminaris calcin.d and levigated, or Flints, calcirid, beaten and levigated-, any of which Pouders being blown into the Eye, tonfyme Pearls, Films, Stc. fo alfo fine Vouder of Rice, which with ones Finger may be daily and feveral times a day rubbed upon Films, f earls, &c£ which in time wears them off.* 4. *Fouders for fiopping Blood, are chiefly Catechu, Vitriol calarPd with fine Bole and Camphl, Vouder of Puffs or Fufs Balls, of Mans Blood, of Alcanct Root, Sec.* 5. *Pouders for digesti ing, and healing old Ulcers^ as Awes, of*

Rofin, of Scammony, of Tobacco, &c. which two laft things are without comparifan.

VI. EMPLASTERS, and CERATS, & RECLOTHS. 1. *Emplhfters. are made firjl with Oil Olive. Secondly with HogsLard, or fyvnb^pther, Fat or Greafe, adding the other proper Ingredients.* 2- *Firft with Oil. Take Oil Olive a ^jcart, fome proper Gum or Gums, from 10 to 16 Ounces, Bees Wax 4 Ounces, melt, mix, and boil to the Conffie nee of an Emplafier.* 3. *Where Turpentine^ and any proper Pquders of Vegetables are added, Bees-Wax will be needlefs, and if*any proper Juices be ac\$ed, it is to be boiled to the Confumption of the Juices.* 4. *Some JSlineral Pouders, as Red Lead, White Lead, Litharge, &c-being added to the Oil with Vinegar, will fufficiently bring the Oil to the Body of an Emplafter, without the addition of Gums or Vax, by a pretty long boiling and constantly firring^ with a wooden Spatula till it is perfected* 5. *Secondly with hogs Lard, or fome otbePt'ators Greajes. It is made altogether as the former, fave in this cafe it needs much lefs boiling, and a fmailer quantity of Gums or Pouders.* 6. *Cerats or Cerecloths. They are feft pmplafiers, which will spread without melting in a Pan, or the help of Fire^h being for the moji part made with Oil Ulive, and In a much larger quantity.* 7. *^| Emplafie^ being brought to its &^ue Conffiencc, is then made up into Row Is^y and fo kept for UJe.*

VII. CATAPLASMS, or PULTICES.

*They are made with Oil or Fais, adding the boiled Pulps of Roots, or Figs, and the other proper Ingredients according to the Intention •, as baked or boiled*whit-Lilly Roots, Turneps, Onions, Garlick, Leeks, Comfrey Roots, &c. and fo bringing it to a due Cnfficiency with Flomer of Oatmeal, Barley-Flower, Orobus-Meal, Crumbs of White Bread, Milks, &c, boiling all to a due foftnefs.* 2. *Some Pmtices are made to difcufs Tumors which will not probably break; fome to eafe Pain, fome to allay Inflammatibns, and fonte to Maturate Tumors which tend to breaking, fo that according to the Intention of the Cataplajm, fuch ought the Ingredients to be, to anfwer the fame.* 3. *It ought to be laid on as hot as the Patient can well endure it -, and to be renewed 2 or 3 times a day, or as often as the Nature of the Malady ajffifting requires it.*

VIII. CLYSTERS, T. *They are Liquids made with Poffet drink, or Meat Broths, with the addition of fuch other Ingredients as are proper to the Intention of Cure.* 2. *The chief Purpofes for which they are ufed are, Firft, to eafe Pain in th* Bowels from the Colick or sharp Humors. Secondly, for the Cure of Fluxes of the Belly, and Bloody Fluxes. Thirdly, to remedy Cofiwenefs, Fourthly, tPurge the lower Bowels.* 3* *Clyfters for eaiing Pain, are made itoith Carminative Decofions adding half 3 quarters, or an Ounc\$ of Strasburgh Turpentine, well mixed with 1 or 2. Iolks of Eggs, and then with the Vecob^wn, and fo exhibited fomething more than Blood warm.* 4. *For the Cure of the Bloody Flux, or other Fluxes of the Belly, to a firengthening Decoffion in Whey, a quarter Part of Brandy ought to be added, and the Clyfter to be feveral at times repeated : If the ilux is Inveterate, and not eafy to be fiopt, 6, 8, or 10 Grains more or lefs of Laudanum, ought to be diffolved in the Brandy and mixt with the Decoffion.* 5. *For a> extrem Cofiwenefs. The Clyfter ought to be made of Lu-brifiainvcs, as a Decolhon of Althca Roots, in*

which a fmall quantity as 2, or 3 Drams of Castile, Genoa, or Venice Soap ought to be dijjolved, or a quarter part of Oil to be mixed therewith, vcell feafoned with Table Salt. 6. For purging the Belly and giving Stools. It may be made cfTarmative Dccoffioris, or Meat Broths, or Poffct-drink ; to a Tint of which, a quarter of a Pound of brown Sugar or Honey, and half an Ounce*of Salt are to be addej, and dijfo fifed in the fame, without the Ad» dition of any Oil; bhaufe Oil will Obtund the points of the Salts, andfo hinder the Operation or Working. 7. As to the Quantity to be exhibited at a time, to little Infants, give a quarter of a Vint or 6 Ounces \$ to Children from 5 to 10 Tears Old, half a Pint-, to bigger Children from 10 to 16 Tears Old, 3 quarters of a Pint_h to Men and Women 7 frm a Pint, to a Pint and half

CHARX.

Of Preparations Chymioal

THE chief Chymical Preparations, as they may have refpect to this prefent Work, are theje ten here .enumerated, viz.

- | | |
|--------------|-------------|
| 1. Effences. | 6. Oils. |
| 2. Tin&ures. | 7. Balfams. |
| 3. Extracts. | 8. Powers. |
| 4. Waters. | 9. Elixirs. |
| 5. Spirits. | 10. Salts. |

I. ESSENCES. 1. **By** Effences here, we do not mean thofe highly reUified and fublime dtherial Chymical Oils, which Perfumers and others ufe, and Jo call, but another Preparation which is taken from the whole Subftance of the Plant. 2. Take Angelica, Bawm, Mint, *or any other like fitting Herb ^ beat it in a Marble Mortar with a Wooden Peftle, to a Pulp or Mafs •, put it into a Matrafs or Bolt-head, which Seal up Hermetically, (or otherwife flop it up with Cork dipt in Wax, then clofed faft with Sealing-Wax, and after that luted over) fet it to digeft in a liorfe Dunghil, or fome other analogous Heat, as Balneo, Sand, &c. for 40 or 50 Days 5 fo will the whole be reduced almoft to an uniform Subftance: Afterwards take out the Matter, which is now more liquid than it wa before, or reduced into a Liquor; which prefs from the Faeces. Digeft it again in a gentle Balneo, that ihe remaining grojjer parts may fubfid: decant the clear Liquor, or filter it thro* Brown Paper_i or*Cotton, in a Glafs Funnel. And from the former Faeces, being dried and calcined, extraU a fixed Salt, which add U) the filtrated Liquor. This is Le Febure'j Ejjence of Plants; and may be given in any proper Vehicle, from one Spoonful to two, or three. 3. Some add to, this Ejjence, when it is for long keeping, to every \$>jiart, u quarter of a Pint of the be ft Brandy, or Spirit of Wint. 4^ But if you would exalt this Ejjence to a higher degree of purity and excellency, the faid Le Febure proceeds thus, lake of the former F.Fence.. Water of dectipitatcd common S^_r. m.vle

per deliquium_s of each equal parts; put, them into a Mutrafs. or Bolt»bead, which Seal up hermetically, or flop up as before; Digeft in the Sun, or in Balneo, or a Sand heat, for 40 or 70 Days more, fo will this fdime Liquor, with* out any other Operation, feparate all the heterogenous and Jlimy Matter, or Subftance, which hindred its purity and exaltation: And there zvill fwim upon the top, the pure exalted Effence of the Plant, either green and tranfparent -as an Emerald, or of a reddifh color, according to the nature of the Plant; which feparate and keep for ufe. \ This exalted Effence, may be taken from half a Spoonful to 'a SpQonful; Morning and Night, in a Glafs of Canary, or other proper Wine. 5. The Effences of Cold Herbs. Take the whole Plant well beaten in a Mortar, Juice and all; add to it an equal quantity, of Spirit of Wine, or Brandy: put them into a very large Bolt-head, which (lop clofe a* afore/aid, fo that nothing may bregp forth: fet it to digeft in liorfe-dung, or its equal heat in Balneo, or Sand, for 40 or 50 Days, or more ^ then- ft(ain out all the Liquor by hard preffing -, which put into the Bolt-head again: being ft opt clofe up as before, digeft in a gentle Sand heat for 40 or 50 Days ntore ^ fo will the Effence meliorate, fupernate the Faxes, and grow fine; which decant and keep for ufe, adding to it the fixt Salt of the Prejings* ^ofe from one Spoonful to three, in fome proper Vehicle^

II. TINCTURES. 1. There are feveral forts pf Tin&ures, which are to be drai\$ n out with fuch Menftruums, as are moft proper to the Difeafe afflitting; the chief of which are thefe four following. Yirft, A Spirituous Tincture. Secondly^ An Acid Tinture. Thirdly, An Oily Tinture. fourthly, A Saline Tinaure. 2. The Spirituous Tin&ure. Take any Root^ark, Wood, Herb, flower, or Seed, being drm* and reduced into grofs Pouter m & hot Iron Mortar, with an eighth part of Salt of Tartar or Pot-Afhes: affufe thereon, in a large Matrafs, the be ft reUified Spirit of Wine, fo much as may over-top the Ingredients 4 or y Inches^ fhake them well together, and pop the Veffel very*clofe: digeft 20, 30, or 40 Days, (the longer the better) in a place naturally warm, or in a gentle Sand heat, fhaking the Veffel once every Day >: then decant the clear Tinfure, and keep it clofe ft opt for ufe., Dofe M 2, or 3 Drams, if prepared from Alteratives. 3. The Acid Tin&ure. The Ingredients being prepared as in the former, affufe thereon the dulcified Spirit, either of Nitre or of Salt, Sulphur 9r Vitriol^ fo much as to fupernate 4 or % Inches: digeft as before, then decant the clear Tin&ure and keep it in a Glafs clofe fropt for ufe. Dofe from 40 to 6Q Drops, or fo much as to give the Vehicle a little acidity. 4. The Oily Tinture. Take the Ingredients as before diretted to be prepared, which put into a Matrafs, or Bolt-head, and affufe thereon pure atherial Oil of Turpentine, fo much as may over-top it 4 ^ 5 Inches *, flop it clofe up, and digeft only in a voarm but for nor 21 Days, fhaking the Veffel once cvety Day r. ft rain cut the Tinture by preffing -, let it ft and till it is fine, and then decant th<> rfrar, and keep it for ufe. Dofe from 6 to ; 8 Drops 5 fir ft dropt into Sugar, and then mixt with any proper Vehicle, and fo taken. 5. The Saline Tin&ure, firft make the Spiritus intimus thus-take Spring Water, 6 Quarts * choice Pot A flices, a Pounds \$ Sil Armonuck. one Pound: mix.,

INTRODUCTION.

it ^d^ft^pTVDays, (train, filter, and ... it for use. " Then take the Ingredients as be- fore prepared, which put into a ftr'Jsorqolt head and affufe thereon of the former Sp^ntus In imus, at much as may over-top the Ingredients Tor * Inches: diged cold (being clofe ftopt) for \ or I Days.Jhaking the Veffel twice a Day , let it fettle for one or two Days, decant the clear from ,6/FttW, ^ ^ B ^ ^ f % ^ ^ & ^ r ^ Paper, and keep it in a Glafs clofe ftopt for ufe. life from half a'Dram, to i or 2 Drams, Morn- ini, and Night,in a Glafs of Canary, or fome other proper Vehicle. Where note, that by th* Menftrum, you may extrall the Tincture from any Root, Bark, Herb, Flower, or Seed, as mil green as dry, and that in a manner extemporance

III. EXTRACTS. I. Take the Spiri- tuous Tmture of any thing you defign to have the Extract of, pat it into a Bolt-head, with its Alembick and- Receiver, Mnd luting the Joints well • by a gentle heat abftraS the Spirit in Balneo/ite Ma^tna at bottom is *he Extraff. 2. Ex- traas are either foft, jit either to be diffolved in any proper Vehicle, or to be made up with You- ters, if very foft, into an Elefuary -, but if of a more thick body, to be made with Pouders into Pills: Or they are of a folid body, fo thai they may be fdrmed into Pills of themfelvcs, without any addition. 3. And therefore aqcorfyng to the confidence you defign the ExtmS to be of, tofuch a degree you muft abftraS the Spirit. 4. The ab- ftratted Spirit is fomethng more than the fimple *Spirit of Wine, and may very well be called the Spirit ofthat Ingredient, or Matter, ofwhich the *ExtraEi is made, and contains fome of the moft volatil Spirits and Particles thereof.

IV. WATERS. I. They are Diftilled in Common Stills, puttimgood Store of Afhes under- neath, to avoid tmanpyreuma, or Smell and Taft of Burning*, or in an Alembkk, in Balneo. 2. If you Diftil in an Alembick, it will be good thof the Roots, Herbs^ Flowers, be bruifed, and by adding common Silt, or Leven, to be mixed wi& them td be digefted; then putting Spring Water to them, to Difil'them in an Alembick with its Worm or Refrigeratory, till the change of the Taftefhe-ws the Virtue to be drawn of, fepa- rating the Oil if any be. % . By adding the Salt or m^wen, or left, and digefting' the Herbs there- with, till they have a kind of Winey-Smell ^ by which means the Water is made twice or thrice as (Irong^nd Smells much ftronger of the Herbs, Flowers, Sx. 4. Waters from dried Herbs. Let them be cut and infufed a while in hot Water, and digefted with Salt, Leven, or Tefi, and then diftilled in Balneo -, and if it be cohobated upon more dried Herbs, it will be fo much the better and more noble. % . Waters' from tender Herbs and Flowers, and frem cold Plants, are diftilled in Balneo, with Cohobation upon frefh Herbs. 6. Waters from hot Seeds, Spices, &c. beat or bruife them groflh infufe them in a little warm Water, then diftl'l them by a Copper Vefica, Tinl within : You may alfo fteep them in Wine^fo will the Water be more excellent, with fome Oil. 7. If from gmen Roots or Barks, bruife or fhave them -, but iffrom dried Roots, Barks, rafp them, or grofly beat them in a Mortar, and infufe them in a little warm Water, &c.

• V, ' S P I R I T S. 1. Take the Hejbs, Flow- ers, 6?V. beat them in a Mortar, and Pickle them

voith Salt, in an Earthen Veffel, by mixing the Salt therewith •, put all into a well glazed Earth- en Jar, preffing them well down : flop the Veffel very clofe, and put it into a Cellar for 3 or 4 Months,* till they have a flmrp or Wine-like Smell:, then difiil in a Vefica, in Balne#, or Sand, or Afhes, to drinefs: cohobate the Spirit and diftil again, after which reffify it in^ a Glafs Matrafs, in a gentle Balneo, or Sand-he alt; 2. Spirits from Juices. Beat the Roots, Herbs, Flowers, Fruits, if Juicy, and, prefs forth their Juice : But if they be not Juicy,- fprinkle hot Water on them, and then ex prefs the Juice. Steep in this Juice frefh Herbs, and prefs out again, [which work re- peat till you have Juice enough • this Juice fer- ment with Sugar, Leven, or left, diffolved in a little Watery and then diftil it as before* Where note, that the Fermentation of the Juice, i* be ft done in Wooden Veffels. 3. Spirits from Fruits which have a Pulp,* as Black Cherries, Elderber- ries, Goosberries "" " rries, Rafpberries, Straw- berries, &c, En ke vWine of them, which let grow a little Acid-, and diftil it as before di- rectcd, or as you diftil Brandy, or Spirit of Wine from Wine : Or elfe take their Puip, freed from their Stones or Kernels, to which put warm Wa- ter, to make it thin^ then with Leven, Teji or Sugar, diffolved alfo in warm Water, caufe them to ferment h dhur which difil. 4. Spirits from hot Seeds,* Sp^B.,6?V. Bruife them well, and macerate the Mafs with Wine, caufe them to fer- ment with Leven, &c, and then diftil • fo you have a Spirit mixt with, a great deal of Wa- ter: cohobate and diftil again, Jo will the Spirit be much betterj which after feparate from the Water by Difillation: referve the Spirit % it felf, and the Water by it felf, as Water of the fame Seeds, Spices, &c.

VL OILS Diftilled. i. Oils from green or dry Roots, Herbs, Flowers. Bruiffobem^dl in a Stone or Iron Mortar, digeji them 14 days or more in Water, and let them futrify ; then dift it by a Vefica with a great Fire-, fo will you have Water and Oil come over, which you are to fepa- rate. 2. If you diftil Oils from Angelica, Anife Bawm, Caraway, Dill, Fennel, Lavender Mar' joram, Mint, Origanum, Pennyroyal, Rofemary Sage, Savory, Southernwood, Thyme, Worm wood, and the like hot Herbs : It is to be done when in Flower, and you are only to take the upter Branches with the Flowers, for then they xielA^ih greateji plenty of Oil, and thofe parts of Z Plants the moji; the Leaves, Stclks, &c. little none at all 2. Oils from hot Seeds as Cardamoms, Cubebs, Caraways, CoriannW^rill, Fennel, Muftard, Parfly, Rocket, OV. Cardamom grofly, affufe en them hot Water : add 0.C.TM?^AT^?T >i^Po^>V&Jl 10 or 20 Days then difiil with a Copper Vefica, with its head and Receiver well luted ; fo will you have Water TMJ Oil together, which you are JO feparate h*J^f the Oil by it felf; and the Oilfo tff, loiter, Cardamom* Caraway Water 4> Uils from Roots being dried. njy or rot; add Water to them; then diftUtlem a* the former Roots , fo will you have Oil and Jbe Water may bg ufed

in like manner to rfore prepared Feels. 6. Oils yield lefs Oil-,) digefi them \$*or 10 Days in the Menfruum you intend, adding Nitre,* Salt, or Tartar : tb& dijiil in a Vefica •, fo will you have Water and Oil, which feparate : cohobate the Water upon the Faeces feveral times, fo will all the volatil Oil yfcend : The Water referve fo to fike more Oil with, upon freff) Spices.' The weighty Oils (as of Cinamon) will feparate from the Water, in 14 or 16 Days, by funking to the bdkom. 7. Oils from Aromatick Woods, as Caffia Lignea, Cedar, Cyprefs, Juniper, Rhodium, Sanders Yellow, Saffrafs, Xyloaloes, ©V. Take their rappings, or let their Chips be exceedingly well bruife.d in an Iron Mortar, which digefi a good mîle in Water, then dijiil by a Vefica : cohobate, and continue diftilling for Jome Days \$ at length the noble odoriferous Oil will come forth very fubtil and volatil. 8. Oils from Rofins, Turpentine, &c. Add to them a good quantity of Water, and dijiil by a Vefica; fo will you have Water, and an Oil fwimming upon it, (which Oil is called Spirit-) continue the diftillation, and by degrees it will be Tellow •, then change the Receiver : Separate this yellow Oil, and keep it by it felf, di(lilling till no more appears. This is called Oil. The Matter remaining is called Colophony. 9. The RefKfication of Chymical Oils. They are rectified by diftilling them by a Cucurbit, or Vefica, with much Water -, fo will the pure atherial Oil afcend, with fome Water, which feparate. They are alfo redified in a Bolt*hcad, with its Receiver, in which the pure atherial Oil will afcend, the thicker Sub ft am e remaining at bottom.

• VII. BALSAMS. 1. The true difference between Chymical Oils and Chymical Balfams lies chiefly in two things, viz. fir ft the Oil contains the pfincipal or chief of the fublime and volatil parts. Secondly, That it is of a thicker Confidence or Substance, than the Balfam ^ which as this latter is lefs fubtil and thicker, fo it is more fit for old Sores and Ulcers. 2. Hence it appears that as Oils are the more thin, pure, and drtherial parts, fo they rife fir It in Dill illation, from the Matter they_ are feparated from ; but the halfam is that other thicker Oily Matter, which by the force of a Jironger Fire, afcends next after the former pure, atherial, volatil Oil is drawn ojf, which as it is of a thicker body, fo it is alfo of a deeper color. 5. Balfams Chymical, are oftentimes alfo made in Refification of Chymical Oils ; wfcn drawing off the thin, fubtil, volatil Parts, or Oil, the thick Balfam is left at bottom. 4. But they are properly Balfams which (the thin Oil being drawn Jff in a Vefica) are afterwards drawn from the Colophony by a Retort. 5. Take the Colophony remaining after the Oil is drawn from Rofins and Turpentine; put it into a Retort, and dijiil with a gradual gire, firji /oft and gentle, then greater, and fo encreafing the heat, till the Colophony has given up all its Oily or Balfamick parts, which will be of a body thick and red. And this is thqt which is properly called Balfam ^ which if it be retified again in a Glafs Retort^ in a Sandheat,* will be much more fine and pure.

• VIII. *O TESTATES, or POWERS.

1. Take the retified Spirit of the Plant, fuppofe of Mint, or Pennyroyal, a Pint; Chymical Oil of the jume Plant, an Ounce, or fo much as the Spirit* will abforb^ or fwallow up : mix them, together, and keep them for vfe. 2. But ij you take the

fixt Salt of the fame Plant, and grind it with an equal quantity "of the volatil Sal Anno mack \$ fuhliming and re-fubliming fo long till the Salt afcends with the Volatil; and add 2 Drams thereof to the former mixture, it will be fo much the more powerful to all the Intentions jmr which the/aid Voteyhtes are ufed. 3. And many times for want of the particular Spirit of the Plant, whofe Powers you would make, the beji rectified Spirit of Wine is u'fed as a Succedaneum •, to which may alfo be added, if you pie ofe, the volatilized Salt of the fame Plant, or a volatil Salt of Tartar.

IX. E*L I X I R S.

1. An Elixir is the fulphureous TinUure of any Vegetable, -drawn out of the dried Vegetable, (grbund grofly. with Salt of Tartar in a hot Mortar) with the retified Spirit of the fame Vegetable. 2. Or thus. Take any dried Herb or *Plant^ beat it into grofs Pouder, which put into a filArafs or Bolt-head : Take the Powers of the fam&Plant, fix Pints -, rectified Spirit of Nitre, & 2 Ounces : mix, and digeft for to Days*, affufejo much of this Mixture upon the former Pouder, as may jupetmate 4 or ^Inches. digefi cold for 20 Days, Jhaking the Glafs every Day ; then decant the deaf Uiquor, and keep it for ufc* j. But you are not always neceffitated to #/£. Spirit of Nitre 5 but may in place thereof, as the nature of the D'ifeaje may require, take Oils of Salt, of Sulphur, or 6f Vitriol, ^ digeft with the Powers as above direth.d. 4; Again, by vnfufion of any Vegetable (fuppofe Rofemary) in Powers of * the fame, acuated with Oil -of .Salt, and Salt of the fame, youfhall have /fo Elixir thereof.

X. SALTS.

I. Salts Chymical are either Volatil or fixed : And tho' all Plants have indwjl a volatil Salt, yet the moft, of them having but little, and that little very difficult to be gotten, Authors have taken little?or no notice thereof : Thofe which really ah 'ib it art but few, of which Beans, Peaic, an* lauar, are chief The way of making their Volatil Salts, we jf-) all not declare here, having taught it fully and at large in their proper places, in the following Book. 2. Fixed Salt of Vegetables is thus made."*Firft burn or calcine the Herb you would make a Salt of, into white Afhes •, yet avoiding a too fierce or hafy Burning > left it fould vitrify. Boil thefe Afloes in fair Water, to make a Lixivium of them^ wbcfy filter-thro'filtrng Browjp#Paper, by help of a Glafs Funnel. • This filtered Liquor Boil in a Glafs Vejfel, with a gentle Fire, to the confumption of all the Water-, fo imllhefixt Salt of the Plant be left at bottom* 3. I] the Salt be not purely White and Fine, you mufl diffolve it again in ?nore fair Water; filter and coagulate by an abjumption of tb&Water ; which work you are fo eft en to repeat, 'till it is freed from all Impurity, and is very White. 4. Thefe alcalious Fixt Salts, are very apt to melt in the Air*, but if they be firft calcined with Sulphur, it much preserves them from that Accident ^ and makes them wiithall fomewhat more grateful to the Palate.

INTRODUCTION.

CHAP - XL

Of the Virtues of Medicines.

I. >~Tp H AT some Plants Heat, some Cool, and JL some Dry, and some Moist, is manifest, and this is from their First Qualities, which are found out, first by their Taste. Secondly, by their Smell. Thirdly, by their Operations, *cr Effects. fourthly, by-Experience.

II. THAT some Plants open ObstruBions, and some Hop, as in Catarrhs and Fluxes of blood >, some Bind, and some Relax -> some Attract, and some Rpercufs; some Maturate, and some Abflerge, &c. These Virtue^ which are their Second Qualities, they draw frqgi their First Qualities, but are more perfectly known and found out by -Experience, and a continued Series of Observations.

III. THAT the Appropriation of Medicaments to the several principal Parts of the Body, has been found out partly by their Signatures, and partly by Experience, and somttime by both of them together: And so this Appropriation of them to the Head and Brain, Nerves, Stomach, Lungs Pleura. Heaw Liver, Spleen,, Mefentery;Reins, Womb, and Joints, is called their Third Qualities, *JF a ^lant ^ hot ani ir.y-> it naturally follows that it must resist and be helpful against Diseases, proceeding from cold and moisture: So also if a Plant is cold and moist, it must resist and be helpful against Diseases proceeding from heat and drinefs: The same may be said of Plants hot and moist, or cold and dry, TMjd> doubtless resist, and are helpful against Diseases proceeding from the oppolite Qualities.*

V. THIS being said, if we consider what Diseases affliQ those principal Parts of the Body, and from what Causes they proceed, it follows that those Plants, which are endorsed with those First Qualities, and withal/ are in the predicament of the Third Qualities, must generally resist and be auxiliaries in the Curing those DiUmprcs, affiising those particular Parts; and therefore in giving you the Virtues of the Medicament, tho* there are m almost every Plant, and in the Variety of their Preparations, a great number of Diseases enumerated, againji which they be Good of Helpful, yet we do not intend thereby, that they are Specificks^ and absolute Cures for all the Diseases there named, but chiefly helpful against the same y and in Compactions framed against such Maladies, may ""* a Vis duplicata, add to their Force and EffeSs.

VI. AS FOR Example, take Angelica, Lavender, or any other Plants, which are hot and dry in the secondy third, or fourth degrees, as to their First Qualities, and withal/ are appropriated to the Head, Brain, and Nerves: We say that those Plants, and their Preparations, are good for and helpful against all the Diseases of those Parts^ proceeding from cold and moisture, and accordingly we enumerate them, as Catarrhs, or DeJluxions, Megrims, Vertigo's, Appoplexies, Epilepsies, Lethargies, Caius, Coma, Palfies, Cram'ps, DQ-

fluxions into the Eyes and Nose, hea-qinefs of the Head, weaknefs of the extream Parts, thro' the hurts of the Nerves, Sic. more espedaily if the Habit of the Body be cold and moist too. These and 01 her like Diseases of those PMts, proceeding from a cold and moist Cause, we say, these and the like*Plants are Jrbper for, and helpful in their Cure, tho' we do not say they will absolutely do the Work: And yet a great deal is to be said, if Alteratives be given in a full Dolè, affiduouly used, not by fits and girds, and continued for a good length of time, for sa Nature alls in %on-junliion with the Medicine, and the Cure is performed and perfected at length, which other wife could not be either expelled or hoped for.

VII. AGAIN, those Plants which are in the Fourth Qualities of Medicines, qir Abfra&ives, which abstratf or take away all superfluous Humours, Recrements, mid Excrements out of the Body, its Ventricles, or principal Viscera, and Veffels, which tfrEmeticks, Catharticks, Salivaticks, Ptarmicks, Emmenagogicks, Diureticks, Lithontrip.ticks, and *Sudorificks, and these are said to be Curative, at least helpful in Curing all Diseases of Repletion.

VIII. THE KIND of the Abfra&ive istobe chosen, according to the fite of the Part, or Parts afflicted -, and na>e of the Diseases affliaing. So if it be the Head, flufi with pituitous, cold and moist Humours, Ptarmicks are to be chosen: If the Stomach, by Surfeits, Fulnefs, QbstruBions, fjiarp Humours, &c. then Emeticks. If the* Entrails, with sharp Humours, Colicks, Worms, &CC then Cathstticks. If all' the Juices of the Body are contaminated, as in the French Disease^ Leprosie, Leuce, Elephantiasis, &c. then Saliva?* ticks. If the Womb be obstruSed, or the Courses jiopt, then Emmenagogicks. If there be a repletion of Urine, thro' an QbstruBioni of the Reins, and Urinary Veffels, then Diureticks. If Grave!, Stones, &c. in Reins or Blddder, <tben Lithontripticks. If Univerfal Obstruaions over the whole Body, with a repletion of Watery Humours^ as in Dropfies, then Cacharticks firji^ and Sudorificks afterwards.

IX. AND SO the Diseases proceeding from Piz-pletion, are enumerated according to the Part or Parts affliHed, and accordingly the proper Abtra&ives are applied, which taking away the superfluoM Humours, or Recrements, causing, < or some ways contributing to those Diseases -, those particular Medicaments according to their Kind, - are said to cure, or be helpful, or contributory to the removal or cure of those Diseases,

X. THOSE HERBS, or Plants, which add something to the Body, or its principal Parts, are in the Fifth dualities of Medicines, and are Adduatives, and said to cure, or be helpful in curing, all Diseases of Ablatfcn, viz. such Distcu-pers as are caused from the want of some N. rishment, Juices, or Humours, in order to the conservation of the whole Body, or of some particular and respeltive Parts: And so they are said to cure, or be helpful, or contributory to the removal or cure of those Diseases, *JF a ^lant ^ hot ani ir.y-> it naturally follows that it must resist and be helpful against Diseases, proceeding from cold and moisture: So also if a Plant is cold and moist, it must resist and be helpful against Diseases proceeding from heat and drinefs: The same may be said of Plants hot and moist, or cold and dry, TMjd> doubtless resist, and are helpful against Diseases proceeding from the oppolite Qualities.*

XI. AND THEREFORE the Kind of the Adduativ

is to be chosen, according to the nature of the Matter deficient, the Parts affected and the approaching Evils to be feared: So if the Tone of the Stomach is hurt, that it cannot breed good Chylus, whereby an Atrophy or Pining may be feared, Chylificks are to be administered, which are withall Stomachick, or Stomachicks are to be added to them. If a grand Waiting of the Flesh be, as in a *W*ithifis, or deep Consumption, Analepticks are of use. If a deficiency of Milk, then Galactogeneticks. If a deficiency of Seed, then Spermatogeneticks. If Pollution be taken, then the Vital Powers, are to be strengthened and augmented by Alexipharmicks.

XII. *AND SO* the Diseases proceeding from hilation, are enumerated, according as the whole Body, or its Parts may be affected, and accordingly the proper Adductives are chosen, which adding to Generating or encreasing the Nutrient, or Juices defective, are said either to cure, or some ways contribute to the cure, of the prevailing Illnesses, either present, or intruding upon the Patient.

XIII. *THIS IS* the Method, joined with Experience, [and a long Series of Observations, thro' all preceding Ages from the first beginnings of the Art of Physick, by which the Virtues of Medicaments have been investigated and found out, and according to which, the Virtues ascribed to Herbs and Plants in this our Herbal, are rationally to be accounted for.

C H A P. XII.

Of Doses, Uses and Application.

THE DOSES of Alteratives, i. Pouders, // A temperate, or hot, or cold in the first degree, may be given from one Dram to two Drams in the second and third degrees, from half a Dram to a Dram, or more: In the fourth degree, from half a Scruple to half a Dram. 2. Infusions, Decoctions and Waters, from two Ounces to four, six, or eight. 3. Exgacts, from one Dram to two Drams. 4. Electuaries, from one Dram to four, or half an Ounce. 5. Elixirs and Powers, from 30 Drops to 60, or So Drops. 6. Clysters, a Pint at a time to a Man or Woman; but to Infants and Children, from a quarter of a Pint to half a Pint.

II. DOSES of Abstratives. 1. Emeticks, if of Antimony, as Tartar Emetick, from three Grains to eight: If Infusions of Crocus Metallorum, Vitrum Antimonij, or Regulus Antimonij, from half an Ounce to an Ounce, and if strong, from an Ounce to an Ounce and half, or two Ounces: Emetick Decoctions of Herbs, from half a Pint to three quarters of a Pint, or Pint. 2. Catharticks, if Pouders, from a Scruple, or half a Dram, to a Dram, or Dram and half according to the strength of the Species, and the Age and Strength of the Patient: the Strongest may be given from half a Scruple to half a Dram, Lenitive Electuaries,

from half an Ounce to two Ounces: Purging Electuaries, from half an Ounce to an Ounce. 4. Purging Infusions and Decoctions, from an Ounce to six Ounces, according to their Strength, the Strong, from an Ounce to four Ounces, the Strongest, from an Ounce to two Ounces. 5. Purging Extrafts, from half a Scruple to two Scruples. Purging Pills, from a Scruple to a Dram. 6. Purging Salts, from half an Ounce to an Ounce, or Ounce and half. 7. Salivaticks, according to the Discretion of the Learned Physician. 8. Emmenagogicks, Infusions or Decoctions, from a quarter of a Pint, to half a Pint or more. If Tinctures or Elixirs, from two Drams to three Drams, or half a Pint. 9. Diureticks and Lihontripticks, // Pouders, from a Dram to two Drams: Infusions or Decoctions, from a quarter of a Pint to half a Pint, or more: If Salts, from ten Grains to a Scruple or half a Dram. 10. Sudorificks, // Infusions, from half a Pint to three quarters of a Pint, or wye: Electuaries, from a Scruple to a Dram, two Drams, four Drams, or an Ounce. But if an Opiate, you must be regulated according to the quantity of Opium, which is in it. If Salts, from half a Scruple to half a Dram.

III. *BUT IN ALL* these Cases you are to observe, that these Rules, nor any other, can be absolutely General, but that different Accidents which may be, as to the Age, Habit, and Strength of the Patient, Recency or Inveteracy of the Disease, together with the different Strengths or Weaknesses of the Medicine, may cause some Exceptions, or particular Cautions and Observations necessary to be known, and which we could not comprehend in these general Directions; so that notwithstanding the Limitations of these Doses in this place, they must be proportioned from hence, according as the Accidents may be, in respect both to the Patient and the Preparation, giving to Grown Persons the larger and more compleat Doses, and to Weak Persons, Children and Infants, they are to be diminished, according to their Weaknesses, Disabilities, and tender Tears.

IV. THE USES of Internal Medicaments. And they are to be considered, 1. As to the Time of Giving. 2. As to the Way and Manner of Giving. *FIRST*, as to the time of Exhibition, Alteratives may be given in the Morning fasting, but without doubt, all Aperitives are best given at Night, (but upon an Empty Stomach) because there will be the less fear the next Day of taking Cold. Catharticks and Emeticks, are best given in the Morning, because as the Stomach is then most Empty, so they will the easier ail upon the Offending Matter, and the sooner Operate, the better Attendance may be given, in the time of their Working.

V. *SECONDLY*, As to the Way and Manner of Giving them. And this is taken from their form. 1. Waters Distilled, Syrups and Juleps, are used chiefly as Vehicles to convey other things down the Throat in. 2. Infusions, Decoctions and Wines, are generally given by themselves, dulcified with White Sugar, or some proper Syrup. Electuaries and Juices, are generally mixed with some proper Syrup, or with Wine (as the nature of the Disease may require) sweetened with White Sugar, Honey, or Syrup. 4. Tinctures, // Spirituous, Add, or Oily, or almost always given in the time of their Working.

-But Saline Tinctures, are generally given in some Diuretick Decoffion, sweetned with Syrup of Al-tUa, or of Parfly, Winter Cherries, &c. 5. Pou-
 *ders and Extra&s, if soft, are made into Bolus's with Honey, Pulp of a Rofted Apple >or Pear, or some proper Lohoch. 6. But Extracts, if fit enough to be made into Pills, (while Recent) are swallowed as Pills by them/elves : If kept till they are hard, they will scarcely dissolve in the Body, but must be reduced to a soft EleSuary. 7. Troches, are to be reduced into a Pouder, and made into a Bolus with some proper Syrup, or Honey. ; 8. Lozenges are held in the Mouth, and swallowed down only of they melt. 9. Electuaries are swallowed either as a Bolus, or dissolved in some proper Infuswn, Becoiftori., or Wine, sweetned with some Syrup, honey, or Sugar. *So. Pills are swallowed by themselves, washing them down with some proper distilled Water, Infusion, Decoffion, Wine, Julep, Poffet-drink, or Broth. 11. Spirits are distilla'd with some proper Syrupy or mixt with Wine sweetned with Syrup, or Whit Sugar, and/o taken. 12. Potestates > and Elixirs, are always given in a Glass of dulcified Wine. 13. Oils and Balsams, are always dropt into soft White Sugar? and so will mixt with it, then put into a Glass of some proper Wine and so drank. 14. Salts Essential, Elementary, or I'm, and Volatil, are generally dissolved in some proper distilled Water, Infuswn, DecoUion, or Wine, and dulcified with Syrup, Honey, or Sugar, and swallowed.

VI. THE APPLICATION of Topicks or Externals. 1. Lotions are either for Bathing, or for Washing old Sores and Ulcers -, for Gargari/ms^ for Sore Mouths and Throats ^ or for injections into the Uterus, the Tard, or Womb, to be used with proper Syringes. 2. Oils, they are to be anointed upon the Parts affected, rubbing them well in, Morning and Night^ or two or three times a Day: 3. Ointments and Balmes, the/e may be anointed withall, if they are spread upon Pledgets, and applied, to Green Wounds, Old Running Sores and Ulcers. 4. Pouders the/e are either mixed with some Ointment or Balsam, and so applied; or simply strewd upon the Wound, Sore or Ulcer. 5. Emplastres and Cerates, are to be spread upon supple Cloth or Leather, and so applied simply upon the naked Tumor, Wound, Sore or Ulcer, or laid over Pledgets, dreji or armd with Balsam, to heap them on. 6. Cataplasms are put upon Cloth or Leather, to be applied to Tumors and Apofiem, to discuss, or to suppurate. 7. Clysters are to be used either with a Syjier-Pipe and Bladder, or with a Clyster-Syring, to force it up the Intestinum rectum, h the Anus.

VII. WHERE NOTE, that Cryst&s are either Anodyn, or Healing, or Purging: If Anodyn, some choice Opiate is dissolved in it. If Healing, they are mixed either with Spirit of Wine, or some Oil, or Balsam, or Liquid Rosin. But //Purging, they have always a proportional quantity of Brown Sugar in them, with some Common Salt, but no Oil or Oily body, by any means, because they always blunt the points of the Saline Particles,

C H A P. XIII

Conclusion of the Introduction.

I. ~PHUS II A V I N G given you a short and plain Introduction to our History of Plants, without the Knowledge of which, this Work could not well be understood, and upon which principles a great part of the Philosophy of Physick is founded and built, the Observation of which, unruly a practicing according to Art, and not according to head, and a doing of things at all adventures, as Empiricks do, by which the Life of a Patient is not only put into Danger, but by such Empirical Practices, a thousand Mis-carriages are daily committed; to the great prejudice of the Sick, and disreputation of the Medical Arts.

II. M A N T G R E A T things have been performed by simple Medicines and Preparations - and by that prime and simple Practice, the Qualities and Virtues of Simples were first investigated or found out. This was the first step of Art. Afterwards when the Accidents and Virtues of many things were discovered, the succeeding Practisers began to add one thing to another, which they thought to have like Virtues, believing, that two things of equal strength being conjoined, the Power and force of that "Medicine must be doubled", and indeed it many times succeeded according to expectation.

III. F R O M T H E S E beginnings, Artists began to redouble their forces, and to multiply Ingredients; making continually Complex Compositions, and from the belief of a Vis unita, a form of Compounds, which in process of many Ages, became a Magazine or Store-House, as it were, of Remedies for all Diseases; which they formed in a method, of Receipts, and under proper Titles, and particular forms of Preparations; they made at length a Repository for general Practice, consisting of a great number of Prescriptions, serving for all Indications, and for the Cure of the most common and reigning Diseases, which they called by the name of a Pharmacopoeia or Dispensatory.

IV. T H U S T H E Medical Arts, under this natural and primitive Simplicity continued for many hundred Years, and obtained the name of Hippocratical and Galenical Physick, without any considerable or manifest advantage, alteration or advance of Reputation, except in forming a Farrago of simple Compounds, which rather to the Detriment and Reproach of our Art, than the adding of any Honour or Gain to it; and thereby reduced the Science from its original Purity and Simplicity, to a state of Complexity and Obscurity.

T H E N C O M M E N C I N G to consider the Reason of this, we find, that the Physicians of the present Age, have not only followed the same method, but have added to it, a great number of new Compounds, which they call Preparations, and which they think necessary to the Cure of all Diseases, and which they think necessary to the Cure of all Diseases, and which they think necessary to the Cure of all Diseases.

Indications of Cure, voluntarily flowed from the morbidick (late of the Sick, which proceeded i. from the Causes Antecedent and Present. 2. from the nature of the Disease, whether Similar, Organick, or Common. 3. from the Symptoms, a* being Dangem or not. 4. from the Vital powers, respecting the Strength or Weakness of the Diseas'd Body.

XL ART BEING by these Advances, Quid? many Degrees, or Steps, brought on towards Perfection, what remains for the Learned Professor to do? Truly to know what Disease it is which afflicts the Person, and by the Causes, and manifest Symptoms, to make his Medical Progressions, whether the Patient be Curable or not; that he may do every thing for the Reputation of his Art and of himself. So that if he sees the Sick fast hopes of Recovery, he may decline his Attacks, and let the Relatives and Attendants know the Danger impending. But if there be hopes of Life, (tho' Thoroughly) he may make his Artful and Majestically Prescriptions, according to the Indications of Cure, which with a Rational and Modest assurance, he may hope and conclude will not go without their effect.

XII. LIKE AS THE Art of Rhetoric was not the foundation of Oratory, or of the first Orators, Demosthenes, Cicero, &c. but the Orators the foundation of the Art, out of whose unexampled Orations, all its Precepts and Rules

were Excerpted, or Gleaned, and by Wise Men reduced into the form of an Art, by which all succeeding Rhetoricians regulated and made their Orations: So the Medical Art, and all its Rules, even the Fabrick of the whole Art, was Reared, and Built out of Empiricisms, or Quackery, and its Original or Foundation, was laid by Empiricks, or Quacks, (as they Learned are pleased to phrase it) and that the first Physicians were no other than Empiricks, Quacks, or Tryers of Skill, out of whose Tryals, Observations and Practices, some Wise Men collected a Set of Precepts and Rules, which being reduced into Method, we now call the Art of Physick. But all the to be deplored Misfortunes of the Art is, that it makes not a great many Real Physicians, but too many ignorant or Conceited Doctors and too great a number of Formal and Rattle-headed Empiricks or Quacks.

WHAT WE have farther to say is, to commend the sincere Lovers of Art, to the good Providence of God. That in their Search and Enquiries into Nature, and unravelling (as it were) the Rules and Precepts of Medicine, they may find the Answer of their Expectations, and have their Minds or Souls, enlighten'd with the Splendor and prevailing Excellencies, of true Wisdom and Knowledge, so as to be able to perform the Great tilings, wrapt up in the Mysteries of this Science they are Professors of, for the Good of the Sick, their own Benefit, and the Reputation of the ART of PHYSICK.

W. SALMON:

Black-Viewers, London.

ADVERTISEMENT.

I Request all those Gentlemen and others, who send Letters to me, about their own Concerns, to be so Civil, as to pay Postage for them, or else they may expect to *o without an Answer. It is not reasonable that I should be at Charge for Persons, I have no Acquaintance withall, and the Business their own. I should not say this, was it but now and then a Letter. But to receive about two thousand Letters a Year (as I have formerly done) upon other Peoples Affairs, or some trifling Matter, and to pay Postage for them makes a considerable Sum. And besides, it is as Burthenfome and Troublesome to Answer them, as it is Chargeable to Receive them.

CHAP. I.

OF ADDERS-TONGUE.

THE Adders-Tongue is a small plant, growing in the woods, and is very common in the mountains of the West. It is a perennial herb, and is distinguished by its long, narrow, pointed leaves, and its small, white flowers. The root is thick and woody, and is covered with a thin, white bark. The plant is very hardy, and is able to withstand the cold of winter. It is a very useful plant, and is used in many of our remedies. The leaves are used in the treatment of the jaundice, and the root is used in the treatment of the dropsy. The plant is also used in the treatment of the rheumatism, and the gout. It is a very good plant, and is well worth the notice of the physician.

The first medicinal use of this plant is recorded in the Chinese Materia Medica, where it is called 'Shan-shu' and is described as a 'warm and bitter' herb. It was introduced into Europe by the Jesuit missionaries in the 17th century.

The plant is native to the mountains of China and is cultivated in the provinces of Szechwan and Yunnan. It is a perennial herb with a woody stem and is characterized by its small, opposite, lanceolate leaves and its terminal racemes of flowers.

The medicinal properties of this plant are attributed to its essential oil and its tannin content. It is used in traditional Chinese medicine for the treatment of various ailments, including rheumatism, neuralgia, and dysentery. The plant is also used as a tonic and a stimulant.

The first of these is the *Artemisia*, which is a very common herb in England. It is a biennial plant, and is distinguished by its strong, bitter taste. The leaves are small, narrow, and pointed, and are arranged in opposite pairs along the stem. The flowers are small and numerous, and are borne in a terminal panicle. The plant is very hardy, and is able to withstand severe frosts. It is a very useful herb, and is used in many different ways. The leaves are used as a seasoning for meat, and the flowers are used in the preparation of wine. The root is also used in medicine, and is said to be very beneficial in many cases.

CHAP. XX.
 OF THE HISTORY OF THE
 ART OF DISTILLATION.

THE ART OF DISTILLATION is one of the most ancient and useful of the mechanical arts. It is a process by which the volatile parts of a substance are separated from the fixed parts, and are condensed into a liquid form. This process is used in the preparation of many different kinds of spirits, and is also used in the purification of water. The art of distillation is said to have been discovered by the ancient Egyptians, and it is now one of the most important branches of chemistry.

Artemisia

The art of distillation is a very ancient one, and is said to have been discovered by the ancient Egyptians. It is a process by which the volatile parts of a substance are separated from the fixed parts, and are condensed into a liquid form. This process is used in the preparation of many different kinds of spirits, and is also used in the purification of water. The art of distillation is said to have been discovered by the ancient Egyptians, and it is now one of the most important branches of chemistry.

The first of these is the *Salmon's* *Herbal*, which is a collection of plants and their uses. It is divided into two parts, the first being a list of the plants and the second being a description of their uses. The plants are arranged in alphabetical order, and the uses are described in a simple and plain manner. This book is a valuable work, and it is one of the best of its kind. It is a book that is worth reading, and it is a book that is worth having.

The second of these is the *Salmon's* *Herbal*, which is a collection of plants and their uses. It is divided into two parts, the first being a list of the plants and the second being a description of their uses. The plants are arranged in alphabetical order, and the uses are described in a simple and plain manner. This book is a valuable work, and it is one of the best of its kind. It is a book that is worth reading, and it is a book that is worth having.

The flowers are white, and the leaves are green, and the plant is very hardy, and will grow in any soil, and in any situation, and is very useful for many purposes.

The flowers are white, and the leaves are green, and the plant is very hardy, and will grow in any soil, and in any situation, and is very useful for many purposes.

The first of these is the *Prunella* which is a very common plant in the mountains of the West. It is a small bushy plant with opposite leaves and small flowers. The fruit is a small black berry. It is used in the medicine of the Indians for various purposes.

The second is the *Salix* which is a very common plant in the mountains of the West. It is a small tree or shrub with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The third is the *Empetrum* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small red berry. It is used in the medicine of the Indians for various purposes.

The fourth is the *Chamaenerion* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The fifth is the *Geranium* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The sixth is the *Urtica* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The seventh is the *Lythrum* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The eighth is the *Stachys* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The ninth is the *Thymus* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The tenth is the *Origanum* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The tenth is the *Origanum* which is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

CHAPTER XXV
 OF THE GENUS *ARACHIS*

The *Arachis* is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

Arachis garden large.

The *Arachis* is a very common plant in the mountains of the West. It is a small plant with opposite leaves and small flowers. The fruit is a small capsule. It is used in the medicine of the Indians for various purposes.

The first of these is the *English Rose*, which is the most common and the most beautiful of all our flowers. It is a native of the East, and was introduced into England by the Romans. It is a climbing plant, and is cultivated in gardens and parks. The leaves are pinnately compound, and the flowers are of various colors, and are very fragrant. The rose is used in medicine, and is a source of many essential oils.

The second of these is the *English Lavender*, which is a native of the South of France. It is a woody, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The lavender is used in medicine, and is a source of essential oil.

The third of these is the *English Mint*, which is a native of the East. It is a creeping, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The mint is used in medicine, and is a source of essential oil.

The fourth of these is the *English Thyme*, which is a native of the East. It is a creeping, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The thyme is used in medicine, and is a source of essential oil.

The fifth of these is the *English Sage*, which is a native of the East. It is a woody, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The sage is used in medicine, and is a source of essential oil.

The sixth of these is the *English Marjoram*, which is a native of the East. It is a woody, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The marjoram is used in medicine, and is a source of essential oil.

The seventh of these is the *English Basil*, which is a native of the East. It is a woody, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The basil is used in medicine, and is a source of essential oil.

The eighth of these is the *English Oregano*, which is a native of the East. It is a woody, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The oregano is used in medicine, and is a source of essential oil.

The ninth of these is the *English Catnip*, which is a native of the East. It is a woody, upright plant, and is cultivated in gardens and parks. The leaves are opposite, narrow, and pointed. The flowers are small, tubular, and are borne in dense, terminal spikes. The catnip is used in medicine, and is a source of essential oil.

The Virtues

XII. *The Juice of the Root.* It cleafes, and takes away the white Morpew in the Face, or other parts of the Body, the place being firft chafed well and tubed with a courfe Linnen Cloth. If it is mixed with *Sherry Sack* in which a little *Myrrh* has been difblved, andatwelfth part of the T^r of *Saffron*, it makes an excellent Collyrium for the Eyes to heal Inrlamations, take away Mitts, Cloudings, dimnefs of Sight, and other difaffeacions, being dropt into them.

XIII. *The Effence of Wine againft the Kings Evil,* Coughs, Colds, Affhma's, fhortnefs of Breath, or any Vehement d^rufftions of the Lungs. If the Stomach is fo^u will Vomit the Patient: it evacuates evil Humors, and is contributory to the Cure of running Sores, old Ulcers, Fiftula's, and the like, Bathing and Wafhing the Swelling and Sores with it alfo.

XIV. *The DecoBion in Wine.* It is Emetick if it meets with a foul Stomach, is opening and cleafing, good for a Cacoethick habit of Body, and prevails againft the bitings of any venemous Creatures, Stone and Gravel, or any ftoppage of the Urinary parts. I know it to be an excellent thing* to be confantly taken by fuch as are troubled with the Evil, Oedema, or other like Tumors, for it confumes the Morbifick Matter which Compofes them. It may be given to iij. iv, or vi. ounces, or lefs, #'.

XV. *The Syrup.* It has the fame Virtues with the former Preparations, but much weaker yet pleafanter to be taken by fuch as are queafy Stomached: It is an excellent PeCtoral: and caufefafy expeaoration in ftoppages of the Lungs. Dofe: ounces morning, noon and night. Tis tit tor Unldren.

XVI. *The Saline TinSure.* It works downwards, and carries off the Caufes of Difeates by Urine: given from j. to ij. drams in White Port Wine, it provokes Urine and the Terms powerfully, is good againft Plurifies, and an old Cough, Pains and Stitches in the fide. J3V.

XVII. *The Oily Tinture.* It is Excellent being Bathed with* againft Punftures and Wounds of the Nerves, bitings of Mad Dogs, Vipers, and other Venomous Creatures.

XVIII. *The AJhes of the whole Plant.* Galen favs that if they are mixed with Ducks Greafe, the mixture is good againft an Alopecia, and brings Hair again where it was fallen ott, by means oi that

XIX. *The Oil.* It is good againft cold Tumors, and to anoint within Cramps, and for any Ach or Pain in any part, proceeding from a coldXaufe, and is good to difcufs Tumors and Swellings in Womens Breafts, Teficles, and other Glandulous

XX. *The Ointment.* It cleafes old running Sores, putrid Ulcers, and rebellious Fiftula's, difpofes them to healing, and puts a ftop to Setting and eating Ulcers: Difcuffes Inttamations in Womens Breafts, and Teficles, and is good againft Fellons in the Fingers ends.

XXI. *The half am.* It is an Excellent thing indeed, for healing all forts of Green Wounds^ cleafes Ulcers to the bottom, incarnates and heals them, and is alfo profitable againft the Gout from a cold Caufe.

XXII. *The fonder of the Roots.* It may be given to j. dram in a Glafs of White Port Wine, it provokes Urine and the Terms in-Women, helps Pains in the Sides, Ruptures, Convulfions, and old Coughs; Ufed as an Errhine, it purges the Head and Brain of cold and moift Humors which caufe Head-Aches, Lethargies, Vertigoe's, Epilepfies, Apoplexies, &V- And j. dram taken in Broth provokes Vomit, and helps fuch as are bitten with Venomous Creatures.

XXIII. *The Cataplafm.* It is fingular good to difcufs Contufions, Inflammations and the like, to give eafe in a cold Gout, or any Ach or Pain from a cold Caufe, ftrenthens the Nerves, and cures Cramps, in #hat part foever: and is good to be apply'd in Tumors of the Kings Evil, Kernels and Swellings in the Neck and Throat, &c. I have had large Experience of the Virtues of the Root of tills Herb} and I write little more of it, than what is true to my own knowledge.

CHAP. XXXVI.

Of Onion ASPHODEL,

J. T. Names. It is called in Greek, 'X«Sta«
Αφροδελος: In Latin, *Aphodelus Bulbosus*,
Asphodelus F^mina by *^bel*, *Apho-*
delus Hyaanthvus, and *Hyacinth*.² *Affhodelus*, and
that rightly, becaufe the Root is like the *Hyacinth*
or *Jacinth*^ and the Flowers like the *AJphodei*:
Clufms calls it *Ornihogalum Majus*, the *Greater*
Star of Bethlem, and that fitly enough: in *Englijh*
we call it, *Onion Aphodel*^ and *Bulbous Affbodel*^
from the form of the Root.

II. *The Kind.* It is a fingular Plant, having no particular Species under it,

III. The Description. *It ha* a yellowish round Bulbous or Onion like Root, with some Fibres hanging thereat, from the which come many whitijh green Graffy Leaves, long and narrow, not much unlike inhape to Leeks, anifpread upon the Ground-, tbefo come forth at the beginning of the Tear, and abide till May; and then they withering, amongst thofe Leaves, rife sup a qaked fmooth Stalk, replenished towards the top with many Star like flowers, of a whitijh, or pale yellow gwen Color on the infide, and wholly Green without, confifting of fix little Leaves, /harp pointed, with certain Chives or Threads in the Middle, and growing onshort foot Stalks, on a rea- fonable long Headfpike fafhion: after the flowers arepaft, there fucceeds a frnall Knop,-or Head three fquare, in which lies the Seed which is roundijh and black. It differs from Kings Spear, which is alfo a kind of Aphodel, in the pods, the which are round, but in this long and three fquare: from the Marjh or Lancashire Aphodel, in the Stalk, which is not wholly Naked: and the Common Aphodel in the Pods and Roots, which in thofe the Pods are round, and the Root multiform and knobby.*

IV. *The Places.* It grows in the Corn-fields in the Upper Hungary; but with us, it is only nourifhed up in Gardens,

V. *The Times.* It Flowers in May, June, and July 1 and the Seed is ripe in Augujt, or not long after*

VI. *The Qualities.* It is hot and dry in the third Degree, haying almoftthe fame temperature with Aron. It is aperitive, inciding, attenuating, abfteriive, difcuffive, and fomething Emetick. And are appropriated to the Stomach, Lungs, Womb, Reins and Joynts.

VII. *The Specification.* The Roots which are only ufed, openobfructions of the Lungs-, and are peculiar againft Afthma's, caufing Expectoration.

VIII. *The Preparations.* You may have from the Root. 1. A Juice. 2. An EJJence. 3. A Lohoch. 4. AS aline Tintture. 5. An Oily TinUure. 6. An Ointment. 7. A Balfam. 8. A Cataplafm. 9. A Syrup. 10. Afhes.

The Virtues.

IX. *The Juice-* Given from half an ounce more or lefs as the Patient is in age and ftrength in a Glafs of White Wine, it opens obfructions of the Vifcera, and is a fingular good Medicine againft the Yellow Jaundice.

X. *The EJJence.* It is good againft Pains and Aches of the Bowels, Pleurifies, Stitches, and other Difeafes caufed by Obfruction, whether in the Lungs or elfewhere: It prevails againft Coughs, 4Qolds, Afthma's, fhortnefs of Breath, and difficulty or fireathing, and difpofes wounds and Ulcers to a fpee% healing. Dofe from 1. ounce to j. ounce and half JrWine or Mead.

XI. *The Lohoch.* It is made of the Juice Boiled up to a thicknefs with Honey, with a quarter part of the fine Pouder of Elecampane Root, it is a famous Pectoral; with this I once cured a fupposed incurable Phthifis, in lefs than two Months time: at firft it Vomited, and continued to do fo, more or lefs for 10 or 12 Days, after which time the Patient took it very pleafantly, i, cleaned the Lungs, caufed a great Expectoration, and in fhort time after healed them and performed the Cure Pleafantly. It is good for Coughs, Colds, Afthmas, Wheezings, fhortnefs of Breath, and other Diftempers of the Lungs. Dofe j. ounce in the morning Falling, and as much at four in the afternoon.

501. *The Saline Tintture.* It provokes Urine and is good againft Gravel, Stone, and Tartarous

Siime in the Reins and Bladder. It repreffes Vapors and Fits of the Mother, provokes the Terms, and prevails againft the Gout. Dofe from half a dram to ij. drams morning and evening in a Glafs oi Wine.

XIII. *The Oily TinSure.* It is good againft an Oedema in the Knees, Traumarick Tumors in the Neck and Throat, and any other cold Swelling in any part whattbever, being anointed thereon. It prevails againft a cold Gout, and other like Pains and Aches. Inwardly taken from vj. drops to xvj. in a Glafs of Wine, it Comforts the Head, Brain, Nerves, and Womb.

XIV. *The Ointment.* It is good to anoint Kernells and Scrophulous Tumors in the Throat, cleanle old Ulcers, and being put Scalding hot into Fiftula's to remove the Callus and tkai them.

XV. *The Balfam.* It is prevalent againft Oedematous Tumors, and the Gout, heals Wounds, cleanfes old Sores, running Ulcers and Fiftula's, makes the Flefh grow, and heals them. It alfo difcuffes hard and fcirrhus Tumors.

XVI. *The Cataplafm.* It takes away black and blew marks of the Skin occafioned by Blows or Bruifes, difcuffes or refolveS Incarnations, and abates pain by its Anodine Property: It is good in Tumors of the Breafts and Cods.

XVII. *The Syrup.* It is Pe&oral, good againft all difeafes of the Brest, Lungs, and Womb* caufes Expe&oration, and a free Breath, and provokes the Terms. You may give it from j. ounce to ij. ounces, in a Glafs of white Wine morning and evening.

XVIII. *The AJhes of the whole Plant.* Galen faith, That the Afhes of the Root mixed with Oil, or Hens Greafe, cures the falling of the Hair in an Alopecia, and reftores it where it was loft-, and alfo cures a Scald Head. It is good againft Scurf*, Morphew, and other like vices of the Skin.

CHAR XXXVII

Of Marjh or Wild ASPHODEL.

*-T+He Names. It is called in Greeke, 

I «Arf/»r. in Latin, *Aphodelus Palufter*, *Pseudo-afpboMus Luteus*: in English, *Marjh AJphodel*, *Wild or Bafiard Aphodel*, and *Baftard yellow Aphodel*, and *Lancashire Aphodel*.

II. *The Kinds.* There are two fpecial Kinds hereof, *Pseudoaphodelus major*, *Aphodelus Lancastret*, the greater *Marjh*, *Wild*, 01 *Baftard Aphodel*, *Lancashire Aphodel*. 2. *Pseudoajpbodelus minor*, *Aphodelus Lancastna vents*, the letter *Marjh*, *Wild* or *Baftard Aphodel*, the true *Lancashire Aphodel*.

III. The Descriptions. *The firft of thefe has a Root long and Jointed, creeping as Grafs does, with many fibres thereat, from whence rife up fever al long and narrow Leaves, like unto Corn Flag, but notfojhfforhard, of a beautiful green Color, and fomihat Chamfered, furrowed or fir a/zed down right, yet co?npajjing one another, as the Corn Flag and Flower de luces do at the bottom, among which rifes up a Stalk about a foot and a half high, with divers fhort Leaves enclofing the Stalk, as it were hofed at their bottoms-, and at the tops ft and fever al yellow Flowers, as it were in a fpiked Head, each of them ?nade of fix Leaves a piece, as are thofe of the other Aphodels^ in the midji of which come forth fever al fmall Threads or Chives-, which being paft, there comes*

Seed in fomwbat long and' fqnare pointed Husks or Cds^ which Seed is very fmall and Blackish.

IV. The lesler Kind, has a Root which confists of of a few whitish long Fibres, not creeping far, or wuch, but increafing intofundry Heads, from whence Spring forth many fsmooth green heaves, narrower, fhorter, and frether than the former, (Gerard//?, two Inches and a half or three Inches long, fomewhat broad at the bottom and fharper towards their ends) not much unlike to a narrow Flower de luce, but neither fo hard nor fo thick \$ from among which JLeaves rifes up a Stalk, which fcarcely attains to be a Foot high, having very few fmall heaves thereon, (Gerard fays it is fsmooth and without any heaves thereon*) towards we top whereof in a fpiked Head comes forth fmall Flowers, of a paler yellow than the former, and of a pretty Star like fafhion, which being gon, there fucceeds fmall three fquare reddish Husks, or longijh little Cods^ which, Gerard/*/*-, are fometimes four or five Square, and in which is contained fmall reddish brown Seed.

V. The Places. They are both found Wild in England, as well as in other places beyond Sea, in Marfh and Wet Grounds: the firft near Lancaster, in the Moorish Grounds there, as also near unto Mandjley, and Marton, two Villages not far from thence, as also at the Foot of Bagfhot Hill in the Weft of England, near to a Village of the fame Name. The fecond grows near Egham, not far from the River fide there, and in many other places, in the Weft of England.

W.The Times. They Flower in May, June, and July, and the Seed is ripe, about a Month after the Flowers are gon: molt of their Leaves remain green in the Winter Time, if it is not extream cold and hard weather.

VII. The Qualities. They are hot and dry in the fecond Degree^ Inciding, Attenuating, Aperitive, Abfterfive and Diuretick: Dedicated to the Lungs, Reins, Womb, and Joynts*

VIII. The Specification. There has been nothing in a conftant Obfervation, to which they can be faid to be peculiar^ Authors having as to their Virtues been filent.

IX. The Preparations. You may make from the Roots, i. A DecoSion. 2. A Juice. 3. An Effence. 4. A Syrup. 5. An Ointment. 6. ABalfam, y« A Cataplafm. ! A Saline Tinliure*

The Virtues.

X. Altho' Authors have faid nothing of the Vertues of thefe Plants^ yet, by their Taftes, and other Signatures, they seem to have the Virtues of the Garden Afpbode/s, tho poffibly not fo Potent and Efficacious: I have made feveral tryalls of them, and have found the Decoffion to open obftru&ions of the Lungs and provoke Urine. With the Juice given to ij. ounces for fome days in White Wine, I once provoked the Courfes in a Woman where they were obftru&ed: and with the Syrup and Effence, I have cured fome that have had extream Colds. The half am I know to be a good Vulnerary, and the Ointment is very difcuffive and refolutive, and good againft the Gout. The Saline Tintfure provokes Urine, and dears the Reins and Urinary Paflages. of Sand, Gravel, Slime and Tartarous Matter, given to ij. drams in White Wine: the other Preparations I have not much ufed, but this laft, (as it is the eaft made) I have oftentimes proved, and that with good Succfs.

CHAP. XXXVIII.

Of Garden ASPARAGUS.

I. The Names. It is called in Arakick, Halion, Helwn: In Greek, 'A^&yo*, \$ >Aw<t&wl, TroTS^ of^, Trom provoking Luft: In hat in AJparagus (If Coruda: In Englijb, Afpargus, Sparagus, and Sperage.

II. The Kinds. There are feveral Species of this Plant, i. The Garden Kind. 2. The Wild Kinds^ of which there is, x. The Seu or Marjh. 2« The Rock Kind. 3. The PricJUy, of which three laft m the two following Chapters. The Garden Kind is also 1. Afpargus Sativus vel hortenfis, feu Minor, The Common Garden Leffer Kind * Afpargus Sativu, Major, The Greater Garden Kind.

III. The Defcriptions. The firft or Smaller has very many Roots, difperfed from a Spongy head, which are long thiak joft and fpongie Lngs, ing down, and fpreading themfelves all abvia, by it greatly enereafes: from this Rpot thU^L out of the Ground divers whitijh, greeY ftab Sprouts thick tender, very foft and Brittle yZ thicknefs of the greatesf Swans Suill, or romèJhat thicker in Tafie not m%ch unlikto GreenZn^ or Peafe, having at top a certain fealy foft Bud which Redoes rife up into very ligZfietder SS, and growing to be three or four Feet high f j? (fsfp* Ground is ingoodnefl) which Stalks Jend forth divers fmaller Branches, wbenon are Jet many little green Leaves, like Fennel, but Jhorter and fmaller, and growing up to the top, mnh finer than the Leaves of Dill- among which, at the Joynts thereof, come forth, fmall Moijfw, ydbmfh blowers, Which yield a Fruit or Berries, gre#n at firft, afterwards red as Coral, of the bignefs of a White Pea, whomrth conPamedgrofs Uackijh Seei^ and

and exceeding hard, which is the caufe it lies fo long in the Ground after fowing, before it Springs up.

IV. *The other or Greater Kind differs nothing from ifye former, but in the Colour of the Shoots, their Magnitude, and Tafte, they being much whiter, vaji-ly larger, and much more jweet and pleafant. It is almoji beyond belief the relation of the vaji Magnitude to which thk Great Kind will grow : This pre-ferent Tear 1696. a present was made to a Lady of one Jingle Bunch containing but one hundred of Sprouts or Heais^ which weighed (as was reported to me) above forty Founds weight: and the Ian Tear I cheap-ened a Bunch or hundred, of the fame Kind in New-gate-Market, which they would not Sell me under eight Shillings, and warranted to weigh above twenty Founds Weight. So that it is manifelt that the larger fort is either another Kind, or elfe, the former fort vafly improved by Art and Induftry.*

V. *The Places.* They grow with us only in Gardens, where they are nourifhed up for the daily Service of the Houfe, being an Excellent Boiled Sallet.

j. VI. *The Times.* The bare tender Shoots, which * are Sold in Markets in Bunches or Hundreds, come Hjp. commonly in the Spring, and may be had all March, April, and May, and fometimes in June^ but the Gardner has arrived now to fuch a dex-terity in his Art, that if the Winter or Seafon is Warm, you may flave them all January and February, as was manifelt this prefont Year, when I could have had what quantity I pleafed on New-Years Day. They fpring up after that, to a kind of diminutive Bu(ha and Flower in June and July, and bear their ripe berries in September, or late in the Year.

VII. *The Qualities.* They feem to be Temperate in refpeft to heat or coldnefs, drynefs or moifture. They incide, attenuate, open, cleanfe, and are very Diuretick : and fœm to be chiefly Cephalick, Hyfterick and Nephxkick h and, if Authors fay true, Spermatogenetick withal.

VIII. *The Specification.* They are peculiar againft

the Strangury, or ftoppage of Urine, and difficulty of making Water, to provoke Urine, and to expel Sand, Gravel, and fmall Stones out of the Reins, which even the figure of the hardnefs of the Seed, feems alfo to intimate.

IX. *The Preparations.* You may have therefrom, I. *The Roots.* 2. *The Seed.* 3. *The Diftilled Water of the whole Plant,* diftilled in September, when its Berries are Red h which things the Shops are laid to keep: But befides them, we have, 4. *The tender Shoots or Heads.* 5. *The DecoQion.* 6. *The Juice.* 7. *The Effence.* 8. *The Saline TinSurc** 9. *AGargarifm.* 10. *A Bath.*

The Virtues.

X. *The Roots.* Being reduced into Pouder, and given from j. dram to ij. drams in White Wine, or the Diftilled Water of the Plant, it provokes Urin and opens the ftoppages of the Urinary parts. *

XL *The Seed.* It is held, to be very effectual for the purpofes aforelaid, j. dram of it being given in White Wine •, fo alfo, it is mixed in equal quaxir tities with the Pouder of the Root, and given in like manner from j. to ij, drams.

XII. *The Diftilled Water.* It is drawn from the whole Plant, and is to be re&ified (as Schroder directs) by putting it upon more frefti Herbs. It pro-voques Urine, and gives eafe in the Scone, being drunk daily three times a day, from iv. to viij. ounces : It is ufed alfo as a Vehicle for other things.

XIIL *The tender Shoots or Heads.* They are Boil- ed, and Eaten as a Sallet, with Butter, Vinegar and Pepper, being very Nutritive h and tho' cleaning, as to the Reins, Bladder, and Urinary Paffages, yet they comfort the Stomach, are eafe of Digeftion, and reftore in Confumptions. *

XIV. *The Decoffion of the Roots in Wine.* It opens Obftu&ions of the Bowels, provokes Urine, being toppeda and expels that Tartarous Matter in the Reins, Ureters and Bladder, which caufes the Strangury. Dofe from iv. to viij. ounces.

XV. *The Juice of the Roots and young Sprouts.* It prevails againft the Strangury, or difficulty in mak- ing Water, when it is done by Drops -, it expels Gravel and the Stone out of the Reins and Bladder, and helps vehement pains in the Back. Dofe ij. or iv. ounces in Wine, twice a day.

XVI. *The Effence made of the Juice, or bruifed Plant.* It has aU the Virtues of the Juice beforegoing •, befides which, it is good againft the Obftu- frutions of the Lungs, Pains of the Stomach and Bowels, Falling-ficknefs, Fits of the Mother, Yel- low Jaundice, and dimnefs of fight: and taken eve- ry Morning and Evening, from ij. to iv. ounces in a Glafs of Generous Wine, it is laid to ftir up Bodily Luft, Generate Seed, and remove Impotency.

XVII. *The Saline TinSure.* It has all the Virtues of the Deco&ion, Juice, and Effence h but more powerful in provoking Urine, and expelling Sand, Gravel, Stones and Slimy Tartarous Matter: befides it particularly Stimulates the Generative Faculty by its penetrating and fubtil Quality, and effectually cures the Yellow Jaundice, Doib from i. to ii. drams in Wine.

XVIII. *The Gargarifm.* The Roots bruifed and boiled in White Wine Vinegar, being gargled in the Mouth warm, gives eafe in the Tooth-ach : and the Root it felf is laid to be profitable to be applied to an Aneurifm.

c^xl^xv> rbe Bath, l^z is made of a good quantity of the Roots and Seeds bruifed, and boiled in a great Itore of Water, which is to be put into a large Veffel, in which a Man may fit up to the Breafte

at leaft : This has been found effe&ual againft Fits of the Mother, Cholick, and Pains of the Back and Reins, and generally 'tis good againft Cramps, Convulfions, Sciatica's and other vehement Pains of the lower Parts of the Body.

CHAP, xxxix.

Of Sea or Marfli ASPARAGUS.

I. ^{^T}* ^{HE} Names. It is called in ^{Grra} VA^{^^}Ⓞ X «*fw : in Latin, by *Anguillara* and *Taber-montanus*, *Afparagus Paluftris*: and *Afparagus manum*, by *Clufius* and *Camerarius* : by *Bauhinus*, *Pe-* *ra*, *Marfli*, *Afparagm* *maritim*: in English, *Sea*, or *Marjh Afparagus*.

II. *The Kinds*. This is the firft fort of the Wild *ivinas*; which fome would have us to believe will, *Plantation*, and *Manuring* in Gardens, become the *Garden Kind*; at leaft as good as the *Gard-*

III. *The Defcription*. This Wilder Sea, or Marfli kind of Afparagus has a Root with many Strings and Fibres difperfed from a fpongy Head like the former, from whence rifes up many, but jhorter Stalks than the Garden Kinds, flronger alfo and thicker, branching forth in the fame manner, and having Juch like winged Leaves, but Jhorter, thicker, harder, and of a blewifh, green Colour. The Flowers are like the other, and fo are the Berries or Seed which follow, but greater than they, and not of fo frejh a red colour.

IV. *The Places*. If is found to grow in the Marflies of Tidnam, near Chepftow, and in Appleton Meadow in Gloucefterfhire, about two Miles from Briftol, where the Poor People do gather the young Shoots or Heads, and fell them in the Market at Briftol, much cheaper than our Garden Kind is fold in London. Mr Ray fays he has found it alfo at the Lizzard Print 5 and it is Cud to be found about

Harwich in *Ejflex*, and divers other Marfli Grounds and Places, as in a Meadow belonging to a Mill near *Thorp* in *Ejflex* ; and at *Singleton* not far from *Lorbie*; alfo in the Meadows near *Moult on* in *Lincolnfhire* : At a place called *Badmor-lading*, not far from *Harwich*, and at *Moulton* in *Holland*, which is alio a part of *Lincolnfhire*.

*⁹ ^{the} *Times*. The Tender Shoots fpring up in *March* and *April*, at what times they are gathered and Eaten -, they Flower in *June* and *July*, and the Berries ate ripe in *September*.

VI. *The Qualities*. It is, as to its firft Qualities, temperate: Mr. Ray %s, that the Roots are Dintetick, and Lithonriptick, and are one of the five opening Roots: They a/e appropriated to the Liver, Spleen, Reins, Womb and Joints.

VII. *The Specification*. The Roots are peculiar againft the Yellow Jaundice, Stone or Gravel in the *Re Pns an* d Bladder, as alfo the Sciatica and Gout

VIII. *The Preparations*. You may have therefrom, 1. *The tender Sprouts or Heads*. 2. A *DecoSion of the Roots in Wine*. 3. A *Juice from the fame*, *f A Mence* of the Roots. 5. A *Syrup of the fame*. 6. A *Saline TinUre*.

The Virtues*

IX. The Virtues of the Roots and Seed, and even of the whole Plant, are the fame in all refpe&s with thofe of the Manured or Garden ; fo that we need not here be particular in explicating the Virtues and Ufes of the afore enumerated Preparations, but wholly refer you to that which has already been laïd in the lait Chapter.

CHAP. XL.

O/Wild ASPARAGUS.

I. ^T* ^{HE} Names. It is called in *Greek*, ^X ^{My} ^W ⁹ ^a, ^{ic} ^T ^x ⁱ ^z ^f ^y [Ⓞ] [^] ^T ^f [Ⓞ] : in Latin, *Afparagus Sylveftms* : in Englifh, *Wild Afparagus*, or *dione Afparagus*.

II. *The Kinds*. There are two principal Kinds I. *Myacanthinus Galem*, *Afparagus Sylveftris foli & acutis* : *Gefner*, *Dodonxus*, *Camerarius*, and others, call it fimply *Afparagus Sylvejlris* : *Cordus* *Lugdunenfis*, and others, *Corruda*: *Bauhims* and *Parkmfon*, *Afparagus folus acuti**, and is thought to be xte *Afparagus Petrous* of the *Tird* *Agriarides*. 2. *Afparagus Petrous*, or *Prickly Rock Afparagus* : this is called by *Corruda altera* : by *Dodoneus*, *Ar* (fo that he makes little difference the former, tho' indeed there *hinus*, *Afparagus aculeatus* *2* *Uatuor* *Spims ad eundem exortum*.

III. *The Defcriptions*. The *Rrtt* *W:w* *gus* with *ftiarp* *Leaves*, *hasfd* *many* *Strings* *and* *Fibres* *depend* *and* *jhorte* *than* *any* *whence* *rif*

Chap. 41. 'EngUfh Herbs.

ijh Aft-colour when they are ripe, wherein is contained a bard Black Seed.

IV. The fecond Wild Kinder Prickly Rock Afparagu\$, which fome call Thorny Afparagus, ha* very thick and fhort Roots, with many thick firings, all meeting together at the head of the Root, from whence rifes up fever al branched green Stalks, having three or jfour fharp green Thorns (more like indeed to Thorns than Leaves, they arefo hard, fmall, long, and fharp pointed) fet together all along the Stalks and Branches \$ from which come'forth fmall, moify, yellowijh green flowers -, and after them fiore of Berries, greater than in the former, and of a black-ijh green colour, when they are ripe, full of a green-ijh Pulp_h wherein ujually lies but one black hard Seed, or at moft two, having a White Kernel within it.

V. The Places. The firft Kind grows in Stony and Rocky places, as, near to *Salamanca* in *Spain*, alfo under Hedges, and in the very Fields in *Cafile* and *Granada* ; about *Narbone* and *Montpelier* in *France* , as alfo in *Creet* ox *Candy*. The fecond Kind grows in ftoney and ragged or rocky places, as alfo by hedge fides, not only in *Spain*, but alfo in *Portugal* and *Creet*. But with us, both the Kinds are only found Nurft up in *Gardens* of the Curious.

VI. The Times. They fend forth their tender Shoots early in the *Spring*, and Flower in *June* and *July*, having ripe fruit in *September* : But with us in *hngland*,[^] it fcarcely comes to perfeftion, unlefs the beaion is very warm, and they grow in a warm place, which may defend them from cold Blafts and nipping Winds.

They are Temperate as to the firft Qualities, but rather more drying than any of the former. They incide, attenuate, and open powerfully, and are ftrong Diurericks and Lithon- tripticks : and peculiarly appropriated to the Liver, Spleen, Reins, and Womb.

VIII. The Specification. I have been informed by

fome intelligent *Engliffh* Men, who have lived in *Spain* for fome Years, that the People of the place efteem them as one of the molt peculiar Remedies againft the Stone and Gravel, and much Superiour to the Garden or Marfh Kinds. •

IX. The Preparations. You may make from the Root, 1. A Decoffion. 2. A Juice. 3. An Ejjence* 4. A Saline Tinture. <j. A Dijilled Water: and from the Seeds or Berries, 6. A Pouder.

Tide Virtues.

X. The Virtues are the fame with the Garden and Marfh Kinds : and therefore the Defignation and Ufes of each Preparation the fame, to which you are referred •, fave, that thefe Wild Kinds are efteemed to be double in Force and Goodnefs.

CHAP. XLL

Of Common A V E N S.

Lⁱ n p H £ Names. This Herb, for all that we can JL learn, was unknown to the *Greeks*, and therefore we can furnifh you with no *Greek* name for it : but it is called in *Latin*, *Caryophyllala*, and *Garyophyllata*, (from the finell of its Root) alfo *Herba Beneditta*, *Sanamunda* -, and *Tragus* would have it called *Nardus agreftis*, (not only for the fweet fcent of its Roots, but for its excellent Vir- tues) and is fuppofed to be the *Geum Plinij*, in *Hi ft. lib. 26. Sea. 21*. It is called in *Engliffh*, *Avens*, *Trufler* *Brandy*.

II. The Kinds. The General Kinds are two. 1. *Czaryophyllata vulgatiore*, the common *Avens*. 2. *Caryophyllata Montana*, the Mountain *Avens* ^ of which in the next Chapter. The *Common Avens* is two-fold, 1. *Thzt, Flore minore*, with the fmaller Flower, (which is the more Common;) 2. That, *Wore ma-*

J're, with the greater Flower, as Mr. Ray has noted, *Hift. riant*, pag. 606.

III. The Defcriptions. *The Jirst of the Common Kind with the fmaier Flower, has a Root confjiing of many thick Strings', and f mailer Fibres, fomewhat of a brownish yellow without, and reddish within, fmelling fomewhat like unto Clove'r, efpedaily if it grows in the higher, hotter and dryer Ground, and in a freer and clearer Air ; but nothing fo much, or not at all in many other places, especially if they be moiifi : From this Root Spring forth many long, rough, dark, green winged Leaves, every one made of many "Leaves, fet on each fide of a middle Rib h the three largefi whereof grow at the ends, and fnipt or den- ted round about the edges ; the other being fmall pieces, fometimes two, and fometimes Sour, Jianding on each fide of the faid middle Rib, under them : among which do rife up divers rough or hairy Stalks, about a Foot high, branching forth with heaves at every Joint, not fo long as tbofe below, but abnoji <u much cut in on the edges, Some into three parts, and Some into more : on the tops of the Branches fl and fmall, pale, yellow Flowers, confjiing of five Leaves, like Cinque foil Flowers, but larger h in the midft whereof, ftands a fmall green head, which, when the Flowers are fallen, grow to be rough and round, being made of many long, greenifl), purple beads, like grains, which will flick on your Cloths.*

IV. *The other Avens with a large Flower, is a riant little differing from the former in any parti- C f. Exc'p' in the Flowers, which are greater than thofe of the common, and fairer : This I have Sometimesformerly feen and gathered in Woods and Cop- fa in fome parts of Cambridgefhire, where the whole Plant grew large and very fragrant ; but the Roots not much inferior (in my opinion) in their Scent to Cloves themfelves.*

V. *The Places.* They are found to grow Wild in many places of our Land, under Hedge fides and near By-paths in fome Fields, as alfo in Woods and J'opfes, delighting to grow rather in Shadowy than punny places. And in many places they are brought into Gardens, chiefly about London, and in fome great Towns and Cities, that they may be near at hand upon occafion. The Large FloLred Avens IS found in Tedford Wood, in the Would* ofLinZl- /hire.

VI. *The Times.* They Flower in May and June generally, and their Seed is ripe in July at far- theft.

VII. *The Qualities.* Avens is hot and dry in the firft Degree •, and is Inciding, Attenuating, Opening, Abfterfive, Difcuflive, Refolutive, Carminative, Akkipharmick, Afringent, and Vulnerary. Schroder lays, it is Cephalick, and Cardiack 5 and we know by Experience that it is Stomackick, Hepatick, Hy- fterick, and Arthritick.

VIII. *The Specification.* Schroder lays, its chief ufe is in drying up Catarrhs, and refolving Coagu- lated Blood: it is a fingular cure for Wounds and Ulcers.

IX. *The Preparations.* The Shops keep nothing hereof, but only, 1. *The Root* : but you may pre- pare therefrom, 2. *A Decoffion*. 3. *A Wine*. 4. *A Juice from the Roots and Plant*. 5. *An Effence*. 6. *A Spirituous Tinture from the whole Plant*. 7. *A Saline Tinlure*. 8. *An Oily Tinture*. 9. *An Ointment*. 10. *A Balfam*. 11, *A Cataplafm*. 12. *A mixture for CallousUlcers*.

The Virtues*

X. *The Root.* The Poudet of the drycd Roots given from half a dram to j. dram, ftrengthens the btoiroch, opens Obftru&iioos, is ggod 3g4infst Spit-

ting or Pilling Blood, or the Bloody Flux -, and ftrewed on moift or running Sores, or Ulcers, dries them up, and difpofes them to healing. The dried Roots are alfo ufed to be laid among Cloths, to per- fume them, and keep away Moths.

XL *The Decoffion*, Made in Mead, or half Wine half Water, it is good for ftoppages of the Breft and Stomach, Stitches and Pains of the Sides, opens Obftru&iions, and corrects cold and crude humors in the Stomach and Bowels. Dofe vj. ounces.

XII. *The Wjne*. It is very Aromatick, and if it is drunk for fome continuance of time, every Morn- ing fafting, it warms and ftrengthens a cold Sto- mach, takes away ficknefs at Stomach, comforts the Heart, expels Wind, makes a good Digeftion, opens Obftru&iions of the Liver and Spleen, refills Poifon, and is a fingular prefervative againft the Plague, or any Peftilential Difeafe; Dofe, in infeftious times, iv. or vj. ounces, Morning, Noon, and Night.

XIII. *The Juice from the Root*, &c. It is Pe3o- ral, Warming, Comforting, and Strengthening a cold Stomach, and is good for Inward bruifes'and hurts, for it diffolves congealed Blood, happening by falls or bruifes. as alfo fpitting of Blood h it opens Ob- ftructions* of the Li^er, Spleen, and Womb, pro- vokes the Terms, and is good againft the Colick. Dofe from ij. Spoufuls to iv. or more, in Wine, Mead, or Ale : Outwardly, it is good to wafte old runnig Sores, or putrid Ulcers with, in Order to their cleaning and healing.

XIV* *The Effence*. It is good for Difeafes of the Breft and Lungs, is Cephalick, Stomackick, Cordial, Hyfterick and Vulnerary, eminent againft cold and moift Difeafes of the Head, Brain and Nerves 5 it ftrengthens Digeftion, and caufes a good Appetite, taking away pains of the Stomach, from the cold- nefs thereof* it chears the Heart, and is good againft Sicknefs and Fainting Fits -, prevails againft Bar- rennefs in Women, by refifying tJiecold and moift Diftemper of the Womb. ^ It is alfo an excellent Vulnerary^ for by taking this Effence Daily, from j. to iij. or iv. ounces, Morning, Noon and Night, it caufes Wounds, Ulcers, and Fiftula's to heal after an admirable manner.

XV. *The Spirituous Tjntfure*. It has the Virtues of the Effence, but not full out fb powerful, except in Vulnerary cafes, in which it may do full as well. Dole from j. dram to ij. drams, or more, in a Glals of Wine or Diet Drink.

XVI. *The Saline Tinlure*. It opens Obftru&iions of the Reins, is good againft the Plague, and all Peftilential Difeafes, Wounds, Ulcers, Sores Fiftu- la's, and many Difeafes of the Head, Brain NervesL Lungs, Breft, Liver, Spleen, Womb, and Reins car- rying off the Morbifick Caufe by Urine Dofe from j. to ij. drams in Ale, Mead, Wine or Diet Drink.

them: it helps l ^ x ^ ^ ^ % * c < e s of the Limbs, and Palfies being IS d and Evening on the parts a Med s as Tains and Gouts, proceeding from cold Caufe \ fluxion of cold Humors. And in wa TdK vj. drops to xvi. or xx dron* Z r^n taken from hide, ft prevails agaLttffirefe/plexies, Convulfions, and o the S'r??^ f S?" the Head, Brain, and Difeafes of the Code. It ceafes Pains from a cold m . n . I T a . n a s , Scrophula's, and Pleu » or , Inflan (nations, and dables Inflammations h Wounds and Ulcers, by difcufling the Caufe and IS | O , o ; a ? , Inft * e Piles in Ana a u i e ^ n d AIA. i be Balfam. It is a true Vulnerary, and

cures fimple Wounds by the firft intention : It cleanes running Sores *, old foetid Ulcers *, and flubbom and rebellious Fiftula's *, washing them firft with the Juice, or Eflence, and then applying of this Balfam : it cleanfes, incarnates, or breeds Flefh, and brings to a speedy healing.

XX. *The Cataplafm.* It difcuffes Inflammations in their beginning, is good againft Contufions, or Bruifes, eafes paips or Aches* in any part, and is fingular good in a cold Gout. * I have applied-it with great fuccefs in vehement Head-achs, proceeding from taking cold, or any recent Caufe.

XXI. *The Mixture.* Take Juice of the Roots iv. ounces, fine Verdgreefe ij. drams -, mix them. It takes off the Callus in hollow Ulcers, and Fiftula's, where it mull be injected with a Syringe. But if the Callofity is in an open Ulcer, the Mixture may be thus made : Take of the foregoing Ointment ij. ounces : fonder of Tobacco ij. drams : Verdgreefe j. dram : mix them. Or thus : Take of the former Balfam ij. ounces : Powder of round Birthwort Roots ij. drams : fine Verdgreefe j. dram : mix them. Any of thefe mixtures take off a Callus from any Ulcer or Fiftula, cleanfes the fame,* and induces it to a speedy healing -, and this it will do, if the affecl: is in the Joints.

CHAP. XLII.

Of Wild or Mountain AVENS.

I. **T**HE Names. They are called in Latin > *Caryophyllata agreftis* < *Caryophyllata montana* and in English, *Wild or Mountain Avens*. The Epithet *Wild* is put to thefe, to diftinguifh them from the former, which are never called *Wild*, for tho' they grow Wild in Fields and Woods, yet it is always near home, and befides, they are many times nurfed up in Gardens, which thefe are never, except as meer Rarities.

II. *The Kinds.* There are feveral Kinds of *Mountain Avens*, but thofe growing in our Country chiefly, are, 1. *Caryophyllata montana purpurea*, as Gerard calls it: Or *Montana paluftris purpurea*, as Parkinson : Also *Aquatica nuda ante flore*, and *Aquatica flore rubro friato*, by the Bauhins, *Purple Mountain Avens*, or *Water Avens*. % *Caryophyllata flore amplo purpureo* ^ *Avens with a large double flower*. 3. *Caryophyllata Chamadryos folto*, as Morifon calls it: *Chamadryos purpurea* *Ciftiflore*, as Parkinson : *Alpina Ciftiflore*, and *Alpina fore fragrantia albo*, as the Bauhins : *Teucrium Alpirum Ciftiflore*, as Gerard, *Mountain Avens* with *Germander Leaves*. 4. *Caryophyllata Pentaphylla*, as Bauhin and Parkinson: *Alpina Pentaphylla*, as Gerard: and *Alpina quinquefolia*, as Caffar Bauhin * *Unquefoil Avens*. To which add, % *Laryophyllata montana Virginienfis*, *Virginia Mountain Avens*. 6. *Caryophyllata montana flore magno luteo* ^ *Mountain Avertis*, with a great yellow flower.

III. *Descriptions.* 1. *Purple, or Water Mountain Avens.* it has a Root about a Foot thicknefs, with many Strings or Ives thereat, whence rifes up many long and hairy Leaves, compofed of divers little heaves with larger at the top, and thefe fnipt or dented about the edges, like as the Common Avens: among thefe Leaves rife up feveral Stalks, a foot or more in height, on which grow flowers, whose Heads hang down : the tops of the Stalks, and Cups * of the Flowers, are commonly of a purplifh Yellow, but the flowers fcarcely appear above the Husks that contain them : Thefe flowers themfelves are of a

pretty Red Colour, and are of divers Shapes, and grow divers ways : (which is the reafon that Clufius, and fome others, have judged them to be feveral Plants, giving the flowers here exprefl for it differing kind.) but fome of thefe flowers, even the greateft part of them grow with five Red, round, pointed Leaves, which never lye fair open, but only fit and fraight out, the middle part being filled with a hairy matter, and yellowifh Threads : Some of thefe flowers confift of Seven, Eight, Nine, or more Leaves, and fome again lye wholly open, with Green Leaves, growing clofe under the Cup of the flower, and fome few now and then may be found compofed of a great many little Leaves, thick thruft together, making a very double flower : after the flowers are fallen come Juch hairy Heads, as you fee in the figure, and in other Plants of this Kind, among which lies the Seed.

IV. 2. *Avens with a large double purple Flower* * Tho' fome make this to be a different Kind from the laft, yet doubtlefs it is not, but is one of the fportings of Nature, wherein the affs variously in one and the fame Plant ^ and therefore the Defcription of the laft may fully ferve for this, there being in truth no variation but in the flower, as we have in the former, above, already declared.

V. 3. *Mountain Avens with Germander Leaves.* It has a long, thick, hard, woody Root, with many Sprigs or Strings growing from it, and fpreading under ground, of a brown blackifh colour -, from whence fpring up feveral hard, woody Stalks, eight or nine Inches long, fpread upon the Earthy of a brown, reddifh colour, which have Leaves growing upon them without any order, like to Germander Leaves, but leafier, harder, more wrinkled, and faw-like indented on the edges, of a White Honey colour below or underneath, and of a blackifh Green colour above, having an Aftringent Tafte. The flowers are White, and each flower ftands upon a (ender hairy foot-ftalk, about three or four Inches long, thence a* big a* a Strawberry Slower, and confifting of fix Leaves apiece, or more, in the middle of which is a Thrummy Head, of a fmall hairy fubftance, which being fallen, there fucceeds little Down

and Nights, till it is well ftocl/i •, then drain the Water from it by a Cock or Pipe below -, which done, the/welled Barley is to be taken out of the Cifterns, and fpread equally, or of an equal tbicknefs, upon the iloor of a Malting Uoufe, about half a foot thick, or more, and according as the Air is cold, it zs covered with Cloths, or not covered, and is to lye till it begins tojprout, ready as it were to grow, which will be performed in two or three days, if the Weather is warm, or not very cold-, otherwise it may lye longer: before it grows hot, which it 'is apt to do, it is to be turned with Shovels for that purpose, two or three times a Day for a Week or ten Days together, to cool it, and dry it : When it is thus dried, it is put upon a Malt Kiln, and there it is throughly dried by the help of fire, made either of Straw, Yurzes or Wood, to caufe it to have the fweeter Relijh or Tafte : If it is dried with Faggots or Wood, the Malt will tafte Bitterth from the Smoak, and will eafily be perceived in the Drink, which will tafte Bitter: If it is dried with Furzes, or other light fluff, it will tafte lefs Bitter •, but the only choice Malt is that which is dried with Straw, for that is truly Sweet, and makes the only pleafant Drink, Malt being groflw Ground is made into Beer and Ale, as we (hall in the next place fhew. Ground Malt Fryed, and applied in a Bag, as hot as can be endured to the Sides or Belly, gives eafe in Pains proceeding from Stitches, Colick, or Gri- Pings caufed through Cold or Wind : Made into a Multife, it is good to affwage Mamations, or other like Tumors or Swellings.

XIII. Beer. This is called in Greek, Ui& . in Latin, Zythum ; Cerevijm Lupulata^ and in Englifh, Beer. It is made by Infufwn of Ground Malt, and a due Quantity of Hops in a fufficient Quantity of Boiling Water in a proper fat or Veffel, fo long till the whole Virtue and i, ExtraUed out of both Malt and Hops h then this Liquor is drawn off: Mow/left anygooinefs fhould yet be left in the remaining Malt, another Quantity of Boiling Liquor is put thereon, and fo ftirred well together, and kept in Infufwn till the remaining Sweetnefs is ExtraUed into the Liquor : Thefe two Liquors (or more, if you think needful to make them) which are call'd Worts, viz. the^jigeranitUSmaUerWmT^ put together, and being mixed, are put intoCoockrs to bring them to ajuji Heat, or rather Warmth, tl make them fit for ajucceeding Fermentation. MBeing thus only brought to a Warmth, the Liquor is put into the Wprking Fat , and to caufe or facilitate the fermentation or Working, a proportional Quantity of ferment or left is, added, and mixt with it, ani the Working is continued Jq long till both fa fie and Smell give a Demonjiratwn, ihat the Nature of the Liquor is changed, and turned from a dull heavy fweet Tafte, to a kind of a Vinous Activity v, & p'al vor. I know our Common Brewers Boil their Worts, and it is their Opinion, that the Beer or Ale will not keep without fuch Boiling h but Experience has long fince refuted the Error or Vanity of fuch Conceptions : 'tis only the Liquors being frong of the Malt, which makes the Ale or Beer keep, if it is weak in that, boil it as long as you will, it will foon grow Small, Hard, and Soure, nor can you prevent it, do what you can: and if it is very frong of the Malt (and not too much fermented) tho' the Worts were never Boiled at all, yet will the Drink keep feveral Years Good, and grow neither Soure, nor Hard, as your Drink made of Boiled Worts does ^ and of this I am a particular and taithful Witnefs ; See more Arguments againft the Boiling of Worts in my Seplajlum, or Druggijs Shop, ff.c.8. cap. j.fetf. 26. where you may receive abundant Satisfaction, almoft next to Demonftra- tion.

XIV. Ale. This was called in Greek by Diof corides, U_m> K6/a*: In Latin, Curmi, (from the Greek,) alfo Cerevijia, Cervifia, & Cervifia non lupulata^ot Drink not Hopt, now called Ale. It is made of Malt exatfly as Beer it made, without any difference, except in the Happiing, which Is here wanting. But of late, in the Simmer Time, the Brewers put in a imall quanty of hops, to make the Ale keep the better, which is the property of the Hops, confirmed to us by Experience. Ale with- out doubt is the moft Ancient Drink of our Land -, But it has loft much of its Reputation fince Beer came into Fafhion or life-, becaufe the Hops make it more durable without lowering, and lefs fiillibme and more wholfome. However, whether it is Ale or Beer that is drunk, that is the beft and more wholfom which is recent or new, than that which is hard or ftale, the former being cleanfing, and keeping the Body open and more Soluble ^ whereas the ftale is Afringent, and flopping, caufing heart- burnings in many, and breeding Acid Humors, and laying the Foundation of an Acid Ferment.

XV. The Spirit. It is drawn from Beer or Ale grown very hard, prickt, or almoft fewer. It may be drawn in a Copper Vefica, with its Serpentine or Worm, with a gentle Fire, drawing off two thirds of the Liquor: or it may be mixt with double the quantity of fair Water, and one third part or better may be drawn off with a frong fire, fo will it have lefs of an Empyreuma: this Spirit thus drawn off miuji be reTified, by mixing it with an equal quantity of Water, and drawing off the one half: and by repeat- ing this Work feveral times, you will fo purely wafh, andperfeUlycleanfe the Spirit, that all its Empyreuma and ill fcent will be taken totally from it: This being done, you may either keep it in its prefent condition, of the Strength of Common Brandy^ for common and ordinary Ules: or you may Detleg- mate it by reiterated piftillations perfe, either in a Copper Vefica tin'd within with its Worm, drawing off only the fine Spirit, leaving the Flegm behind v or you may Djftill it in a Glals Body or Bolt Head in Balneo Maria, or a very gentle Sand heat, which will caufe the fubtil Spirit only to Ascend, leaving the Watry parts below ^ and this Work is fo often to be repeated, till the Spirit is become purely fine, and free from Flegm, frong enough to fire Gun- powder. This Work will the better be done, if a proportional quantity of Common or Bay Salt, or Pot-Afhes be caft into the Spirit: for the Salt diffolving in the Flegm, will keep it down or make it ftay behind, and caufe the Liquor to yield its Spirit with much more eafe and freedom, and mm* pure from Flegm afd Empyreuma. As to its Virtues and Ufes, it has the fame Nature, Quality, and life with the Spirit of Wine, and performs all the fame things, in making Twtfures, Cordial Water Elixirs- Powers, Volatile Spirits, Baths, &c. and therefor^{lore}

XVI. . . PA Th is the Ancients made varioufly • Yhny Itb. 18. chap 7. %sthat thcGreeksSii of Green#3.r^y taken out of the Ear hrfl • fig "Pe^eteiMaUr^n &, &?&£

being dried . . . anj, the, took x* P. r. h. i. 1. e. l. m. o. > Li 4eel Coriander feed of each j. pound. Salt ij. Jces. Thefe laft things well beaten together voere mixed with the Barly, and and Jo. P/fared for .fe. II. Other Grecians, fays Myfieepedfora Might in tiatl and Husked by beating in a Mortar , after dried, and fo parched or fried it the next day, and then ground it to Meal, to make Bread, Cakes, Puddings

or Broath of. III. The Italians Made it of Parched Barly, without any moifining, ground fmall; to xx. pounds of which they added Millet-feed in Pouder iij. pounds: Coriander-feed, Lin-feed, well beaten of each j. pounds Salt ij. ounces and a half and then mixt them all together. IV. Galen Commends it to be Made of Frejh Barly not full out ripe or hardened, and before the Beard was white, or quite dry, and tien indifferently parched, and reduced to Flozver, adding nothing elfe to it. Many Nations used thft Polenta intlead of Breads and the Cypriots tho' they had Wheat growing with them, yet moftly eat this. It dries and atringes more than Barly it felf, binding the Belly and flopping fluxes, being drunk with Meant, or red Wine: drunk with Water, it quenches thirft, and allays Inflammations of the Throat or Lungs. It was often eaten mixed with new Wine, or boiled up with Wine, and fo eaten, as every one liked beft.

XVII. Maza. This is only Polenta, or the Flower of Parched Barly, moiftned with fome kind of Liquor, as every one liked belt: fome with Water, fome with Water and Oil Olive, fome with fweet Wine, fome with Wine and Oil, and fome mixed it with Honey, as Hefychius, Hippocrates and Galen declare: but Galen fays that Maza, is hard of Digeftion, and generates Wind: if it is well moiftned with Water, fweet Wine, or Oil, and Honey alfo is added to it, it the fooner paffes, off

XVIII. Ptifana. The Ancients made it of feveral forts of Grain, not of Barly only, but of Wheat, Rice, Oats, Peafe, Lentils. But Ptifan, limply confidered, is always underftood to be made of Husked Barly only. Hippocrates his way of making of it is thus, Take the beft Barly, Jteep it in Water four Hours or more, then put it into a courfe Bag, and beat it with a Mallet or wooden Pefile till the Husks come off which take away by wafhing, dry it in the Sun, and keep it for ufe. Take of this hulled Barly what you please, and boile it in a Sufficient quantity of Water till it breaks, and that the liquor is thick like Cream: this liquor is the Ptifan, which ought to be moderately liquid. This has no Aftri&ion, nor troubles the Stomach or Bowels, nor fwells or fills them with Wind, for the Windy part is vanifhed by boiling: it clogs not the Breft or Stomach, but by its Lubricity it eafily digefts and paffes off, and quenches Thirft by its moi lining quality y and for thefe properties lake, it is profitable both for fick and well: Thus Hippocrates and Galen. But Diofcorides further adds, That this Ptifan by reafon of its being boiled, yields more nourifhment than Polenta, is good againft Exulcerations, and to help, the hoarfnefs and Roughnefs of the Throat. This was the Ptifan of the Ancents: but the Phificians in our Times make it thus, Take huled Barly, commonly called French Barly •, boil it in Water till it be foft or broken, then beat it in a Mortar, and firain it, to which add blanched Almonds, Melon and Citrul Seeds, beaten to a Pulp, and then v?xt together. This is their ufual Ptifan, or Barly Milk. Ptifan Drink is thus made, Take hulled Barley, boil it in a firft Water, and then in a fecond Water, but Something lefs than in the former Recipe, firain away the Water from the Barly* and to iij. quarts of this Water, add Raifins of the Sun fioned iv. ounces, Blew Currants ij. ounces, Liquorice bruifedy ounce, fweet Fennelfeeds iij. drams, Coriander feeds)* dram and half, Maiden Hair a handful-, boil again a quarter of an Hour, or fetter, then firain out for ordinary Drink- It is good againft Coughs, Colds, Hoarfnefs, fortnefs of Breath, difficulty of Breathing, obftufitions of the Lungs, coltivenefs of the Bowells, andallo for weak and Cofumptive Bodies*

XIX. The left. It is the Superficial Fctulency of the Drink, railed therefrom in Working • and Ye (I begets Yefi, haftning on and more fpeedily perfecting the fermentation of the Liquor, which is i feparating of the Flowery ox Mealy Particles of the Malt from the Wort, and the furring up an innate and latent Acid into aft, to give the Drink a plea- lant fort of brisknefs or Quicknefs, enlivening it with a Subtil and kind of Vinous Spirit. This Yefi by Diftillation yields a Vinous Spirit, of equal Virtues with the Spirit of Wine: and Bakers u&Ale Yefi^ infteap of Leaven, to make their Bread light^ which would otherwife be lad: but Phycally it is chiefly of External ufe. Being immediately apply M in Burns and Scalds, it prefendy takes out the Fire, and eafes the fmarting Pain> making the affekt more eafy and yielding to other Medicaments. Apply'd to Phlegmons, and other like Tumors, it helps to dip cuffs and relblve them, unels they be Apoflemaced, and then it haftens the fuppuration of the Apofteer or Tumor, and alleviates the pain. Being boiled to a Salve or Emplaftick body, and apply'd, it ftrenghens a weak Back, and weak Joints, cafes Pah in thofe or other parts^ and is difcuffive and refulutive.

XX. The Faces or bottoms of the Barels, called by fome, Emptyings. They yield a Spirit by diftillation like tbeiet, which may be rectified to the like degree of Subtilty and purity-, and may ferve for all the lame intentions the other will ferve for, whether Chymical or Pharmaceutical: And tht Faces or Bottoms themfelves are good to be outwardly applied in all the fame cafes, and to all the fame Difcafes for which we have prefcribed the Yefi in the former Se&ion to be applied. But this is not fo good for the Fermentation of Wort, as Yefi is, becaufe it will fcarcely work at all and if it does it is fo meanly and weakly that it makes rather a Flat and Infipid of dead kind of Liquor, than any thing which hasbrisknefs and Life: But it may be renewed, by adding a little fower Leaven to it, diifolved in a little of Jirong or fweet Wort, mixing them well together^ ad digefting them in a warm place, for fome little time.

XXI. The Ballam. It is made of firong Ale, by gently boiling it fo long till it becomes thick like Chio Turpentine, and willfspread on Leather like a Salve, or foft Cerote. This being apply'd warm to the Neck or Throat troubled with the Kings Evil, of Kernels, or other hard Swellings, gives much eafe and either difcuffes or refolves them: it is good to refolve contra&ed Sinews and Tendons, comfort and ftrenghen weak Nerves and Joints, and is an excellent thing for weaknefs and pain in the Back, and to apply it to any part or Member which is hurt by fpraining, fells, blows, or other the like Accidents*

XXII. The Meal or Flower. The Ancients of old, made of it Bread, 2. Kings 4. 42, John 6. 9; and 13. They made alfo Cakes of it, Judges 7. 13. Ezeh 4. 12. And fo they have done almoft in all Nations, and in moll parts of this Kingdome, within thefe three or fourcore years laft paity they made alfo of it a kind of boiled Bread or Puddings y and fried Bread or Pancakes -, but now in our days Wheat being lb plentiful with us, Barly is wholly difufed, unles amongst the pooreft of the People. The Turks at this day make a kind of Drink of the Meal or Flower which they call Chaujjet : Thus, they take the Meal or Flower which they make into Pafie, and boil it in a great Caldron after which it is made into fmall balls: thefe balls being caft into the Water, it will prefently boile up of it felf and grow hot, without the help of any Fire, and become by working a kind of thick Drink. It is of a whitifh Color, thick, of a good nouiifment,

whileft they are hot, or if cold, heated again as hot as may poffibly be fuffered-, and the Patient fit therein, fo as to cover thofe parts, that they may gently fweat, as long as he can well endure it without Fainting: this I fay, if it is done three or four times, or more if need requires it, will both abate the Swelling and eafe the Pain^ alfo reftore the Nerves, Joints, and Limbs, to their priftin health and ftrength.

CHAP. XLIV.
Of Wild BARLEY.

I, H p # £ Names. It is called in Greek, ΚΙΟΙ) «&: A In Latin, *Hordeum agrejie*: In JEngHJh, Wild Barley.

II. *The Kinds.* There are feveral Kinds thereof, I. *ZU yltUMop'oKOKw*, and by *Lobel*, *Bryza Monococcus*^ WM or *Brant Barley*, *Peters Corn*. 2. *A/>/M4*, *JEgilops*, *Fefluca*; *Degenerate Barley*^, or *Havergrafs*. 3. *KeSt rFB*» '0**3* {dm£%>*****^, ita^ hendo, qubd ariftas^e corpore trahat): *Hordeum fpun- vum*, *murinum*, *vd fpontaneum*, *Riftida*; *Way Barley*, *Wall Barley*, which laft is alfo faid to be greater and leffer.

III. *The Defcriptions.* *Zea*, or *Bryza*, has a fmall *Fibrous* or *Stringy Root*, from whence rjjes up /lender and *Jhort Stalks*, but *Jirm*, bearing a fmall, thin *Spiked Ear*, fet with *Grains* or *Corn* in two rows, one *Corn* on each fide oppofite to the other, from we bottom of the *Ear* to the top, whereby the *Ear* is flat, like unto *Barley*, w>/> fo rough *Awnes* or a *Beard*, as *Barley* alfo hot; every *Grain* is contained fingly in a *husk*, voich flicks to it Jo as not eafdy to be gotten off; the *Ear* much refembles *Barley*, and the *Colour* of the *Grain*, is a dark *Red*: it makes *blackifh* or *dark brown Bread*, and not altogether fopleafant as our *Common Barley*.

IV. *iEgUops*, (which in my opinion ought rawer to be called *Monococcus*.) box a *Root* which fr^ond a fmall *Head* fend forth many *fibres* or *Strings*, worn whence fprings forth *Stalks* 2. or 3. handfals bigh,

refembling *Wheat* or *Barley*, *Jointed* in three or fou places, from whence comes forth divers *Grafs Leaves*, of a pale *green colour*, and at the top of the *Stalks* two or three *Heads*, fet one above another, which are round and fomewhat long, hard and firiped, having alfo many *Beards* at the end of each, whereiñ, when they are ripe and look whitijl), lye 1. or 3. fmall *Grains* or *Seeds* a little fmaller (fays *Gerard*) than *Barley*-. thefe *Seeds* are wrapped or infolded in a *Crefted Film* or *Skin*, out of which the *Azynes* come forth-, *Matthi- olus* fays, that as *Lolium*, or *Common Darnel* is known to be a *Seed degenerate* from *Wheat*, being found for the mo ft part among *Wheat*: So by his own experimental knowledg, he had found that this *iEgi- lops* or *Fefluca*, was a *Seed* or *Grain*, degenerating from *Barley*, and is found among *Barley*, or where *Barley* has grown.

V. The greater *Way Barley*, or *Wall Barley*, hdi a *Fibrous* or *Thready Root*, continuing many *Tears*; from whence fprings up ?nany *Graffy Leaves*^a/zd among them feveral *Benty Stalks* abcut 16. or 18. *Inches* high* at the top of which grows feveral whitifh yellowijh *Ears*, with fomewhat rough *Beards*, but much *Jhorter* than thofe of *Barley*, and fome have fcarcely any *Beards* at all. The *Ear* is much more like that of *Rye* thari *Barley*, and the *Corn*, or *Grains* which co?ne out of it are brown Coloured, lank and fmall, in *Color* and fhape refembling *Rye*, y^ that it might more properly be called *Wild-Rye*, *Way-Rye*, or *Rye-Grafs*, rather than by any *Appellation* of *Barley*, to which in my opinion it has no refemblance.

VI. The leffer *Way* or *Wall Barley*, is like the other in its *Roots*, *Leaves*, *Stalks*, *Ears* and *Grains*, fo that many have taken it to be the fame zwith the former, but in this it differs, that it is ?iuch loiver, fo that it fcarcely attains to be a *Foot* high; and in* deed it comes fo near to the former *Barley*, or rather *Rye-Grafs*, that many have taken it to be one and the fame, as even I my felf alfo do.

VII. *The ?laces.* The firft was anciently fown in *Greece*, and the *Eaftern Countries* -, now it is Sown in fome parts of *Germany* and *France*, but with us

it is chiefly found in *Gardens*, tho it grows well and naturally enough here as other Grains do. *Gerard* says, that he had often times found many Ears of it among our ordinary *Barley*, when he lived in the farther side of *Lincolnshire*, and they there called it *Brant Barley*. The second is Sown in many places of *Italy* and *France*, as in *Provence* and *Narbonne*, among their Corn, and grows well in a moist Ground, but prospers most in a more Fruitful, dry Soil: *Gerard* says, it grows commonly among their *Barley* in *Italy*, and other hot Countries ^ but only with us in *Gardens*. The third and fourth, by the High-ways, and Path-sides, as also on Mud Walls, and at the Foot of other Walls, and Way-sides in Reids, almost every where through the whole Kingdom.

VIII. *The Times*, the first is a *Summer Corn*, and Sown in *March* and *April*, and is ripe in the beginning or middle of *August*. The second also is a *Summer Grain*, and is ripe towards the latter end of *July*, or the beginning of *August*. The two last are found coming to ripeness all the *Summer Months*.

IX. *The Qualities*. They are all of them temperate in respect to heat or coldness ^ and dry in the first Degree. The first and second Attenuate, digest and cleanse: and the two last are aperitive, absterfiv, and Vulnerary; and are all appropriated to Difeals of the Joynts.

X. *The Specification*. They have a peculiar property to cleanse and dry up Ulcers, and resolve Tumors in the Joynts. The *Mgilops* is said to be a Specifick against the *Mgilops* or *Yiftula* in the Corner of the Eye.

XI. *The Preparations*. The first Kind has much the Nature and Virtues of *Common Barley*, and therefore may have most of those *Preparations*, so that we (shall say no more of them here. From the *Mgilops* or *Fejiuca*, you may have, 1. An Infusion of the Seed in Drink or Wine. 2. A Decoction in Wine. 3. A Syrup of the whole Plant. 4. 4 Powder of the Seed or Grain. 5. A Juice. 6. A Jhes of the Stalks. And from the *Way Barley* or *Rye-Grafs* you have, 7. A Cataplasm.

The Virtues.

XII. *The Infusion in Ale, Beer, or Wine*. The Seed Infused, or Drunk in Powder in any of these Liquors, affects the Head and Brain much, and causes Drunkenness.

XIII. *The Decoction in Wine*. If it is made with the Addition of *dry Damask Roses*, and drunk from ij. to iv. ounces ^ as also the Mouth and Throat, Gargled therewith, it is good against a stinking Breath, I suppose caused by some filthy Ulcer or Ulcers in those parts, for that it has a property to heal Ulcers.

XIV. *The Syrup*. If the whole Herb, Roots, and Seed be bruised, boiled in Water, strained, and made into Syrup with Honey, to viij. ounces, of which if j. of *Abes Succotrina* in fine Powder be added, you have an excellent Medicine against foul Ulcers of the Nostrils, by wetting Tents therein, and putting them up the same, holding them a pretty while therein, and often repeating it.

XV. *The Powder*. Mixed with Water in which a little *Roch Alum*, or *Saccharum Saturni* has been dissolved, and laid upon the *JEGibps* or *Yiftula* in the Corner of the Eye, it cures it, it also cleanses, dries up and heals Ulcers in other parts of the body, being used, or strewn on dry.

XVI. *The Juice*. It is mixed with *Barley Meal* and so dried: and then upon occasion moistened with *Rose Water* ^ and apply'd Plaister wile, it heals (as *Gerard* says) the *JEGibps* ^ or *Yiftula* in the Eyes: it also softens and affwages hard Tumors, and swellings in the Joynts. *Label* says, this has been often tried to be effectual against the *JEGibps*, for that it has a drying quality without sharpness.

XVII. *The Jhes of the Stalks or Straw*. "Made into a *Lixivium* with Water, it is good against the Gout from a flegmatick cause; by often bathing there with, and to dissolve hard Tumors or Swellings in the Fleth, and disperse Tumors of the Joynts.

XVIII. *The Cataplasm of Way Barley or Rye Grafs*. Being made of the Green Ears and Grafs by beating it in a Morter, and then apply'd to places bald, or where the Hair is wanting, *Gerard* says it causes it to come forth and grow again*.

CHAP. XLV.

Of BARREN. WORT.

I. *The Description*. It is found in the most barren places of England, especially in the North of the Kingdom. It is a small plant, growing in the most barren places, and is very common in the North of England. It is a small plant, growing in the most barren places, and is very common in the North of England. It is a small plant, growing in the most barren places, and is very common in the North of England.

three Blanches, and each of them bearing three Leaves apiece, which are several somewhat broad and round, yet pointed at the ends, harder dry in feeling, and a little sharply dented about the edges, of a light green Colour on the upper side, and whiter underneath: from the middle of some of the Stalks of Leaves, shoots forth with them, from the first rising up of them, a small long Foot Stalk of flowers, not much higher than the Stalks of Leaves, divided into Branches, containing on each of them, three flowers apiece*.

apiece, fepci rated into four parts, as if the Vlowercon-
 Jifted but of four Leaves, when of each part ha*
 two leaves, one lying clofe upon another, toe inner
 being yellow, andfmaller than the lower which are
 red, Jo that the red edge appears round about the
 yellow, making it feem a yellow flower of four
 Leaves with red edges, having alfo a fewyellow
 Threads in the middle, fet with green, the under
 fide of the flowers being of a yellowJJ? red Colour,
 firiped with white lines. Gerard fays, the flower is
 butfmallconjuring of four Leaves, whofe out fides are
 purple, the edges of tde innerfide red, the bottom
 yellow, the middle part of a bright red Colour, and
 the whole flower fomewhat hollow. The flower be-
 ing paf, Jmall long Pods or Cods appear much like to
 Saracens Confound, butjhorter, in which is contain-
 ed flattifh red feed. It is a pretty fhrubby Plant,
 end its fmell is rather firong than pie of ant.

IV. *The Places.* It grows on the Mountains O i
 Liguria, and in moft Meadows in Italy, about Bono-
 nia and Vicentia *, alfo in Romania, and on the En-
 ganian Hills. It grows with us in Gardens only, i
 moift and fhadowy places, where it brings Fort
 its Seed to perfection, tho* Diofcorides and Plin-
 fay, that it is without either Flower or Seed.

V. *The Times.* It Flowers at its firft comini
 Forth, or firft Year of its growth from June tillthi
 taiddle of Augufi: but after it has taken fall hold,
 and well Rooted it felf in the Earth, a Year before,
 it then Flowers in April and May.

VI. *The Qualities.* Galen affirms it to be mode-
 rately cold and moift: I judge it to be cold am
 moilt in the firft Degree: it isRepercuffive am
 D^utieijt, and appropriated to the Joints.

VII. *be Specification.* ParkinJon fays, it
 without any fpecial property, more than to kee
 Womens Breafts from growing over great.

VIII. *The Preparations.* Byreafon muchofthi
 Virtues of this Plant is not known, there are no
 many Preparations from the fame: the chief being
 I. A Juice. 2. A Pouder of the Roots and Leaves
 3. A Cataplafm*

The Virtues.

IX. *The Juice.* Whether it is taken out of the
 ftoots or Leaves, it is good to cool Tniiamations,
 and is profitable to bath within an Eryfipila*.

X. *The Pouder.* It may be made of the Roots
 or Leaves for of either the Virtue is the lame, tho
 if made of the Root it is thought to be ftrbnger*
 Parkin/on fays it is reported, that being taken in-
 wardly for foffle time, it makes Women Barren:
 from whence poffibly the Name might come.

XI. *The Cataplafm.* The Leaves made into a
 Fultife, by beating them up with Oil, and applyed
 to Womeñs Breafts, keeps them from growing great \$
 and is good to Difcufs a flight Contuhon,

CHAP. XLVL

Of Common B A S I L.

THE Names. It is called by the Arabians,
 Bedarog, Berendaros: in Greek, * & * / v £
 BctmKtKQV: in Latiy, Ocimum, Bafilicum, Regium.*
 in Englifh, Bafil

IL *The Kinds.* The general Kinds are, 1. Gar-
 den. 2. Wild. The Garden Bafil is, 1. The Com-
 mon Great, *Ocimum Vulgatius*. 2* The fmall or
 Rufh Bafil, *Ocimum Vulgar e minus*. 3. An if at ed
 Bafil, *Ocimum Anifatum*, of which in this Chapter*
 4. Bafil Gentle, or Clove Bafil, *Ocimum Caryophylla-
 turn*. 5. Citron Bafil, *Ocimum Citratum*, of which
 in the next Chapter. 6. *Ocimum Americanum mac-
 ulatum*, Spotted American Bafil. 7. *Ocimum Ame-
 ricanum Crifpum non maculatum*, Crifped America?!
 Bafil not fpotted, of which two in Chap. 48. The
 Wild Bafil is either Stone ox field, of which in their
 proper Places in Chap- 49. and 50.

III. The Defcriptions. The Common Great Tk
 fil, ba* a Thrcaddy and fibrous Root which perijh*

at the fir ft approach of Winter, and therefore is to be Sown a new every Tear if you will have it; from whence rifes up ufually but one upright Stalk nearly afoot high, varioufly branching forth it felf on all fides, whereon, at every Joint, are S?t two Leaves, broad, thick, and fat, a little pointed, of a pleajant Jvoet Jmell, of a frefb green Colour, and a little Jnript about the edges-, of which fome one here and there, are of a black reddifh hue: towards the upper part of the Stalk and branches come forth a num- per of Jmall whitijh flowers, which many times tend to a dark purple, with tiwSmall Leaves at the Joint, in Jome places green, in others brown, after the blowers come J?i all black Seed.

IV. The Small Buft Bafil, has*a Fibrous perifhing Root much like the former, from whence rifes up Jmall tender Stalks, which grow not fo high as the former, but is thicker Spread with Branches and Smaller Leaves thereon, and fet clojer together: thefe Leaves are little, lejs than thofe of Pennyroyal and the whole Flanttslow, and fine or Jmall, gr owing into a kind of dminutiveBuih, whence the Name of Bu(h Bailie and x of a more pleajng Jweet Jent than the former by much: the l lowers are Jmall and white and the Seed black like the other, when it yields Seed with us, zvhich is more Seldom, it nnt often yielding ripe Seed here, becaufe it neither Springs, blowers nor Seeds Jo early a* the others. Parkinibn add) another middle Kind Something larger than this both in the height of the Buft, and magnitude of the Leaves, but not othenmfe differing, which to me seems to be one and the Jame Herb, but differing according to the goodnejs of the Soil,

T *thf Anifated Bafil, Is tritely of the Self fame Kind with our ordinary Garden Bafil but of a middle fize between the Common Great and Buft Bafil and differs nothing wits Roots, Stalks, Leaves, flowers nor Seed, but a little in the magnitude, and Some- thing in the S^{small}-> which is like the Swell of Ani- feeds.

VI. The Places. Whence thefe Herbs firft came, is unknown to us, but in Italy, France, Spain and England, they are only nourilhed up in Gardens.

They Flower in the heat of the Sun, and July, by little and little, whereby they are long a Flowering, beginning at the top firft, and fo Flowering as 'twere Hnw. m.

CHAP. XL VIII.

Of American BASIL.

THE Niwies. This was wholly unknown to X tie Greeks, and therefore can have no Original Creek Namej bur contidering it is an Indian Plant, may well enough be called, 'uii^r ^ »«*«>> trJutii : in Lefin, Octmum Americanum vei indicum: and by Camerariits Bafdkum Hijpanuum 1 in Eng-hfh, American Bofil.

11. The Kinds, his twofold, 1. Ocimum s. maculatim itrve, finooth, fpotted Ametj-Balil. 2. Ocimum Amencanum enjpuet non mii-crifped American Bafil, not Ipotted.

American Basil

III. The Definition
 n Basil, has a fc£W£KS ^ W

\$ » n * farfauart S ? ^ h » < ^
 Hfa cr better, fro- ... many Branches, m, f ur ... mo a'ways at a Joint ... Bafilsw, h' * ... and fometimes ... redaiſht'ovt ... with deeper ... the ... of a dark purple colour, ſpotted ... the ... of the ... of a dark purple colour, with ... and ... through them, ſet or placed in

dark

dark purple coloured Husks : The Seed is greater end rounder than any of the former Kinds, and fowebat long withal: the whole Plant /mellsstrong like to the common or ordinary Bafil and Camphire put together.

IV. *Toe Criped or Cufled American Bafil*, not spotted : It has a Root like the foregoing, being a degenerate of the other kind, rifen (a* Parkinon fupposes) from the Seed of the former "Plant, gathered in these colder ^Countries •, and is indeed of the Kind of the American spotted Bafil, having like Stalks, and fuch like large Leaves, cut fomevithat deeply in on the edges, and curled or crumpled, as they also fometimes are, together withfvelling bunches like Bladders in them, but wholly of a green colour, and without any/pots, or spot upon them : the flowers hereof are all white^ and without any/pots a* the other has : the fmell hereof is very Jirong, and perfectly refembfing the fonner.

V. *The Places.* They Originally grew in America, from whence they were brought into Spain, and from thence to us, being nourished up in our *Gardets* h, the latter of which seems now to be a Native of our own Country.

" ^The Times - The y Flower gradually in June and July, as the others do h, and their Seed is ripe in August.

- VII. *the Qualities.* They are hot in the second Degree, and moist in the first h, highly Cephalick, Neurotick, Cardiack and Hyfterick h, they Attenuate, Open, Refolve, Difcufs^ are Carminative, Anocline, Alexipharmick, and Emmenagogick.

VIII. *The Specification* I have found them peculiar against Palfies, and Pains and Aches proceeding from a cold Caufe.

IX. *The Preparations.* You have, I. A Powder from the Seed. 2. A Distilled Water. 3. A Juice. 4. An Effence. y. A Spirituous TinBure. 6. A Saline TinUure. 7. An Oily Tinffurr. 8. A Decoftwn. 9. A Syrup. 10. An Oil. 11. A Cat a* P<tfm : the Virtues andlifes of which, are the fame with the fame Preparations in Chap. 46. Se8. 12. to Setf. 22. aforegoing. 12. A Distilled Oil. 13. The Powers*

The Virtues.

X. *The Distilled Oil* It cures Head-aches, Megrims, Lethargies, Apoplexies, Epilepsies, Palfies, Convulsions, Tremblings, and weakness of the Nerves, Obstruptions of the Womb, Reins and Bladder, Pun&ures and Wounds of the Nerves, and all forts of Pains, Aches, Sciatica, and Lameness from a cold Caufe, being taken inwardly from iv. drops to xij* in some proper Vehicle •, and outwardly anointing the part affe&ed therewith, It expels Wind, and cures the Colicfo

. XL *The Pot elates or Powers.* They have all the former Virtues, but penetrate more, as being more Subtil or Volatile : They provoke the Terms in Women, ease Pains and Stitches in the Side, are g^{od} against Fits of the Mother, and Vapors, cheer ^{the} Spirits, refill Poifon, and re-^{ve} Melancholly, ftrengthening the Stomach, and all m^vificera. Dose from j. dram to ij. drams, in a Giass of Wine, or some other proper Vehicle.

C H A P . XLDL

Of Stone B A S I L ,

THE Names. It is called in Greek, *&nv& ^*AJCOVQ- : in Latin, *Acinus* and *Acinos* by Lobel and *halechapius* : *Qinopodium Vulgare*, by Matthiolus : *Qinopodium flajit/s*, by Camerarws: Botanic a Paul/, by Guilandinus : *Pulegium montanum*, by Lonicert/s -, *Polycncmon*, by Gejner ; and *Clinopodium Ongano Jimi/e*, by Baubin: in Engliff^ Stone Bafil, and Great Wild Bafil.

II. *The Kinds.* This is properly the first and chief est of the *WildBafils*-, and is twofold. 1. *Acinus major*, the greater Stone Bafil. 2. *Acinus minor*, the lesser Stone Bafil

HI. *The Descriptions.* The Greater Stbne Ba^l fil bai a bushy Root, of many Strings jet together aT% and depending from one Head, which Jhoot forth fockets round about t from this Root springs forth feveral hard, fourquare, hairy or hoary Stalks, d foot, or foot and half high, or more, fet with two hairy green heaves at each Joint, being covered also as the Stalks are with a hairy Down, fomevohat larger than any of the other Wild Bafils, corning near unto the bignefs and fashion of the Leaves of Origanum: the l'lowers grow in Handles, or round the Stalk, in greater plenty than in the Wild Bafils of the following Chapter, and of a purplijh colour, but fometimes white, the Husks cf which are fowebat larger and rougher.

IV. T/;^Leflér Stone Bafil, has like Roots, Stalky Leaves, Mowers and Husks, and differs not any thing from the former, fave that the Stalks are lower, the Leaves leifor, and the Husks of the ¥ lowers fynaller* in a xnord, it is of the fame Kind^ but toe vford Plant is every ivay left.

V. *The Places.* Gerard says they grow plentifully in Autumn, Amos by every Hedge : Parkinson says, they are found sometimes in Corn Fields in England, but more often in open Woods and Copiēs which have been filled, and that almost through all our Countrey -, more especially if they are itony places.

VI. *The Times.* They Flower in the latter end of May, all June and July, and the Seed is gradually ripe in July and August.

VII. *The Qualities.* They are hot and dry in the first Degree : Difcutive, Afringent, and Vulnery ; and dedicated to the Womb.

VIII. *The Specification.* They are peculiar for flopping Fluxes, and the Terms in Women -> more especially for Fluxes of Blood.

IX. *The Preparations.* You have from them, 1. A Juice. 2. An Effence. 3. A Spirituous Tincture. 4. An Oily Tincture. 5. A Decottion. 6. A half am. 7. A Cataplasm*

The Virtues.

^ "K. *The Juice.* Given from j. ounce to ij. ounces, it iterigthens the Stomach and Bowels -, and bathed upon an Mamation it affwages it.

XL. *The Effence.* This is more Stomatick than the former, and given inwardly, (tops all forts. of Fluxes, whether of Humors or Blood, as. also the Terms in Women. Dose from l. to iij. ounces, in some proper Vehicle.

XII. *The Spirituous Tincture.* This has all the Virtues of the former, and is good to take inwardly, to heal Wounds and Ulcers, from j. dram to half an ounce, in a Decoation of the same Herb h Ms an excellent Vulnery.

XIII. *The Oily Tincture.* It is good against Pains and Aches from a cold and moist Cause, gives ease in the Gout, and heals Wounds, Pun&ures, or other hurts of the Nerves, by anointing therewith Morning and Evening.

XIV. *The Decoffion in Wine.* By fomenting therewith it Dissolves the hot Tumors and Inflammations, ^Jed as an Injection into foul, foetid, and Hollow Ulcers, it cleanses them : and daily drunk from iv. to viij. ounces, it stops the overflowing of the Terms in Women, the Bloody Flux, and other Fluxes of the Belly.

XV. 17.* *Balsam.* It is an excellent Vulnery, cures Wounds by the first intention, and digests and cleanses, old, foul, rotten, and filthy Ulcers with great facility, after which it incarnates, or fills the Ulcer with Hefh, and presently heals it up.

XVI.* *Cataplasm.* It is made of the Herb chopt small, beaten in a Mortar, and boiled in Milk, and brought to the thicknes. of a Pultife, with Yolks of Eggs, and Crumbs of Bread. It is Difcutive, Resolutive, and Anodine, and of singular good use to be applied to a recent Contusion^ or a Gout from a cold Cause.

CHAP. L.

Of Wild BASIL.

THE Names. It is called in Greek, UwniAov L (quasi Le&ipēs, Bedsfoot flower, because they resemble the Beds feet :) in Latin, Ocimum Sylvestre, Basilicon Agrestie, Clinopodium : and in English, Wild, or Field Basil, Beds-foot blower.

II. *The Kinds.* There are three several Kinds hereof, 1. Clinopodium Vulgare, Clinopodium minus, (because less than the Stone Basil-) Ocimum Sylve-

fire, by Label and Clufius, Acmes and Ocimajirum, by Fuchsius and Dodanaus ; Clinopodium, by Anguilara and Turner; Clinopodium majus, by Came r anus, Pulegium Petræu??i, by Gejner -, Clinopodium Alterum, and Pseudo-Clinopodium?, by Matthiolus \$ Clinopodium Arvense Ocimi facie, by Bauhinus 5 and Bafdicum Tertium, by Tragus v, in English, Held Bafil -, but the People call this as well as the next; following, where they grow, llorfe Time, and Poley-mountin. 2. Acinos Anglica Clujij, (which is thought to be, by Clufius, the true Acinos of Diqcorides ^) Clinopodium Ocimi facie alter urn of Bauhinus h our English Wild Bafil the lesser. 3. Acinos oioratffimum, Latifolia Column*, Broad Leav'd sweet Scented Wild Bafil

III. *The Descriptions.* The fitji has a Woody fibrous Root, full of hairy Threads, creeping along the Ground, and Springing up Yearly of it Jeff without Sowing; from whence rises up Jeveral Square Stalks about six or eight Inches high, with two/mal Leavel Jet at every Joint, being Jomewbat like Wild Marjoram or the fine bufh Bafil, a little dented about the edges, but not much, and fine Leaves not at all dented, and in/me Plants and Places a little rull and hairy, and in others, less, or not at all. L flowers grow at/paces with the Leaves, hke Ziorehounddoes, fianding in green rough Cuts toh%, are of a purplish Colour, and parted, jr it wen it four equal Jhort pieces at the end. The square foot of a Bed-fiead, end opi- Leaves like other hcoded Flowers f- have not every one but. S**U rouJreddrJh Seed,

dusks. 1U whole & me hEU Jme /mai J/m, but mere diynejsm the Tafr thereof, ohdjueet or odc- "JZfir* Bafil and Calamint.

D J * * > ^ Kind has a/Jo a bujhy, fibrous Root, which penjkes every Tear, jrm whence riles. «p Jeveral/lender jour square branches cr Stalks, Jeven or eight inches high, lying on the Ground, on which

which grow divers small grayish green Leaves, two always set together at a Joint, resembling much the former, or those of the Stone Basil, but smaller, flatter, and fuller of Juice, not dented about the edges at all, and almost like to Mother of Time, or the smaller Garden Basil, called Basil Gentle, having an excellent sweet Scent, but not Heady: from the middle of the Branches up to the Tops, grow the flowers in Rundles or Spaces about the Stalks, being very like to the former just now described, but of a more bluish purple colour, with a white Eye, or Circle in every flower, which being past, there comes three or four small Seeds, like the first in the Husks where the flowers stand, which fall and rise again every Year of their own Sowings

V. The third Kind has a bushy Root with many Fibrous Strings like the former, from whence rises up four, five, or more, four square hard Woody Stalks, divided into many Branches, covered with a soft white hairiness, two foot long, or longer, not growing upright, but trailing in some measure upon the Ground: the Leaves grow upon short foot-stalks, by couples, of a light green colour, somewhat like the leaves of Basil, or rather Bawm, about three quarters of an Inch broad, and not fully an Inch long, a little sharp pointed, and lightly notched about the edges, covered also with a light soft hairiness, of a very sweet smell, not much inferior to Garden Marjoram, of a hot biting Taste: out of their Buds grow other smaller Leaves, or else Branches: the flowers also grow out of the Buds of the Leaves, towards the Tops of the Stalks and Branches, not in Whorls or Rounds, like Acinos, or Stone Basil, but having one little short foot-stalk, on which is placed three or four, or more, small flowers, gaping open, and divided into four unequal parts at the top, like the flowers of Basil, and very near of the Use and Signification of the flowers of Garden Marjoram, but of a pale bluish colour, tending towards a purple, after which come the Seed Vessels, which contain small roundish blackish Seed.

VI. The Places. The first grows commonly in the borders of Fields, and among Corn it is found as at Sutton in Kent, not far from Dartmouth, at Thetford in Norfolk, and in divers other Dry, Sandy, and Untilled Grounds. The second grows Wild in Kent in divers places, where Clujus says he found it, also in several other parts of England, Gerard says he found it a little on this side Pomfrati in North-hire, and since by Dartford in Kent, and in the Me of Tbanet: he says it is brought to our London Markets, and is called by the Herb Women Poly-mountain. The third grows Wild in hot Countries, but with us in Gardens, and is often found amongst Sweet Marjoram.

VII. The Times. The two first Flower in Winter and July gradually, and their Seed is ripe in July and August: The third Flowers in July and August and its seed is ripe in August and September.

VIII. The Qualities. They are all of a nature, hot and dry in the end of the second, or beginning of the third Degree: they are also, Attenuating, Inciding, Opening, Carminative, Diffusive, Resolutive, Vulnerary and Anodyne, Cephalick, Neurotick, Stomack, Cardiack, Hyfterick, and Arthritick, and powerful Alexipharmicks and Emmenagogicks.

IX. The Specification. The Field Basil has been experimented against Conyulsions, Cramps, and Neurotick Distempers. Acinos or English Wild Basil is approved for Stopping Fluxes: and the Broad Leaved sweet Scented Wild Basil is good to facilitate the delivery.

X. The Preparations. The Shops keep nothing of them, but you may prepare, 1. An Infusate Juice of the Acinos. 2. A Spirit from the first and third. 3. A Spirituous Tincture. 4. An Oily Tincture. 5. A Saline Tincture. 6. A Balsam or Oil of the first.

The Virtues.

XI. An Infusate Juice of the Acinos. Being given to a dram in Red Wine, it stops all sorts of Fluxes of the Belly, and Fluxes of the Terms, and diffused,

difoived, and mixed with Lard into an Ointment it difcuffes hot Tumors.

XI. The Spirit from the first and third. It is singular good against Convulsion-fits, Megrim, Vertigo, Lethargy, and other cold and moist Diseases of the Head, Brain, Nerves, and Womb: outwardly bathed upon places troubled with the Cramp, it cures them. Dose from j. dram to ij. in Wine or Ale.

XIII. The Spirituous Tincture. If made of the first or third, it warms, comforts, and strengthens the Stomach, causes a good Appetite, and is good against the sickness thereof. Dose ij. drams, more or less in Wine, Ale, or Poffet-Drink.

XIV. The Oily Tincture Taken to half a dram in any fit Vehicle, it prevails against the Stone and Stoppage of Urine: outwardly anointed upon places pained from any Cold Cause, it eases the Pain, warms and comforts the Part, and restores it to its due strength.

XV. The Saline Tincture. It opens Obstructions of the Viscera, and being made of the third Kind, it provokes the Terms, and expels the Dead Child, and Afterbirth. Dose from j. dram to ij. drams in Wine.

XVI. The balsam or Oil of the first. It is good against Convulsions, Cramps, Ruptures, Strangury, Ringing and Bitings of Venomous Beasts, and other afflicting, Morning and Evening.

ance: Cordis calls it Cucumis funiceus: Gefner, Balfamina pomifera: Lobel, Balfamina Cucumerina punicea: Some, Pomum Hierosolymitanum: and we in English, the Male Balsam Apple. It is thought by some to be that which Pliny speaks of, lib. 20. cap. 3. which the Greeks call Cucurbita Somphos^ but this is disputable.

II. The Kinds. Of the Balfamina there are three principal kinds. 1. Balfamina Max, which is that we treat of in this Chapter, and is called by all the names foregoing: as Afa Balfamina by Matthiolt: Balfamina wima by Yuchfitts and Anguila: Charantia by Dodonaus and Lonicerus: Balfamina Mas by Gerard and Parkinson: Momordica by Castor: Momordica frusca luteo rubefcente, in Horto Eryth. 2. Balfamina femina, of which in the next Chapter, 3 4 Balfamina lutea, five noli me Tangere, which is called Uerba Impatiens 5 in English Codded Armar.

III. The Description. It has a Root which is small and stringy, creeping a good way within the Earth: it Springs up with divers slender reddish Stalks and Branches^ shooting forth many clasping tendrils, much like to a Vine^ by which it takes hold of any Pole^ Twig^ or other thing which it finds near it \$ but without any such Supporters, it lies upon the ground^ not being able to support itself for which reason it is reckoned among the number of the Climbers, or a kind of Cucumer^ in respect to the flowers and fruit. The leaves grow from the Stalks^ and sit and upon Foot-stalks^ being cut in on the edges, into several divisions, like to a Vine leaf or those of white Bryony, but much smaller^ tenderer^ and more divided. The flowers are yellowish^ like to those of the Cucumer^ coming forth in the same manner at the Joints with the leaves: after which comes the fruit which is some what long and round, pointed at both ends, and bunched on the outside in rows, the skin itself being smooth and very red, almost black: when the Fruit is ripe, which has a reddish Pulp within: The Seed is manifold, rough, hard, flat, and reddish, but when dry, of a grayish black colour, something like unto Citrus, or Water Melon Seeds, both for the form and largeness.

IV. The Places. It is nursed up with us in Gardens, but the Seed came originally to us from Italy, and we yet generally make use of the Italian Seed.

V. The Time. It flowers late with us, and the whole Herb withers before the Fruit comes to ripeness, it being a tender Plant, and so not able to endure our early cold Nights, for which reason we have no ripe Seed here.

VI. The Qualities. It is almost cold in the first Degree, and dry in the second: It is Peccoral, Pulmonick, and Vulnerary, and purely an alterative.

VII. The Specification. It is a peculiar Specific for the Curing of Wounds and Ulcers.

VIII. The Preparations. 1. A Powder of the Leaves. 2. A Decoffion of the Plant. 3. The Infusate Juice-4. A Spirituous Tincture.

The Virtues.

IX. The Seeds of the Male Balsam Apple, when being and being in the Juice of the Plant, is held to be good against the Stone or Disturbance of the Bladder, it helps the Urine.

X. The Juice of the Male Balsam Apple, or Wine and Water Being drunk to five or six ounces, it gives ease in the Colic, helps the Gripings of the Bowels and itops inward fluxes of the Blood, whether from the Stomach or Bowels -, reprefles Vapors in Women and what some call the Rifting of the Lights

XI. The

CHAP. LI.

BALSAM-APPLE Male.

I. The Names. It was unknown to the Greeks:

X The Latins call it Balfamina^ which name it took from its ianative or healing properties. Some call it Viticella, from its Vine-like appear-

XL. The Infuffate Juice. Difflved in a mixture of Red Wine and Water, it is a fingular thing to heal internal wounds, and ftop inward bleedings, and to repress the Fits of the Mother. Inje&ed up the Womb two or three times a day, it flops the overflowing of the Terms, and the Whites in Women. If it be reduced to pouder, and drank to one dram in *Red Port Wine* it heals inward Wounds, and outwardly being ftrewed upon any frefli green Wound, it heals it.

XII. The Spiritous TinUure. It heals inward Wounds, and gives eafe in the Colick; and is found to be of excellent ufe in fainting and Iwooning Fits. Dofé from j. dram to ij. drains in any proper Vehicle.

XIII. The Oleaginous Tintfure. Given to j. dram, it opens obftru&ions of the Womb, and is good againft Fits of the Mother^ It alfo eafes vehement pains in the Back and Reins, being given in a proper Vehicle twice a day.

XIV. The Oil by Infufwn in Oil Olive. It is a moil fingular Vulnerary, not only for all forts of external Wounds, but for inward Wounds alfo, being drunk (in fome proper Vehicle) from ij. drams to four, twice or thrice a day. And as for all forts of outward Wounds which are green or frefh, it dries them, confolidates their Lips, and heals them. It alfo dries up the moifture of inveterate or old Ulcers, which hinders them from healing, and difpofes thpm to a speedy cure. Being applied with Lint, it is good againft the Piles or Hemorrhoids ^ and being applied hot, it is effectual againft Puncture's of the Nerves. Some Authors fay, that anointed on the Bellies of Women which are Barren, it caufes them to be fruitful. It alfo cures burnings with Fire, or fcaldings with Water, and eafes theftijging of Bees, Wafps, Hórnets, ©V. and being anointed on the Marks, Scars, or blemifhes of Wounds , it takes them away, or much abates them.

XV. The Balfam. If it is made of the former Oil, by addition of *Venice Turpentine*, or *Balfam Capivi*, and Bees Wax •, it becomes a frioft fingular Vulnerary, and in many refpe&ts more excellent than the fimple Oil, and indeed is much more profitable for the healing of rotten running Sores, and old putrid Ulcers ^ applied to Cramps or Convulfions for fome time, it helps the fame, and is a fingular thing to cleanfe and heal Ulcers in Womens Breasts, and fuch as happen in the Secret Parts of Man or Woman.

CHAP. LII

BALSAM-APPLE Female and Yellow.

THE Name*. It is alfo unknown to the *Greeks* : but is called in *Latin* by *Matthiolum*, *Anguilla*, *Fuchfius*, *Gefner* and *Tragus*, *Balfamina alt era* : by *Dodoqueus*, *Balfaminum* : by *Lugdunenfis*, *Balfamina* : by *Cordus*, *Balfamella* : by *Gefner ad Cordum*, *Balfamina amigdoloides* : by *Camerarius*, *Tabermontanus*, and *Gerard*, *Balfamina Famina* : by *Lobel*, *Balfamina fcemina perficifolia* -, and by *Cefalpina*^ *Catanance* : and in *Englijh* *Balm Apple female*.

II. The Kinds. It is the fecond kind of the *Balm Apple*-, viz. the *female* -, differing very much from the former, both in the form and manner of growing. The *Tellow Balfamine* is the third kind, and by *Lobel*, *Camerarius*, *Gerard*, and others, is called *Perficaria Silifuofa*, in *Englijh*, *Codded Arfmart* h

by *J. Bauhin*, *Noli me tangere* : by *Tragus*, *Mercurialisfylveftis alt era*: *hyPodpneus*, *Imp at i ens Herba* ; and by *Columna*, **Balfamita altenu*

III. The Defcription. *The Feiriale Balm Apple does much differ from the former : It has a Root a If* perfed into manifold Arms, from whence proceeds many fmall firings fpreading under the Earth : The Stalks arife from the main flock of the Root, which are thick, fat, full of Juice, in fubftance like the (talks of)Yurflane, of a reddijh colour, and fomewhat Jhining. The Leaves are long and narrow, much like thofe of the Willow or Peach tree, a little toothed about the edges : among which come forth the Flowers, of an incarnate colour, tending to blewmfs, with a little tail or fpur annexed, thereto, like to Larks heels, of a faint, light crimfon colour. Thefe being gone, there comes up in their places the Fruit, or Apples, rough and hairy, round, and fharp at the point, and leffer than thofe of the Male, at fir ft green, but afterwards yellowifh when ripe, the whid) open of themfelves when full ripe, and cafi abroad their Seed, much tike unto a Fetch, fays Dqdoneus h or like to Lentils, as other Authors fay. But that which Gerard had in his Garden cafi forth the Seed like Cole-flower, or Mufiard-feed, which made him to think that either the Clime had altered its fhape, or that there wa* two kinds thereof*

IV. The yellow Balfatpint (which Gerard places with the *Arfmarts*, and *Parkinfon* with the *Mercuries*) has d black and thready Root, which pèrifhes every year, from which fpring forth Stalks about two foot high, tender, green, and fomewhat purplifh, hollow, fsmooth, juicy and transparent, with ^{nat}ge and eminent Joints : From whence proceed Leaves like thofe of French Mercury, a little larger and broader towards their Stalks, and thereabouts alfo cut in with deeper Teeth or Notches. From the bafoms of each of thefe Leaves, come forth long Stalks hanging downwards, which are divided into three or four branches, upon which*hang yellow flowers, much gaping, with crooked Spurs or Heels, and/potted -alfo with red or crimfon fpots. The Flowers being gone, there fucceeds Cods containing the Seed, which are about two Inches long, fiendat\knotted, and of a whi-

tijhgreen, creftled with greenifh lines-, which asfoon Of they begin to be ripe, are fo impatient, that they will by no means be touched, but presently the Seed will fly out of them into your face) from whence came the name herba impatientis) and for which re a-Jon Lobel, and others have called it, Noli me tangere)

V. *The Places.* The first of these is only Nurs'd up with us in *Gardens*. The latter grows in shady Woods in *France, Germany and Italy*. It has also been found in shady Woods side, and shady sides of Mountains, and their Vallies in *Wales* •, in *Sbrop-Jhire* at *Marington* •, on the Banks of the River *Kemlet*, and at *Guerudee* in the Pafifh of *Cherftock*, half a mile from the said River, in the Highway among great Alder-trees : but it will grow and abide in our *Gardens* very well, and every yearfow it self, being fet in a shady place.

VI. *The Times.* The first of these (as also the former Male kind) must be Town in the beginning of *April*, and in a hot bed of Horfe-dung, as you do *Musk-Melons, Cucumbers*, and such like cold Fruits; then they must be replanted abroad from the laid beds, into a hot, moist, and fertile place, at such time as they have gotten three Leaves a piece. They flower in *July* and *Auguf*, and their fruit comes to the greatest perfection out Country will give it in *September* following. • The *Noli me tangere* flowers in its natural place, about the middle or end of *Auguf*, and presently after Seeds: but that which grows with us in *Gardens* flowers in *June* or *July*.

VII. *The Qualities.* The first of these is cold in 1st ° dry in 2^o * C^e P^halick, Neurotick, Vulnerary, and Alterative. The *Noli me tangere*, is hot and dry in the third degree, Nephretick, Diuretick and tmetick.

VIII. *Vie Specification.* The latter Specifically provokes Urine, even unto a wonder, as *Gefner* testifies.

IX. *The Preparations.* They may be the same with those of the Male kind, as, 1. *Pouder. i. Decoltwn.* 3. *Infpiffate Juice.* 4. *Spiritous Tinture.* 5- *Oleaginous TinSure.* 6. *Oil by Infufwn.* 7. *A Balfam.* From the *Noli me tangere*, there is, 1. *A Pouder of the Herb.* 2. *An Infpiffate Juice.* 3. *A bifilled Water.*

The Virtues.

X. *The Pouder.* It dries up green Wounds, consolidates, and heals them.

XI. *The Decoltion.* It cleanses old Ulcers, and rotten Sores, and difpofes Fiftula's (being injected into them) to a healing.

XII. *The Infpiffate Juice.* Being reduced into a powder, and ftrewed upon a green wound, it presently conglutinates it, and heals it.

XIII. *The Spiritous TinUure.* It is helpful to a Gangrene in beginning, and by its gentle ftyptick ouality, restores and conferves the heat of the Part.

XIV. *The Oleaginous Tintfure.* It has the same Virtues with the Spiritous Tin&ure, but much more powerful^ bathed upon the Nerves, it comforts and strenghtens them, helps Cramps, and eases Aches and Pains^ and is good againft pun&cures of the Sinews.

XV. *The Oil by Infufwn,* heals Wounds, abates Inftamations, and cures fiery fultules of the skin.

XVI. *The Balfam.* It cleanses and heals Ulcers, and gives ease in Punftures of the Nerves : being applied, it cures old rotten^Ulcers, running Sores, and kibed Heels.

XVII. *The Pouder of Noli me tangere.* It is

Emetick, and sometimes Cathartick, working (as some Authors say) strongly, for which reason *Doneus* says, it has a pernicious faculty, and is deleterious : yet it may be given from a scruple to half a dram in some convenient Vehicle, in strong Bodies.

XVIII. *The Infpiffate Juice.* It is Emetick like Cambogia, and sometimes it works downwards like Scammony, but its operations are not altogether so certain. It may be given from ten grains to a scruple, made up into a Bolus, and so swallowed.

XIX. *The Diftille Water.* It is of mighty power to provoke Urine, and if largely drunk, it is said to induce a Diabetes, and some magnifie it, as to expel the Stone in the Reins: but without doubt it powerfully cleanses the Reins and Urinary passages, expelling Sand, Gravel, Slime, and other things which obstruct the Passages of the Urine,

CHAP. OIL

BAWM Garden and Baffard.

THE Names. It is called in Arabk, *Bedengie, Bedarungi, Cederezegwn, Turungen Marmacor*: in Greek, *VLeKiarb* <py>w% ^K^VKOV, «A^T^M, id efi, *Apajirum, & ^Ktrl^ Apes dekdentur, Dhcor. lib. 3. cap. 18.* 21. cap. 20. *Melyfo Syllontf Melum* in Latin, *ab Apibus qua et tam* *A<V* *icuntur*: and in *Bawm.*

Cefolpwus Gerard, *Me/tffa*: by *T. domrjiica*, by *Gefner* in horf. *Caftill* and *labayama* Mamts, *MeKthphyllum*: by *Parkin/b*: and by *Gefner*, *G*

lijfit notba, Baftard Bawra, called by *i'uchfivs*, *fy jophyllum* -, by *Qtftus*, *Ldmium fannomcmn* : the] we neat of in this Chapter. 3. *Meliffa Turcica* Turkey Bawra. 4. *Melijit Moluccana odorata*, o which we treat in the next Chapter. J. *Melijl Percgrina*, called by *Matthiolus* and *Lugdunenfis*, *Meliffa Moldavica*. 6. *Meliffa Moluccana fetiiti* o which we fay nothing in this Work.

HI. The Defctiptton. *The common Garden Bawra has a fool of a Woody Jubftance, and full of firings which endure long, andfafien them/elves firongly i the ground, the Leaves and Sialks only dying ever Tear: from this Root fprings up divers Square greet Stalks, with round bard dark green heaves (an fomme of a lighter green, according to the plac it grows in) a little dented about the edges, Jet ^ couples at the Joy/its, and almoft of a Citron er Limonfmell: the blowers are [mall andgapeing, grating at Tops of the Stalks^ of a pale Carnation colour and almoft white.*

IV. *Fuchfius* hit Baftard Bawm has a bard moody firingy Root like the former, from whence faring fquare Stalks half a yard high, with Leaves like unto common Bawm, but larger and darker coloured, and not of fo pleafant a fcent*, the lhiners are white, am femettes of a pale purple colour, but much larger than thofe of the former, almoft like to the yellow Lamium, or Dead Kettles, or to thofe of the Moun- tain Qalam'snt. Patkinfon fays the flowers are eft pale purplijb colour an the lower parts, and whitift above, not being fo pleafantlyfcented at the common Garden Bawm.

V. *The Places*. The firft grows with us only in Gardens, and is profitably planted there, as *Pliny i.e.2t.cap.* 13. fays, for the delight of Bees, tor which caufe it is called *Afufntm*, and by iorae *Apmfolium*, *Bees leaf*. The other is a Native of *pungaria*, but is nourifhed up by curious Herboiffts in their Gardens. I have fometimes found it growing in England, on the Sunny fide of Ditch and Bajik fides, where the ground" has been pretty dry.

VI. *The Time*. They flower in June, July and Augujl, and wither or dye away towards Winter, fpring'ug tbnh from die old Roots.

VII *lbs Qualities*. They are both hot and dry in the fecond degree : they are Cephalick, Neuro- tick, Cardiack, and fomething Hyfterick: famouily Cordial (chiefly the Garden) and Vulnerary, Alcxipharmidt, and Alterative.

VIII *the Specification*. It is approved againft fainting and twooning Fits, Poifons, Sickneis at Heart, and Hypochondriack Melancholy.

IX. *The Preparations*. You may prepare from it, 1. A cold DiJiilUd Water. 2. A Spirituous Witter. 3. A Spirit. 4. A Spiritous TnSure. J. An Oily Xtmture. 6. A Saline TinSure. 7. An Effence. 8. A Syrup. 9. A fixed Salt. 10. A Balfum or Oil. 11. A Cataflafm. 12. Anexprejcd Juice,

The Virtues.

X. *The cold Diflilled Waier*. It is a Cordial Water, and only ufed as a Vehicle to convey Cordial Medicaments in.

XI. *The Spiritous Water*. If it is a little dulcified with Syrup of Bawm, it is an excellent Cordial, and good againft Fainting and Swooning Fits, Convulfions, and the like, and this chiefly in Children : It diés griping^s in the Bowels, and comforts Univerlal Nature. Dote from half an ounce to two ounces, according to the Age of the Patient.

XII *The Spirit*. This is much more excellent than tile fbtmer water, and lias a mighty power to leprels Hypochondriack Melancholy; it revives the

Spirits, and makes the Heart merry and i eafing the Pafficis thereof after a wonderful nuner. Dole from j. dram to ij. drams in any proper Vehicle.

XIII. *Tie Spiritous Tinffurc*. It has the former Virtues, and more powerful to all the fa id intentions, but not fo pleafant: It is indeed a declared thing againt all Paffions of the Heart, the Colidt, and Gripping Pains of the Bowels. Dofe j. or ij. drams, fwecned with the Syrup of the lame.

XIV. *Tlie Oily Tinllure*. Outwardly bathed tip< on any place pained from a cold and molft caule, it gives eaie and relief: and taken inwardly from xij. to xxx. drops in lbme fit Vehicle, it gives eaft in pains of the Spleen, Sides and Stomach, efpecially if they proceed from a cold caufi; : it allb eafes pains in the Back and Reins proceeding from wealtnefs and oblruffions : and being taken in aright time, it has been found to provoke the Courles in fuch as have them preternaturally ftopt.

XV. *The Saline TinSure*. Being given from one dram to two, or ijpre, in lbme proper Liquor, it ia good againft Poilbn, and the bitings of Mad-Dogs, eafes the pains of the Stomach, and the gripings of the Bowels, proceeding from (harp humo;s; it opens the obftruEtions of the Lungs, andcaufes fuch to bteath freely, who before could fcarcely take their breath: It may be made pleafant with the Syrup, of which we mall fpeak anon.

XVI. *The Effeme*. It caufes lpeedy and eaCe delivery to Women in Travel -, and in a mere efpecial manner is recommended againft Hypochondriack Melancholy, being afliduoufly taken ibr lbme time. It has all the Virtues of the Spirit and Tintlure, buE muft be given in a kiger Dofe, by reafon of the grofs Particles which are mixt with it; mixed and made plealant with Rofc-water and Sugar, or its own Syrup, it may be profitably given to Women in Child-bed, to bring away the After-birtli, or caufe d perfect cleanfing. *Galen lib. Je Siwpl.* iis, that Bawm is like unto Horehound in Qualities, but much weaker. I will not gainfty *Galen* totally j but thar it may be Jo in lbme Cafes ; as in Hylte- ick Dileafes: but where a Cordial is intended, I am iire Bawm is nrach the fuperiour, and is muchbet- ter for Women in their Lying in, when they are iibting, from their fore Travel or hard labour. Dofc rom half an ounce to two ounces. It is good a- ainft Poifon, and the bitings of Venemous Bejfts, and futh as have been long troubled with the Bloody •lux.

XVII. *The Syrup*. It is Cordial, but is chiefly ufed as a Vehicle to other Cordial Medicines, and o make them palatable : however it is of it lelfa angular pe&oral, and good againft Coughs, Colds, Afthma's, Spitting of Blood, Obftru&ions of the Lungs, and other like Difeafes of the Breat, and parts adjacent.

XVIII. *The fixed Salt*. It ftrengthens the Stomach and Spleen, refits Vomiting, and carries off much of the Morbifick Caufe by Urine. To flop Vomiting you may give it thus : *Take of this Salt fcmple -, Spirit of Sulphur viij. or x. drops: mix hem till the effervescence is over : then diijohe it in a Glafs of Canary, or Jome other Stomaiick Vehi- le \ and fo give it the Patient to drink.*

XIX. *The Balfam or Oil*. They are moft flngular vulneraries, and many times cure Wounds at one Drefling: and it is my opinion { grounded upon the experience I have had ot the Plane, in Chirurgery) that it is not inferiour for curing Wounds Jiid Ul- cers, to any of the Allheals: and from its vulnerary and healing Properties it was, that our Anceltors called it *Balm*, as being of the nature of *Balfun*. Ouc- <wardly applied it is good agauilt tht; Hinging or ftri-

king of Scorpions, and the Poyfonous Bite of the *Vhalangium*

XX. *The Cataplasm.* Being applyed it eases rains coming from a cold Giufe, and Diucuffed Flatulent Tumors: and being mixt with a little *Niter*, or the *Amalgamation of Mercury with head*, it prevails againit Wens, Kernels and hard Swellings in the Neck and Throat or other parts, and is good also to give ease in the Gout, and ripen Biles and break them.

XXI. *The Expreffed Juice.* It lengthens the Vital Spirits -, and being given to iij. iv. or vj. Spoonfuls in a Glafs of *White Port Wine*, it caufes speedy Delivery to Women in Travel, and brings forth both -Birth and After-birth. It is an Antifcorbutick, and helps the JSloody Flux, by reason of its ifalfamick and healing Virtues. Put into the Eyes, it is a fingular remedy for dimnefs of Sight, and being mixed with Honey it takes off Films which obfufcate and hinder the Sight.

XXII. *The Bajiard Bawm.* You may make the fame Preparations of this, as of the former, and they have in General the fame Virtues, but as to the Vital Indications, they are not fo powerful. However in all *Hysterick Di'eafes* they very much exceed, as being more effe&ual in opening Obftru&ions of the Womb, and refitting Fits of the Mother*

CHAP. LIV.

BAWM, Turkey and Syrian,

I. T~*#E Names. The firft is called in *Latin*

X *Mejiffa Tunica*, or *Meliffobillum*, or *Mel'ifhyllum Turcicum*; by *Gefner* in *Uort. Cedromella*, and *Ctrago Tunica*, and in *EngHJb*, *Turkey Bawm*.

II. The other is called in *Latin*-, *Meliffa Syriaca*,

and by fome *Meliffa Moluccana*: by *Matthiohis*, *Meliffa Conftantinopolitana*: and by *Tabernmontanus*, *Cardiaca Syriaca*: by *Lobel*, *Mafeluc Turcorum*.

III. *The Kinds.* The *Turkey Bawm*, is the Third Species, in our order: The *Syrian*, or *Moluccan* conftitutes the Fourth Species, which are all that are neceffary for us to confider in this Work. This *Syrian Bawm*, Authors will have to be twofold, viz. *Ltvifani Afferpa*, or *Afferi or: OI Odor at a*, and *Inodorata*.

IV. The Defcription. *The Turkey Bawm hat a Root fmall and thready, which perfifhes every Tear at the fir ft approach of Winter, and therefore muft be Sown frefh again, every Spring. From this Rooft rifes up one fquare brownifh green Stalk, two Feet high and fome times more, if it grows in good Ground, fprending it jelf with two Branches from every Joint, where the leaves are fet; and this courfe is continued up almoft to the Top. The Leaves are narrower and longer than thofe of Common Garden Bawm, and more dented in about the edges, of a Jweet Limmon fcent, rather exceeding that of Common Bawm: they are rough also, and of a like Green Colour. The Flowers are gaping or hooded, growing at the Tops of the Branches at certain Difftances, ftanding in fharp, rough, pointed Husks; and they are of a blew or purplifh blew Colour-, but in fome the Colour is perfectly white, whence feveral Authors would make feveral Kinds thereof, tho at the fame time they differ in nothing but the Colour of the Flowers*, but fome fay the Leaves are of afrefher green Colour, which I have not yet obferved. After the Flowers are paf, then comes the Seed, which is black and roundifh, with a white Spot in each Seed, whilji it is frefh, which afterwards in a manner Vanifhes, net being fo difcernable when dry.*

V. *The Syrian Bawm, has a Woody thickRoot, and full of firings, which perfifhes every Tear. From whence rifes up, a round hollow Stalk, thick] and of a reddifh Colour, about Two Feet high, branching forth variously on all fides up to the Top, on which are fet fhorter and rounder Leaves, at the end of longer Foot Stalks. The other Leaves ft and also upon Foot Stalks, and much refemble thofe of the Common Bawm (for which reason, fome Athors have taken this to be one of the Kinds thereof) fomewhat lefs dented about the edges, than the Garden Kind. At the Joints of the Stalky from the middle upwards, come forth round about it, certain hard, whitiffy Skins, Jmall and round at the bottom, and wide open at the brims, a little prickly at the corners, and much like unto a Bell, being for the mo ft part five Cornered from the bottom of each of thefe, comes forth one Flora er, fomewhat fmall, and like to thofe of the Comm Bawm, almojt white in Colour, or with a faxl of Red therein. After they are juft, the fecond of the fame skinny Bell, the Seec! which is the fecond rarely comes to be Ripe. The third of the fame Bell, is five Cornered. The Plant rarely comes to the Seed of Bawm, but is ufed in the fame manner.*

VI. The other being Kind, which is called *Afferpa*, and *Afferi*, is a woody thickRoot, and full of firings, and from whence rifes up, a round hollow Stalk, thick and of a reddifh Colour, about Two Feet high, branching forth variously on all fides up to the Top, on which are fet fhorter and rounder Leaves, at the end of longer Foot Stalks. The other Leaves ft and also upon Foot Stalks, and much refemble thofe of the Common Bawm (for which reason, fome Athors have taken this to be one of the Kinds thereof) fomewhat lefs dented about the edges, than the Garden Kind. At the Joints of the Stalky from the middle upwards, come forth round about it, certain hard, whitiffy Skins, Jmall and round at the bottom, and wide open at the brims, a little prickly at the corners, and much like unto a Bell, being for the mo ft part five Cornered from the bottom of each of thefe, comes forth one Flora er, fomewhat fmall, and like to thofe of the Comm Bawm, almojt white in Colour, or with a faxl of Red therein. After they are juft, the fecond of the fame skinny Bell, the Seec! which is the fecond rarely comes to be Ripe. The third of the fame Bell, is five Cornered. The Plant rarely comes to the Seed of Bawm, but is ufed in the fame manner.

VII. *The Places.* The *Turkey Bawm* grows naturally in *Moldavia* and several parts of *Turky*, from whence it is brought to us, and Nourish'd up in *Gardens*. The *Syrian Bawm*, called also *Moluccan*, was thought by *Matthiolus* to grow in the *Molucca Islands* (whence that Name.) But *Parkin/on* says he was mistaken: and that *Sequent/s* an *Italian* sent them *frorriSyna* to *Verona*, from whence they were brought to us, and nourish'd up in *Gardens* only.

VIII. *The Times.* The *Turkey Bawm* Flowers the latter end of *June*, or in *July*: *buithQ* *Syrian Kinds*, feldom Flower before the middle of *August*, for which reason, they feldom give any good Seed, which the *Turkey Bawm* fails not to do.

IX. *The Qualities.* The *Turkey Bawm* agrees herein wholly with our *Common Garden Bawm*. The *Syrian Bawm* is hot in *ont* Degree and dry in two, *Hylterick*, *Vulnerary*, and *Alterative*.

X. *The Specification.* The *Turkey Bawm* is peculiar against *Vertigo's*, *Faintings*, and *Sicknefs* at *Heart*. The *Syrian* relifts fits of the *Mother*, and *Vapors* from the *Womb*.

XI. *The Preparations.* The *Shops* keep nothing of them, but you may Prepare therefrom. 1. A *Powder from the Leaves and Flowers*. 2. A *Decottion in Wine*. 3. An *Expreffed Juice*. 4. A *Spirituos Tinture** 5. An *Oily Tinture*. 6. A *Saline Tinture*. 7. An *EJfence*. 8. A *Syrup*. 9. A *Fixed Salt*. 10. A *BalfamorOil*. 11. A *Cataplafm*.

The Virtues.

XII. All these several Preparations of the *Turkey Bawm*, have the *fattie Virtues*, *Ufes* and *Dofes*, with those of our *Common Garden Bawm*, so that no more need be laid of them in this place, and therefore we refer you to their respective Titles in the Chapter aforegoing.

XIII. *The Powder of the Syrian Bawm*, heats, rarifies, and cleanses.

XIV. *The Decottion of it in Wine*, Kills Worms, and is good against the pains of the *Mother*, *Vapors*, and the like. Dose iv. ounces.

XV. *The Expreffed Juice of it*, Kills Worms, and gives relief in *Hiiterick Fits*, pains of the *Spleen*, and the like. Dose j. ounce or more.

XVI. *The Spirituou Tinture of it*, Expels *Poyfon* or *Venom*, and is good against the *Plague* or *Pestilence*, and all sorts of *Malign fevers*. Dose half an ounce.

XVII. *The Oily TinBure of it*, Gives ease in the *Colick*, given to one *Dram* in *Ale* or *Wine*: and outwardly applyed helps *Palfies*, and eases Pains from a cold *Caufe*, in any part of the *Body*,

XVIII. *The Saline Tinture of it*, Is a Specifick for killing Worms in the *Body*, whether of old or young. Dose j. or ij. *Drams* in *Wine* or *Ale*.

XIX. *The EJfence of it*, Kills Worms, and cures Fits of the *Mother*, *Convulsions* of the *Bowels*, &c. Dose from ij. *Drams* to vj. in *Ale* or *Wine*.

XX. *The Syrup of it*, has the *Virtues* of the tlience, but is much weaker, and is mostly used as a *Vehicle* to convey the tyher Preparations in.

XXI. *The Fixed Salt of it*, removes *ObstruEhons* of the *Spleen* and *Womb*. Dose to xx grains of it, in a *becottion* of the *Herb*, sweetned with the *Syrup* thereof /

XXII. *The Balfam or Oil of it*, is *Vulnerary*, and eases Pains of the *Spleen* and *Joints*.

XXIII. *The pitaplafm of h*, Difcufles *Tumors* arising from *Qold* and *Wind*, and gives ease in the *Spleen* being applied to the *Region* thereof.

CHAP. LV.

BEANS Garden and *Thalpa*

I. *The Names.* The *Bean* is called in *Arabick*, X *Bachale*, *Bachele*, *Bakilla*, and *Hachilte* in *Greek*, *Map*: and in *Latin*, *Fab a*. The *Cod* is called in *Greek* by *Arijiotle Qh*: by *Nicander*, M^@-, *e^a, T* < t^@* ' . by *Helichius KQe*-, *hkCne*^ :# and by *Apollo nilts Klv* < pQ- ' and in *Latin*, *Thee a*.

II. *The Kinds.* There are many *Kinds of Beans*, but those which we shall chiefly take notice of, are 1. *The Garden*. 2. *Kidney* or *French*. 3. *The Field* or *Horfe Bean*. Of the *Garden Kind*, there are said to be two sorts, 1. *The True*. 1. *The Bajlard*.

III. *The Description.* *The True, Large, Sweet garden Bean*, has a *Root* thick, with many *Fibres* or *Strings* annexed to it, from which rises up *One, Two, or Three Stalks* (according to the goodness of the *Ground*) smooth and square, and sometimes *Four or Five Feet* high or more. Upon these *Stalks* are set the *Leaves* at certain distances upon a small *Foot-Stalk*, from the very bottom almost to the top, by *Two or Three*, which are fleshy, thick, of a light green, and long, a little pointed at the ends. Between these *Leaves* and *Stalk* come forth divers *Flowers*, all of them looking one way for the most part, which are *dofe*, a little, turfd up at the brims^ *White*, and spotted with a *blackish Spot* in the middle, and somewhat purphjh at the foot or bottom, of the *Form* almost of *Broom*, or *Peafe Flowers*, many of which*, that grow upwards towards the top^ do feldom bear seed, and therefore are gathered by many to be *Difilled*, and the tops also being cut off, it makes the left of the *Plant* to thrive the better. The *Flowers* being gone, there grows forth longer cat, smooth, green *Cods*^ greater than in the other *Kinds of Beans*, which

grew black when they are ripe, and contain within them, Two, Three, or Four, flat and somewhat roundish Jong Beans, either white or reddish, which latter when ripe grow many times black with all.

IV. *The Baftard Bean, Differs little or nothing in the form and Shape of the Plant, or in the manner of its growing from the former, save that it seldom grows full out so large as the True Garden one doth, nor are the Beans themselves altogether so large: but that which is the principal note of distinction, between this and the True Kind, is their want of that sweetness, pleasantness, and excellent Taste which the Right Garden sort has: and therefore by reason of the small difference which is between them in respect to their form and growing, they are generally Sold in the Market the one for the other: tho at the same time the Gardener can distinguish between them.*

V. *The Places.* These are both Sown in Gardens with us, but the latter are for the moil part Sown abroad in large fields, and Sold in Markets for the winter.

VI. *The Times.* They Flower in April and May, and that gradually, so that they are long in Flowering: and the Beans themselves are Ripe in July and August.

ML *The Qualities.* They are Temperate as to heat or cold, and moist in the first Degree; Nephritic, Lithontripstick, Spermatogenetic, Suppurative, and Alterative.

VIII. *The Specification.* They are peculiar against Gravel in Reins or Bladder, restore in Consumptions, for they nourish much, and being much Eaten cure a Diarrhaea.

IX- *The Preparations.* The Shops keep, 1. A Water from the Flowers or the whole Plant. 2. A Meal or Flower from the Beans. But you may make therefrom also, 3. A Decoction of the Beans in Water or Wine. 4. An Effence of the Leaves and Cods. 5. A Cataplasm of the Beans. 6. A Volatile Salt, Spirit and Oil from the Beans. 7. The Aches of the Cods and Stalks. 8. A firing Broth.

The Virtues.

X. *The Distilled Water from the Flowery or whole Plant when in Flower.* They are chiefly used as Cosmetics, to whiten, cool, and beautify the Skin, it being often washed therewith, and suffered to dry on: but before it is applied, the Face and Hands ought to be made purely clean with warm Water in which *Wheat Bran or Bean Meal* has been boiled: some Ladies have affirmed to me, that by a continued and long using this Wash, of Water Distilled from the Flowers, they have had Lentils, Freckles, and other Deformities of the Skin perfectly removed. This I believe, that if it is acuated with some small quantity of the Volatile Salt, and then used, it may do much in that Kind.

XL *The Meal or Flower.* Being used with warm Water to wash the Face and Skin with, it cleanses it admirably, and is said to take away Deformities thereof, as Scurf, Spots, Wrinkles, Tanning, Sunburning, and the like.

XII. *The Decoction in Wine or Water.* It is very good against the Stone and Gravel whether in the Reins or Bladder, and provokes Urine: so also a Decoction of the Green Cods, or a Water Distilled from the same.

XIII. *The Effence from the Leaves and green Cods* It is Diuretic and Lithontripstick, removing the Matter causing the Strangury, whether it be Gravel, Sand, Slime, or other Glutinous Matter. Mixed with Honey and taken, it prevails against Coughs, Colds, Rheums, Catarrhs, and other Distempers of the Lungs,

XIV. *The Cataplasm of Bean Flower or Meal* If it is made with Vinegar and Oil, and applied to Womens Breasts, swelled with abundance of Milk, so that they can scarcely hold, it will not only repress the Milk, but also dissolves the Tumor or Swelling occasioned by Curdling thereof. If the Cataplasm be made with Fenugreek and Honey, and applied to Felons, Biles, Bruises, Apoftems, as also Kernels about the Ears, and Kings-Evil Swellings, it helps them all. If the Cataplasm is made with Wine, and applied to Watering Eyes, or Eyes having a Contusion by blows, it gives ease and does them good. If made with Whites of Eggs, Rose Leaves and Frankincense, and applied, it helps Eyes which Swell or grow out. If it is made with White Wine, and with Vinegar and Oil, and applied to the Cods, it takes away their Pain and Swelling. If it is made with Wine only, and a little Oil, and Eaten, it is good against Impotency, and tires up Luft in such as cannot use the Act of Generation, by reason of the coldness, fluggishness, and weakness of their Members. If Fried in Oil with Garlick to the thickness of a Hasty Pudding, and Eaten as daily Food, it helps inveterate Coughs, almost past cure, and the hoarseness of the Voice: and being for some time Eaten, it breaks Apoftems of the Breast and Lungs.

XV. *The Aches from the Cods and Stalks,* Being Infused in Ale or Wine, and the Liquor Drunk, they are very Diuretic, and open all Obstructions of the Reins and Bladder, and therefore are very good against Sand, Gravel, Stone, Dropfy, Jaundice and Gout. The Aches made into a Cataplasm with Hogs Lard, and applied, are good against old Pains, Contusions, Wounds of the Nerves, Defluxions upon the Joynts, the Sciatica, and Gout, whether in Hands, Arms, Knees or Feet.

XVI. *The Volatil Salt, Spirit and Oil of the Beans.* Beans and Pease yield a vast Quantity of Volatil Salt, and in much larger Proportion than any other Vegetable Production. It is thus made. 5t Beans for x. whole and dry, put them into a large Earthen Retort, or into a large Glass one well Luted, so large as that about a third part may remain Empty: put it into a close Furnace of Reverberation, luting to it a large Receiver or great Glass Ball: stop the Registers of the Cover of the furnace, and make a small Fire in the Cinder or Aches place, at first only to inarm the Retort, and heat the Matter within, which keep so for an Hour, then kindle a fire in the Grate place, gentle at first for an Hour more, after which increase it gradually from Hour to Hour, but not to an Excess: in the mean season, the Aqueous parts will come over in large quantity, then give a little Air to the Register of the Cover of the furnace on the Receivers side, continually increasing the Violence till you see the Receiver to be filled with white Clouds, which will by degrees condense into Liquor: the Oil, Aginom and Salt parts sinking to the bottom of the Vessel; keep now an equal fire, for about two Hours giving a little Air to the Register, after which let it Jar altogether, giving a more violent heat and length a flaming fire, which continue till the Vapour ceases, and the Receiver is clear: let then the Receiver go out, and the Vessels cool. In the Receiver have much flegm mixt with Oil, with a little Si-
with a
well Luted, and fitted with a Beak and Receiver: place it in a Sand heat, in a cool Airy place, so may you see the Volatile Salt ascend by little and little and coagulate it self in the Head (which you must often cool by double Cloths dipt in cold Water, to hinder the Dilution of the Salt): This is done with what speed may

may be take out of the Head, and keep it in a Glafs Bottle clofe flopped, and in a cool place, for it turns into Liqueur or Spirit with the leaf heat, and sooner than any other Volatile Salt: but you muji have another Head ready to put on in the place of the former, whose junctures being well Luted, continue the reffifie at ion, fo will you have in the Recipient, the reft of the Volatile Salt Diftill'd in a little of the Flegm (which is the Spirit) and the Volatile Oil, which you may feperate and keep apart; the ufelefsblegm, and finking part of the Oil remaining at bottom of the Matrass.

XVII. This Volatile Salt of Beans, is a strong Sudorifick, and one of the molt Subtil and Volatile Salts that is, being of the fame ufe with all other Volatile Salts. It is good againft Palfies, Cramps, Withered Limbs, Epilepsies, Apoplexies, Gouts, Rheumatifms, Colicks, and other difeafes of the Head, Brain, Womb, Nerves, and Joints. It kills Worms, and is admirably good in Fits of the Mother. The Spirit- is alfo of the fame Virtue, The Oil, is stronger, and therefore in outward applications, it may be mixt with Oil of Bitter Almonds, or Oil of Ben, and the Stomach and Navel anointed with it, for Fits of the Mother. In Difeafes of the Brain, alfo of the Womb, you may put it up the Nostrils. Dofe of the Salt, a gr. vj. ad xij. of the Spirit, from xv drops to xxx. or xl. and of the Oil a gut. ij. ad. vj. all which are to be given in fome proper Vehicle.

XVIII. The strong Brwth of the Beans. It is Nutritive in the highelt Senfe fo far as a Vegetable can be Nutritive * It alfo ftirs up Luft, and is of good ufe where there is an Impotency in the Male Kind, who have not the power to ufe the Ael of Generation, by reafon of a weaknefs in the Inftruments of Generation, or defect of Seed, as it has refpeQ: either to Quantity or Quality. And by reafon the Bean, (efpecially the Field Kind) has the Signature of the Glans of the Penh, Pythagoras and his Followers judged then to provoke Luft, which afterwards by multitudes of Experiments and Obfervations, has been confirmed to us, even from that time to this day. This Broth ftrengthens the Bowels and reftores Nature, Cropping all forts of Lasks and Fluxes of the Belly, inveterate Coughs and other Diftempers of the Lungs: It is Nephritick and Diuretick, much provoking Urine, and therefore is good againft all Obftructions of the Reins and Bladder. If this Broth is made for Nutriment fake, it will be neceffary to boil the Beans till they are Broken, and the Flowery part of them mixed and as it were diftbl'd in the Liqueur, which afterwards may be made favory with a little Salt, Juice of an Orange, and a bit of iweet Butter. Beans are indeed Flatulent (by which property they are laid to ftir up Luft.) yet accounted good Food. Nos Trago Subfcibimus recntesinnoxia* ejfe inCibo, & bonum fuccum gignere. Ray, Hi ft. Plant, lib. 18. cap. 2.

CHAR LVL

BEANS Kidney and Scarlet.

Linn H E Names. This Plant is called by Hippo* X crates, Theophrastus, and molt of the Ancient Writers, OKIKOV come from the Seed call it AhCov, & A'QIQV: others name it *^OMI,a diminutive from SaWo* Difcorides calleth it S^A*? *ma<> z***f mu AofL: in Latin, Smilax Hortenfis, Siliqua, Phaeolus: in Arabick, Lubia: in Englifh Kidney Bean, and Garden Kidney Bean.

II. The other is called in Greek Kv^@- -/QKW&, & totLoioh©- KUKIV©- : in Latin, Faba Coccinus; t5> Phafe* olus Coccinus: and in Englifh, the Scarlet Bean.

III. The Kinds. The Species of the Kidney Bean are very many: whose chief differences confift moft in the Colour of the Beans, which every Child is able to diftinguifh at Sight, as the White, the Blacky the Red, the Purple^ the various Coloured, the Great, the Small, &c. as for other Differences, as they would be fuperfluous and needlefs, fo they would be almoft endlefs.

IV. The Scarlet Bean is faid to be of two Kinds %
1. That which Grows and is Common with us in England. 2. The Indian Downy or Hairy Bean, which is called Cow Itch, which fee in the Exoticks* lib. 3. chap. 73. following.

V. The Defcription. It has a long Root with many fibres fpringing from it, which peripes every Tear, from which rifes up at fir ft but one Stalky which afterwards divides it felf into many Arms or Branches, every one of them being fo weak, that they cannot fuftain them/elves, but are upheld by Stick\$ or Poles, or other adjacent things, * taking hold with its claffing tendrels thereupon, in like manner as does Bryony, Hops, and the Vine, otherwife they would lye bruit/efs itpon the Ground, from thefe Branches grow forth at feveral places long foot Stalks, every one of which hat? three broad, round, point eel Leaves, of a green Colour, growing together bynhreeV as in the Common Trefoil: Towards the Tops of the Branches come forth divers blowers in form like to Peafe Bloffoms, which vane and differ in their Colours according to the Soil in which they Grow, fometimes White, Black, Red, Tellow, Purple, Pale and Various Coloured, for the moft part of the fame Colour the Beans will be of. After which come forth long and ftender^ fiat, lightifh green^ Cods, moftly crooked a little, and fome Ji rait, in which are contained the Beans, made almoft in form of a Kidney, fiat ind much about the Magnitude of Horfe Beans.

VI. The Scarlet Bean is a large Plant, but differ* not much in its manner of growing from the former Kidney

Kidney Bean: but the Flowers are large and many, and of an Elegant Scarlet Colour, for which reason it is commonly called by our Florists, The Scarlet Bean.

VII. *The Places.* They Grow both of them, not only in England, but also in most parts of Europe, and with us they are nourish'd up in Gardens. The hrt or Common Garden Kidney Bean (which some call the French Bean) extend their Branches to a very great length, having Poles or other like things to support and fatten themselves upon. The Scarlet Bean was first Brought to us by John Tradescant and made to Grow in our Gardens, where it now very naturally flourishes.

VIII. *The Times.* They are sown in the Spring, chiefly about the middle of April, and not before, and the Beans themselves are ripe, about the latter end of the Year.

IX. *The Qualities.* The former are Hot and Moist in the first Degree: (as for the latter they are more for the Show and Beauty of the Flowers, than for any Physical use.) They are also Suppurative, Afringent as to the Bowels, Nephritick, Spermatogenetick, and Alterative.

X. *The Specification.* There is nothing Observable in this, saving that they have been found to provoke Urine.

XI. *The Preparations.* The Shops keep nothing of them, but you may make therefrom, 1. A Decoction of the green Cods, and whole Plant, 2. A Decoction of the green Cods, or whole Plant in Water or Wine. 3. An Effence of the Leaves and Cods. 4. A Volatile Spirit, Oil and Salt, from the dry'd Beans. 5. The Afhes of the Straw and Cods, 6. The green Cods to be eaten as a Sal let.

The Virtues.

XII. *The Diuretic Water,* May be used as a Vehicle to convey Nephritick, Diuretic, and Lythm-triptick Medicaments in.

XIII. *The Decoction in Wine or Water* is very Diuretic, and as its Signature shews, powerfully opens Obstructions of the Reins, Ureters and Bladder: It may be Drank a Pint at a time morning, noon, and night a little sweetned with Honey, and be continued for some days.

XIV. *The Effence.* It has the Virtues of the Decoction, but much more Powerful, and is a singular sweeter of the Blood.

XV. *The Volatile Spirit, Oil, and Salt.* They are made from the dry'd Beans, exactly as we have Taught in the former Chapter, See S. 16. and their several Virtues, Uses, and Doses are the same, so that we need say no more of them in this place.

XVI. *The Afhes of the Straw and Cods,* being Infused a Night or two in a Bottle of Ale or Wine close stopp'd up, and that Liquor Drank Morning, Noon and Night, half a Pint at a time, or more, it powerfully provokes Urine, opens obstructions of the Reins and Ureters, and plentifully brings away Sand, Gravel, Slime, or other Tartarous Matter offending those Parts. You may put xvj, ounces of the Afhes to a Gallon of Ale or Wine.

XVII. *The Green Cods.* They have the Virtues of the other Beans, provoke Luft and breed Seed: boiled and eaten with sweet Butter and a little Salt, and Juice of Oranges, they loosen the Belly, provoke Urine, strengthen and please the Stomach, and make good Blood, but they ought to be eaten while they are green and tender (otherwise they will not be so Toothsome) and the Rib [or String which runs along the Cod, being taken away, then to be boiled close Covered, till they are soft, and so dress'd up with Salt, melted sweet Butter and Juice of Sevil Oranges, as aforesaid in which manner they are very wholesome, nourishing, restorative, and of a pleasant and grateful Taste, and not in the least inferior to the other large Garden Beans.

CHAP. LVII

BEANS Field or Horfe.

L. *The Names.* It is called in Greek, *Faba Equina*.

X. *The Latin Names.* in Latin, *Faba Equina, Faba Minor*, and by *Dodonaus, Phafelus Minor, Faba agria vel Rustica*: and in *£>£/I/>*, *E*Zi ft^*, and *^ / > Bean*. *KJ^ut Gnem ditfi credwtur quia funt^** *½ KUVV etWol ^ £770 7* KUVV* RaT^*.

II. *The Kinds.* We shall take notice but of three sorts of these Beans. The First Kind, is our Common held Bean, which is usually sown with us for Horfes, and is Named as aforesaid declared. The Second Kind, is that which the Germans call *nuffv*, and by some *K«V« £>««**: in *Lcf. Th^* *Sylvestris^ faba Grtea*; and in *£«?/;J/%* *Th^ Wild Bean*. The Third Kind, is the *Old Green Bean*, called *Kvcr^Q- SAAW^XQ-*; in *I,atin n i r^* *terum Grtcorum, Faba Sylvestris Gr£tnru*, */J;* *quorum*: in *£*£/(/)*, *The Green Bean of the Ancients*.

III. *The Description.* The Field or Horfe Bean to a short Root, going down right, with many small firings bringing from it, which perishes every Year, from whence springs forth one, two, or more Stalks, which grow upright like the Garden Bean, not leaning down, the Leaves are like unto the Garden Bean, without any dents on the edges, but they are smaller, more at a Joint, and growing closer: the Flowers fit and also sown at a Joint, lesser, and of a more Purplish Colour: the Cods succeeding

them are long and round, jmaier than the Garden Kind, and flanding upright: within which are small longifh round Beans, which when they are Ripe, are fame blackifh, feme brownifh, and fonte of a dirty yellow.

IV. The Wild Bean differs in its defcription not mob from tlye, former, fave that it is fomething lefs in the Magnitude of the Plant, and the Beans themselves are black and round.

V. The Greek Beantav a Root which goes not deep nor jar into the Ground, but fends forth many long Vibres orfrings, dying every Tear-, from whence jprings forth two or three long flat Stalks^ with two edges, lying or running, upon the ground, if it has nothing to rife or claff upon. The Stalks branch out on every fide into ft alks of Leaves, four commonly fet thereon, by two and two, with a diftance between them, like unto the Garden Bean, and each Branch bending in a long Claffer. The flowers grow fingly at the Joynts of the Branches, under the heaves, and are of a kind of dead, dull, purple Colour, with fome palenefs at bottom of them : after which fucceed long and fomething flat Cods, with two fharp edges, dented about, and a little hooked or bowing, green at fir ft, but afterwards black and hard when they are Ripe. In thefe Cods are contained four or five, or more round Beans, very black, and as large an Peafe.

VI. The Places. The Firft grows with us every where, in Fields, and are chiefly Sown for the Food of Hoggs and Horfes, whence their Name: The Second and Third forts ^row with us only in Gardens *, but are Natives of Spain and Greece, where they are plentifully to be found.

VII. The Times. They all Flower in April, and May, and June, and that gradually, for they are long in Flowering, and the Seed is Ripe fometimes in July\ but moftly in Auguft m&September.

VIII. The Qualities. *OUT Field Beans* are hot and moift in the firft Degree, fuppurative, ftrenghening and fpermatogenetick: nephritick, diuretick, and alterative: and ufed externally, as in Wafhings, they are of an abfterfiye faculty. The *Wild Bean*, and *laba Veterum*, or *Greek Bean*, which *Dinfcorn des*, *Galen*, and other *Greek Authors* intend, when thty give us their Virtues, are ufed to all the fame purpofes and intentions afcribed to thefe *Our Field Beans*.

IX. The Specification. They have a peculiar Faculty to remove Obftru&ions of Urine -, and to make a clear paffage for the Water.

X. The Preparations. They are exactly the fame with the former, as 1. *ADiftill^ Water from the Flowers and green Cods*. 2. *A DecoSion of the fame** 3. *An Effence*. 4. *A Volatile Spirit, Oil, and Salt*. 5. *The Afhes and Fixed Salt*. 6. *A Broth of the BeanS*. 7. *A Cataplafm of the Meal*.

The Virtues.

XL *The Diftilted Water*. It is ufed as a Vehicle for other Preparations, and as a cofmetick for the Face and Skin, to take away Scurf, Morphew, Tannings, Sunburnings and other like Deformities, by often wafhing therewith, and letting it dry on.

XII. *The Deco&ion of Cods and Plant*, opens Obftru&ions of the *Vifcera*, but chiefly of the Reins, Ureters and Bladder, and provokes Urine.

XIII. *The Effence*, Is faid to difsolve the Stone in Reins or Bladder, but then I conceive it muft be a foft and gritty Stone, not of a Flint like Subftance: it increafes Seed, and provokes Luft.

XIV. *The Volatile Spirit, Oil, and Salt of the dryd Beans*, They are made as thofe of *Garden Beans chap. 55. Serf. 16.* and have all the fame Virtues, Ufes and Dofes.

XV. *The Afhes and Fix'd Salt*. They are Diuretick, and powerfully provoke Urine, and therefore are finguiarly good againft the Dropfy Satfites, Gout, Stone, Gravel, and Jaundice. Dofe a fcruple in White Wine, mornin& and night.

XVI. *The Broth of the Beans*. It has the fame Virtues, but not all out fo Powerful.

XVII. *The Cataplafm. Made with Wine*, it is good againft fuffuffions and Blows of the Eyes, and is profitably applied to eafe the Pains of the Gout. *Made with Wine Vinegar*, and applied, it takes away the Inflammation of the Tefticles, and Womens Breafts, and apply'd where Hairs are firft and immediately plucked forth, it confumes their Nutriment,, and in fome meailire hinders their growing again. And // *beaten up with Whites of Eggs*, it is good againft the Pin and Web, and helps the Watering of the Eyes. *If made with Vinegar and equal parts' of Barley Meal*, it is laid to waft away the Swellings of the *Kings Evil*. *If made up with equal parts of Meal of tanugrerck*, it takes black and blew fpots, occafioned through Blows^ and Difcuffes hard Swellings under the Ears. *If the Cataplafm is made with Oxymel*, it is good againft the Stinging of *S&corpions*, and Bitings of Venomous Beafes, Diicuffes Tumors caufed by Blows and Bruifes, abates the Milk in Womens Breafts, and eafes Wounded Nerves, if apply'd upon the Wound,

CHAP - LVIII.

BEARS BREECH.

THE Names. It is called In Greet, 'A^6@ X 'x) *A^8* : in Latin, Acanthus, Acant%a, Branca X JrJina: and in English, Brank Urfine, or Bears-breech.

II. The Kinds. It is twofold ; I. The Garden kind, called in Greek iV^S@- w/^e^ W/v.f@-, usApp/AA@- 'EfTjfi&yda : to Latin, Acanthos Sativus, Acantha Hortensis, P&leros, Melamphyllos, and Herpacantha, A^ canthus vents & Htvis, Branca Urjina Uvis : and in English, Garden Brank Urfine, or fi^ n- Breech 2. The Wild Kind, is called in Greek, a^fi@- *e^@> in JLtifi#, Acanthus Sylvefiris, and Aculeatus, Acantha Spinofa 0" acideata, Herbacantha : in English, the pichf or Prickly Bears-breech. Acanthos is the common name for all Thirties, but here it is used by the figure, Antonomafia, qua loco proprij^ nominis ponitur Appellativum, ut Civitas pro Londino.

III. The Defcription. Garden Bears Breech has a Root thick and long, with many long firings spreading far and deep in the ground, of a blackish or dark colour on the out file, and white within, full of a very ciabby Juice, more mucilaginous than the Leaves, fo full of life, that if a small piece be but left in the ground, it will firing up again, and bring forth the whole Plant, but requires asbelter or defence from the extremity of the Winter. From this Root thvre shoots forth many Urge, thick, smooth, fad &r fja Leaves "p^n the ground, with a thick middle rib, divided into many fartsjoith great and deepgajhes on the edges, from among which (after it has flood long in a convenient place) rifles up a readable great Stalk, three or four foot high, without either p,nt or branch thereon, fet with some Leaves • and from the middle upwards, fet with a spike, \ were, of white hooded or gaping Flowers, /landing in frw^h dusks fomewbat Jharp at the pom, ind afmallMg undivided Leaf under each * W ' . af-

ter which come (in more hot Countries, but not in ours that I know of) broad, flat, round, iUck, brownish yellow Seed. Dodoneus fays, that the Leaves are great, large, of a fad green colour, thick, grofs, fmoother, and deeply cut in by the fides, like the leaves of Rocket.

IV. Wild Bears Breech has a Root not spreading fo deep, orfofar as the former, nor fo great in magnitude, but morf tender, as lefs able to endure the Winters cold, from this Root rifles up feveral long heavens lying upon the ground, but much narrower^ and more divided on the edges into fmailer parts, and each part with fmall incifions, fet with very Jharp white prickles ; from among which a leffer and lower Stalk arifes, with the like fpiked heads of Flowers, and a few prickly Leaves thereon, in their way coming up, fianding in more Jharp and prickly husks than the former \$ after which comes Seed^ ysmall as a little Pea, hard, black, and round. Gerard faith, that this Thiftle is in Stalk, colour of Leaves, Flowers and Seed much like the firji kind, but the Plant is Shorter and lower, and the Leaves pretty large, dented or jagged with many cuts and incifions, not only in fome few parts of the heavens^ asfome other Thijiles, but very thickly dented or cloven, and having many Jharp, large, white and hard prickles, about the fides of the divifions and cuts not very eafie to be handled or touched, without danger to the hands and fingers.

V. The Places. They naturally grow in Greece\ Italy, Spain, and France ^ but with us, and in Holland, Germany, and other cold Countries, it is only to be found nourished up in Gardens. Diofcorides fays it grows only in moift and ftony places. The Wild grows in many places of Italy near the Sea and Pena lays, he found it in moift and gravelly places near to the Walls ofMompelieir h but with us it is only in Gardens.

VI. The Times. The Root keeps alive in Winter in hot Countries, and fo with us, but fometimes it dies, if the weather is too cold: but in England that is rare in the Garden kind. The former flowers in June and fometimes in July >, but yields no perfeft Seed with us: the latter flowers later 5 feldom or never giving with us any ripe Seed: but in thofe Countries where the Seed comes to perfe&ion, it is always in Autumn, or latter end of Summer.

VII. The Qualiities. They seem to be Ter in reipeft of heat, and drying in the firft They are Afbrihtg ^ afterwards Allenged, Dryne, &c.

VIII. Confumpuunb ana spitting of Blood*

IX. The Preparations. The Shops keep nothing of it: but you maymake^thereof, i. AnInfpiffatc Juice, or Liquid. 2. An Effence. JfJfTM* Wine. 4. A Syr up. 5. AClyftet. 7. A Saline TinUure.

X. The Juice of the Root, mixed with the Juice of the Large Diof of the Linseed, one or more foived to Red Wine, &c T: ad fo either of them to be rakai.

XI. The Juice of the Root, mixed with the Juice of the Large Diof of the Linseed, one or more foived to Red Wine, &c T: ad fo either of them to be rakai.

XII. *The Decoffion in White Wine.* It provokes Urine, and binds the Belly.

XIII. *The Syrup.* It is good againſt Coughs, Colds, Aſthma's, Phthificks, (pitting and piffing of Blood, Bloody Fluxes, &c. Dofe two ſpoonfuls in Wine.

XIV. *The Clyfter.* By reaſon the whole Plant is of a Glutinous, Clammy, and Slimy Mucilaginous Nature •, it is given Clyfter-wife to procure Stools, and heal the Excoriations of the Bowels*

XV. *The Cataplaſm.* From its Glutinous and Mucilaginous property, it is (like Comfrey) applied to weak parts: and applied to the Gout in the Joints, it eaſes the Pain, diſcuſſes the Humor, and cures the Diſeaſe: It alib is profitable againſt Cramps in any part, and Ruptures in Children, being timely applied to the Part: made into form of an Emplaſter, and applied to the Back, it eaſes Pains there, and ſtrengthens a weak Back.

XVI. *The Saline Tincture.* It opens obſtructions of the Urinary Paſſages, and powerfully provokes Urine. Dofe, one or two drams in a draught of White Wine: and Cloths dipt in it, and applied to parts burned (where the ſkin is not broken) it preſently draws ibjth the fire.

XVII. *The Wild Beats Breech has the ſame Preparations, Virtues and Uſes.*

CHAP. LIX.

BEARS-EARS.

I. *The Names.* They know no *Greek* Name,

but have obtained ſeveral *Latin* ones, according to the variety of Authors, who have treated of them: but they may well enough be called in *Greeks* *AcC^rStr^?>iov*: They are called variously by ſeveral Authors, as *Lunaria Arthritica*, alſo *Lunana Parafytica Alpina*, and *Sanicula Alpina*, by *Jefner*: *Primula veris Pachyphyllos*, by *Lugdun*: *Auricula Urſi*, by *Matthiolus*. *Bauhinus*, and others: and at this day they are fo generally called by Mr. Ray, and other Authors. Some Authors, as *i^abius Columna*, will have them to be the *Alifna*, or *Damaſonium of Diaſcorides*, but are, in my opinion, miſtaken, becauſe the form of the Flowers plainly demonstrate the contrary: in *Engliſh* they are generally called *Bears-Ears*, and *Auriculas* by the Floriſts. They are certainly of the Family of the *Cowſlips*, and therefore are alſo called *Alpine Cowſlips*, and *Mountain Cowſlips*, from the places whence they firſt came: *Sanicula Alpina*, *Alpine* or *Mountain Sanicle*, *ufanandis vulneribus*: and *Auriculas* from the form of the Leaf

II. *The Kinds.* There are three principal Kinds, as i. That with long dented Leaves. 2. That with long Leaves not dented. 3. That with round Reaves •, and of each of theſe there are many varieties: as, the *Tellovo*: the *Purple*: the *Red*: the *ocariet*: the *Bright Red*: the *Bluſh-coloured*: the *Various-coloured*: the *BPeto*: the *White*: the *Hair-coloured*: the *Straw-coloured*: and the *Variable Oreen*.

III. *The Deſcription.* Thoſe with long dented Leaves (of which the *Tellovo* kind is principal) which u a beaut ij id fine P/a^ has a thready Root, very like to the *Oxlip* i which fends forth green, thick, and fat heaves, ſomewhat finely Jnipt about the Edges, much like to thoſe of *Qowſlips*, but greener Jmoother, and nothing ſo crumpled: among which a riſe s up a ſlender, round Stem, an handful high, bearing a Tuft of Flowers at the Top, from fix to twelve in number ^ ſome times of a TeHow Jometimes of a Fur pie, or Red,

and ſometimes of a White colour, or various coloured^ not much unlike to the Flowers of *Ox-lips*, but more open^ and confijiing of one only Leaf like *Cotiledon*, or *Pennywort*: after which come f^nal heads with a p^ntel at Top of them, not riſing to the height of the *Cups*, containing ſmall blackiſh Seed.

IV. *Thoſe with long Leaves not dented, have a Root greater and thicker than the former, with long firings or fibres like unto the other ſorts, but greater from whence ſprings up many fair, large, thick Leaves, ſomewhat mealy or hoary upon the greenneſs, ſmooth about the Edges, and without any indenting at all. The Stalk is great, round, and not higher than in the former, but bearing many more flowers thereon, more in number than any other kind^ amounting ſometimes to twenty or more, yea ſometimes to thirty, Jlanding ſo round and doſe together^ that they ſeem to be a Noſe-gay alone: their form is like ſome others, but that the Leaves are ſhorter and rounder, yet with a notch in the middle, like the reſt, of a fair Tellow, &c. colour, neither very pale nor deep, with a White Eye or Circle in the bottom, about the middle of every Flower, giving them an extraordinary grace \$ after which comes round heads greater than the former, with a ſmall point el Jinking in the middle, in which is contained Seed of a JlackiJh brown colour.*

V. *The round Leaved, which Tabermontanus, and Gerard, call Sanicula alpina -, and Matthiolus, Cortuſa, and we Bears-Ear fanicle -, has a Root confijiing of a thick Tuft of ſmall whitish Threads, rather Jhan Roots, much interlaced one among another: from whence ſpring up Leaves ^ firſt, ſuch as are much crumpled-) and as it were folded together, which afterwards open themſelves into fair, broad and roundiſh Leaves, ſomewhat rough, or hairy, not nly cut into five diviſions, but ſomewhat notched Jj^ about the edges, of a dark green colour on the upper ſide, and more whitish green underneath. The Leaves of this Plant die down every Tear, and riſe p anew every Spring, whereas all other Bears-Ears keep their Leaves green all the Winter, eſpecially the middlemoji, which ft and like a doſe head, the Jntwardmoſt for the moſt part penſhing after Seed-*

tyie. from among these Leaves rises up one or two
miked round Stalks, five or six Inches high, bearing
at the Tops several small Mowers, somewhat fwcet,
and like unto the purple Bears Ear, hanging down
their Heads, confit'ng of five small pointed Leaves
apiece, of a dark, reddish, purple Colour, with a
white Circle or bottom in the middle, and some small
threads therein: the blowers being past, there ap-
pears small round Heads, somewhat longer than any
of the former kinds of Bears Ears, standing upright
upon their small foot Stalks, in which is contained
small round, and blackish Seed,

VI. *The Places.* The native places of these
Plants are on the *Alpine Mountains*, and other like
places, as the *Pyren'an*: those with the *blew Flower*
and *Borage Leaf*, grow on the *Mountains in Spain*,
and on that side the *Pyrenxans* next to *Spain*, from
whence they have been Transplanted to us, and are
only nourish'd up with us in *Gardens*.

VII. *The Times.* They all Flower in *April* and
May, and their Seed is ripe in the end of *June*, or
beginning of *July*: and sometimes they will Flower
again in the end of *Summer*, or in *Autumn*, if the
Season proves moist, rainy, and temperate. As for
the great variety of these Flowers, *Parkin'on* is of
opinion, that they have risen from the Seed, accord-
ing to the differing Climes and Soil in which it has
been Sowed.

VIII. *The Qualities.* They are Temperate in re-
spect of heat or cold, and dry in the first Degree.
They are Cephalick, Neurotick and Arthritick, Vul-
nerary, Afringent, and Alterative.

IX. *The Specification.* It is a most admirable
Vulnerary, as well for Internal as External Wounds.

X. *The Preparations.* The Shops keep nothing
of it Prepared, but you may make therefrom, i. An
expressed Liquid Juice. 2. An Infusate Juice. 3.
An Effence. 4. A Decotion in Wine. 5. An Oil.
6. An Ointment or Balsam. 7. A Spirituous
T'wUure.

The Virtues.

XL. *The Expressed Liquid Juice.* Taken inward-
ly one or two spoonfulls at a time in a Glass of Tent
or Red Wine, it stops inward Bleedings, and heals
Wounds in the Stomach and Lungs: being ihufPd
up the Noftrils it purges the Head and Brain of
Phlegmatick and Serous Humors, and therefore is
good against Epilepsies, Apoplexies, Vertigo's, Me-
grims and other Head Diseases.

XII. *The Infusate Juice.* Dissolved in Red Wine,
and used as the former, it is prevalent to all the same
Intentions, and against all the same Diseases: be-
sides it strengthens the Stomach to a Miracle,

XIII. *The Effence.* It has all the Virtues of the
Expressed Liquid and *Infusate Juices*: besides which
taken every day from j. to iij. spoonfulls in any pro-
per Wine or other fit Vehicle, it prevails as a Vul-
nerary potion for the Curing of all sorts of new
Wounds and old Ulcers, and is found to be a singu-
lar thing against the Palfie, dimness of Sight, and
many other Diseases of the Head, Brain, and
Nerves.

XIV. *The Decotion in Wine.* It is Vulnerary
taken Inwardly, opens Obstructions of the Lungs,
and causes free breathing, gives ease in Gripings of
the Belly, and the Bloody Flux, for which Disease,
also in a Diarrhea, and Lienteria, the *Liquid, In-
fusate Juices* and *Effence* are all profitable.

XV. *The Oil.* It is made with Sallet Oil by boil-
ing. It cures External Wounds, as *Carrierarius* in
his *Hortus Medicus* faith, tho' of the Nerves to a
Miracle, dissolves Swellings, eases pain, and is

found to be profitable in the Gout whether arising
from a hot or cold Cause.

XVI. *The Balsam.* It has the Virtues of the *Oil*?
but more excellent for the Cure of Wounds than it,
especially of the Nerves* is good against the bitings of
the Sea Hare, and of the Toad* and relieves *Oe-
dema's*.

XVII. *The Spirituous Tinsure.* It cures Gripings
of the Belly, the Dyfentery, Convulsions, Fits of
the Mother, and other Distempers of the Womb.
Dose j. spoonful Morning and Evening.

XVIII. *Parkin'on* says the Leaves of *Cortufa* taste
a little hot, and if one of them be laid whole, with-
out bruising, on the Cheeks of any tender Skinn'd
Woman, it will raise an Orient Red Colour as if
some *ucus* had been laid on, which will pass away
without any manner of hurt, or mark where it
lay.

CHAR LX.

BEETS Common and White.

T. *H*E*ams** This Plant is called by the
X *Arabians*, *Decca*, and *Calab*: by the *Greri-
am*, T W, 3 2C.TAO, *ab mpulfu quod Lile eZrf*
cat, because it comes up in few days after plu-
ing, and then grows ve^ fifth till f ? S S ^ £
nels. In *Latin*, *Beta*, quoniam *fyuram hier* B*

of it being in Seed, is somewhat like to the *G%e**
Letter *Beta*, as *Columella* observes. And in *Englisc*
it is called, *Beet*.

II. *The Kinds.* *DioscoHdes* makes a White and a
Black: So *MqTkopbrafnWjt. Plant, lib. 7. chap.*
4. who says, *Candida sapore nigrā praftantior*. So
Pliny, lib. 19- chap. 8. Beta A colore duo genera
I *Gr<ea faaunt, mgrum & Qindidivs. Parkin'on*
alsoit

almost of the opinion that the *Black Beet* of the *Ancients* was that we now call *Our Red Beets*: but *Modern Authors* have found out several other Kinds. As, 1. *Beta viridis Communis*, The Common Green Beet. 2. *Beta alba*, called also *Candida* iff *Pallefcens*, The White Beet. 3. *Beta rubra noflra*, called also *nigra*, iff *rubra vulgatiore*, The Red Beet. 4. *Beta rubra*, called also, *Beta Romana*, *Beta rubra RapdZ. radice*, *Rapum Rubrum*, *Rapum fativum Rubrum*, *Beta nigra Romaga*, *Beta erythrorrhizos*, by *Lugdunenfis*, The Roman Red Beet. 5. *Beta Cretica fpinofa*, Prickly Beets of *Candia*. 6. *Beta Sylveflris maritima*, Sea Beets. 7. *Beta Lucia Syriaca*, Yellow Beets. 8. *Beta platicaulos*, *Beta Cofla lata*, *alba Lutea*, *aurea*, *ruberrima*, *Italica*, *ficula*, The yellow or flat Stalk'd Beet. Of all which Kinds we ftiall only Treat of the firft Four in this Book, as being only proper for this purpofe. And of them, we fhall Difcourfe of the two firft Kinds in this Chapter.

III. The Defcription. *Our Common Green Beet is almoft like unto the White Beet, having a great long hard Root, of no ufe after Seed time, from whence fprings up many large Leaves lying upon the Ground of a green Colour, amidfl which rifes up a Urge green Stalk ere fled, with fome Branches and many Leaves thereon, almoft up to the Top. The flowers grow in long Tufts or Spikes, fmall at the ends and turning down their Heads, and yielding cornered Seed.*

IV. *Our Common White Beet has a long thick, great^{TMf} and bard after beating Seed, which entTML? mTM^TMi TM<h its Leaves upon it, but periling commoniy the fecond Winter. From whence comes forth great broad Leaves, fmoother and Plain, lying next the Ground*, thefe fays Parkinson, grow in hot Countries to be three foot long and very broad, <m<L in our Country they are very large but nothing near that Proportion, and they are of a fhyitjb green Colour. From this Root rifes up a Stalk great, ft rong, and Ribbed or Crested, bearing great fiore of Leaves upon it, almoft up to the very top: the Flowers grow along the Stalks in long tufted*

Spikes fmall at their extremities, ani bending down their Heads, and they clufler together in fhape like little Starrs-, ivhich being pafte, there are fmall pale greenjh yellow Burrs, yielding cornered, and uneven prickly Seed.

V. *The Places.* The *Green Beet* Parkinson fays has been found near the Salt Marfhes by *Rochefter*, in the Foot way going from the then *Lady Levefons* Houfe thither. The *White Beet* is laid to grow Wild upon the Sea Coaft of *Tenet*, and divers other places by the Sea. They delight to grow in fat and moift Ground, but are chiefly nourifhed up with us in *Gardens*.

VI. *The Times.* They ought to be fown in the *Spring*: they flourifh and are green all the *Summer* long, as alfo in *Winter**, and they Flower in the beginning of *July*, and the Seed is ripe in *Augujh*

VII. *The Qualities.* They are Temperate in refpect to heat and moifture; and of a Nitrous Quality, Abfterfive, a little Diuretick, Opening, Cephalick, and Hepatick, Ptarmick, Alterative, and Alexipharmick.

VIII. *The Specification.* They are found to be Specifick againft Difeafes of the Head and Brain-

IX. *The Preparations.* The Shops keep nothing thereof, but you may prepare therefrom, 1. A *Liquid Juice*. 2. An *Infpiffate Juice*. 3. An *Effence*. 4. A *Decoffion*. 5. An *Errhine*. 6. A *Cataplafm*.

The Virtues.

X. *The Liquid Juice.* It is Nitrous and cleaning: being taken yj. or viij. Spoonfuls at a time, at going to Bed for fome Nights, it opens the Obftructions of the Liver and Spleen, and is good againft the Head Ach.

XI. *The Infpiffate Juice*, made with Vinegar into the thicknefs of a Balfam, and apply'd to the Temples, prevails againft the Inflammations of the Eyes, *M mixed with Oil Olive, is good againft Burnings and Scaldings.

XII. *The Effence.* It is good againft the Yellow Jaundice, opens Obftructions both of Liver and Spleen, is good againft the Vertigo, and the Bitings of any Venomous Creature. It is good againft the Itch, the parts affected being bathed therewith, and cleanses the Head of Dandriff, dry Scurff, Scabs, and heals fretting and running Sores, Ulcers and Herpes in the Head, Legs, or other Parts: it is alfo laid to cure Baldnefs, and hinder the falling of the Hair. Dole ʒ. or 4. Spoonfuls or more.

XIII. *The Decoffion.* If it is made with Equal parts of Water and Vinegar, it has all the Virtues of the *Effence* -, befides it prevails againft *St. Anthonies Fire*, and all other Inflammations in any Part.

XIV. *The Errhine.* It is made of the *Liquid Juice* iv. ounces, Niter half an ounce mixed and diffolved. Being fnuft up the Nostrils it powerfully empties and cleanses the Head and Brain of fuperfluous Humors which caufe the Apoplexy, Epilepfy, Vertigo, Megrim, Cephalalgia, Cephalosa, Lethargy, Cams, and other like Diftempers of thole Parts •, it alfo eafes the Tooth Ach, and pains in the Ears, and being outwardly apply'd, has all the Virtues of the *Effence* and *Decoffion*.

XV. *The Cataplafm.* Made of the boiled Herbs with or without the Addition of a little Niter and Alum, and apply'd, it is good againft all forts of Wheals, Puffes, Boils, Blains, and other eruptions of the Skin, as alfo for Chilblains or Kibes whether on Hands or Feet, fpeedily Curing them.

CHAP. LXI.

BEETS Red.

I. T. WiE Names. This Plant is called by the
1 Greeks^ TWTKCV XSAPJV. by the Latines^ Beta
rubra, and Beta nigra: and by us in £*£/(t&. The
Re-J Bret.

II. T/v K/WJ. It is the third Species of the
GiTicrick Kind, as is before declared.

The Defc%ion. This Kind differs nothing
om icv i former White Beet, but only that it is notfo
*ZVel it^ otTand Lavés are forne-
eoliat red: the Root h red Coonev, and not used to
be eaten. The Leaye .Zè' inJoLhwre red than in

Vil - i i^ AhTM A and Analeptic.

III. The Defcription. It is a peculiar thing
l: r ^N^OOf. Blood in kind of Hcmor,
ilc. Be.

^fhJ^ Fre arimio n*. They are the fame with
Uffae r i ^ f ^id Juice. 2. An In-
c.

The Virtues.

IX. Allthefe Preparations have the fame Virtues
with the former, and may begiven-in the fame man-
ner and Dofe. But this difference is obferved, that
thefe are more Afringent or Binding, and there-
fore, both the Liquid and Solid Juices, the EJfence
and Decottion, all very effectually flop the over-
flowing of the Terms in Women, and flop other
fluxes of Blood: and are more eff&lual for curing
any Ulcer, or running Sore, and to dry up and re-
move moift and running Scabs, and other like de-
fedations of the Skin. They are good againft the
Bloody Flux, and other Fluxes of the Bowels, ftop
the Whites in Women, and help the Yellow Jaun-
dice, and this morepecially if daily given for fome
time mixed with a finall quantity of the Tin&ure
of Mars.

CHAR LXII

BEETS Roman-

I. THE Names. This Plant is called in Greek,
X Twrhov zapaiKOp: In Latin^ Beta Romana,
Romana rubra, Rapofa, Beta rubra radice Rapa, radice
rubra craffa, and in English, Roman Beet, Red Beet
and Carrot Beet.

II. The Kind. It is our Fourth Species of Beets,
and a fingular Kind,

III. The Descriptions. Ir b_M a Root red a* Blood,
and as long and a* big as the great efi Carrot, very red
both within and without, ver)ifwee, t and good, and Jit to
be eaten (which none of the former are) and fome-
times the Root is Jhort like a Turnep, whence it took
the Name Rapa and Rapofa: from this Rootfpnms
up a Stalk, higher than our Common Red Beet, which
in its make and form of the heaves, and proporti-
on, differs liitle or nothing from the former^ but only
are

are of a better taſte, and of a red Colour like the former Beet. Gerard ſays, they are of a very red Colour, and that they, a* well as the Root, Stalky and i'lowers, are refleat with a pcrfett purple Juice, tending to Rednejk: the middle Rib of the Leaves is for the the moſt part very broad and thick, like the middle part of the Cabbage Leaf which is equal in goodnejs with Cabbage being boiled: the flowers (excepting the height of the Colour) and the Seed are nil one with the former Common Red Kind. Gerard ſays that in i\$0k it grew with him to the height of yijj. Cubits, which is xij. Feet, and did bring forth its rough and unpleaſing Seed very plentifully. With this Plant (ſays he)* Nature ſeems to Play and Sport her ſelf: for the Seeds taken from that Plant, which wa* altogether of one Colour, being Sown, do bring forth Plants of many and variable Colours, very beautiful NozC if I may be admitted to render a Reaſon of this Variety, I am of opinion it is from the differing Soils in which they are Sown, which thing I have chjerved in feverd other Plants, even to admiration.

IV. *The Places.* It is Originally a foreign Plant, ^nd brought to us out of Italy, but now is become a free Denizon, or rather a Native of our Country, In which it thrives as well as in any place of the World. It is nourifh'd with us wily in Gardens where it proſpers very well.

V. *The Times.* It Flowers in the latter end of June if the Seaſon is warm, or beginning of July, h and yields its ripe Seed in Auguji.

VI. *The Qualities.* It is temperate as to heat and cold, and dry in the end of the firſt Degree, Traumatick, very Aftringent, and fomething Styptick withall, Splenetick, and Hyfterick, Alterative, and Analeptick.

VII. *The Specification.* It is a peculiar thing for flopping Hemorrhages.

VIII. *The Preparations.* You may Prepare from it 1. A Liquid Juice. An Inſpiffate Juice. 3. An Effence. 4. A Decoſicn. 5, A Cataplaſ?n. 6, A Saline TinHure.

The Virtues*

• IX. *The Liquid Juice.* Given to iij. or iv. ounces HI White Wine, it is good againſt the Yellow Jaundice: it alſo Hops all Fluxes of Blood in the internal parts cauſing Spittings, Vomiting, or pitting of Bloody beſides which it is admirable for the cure of a Dyfentery, and other Fluxes of the Bowels, very much ſtrengthening them.

X. *The Inſpiffate Juice.* Being reduced to Pouter, and ftrewed upon any bleeding Wound, it preſently flops the bleeding. So alſo being diſſolved, in Vinegar or Oxycrate, and then Stuphes to be dipt in and applyM. This Juice diſſolved in Syrup of Limons, and made into a Lohoch, is excellent to ſtrengthen a Weak Stomach, being ſometimes taken with a Liquorice Stick.

XI. *The Effence.* Being taken daily with TinQu-ra Mart is \ powerfully opeas Obſtructions of the bpleen; And being taken with Crocus Martis Afrin-&ns, it powerfully flops the overflowing of the Courſes.

XII. *The Deco&ion.* It has the Virtues of the Juices and Miencie, but is ſomewhat weaker, and therefore ought to be taken longer. It will be better if it be made with Red Stiptick Wine or with the Rougheſt Red Florence.

XIII. *The Cataplaſm.* If it is made of the iaw Leaves and apply'd, it removes Dandriff or the white Scuff, the place being firſt well rubbed with Sal Nitre, h it alſo flops the ſpreading of running Sores, and helps Scald-Heads, (if mixed with a

little Nitre) as alſo the Tinea, Alopecia, and other ill-natured breakings out of thole parts, which caufe the Hair to fall If it is made of the boiled Leaves, it is good againſt Burnings and Scaldings, Inflammations, and other hot Tumors, Tubercles, Wheals and fuch like, proceeding from Inflamed Blood and Choler.

XIV. *The Saline Tinffure.* It is good againſt Scabs, Itch, Scurff, Dandriff, Scales, Scurvey, Spots, Lice, Nits, &c. Chilblains, Kibed Heels, the parts affected being often waſhed, and ſometimes well foaked in the fame.

XV. *It is uſed (I me an the Root) as a Sallet, and to adorn and furniſh out Difhes of Meat withall,* being as Iweet and good as any Carrot: and if boiPd as Carrots, and eaten with Butter, Vinegar, Salt and Pepper, it makes a moſt admirable Difh, and very agreeable with the Stomach.

CHAP. LXIII.

BELL-FLOWER *Small*

I. *THE Names.* Some Authors will allow this

X Plant no Greek Name, but others ſuppoſe it to be the lame with Dioſcorides his *wreufx*: It is called in Latin, Campanula: wAmEngliJh, Bell flower.

II. *The Kinds.* Authors make almoſt an Infinite number of Kinds, amongſt which are the Throat Worts, Campions, Rampions, and ſeveral other Nominals, ſo that they run into ſo great Confiſion about them that it is not eaſy to be fet right. To avoid therefore all this clutter and trouble, we (hall Treat of thoſe otherwiſe Denominated under their proper Titles and Names they are beſt known* and in thisanc^theſucceedingChapter, difcourſe only of the Chief of thoſe which are peculiarly called Bell-Flozver*

flowers. Of the Bell-blowers of which we (hall take notice, there are two Principal Kinds, viz. i. The Small Bell-blower, of which we Treat in this Chapter. 2. The Great Bell-flower, of which in the next Chapter.

III. Of the Small Bell-flower, we take notice of three kinds : 1. Campanula Cerulea vel Rot undifolia, blew or Round-leav'd Bell-flower. 2. Campanula alba, White Bell flower. 3. Campanula lutea, Tellow Bell-flower.

IV. The Description. The Blew or Round-leav'd has a Jmall thready Root, from whence rifes up Leaves which lye upon the ground, round and fmall, almoft like unto a Violet-leaf but rounder, and flipped or dented, from whence rife up divers weak, flender Stalks about two foot high, fet from the bottoms to the tops, with many very Jmall, long, narrow leaves, inhere the flowers ft and upon Jmall' long stalks very like in jafhion and bigneſs unto the fmall Garden Rampions, but of a perfett blew colour, moft commonly turning towards Purple, andfometimes White thoſeliom: after which follows fmall Seeds, in fmall Heads, like thofe of Rampions.

kild JfW / TP te Bd l f. oWer (M f o TM " count a kind of Wild Rampion) is a fmall Plant with a (lender, Root of the bigneſs of a fmallftrawwi) fome firings j pnn gms f rmi U ^ Ze/omewha, 2n'ri "I i' a P e S & TM coCfyTngflt

lot at 2iT?t afm leaves >> TMd the flowers glow at the tops of them of a Milk-white colour.

Plant n' Tel: o * Be Mower * a very beautiful or Roffl. futh; lhas roots Itke to the Blew [hfZif dV; m* the kTMes are tlmoft like to ar/Tf dVe th eth o e TMt «b l" next the ground TJf J T dafht, former, a little larger, and lopijh, and fome of them a little dented about the edges, the flowers in their way and manner of grow- > "£, are like the former but differ only in the colour, th'ff^g of a pale yellow.

VII. The p/accSt <pha' grow wild in moft places M England, eſpecially upon barren landy Heaths, and iuch other like places.

VIII. The Times. They flower all the Summer wng, fome continuing till the cold oi Autumn makes them decay.

IX. The Qualities. They are cold and dry in the firft degree, of the nature of Rampions: Afringent, ^ornatick, and Alterative.

X. Preparations. You may make therefrom, \A dfilled Water of the whole Plant. 2. A Cataplaſm of the Root.

The Virtues.

I. The milled Water. It is good againſt dif- rriugs and deformities of the ſkin, cleaning it. a «d making the race very clear and fair.

XII. The Cataplaſm. The roots beaten into a Mafs, and made in.o a Cataplaſm, with Meal of Lupins and Vinegar, is reftri&ive, abates the Milk in Womens Breails, takes away ſpots and marks of the *iin, and removes many 'other of its deformities.

II. The Kinds. This is die fecond Species of our Generick Kinds, and is three-fold, i. Campanula >erficifolia, the Peach-leaved Bell-flower, 2. Campanula laUefcens pyramidalz's, Campanula major; the Pyramidal milky Bell-flovoer. \$. Viola Mariana^ Coventry Bells.

III. The Description. The Peach-leav'd Bell flower has a Root very fmall, white, and thready, creeping under the upper cruft of the ground, ſo that oft times the heat and drought of the Summer does parch it, and caufe it to wither away : from whence ſprings many Tufts or Branches ofheaves lying upon the ground, which are long and narrow, much like to an Almond or Peach leaf, being finely nick'd about the edges, and of a fad green colour, from among theſe rife up divers Stalks two foot high, or more Jet with Leaves to the middle; and from thence upwards, with many flowers ft anding on fmall Foot-ftalks, one above another, with a fmall Leaf at the foot of every one The flowers ftand in fmall green huſks, fmall and round at bottom, but wider open at the brim, and ending in five corners, with a three forked Clapper. in th, middle, fet aloTwhhfz fmall threads tiptwithlallow, which flowers in ſome Plants are pure White, but in others of a pah> •BleJ or Watchet colour, having little or no fce ni, it, g\ the Seed JSfmall, and contained in round flat Heads' or Seed-VeJfels. ^ J^C«UJ,

The Blowers are Bliw, and in ſome White not Co greater larger the former, but near of Vh'fame jafhion, growing thicker, and more pJJf_u% TMJ ther,

LXIV.

BELL-FLOWER Great.

I. T Hu fames It has no known Greek Name : . . . 7, . Xf Q, J C# ir Campanula, and Campanul jreat Bell-flowerl

ther, u th/waite Leaves among them, bu/ning thick hflor: <i. and rifing /maile and thinner up to the Top like a Pyramis, or Spire Steeple.

V. Coventry Bells n a Plant which has a White Root, which being young as in the fir-ft year Sowing, a tender, and often eaten as other Rampions are h

but the next year vchen it runs up to Seed, it grows bird and peri/hes. From hence /pring up J.eaves of a pale or fresh green colour, long and narrow next to the bottom, and broader from the middle to the end, /omewhat round pointed, a little hairy* all over, and dented about the edges. The next year after the Sowing, rife up Stalks, some thing hairy al/o, and branching forth f row the Root into divers Arms, up* on which grow jeveral Leaves, smaller than the former, and of a darker green color. At the end of every B'ranch fland the Viewers in green husks, from whence con/e large, round, hcllow Bells, fwelling out in the middle, and rifing/omewhat above it, like the neck of a Put, and then ending in five Corners, which are either oj a fair or faint White, or of a pale blew Purplish colour, and jometimes of a deeper Purple or Violet* The Flowers being pafi, there grows up great, /quare, or cornered Seed-veffels, in which are contained in five feveral Cells, or Divifions, /mall, hard, brown, finning flat Seed.

VI. The Places. All thefe grow with us in Gardens, where they are brought up for the beauty of their Flowers. The Coventry Bells, Ray fays, grow in Woody and Mountainous places *, and Gerard fays, in dark Valleys, under Hedges, among Bufhes, more efpecially about Coventry, whence the name, and where they grow very plentifully abroad in the fields, but are alib with them Nurfed up in Gardens, as they are with us in London, which pleafant Bell-flower, is kept chiefly for its beauty fake, though its Root is alfo eaten as Rampions are. The firft of them alfo requires to be planted in ihady places.

VII. The Times. Thefe plants are to be continued by fowing them every other year. They flower generally all the Summer Months : but the Peach-leaved flower for the moft part earlier than the others: The Coventry Bells flower in June, July^ and Auguft, and the Seed ripens in the mean Season, in regard they bring not forth their flowers all at once, but as fome flower, others feed.

VIII. The Qualities. They are cold and dry in the firft degree, Afringent, Traumatkk, Vulnerary, Stomatick, and Alterative.

IX. The Preparations. You may make thereof, 1. An expreffed Juice of the whole Plant. 2. A De*cotton thereof in Wine. 3. A Catapla/m.

The Virtues.

X. The Expreffed liquid Juice. Being bathed upon any Inflamed part, it abates the Inflammation^ and flops the fluxion. And if a little Alum and Honey is difflbled therein, it makes a good Lotion for old Sores, running Ulcers, and a virulent Gonorrhoea in Man or Woman-

XL The DecoSion in Wins. It makes an extraordinary Gargle for a fore Mouth and Throat, inflammation of the Uvula and Almonds, mote efpecially if a little Alum and Honey be alfo difflbled therein*

XII. The Catapla/m. It allays Inflammations, eafes Pain, and repreiles the Flux of Humors,

BETONY W09&

I. nr* HE Nartes. • It is called by the Arabian^ X Chaffra: by the Greekekkiki&sy»xi>rej>< poyt by the Latins^ Bettonid and by us Eijh, Ee* tony*

II. *The Kinds.* There are two principal kind thereof*. i. Kir^e, *Betofuca*, *Betony*; which is that of the Wood: it is twofold, *vis.* either with *Purpk Hewers*, which is molt common; or with *White*, which two kinds differ nothing one from another, but only in the colour of the Flowers. 2. *Betonia Aquatica*, *Water Betony*, of which in the next Chapter.

III. *The Description* Wood Betony has a Root TW^m f^t TM^y* white, thready firings like unto Wp of Plantane, w^bid generally endures all the Winter. From whence r^f many Leaves, the lowerTM f^t hereof are f^mewhat broadband roundish at the ends, flightly indented about the edges, and jⁱand upon Pretty long footstalks: but those which grow by and two at the Joints upon small slender fournd forne what Ury^{Stalks} are much lesser. The stalk is for the meli^{part} near a foot high, and is higher, and perishes every year: upon the gronfme Leaves, and whereon are fetfeveked heads of Flowers, of a Redijh or Purple sp^{mei} wth whiter^{spots}, all over. TI>e Seeds vrelongish and uneven, and of a blackijh colour.

IV. That with White Flowers is wholly like to the former, save that the spikedheads of Flowers are somewhat smailer, the Flowers without any spots in them, and the Leaves something greener. There is also a Mountain Betony, which differs nothing from the first, but that, the Leaves, Stalks and Flowers are smaller. There is a Broad Leav'd Betony, which differs not from the first, but in the Leaves, being of three times as big, a larger and higher Stam the Flowers being larger; this is called *Betonica Danica*. Also *Betonica Alopecuros*, Fox-tail Betony, so called from the form of the spiked heads of flowers, but is every way less, as also are the

The common sort is usually found in Kent, and other hady places though, and is many times nurled UP in the Mite Flourr is more in the Grounds, and in the

ral times found in, and by the Borders of *Hornsey Wood*, not far off the *New River*. That with the other are also nourished up in Gardens.

VI. *The Times.* They flower for the moft part in the Months of *June* and *July*, and the Seed is ripe not long after.

VII. *The Vitalities.* They are hot and dry in the second degree, Abfterfive, Digeftive, Difcuffive, Laccarnative, and Vulnerary -, Cephalick, Neurotick, Stomatick, Cardiack, Hyfterick, Arthntick, Alterative, and Analeptick.

VIII. *The Specification.* They are peculiar againft Difeafes of the Head and Nerves, as Falling-ficknefs, Apoplexies, Palfies, Gouts, Madnefs, &c

IX. *The Preparations.* You may make therefrom, i. A liquid Juice by ExpreJJion. 2. A Decoftion. 3. A Wine. 4. A Vinegar. 5. A Syrup. 6. A Spiritous Tinfure. 7. An Oily Tinfure. 8. A Saline Tinfure. 9. An Acid Tinfure. 10. An Efence. 11. A fixed Salt. 12. An Ointment, IT., A Balfam. 14. A Cataplafm.

The Virtues.

X. *The liquid Juice by ExpreJJion,* being drunk to fix or eight fpoonfuls it is good againft Fits, chiefly the Falling-ficknefs, Convulfions, and the like, and being mixed with a little powder of Sena, it prevails againft Madnefs: being snuffed up the Noftrils, it purges the Head of Flegm, and Cold Humors, and gives relief in the Apoplexy, Palfie, Lethargy, and other like Difeafes.

XI. *The Decoftion.* If made with Wine, it is Stomatick and Cephalick, comforts the Nerves and Brain, refrefhes the Spirits, opens Obftructions of the Liver and Spleen and is laid to kill Worms, ease the printing of the Bowels, and the Colick. Dofe

1 X P' T^e me ar. It is Stomatick, and being drunk to half a pint, or three quarters of a pint, it is laid to cure Quartan Agues, and abate the Humors which fall into the Eyes, and caufe Blindnefs.

XII. *The Tincture.* It is pectoral, and caufes an Expectoration of Flegm, and other tough Vifcous Humors out of the Lappets of the Lungs; and other places adjacent. It may be taken with a Liquorice

XIII. *The Spirituous Tinfure.* It is a notable Medicine againft all cold and moift Difeafes, of the Head, Brain, Nerves and Joints, is good 'gainft Epilepsies, Apoplexies, Convulfions, Palfies, and Aches of those parts, Gouts, and WeakVibr^I the Joints. Dofe from half an ounce to fix^s m^f in fome fit Vehicle.

XIV. *The Oily Tinfure.* This is of external Applications, and is profitable to be laid upon any pained place, proceeding from cold, Slows, & wfe, or other w^kneltes of the Liffe and Joma: being bathed upon the Head

XV. *The Tincture.* It prevails againft the pains of the Limbs, the Conffions, or the Joints, and is good for the Head, and is laid to kill Worms, ease the printing of the Bowels, and the Colick. Dofe from a scruple to a dram, with Wine, and is good againft the Rickets, and Gravel in Kains, Ureters,

XVI. *The Acid Tincture.* This poffibly is one of the greateft Stomatiks in the World, and is an excellent thing to freⁿs then *e Head, Stomach, and Womb, to help Digition, caufe a good Appetite,

tire, open ObstructiOns of the *Vijcera*, and to cure Coughs, Colds, Wheezings, Shortness of Breath, stop inward Bleedings, and to remove Catarrhs, which fall upon the Lungs. Dose, a quarter of a Spoonful, more or less, in a Glafs of Generous Wine. . .

XVIII: *Vie Efle rice*. Taken inwardly two or three Or more Spoonfuls at a time, Morning and Evening, it is good against th§ Jaundice, Falling-sicknes, Convulsions, Megrim, Vertigo, Stuffings of the Lungs, Gripping pains of the Bowels, and Wind Colick *. It opens the Womb, and provokes the Terms in Women when stoppt. It is a famous Traumatick, or Vulnerary, causing a speedy healing to old Sores, Running Ulcers, and the like *, and given to Women in Travel, it causes speedy Delivery, and gives ease in the After pains, which many times come through taking cold:

XIX. *The fixed Salt*. Given to one scruple with a little Juice of Limons and Canary, it stops Vomiting, and mixt with Effence of Winter Cherries, it provokes Urine, removes stoppages of the Urinary Parts, and expels Sand, Gravell, and other Tartarous and Viscous Matter.

Vntment. It eases Pains and Aches, ducies Tumors, relaxes shrunk Sinews-, diffblves Congelations, and is good against Indurations of what kindsoever, except they be Cancerous.

XXI *The halfam*. It is an excellent thing for the curing of Green Wounds, in any part of the Body, but chiefly of the Nervous Parts. It Digests, Cleanses, Incarnates, Cicatrizes, and heals Wounds of all sorts after an admirable manner and in many cases performs the Cure in a few days time if dressing the Wound with it twice a day.

XXII *The Cataplasm*. Made of the greener Herb, and applied to the Head, it eases the Head-ach and Megrim in an hours time: applied to hard Tumors, it softens them, and diffuses the Humors gathered together in Contusions, where no Bones nor Vessels are broken. Applied to inveterate Scabs, it removes them, qualifies the sharp Humors, and in a short time after cures them*

rife upfomewhat like Fig-wort, but generally higher, square hard, and green, sometwies brown, jet wth dark, broad, green Leaves, fo very like unto thse of Fig-wort, that they have been often mijiaken one for another, being also dented about the edges, but with rounder Notches *, by the careful observing whereof they may be distinguished and in that respect something resembling Wood Betony Leaves, but of a larger size, and two for the moi part set at a joint. At the tops- of the Branches, as also at the Joints, where the Leaves come out from the middle of the Stalk upwards, come forth many round bellied Flowers, voh:ch being perfectly blown, are open at the brims, but divided into two parts, the uppermoi like a hood -, the lower moi like a lip hanging down, of a dark red color : which being paji away, there comes round heads with small points in the ends containing small and brovanijb Seed.

LXVI.

Water B E t O N Y.

I. *THE Names*. It knows no Greek Name: A buc it is called in Latin by Dodonæus, Gerardus Lobel, Lugdunensis, Parkinson, Tabernmontanus and Turner Betonica Aquatica and Aquaticus. Tragus makes it his greater Ocimastrum: Thaus calls it Scrophularia major aquatica : fo also Zauhinus: We in English call it Water Betony, and some Brdwn-wort, but this Name is more proper for *Water Betony*.
 II. *Kinds*. It is the second Species of the Genrick and is also either the Greater, or the Lesser: the Greater is called in Latin and English, as *Betonica aquatica major*: the Lesser is called by Lobel, *Betonica aquatica minor*: Carrierafite his Epitome *oimathylus*, calls it *Scrophularia fiemind*: and in EngUA Water Betony the lesser Brook-Betony, and Bihops-leaves.

III *The Description*. The Greater has a Root consisting of a thick bunch of firings and threads proceeding from a head; or of a great number of fibrous firings, which being fastened to the bottom of the stalk, feeds it with nourishment in Summer, at the end of which time it perishes. From this Root the Stalks

IV. *The Lesser kind* has thready Roots almoji like the firmer, differing only in finalness: the Stalks are square and green, the Leaves round almoji, but yet pointed, and of the same dark green colour, and the Flowers are of a sad red or purple. In a word this is in all things like the former, save only in the magnitude, this being lower and lesser by three parts in four.

V. *The Places*. The first grows in England as frequently as any Herb whatever, by Brooks, Banks of Rivers, and other Water-courses, but is seldom found far from the Water-side, unless it has been planted in a Garden. The other is found in like places in Germany near Heidelberg, and grows also with us, if planted in Gardens.

VI. *The Times*. They flower in July and August? and their Seed is ripe in a little time after.

VII. *The Qualities*. They are hot and dry in the first degree, or beginning of the second: they are Astringent, Absterlive, Digestive, Traumatick, and Vulnerary: Peftbral, Hepatick, Spleneck, Hyfterick, and Arthriticck, Alterative, and Ana-

Vill. The Specification. They are peculiar, the Greater especially, for the curing of the Kings-Evil, and other malign and inveterate Sores and Ulcers.

IX. The Preparations. There may be made from it: 1. A liquid Juice by Expression. 2. A Ponder. 3. An Ejjeric. 4. A Decottion. 5. A Wine. 6. A Spiriture. 7. An Oily Tintfure. 8. A Saline Tintfure. 9. An Acid Tintfure. 10. A Spirit. 11. A Salt. 12. A Wajh. 13. An Oil. 14. A Baljam. 15. A Cataplafnu. 16. A Distilled Water. 17. A Syrup.

The Virtues.

X. The liquid Juice of the whole Plant. Mixed with Water, and applied Morning and Night, it wafts and diffolves any hardness or swelling. The Juice drank five or six Spoonfok, cures

the Tumor in the Throat, called

Evening to one dram, In any conve-

the Virtues of the being take inwardly every

uces Running Sores, Old ulcers, and Filtula's: In what part of the Body found: It is also good against Ricks, Wheals, Pufhes, Leprofie, being as aforefaid, and outwardly bathed, applied upon the Parts affeted.

XI. The Decoffion in Water. It allays the heat, quenches Thirit, and is good to Bath the Face, Scabs, Breakings out, or any other jeblemens of the Skin: It also gently diffolves Inflammation and other hot Tumors.

XII. Wine. Drunk daily as a Diet Drink, prevails against the Scrophul* or Kings Evil, and strikes at the Root of the Distaffe, whether in Old or Young: refits Vapors in Women, and helps Fits of the Mother.

XV. The spirituuous TinSure. Being taken for some time, it warms and deficcates a cold and moist habit of Body, comforts a cold and moist Brain, gives relief to the Nerves, strenghtens the Liver and Spleen; and, as I have been told by a very understanding Midwife, it corroborates and warms the womb, as to cure Barrenness in Women, the which it has done in several. Dose, half a Spoonful Morning and Evening, in a Glafs of Generous

XVI. The Oily TinBure. It cures wounds of the Nerves, takes away Pains and Aches of the Joints, Proceeding from a cold Cause, gives relief in Rheumatijms, and softens cold indurated Tumors. Taken inwardly from ten drops to twenty, in any proper Vehicle, Morning and Night, it cleanses the Reins and Womb of cold stimy Humors, and other

XVII. The Saline TinSure. It is a famous thing in the Skin of Tanning, Sun-burning, Freckles, Scabs, Itch, Scurf, Dandrit, Boils, Wheals, and other like Defxdations, being used Morning and Evening for \ or!

imple or it self at first afterwards it is to be weakened, and used, mixed with Rose-water.

XVIII. The AadTmSure. Being taken for some time Morning, Noon and Night, from a convenient Vehicle, it cures the Scurvy radically with all its Symptoms, and destroys that humor which is the cause of the Kings-Evil » it also kills Worms in Children » Correcting the matter which breeds them, preventing their future increase.

XIX. The Scurvy. It is coriial, Hyfterick, Arthrick, and Antilcorbutick, and has the Virtues of the famous Tinaure. Dose one or two Spoonfuls.

XX. The Scurvy. It opens obstruitions of the Kidneys, and Bladder, carries off Watery Humors, is good against the Cachexia in Virgins, and dissolved in Water, withal, to clear it of Sun-

XXI. The Wqfh. It is made of the clarified mixed with the fixed Salt: to a quart of the one ounce of Salt. It is an admirably good for the Face and Skin, clearing it, as it were, of all deformity, and if the former composition of L ounce of pure Nitte is added, it abates all manner of heats, redness of the Skin, Mammations, and other like distaffeions. If also yet you add thereto Lac Sulphur or if but flowers of Sulphur you will find it effectual against the Itch, Pimples, Scabs, Scurfs, Dandriff, Leprofie, and all other Breakings out of the Skin whatsoever.

XXII. The Wqfh. It eases Pains, diffuses Tumors, and is good

XXIII. The Wqfh. It has all the Virtues of the Saline Tintfurei and, being applied, is a good thing against Wounds new or old, running Ulcers, malign Filtula's, and it cures Scrophul* or Kings-Evil Sores almost to a miracle, for which reason it is called by some Authors Scrophularia.

XXIV. The Wqfh. It is diffusive, diffolves Swellings, and is profitable, being used in Strumatick, or Kings-Evil Tumors, if the Cataplafnu is only made of the green leaves beaten and mixed with a little Vinegar, and applied Morning, Noon and Night, it does not only destroy hard Tumors, but heals old, rotten, spreading and fretting Sores and Ulcers, the virulence of Pockey Sores, and the multitude of Cancers; and this more effectually, if a proportion quantity of Litharge or Kermis is added thereto.

XXV. The Distiffed Water having the same Virtues as the former, but is more powerful. However, when the water is to be mixed with them, as before, it should be more homogeneous, may be used in its place

XXVI. The Distiffed Water having the same Virtues as the former, but is more powerful. However, when the water is to be mixed with them, as before, it should be more homogeneous, may be used in its place

XXVII. The Distiffed Water having the same Virtues as the former, but is more powerful. However, when the water is to be mixed with them, as before, it should be more homogeneous, may be used in its place

CHAP. LXVII.

BIFOIL, or TWA-BLADE.

I. T * HE Names. It was not known to the Greeks, unless the 'Op?& of Pliny be it, which some Herborists believe, and therefore call this Plant by that name : in Latin it is also called *Ophrys* and *Bifolium* : and in English, *Bifoil* or *Twablade*.

II. The Kinds. There are two Kinds thereof, viz. I. *Ophris* feu *Bifolium*, *fyhefire vulgare*, Common Wood Bifoil or Twablade. 2. *Bifolium Palujire*, *Marfh Bifoil*.

III. The Description. It has a Root somewhat sweet, with a head or top somewhat thick (which some call a Bulbe) Jhooting many long Fibres downwards, from which Root rises up a round green Stalky bare or naked next to the ground, for an Inch, two, or three, to the middle thereof, as the Plant is in age and growth, as also from the middle upwards unto^ the Flowers, having only two broad and short T^b'd pale green or hoary Leaves, very like unto *ilanjane* leaves, but whiter, and J^t at the middle of the Stalk, one on each side, and encompassing it at bottom, sometimes it will h^ave three leaves, but is more rare, and this some account to be a different fort, but is rather to be looked upon to be *lufus Naturae*, aground, which abounds with too much nourishment, the which happens also to many other Plants; (a* l* Herb Fans, which has sometimes five, six or seven leaves and sometimes it wants a leaf of its ordinary number being but four, and in common Trejoil, which usually has but three leaves, yet oftentimes four are found upon sever al Stalks, &c.) the flowers at top of the Stalks, are inaspikedhead, and they are many, small, long, whitish green, and almost Jhapeless bodies, somewhat like unto some of the Orchides or Vulgar Saiyntons: these Jaffing away, there remains small heads, with a kindofdujt in them, which is accounted to be the Seed*

IV. The Marfh Bifoil has a Root which runs or creeps in the Earth, arti the whole plant is jo little differing from the Jormer, that the differences have scarcely been observed, whereby several have been deceived in their judgments -, but in these fol* lowing particulars it is distinguished, 1. In its Site, or place of growing. 2. In the smallness of the Plant, this being much lesser, and having sometimes three leaves also. 3. In the Greenness, the other being of a more hoary White. 4. In the [pike of Vlotvers, which although of th\$ fame fashion or colour, or very near, yet are less by far.

V. The Places. The first usually grows in Woods or Coppes, and such like shady places, as between High* gate and Hamjead, also at Southfleet in Kent ^ in a Wood by Longield Downs : in the Woods by Owenden near to Clare in Effex *, as also in the Woods by Dunmow in Effex. The other grows not only in the low wet grounds between Hatfield and St. Albans, but also in divers places in Kunney Marfh.

VI. The Times. They flower for the most part in May, and so continue to the middle or end of June^ and then wholly wither away, and are gone in July.

VII. The Qualities. They are Temperate in their first qualities, Glutinative and Vulnerary 5 Neurotick, Arthritick, and Alterative.

VIII. The Specification. They are Adapted for the Cure of Green Wounds.

IX. The Preparations. These may be made from it: 1. A liquid Juice. 2. An Effence*. 3. A Decottion in Wine. ^APouder. 5. An Ointment* 6. A Balsam. 7. A Cataplasim.

-The Virtues^.

X. The liquid Juice, {f mixt W& Nitre, it al* lays Inflammations*-dnd gives ease in fife Gout; fo also if mixed with Vinegar.

XL The Effence. It is Glutinous, and heals Wounds (if simple) by washing them therewith* more especially if at time of using, it is mixed with a third part of Wine, or Spirit of Wine: it prevails also against Ruptures.

XII. The Decoffion. It is of admirable use in dilacerated Contusions, for it draws forth the feathered and bruised Blood, cleanses the Wound, and disposes it to healing.

XIII. The powder of the Leaves. It disposes green wounds to healing, dries and heals.

XIV. The Ointment. It softens, gives ease in pain, and cleanses Wounds without any harpness, whether new or old : and is of good use in Ruptures.

XV. The Balsam. It cures all simple wounds commonly at one dressing, and if they be contused and dilacerated, it digests them, cleanses them, and after an admirable manner speedily heals them.

XVI. The Cataplasim. It discomfles soft Tumors, and Contusions, where the skin is not broken: and applied upon an old open Ulcer, causes a separation of the Stuff from the quick flesh, and dilposes it for healing, to be accomplished by other proper Medicines.

CHAP. LXVIII.

BIND-WEED Common.

I. T p HE Names. It is called in Greek, by *Galaxilen*, and *Pauhts JEgineta*, 2^*5 ^M% : in Latin, *Smilax Uvis* : it is called *Lavis* or *Smooth*, because the Stalks and Branches have no prickles at all. *Pliny lib. 2\ cap. 5.* calls it *Cynvolvitw*, and

"Cimpanethi, Convolvulus <r/W, alib £#>* Arbstrun:: others call it Volubility alib Volubilis communii • ami in ifb, "Bindweed, White Bindweed, and the Bindweed.

Gr. Bindweed common

¶ The JC/fij. Of the Bindweeds we have to treat in this Work, there are chiefly three, i. The Common great Bindweed, as also the Le/s aforementioned, which in this Chap. i. The Lesser Bindweed. 3. The Black Bindweed. Of which to the two next;

Gr. Bindweed

HI. The Description. The Root it whitish an* H, of the krgentfi of Siutch-grafi, or sometbirg

gger, running much under ground, asi fliootin, orb again in fevtrd pieces ; it laics under ground. II Winter, And jboois forth it frefit every Spring, ndyeldi Milk, being bro/tex. from this Root/print's . . . to . . . j , — .j. . . . xbingfor it to climb pen, it rum it jelf along upon the ground, cj'peanl- V on the banks (if Sy ditcheit The Leiines are di- >ers and large, groimtig feverdly on the Stalks J-we^A vh. It hng% and pointed at the further end, anl parted, into two parts or points at the broad part next to the ta/A, making it Jeem almsj} three jquare^ being mot>th, and cfa pale grten colour^ yielding a fflH&i >ewg broken, bat not jo plentifully <u Scammony. At the Joints with the Lcwes towards the tops of the Branches come forth Urge White flowers, infa- fhion of a Bel/^ -without any cut or d'vuifion in them; which being pajj'ed qff; there comes forth round shn- iy Husks, or Heads, containing within them ""tny (mall blackfii Seeds', and. almoji three cornered. Thjt jreat Bind-weed ti fo like unto Scammony, that •excepting the Urgenefs of the Hoots, and the g^ea\ 'er force in purging, vbiqb may both of them proceed in part from the Q/wofc, one would think it to be one of the kinds of Scammony, yohofe many flender winding Stalks run up, und wind them/elves upon whatever-fiends next, or near to them.

Bind Weed Common Smal

IV. The Leifer is lite the Greater in moll re- ppeUs, except the magnitude.

V. rhe &%". It g>ws throughout this King- dom, near hedges and dry ditches, and other like places;

VI The Timer. Ir Flowers with us in June, July and Augup -, and the Seed is ripe in iome tall time afterwards.

Vir. The-Qtstnlet. It is hot and dry- in the first degree : Vulnerary, Anhririck, and a little Qrfui- tick.

VIII. The Specification. It is peculiar for wafting and diicufing Tumors.

IX. The Preparations: You may make there- from, l.Theinpfiffate Juice. 2. The liquid Juice. 3. The ponder of the Leaves, flowers^ and Roots, ox If ite, mfpiffate Juice. 4. The Bolusum. %. The Gutplafit. 6. The DifullJd Water.

The Virtues.

X. *The infpizzate Juice.* Being difflbled in Wine, it makes an excellent Wafh to cleanfe old Sores, filthy, putrid, and running Ulcers, and hollow Fiftula's, inducing them to a fpeedy cure.

XL *Tho liquid Juice.* Mixt with Red Wine, it is a very good thing for a fore Mouth, and is of ufe to heal Cankers in the Mouths of little Children : and if Childrens Feet, who are ufually troubled with Chilblains or Kibes, be wafhed often herewith, it perfeftly cures.

XII. *The Ponder of the Roots, Leaves, Flowers, or ?nfpizzate Juice.* It admirably cleanfes and heals old, rotten, and finking Ulcers : and where the Bone has been putrified, it has perfectly cleanfed the Ulcer, dried the Bone, and in a little time fcaled it, and afterwards by the continual application, it has covered it with Flefh, incarnated the Ulcer, and in a little time healed it : I fpeak this by great experience; One time it happened, that a Youth who had Kibes in his Feet, and *ib* much corrupted, that the Bone it felt was puwffed * by the fole application of this pouder, dry, upon the Ulcer, I cleanfed it, fcaled the Bone which was black, and afterwards incarnated and healed the Ulcer, beyond the expectation of any one that then law it-

XIII. *The Balfam.* It is fingular good for the curing of Wounds, but chiefly of old and putrid Ulcers, and efppecially of thofe Ulcers which arife from Kibes in Childrens Feet, or from Tumors in the Kings-Evil.

XIV. *The Qataplafm.* Being made of the green Herb, and applied to the grieved place, it waftes, difflbles, or difcuffes Tumors or Swellings, as *Gakn* faitfr: I know it to be excellent to dilcufs Chilblains in Childrens Feet

XV. *The Dijlilled Water.* It is a good Cofmetick, and as fome fay, good againft Freckles, Pimples, Scurf, and other defilements of the Skin: it takes away Tanning, Sunburning, and redneis of the Face and Hands: and this it does more efppecially, if it is mixt with a linall quantity (fome fay, equal parts) off Vinegar, or Juice of Limons.

CHAR LXIX. m

The Leffer BLEW BINDWEED.

I-TP HE Names. It is called in Latin, *Convolvulus minor*, and *Volubilis minor*, to which they add *Purpureus*, becaufe of the Purple color of the Flower: And in Englifh, *Bindweed the leffer*, and *Blew or Purple Bindweed*.

II- The Kinds. There arc feveral Species of it, as, I. *Convolvulus minor vulgaris*, *The Common Small Bindweed* 2. *Althta foliis*, *Mallow leav'd* 3. *Purpureus* 4. *Purple Bindweed*. 1 *Ceruleus* *Hifpanicus*, *Blew Spanifh Bindweed*. 5. *Convolvulus Sjine* * joins, ^{La} ?fr ⁱ*L ^eV?; ^{hin}*TM e<L: of all which in order.

III. The Defeiption. It has a Root Jmall and flender, running both very deep into the ground, and fpreading aljojar about, efppecially where the ground is loofe and mellow : From this Root comes Stalks, which rife up and wind themfelves upon any thing tohich is near it, but otherwife ufually fpreads every way on the Earth, with long trailing and winding Branches, one voithin another, having Leaves thereon, fome what like unto the greater White Bindweed, but much leffer: The flower is for form, like the former White Bell-flower, and is Jometimes wholly

White, or has Plaits purplijh, but lefs, made of one leaf plaited as it were into jive folds, and opening wide at the Brims : ajier which come Jmall blackijb Seed, contained in Jmall, long and round heads,

IV. *The Mallow leav'd* has a fmall and brownifh Root, creeping under ground, and fhooting up branches in di'fant places : From this Root fprings branches, which grow not high, nor climb much upon any thing, but for the mojl part lyes with its fmall^ fien* der, hairy tivigs upon the Earth, having divers leaves verif

very thinly, or poreingly fet on them, jamething broad and long, like unto the leaves of MarJJj-mal- lows, but mailer, crumpled, and cut in on both sides. at the lower ends, dented about the edges, and of a hoary or duffy grayijh green Color, which when they are cleared, are clammy, or fie king like Gum to the Teeth, Jharp, and fomewbat bitter in tajie. The flowers come forth one by one at the Joints with the Leaves, all ohng the Stalk, up to the top, every one upon a long Stalk, which are very like the former, just before deferibed -, they conjili of one whole leaf, yet plaited as it were before the opening into Jive plaits, and being open, have Jive corners, as if it had Jive leaves, broad like a Cup or Bell at the brims, and small at the bottom, of a fine pale Purple color, and fomativies deeper, ajier which co?ne forth deads of Jmall Seed.

V. The Small Purple Bindweed, is in all things like unto the jirft of thejẽ described in this Chapter, Swing that the flowers are of a pale purplijh, or blemfb color, the folds being White, or of a deeper Purple withmt, an I White within, the bottom being aljo agreeable therewith, which is of much beauty.

. VI. The Spanijh Blew Bindviz&, hat a Small threa- ty Root, which dies every Tear, from which Jhoots jorth feveral fmall branches a yard long, or more, having feveral Lews fianding fingly thereon Jmall and long at the bottom, and broader, and almojl round at the end, a little hairy as it were, all over. At every leaf for the ?nofl part, from the middle of the stalks upwards, comes forth a flower, like unto the common fort, folded into Jive platts, which open into Ja many corners, of a moji admirable Sky colored & cw (Jo pleafant to behold, that it amazes the Spetla- tors) w?tb White bottoms, pointed upwards, and lel- tow in the middle, which pajfing away, there comes Jmall round white heads, containing within them, Jmall blackijh cornered Seed, which h to be newfown every Tear.

. VII. The Lavender leav'd, TWx // like the jirjl in all twngs, except the Leaves, which are long and nar- row, refembling thofe of Lavender, or Linaria : But ft has ajiner flower, plaited or folded in the compafs ^{uf} ⁶¹¹ ^{Ver} ^y ^{orderly} -> fpecially before the Sun r ye, for afterwards, when it opens its Jelf, the folds ^{if} ^{fo} ^{mb} ^{perceived} >, and it is of a deep Pur- pe color : the Seed is not unlike the reji, corner d flat, growing out of Jender Branches, which Rand upright and thick together, proceeding from a White woody Root.

VIII. 77* Places. The firft of thefe is common, and grows almoft every where in Fields, By-ways, wy Ditches, Ditch banks, and Hedge fides, through England. The Second and fourth grow in Spain, and J are nourifhed up with us in Gardens. The Third and Fijib are common with us in England : This *rth or latt, Gerard fays he found it growing in the Corn Fields about Great Dunmow in EJfex, in *uch abundance, that it does much hurt to the Corn, and Parkinon fays, it is as great a plague to the Fields where it grows, as the firft is.

IX. The Times. They all flower from May to the end of Auguft, and the Seed ripens gradually in the mean Sealbn.

X. The Qualities. They are all much of a Na- tur e, being hot and dry in the firft Degree, a little -Astringent, Vulnerary, Arthritick, and Alterative.

XI. The Preparations. You may have, 1. A li- quid Juke. 2. An EJfence. 3. A Pouder. 4. A Balfam. 5. A Cataplafyn. 6. A Dijilled Water.

The Virtues.

XH. The liquid Juice. Being often fuffed w\ the Noftrils till ic comes out again at the Mouth.

cleanfes and heals Running Sores or Ulcers in thofe parts : And if a little Nitre is difclved in it, it purges the Head and Brain.

XIII. The Effence. It has the fame Virtues, but is more Difcuffive, and prevalent for the cleanfing of Ulcers, and healing of Wounds,

XIV. The Pouder. Strewed upon a foul Ulcer, it cleanfes it (if alfo wafhed with the Eflerice) and afterwards it incarnates and heals.

XV. The half am. It is can excellent Vulnerary, and cures fimple Wounds many times at once dref- ling.

XVI. The Cataplafm. Made of the Green Herb, it difcuffles Tumors, and applied upon Contufions difperfes the Humors gathered together.

XVII. The Dijilled Water. If you difblve a lit- tle Sal Pntmella, or Nitre in it, it is good againft Heats and Breakings out in the Face, Tannings, Sun-burnings, Pimples, Scurf, and other like De- formities.

CHAP. LXX.

BINDWEED Black.

H Names. It is fuppofed to be called in X Greek Zi#n x w ^ ^ . In Latin tielxine Giffmpelos, Convolvulus minor nger . L^/calls it Offampelos aherq atnpUcU effigie : Dodontus calls it, Convolvulus, mger : Males calls it, Volubilis me- dia five rugra: Lollumna calls it, Volygonum Hede- raceum: Cordus on Dio/corides takes it to be Ela- ne: And Angulara will have it to be Centunculus ?limj : in Enghjh, Black Bindweed.

There is, l The Gw* w Black Bindweed, which though it is one of the fmall Bind- weeds, yet is the gteafer of the Black. 2 c S -

III. The Defcription. It ha* a Root fmall and flender, perfishing every Tear, and rijing again from the Seed every Spring, uilefs it be weeded out of the Garden, from this Root rifes up Branches, which if they meet not with upright tall Herbs, or other things whereon it may climb, it rifes up but a little height, and leans down again to the ground, but citherwife if it meets with fit thing, on which it may cling, it will wind it felf with its long, fle?uler, red* difh, thready Branches about them, to the height of three cr four feet, or mofo, Jhooting forth its Leaves fingly at the Joints as the others do, either fome- what like to an Arrach leaf or almost like the firfl Jmall field Bindweed, or like the leaf of Black Briony^ for of thefe kinds there are, but 7?iuch fmailer. The Flowers, Gerard(*)*, are/mall^ like thafe of the Arrach *, and Parkinson fays, they are very Jmall, and many, ftanding together upon a fmall long Stalk, which comes from the Joint where the leaf ftands, and are of a reddifb green color, but fo f/nail, that they are oftentimes not taken notice of, and they fo quickly fade, that they are fearrely regarded : The Vlowers being gone, then comes the Seed, which is fmall, blackifb, and three cornered, like, but lefs than that of Buck Wheat.

IV- Thefmalleft kind of Black Bindweed, differs from the former only in the Magnitude^ this rijing not above a hand breadth high.

V. The Vlases, They grow in many places of this Kingdom^ both in Fields and Gardens, where they grow as a Weed- The larger of them is not only* a hurtful Weed, but of an ill fmell, and too often found amongft Corn.

VI. The Times. They flower in May, June, July and Auguft, and the Seed ripens in the mean Seafon, in a little time after the Flower is gohe.

VII The Qualities. They are hot and dry in the firft Degree, Difcuffive^ Vulnerafyv Arthritick and Solutive.

VIII The Preparations. You may make thereof, 1. A liquid Juice. 2. An EQenee. 3, A half am. 4- A Cataplafm. 5. A Drifted Water.

The Vertues.

IX. The liquid Juice. It is made of the Leaves only, and if it is taken inwardly 3 or 4 ounces at a time, it loofens and opens the Belly very much.

X. The EJfence* It has the fame Virtues to loofen the Belly > besides I have heard it confirmed from Experience, that it is prevalent againit the King's Evil.

XL The Balfam. It is very good for healing green Wounds, and to cleanfe Old Ulcers, and Running Sores, and to cure Kibes in Childrens heels.

XII. The Cataplafm, made of the Green Leaver It diffblves and dffcudes Tumors or Swellings, and feard Lumps in the Flefh, as Galen fays : and if mixed with a little Nitre, it allays Inflammations.

XIII TheDiftilledWater. It is good againft Pimples, Scurf, Freckles, Tannings, Sun-burnings, and other deformities of the Skin ^ more efppecially if a little Vinegar, or juice of Limons is mixed with it.

CHAP. LXXI

BINDWEED Sea

IT if E Names. I cannot find that the Greeks X knew any thing of it : Th« Latins call it Soldanella, and Soldnna^ Convolvulus Mdrinus, jm<l Tulfilago Manna (from the relemblance of the JLLeaves.) And we 10 Engiifh. only \$& Bindvse?^ W

Sea Bells, or Bell-flower. I know rhat Mattheus, Cordz/f Gefivr, Cdmerdrius, Dodtinaus, and others* call it Brdfica JI/rwM, burit is no fuch tiling, % that is clearly another Plant.

II The Kinds. Theie are three Kinds thereof, Soldanella, Sea Bindweed, -properly fo called, Saldanella Maritima major, the Greater Sea Bind- and V Soldanella Mpina, Mountain SolJanella.

The/rfl of thefe hds aRoot

(hooting up divers heads in fever al places -and f-y part if it is broken, there comes forth from it (at alfo from the Leaves) a whitijh water, which is bit- t«rjalt, and uripfcasmt. Yrom this Root rifes many weak, flender, broivnijh green branches, trailing or lying upon the ground, father than faifing it felf up, orclibing upon other things. XJfon theje Stalk* are fet divers Leaves, not always two *%*%* Joint, nor yet always jingle, one f ^ f ^ are always round like the Leaves °fMdTM*%f, J" a little unevenly dented about the edges, f J every one ftandt? :g on a long footfialk«?d J ijh green color : among which erne ^ ^ ^ wards the ends, each m»er by it felf Springing forth at the Joints, much like rnfhape or form to th Common Small Bindweed, which grow, upon be ound by wayfides almoft etery where, If tley ireinijhder, and of a reddifh P%o Theje being paji away, were ^ * r- tainin? within them 2 or 3 round blac

IV. The greater Sea Bindweed, has a Root a little creeping in the Earth, from whence Ms up feveral long flender Branches, on *bkbarcfetj* > ger Lctvet than on the former, many of them having a dwifion on bah fides the Leaf next to the bottom : and many of them but on one fa and feveral of them TM,* are fmailer^ having none at all, yet all of them for themofi part a little finuatei on the edges towards the ends] ichich are round, or with a dent in thd middle, making the point Jeem double forked, wf mm Veins running therein. Be Vowers are of a red, purple colored are not Bell or CuJ> fajbion like

the former, but confit of five fomewhat large and long Leaves. The Heads and Seeds are like the other, and Spring up by being scattered. after Seed time.

Alpina major, The greater Mountainanella (for there is a lesser, of which we shall take no notice here) has a long round Head or Root shooting forth many Fibres, or small Strings. From whence rise many hard round Leaves, fit anding upon long Foot-stalks, nothing unevenly cut about the edges; green on the upper side, and of a grayish green underneath, and a little reddish like the leaves of Sowbread, and much resembling the Sea Souldanella (this Mountain Souldanella being formed from the likeness of the Leaves to the former.) The Stalks are slender, small, round, and reddish, about a span high, having upon them four or five Flowers at Top, every one hanging down their heads Me unto a Bell-flower, confijiing but of one leaf, plighted into five folds, each of them ending in a long point, which makes the Flower seem to have five leaves, having a round green head in the middle with a prick or point at the end thereof The Flower is of a fair blew color, some deeper, some paler, and some almost white, as nature pleases, but without any smell at all. The middle head, after the flower is fallen, grows to be a long, round Pod, bearing the point of it had at the end thereof, in which is contained small greenish Seed.

VI. The Places. The two first Kinds grow on our own Sea Coast in great plenty, in many places, as near Lee in Effex, at Mersey in Effex, and in most places in the Hies of Thanet or Shepca, as also along the Northern Coast: The last grows on the Alps and Mountains of Germany: It also grows on the Mountains of Wales, not far from Cowmers Meer in North Wes.

VII. The Times. The two former flower, Gerard joys, in June, but Parkinson, about the end of Summer, and their Seed is ripe in August. The third flowers on the Alps, &c. not till July or August as the Snow melts sooner or later -, but in Gardens in flowers in April.

VIII. The Qualities. SolJanella is hot and dry in the second Degree, Afringent, Hepatick, Cachartick and Lmetick; but is said to be a great Enemy to the Stomach.

IX. The Specification. It is said to be a neoulr thing for curing the Dropie.

X. The Preparations. 1. The Decoffion. 2. The Juice. 3. The inspissate Juice. 4. The Effence* 5. The Pouder. 6. The Cataplasim. 7. The Balfart of the Mountain Souldanella.

The Virtues*

XI. The Juice. It is thought to be made of Fat (because of its length, and S2 trouble the Stomach) opens the Belly powerfully, and purges Violently in Dropfes, and Timpanies, and therefore is not to be given, but to such as are of a strong Constitution; it opens Obstructions, and strengthens the fame. Emetick and Cathartick, and makes Sick -, but in such Bodies as can bear its violence, it effectually carries off Wa-

XII. The Effence. It has the Virtues of the liquid Juice, but more correct and free from Crudities, and therefore more gentle in its Operation being given in Wine from half an ounce to a People. It kills Worms both in Children and Elder.

XIV. The Effence. It has the Virtues of the liquid Juice, but more correct and free from Crudities, and therefore more gentle in its Operation being given in Wine from half an ounce to a People. It kills Worms both in Children and Elder.

XV. The Pouder. It is made of the f... and ought to be combed with ANK... ways Cinnamon, Cahes, Cargel, ... good pills to ...

XVI. The Cataplasim. It is made of the fresh Leaves, and applied to the Belly, it is said to purge the ...

XVII. The Balfart. It is made of the Mountain Souldanella, ...

XVIII. The Decoffion. It is made of the Mountain Souldanella, ...

CHAP. LXXXI

OF THE VIRTUES OF THE

The Name [From Greek Name Halia ...]

U. the

II. *The iCtttr*. This Plant doubtles belongs to the tribe of the *Cowjlips*, of which it is a special Kind, as being a lesser fort. There are also two Species of *Birds-Eye*, viz. 1. *Paralyfts minor flore rubro*, the lesser *Cowjlip*, which is also the lesser *Birds-Eye* with Red Flowers. 2. *Paralyfis minor flore albo*, the lesser *Cowjlip*, which is the greater *Birds-Eye* with White Flowers.

III. The Description. Red *Birds-Eye*, which *U* the smaller Plant, has *Roors* small, white and thready, from which arises tip a head of *Leaves* so clofed together, that it seems a small white head : this afterwards opening it self spreads round upon the ground, and has small long and narrow *Leaves*, snipt about the edges of a pale green colour, on the upper side, but very white or mealy underneath : among these *Leaves* rise up one or two *Stalks*, small and hoary, half a foot high, bearing at top a bush or tuft of much smaller flowers, (landing upon short *Footstalks*, something like to *Cowflips*, but more like unto *Bears-Ears*, of a fine reddish purple colour, in some deeper, in others paler, with a yellowish Circle in the bottoms of the flowers, like unto many of the *Bears-Ears*, of a faint, but little scent -, after which comes a *Seed*, smaller than that of *Cowflips*.

IV. White *Birds-Eye*, which is the greater of the two, differs little from the former, save that it is a little larger both in its *Leaf* and *Flower*, and that the *Flowers* hereof are Wholly white, without any great appearance of a Circle in the bottom of them, unless it is well observed, at least it is not so conspicuous as the former : both these *Kinds* of *Cowflips* have sometimes, though but seldom, from the middle of the flower on the *Stalk*, sent forth another small *Stalk*, bearing *Flowers* thereon likeivise.

V. *The Places*. They have been found growing wild in *Clofes* and *Pajure Grounds* in many places of *England*, from whence they have been transplanted into *Gardens* for the pleasantness of their *Flowers*.

VI. *The Tims*. The Red *Birds-Eye*, for all the care and industry we can use to keep it, will scarce-

ly endure in our *Gardens*, but all the *Winter* long till the *Spring* begins, its *Leaves* are so clofed together, that it seems a white head of *Leaves*. They both flower in the *Spring* of the Year, some earlier, and some later, according to the mildness of the *Season*.

VII. *The Qualities, Specification, Preparations and Virtues* are the same with those of *Cowjlips*, and therefore referring you thither, we shall say no more concerning the same in this place.

CHAP. LXXIII BIRDS-NEST,

THE Names. It is called in *Greek* by *Dofa* nexts, NSSTI* : and in *Latin*, *Neottia*, *Nidus Avis* : by *Gefner*, it is called, *Orobanche* : by *Lobel*, *Satyrrium abortivum*, and *Orchis abortiva* : but we in *English* call it *Birds-Nest*, or *Goose-Nest*, from the Plattijg of the *Roots*, like the ticks and fraws of a *Crows* or *Birds-Nest*.

II. *The Kinds*. Authors make two sorts thereof, the one not much differing from another, save in the color : the first and longest known is of yellowish colour : the other of a purplish Violet, and is called by *Clufius* *Limodoron*, and *Pseudoliinoiron*.

IV. The Description, Yellow *Birds-Nest* has a great number of *Fibres* or thready *Roots* crossing one over another, and as it were platted, or intricately entangled together like a *Crows Nest* : from which rises up a thick, fast, gross, brown *Stalk*, set with small *Heart* *Leaves*, of the color of a dry *Oaken leaf*, which has laid under the *Tree* all *Winter*. *Parkinson* says, the *Stalks* are upright, weak, and fappy, and that the *Leaves* are only as they being rat per very"

very Jhort thin skins than leaves, of a brownish dead yellow color. Ilye hlovoers alfo are of a dead yellowish color, and fit and upon affpikedhead, like unto that of the Orchis, and of the fame fashion ; after which follows Husks of dufty Seed.

IV. The Purple Birds-Neft has a Root exatfly like "the former, from whence rife up a Stalk or Stalks about eight or nine inches high, the lower part of which within the ground is not round like the former, but flender, and of ayellowifh white color: the Stalks are Jet with a few finally narrow, JhortΛ skinny, Jharp-fmated Leaves, Jit without any order, very little, or almoft nothing at all wrapping or enclofing the Stalk, tibfakiy h'u a fpike of Ylowers very like the former, without Tails or Leaves growing amongft them. Tbewliol? Plant, a\$ it appears above ground, Stalks, Leaves and Flowers, is of a Violet, or deep Purple cotir : after the Flowers are fallen, there fuc-teed, Veffeisfull off mil Seed, like the former.

V. Tlx Places, They are both found in many places of England, in Woods, and low Copes: wt they are not fo much found in the Southern ^rts of the Kingdom, as in the Northern : It is faid, that they grow near to a Village called Knacs-brough in lorkjhire. Gerard found it growing in the middle of a Wood in Kent, two Miles from wavcjenl, near to the then Mr. William Swans Jioufe of Hmch-Green \$ the Wood then belonging *o one Mr. John Sidley : the ground in the fame P&ce (Ctys he) is covered all over with the Herb Panicle and with that kind of Orchis, called tier-

phindinora-o B Bittelfly Satyrion. yi. Ibe limes. It flourishes, and flowers in June, July uA Auguft 5 and its Seed (if it may be called) falls in the end of Augu. B\vrQerard will not allow it to beany Seed at all.

VII. The Virtues. No Authors that have ever wrote of-it, have affienedit any Virtues: however if * certain, that it is of the Nature of the Orchis, ^jgflibly may have their Qualities, Properties, -it tite s, being in like manner applied.

the Seeds which the Apothecaries uie, or have been (hew'd for Ammi, can be compared with Cmmi/?, nor have they the Imell of Origanum : in Englifh, Small Bifl.>ops-weed: Of thefc two laft we (hall treat in the next Chapter.

III. *the Defcription. Our Common Bifhops-weed has a Root White and. Fibrous, perijhing every Tear^ after it has Seeded, and commonly rijing again of its own /owing : From this Root rijes up a round freight Stalk, fometimes a* tall as a Man, but commonly % or 4 feet high, Jet with feveral small, long, and fomevihat broad leaves, cut in, in fome places, and fnipt or dented about the edges, growing on both fides of a long fcotffalk one againfl another, of a dark green color, fomevobat like unto Skirret Leaves^ having feveral Branches on them; and at the tops small Umbles of white t'owers, which turn into small, round, and brown Seed, little bigger than Parley Seed, and not fo large as Annife Seed, of a brisk quick fmell, and hot tafte.

IV. The Places. It is found growing Wild in many places of England and Wales ; by a hedge fide next field beyond Green Hithe, on the way as you go to Gravefend ; and with us it is alfo nourifhed up in Gardens.

V. The Times. It flowers in June and July and the Seed is ripe towards the latter end of AuYuf.

VI. The polities. It is hot and dry in the third Degree, the Seed more epecially. It is attpnna^ Difcuffive, Diuretick, Wephritkk, H y S ^a?d' Arthritick • Alterative, and AlexiphamiS: ft b bitter in tafte, of thin parts, and (harp withfal.

n Vj the S^a ^ »»» ^ is approved againft the Cholick, and mightily provokes Luft 5 which I behew is from its Spermatogenetick faculty.

The Virtues.

IX. *The liquid Juice.* It is very thin and subtil, digests Humors, expels Wind, and gives ease in the Grippings of the Guts. Dose from iij. to viij. Spoonfills in a glass of Canary, Sherry, or other generous Wine, two or three times a day.

X. *The Effence.* It has the Virtues of the Juice, *but more powerful to the purposes intended, it provokes Urine, and the Courfes in Women when flopt, helps the Cholick, and is very powerful against the biting of Mad Dogs, Serpents, as the Viper, Rattle-snake, Slow-worm, or the biting or stinging of any other Venemous Creature whatsoever, being given Morning, Noon and Night, from iij. ounces to vi. in a glass of any generous Wine.

XI. *The Dihilled Water.* It is stomatich, and has the Virtues of the Effence, but very much Weaker, and therefore may serve as a Vehicle, to convey any Medicine in, good against those kinds of Diseases.

XII. *The Ponder of the Seed.* It expels Wind, comforts the Stomach, and other *Viscera*, gives ease in the Cholick, and has been found, by experience, to be profitable against the Stone, Sand, Gravel, or any Tartarous or Slimy Matter in the Reins, Ureters and Bladder. It may be given (mixed with Sugar) in a glass of White or Rhenish Wine.

XIII. *The Spiritous Tincture from the Seed.* It is Cordial and Stomatich, good against Vapors, Wind, Fainting and Swooning fits, *Cardialgia*, Palpitation of the Heart, Poyson of Vipers, Rattle-snakes, Mad-Dogs, and the biting or stinging of any other venemous Creature. Dose from one Dram to two, in a glass of excellent Wine.

XIV. *The Oily Tincture.* It is good against Palfies[^]Convulsions, Rheumatifms, Pains, Aches, Weakness, and Pun&ures of the Nerves in any part of the Body: It eases the pain of the Gout, proceeding from a cold cause, softens, diffuses, and wafts cold Tumors, and is of admirable use, being taken inwardly, for the most inveterate Pains of the Back, or any Obstruction of the Reins, Ureters or Bladder. Dose from half a dram, to one or two drams Morning and Evening in a glass of White Wine.

XV. *The Saline Tincture.* This may be made either of the Seed, or of the whole green Plant. It is good to take away Black and Blew Marks, Spots, Tanning, Sun-burning, and other deformities of the Skin, it being often washed therewith[^] also is said to abate an high color, and a Spong being dipt therein, and applied upon the biting of any Venemous Beast, especially that of a Mad Dog, it effectually attracts and draws out the Poyson: It also diffuses the afflux of humors in Contusions[•], and being drank to one dram in White Wine, it is prevalent against Fits of the Mother in Women, and is good against the evil Effects of *Cantharides*, if timely taken in some proper Emulsion.

XVI. *The Spirit.* It is an excellent Cordial, good against Fainting and Swooning Fits, eases the Passions of the Heart, cheers the Spirits, comforts Nature, provokes Luft, strengthens the Womb, and all the Instruments of Generation in both Sexes, and has indeed all the Virtues of the Spiritous Tincture, but not altogether so powerful. Dose from two drams to four, alone by itself, if dulcified, otherwise to be taken in a small glass of Wine.

XVII. *The Chymical Oil of the Seed.* It is said to correct the Virulency of *Cantharides*, that if they be digested in it for some time, they may be given inwardly without any danger, this may be true, but the true Corrective of *SpaniJ*) Hies is Spirit of Nitre, as we (hew in its proper place. This Chymical Oil is an admirable Carminative, and gives present ease

in the Cholick, by giving it inwardly by the Mouth, if the Disease lies in the *Stomach*, *Duodenum*, and upper Bowels[•], or giving it Clyfter-wife, if it lies in the *Culon*[^] or other lower parts. It also provokes Urine, and the Terms, is good against Poyson, and the bitings or stings of Venemous Creatures. It opens Obstructions of the Spleen, and has been found very helpful against Hypochondriack Melancholly. Dose from six drops to twenty in a glass of Wine, or Wine and Water \ drop the Oil into Sugar, and mix them well together, then mix it with the Wine, and so drink it up.

XVIII. *The Fixed Salt of the whole Plant.* It is a powerful Diuretick, and being taken in all the Liquor the Patient drinks, as Ale, Beer, Wine, it has been found profitable against the Dropie and Jaundice: It also cleanses the Womb, Reins and Bladder, of any Tartarous Matter obstructing them. I once knew a Gouty Person, by the constant use of this Salt, and drinking Milk and Water, to become perfectly freed from his Gout, and had not so much as one Fit of it in above 18 Years time, which was confessed to me at the writing hereof. Dose from xv. grains to xxx. in Water, or Whey, or Milk and Water, if for the Gout; but in Ale, Beer, Cider Mead, or Wine, if against the Dropie, or other Diseases.

XIX. *Potcjates* or *Powers.* They have all the Virtues of the Effence, Spirit, Spirituous Tincture, Chymical Oil and Salt, and may be given from one dram to two, Morning, Noon, and Night, in Wine, Mead, Hypocras or any other fit Vehicle.

XX. *The halfam:* If it is made of the Chymical Oil, with Turpentine and Wax, it is of excellent use in all Wounds and Pun&ures of the Nerves[^] and applied, gives ease in the Gout, proceeding from a cold Cause, as also in the Sciatica, and other Pains and Aches of the Nerves and Joints. If it is made of the green Herb, it is good against Pains and Aches also, but is a peculiarly Vulnerary, for healing wounds made in Scorpion, Cold, Moist, and ill habited Bodies, and *ujt.* depending places, because besides its admirable healing property, it dries powerfully, and strengthens the part affected.

XXI. *The Catapkm.* It is excellent to be applied to Contusions, for it prevents the further afflux of Humors, and diffuses those which are present, dissolves and scatters congealed Blood, and this more especially if it is mixed with Honey: it also takes away Black and Blew marks, which come by blows or falls, or other discolorings of the Skin.

XXII. *The Seed.* It is one of the four letter hot Seeds, always commended as a Carminative: and it is said the *Egyptians* make use of the Seed, to provoke Luft or Venery, for which it is very powerful.

CHAF, LXXV,

BISHOPS~WEED Foreign.

L **T** **H** **E** **N** **A** **M** **E** **S.** It is called in *Greek* also "Α[^]/i I which is the Name given by *Dioscorides*: and in *Latin*, *Ammi*, *Cuminum Regium*, and *Jethivipicum*[•], and *meigUA* ^{orein or Oulani} *hsh Bishops-weed*.

II. *The Kinds.* It is twofold, I. *Qretick*, or that of *Candy*, called *Ammi Creticum*, and by *Lobel*, *Ammi Creticum Arornaticum* % *Biswps-weed of Candy*, 2. *^Egyptian*, called by *Gejner*, *Ammi verum*: by *Dioscorides*, *Ammi alterum parvum*: *Ammi* ^{refl.}

him by Lobe! and Gerard: Ammi primum Ale x-
a?idnnum,hyTabermontanus : Ammi parvum l^/7
fcemculi, by C Bauhin and Parkinon : and Ammi
twijjimo & Odoratijimo, by J. Bauhin : Alexan-
drum BifhopSweed.

III. The Description. Bifhops-weed of Candy h <u
a Root like unto the Garden Carrot, and of a yellowifh
color, an! brown on the ou^fide, as Farkinibn fays,
& itbfome Fibres or Strings thereon : From this Root
comes forth feveral, flender Stalks of fine cut Leaves^

some what like unto thojē of Wild Carrots,qr Daucus
Creticus, fmellwg fomabing quick, and of an, excel-
lent Aromatick or Spicy flavor, not much unlike Op-
ganum ., from which rife up flender Stalks, with
^me Joints, with like Leaves as the former Jet
I thereon, and at the Tops, Umbles of white Flowers,
J in Tufts or Roundles like Canon, which turn into
lsmall Seed like S?nallage^ of afweetfharp fcent, and
Xquick hot tafte.

IV. The Alexandrian Bifjiops-weed has a fmall
white Root, perfhing after Seed-time -, from which
fmall Root rife two or three flender Stalks, about a
Foot, or Foot and halfhigh, arched towards the tops^
and Jet with fever a I very fine fmall Leaves, like un-
to Dill, and finer than Fennel h at the Extremities
whereof grow fmall Umbles of white Flowerf, after
which co7tie very fmall blackifh Seed, much like to
Purfley Seed, plea^ant in jmelly, andfharp or quick
in tafie.

V. ThePlaces.ThejirJl of thefe came to us from
Candy -, as alfo from Syria to Venice, and from thence
to France, the Low Countries and England! ., which
Seed has been often fown, but without effecl -, Pl
fcond grows in Arabia, and at Alexandria in
Egypt ^ from whence it has been brought to us.

VI. The Times. They do all Flower and Seed
reafonably well with us (fays Parkin/on) if the
Year proves kindly, otherwife not : if they flower,
it is in June and July, and the Seed is ripe in Au-

VII. The Qualities, Specification, Preparations^
Virtues and Ufes are the fame with that in the for-
mer Chapter in all repeas h fo that no more need
be faid of them in chis place. Note, It is fupposed,
That the true Ammi is wholly loit to us ^ but Par-
kinfon is of Opinion, that Curninum Sy he fir urn may
be the true Ammi of Diofcorides.

CHAP. LXXVI.

BISTORT Englijb.

I- 'HpHE Names. This is a Plant that I cannot

JL perceive the Greeks knew any thing of, no
Greek name being yet afligned it : it is called in
Latin, Bijlorta, (by molt Authors) a corwolutis {
intortis radicibus (fays Ray*) by Tragus, Lonicerus,
and others, Colubrina, and the Root Radix Coin-
brina, Fracaforius, Bulapathum, as well as Biftorta--
and we in Englijb call it Biftort and Snake-wee<i
Some will have it to be Behen Rubrum .
Molybdcena Plini), others again Dracunculus P
Some again, as Gejner, Limonium: Lobel and
fius fay, that it is xteBnttanica of Diofcoride
Pliny -, but m all thefe they are miftaken
who pleafe to Examine thofe feveral Plants in
proper Chapters, and compare them with the
ienpnons here, may eafily^ perceive.

II. The Kinds. What we (hall difcourfe of here
are principally two, i. Biftorta ma
and the bauhins call it: major vufa
Jon : Radice minus intorta, as the
rugofwnbus foliis, as J. Bauhm : and We, the
greater Biftort, or Snake-root. 2. Biftorta minor
is Gerard minor noftras, as Parkinjon s Colubrina
minor, as I tagus ., Alpina media, as C. Bauhm .
and we, The lejjer Biftort, or Snake-weed : But be-
hdes thefe, Avho& make mention of four Kinds
more, as, 9. Bifiorta Latifolia, Broad leav'd Biftort.
4. Biftort a Alpina major, and Alpina maxima Ibc
Greater or Great Mountain Biftort. 5. Biftort a
Alpina

Alpina media, & Alpina minor, The leijer Alpine Biftort. 6. Biliorta Alpinaj > u » n l a f o l i h v a r i i s, Low Variable leav'd Siftort ; of all which we fhall lay nothing in this Work.

English Biftort.

great girtort.

III. Tite Defcnption. The Greater Common Biftort bar d thick, fhort[^] tuberous or knobbed ftxf, blackfb without[^] andjomething rediifh within, a little crooked or writhed together[^] and of en harjh or aftrtugent Tafte, with divers blackijh fibres cr Threads growing thereat : From whence fpring up every Tear, fevertil Leaves flanding upon long i'oot-falh, be'rng fomevihat long and broad, not much unlike to e Dock Leaf, and a little pointed, at the ends,

but that it is crumpled[^] of a bleicifh green color on the upper fide[•], anlcfan Afh colored, grey, andalittle purplifh underneath, havingfeveral veins run'ning therein : from among which, rife fever[^]l fatal! and flender Stalks about half a Yard high almoft naked, and without Leaves, or mitb very few narrow ones[^] bearing apiky bufh of pale, frefl[>] colored Wouiers ; which being pajh there i f t t afmall, brown, cornered Seed, not much unlike to Sorrel* Seed, but greater.

Small Biftort or Lank-wood.

IV. The Leflei Englijh Biftort has a Tukroui Rvot[^]fnallin proportion, but fomething crooked or turned like the former being of a blackifh color t[»]'tbout, indfemewhax whitifh within, of the feme aufore, ftytick or bmdizg tafie, with the former i Thn Root fends forth % or 4 f^{mal}i narrow Leave*, fcarcely an inch brodd, dnd near four Inches long, green above, and grey underneath .- The Stalks are flender, and with but one or two Leaves fet thereon L at the tops whereof Rand long, round, fpiky heads of white blowers, with feveral fmall green Leaves antong them, after which comes a reddifh Seed, almoji round, which being dry, becomes blackifh, and is bigger than that of the former[^] about the bignejs (fays' Gerard) of a Tare,

V. The Places, The fiift grows at the Foot of Hills, and in fhadowy moift Woods neat to them, in many places or' Germany ; and in England in like places, but is chiefly with us nourifhed up in Gardens. The other grows in the North of England[^] as in LancaJhire, Torkjhire, and Cumberland[^] feveral places •, alfo in WeftmorlmL at Crosby, Ravenf teatib, at the head of a Park formerly belonging to one Mr. Pickering, from whence it has been brought, and difperfed into Gardens. The iirft is alfo laid' to grow in aMeadow, about a Stows caft above the Abby Mill at St. Albany about an Acres breadth of more from the Ritcr iidu, where it is faid K> grow in great plenty.

VI. 'iV Times. They both flower about the avt of May, and the Seed is ripe about the beginning Oi July.

Vl The Qualities, They are cofd and dry in the third Degree; Aftrigent, Stytick, and Vulnerary,* Cordial, Hvtetick, Alterative, and AlexiphSrmick.

VIII. Th(

VIII. *The Specification* It is famous for the refitting and expelling Poyfon, as also to stop the Flux of Blood in Wounds, or any other bleeding, whether inwards or outwards.

IX. *The Preparations.* 1. A liquid Juice of the whole Plant. 2. A distilled Water of the Roots and Leaves. 3. A Powder of the Leaves. 4. A Powder of the Root. 5. A Powder of the Root compound. 6. A Decoction of the Root in Wine or Water. 7. A Decoction compound of the Root. 8. The Diet Drink made of the Roots, Leaves, and Seeds. 9. The Spirituous Tinbure. 10. The Acid Tinbure. 11. The Oily Tinbure. 12. The Saline Tinbure. 13. The lixed Salt. 14. The Effence.

The Virtues.

X. *The liquid Juice.* Taken inwardly, 4, or 6 Spoonfuls at a time in a Glass of Red Florence, or other Symplic Wine, it presently stops any internal Flux of Blood, refills the Poison of Vipers, or any other Serpent, and the bitings of any other Beast whatsoever, and is very powerful against the Plague, and all other Malign and Pestilential Fevers.

XL *The Lift Wed Water.* It is a singular remedy to wash any place bitten or stung by any Poisonous Creatures, as Spiders, Toads, Serpents, Vipers, Rattlesnakes, or the like, and has the Virtues of the Juice, but not with equal power or force. It is good also to wash Sores or Cankers which happen in the Mole, or any other part, more especially if the Powder of the Leaves be mixed thereto. afterwards. *The Powder of the Leaves.* Taken to a dram, it is good to kill Worms in Children: prevails against a Diabetes, and helps such as cannot keep their Water, but are apt to miss a Bed, and this more especially if given with Juice of Plantane.

XIII. *The Powder of the Root.* Being given to a dram, more or less, in Wine, or other fit Vehicle, it prevails against the Malignity of the Purples, Measles, and Small Pox, and expels the Poison of the Plague or Pestilence, or of any other infectious Disease, driving it forth by Sweating. It stops all manner of inward Bleeding, as Dyfentery, biting, Vomiting, or pissing Blood, and is profitable against Ruptures in Children, or Elder Persons: it is good also for any Contusion, or Bruise caused by Blows or Falls, dissolving the congealed Blood, dissolving the aggregated Humors, and easing the Pain. Given to one dram in the Distilled Water, in which some red hot Iron has been quenched, it is said to help or cure a Gonorrhoea, or Running of the Urine, Universal being first premised. And being strewn upon any Cut, or Wound of a Vein, where there is a great Flux of Blood, it presently stops it.

XIV. *The Powder of the Root compound.* It is made of equal quantities of Biflor Root, Root of Pellitory of Spain, and of Burnt Alum. This Powder being made into a Paste with a little Honey, and some of it put into a hollow Tooth, or held between the Teeth, if there is no hollowness in them, eases their Pain, and stops the detraction of Rheum upon the Part, cleanses the Head and Brain, and causes an evacuation of abundance of Rheumatick Matter.

XV. *The Decoction of the Root.* If it is made with Water, with the addition of some Pomegranate Peels and Kowes, it makes a most admirable Injection for the Womb, cleanses it of any filth lodged there, it stops the overflowing of the Terms in Women, and cures a long continued Flux of the Whites, dissolves Ulcers in that part, and strengthens the Ligaments of the Womb, being relaxed, whereby the Womb becomes as before or falls down. If the

Decoction is made with Wine, it stops all manner of Inward Bleeding, as Spitting of Blood, Vomiting Blood, and all Fluxes of the Bowels, whether in Man or Woman, is available against Ruptures in Old or Young, dissolves congealed Blood, and dissolves Contusions to admiration. It is laid to cure the Jaundice, and being inwardly given, and outwardly applied, it is eminently good against the biting of Vipers, or any other poisonous Serpent, and the bitings and flinging of any Venomous Creature whatsoever. Given to Women with Child, it prevents Abortion, or Miscarriage, and helps such as cannot hold their Water, and used as a Gargarism in the Mouth, it allays Inflammations, heals Ulcers, and loosens the Teeth.

XVI. *The Decoction of the Root compound, by Biflor Roots six ounces: Angelica Roots, Zedoary, of each four ounces: Virgine a Snake-root three ounces: Clove-bark an ounce and half: Winters Cinnamon one ounce: all being bruised, infused in Red Port Wine, or Canary, five quarts, for six hours: after giving it two or three boils, take it from the Fire, and strain out the Wine from the Ingredients, which let settle: then decant the Clear from the faeces, and sweeten it with Syrup of Limons, or Syrup of Vinegar.* It is a noble Medicament against the Measles, Small Pox, Purples, Calenture, Spotted Fever, and even the Plague itself, being given either preventively, as two or three Spoonfuls of it Morning, Noon, and Night: or curatively, in which four or six ounces of it may be given to sweat upon, and to be repeated as need requires. It is an excellent thing against the biting of Mad Dogs, Vipers, Rattlesnakes, or the bitings or stings of any other Venomous Creatures. It also prevails against any Vegetable Poison, which is taken inwardly, if timely given.

XVII. *The Diet Drink.* It is made of the Roots, Leaves, and Seeds, boiled in half Wine, half Water. It is an excellent Traumatick, cures all curable Inward Wounds, and Ulcers, and Fluxes of Blood, of what kind soever, and also being regularly drank, contributes very much to the cure of Wounds, and old Ulcers in the External parts.

XVIII. *The Spirituous Tinbure.* It defends the Heart against Poison, whether Inward or Outward, whether a Vegetable or Animal Poison, or the Malignity of the Plague, or of any other infectious Disease. Dose, one or two drams at a time, two or three times a day, in a glass of Wine, or other Vehicle.

XIX. *The Acid Tinbure.* This is more peculiar against the Plague, and other Malign Fevers and infectious Distempers than the former. It allays the Inflammation of the Jaws, Almonds of the Ears, and Throat, being often taken inwardly, and also used as a Gargle, by mixing it with Decoction in Water or Wine foregoing. It cures Cankers and Sores of the Mouth, if often washed therewith, and being swallowed, cures tough Hoem, and clears the Throat.

XX. *The Oily Tinbure.* It is composed of Castoreum, and Wounds of the Neck, and cures them, being bathed thereon, and thereto, and represses the Flux of Humors.

XXI. *The Saline Tinbure.* Outwardly used, it penetrates, and contributes to the curing of Ruptures. Old Ulcers being washed therewith, it cleanses them, and disposes them to healing: and Phlegmons or Inflammations being bathed therewith, it abates the heat. Inwardly given, it cleanses the Reins, Ureters and Bladder, after the use of it for some time, if there be any Ulcers in those parts, they are cured by giving inwardly the Decoction in

Wine.

Wine, Juice, or Effence, and continuing it for some time. This Saline Tincture is also prevalent against the Jaundice. Dose from half a dram to a dram and half, in any convenient Vehicle.

XXII. *The fixed Salt.* It is good against roilons, and all malignity of the Plague, opens Obstructions, refits Putrefaction, and defends the Vitals against any kind of Infection, or the malignity of Evil Airs. It provokes Urine, and cleanses the Urinary Passages, carrying off the Recrements of the Humors by those Passages, by which it has been found good against the Jaundice and Dropie. Dose from ten grains to a scruple in Ale, Beer, Cider, Mead, or Wine.

XXIII. *The Effence.* It refits Poison, Plague, or Pestilence, and all sorts of malign Fevers, stops all Fluxes of the Belly, as Diarrhea, Dysentery, Lien^ateria, and the hepatick Flux, as also all Hemorrhages whatsoever, whether inward or outward, the overflowing of the Terms in Women, and the præternatural flux of the Whites : but in these last Cases, Inuniversals ought to be premised. In a word, the Effence has all the Virtues of the Liquid Juice, the Pouder of the Root, and the Decoction in Wine at Sectio, 13 and 15, foregoing. But it peculiarly stops the afflux of Humors to any part, being applied to the fame outwardly, and also taken inwardly. Dose is from two to six ounces in Wine, or any other Vehicle, proper against the Disease for which it is given. *Note,* The Root of this Plant is that which is chiefly used, as having most Virtue in it.

CHAP- LXXVII BITTER-SWEET.

I. **T**HE Names. It is called in *Greek* *rw Glycypticron*, i. e. *Amara dulcis*, and *Strychnodendron*, i. e. *Solanum Arborejens* : but no *Greek* Author, that I know of, has laid any thing of it : but Come of the Moderns have im-

posed these *Greek* names upon it. The *Latins* call it, *Solanum Lignofum*, and *Solanum Arborejens*, and yet in Truth, it is not properly any Nightshade, but only so called for the conformity of its Leaves. Also *Amara dulcis*, and *Dulcamara* : Some will have, it to be *Melortum Plinij*, others *Vitis Sylvestris Theophrasti*, as *Camerarius* in his Epitome : (but *Vitis Sylvestris* is truly *Black Bryony*, as *Matthioli* has it :) In *English*, it is called *Bitter-sweet*, or *Woody Night-Jhade*, and *Mellon-wort*.

II. *The Kinds.* It is twofold, 1. *Purple-flowered*, called, as aforesaid. 2. *Whit-floxed*, which *Donxus* thinks to be *Cyclaminus alter a Diofcoridis* & *Guilandinus* took it to be *Salicaftrum Plinij*, but very erroneously : *Bauhinus* calls it *Solanum Scandens feu Dulcamara, fiore Albo, Bitter-sweet, with the White flower*.

III. *The Description.* It has a Root which spreads it self with many ft rings tinder the Earth, not growing into any great or thick Body : from whence comes up many slender, winding, brittle, woody Stalks, Jive or six Yoot high, without any Clappers, or Tendrills, but folding it self about Hedges, or any other thing which stands near unto it : these stalks are covered with a whitish rough Bark, which being chewed in the Mouth, tastes bitter at first, but sweetish afterwards : and in the middle they have a Pith, and Jhoot out into many Branches on both sides, which are Green whist young : whereon grow many Leaves without order, somewhat like unto those of Nightshade, but that they are something broad, long, and pointed at the ends, with twyn small Leaves, or rather pieces of Leaves at the bottom, of most of them, something like the Sage with Ears^a and many of them likewise, with but one piece on one side^a sometimes also those pieces are dose to the Leaves, making them seem as if they were jagged, or cut in on the edges into many parts, and sometimes separate therefrom, making the Leaves seem winged, or composed of many Leaves, which are of a pale green color. At the tops and Jides of the Branches come forth many lowers, (ft and ing in jashion of a long Vnible) upon Jhort ibot-Jhrfks one above another^a which consist of five narrow and long violet purple colored Leaves, not spread like a Star, or very feldom, but mostly turning themselves backwards to the Stalks again on which they ft and, with a long golderi yellow Point el in the midft, sticking forth, which afterwards turns into round, and somewhat long Berries, green at first, and very red, soft, and full of Juice when ripe, which are sweet at first tasting; but afterwards of an unpleasing bitter taste in which Berry is contained many flat white Seeds;

IV. *Dulcamara fiore Afbo, Bitter-sweet, with white flowers, differs in nothing from the former, but in the flowers, whose outward Leaves are white, and its Point el yellow.*

V. *The Places.* The first grows usually by Ditch-sides and hedges, where it may climb up, almost every where : The second is more rare, and feldoiri to be met with, but grows by or near St. Margarets Church near Romney Marsh.

VI. *The Times.* The Root is Perennial⁵ and the Branches, tho' they are dilpoiled of their Leaves all the Winter, yet they perift not, but (hoot forth new Leaves in the Spring : they flower in July, and the Berries are ripe in Ai/g-tfh

VII. *The Qualities.* The Leaves and Berries are hot and dry in the first Degree[•], Afringent and Cleansing[•], Cephalick, Hepatick, Splenetick, Hyfterick and Cathartick.

VIII. *The Specification.* It is a peculiar thing for the Cure pf Jaundice and Dropie.

IX. *The Preparations.* You may make therefrom, 1. *The Liquid Juice.* 2. *The Effence.* 3. *The*

Decoition. 4. The Spirituous Tintture* 5. The Acid Tmlure. 6. The Saline TinSure. 7. The Qitaplqfm.

The Virtues.

X. The Liquid Juice. Being given to two or three ounces, it purges well, and powerfully opens Obstruptions of the Liver and Spleen, and helps such as are Athmatick, or are troubled with difficulty of breathing, being taken every Morning falling for some time.

XL The Effence. It has all the Virtues of the Juice aforegoing, besides which it is a powerful Medicament against a Phthifick, and for the Cure of the Yellow and Black Jaundice, as also the Droplic : It brings away the After-birth, and effectually cleanses Women newly brought to Bed : you may give it from two ounces to four in a glass of White Port Wine every Morning falling : It is also good for Inward bruises caused by any fall or blow, diffolving the congealed Blood in what part of the Body fo ever. It purges well, and not churlishly.

XII. The TdecoBwn. You may make it thus : & Of the young tender twigs or woody substance and of the Leaves ft j. bruise them well, and put them into a Glass Vefica, or holt-head, affuse thereon White Port Wine ft ljj fi. cover it with a blind bead, and wfire in a Sand heat for twelve hours, and then make the heat fo great as it may boil gently, which dont decant and firain out for u/e. It has the Virtues of the Effence, is a Specifick for cure of the Jaundice, and Dropfic, according to Tragus and Decoition & in the Vertigo and Megrim, and other Head Difeases, cleanses Women in Child-bed, and represses Hyfterick Vapors. Dose four ounces every Morning ; it purges the Body very gently.

XIII. The Spirituous Tintture. It purges not, but very much strengthens the Viscera, chiefly the Liver and Spleen, and represses Vapors ascending from the Stomach, and other parts, to the Head and Brain, causing Vertigo's, Megrim, and other Distempers of that Ventricle. Dose two drams, or more, every Morning falling, and Evening at Bed time in a Glass of generous Wine.

XIV. The Acid TinUure. Let it be made with Spirit of Wine acuated with Spirit of Salt. It powerfully provokes Urine, cleanses the Reins, Ureters, and Bladder, and cures the Dropfic to a miracle but it ought to be taken a considerable time, and always in the Decoition of the same Plant, or in a Decoition of Centory, Gentian, and Roman Wormwood. Dose from half an ounce to an ounce, more or less, fo as to give a pleasant Acidity, Morning and Evening : and it is to be put into all the Ale, Beer, or Wine the Patient drinks.

XV. The Saline Tintture. Bathed with, it takes away Scurf, Morpew, and fait, and (harp breakings out of the Skin : inwardly taken to one dram, it provokes Urine, and cleanses the Urinary passages of Slimy, Viicious, or Tartarous Matter, which is commonly the matter that breeds the Stone and Strangury.

XVI. The Cataplasm. It is to be made of the bruised Berries, and Rolin in fine Pouder. This applied to Felons, which commonly come on the Fingers ends, cures them in a very short time.

CHAP. LXXVIII BLEW-BOTTLE.

THE Names. It is called in Greek, M... ajioris Cyaneo, vel Cceruleo colore : In Latin* Cyanus : and in English Blew-bottle or Cornflower.

II. The Kinds. It is twofold : 1. Single-flowered, of which in this Chapter. 2. Double-flowered of which in the next. The single flowered is also 1. Cyanus magnus vel Cyanus major vulgaris Cyanus hortensis The greater Common Blew-bottle, or Garden Blew-bottle. This some call Cyanus montanus Hermolaus takes it to be the Lcucoium Diofcoridis. Cafalpinus to be a kind of Struthium Theophrasii: Fabius Columna thinks it to be Papaver heracleum Theophrasii and Lobel questions whether it be not a Species of Chondrilla. 2. Cyanus minor vulgaris Cyanus fegetum, The lesser Common Blew or tie Id Blew-bottle : It is called by some Brunemi, Corn-flower : Battifecula (as Ray has it) and Baptifecula, or Blaptifecula from its turning the Edges of Sickles in cutting down Corn, Seeula L e. Faix, fecundo ditfa, being taken for a Sickle in Ancient times.

III. The Description. The Blew-bottle has a Root which creeps spreading it self divers ways Jo that the... fzfth... Str whitin... wholly, after Seed... lowing ifore Wi... and spring... by which very much increases : from this... les up acrefiei or rather winged Stalk, of a whitifb green color, about t m or thre feet hi... are Jet diver. Leaver, something long and broad mout any divijlon, or Renting in about the Idles* green on the upper fide, and grayijh underneath, each of

of them encompassing the Stalk about, at the lower ends, which is divided at the top into a few Branches, bearing somewhat large, /caly, green heads, with white or Silver-like edges \$ from the midji of which comes forth a larger flower than in the /mailer Kind, thinly/et, and of a deeper Violet-blew color : in which Heads, after the Flowers are pass, there is found a Dozyn, containing some few white Seeds, like those of the lesser Kind, but a little larger^ and flatter.

IV. The lesser Common, or Field Blew-bottle, or Corn-flower, has Roots somewhat long and large, which perish every Year, but are Annually renewed by its own /owing -, rising or springing up before Winter, and abiding green all the Winter Season, until the next Spring and Summer, when it flowers. Seeds, and perishes again.* The leaves are long and narrower than the former, of a whitish green color, deeply cut in on the Edges in some places, but some more than others, /omething like unto Scabious leaves. The Stalks are two or three Feet high, according to the goodness and fertility of the Ground, /et with such like Leaves, but /mailer, and little or nothing cut in on the Edges : the tops are pressed forth into several Branches, bearing many small green, /caly Heads, out of which rise Flowers, consisting of five or six, or more, long and hollow Leaves, small at the bottom, and opening wider and larger at the brims, notched, dented or cut in on the Edges, and landing round about many small threads in the middle. The colors of the flowers are manifold, and very variable : for some are wholly Blew, or White, or bluf, or of a sad or light Purple, or of a light or deep Red, or of an over-worn Purple color, or else mixed of the/e colors, in some, the edges White, and the rest Blue or Purple y or the edges Blew or Purple, and the rest of the Flower White, or Striped, Spotted, or halved, the one part of one color, the other of another, and the Threads also in the middle varying in many of them*, for in some the middle Thumb will be of a deeper Purple than the outward Leaves, some will have it reddish, deeper, or paler, whilst the

Leaves are White, or bluf. The flowers being pass the heads or bottles contain a Down, in which the Seed is wrapped, which is small, hard, white and shirring. Note, That the flower of that which grows Wild in the Fields, is for the most part only Blew.

V. The Places. The first grows Wild in Germany upon Sandy Hills, but with-us it is nouriſhed up in Gardens : The other with Blew Flowers grows Wild, in many Corn Fields throughout our Kingdom : It is found in Fields of Wheat, Rye and Barley ^ but is also Sown in Gardens, which the skilful Artift, by looking after, makes to become of other colors, as in the Description thereof is declared.

VI. The Times. They flower from the beginning of May, to the end of Harvest, and their Seed comes to ripeness in the mean season.

VII. The Qualities. They are temperate in respect to heat or cold^ and dry in the first Degree : But Schroder says, they are cold and dry in the second Degree : They are Afringent, Ophthalmick, Cardiack, Alterative, and Alexipharmick.

VIII. The Specification. They have a peculiar faculty for the curing of sore and bleared Eyes, and refilling the force of Poifon.

IX. The Preparations. In the Shops are : 1. The Flowers. 2. A Powder of the dried Leaves. 3. An Effertce of the juice with Spirit of Wirte. 4. A Collyrium of the Flotsers. 5. A Difilled Water of the Flowers. 6. A Spirituous Tinture^ of the Flower?* 7. A Catapla/m of the Flowers. 8. A Juice. 9. A bifilled Water of the Herb.

The Virtues*.

X. The Flowers. They are cold and dry in i° : are Styptick, and good to take away Redness and Inflammations of the Eyes, and pains thereof: they cool in Fevers, resist Poifon, and help in Dropies: You may make an Acid Tincture of them with Spirit of Wine, mixed with a half part of Spirit of Salt; which in Fevers, Plague, &c. may be given from 20 to 40 Drops, in any fit Vehicle*

XI. The Powder of the dried Leaves. It is taken in Tent to one dram, for the curing of inward bruises, and to heal a Rupture of the Veins, &c. whereby they void much Blood at Mouth Give it in Plantane, Comfrey^ or Horfe-tail-water^ acuated with a little White Wine Vinegar.

XII. The Effence of the Juice of the Leaves* and flowers. It has all the former Virtues both of the Acid Tincture and Powder: It helps in the Dropie, resists all manner of Venoms and Poisons, and is peculiar against that of the Scorpion, Phalangium, Viper, Mad Dog, and Plague, as also all other Pefficential Fevers, and Infectious Diseases : being dropt into the Eyes, it takes away their heat, inflammation and pain;

XIII. The Collyrium, or Eye-Water. \$ of the Blew-flowers as many as you please : pa them into Rye Dough or Pafie, bake them in the Oven with Household Bread, then taking it forth, dijil ali, viz: Flowers and Rye Pafie, in a Glass Body, in B.M. and keep the Water for use. With this the Eyes are to be wash'd three or four times a day. It is admirable for the cure of most Infirmities of the Eyes, especially Heat, Inflammation, Pain, Blood-flux, &c. h clears, strengthens and preserves the Eye-sight, especially of old People, for which reason some are pleased to call it Break-Speffacle-Wijter : for that, though that use it, need never come to the use of Spectacles : If the Diitemper is inveterate or stubborn, use it five or six times a day.

XIV. The Difilled Water of the Flowers. Aqua florum Cyani, Biew-bottle-flower-wates. 9* Flower*

Corn fields, and are also nourished up in Gardens. The last was brought to us from Turkey, or Constantinople, and grows in the Gardens of some Heberifts.

VII. *The Times*. They flower for the most part thro' all the Summer, and their Seed ripens in the mean season.

VIII. *The Qualities, Specification, Preparations, Virtues and Uses*, are all exactly the same with those in the former Chapter, so that we shall say no more thereof in this place.

CHAP. LXXX,

ELITES White.

I. *The Names*. It is called in Greek Βίλιβ. In Latin, *Blitum*: and in English, *Blites*. Yet Parkinson says, that none of the Ancients have made any mention of them.

II. *The Kinds*. There are two principal Kinds, viz. 1. *Blitum album*, the White Blite, and this is both *Majus* and *Minus*, of which we treat in this Chapter. 2. *Blitum Rubrum*, The Red Blite, which is also *Majus* and *Minus*, of which in the next Chapter.

III. *The Description*. The Great White Blite has a Root very thick, and long, and very full of Threads or Strings, from whence rises up several Stalks, making a kind of bush, till it comes to be three or four feet high, the Stalks are grayish, white, and round: the Leaves are plain and smooth almost like to those of Arach, but not soft nor mealy: the flowers grow thrust together, like those of Arach: after which comes the Seed inclosed in round, flat husky skins.

IV. *The Lesser White Blite*, which is called the Wild White Blite is very like unto the former, except that the Roots, Stalks, Leaves, Branches, and the whole Plant are altogether of a green color, and

every way less than the former, growing and not creeping at all.

V. *The Places*. The Lesser is the Lesser Herb, and grows chiefly there, but; is in some places found Wild. The Second is as a Weed, growing Wild, tho' also in Gardens.

VI. *The Times*. They flower and flower all the Summer long, their Seed is ripe in August and September, and grow very green even in the Winter time.

VII. *The Qualities*. The Blite, says Galen (lib. 6. fac. Med. Simp.) is a Pot Herb, which serves for Meat, cold and moist (in the second Degree:) Hystrick, and Solutive. Yet Parkinson, will have them to be Cold, Dry, Astringent or Binding.

VIII. *The Specification*. They are peculiar against Fluxes and Distempers of the Womb.

IX. *The Preparations*. You may have therefrom, 1. A Liquid Juice. 2. An Effence. 3. A Decoffion in Wine. 4. A Syrup.

The Virtues.

X. *The Liquid Juice*. Taken to five or six ounces in a Glass of Wine, it purges by stool, makes the Belly soluble, and cools the Bowels: but sometimes it overturns the Stomach, and cleanses it by Vomiting.

XI. *The Effence*. It does the same thing with the Juice, but with less detriment to the Stomach and being taken Morning and Evening from two ounces to three, or four, it stops the Whites in Women, and a Gonorrhoea in Men, Universals being premed.

XII. *The Decoffion in Wine*. This is yet less troublesome to the Stomach, and has the Virtues of the Effence but not altogether so powerful, and may be taken without any danger by a Woman with Child.

XIII. *The Syrup*. It is not only Hystrick, but Peccoral also: it cleanses the Womb, Breast, Stomach, and Lungs, of Slime, and Viscous or Tartarous Matter, eases Coughs, and taken for some time, helps Asthma and shortness of Breath.

CHAP. LXXXIIL
BLOOD-WORT-

I. *THE Names.* It is called in *Greek* *Admtov* X ^t%V: In *Latin*, *Lapathum Sanguineurn*, as *Parkinſon*: *Sanguis ifraconis Herba*, as *J. Bauhin*: *Lapathum folio acuto rubente*, as *C. bauhin*: In *Englijh*, *Blood-wort*.
II. *The Kinds.* It is a Species of the Dock, and differs little but in its color.

III. *The Deſcription.* It has a Root not great, but ſomething long, and very red, abiding many Tears, yet ſometimes failed by the extreame hardneſs of the Winter; And as it is one of the fort of Docks, ſo ha* it long heaves, like unto the /mailer yellow Bock, but overſpread with many red Veins, and over-Jhadowed with red upon the g^{reen} leaf, that it ſeems ſometimes almoſt wholly red. The Stalk is red or reddijh, bearing ſuch like Leaves, but ſmailer, up to the Top, where it is divided into dibers Jmall branches, on which grow purplijh flowers *, after which come three Jbuare, dark, red Seed, like unto other Docks.

IV. *The Places.* It grows chiefly in Gardens, as a Pot-herb, almoſt throughout the Kingdom: but *Parkinſon* ſays, it uſ ſometimes found growing Wild.

V. *The Times.* It rifeſ up in the Spring of the Year, h Flowers through all June and July, and the Seed is-ripe in Auguſt.

VI. *The Qualities.* Blood-wort in reſpeſt to heat or cold is tempera-6, jmd dry In the ſecond Degree; It is Afrtringent, D^eicittvè, Dⁱcuſſive, and Traumatick-, Stonurick, Hepatick, Splenetkk, and Alterative.

VII. *The Specification.* It is peculiar for cleaning

the Blood, and lengthening it in its Craft's, and thereiore powerful againlt the Scurvy.

VIII. *The Preparations.* You may make thereof
1. A Liquid Juice. 2. An Effence. 3. A Decoction in Red Wine. 4. An Acid Tinture. 5. A Syrup. 6. A Saline Tinfſure. 7. A Ba/Jam. 8. A Cataplafm. 9. Afouder of the Seed*

The Virtues.

IX. *The Liquid Jmce.* Taken from one ounce to four, either aloije by it felt, or mixed with Wine, it removes the Dⁱlcraftie of the Blood and Humors, ckanièſ it, and renews the whole Bloody Maſſ, like co the Blood of a young Child: It ought to be given Morning and Night for ſeveral Days.

X. *The Effence.* It has the Virtues of the Juice, ſtrengthens the Stomach, Liver, and other Bowels, Hops Fluxes of the Belly, chiefly the Bloody Hux, helps Spitting of Blood, and the Subverſion or Loathing of the Stomach through Cholera: It opens Obſtruitions, and is profitable againſt the Jaundice: Dofe four or fix Spoonfulls, or more.

XI. *The Decoſoon.* It has the Virtues of the Effence, but not full out io powerful -, and being outwardly uſed it is good againſt Freckles, Tannings, Sun-burnings, Morphew, and other like defilements of the ſkin. Taken inwardly to fix ounces, it opens Obſtruitions of the Liver and Spleen, ſtrengrens the *Vijcera*, and flops all Fluxes of Blood. It may be made both of Roots and Leaves in Red Port Wine.

XII. *The Acid Tinfſure.* This is more ſtomatick ihan any of the former, purifies the Blood, rectifies the Humors, and cures the Scurvy whether in Old or Young: The Dole is from a quarter of a ſpoonful to half; in Wine, or any gitoper Vehicle. Befides all this, it kills Worms in Children, and is good againſt the Dr^opfie, y quenches Thirft, reſtores icit Appetite, and takes away the Preternatural heat of Fevers: A Julep may be made of it, with the Syrup thereof, to be given in all malign and burning Fevers.

XIII. *The Syrup* It is Peftoral, good againſt Coughs, Colds, Wheezings, and thorneis of Breath.

XIV. *The Saline Tinfſure.* It purifies the Blood by the Urinary paſſages, allays the heat of Fevers, is prevalent againſt Jaundice and Dropſie, and loolèns the Belly: Outwardly uſed, it is good againſt Pimples, Scurf, Morphew, and other breakings out of the Skin.

XV. *The Balfam.* It eaſes Pains, being anointed upon any Part, ipeedily cures Green Wounds, cleanz Ulcers, incarnates, and heals them*

XVI. *The Cataplafm.* It is Dⁱcuſſive* and ſome-whac Repercuffive, is profitably applied to Contuſions, and other Tumors, and gives eaſe in the Gout.

XVII. *The Pouder of the Seed.* It is drying and binding, itops Huxes of all forts, and bleedings of the *Vijcera*; and taken in Wine to one dram, it is good agamſt the wounds of the *Scorpion*, *Mad-Dogs*, and of other Venomous Bealts.

CHAP. LXXXIIL
BORAGE,

I/TPHE Names. It is called in *Greek*, 'Ei/?^**
JL *Euphrojtie*, ab *efficienda Voluptate*: In *La**
tin, *Borago* h *dilſa videiur* A^{Cor} ago, *urk lite*; *va*
*rital**. *Apuleius* ſaid that it was called, *Corago*^
quod cordis affeSibus medetur^ and from thence it is
thought

thought came our name *Borage*, by the alteration of one Letter •, but this name is not to be found in any of the Ancient Writers : In *English*, we call it *Borage*.

II. *The Kindt.* There are several Rinds hereof: as, I. *Borago Vulgaris*, Bar ago *Hortensis*, *Iloribus* *i. arulek*, Common Garden Borage with Blew Flowers. 2. *Borago flwe albo*, Borage with a White lower. 3. *Borneo fern per Vivens*, Everliving Borage.

III. *The Description.* It htf a Root, thicker and Shorter than that of Buglois. sometbing blackish with-
wr, and whitish within, perrjbing ajter Seed time, but rises again off its own Sowing, M the Spring of the Hear. The Leaves are shorter, greener, rougher, and more crumpled than are the Leaves of Buglois. The Stalks hereof are not Jo high, but branched out into many parts, whereon ft and target/ Voicers, and more pointed at*the end than Buglois, and f a paler blew color for ^he mo) times the blowers are reddish ^ each of five Leaves, fianding in a round husk, divided into five tarts- or lea-
The stalks out pointed at the at the bottom, each being fast away several roundish lek Seeds.

IV. *The Difference oniy confits.*

V. *The Everliving Borage*, has Roots black thicker thaneher of the former, and more Spreading, not t'n? nib? Winter, but" yielding green Leaves all the year. It bat very many bread Leaves, hairy, more refembling Comfrey than Borage, notfo large us either, of a black dark green color. Among which rise up Jhff hairy Stalks, not Jo high a* thofe of our Common Garden Borage upon vcbich do grow many small fair blew y^ ivery like to the ilowers of Buglois. for are J^ lowers, and ripe Seed, all at once, for

which reafon it is called Everlasting, and that very properly, becaufe it not only Jajjs both Summer and Winter, but is feldom without Buds, Viewers, and Seed, ripe and unripe together, by which it wonder* fully increafes.

VI. *The Places.* The first is common in almoft all Gardens : The fecond and third are not fo common, but they grow with us in Gardens, as eafily as the former."

VII. *The Times.* They Flower throughout all the Summer Months, till the Autumn is well spent -, and their Seed ripens in the mean feafon.

VIII. *The Vitalities.* They are Temperate in re-
fpeO: of heat or cold, and moiftin the first Degree, Abiterfive, Aperitive, Emollient, Cordial, Alterative, and Alexipharmick.

IX. *The Specification.* They wonderfully clear the Heart, expelling Sadnefs and Melancholly, according to the Verfe,

*Stultis, Leprofis, Tabidk, Timidis, Furiofis,
Dicit Borago, gaudio femper ago.*

Purificat Sanguinem, & Cor Utificat. It purifies the Blood, and makes the Heart merry.

X. *The Preparations.* You may have therefrom: 1. A liquid Juice. 2. An Ejjence. 3. A DistiUei Water of the whole Plant, 4. A Syrup. 5. An infusion in Wine. 6. A Conserve of the Flowers. 7. An Acid TinSure. 8. A Balsam. 9- 4 / ^ 10. A Spirit,

The Virtues.

XI. *The liquid Juice.* It effe&ually purifies the Blood, and is of excellent use in all Putrid, Malign, Spotted and Pestilential Fevers, to defend the Heart from their Poison and Malignity, and to expell the same, as also the Poison of other Creatures. It cools, opens Obftructions, cleanses the Blood and Humors, and is effe&tual in the cure of the Yellow Jaundice. It is fit from three to eight Spoonfulls, or more, in Water, or mixed with the Distilled Water, or in any fit Vehicle, two or three times a day.

XII. *The EJJence.* It has all the Virtues of the former, more exalted, and therefore more powerfully and effe&ually cheers the Heart, and expells Melancholly. It is an excellent Cordial, revives the Spirits, strengthens Nature, is good againft Fainting and Swooning Fits, and other Passions of the Heart, and restores such as have been long waiting in a Confumption. It may be given from two to four or six ounces at a time, and that two or three times a day, in Wine, or some other fit Vehicle and it may be sweetned, or made pleafant. It contributes very much towards the curing of Wounds, or old Running Ulcers, and Fistula's, in Bodies of an ill habk..

XIII. *The Syrup.* It has all the Virtues of the former, but nothing near so powerful as it may be used as a Vehicle to convey the other things

XIV. *The Syrup.* It is of the Nature of the EJJence, tho' not so Strong and Effe&tual as it is Cordial, opens Obstructions of the Breft and Lungs, helps Coughs, Colds, Wheezings, Aithma, shortnefs of Breath, and mixt with Juice of Fumitory, it cools and cleanses the Blood, and is profitable against the Yellow Jaundice. Dose two ounces.

XV. *The Infusion of the Herb in Wine.* It very sensibly and admirably recreates the Spirits, and gratifies or pleafesthe Stomach, is good against the Cardiack Passion, and Melancholly, and is prevalent against the Falling-sicknefs : If it is a strong Infusion,

it is good againll. rednefs and inflammation of the Eyes, they being wafhed therewith.

XVI. *The Conferree of the Flowers.* They are chiefly ufed as a Cordial Sweët-meat, arid to reftore iuch as have been long in a Confumption, being often taken with new Cows Milk, viz. fuch as is warm from the Cow, arid in which the heat is preferred all day, by the help of the heat of a Sand Furnace.

XVII...*The Add Tinllurel* It is an admirable Stomack and Cordial, rtfefhes the languifhing Stomach, and caufes a good Appetite : It prevails againlt the Scurvy, Dropfie, Jaundice and Gout, removes Sicknefs at Heart, and ftops a vehement and preternatural Vomiting. If ufed as a Gargle, by mixing it with fome of the Diftilled Water, and Syrup, it cures Cankers, and Ulcers of the Mouth and Throat, and allays Inflammations of the Tonfils. This *Tinilure* is t notable thing againft all burning, malign, putrid, and peftilential Fevers, and profligates even the Plague it felf ^ for it immediately allays the preternatural heat, quenches the violent thirit, refills the putridity of the Humors, and profligates the Poifon of the very Peftilence it feif. It cools, opens Obftu&ions, and re&ifies the Difcratie of the Blood and Humors, beyond many other more Specious, and much Celebrated Medicaments.

XVIII. *The half am.* It is an excellent Vulnerary \$ it cleanfo old Ulcers, and other Putrid and Running Sores ^ and heals green Wounds to a miracle, I commend it by Experience to my Countrymen.

XIX. *The Afbes.* If they be boiled in Mead or Honeyed Water, it will be a Gargle for the curing Inflammations of the Throat and Tonfils, Ulcers of the Mouth, &c. And if they be boiled in fair water, and that water mixed with Juice of Fumitory, it will make a Lotion againft Scabs, Itch, Tettars, Ringwprjps, Scurf, Morphew, and other breakings out, arifing from fharp and aduft Humors.

XX. *The Spirit.* It is made of the Juice of the Plant, fermented with Honey, Sugar, MellofTus, or Leaven, and then Diftilled in an Alembick. It is a great Cordial, much exceeding Spirit of Wine in fainting and Swooning Fits, Sicknefs at Heart, Palpitation, and other Paffions of the Heart: It chears the Spirits, recreates Nature, and makes Merry, profligating the moft profound powers of Melancholly, JDofo one Dram, or two, to four Drams, alone, if dulcified, otherwife to be mixed with a Glafs of Wine.

CHAR LXXXIV.

BROOM Common-

TH E Names. This our Broom was fcarcely known to the Ancient Greeks, though fome have given it the name of *satyr* or *Spartion* : However it is called generally in Latin, *Genijia*, and *becoana*, as Gerard and Varkinfon *, fome fup-pofe it to be called *Genifta a gentium Jlexilitate*, from the flexibtenefs of its Joints, or, *gutagenibus medeatur dolenum* ^ becaufe it eafes the pain of the Knees: or, *quod facile generet, fpeciemque propaget*, becaufe it eafy encreaies. and is not without trouble deftroied where it takes Rooting : alfo *Geneva aululofa trijolia*, as J. Baubin and Mr. Ray ; In Englifh Broom, and Common Broom.

IL *The Kinds.* There are but two kinds, which we fhali take notice of in this Book : 1. The Englijh. 2. The Spanijh* The Englijh Broom is twofold, viz. 1 P *Scopantu* ^ O\$ *Genifta vulgare* is, our Common

Field or Heath Broom. 2. *Genijtella*, Dwarf Broom* Gerard calls it, *Chamaginejla Picca*.

III. The Defcription. *Common Broom has a Root which is long and woody, but tough withal, fpreading feveral ways under the Earth, never penjing, but fending forth new Jhoots every Tear, and more efpedaily, if the old Stalks are cut doivn, and taken a* way. From thefe Roots come forth many woody Stems or Stalks, of the bignefs of a Md/ is tinger at bottom ^ fometimes bigger, fom&imes leffer, according to its length of time in groimng, nging up to the height of Jour or jive Wei, or more, and fpreading into feveral the like woody Branches, ma/ting a kind of Shrub or Bujh, ax it were, covered with a hard and thin dark, grayijh, green Bark, from which Jhoot forth a great number of Jlender, pliant, fquare or cornered fmall Twiggs, like Rujhes, upon which grow Jmall, dark, green heaves. The Flowers are large, and of a golden yellow Jhining color, growing one above another for a good fpace, till they come to the Tops of the Branches, which turn into hard, flat, fmall Cods, aU ?noji black when they are ripe, and in which are contained fmall and Jhining, brownijh Seed.*

IV. *Geniftella or Dwarf Broom has a Root long and tough, long lafting, on. I fyreading much under ground : This Plant never grows very great or big, neither come its Jlender, pliant, green Branches to be hard or woody, but they always keep low, rijing up but a little ?nore than a foot in height. Upon its green pliant twigs, are fet Jmall and fomewhat long l Leaves, of a dark, green color on the upper fide, and gray underneath, abiding on the ?n all the Summer time : at the tops grow Jmall yellow lloivers, not fa yellow, nor fo large at the former, but like unto them for the form ; which being pajf, there fucceeds little long Pods or Cods of Seed, which are like to thejirj, but fmailer.*

V. *The Places.* The firft grows very plentifully in*-many places of our Land, as upon Heaths, Bar* ren Places, and Uncultivated Grounds, as well as in France, Germany, Italy, and Spain : The other is alfo found in many Parts of this Kingdom x and is

also found in Hungary : about thirty Years since as I was a walking, I found it in some Waste and Barren Grounds about Low-Lay ton near London : This is supposed to be Oufws his Chamagenijia Pannoni-cafeptima,

VI. The Times. They Flower sometimes earlier, sometimes later in the Summer Months, as in June and July, to the end of August, and the Seed ripens in the mean season

VII. The Qualities. They are both hot and dry in the second Degree, and said to be of one and the same, and equal Virtues : They are Aperitive, Absterfive, Diuretick, and Traumatick or Vulnerary: Hepatick, Splenetick, Hyfterick, Nephritick, Arthritick, and Alterative : but the Seed some say is Cathartick.

VIII. The Specification. It is of peculiar use against the Dropfie, Jaundice, Gout, and Kings-Evil, as also Distempers of the Reins and Bladder.

IX. The Preparations. You may make from these Plants : 1. A Distilled Water. 2. A Decoffion in Wine. 3. A Liquid Juice. 4. An Infusate Juice. 5. An Efficence. 6. An Oil distilled. 7. A Spirituous Tincture. 8. An Acid Tincture. 9. An Oily Tincture. 10. A Saline Tincture. 11. A Syrup. 12. A Sacchar of the Aches. 20. A Tincture of the Buds.

The Virtues.

to be used in the following Preparations. It is good against the Dropfie, Jaundice, Gout, and to cleanse the Reins, and to cleanse the Bladder, of Sand, Gravel, and Tartarous matter.

XIII. The Infusate Juice. The Virtues are the same with the former. Dose from j. to iij. diams : diluble in Wine over a gentle heat, and to drink it.

XIV. The Efficence. It has all the Virtues of the Liquid Juice, before enumerated : It opens Obstructions of the Liver and Spleen, is good against Pains and Stitches in the Sides, difficulty of Breathing, and shortness of Breath, and as it cleanses the Reins and Urinary passages of Gravel and Stones, it is laid to perfectly to remove the Cause, as to hinder their ever breeding again. Moreover, it prevails against the Kings-Evil, and powerfully strikes at the Root of the Cause. It opens Obstructions of the Womb, and provokes the Terms in Women, where

they are stoppt. Dose five, six or eight Spoonfuls, in White Port or Rhenish Wine.

XV. The distilled Oil. It is made from the Seed and Roots dried, as Oil of Saffras, and other like things is made. Its use is External to Anoint with, to take away Spots, Freckles, Pimples, and other deformities of the skin.

XVI. The Spirituous Tincture. It is a peculiar thing against the Scurvy, and to strengthen the Stomach and Bowels, whilst the Dropfie is in curing. Dose two drams.

XVII. The Acid Tincture. If it is often and long taken, it destroys the Scurvy, Dropfie, and Kings-Evil in their Roots, and destroys the preternatural heat in all Burning, Malign, and Pefitential Fevers. It opens Obstructions of all the Viscera and in a word, performs all that the Liquid Juice or Essence can do * and with this advantage, that this may be taken where there is an extreme weakness of the Stomachy when those things cannot. It helps shortness of Breath, and difficulty of Breathing, strengthens a weak Stomach, and causes a good Appetite in such as loath their Food, or cannot endure to see it in their sight. Dose from a quarter to almost half a Spoonfull, in Ale, Beer, or Wine, three, four or five times a day.

XVIII. The Oily Tincture. It is good against external Evils, and deformities of the Skin, as Spots, Heckles, Lentils, Pimples, Wheals, Scurf; Morphew, and such other like Diseases; eases Pains and Aches from a cold cause, in what part of the Body forever : and being taken inwardly from ten drops to twenty, or more, in any Diuretick Vehicle, it gives present ease to Pains of the Back, though never so extreme, provokes Urine, takes away the heat and swelling thereof, and expells Sand, Gravel, and Tartarous Matter.

XIX. The Saline Tincture. It is good in hot Tumors, and all hot Eruptions, and deormicities of the Skin, proceeding from heat, or where they happen in hot Constitutions, Inwardly given, it powerfully provokes Urine, and therefore may be of good use in the Dropfie Sarcites to drain the water out of the whole Body. It kills small Worms in the Skin, which breed in an extravagant manner in some People, chiefly in the Forehead, Nose and Chin.

XX. The Syrup. If it is made of the Juice, it has the Virtues of the Juice, and Essence, but not full out so powerful as however it is better for Children, Ladies, and such as are Queasie Stomached; It purges gently, and carries off the Recrements of Humors. Dose two ounces to four in a Glass of Port Wine. It is a singular thing against the Dropfie, Jaundice and Kings-Evil.

XXI. The Tincture of the young Branches. It is good against the Dropfie, Jaundice, Gout, and to cleanse the Reins, and to cleanse the Bladder, of Sand, Gravel, and Tartarous matter. Dose three, four or six ounces in Wine, twice or thrice a day, as you see need requires.

XXII. The Tincture of the young Branches. It is good against the Dropfie, Jaundice, Gout, and to cleanse the Reins, and to cleanse the Bladder, of Sand, Gravel, and Tartarous matter. Dose three, four or six ounces in Wine, twice or thrice a day, as you see need requires.

Wine, it cures the Black Jaundice, and preserves from the Gout and Stone.

XXIII. *The Confewe of the Ylovcert.* Made with Sugar or Honey, and often eaten, it watts and destroys the Humors which feed the Kings-Evil.

XXIV. *The Oil* It is made of the young Branches and Flowers, boiled in Oil Olive, till they are Crisp, *Cfc.* It is a safe and pure Medicament to kill Lice, Nits, and other Vermin, in the Head or Body, and being applied to the Sciatica, it helps it.

XXV. *The Ointment** It is made of the young Branches bruised, and the Flowers, by boiling them in Oil, adding Sheeps Suet and Wax to bring it to a body, *£fc.* This being applied to Sides pained, or where Stitches are, or to the Spleen, eases the pain, and removes it at twice or thrice using.

XXVI. *The Balsam.* It is made of the young Twigs and Flowers, *Cfc.* being applied to green Wounds, or fowl, running, and putrid Ulcers, it cleanses, incarnates, and heals them in a very short time. The same will be done by a Balsam made of the Liquid Juice and Turpentine, boiled to a thickness, adding a little Oil and Wax.

XXVII. *GenifitmeL* It is made by boiling the liquid Juice and Honey to a thickness. It cures green Wounds presently. It also cleanses old, running, and putrid Ulcers, fills them with Flesh, and heals them: And apply'd to Kibes in the Feet, with powder of Scammony, it cures them in a very short time.

XXVIII. *The Cataplasnu* It is to be made of the tender Tops and Flowers, beaten till they become a Mass in a Wooden Mortar. Being applied, it is said to help the bitings of Serpents, and other Venomous Creatures.

XXIX. *The Fickle.* The young Buds of the Flowers are usually Pickled, and they make an excellent Sallet for the Winter time, but it is of use thro' the whole Year, it excites the Appetite, causes a good Digestion, opens Obstructions of the Liver, Spleen and Reins, and provokes Urine.

CHAP. LXXXV.

BROOM *Spanijh.*

I. *HP HE Names.* It is called in *Greek* ~~Σπάρτιον~~: *X* in *Latin*, *Spartium*, and *Spartum Hispanicum*: and in *English*, *Spanijh Broom*.

II. *The Kinds.* There are, 1. *Spartum Hispanicum*, and *Spartum Hispanicum frutex* (to distinguish it from the *Sedge* or *Rujh*, that is so called) *Spartum Gracorum*, *Genijfa Hispanicum*, and *Spartum Hispanicum vulgare*, Common *Spanijh Broom*. 2. *Spartum Hispanicum majus Jlore albo*, *Pseudospartum Hispanicum Aphyllum*, *Spanijh Broom* with a White Flower, *Baltard Spanijh Broom* without Leaves* 3. *Spartum Hispanicum Jlore luteo*, *Pseudospartum luteum Aphyllum*, *Spanijh Broom* with a yellow Flower, or the yellow *Baltard Broom* without Leaves.

III. *The Description.* *The firji of these hat a tough, woody Root, spreading it self under the Earth many ways, from whence rises up a Stalk five or six Feet high, with a woody Stock below, covered with a dark Gray, or Ash-coloured Bark, and having above many pliant, long, and slender cresied green twigs, whereon, in the beginning of the year, are set many small, long, green Leaves, which abide not long, but fall away when the Plant comes to flower. Towards the tops of these Branches or Twigs grow the flow-*

ers, Jajhwned like unto Broom bfourrs, but larger -u yellow <i> they, and fwelling aszvel/; after which come Jmall, long, round, yellowijh red Cods, cresied at the back, wherein is contained hldckijh flat Seed, fajhioned vety like unto the Kidney Bean, but the Cods (fajls Gerard) rarely contain more than one Seed, Jeldom two.*

IV. *Spartum Hispanicum majus Jlore albo* The greater White flowered *Spanijh* Broom, has a Root like the former, from whence grows up a Stem much higher than the yellow, even to five or six feet high. The Branches are more tough, apt to bend and compliant, than the former, or that following, having

small Leaves on them like the others, ajid as Jbon fading : the Flowers alfo ft and upon long Stalks, and are like the others for form, but larger, and of a White color, and of little or no fnell -, which being pafit away, there comes fmall round Pods or Cods, like the others, but fmailer, each one containing, for the moft part, but one Seed, fomething lcs than the others alfo.

V. Thrd Kind, or Pseudopartum flore luteo, is a ffriffii & Spanif, h Broom, which has alfo a hard, tough, imiy Hoot, from whence grows a Stem or Stalk Sf the bignefs of ones Thumb at bottom ; and grozvs to ije about two Feet high, whose bark is rough, and ftrajied all along, fending forth ?nany green, (lender, pliant Branches, which divide themfelves again into many other fmailer Twigs, whengn for a while ,after they are fhot forth, abide a few fmall heaves, until they begin to Jhoot out Hovoers, and then fall away, leaving the Branches naked, and without Leaves all the reft of the Tear after : from the Sides and Joints of the fmailer Twigs, Jhoft forth fmall long Stalks, bearing many Flowers, fmailer and yellower than the former Spartum, without any Scent for the moft part : after which come fmall round skinny Cods, containing for the moft part but one Seed in them, and fashioned fomewhat like unto the Kidney Bean, which when they are ripe, will by the Jhaking of the Wind, make a wife \n their Pods.

VI. The Places. They all grow in Spain, Italy, rrancee, and other Southern Countries -4>ut the firft of them grows with us in Gardens, only^s an Ornament, lays Parkinson, among other delightfiil plants, to pleafe the Senfes of Seeing and Smelling.

VII. The Times. The firft and fecond Flowers in April and May, and beginning of June •, the third r lowers in February: and their Seed is ripe before Winter-. the jrft, tvhich grows in our Gardens, its Seed is \#ot rifij till very late in the Year.

VIII. The Realities, Specification, Preparations, Virtues, and \jjs, are the fame in all refpefts with EngliJ}) Broom, excepting, that thefe Spanijh Brooms are ftronger in pperation, and more effectual to the purpofes intended h infomuch, that being given in-
u ^ many o* their p reparations as the Eng-
tijo, they not only work downwards, but cleanf the btomach and Body by Vomiting alfo : this being faid, we lhali fay no more of them here, but ferrer you to the former Chapter.

CHAP. LXXXVI.

BROOM Rape.

I. THE Names. It is called in Greek OvB<Lvχ*:

X in Latin, Orobanche, Cauda Leonis h Clufius calls it HiVmodoron, as Theophrastus, lib. 8. cap. 8. or Lehnodoron, as others have it : and in Englijh, it is called Broom-Rape.

II. The Kinds. Of this Broom-Rape there are feveral Kinds, as, *. That which proceeds from the Roots of the Englij})Broom. 2. That which proceeds from the Roots of the Spanijh Broom. 5. That which proceeds from the Dyers Weed : all thefe have but one Defcription, though arifing from the Roots of thofe feveral Plants. Label and Clufius make other Varieties, 1. That which has longer and fsmaller Flowers tfcn the other, or common fort has. 2. That which has larger Flowers, and thofe of a blewilh color, and is ibmetimes found among Corn. 3. That which is parted towards the Top

into feveral Branches, whose Flowers
8.«

III. The Defcription. Broom-Rape^ a bulbous Root, or a Rootwund and fcaly, which adheres or grows unto the Roots of Broom, ^ or large below and fsmaller above, covered zwith blachjh Scales M of ayellow, Jh?^pWithin . f r m this Rm ^ ruf up a Stalk of the hgnefs oj a finger or Thumb and about a-(pan long h Jometimes a foot, or two feet b.gb, whch has ajhew of Leaves on fr and M Movers about the Top of it, foment Jufaj moji

moji like to thofe of dead Nettles •, or Something re- Sembling the hlowers of Orchis, but larger, and of a deadifh yellow color, as the Stalks and Leaves al- are, after which grow forth long, thick and round husks, in zvhich are contained very many Seeds, ye' good for nothing -, but Parkinſon ſays, it perifbe, without Seed.

IV. *The Places.* Gerard ſays, that Broom-Rape i: not to be found any where but where Broom grows. It may be found in a Broom-field at the foot oil Shooters-hill next Lortdon •, upon Hampfledd-Heath, and in ſeveral other places. But Parkinſon ſays, it grows more often where no Broom grows, vi- by Fields and Hedge fides, and upon Heaths -, and other Authors ſay, in Corn-fields and Hemp-lands.

V. *The Times.* It riles up, and appears, and i: in its chief perfe&ion in the Month of June.

VI. *The Qualities.* It is Temperate in reſpe& to Heat or Cold, Dryneſs or Moifture, Aperitive, Ab- ſterſive, Diuretick, and Vulnerary •, Hepatick, Ne phritick, and Alterative.

VII. *The Specification.* Its peculiar property i: to provoke Urine, and help the Strangury.

VIII. *The Preparations.* You may make there from, i. A liquid Juice. 2. An Effence. 3. A Decoftifa. 4. An Iſolated Oil. 5. A Balfam. 6. ACataplajm.

The Virtues.

IX. *The liquid Juice.* It is an extraordinary thing to cure not only green Wounds, tut alfo running Sores, old, filthy, running Ulcers, and malignant breakings out whatfoever.

X. *The Effence.* It is thought to be as effe&ual in opening Obſtrufions of the Reins, Ureters and Bladder, provoking Urine, and expelling Sand, Gra- Vel,* Stones, or any Viſcous, Tartarous or Slimy Matter out of the Urinary paſſages, as Broom it ſelf. Dolè three ot four ounces at a time, Morning and Evening, in a glaſs of White Wine.

XI. *The Decottion.* It has the Virtues of the Ef- fence, but not all out fo powerful.

XII. *The Infolated Oil.* It ought to be made of four or five repeated Infuſions of the top Stalks with the Flowers, (trained forth and cleared. It is ſaid to cleanſe the Skin of all manner of Spots, Freckles, Lentils, Sun-burning, Tanning, and other like deformities which riſe through heat of the Sun, or fuperabundancy of malign Humors.

XIII. *The Baljam.* It is cleaning, incarnative, and healing, and therefore beneficial againſt ali forts of old, putrid, malign, and running Sores and Ulcers: It heals Wounds admirably, and conglutinates their Lips in a very fliont time.

XIV. *The Cataplafm.* It is good againſt Burnings and Scaldings, eafes Pain, difcuides Swellings and Contuſions, where the Skin is not broken, and fo- tens hard Tumors.

II. *The Kinds.* The Arabian, Greek and Roman Authors affirm it to be a Species of *Lapathum*, or *Dock*, which that laborious Bbta'nift Abraham Mun- iing in his famous Herbal, publiſhed in Holland^ in Folio, Anrw T.696. has ſufficiently demonſtrated. And of this Plant there are two ſpecial kinds, T. The European, ſimply called *Britannica*, and *Britannica Antiquorum vera^* or *Britanny*. 2. The A- merican, called by the alorenamed Author, *Br/tan- nica Americana*; and frdm iome of the places where it grows, *Britannica VirginWna,American*; or *Virgi- nian Britanny*.

III. This Plant has layen iri the Dark for maſty Ages, ever ſince the Times of the Ancient *Romany* to whom it was well known, and by whom it was much uſed, as *Avicen*, *Diocorides*, *Pliny*, *Galen*, *JEGineta*, *JFjjuſ^* *Orobſcifus*, and others, teſtifie-, whereby it is maniſeſt, that in Ancient times k was famous for its cures, which it performed in the *Roman Armies*, which in *Britanny* and the *Low Countries*, they laboured under, being chiefly the *Scurvyi* or *Scorbutick Diſtempers*, as *Diarrhea's*, or Fluxes of the Bowels, Pains or Aches, Loofeneſs of Teeth, *tjfe*. for which reaſon *Claudius Gefar* carried it along with him to *Rome*, ordering it to be ſpread upon the Pageants of his Triumph, and to be hung up in the Capitol: And *Nero* himſelf took care of it afterwards for its Culture, by cauſing it to be Nurſt up in the *Gardens of Rome*. But it jcem? when the *Goths*, and other Barbarous Nations over- run the *Roman Empire*, and the greateſt part of *Chriſtendom*, deſtroying and rooting up evry thing they came near, that this Plant was buried or loſt, n that *Universal Deſtru&ion of almolt alF thifigs*.

G H A P. LXXXVIL

B R I T A N N Y.

I. **T**HE Names. It fc_{cz} N_{ei} ^ p//^ B. 20. 5^ . 21. in *Greek* "f^aWα*", *hy&rolafa- wum*: m *Latin*, *Lapathum Sy he fit re longifolium nigrum*, *Hydrolapathum^Hydrolapathum nigrum*, and *Britannica*: in *Engliſh*, the *Wild Black long-lemfd Water-Dock^* or *Black Water-Dock*, and *Britanny*, which laſt is its moſt Common Appellation*

and has lain torgoeten for above eight hundred Year, till this our Author difcovered it anew.

IV. The name of this Plant, Britannia, came no*.. fays Muming, from the Iiland of that Name, but its Etymology (fays he) is taken from the tri/în Language, Brit fignifying Confolidare, vel firmart. Tan, Dens, and lea, loq/c, or a thing going forth, which is as much as to fay, to jaft en loofe Teeth the looihefs of the Teeth and Gums being one c the Grand Symptoms of the Scurvy. But by the great Man's favour, we can give little credit to that far fetched Etymology, it being always a thing known, that the pride of the Ancient Romans was too great to invent, or inveltigate any thing whatsoever with a Latin Name, whole Etymology fhould arife from the unpolifhd Particles or Words of Barbarous Nations : Without doubt the Romans firft finding it in England or Britannia in great plenty (tho' afterwards they might find it in trieland, and other places of the Low Countries) gave it the Denomination from the Kawe of thef Countrey they firft found it in, and lb called it Bntanmca, quafi Herba Bntanmca, and this is that which I adhere to, and really believe.

A Z 11 t f Botanifts of the laft fix or feven hundred Years have named Bntanmca, but they never durft venture to fix it, fo as to defcribe it, or figure it i

Me u si t t l W Study. This is great p... of Snahw... to 4V... makes our English Herboriti... P S. rh Sc*mr<fs Was the tA Bntanmca out dL? an u which nothin g » more remote : with-gi... T H y drô^bum mgrum, is the S... Bri* < ** C* of the Ancients, its de... agreem g e x a % in every particular with

roundifh, fending forth from round about, Several Zi7or Branches of a canfi-77 h cknA all which seem knobbed or gouty, T u J**P'd: From this Root rifes up Jeveral lar & ^ not much unlike to thole of the &ajt Deck, but every way broader and longer, % w jw & upright, and Jharp pointed, fometimes of a ackijh g, en, Sometimes of a purplijh green, and jometimes of a yellowifh g, each of fometimes spot- J Jometimes not. From the midft of thefe Reaves nje_s u^ one prgtJ : largg ^talk, fometimes tone or Jour Feet high, of the Jhape and color of an ^dnarypock, except that fometimes it is inclining f a, re ddijh green_h it has a kind of Joints, whence JP'mgirth Leaves like the former, but much lefs ; e^nd J^om the fame places it fends forth manijold Branches, not much unlike to the Common Water i^oc>, out mere numerous, larger and higher. The i^ro_w all over thefe Branches, abnoft from war very beginnihg^ up even to their feveral Tops, in dph^o J ^>Je or Husk, each fet upon afnall, (lenderJhort tootji, lk, and of a brown color-, which being vanned, the Seed is contained in Chaffy husks- wt much unlike to other Dock Seed, effpecially thai of the Water Dock.

T J f. American or Virginian Britanny has a foot confijh.ng of a Head thick and gouty, but not of

a round tuberous body like the former, from which Head grows downward into the Earth, feveral Armf or Branches, which are thick, brownifh without, and yellowifh zvithin : from this Root rifes up one upright Stalk of feveral feet high, which has alf& Joints upon it like knees, from whence come foÛth very long and large Leâves, Jfrong and hard, not much unlike to Monks Rhubarb, but that thefe dre much longer. The Stalk (which is very like that of other Docks) rifes up oftentimes to a considerable height, about the middle. of which it fends forth n great number of Branches not much un'like the European, which have Some few Leaves, like the others upon them, but much I^s. The hlowers grow in vaft nu?nbers upon all thefe Branches S^in & e^ > ^at & eac^ upon a Small fhort lootJhk, even from their beginning up to their very tops, Jet inSp^aces at certain diftances, in a Seeming Uniform manner: After the h/owers are pafi away, the Seed comes, which is contained in a Chaffy Husk like the firft, and differs not much from it, neither in JI)ape, nor color, nor magnitude.

VIII. The Places. It commonly grows in Marfhy and benny Grounds, banks of Ditches, and moift Places, and in fides of Ditches, and watry Plaffies which are between the Land Ground and Fen Grounds in feveral parts of this Kingdom. • 1 found fome of it in the Borders of the Fens in Cambridge-Jhire and Huntingdonfhire, and in other moift and watry places. It grows plentifully alfo in trieland^ Overyljel Gelderland, and Holland, and poffibly in many" other places in the Law Countries.

IX. The Times. It fhoots forth its Leaves in April, its Flowers in the latter end of May, or beginning of June, and its Seed is ripe in Auguft. The Root is to be gathered in the beginning of the Sprint, or in Autum, viz. in March or September * che Leaves and Flowers in June and July, and the Seed in the latter end of Aqguft, or beginning of the next Month-

X. The Vitalities. It is temperate in refpect of heat or cold, but dry in the latter end of die fecond Degree. It is Altringent, Aperitive, Digestive, and Traumatick; Stomatick, Hepatick, Hylterick, Arthritick and Alterative.

XL The Spetijkafion. It is peculiar for the curing the Scurvy, and all forts of Fluxes of what kind, ioever -, and Munting fays, it is a Specifick againft Foifons and Convullions.

XII. The Preparations. You may have, there-from, 1. A liquid Juice. 2. An Ejjençe. 3. A Decottion. 4. A Spirituous Tintture. 5. A Spirit by fermentation. 6. A Balfam or Ointment, '7. The fixed Salt. 8. The Ponder of the Root.

The Virtues.

XIII. Tffe liquid Juice. Given to five or fix Spoonfuls, or more, either by it ielf^ or mixt with Ked Port Wine, it Itrengthens and confirms the Stomach and Bowels, and powerfully refits the Scurvy in all its appearances, viz. with all its Symptoms, as Ulcers and Cankers in the Mouth, Looienefs of the Teeth, wandering pains, weaknefs and ficknefs at Stomach, e*r. It is good alfo againft ill manner of Fluxes whatsoever, as Diarrhea's, Dv remene, Lienteries, Hepatick Huxes, overflowing of the Terms in Women, tV. It is to be taken Morning and evening for lome time

XIV. The EjJence. h has all the former Virtues, helides which, it is faid to cure Pleurifies, Quinifies, he Hemorrhoids, and all lores of Inflammations • and is very powerful and iiccefsful in the cure of hydropical Diltempers, more elpecially if it is imbrregnated with the Hxed Salt of the fame Plant. It is alio an extraordinary Traumatick, for the cu* uig of Wounds and old Ulcers, being taken Morn-

ing, Noon, and Night for some time, two or three ounces for a Dose in a Glass of Wine.

XV. *The Decoffion.* It has all the Virtues of the Juice and Effence, but not all out so powerful -, it is an excellent Traumatick, and Antifcorbutick, and prevails against spitting and pissing of Blood, and all other Huxes of Blood whatsoever.

XVI. *The Spirituous Tinture.* It has all the Virtues of the liquid Juice and Effence, a famous thing against the Scurvy in a cold and moist habit of Body, a very great stomachick, strengthening the Viscus in all its faculties : It is a kind of *Panacea*, and a Specifick against Convulsions, and Poisons, yea the Plague itself, it stops all sorts of Fluxes, and strengthens the *Viscera* to a Miracle : but it (as alib the other Preparations) ought not to be given to Coftive Bodies* by reason of their Afringency.

XVII. *The Spirit.* It is made of the Juice by Fermentation : and is used (being dulcified) as a Cordial Antifcorbutick, and to comfort and strengthen the Bowels in Hydropick and Consumptive Persons, and such as have been in long Fluxes : being held in the Mouth, it strengthens the Gums, and loosens loose Teeth. Dose from half an ounce to an ounce twice a day, or upon any fainting or illness.

XVIII. *The Balsam, or Ointment.* It cleanses, incarnates, and heals singularly well -, it cures Green Wounds at two or three times dressing, by reason of its Stypticity. Applied to the Hemorrhoids, and the Gout, it eases the pains of those Parts.

XIX. *The Fixed Salt.* It is singular against Quinsies, Pleurifities, and other Inflammations of the *Viscera* opens Obstructions of the Reins, provokes Urine, and absorbs the Acid Humor, which is the cause of Fluxes of the Bowels, it also helps to carry off the Watry Humor in Dropsies. Dose from fifteen to thirty grains, in any Homogene Liquor, Decoction, &c. proper against the same Diseases, two or three times a day.

XX. *The Powder of the Root.* It may be given from half a dram to two drams, Morning and Night, in any Flux of the Bowels, whether Simple or Bloody, it is also good against the Terms in Women, spitting and pilling of Blood, or any weaknesses of those parts, it strengthens the Stomach and refills Vomiting. It may be given in Port Wine, or other Vehicle proper against the Distemper. Strewed upon moist and running Ulcers, it dries up the Humor, and disposes them to heal.

XXI. *The American* has the same Qualities, Specification, Preparations, Virtues and Uses with the former.

crenato, great Brooklime, with *long dented* Leaf
4. *Anogallis aquatica retfius Veronica aquatica minor foliis oblongis non crenath*, The lesser Brooklime with a long leaf not dented. There are several other Kinds, as *that foliis ?ulcgij foliis Alfint*, and *Augui Yifolia*, but not being common with us I forbear them.

CHAP. LXXXVIII

BROOKLIME,

I* *TP & E Names. It is called in *Gre* *Veronica aquatica* *reftius* *Veronica aquatica minor* *folio rotundiore major*, five *Becabunga major*, the greater Brooklime, and greater round-leav'd Brooklime. ? • *Anogallis reftius Veronica aquatica major folio oblongo*

II. *The Kinds.* There are several Kinds of this Plant, as, 1. *AmigaUh Aquatica vulgar is, becabunga*, as *Parkinjon* calls it, *Common Brooklime*, which *Mr. Ray* calls *Anogallis re&us Veronica aquatica minor, Joho fubrotundo, fiore ceeruleo, a\$ l. Bauhm.* 2. *Anogallis reftius Veronica aquatica folio rotundiore major*, five *Becabunga major*, the greater Brooklime, and greater round-leav'd Brooklime. ? • *Anogallis reftius Veronica aquatica major folio oblongo*

III. *The Description.* Our *Vulgar Brooklime* *ba** a *Root white, low, and creeping, with fine firings springing therefrom at every Joint -, from vohent rife upjat, thick Stalks^ which are roundish, arfl* ** *divided*

divided into several Branches, having on them thick, smooth, and broad deep green Leaves, somewhat like to those of Furflice, but of a deeper green color, and Jet upon the Stalks by couples. The flowers grow upon finally long, tender footstalks, which thruft themfelves forth from the Bottom of the Leaves, of a perjettable color, and not much unlike to the Leaves of the flowers of the Land Pimpernel, confifting of five /null round pointed Leaves apiece, which being gone, in a fhort time after comes a fort off mall Seed.

IV. The Greater Brooklime •, this differs nothing from the former, but in having larger and rounder Leaves, and a paler blew colored flower.

V. The Greater long leav'd Brooklime ; this differs little, or almoft nothing from the former, but in the leaf, which is longer pointed, and dented about the edges; and in the Mowers, which are of a pale whitifh blew color.

VI. The Lesser long leav'd Brooklime, this has a Root confifting of a mall bufh of White fibres, but not running far, from whence fpring many fmooth, pale, green Leaves, fmall at the bottoms, but broad and round at the ends, long and not dented, which lying upon the ground, are almoft like those of the Common field Daisy : the Stalk is round, about a foot, more or lefs, high, with divers /mailer Leaves thereon, let one by one up to the Top, from whence come forth many branched Spikes of white flowers, confifting of one Leaf divided into five parts, growing at firft as it were in an umble, but afterwards more /pike fafhiond.

VII. The Places. They grow by River fides, fmall running Brooks, ftanding Waters, and Ditch fides. The laft of them grows in the Marshes of Dart ford in Kent, alfo between Sandwich and Sandown-Caftle, and in the Ditches on this fide Sandwich.

VIII. The Times. They all Howe* in June and July, and yield their Seed in Augujh

IX. The Qualities. They are hot and dry in the fecond Degree, Digestive, Difcuflive, Attra&ive and Diuretick •, Stomack, Hepatick, Nephritic, Hysterick, Alterative, Spermatogenetic.

X. The Specification. It is peculiar againft the Scurvy, to cleanse the Blood, and open Obftructions of the Womb.

XI. The Preparations. You may make therefrom, 1. A Diftilled Water. 2. A Spirit. 3. A liquid Juice. 4. An Effence. 5. A Spirituous Tincture. 6. An Acid TinUure. 7. A Saline Tincture. 8. An Oily TinUure. 9. A fixed Salt. 10. A Cataplasm.

The Virtues.

XII. The Diftilled Water from the whole Plant. It is good againft Stone and Gravel in the Reins, Ureters, and Bladder, opens Obftructions of the Urinary Paflages, and is ufed as a Vehicle, to convey the other Preparations of the Herb in. Dofe five or fix ounces twice or thrice a day.

XIII. The Spirit. It is made as Spirit of Scurvy-grafs. It is good for a weak Stomach, refifies Crudities, and removes Naufeoufnefs and Vomiting, and other Diitempers of that Bowel, and therefore is a very effectual thing againft the Scurvy, which the Greeks call the Stomach Difeafe, as having its Root and Foundation there. Dofe thirty or forty drops in Wine, or fome other proper Vehicle, Morning and Evening chiefly -, but it may be given at other times of the Day upon any occafion of Stomach ficknefs. It is an excellent thing in cold Conftitutions •, but fuch as are of a hot habit of Body are to forbear it.

XIV. The liquid Juice. It is faid to be effectual to break the Stone in Reins and Bladder (if made

of a gritty friable fubftance) and to expell it, for it opens all the Urinary paflages, and powerfully provokes Urine, giving ease in the Strangury, Difury, and other like affections of those parts. Dofe from two fpoonfuls to fix, Morning and Evening, in a Glafe of Ale, Beer, Mead, or Wine.

XV. The Effence. It has all the Virtues of the Liquid Juice, besides which it is profitable againft Ulcers of the Bladder, to provoke the Terms in Women, and expell the Dead Child. It is a fingular thing againft the Dropfie Safities, if its impregnated with the Fixed Salt of the Plant, and be daily given in all the Liquor the Patient drinks. It purifies, or cleanses the Blood from all ill humors, and perfectly eradicates the Scurvy in a cold habit of Body, Univerfals being alfo premixed. It is best taken in the Spring time, and Fall of the Leaf, because then the Blood and Humors are thin and fluxile, and mere apt to pass a depuration. Dofe from one ounce to three ounces Morning and Evening.

XVI. The Spirituous Tincture. It has the Virtues of the Spirit aforementioned, at Sect. XIII. foregoing, but much more powerful -, and may be given from twenty drops to forty in any proper Stomack Vehicle, or Wine.

XVII. The Acid Tinffure. It is a potent Antifcorbutick, and may safely be given as well in a hot as a cold Conftitution, It powerfully opens Obftructions, provokes Urine, and the Courfes, breaks and diffolves the Stone, expells Tartarous Matter out of the Body, helps in Rheumatifms and the Gout, and gives ease in wandering pains running over the whole Body. Dofe fo many drops at a time, as may make a Glafe of Ale, Beer, Mead, or Wine gratefully sharp, fo as if the Juice of an Orange was squeezed into it.

XVIII. The Saline TinUure. This, tho' given inwardly, powerfully provokes Urine, and opens Obftructions, yet it is mostly used in outward applications, as to discuss Swellings in the Legs in the Dropfie, by fomenting them therewith •, to ease pains of the Gout, and to prevent an incipient Gargarene. It clears the skin of Scurf, Mole, and such other like defilements, if often washed therewith.

XIX. The Oily Tincture. It is good against the Palfie, and Convulsions of the Nerves, being often anointed upon the Parts affected. It eases all sorts of Pains in any Part, proceeding from a cold Cause • and being applied to moist Wounds, it defends them from Accidents. Being twell anointed upon any Tumor or Part inclining to a Mortification it prevents it, and conduces much to the Cure

XX. The fixed Salt. It is Deobstruictive and Diuretick, bringing away much Water in Hydro pick Perfons, and carrying off much of the Morwick caule of the Scurvy, by Urine.

CHAP. LXXXIX.

BRYONIE White.

I. ¹ ^T ^p ^{HE} ^{Names.} It is called in *Greek* "A ^ ^ ^
 X *«/»*, i. e. *Vitis alba*, not that it is a Vine, but because it is somewhat like one. Also *fyvoovL* *KivKiti*, a *Bjw*, i. e. *emano, fcateo*, from putting forth because it puts forth many Branches and Tendrells, whereby it climbs up the adjacent Bushes, Hedges, Trees, or other things adjoining to it. It is also called by some *4/*«1#?*, because the Seeds or Grains of it were formerly used to take away Hair. In *Arabick* it is called *Fefire*, *Alfefire*, *Fejjera*, and *Alfjera*.; In *Latin*, *Bryonia*, and *Bryonia alba*, *Vitis alba*, *Vitalba*, *fie diffa*, *non quod fit Vitis*, *fed quod ei fimilis*, as aforefaid: also *Viticella*, *Rorajirum*, *Apiafellum*: In *Englijh*, *Bryonie*, *White Bryonie*, and *Wild Vine*. The *Vv£* or *Berries* are many times called in *Englijh*, *Tettar Berries*, because of their *Effe&s* in curing *Tettars*.

II. *The Kinds.* There are two principal *KinCL* of *Bryonie*, 1. *The White*, of which in this Chapter. 2. *The Black*, of which in the next. The *White* is also threefold, 1. *Bryonie % alba vulgaris*, *Vitis alba vulgaris*, with all the names above mentioned, *Our Common White Bryonie*. 2. *Bryonia alba vulgaris frudu nigro*, *Vitis alba baccis nigris*, *White Bryonie with Black Berries*: Which come from the *Blacknefs* of its *Berries* call *Bryonia Nigra*, and *Vitis Nigra*, but erroneoufly, for this is not the *Black Bryonie*, but a *Species* of the *White*. 3. *Bryonia Dicoccos* of *Uonorim Bellas* ^ *Bryonia Cretica rncu-fata*, of *Bauhin*: *Bryonia Cretica*, and *Cretica Dicoccos*, by *Parkinfon*, *White Bryonie with Double Berries*.

^ JLL *The Description.* *The Common White Bryonie*, has a *Root* which grows to an exceeding largeness, weighing sometimes half an hundred weight, and of the bigness of a *Child* of a year old, with ma-

ny long Branches or arms growing from it, rj a hr/r whitijh color en the ouijdt.; iwd whiter within, -if a *Jharp*, bitter, aril fulfomt' tajh. Vrom this iWt proceeds many long, rough, but very icnlcr Branches at the beginning, which as they grow up, climb up upon *Hedges*, *Trees*, or other *Bujhes* adjoining to it; from thij'e Branches cove forth many very rough broad Leaves, divided into Jive partitions for the most part, in form very much like a *Vine* leaf, but smaller, rougher, an A of a whitifli, or hoary-green color, jpreading very jar upon *Trees* or *Bufocs*, or whatever it is which *JhutJs* next to it: from the *Joints* with the *Leaves* come forth small *Tendrells* or *Clappers*, which twine about whatever small thing is next it: at the Jeveral *Joints* aljo with the *Leaves* and *Clappers* (efpecially towards the tops of the *Branches*) come forth a long *Stalk*, bearing thereon many whitijh *Mejers* in a long *Tuft*, at it were in a *Clufler*, conjifing of five *Jniall* *Leaves* apiece, laid open like a *Star*, after which come the *Berries*, ft and* ing more open or separate one from another than in a *Clufler* of *Grapes*: they are green at jirfi, but very red when they are through ripe, about the big- nejs of *Aightjhade* berries -, of no good or pieafant jmell, and of a loathfom t a ft e provoking to *Vomit*, or caufing a *naufeoufnefs* in the *Stomachu*

IV. *The Common White Bryonie with Black Her** ries, seems to be absolutely the same with the *jnrmer, fave^* that the *Root* of this is of a p<*/e yellow color on the in side, and somewhat brcmnifh on the out side; and the *Berries* after their greenijs is paji, change not into it red color, but into ascrfeti black, when they are through ripe \ hut <^ to alt other parts of the *Flant*, cm in its lotig^ tender, and climbing *Branches*, jorm of its *Leaves*, lendrcis or *Clappers*, and *Color*, *Shape*, *Magnitude* and *Mode* of its bhveers, it is exatfly the same with the former, so that one cannot be known from the other.

V. *The Bryonia dicoccos*, has a *Root* very long, but never growing to be bigger than a *Mans* *Arm*, of a browner color on the out side, and not jo white within in the common, from this *Root* firings forth

many long, rough, trailing Branches, in the same manner like the former in all respects, from which spring clapping Tendrels, winding it self upon any thing which stands next it, as the other does. Its box broad leaves, with such divisions therein, as tire ether have, but that they are somewhat smaller, greener, and striped with white lines through the middle, as likewise in the Veins which go to the Corners. The Flowers are somewhat greater than the former, of a pale whitish color, standing every one upon a little longer foot (stalk, which being past, there comes Berries in their places, which are at first: green, but red when full ripe, and differing inform from the others, for standing Semicircular upon the Stalks they are joined at the bottom, as if it were but one Berry, but are parted at the tops into two parts, wherein are contained two Seeds, from whence arose the Surname of Diccocos.

VI. *The Places.* The first grows on Banks, or under Hedges where are Trees, Shrubs, and Quicksets, in many places throughout the Kingdom. The second is found in like places, but where the former with red Berries is not, and is found in some places in Germany, Bohemia, &c. The last grows plentifully in Candia, from whence Honorius Bellus sent the Seed to Clusius, and others.

VII. *The Times.* They all flower in the Month of July and August, some earlier, some later, according to the Climate they grow in, and the warmth or coldness of the Seasons of the Year, and their Fruit or Seed is ripe in some little time after.

VIII. *The Qualities.* They are hot and dry in the third Degree, Attractive, Absterfive, Cephalick, Nephritic, Hyfterick, Arthritic, and Cathartic, purging as well Cholera as Phlegm, and Watry Humors.

IX. *The Specification.* It is a peculiar thing against the Dropfie, and Kings-Evil.

X. *The Preparations.* You may make therefrom, 1. A Distilled Water of the Root, Berries, and whole Plant. 2. A Juice of the Berries. 3. A Symplicial Juice of the Root. 4. An Essence of the Root. 5. A Decoction of the Root. 6. A Syrup of the Juice. 7. A Powder of the Root. 8. An Electuary of the Root. 9. A Faecula thereof. 10. A Peffary of the Root. 11. A Saline Tincture thereof. 12. A Bath of the Root, and whole Plant. 13. A Cataplasm of the Root. 14. An Oil, or Ointment.

The Virtues.

XL The Distilled Water of the whole Plant. It is good against Scurf, Morphew, Leprosie, Manginefs, Spots, Freckles, Tanning, Sun-burning, &c. The Face and Skin being often washed therewith.

XII. The Juice of the Berries. It has all the same Virtues, but is much stronger, and is said to be a peculiar thing for the cure of Tetters and Ring-worms, Herpes, Scabs, Itch, and other breakings out.

XIII The Juice of the Root. It is thus Made or Extra&ed. In April take away the Earth, and uncover the Root; which done, make a deep but narrow overthwart cut or gash into it, and put in a Gooze Quill a little under the Slit, letting the Quill lye dipping or leaning downwards, when thruji into the Root, but first make a hole with your Knife to get in the Quill, then placing a Receiver under the Quill, you will get a great quantity of the Juice, which will drop thereinto. A spoonful hereof taken by such as are troubled with Fits of the Mother, it helps them, and it is likewise profitable against the Apoplexy, Epilepsie, Palfie, Vertigo, and other like Diseases of the Head and Brain, which it performs by a Specifick Virtue, which it has in attracting or

drawing away Flegm, and Rheumatick Humors which oppress and afflict those parts. It may be also used as an Errhine up the Nostrils, by which way also it purges the Head and Brain admirably, evacuating all such Superfluous Humors, which cause Lethargies, Megrims, Head-ach, or any of the aforementioned Diseases afflicting those parts.

XIV. *The Efficence.* It has all the Virtues of the aforementioned Juice, and may be given from half an ounce to an ounce, more or less, according to the age and strength of the Patient. It is a peculiar thing against the Dropfie, Kings-Evil, Rheumatifms, and Gout, but it purges with great Violence, troubling the Stomach, so that it works both upwards and downwards, and therefore according to the Opinion of Authors, it ought to be corrected with Ginger, Cinnamon, Winters Cinnamon, Nutmegs, Cloves, Pepper, Juice of Quinces, &c. It is very profitable against Watry Humors, which it evacuates abundantly, both by Vomit and Stool, and therefore is a peculiar thing against the Dropfie, &c. It may be mixed with White Port Wine, and so drank. It opens Obstructions of the Urinary parts, provokes Urine, and cleanses the Reins and Ureters from Sand, Gravel, Slime, and other Viscous and Tartarous Matters apt to be lodged in those parts. It opens Obstructions of the Spleen, and rakes away the hardness and swelling thereof. It is good (being outwardly applied) to cleanse the Skin of Scurf, Morphew, Leprosie, Scabs, Itch, Manginefs, Herpes, Tetters, Ring-worms, Freckles, Lentils, black and blew Spots, which come from tails, bruises, and the like, and dissolves new Swellings, and expells the dead Child.

XV. *The Decoction of the Root in Wine.* It has all the Virtues of the Essence, but not full out so powerful, and therefore ought to be given in a larger Dose, as from one ounce to two, three, or four, according to age and strength. It is an excellent thing against Hyfterick Fits, and Vapors in Women, for it opens Obstructions of the Womb powerfully, and facilitates the birth of Women in Travel, but you ought to be sure the time is near, lest it do mischief, let it be corrected with hot Spices in the making, as before directed, because they also promote this end.

XVI. *The Syrup.* It may be made either of the Juice, Essence, or Decoction, according to which it will be of more or less strength. It has all the Virtues of those things of which it is made, but not altogether so effectual, because of its being clogged with such a quantity of Honey or Sugar, which is necessary to bring it into a Syrup. But it is better for Women and Children, and Wifdomachs, because of its pleasantness in taking. It is good against Coughs, Colds, (shortness of Breath), and kills Worms in the Body: It is given in three ounces in a Glass of Wine.

XVII. *The Powder of the Root.* It has the Virtues of the Juice and Essence, but is thought to work stronger: being taken in White Port Wine from a Spoonful to a Dram. It is good against the biting of Venomous Creatures, and kills Worms in Children, prevails against the Gout, Rheumatifm, Dropfie, and Kings-Evil, and provokes the Terms in Women: It ought not to be given to Women

with Child, because it may induce miscarriage or Abortion. If it is thus compounded, it becomes a famous Medicament. Ifc. Bryonie Root in fine powder a pound: Scammony twelve ounces: Cambogium in powder eight ounces: Liquorice in powder six ounces; Aurum Vita four ounces: mix all together. Dose from sixteen Grains to half a Drain. It is a famous thing for the cure of the Gout, Sciatica, Rheumatifm, Dropfie, Jaundice, and King's Evil.

Where

Where a Rheumatism has been so vehement that the Patient has roared out Night and Day with the Vehemency and Extremity of the pain, and has lain Bedrid for two whole Years together, not being able to use Hand or Foot, or in the least help themselves, not so much as to put their Mouths, this Medicament, or Composition, being given but five or six times, has perfectly restored them, beyond all expectation. I commend it against a Rheumatism, as a Composition which has no equal in the whole Republick of Medicine.

XVIII. *The Elettuary.* Recipe. *Powder of Bryonie Roots, four ounces: Scammony in powder, Liquorice in powder, of each two ounces: Cloves, Ginger, in powder, of each one ounce: Nutmegs in powder, Zedoary, of each half an ounce: Tartar vitrwhite two ounces and half: Honey clarified, thirty six ounces: mix and make an Elettuary.* It cures the Scurvy, Dropie, and Gout-, and is an admirable thing against the King's-Evil: It produces die Terms in Women, and expels the Dead Child, and cleanses the Stomach, and other Bowels, of Cold, Raw, Windy, Slimy, Tartarous and Gripping Humors: Dose, in a Bolus, from one dram to two drams in the Morning fasting.

XIX. *The Ixcula.* It has the Virtues of the Juice and Effence, but not altogether so violent. It may be given, say Authors, from five to ten grains -, but in itrong Bodies you may give it from ten grains to twenty: mix it with Honey, the Pulp of a Prune or Roasted Apple, or some such like substance, and so let it be taken in the Morning: being mixed with the Distilled Water or Effence, or any other proper Water, it cleanses the Skin, and takes away Wrinkles, Freckles, Lentils, Spots, black and blew Marks, Tanning, Sun-burning, and the like, let it be laid upon the Skin, and suffered to dry on.

XX- *The Peffary.* It is made of the solid substance of the Root: being put to the Womb, it provokes the Terms in Women, opens Obstructions of the Womb, and educes both Birth and After-birth, as also the Dead Child.

XXI. *The Saline Tincture.* Taken inwardly to a dram, or more, in some proper Liquor, it provokes the Terms, and facilitates the Birth: and outwardly applied, it removes all the Vices and Deformities of the Skin, as effectually as either *Ejence* or *Fcecula*. You must wash therewith, and suffer it to dry on, repeating it several times a day, if the Disease is inveterate.

XXII. *The Bath of the Root and whole Plant.* It is peculiar against all external Defamations of the Skin, as also to open Obstructions of the Womb, and educes the Terms, and to cleanse it from all other Recrements of Humors, the Patient fitting for some time therein, and repeating it, if need be.

XXIII. *The Cataplasm of the Root.* Being bruised and applied Cataplasm-wise to any place where Bones are broken, it helps to draw them forth: and being mixt with a little Wine, and applied, it breaks Boils, and draws forth Pus, and is good against Felons and Whitloes, which infect the Fingers ends, and Roots of the Nails. It is also good to cleanse the Skin from Morpew, Leprosie, Scabs and Manginess.

XXIV. *The Oil or Ointment.* It is made by boiling the bruised Root in Oil Olive, or Hogs-Lard, Oil mixt with Beef or Mutton Suet, &c. they being anointed with it, dissolve or dissolve recent Tumors, help Contusions, and take away black and blew Marks which come from blows or falls and withal remove most of the other deformities of the Skin, if applied for some reasonable time.

CHAP. XC.

BRYONIE Black.

I. *THE Names.* It is called *mbreck* *A^A^V X *[jthavetj x] fvyqvutL ^KOVCL**. In Latin, *Vitis nigra*, and *Bryonia nigra*: In English, *Black Bryonie*.

II. *The Kinds.* There are three kinds of this: *Vitis nigra*, *Bryonia nigra*, *Bryonia nigra Sylvestris*, and *Vitis nigra*, *Bryonia nigra*, *Bryonia nigra Sylvestris*, *Bryonia nigra communis Sigillum Sancte Marine*, *Common Black Bryonie*: but why it should be called *Vitis Sylvestris*, or *Wild Vine*, I know not, because there is a *Vitis Sylvestris*, which is *Vinifera*, and differs but little from the true manured Vine, but that it grows Wild, and bears few or no Grapes, but *Pliny* I suppose was the cause of it, who, *lib. 21. cap. T.* being not able to distinguish them, confounded 'em, and made them all one. 2. *Bryonia nigra Baccifera*, *Black Bryonie with single Red Berries*: This *Bauhinus* in his *Prodromus* calls *Bryonia Sylvestris Baccifera*, and in his *Pinax*, *Bryonia l<Evk, l\Q nigra Haccifera*. 3. *Bryonia nigra Dtofechridis*, *Vitis nigra*, (*ita diffa ab acinis, radiceque nigris*, (*Jf quod Vitis fivilitudinem habet:*) *Vitis Chironia*, The *Wue Black Bryonie of Diofcorides*.

III. *The Description.* It has a Root *vjhkh* brownish, or inclining to blackish on the outside, in some places by long standing, but white within: it is large if it grows in moist grounds, but much smaller and whiter, if it grows in dry, hard, and any places, as *Dalechampius* says, *It is somewhat hot, and of a sharp taste: from this Root arises long trailing Branches, without any clasping tendrils* (as the *Black Bryonie* is) *It is used therewith, contrary to the other kinds. The*

Leaves are fomewhat broad, and like unto the heavens of the rough or prickly Bindweed, and terminate in afkarp point. The i lowers come forth at the Joints upon long Stalks, many clujering together, in long, thin, orparjed Clufters, each one confining of five fmall white Leaves, and after they are fallen, there come in their places fmall Berries, firfl green, and red when they are ripe, andfometimes changing a little blackifh as they grow old.

IV. The fecond Kind, ba* a great thick Root, long, and not much unlike the former, having a clammy kind of Juice: from which rifes up many, long, andfquare Branches, more hard and woody than the other, and without any Clafpefs at all. The Leaves are fomeivhat like to thofe of the Great White Bindweed, of a fhining color, a little unevenly dented about the edges, and (landing upon long looftalks: towards the tops of the Stalks at the Joints, with the Leaves come forth white Flowers, every one fianding on a fhort Stalk, which afterwards give five Jingle Berries, green at the fir ft, and red when they are ripe, not much lefs than Cherries, in which are contained four or five fomewhat large, round and black Seed.

V. The third andhSS. Kind, has a Root fomewhat great and blackifhonnhe outfide, but of a yellowijh color within and full of a clammy moiyl Juice tobich will cleave to your Fingers whence cornel forth many long green Branches, on which grow fever al broad Leaves, fomewhat long pointed, and iot divided on the edges at all, of a fad or dark green color having at the Joints, with the Leaves, c&pZ undrels, by which ,t takes hid, andmnds" itf fof» any thing Mjlands next to it. Towirds the top come, for th long Bunches of whitifh Mojjie lr7lZl wh jch, ei th long Bunches of whitifh Mojjie lr7lZl wh jch, ei th SPfenrcome Berries, v& are green atfirjt, and black when they come to ripe-

VI. The Places. The firfl of thefe grow on Bank-fades, and under Hedges, and Woody places in many places throughout this Kingdom. The fecond grows in feveral places in Germany, zsm Helfia Saxony, Weilphdk, SLOWN the lat several Sout

VII. The Times. They frri flowering June^J in ripe in Auguji and September.

J¹ L¹ the SMW". They are the fame with the White, but much weaker in their Cathartick Vir tue^as «! purging Flegm, Cholera, and Waſty \$f

IX. The Specification. It prevails aq «fl *i Dropfie, KingVEvil, Difeafes Vf iS f omb f f Defilements of the Skin, whatfoever

X. The Preparations. i. The roaedRoot. 2. The Juice. 3. TheEJence. 4. TheDecoZwn. I' The Powder. 6. The Cataplafm. 7. The Fcecula.

The Virtues.

XI. The roajied Root. Matthiolus fays, that the Root of our Common Black Bryonie being roafted in the Embers, and eaten, is a powerful Medicine to increafe Luft, provoke Venery, and ftimulate the Inrtruments of Generation to that a& : but Label iharply reproves him for it, as not believing it.

XII. The Juice. Mixed with Wine and Honey, and drunk, it is good againft the KingVEvil: and fimple of it felf, it cleanses the Skin of Spots and Marks, Morphew,, Scurf, Leprofie, Tettars, Ring^ Worms, &c. it e^ies Pain, ftrenghens the Nerves, difcuffes Contufions, &c. Dofe half an ounce, to one ounce, or mori

XIII. The EJence. It purges Flegm, and Watry Humors, provokes Urine, and is good againft the Falling-iickneis, Palfie, Hyfterick fits, Vapors from the Spleen and Womb, with other like Difeafes of thofe parts. It is prevalent againft the KingVEvil, all fons of Kernels, Knots, and hard Swellings in the Neck and Throat, or other parts. Dofe, two> three, or four fpoonfuls in a Glafs of Wine, according to age and ftrengh.

XIV. The Decotton in Wjne. It has the Virtues of the Eflence, but not altogether fo powerful, and may be taken to fix or eight ounces; it is prevalent againft the Dropfie, Jaundice, and KingVEvil, and fuch other Difeafes as proceed from the Plenitude and Corruption of Humors.

XV. The Ponder. It is made of the Root, and may be given from a fcruple to two fcruples, to purge away Cold, Serous Flegmatick, and Watry Humors, and to remove the Original Cauſe of the KingVEvil: #It has the Virtues of the Eflence.

XVI. The Cataplafm. It is made of the Root beaten to a Pulp in a Mortar, and mixed with a little Honey. This being laid or fpread upon Sheeps Leather, whilft it is yet frelh and green, takes away black or blew Marks, and all Scars and Deformities of the Skip, ripens and breaks hard Apoftems, draws forth Splinters, Thorns, and broken Bones, diffolves congealed Blood, and being applied to the Hips, and Huckle-bones in the Sciatica, Shoulders, Arms, or other parts, where there is great Pains and Weaknefs, it equally removes the fame in a very fliort time: Gerard. And applied to any place out of Joint, it is good to eafe the Pam, to confolidate and ftrenghen the Nerves, that they may not eaſily again be put out of their places. Sar*

XVII. A Catapl^cftheXe<we^ Being bruifed and fprinkled with Wine, and applied to the galled Neck of Oxen, which are hurt with the Yoke, it heals them: I fuppofe it will hear Gallings and Sores in Mankind alfo, being applied.

XVIII. A Cataplafm of the Berries. It removes Sun-burnings, Tanning, Spots, and other blemifhes of the Skin, takes away black and blew Marks, which come from falls, blows, bruifes, &c. being applied to them.

SCIX. The Facula. It has the Virtues of the Port-er and Eflence, is very powerful to the purpofes intended, it is prevalent againft Pfora^ or Scabs, Mangineis, Leprofie, KingVEvil, Dropfie, ifc. Dofe, It may be given in Wine or Broth from ten grains to a fcruple, plus minus, according to the age and ftrengh of the Patient.

CHAP. XCL

BUCKS-HORN.

I. THE frames. It is called in Greek &,*{«,< from the fimilitude it has to a Crows foot: but the true Greek name is 'A'u : the Latins

Herba Stella, (both, from the form of tie Leaves) SangmnrtajxA Sangumalis (from its flopping of Blood;: iiarenana, (from the Sandinefs of the place it grows in:), and Nafturtium Verrucarium, (from the hkenefs of its Seeds to Warts:) And we in Englifh call it, Bucks-horn, Swines Crefles, and Wart Crejfes.

II. The Kinds. It is twofold, I. Qoronopus refta Hk^, Ambrofia Matthioli> Upright Bucks-korn,

or

or Wart Crefs. 2. *Coronopus repens* Ruel'ij, Pjeu-
docoronopus Dodonti, Cornu Cervi alter urn Vulgi
Creeping Bucks horn, or Wart Crefs.

III. The Description. Thejbft has a /mail, long, white Root, with many Fibres thereat, running deep into the ground, the tafte of which is fcmewhat like to the Garden Crefs, but viuch milder, from this Root come forth feveral Branches, which grow upright, but not very high -, which Branches are alfo branched forth into others that are fmailer : upon which grow very many fmall, long, and divided or cut green "Leaves, all along on both fides of them, whofe cut's very much refemble the fngas 0} d Bucks

horn, or of Jome of the Leaves of the Garden Crefs-
Fbe blotters grow among the Leaves, coming forth with them. at the Joints, they come forth in fmall rough C7//fJers, and are fmall and white, or of an herby gccmfl) color, many of them fet upon a final! long tooiflalk, one above another : which being pa lf, there come in place, fmall, fiaUiCb, rough, round husks, fome thing refembling rough orfeeded Warts, which divide them/elves into two parts, and contain in eajch of them a fmall brexonifh Seed.

IV. Ambrofia, or Corouopus repens, is altogether like the former, faving in the manner of its growing : It is a fmall low herb, 7710ft ufually creeping with many long Branches, and fpreading a great way, aim oft round about, upon the ground (yet in Jome places ftanding more upright : This Creeping kind never rifes above four or five Inches high, but the trailing Branches arefurniffed with fuel? like Leaves and blowers a* the fonner, which have a tafte a little like Creffes. It is many times ufed to be eaten a* a Sallet Herb, with Salt, Oil, and Vinegar, and that both raw aud boiled*

V. The Places. They grow almoft every where round about London, and in many other parts of the Kingdom in moilt Grounds, and at the foot of Banks, where there is any low Trench, or places continually plaflied with Water : fometimes by Highway fides, efpecially in thofe places where Hogs frequent, from whence* as is fuppofed, they were called Swines Creffes.

VI. The Times. They flower and feed all lAay; June, and July -, and their green Leaves abide frefti in a manner all Winter.

VII. The Qualities. They are hot and dry in the firft Degree; Afringent, Abiterfive, Digeftive, Carminative and Vulnerary -, Cephalick, Stomatick, Peftoral, Hepatick, and Hyfterick j Alterative, A-lexipharmick, and Spermatogenetick.

VIII. The Specification. They are laid to be peculiar for taking away Warts, for that the Seed bear the perfect lignature of the Warts upon a Man's Hand.

IX. The Preparations. You may make therefrom, 1. A Liquid Juice. 2. An E(fence. 3. A Deco* ffion. 4. A half am ox Ointment. 5. A Qataplfn*

The Virtues.

X. The Liquid Juice. Given to three or four ounces, it is Traumatick, or contributes to the more fpeedy cure of Wounds and Ulcers, more epecial-ly in Scorbutick and Cacheftick habits otBody: made thick with fine Bole, and applied, it flops bleeding.

XI. The Eiffence. It ftrengetheris the Head, Stmach, Liver, Womb, and Joints, and is of fingular good ufe againft the Scurvy, Cachexia, and difaite-ations of the Womb. It repreffes Vapors, and is good againft Fits of the Mother. It is alfo Traumatick, having all the Virtues of the Liquid Juice. Dofe from one ounce to three, Morning and tvening, either by it felf, or mixt with a dial of Wine.

XII. The DecoBion. If made in Wine, it is a good Stomatick, and Hepatick, has the Virtues of the Eflence, but not ail out fo powerful: and externally applied to Wounds, it cleanies, dries, and contributes to their healing, and withal repreies the flux of Humors into the part, hindering Pain and Inflammations.

XIII. The Balfam or Ointment. It is an excellent thing for healing of green WouMs, which it fpeedily performs : it alfo cleanies, incarnates, dries and heals old Ulcers, or running Sores, firengtkens the pares

parts affli&ed, and makes them able to refill a flux of Humors falling upon them.

XIV. *The Cataplasm.* Being applied it has (say; *Mattbiolus*) an adstringent and repelling power; and therefore must necessarily repercuss Humors, abate Inflammations, ease Pain, and strengthen the part, especially in the Gout, Sciatica, and other like Diarrhoeas: Applied upon Waists, it cures them.

CHAP. XCII.

BUGLE,

*THE Nantes** This is a Plant unknown to the Greeks as far as I can find -, and therefore has no Greek name: It is called in Latin *Bugula*, and *Bugulum*, *Confolida media*, and *Soli dagoninor*: *Mattbiolus* calls it *Laurentina*, and *tierba Laurentina* -: And in English, *Bugle*, *middle Confound*, and by some *Sicklewort*.

II. *The Kinds.* Authors make six kinds of this Plant, but all that grow with us, are referred unto two, i. *Bugla vulgaris*, *Bugla flore Cærulea*, Common Bugle, or Bugle with a Blue Flower -, this *Tragra* calls, *Prunella cærulea prima*, vel *major*: but most Writers call it, *Confolida media pratensis cærulea*. 2. *Bugula flore albo*, Bugle with a White flower.

III *The Description.* The first of these bears a firingy *ROCK* threading under the Earth round about like unto *Moneywort*, or *renny-royal*, from whence rises up a hairy square Stalk, about a foot or foot and half high -, It has Leaves long, fat, and oleous, like those of *Prunella* or *Self-heal*, but larger, and a little longer. Some green on the upper side others more bristly, a little dented about the edges, and sometimes hairy. The Stalk is also set with such like Leaves, which ifrand thereon by Couples[^] from, the

middle almost whereof upwards, fit and the Flower* together in roundles, compassing the Stalk, of a fair blue color[^] with Leaves also, but smaller and browner than those on the Stalk below: these Leaves and Flowers are set at distances, leaving between every roundle bare or void spaces. Among the Flowers are also small ones, an those of *Self-heal*, of a blueish, and sometimes of an Ash-color, fashioned like the Flowers of *Ale-hoof* or *Ground-Ivy*: which being past, there succeeds small, round, blackish Seed.

IV. *Bugula flore albo*, Bugle with a white flower differs not in its form or magnitude, either in its Roots, Stalks, Leaves, flowers or Seeds, from the former, excepting in the color of the Stalks and Leaves, that these are always green, and never brown as the former; and in the color of the Flowers, that they are always White.

V. *The Places.* They grow in Woods and wet vales and Fields, generally throughout England - but the latter is not so common to be met withal: Gerard says, that he found the first of these Plants in a moist ground upon *Black Heath* near London[^] and near a Village called *Charlton*, but the Leaves were green, and not brown.

VI. *The Times.* They flower from May until July, perfecting their Seed in the mean season: But the Root and the Leaves next unto it, lying as it were upon the Ground, remain all the Winter until the next Spring.

VII. *The Qualities.* They are Temperate as to heat or cold; and dry in the first Degree: Astringent, Absterfive, Incarnative, Traumatick or Vulnerary, Neurotick, Stomack, Hepatick, and Alterative.

VIII. *The Specification.* They are peculiar for the cure of Wounds and Ulcers.

IX. *The Preparations.* You may make therefrom, 1. A liquid Juice, i. An Effence. 3. A Decoffio. 4. A Syrup. 5. A Distilled Water. 6. A Spirituous Tincture. 7. An Acid Tincture. 8. An Oily Tincture. 9. A Saline Tincture. 10. A Lotion. 11. An Ointment. 12. A Balsom. 13. A Cataplasm. 14. A Fixed Salt.

The Virtues.

X. *The Liquid Juice.* It is excellent for such as are Livergown, or troubled with the Rickets: It strengthens the whole Body, and being drunk inwardly to two, three, or four ounces at a time, it contributes to the healing of old Ulcers, running Sores, and Fistulas, and to the uniting of broken Bones, and Corroborating any Member out of joint.

XI. *The Effence.* It Dries and Astringes moderately, and is of good use for such as have got a fall and are inwardly bruised, for that it dissolves the congealed Blood, and disperses it. It has all the Virtues of the Liquid Juice, and is very effectual to strengthen the inward parts, and to cause to heal all manner of running Sores, fetid Ulcers, and Fistulas, whether they be old or new. Dose five or six spoonfuls in a Glass of Red Port Wine.

XII. *The Decolhon in Wine.* It has the Virtues of the Juice and Effence, but not full out so powerful: it is good to deare old running Sores and Ulcers, by warning them therewith.

XIII. *The Syrup.* Whether it is made of the Herb, or of its Juice, it is an excellent thing against Coughs, Colds, Hoarseness, Wheezings, shortness of Breath, difficulty of breathing, Soreness of the Breast and Stomach, and other Distempers of those parts: It tops spitting of Blood, and cures Ulcers of the Lungs.

XIV. *The Distilled Water.* It is a good Vehicle

to convey the other things in : But mixed with half its quantity of the Juice or Effence, it is good to waffi a Sore or Ulcerated Mouth, and to cure fuch Sores or Ulcers which happen in the Secret Parts of Men or Women.

XV. *The Spirituous Tintfure.* It heals admirably any Sore or Ulcer, whether inward or outward. In Ulcers of the Lungs it may be mixed with the Syrup aforementioned, thus : *℞ of the fat d Syrupy one ounce: of the di/tilled Jtwater an ounce and bdj : of the Tintfure two. drams : mix for a Dofe to be given in Ulcers of the Lungs.* Outwardly mixed with the Juice or Effence, it cleanses old Ulcers, Incarnates and heals, and fometimes heals fimple Wounds at once or twice dressing •, you may make it thus : *℞ of the Juice or Effence four ounces : of the Syrup an ounce and half: of this Tintfure one ounce: ?nix them, to wafb the Ulcer withal.*

XVI. *The Acid Tintfure* It is an admirable thing againft inward Wounds, Thrufts, or Stabs into the Body or Bowels, and is excellent to be mixed with all Wound Drinks, and to be given mixed with the Syrup, againft the Rickets in Children: It flops the funning of Gangreens, being applied ; and opens Obftru&ions of the Liver, and Gall •, and is good to *he* mixed with Wafhes for fore Mouths and Throats. Dofe inwardly from thirty to forty drops, in any Ipecifick Vehicle.

XVII. *The Oily Tintfure.* It cures Wounds at a few times dressing, but chiefly Wounds of the Nerves, for which it is a Sovereign thing : If a Nerve is prickt or wounded, it prefently eafes the pain, and prevents the return of Conyulfions upon that account.

XVIII. *The Saline Tintfitre.* It is cleaning, and is good to wafb and bathe thofe parts which are apt to break out with Botches, Boils, Scabs, Itch, Scurfy Morphew, and other Defoedations of the Skin.

XIX. *The Lotion.* It is made of the Juice thus : *℞ Clarified Juice of Bugle a pint: Honey three ounces : Allum fix drams : mix and difolve over a gentle fire.* It is good to wafb inveterate and running Sores with, which are very foul, and have been of long continuance * and it is as powerful and effe&ual to heal all running and ftinking Ulcers in the Secret Parts of both Men and Women, and is an excellent Gargle for curing Sores, and Cankers in the Mouth and Throat.

XX. *The Ointment.* It is made of the Leaves of Bugle two parts : of Self-heal, Sanicle, and Scabious^ of each one part ; bruifed and boiled in hogs hard, or in a mixture of equal parts of Sheeps Suet, and Oil Olive, until the herbs are cripp, and then grained forth, and kept for ufe. It is a very good thing for healing any freth or green Wound, tho' lacerated, torn, or bruifed •, it brings it to digeftion, cleanits, incarnates, and fpeedily heals it. *F-arkin- fon* fays, that he could wifh that all the good Women and Ladies, that defire to do good to their own Families, or their poor Neighbours, not to be without this Ointment, always ready prepared, and at hand by them.

XXI. *The Balfam.* It has the Virtues of the Ointment, but more digeftive, cleaning, and incarnative, and therefore more fit for complicated Wounds, which are accompanied nvith Contufions, Dilacerations, and other ill-Symptoms.

XXII. *The Cataplafm.* Made of the green Herb, it is good to abate Inflammations, and other hot Swellings in the Neck, Throat, and other Parts. It difcuffes Contufions, diffolves congealed Blood, and is profitably applied to thofe Parts which are nun by any blow or fall : It is alfo profitable to be applied to all forts of Ulcers, whether recent or in-

vetcrate, waihing the lame alio with the *Lotion* precribed in *Sett.* 19. foregoing, every time you drefs them. It is good to be applied to broken Bones, and DHlocations, where the parts have been long out of Joint, and have been often reduced, and fall out again by reafon of Weakneis: but as thele things ought to applied outwardly, fo the Effence, or Juice, ought to be ufed-ali along inwardly, to corroborate the Tone of the Parts.

XXIII. *The fixed Suit.* It is opening, cleaning, and diuretick, removes all Tartarous matter out of the Reins, Ureters, and Bladder : and taken to one fcruple with the Eifence, it Is good to heal Wounds, and Ulcers of the Urinary parts.

CHAR XCIII.

O/BUGLOSS Garden.

I. ¹/_T^A *HE Names.* It is called in *Greek*, *Βύβλος*, *JL* (but it is rather the name of *Borage*, for fd the *Greeks* called that Plant, and this our *Bugloss* was rather the *Lejfer bugloss* •, alfo *AJ«O4/**, with *Dodon^us* : which *Parkin/on* lays was unknown to the Ancients. In *Latin*, *Buglojjum*: and in *Engliff*, *Bugloss* (after the *Latin* name.)

II. *The Kinds.* There are feveral forts of it, as, 1. *The Garden*, which is *Bugloffum Hortenfe*. 2. *Bugloffa Sylvejfris*, *Wild Bugloss*. 3. *Echium*, *Vipers Bugloss*. 4. *Wall and Stone Bugloss*. 5. *Limonium*, *Marjh Bugloss* : Of thefe laft four we fhall treat in the four next Chapters. 6. *Ambufa*, *Alkanet*, of which we have treated in Chap. a. foregoing.

III. *The Garicn KinJ*, of which we ne,r in this Chapter, is twofold, viz. 1. *y^r^Luc^fs*, *Buz-loijum Vuhare*, which is ^Greater BugloJfs. 2. *BugloffonLnhuw*, which is freL# *B_o lf^*

and by some called Ox-Tongue, or Garden Ox-Tongue.

IV. The Description. Our Common Buglofs ha* a Root which is black without, and whitish within, long, thick, and full of a Jlimy Juice (as the Leaves also are) which continues and perijhes not, ever lear, as the Root of Borage does, from this Root comes up Sacral long, narrow, hairy, whitish green Leaves, among which rise up two or three very high Stalks, branched at the top, whereon stand many blew ikoers, consisting of five small round pointed Leaves, with a (mail Pointel in the middle, which ere very smooth, shining, and of a reddish purple ifohilji they are Buds, and not blown open, which being fallen, there grows in the green Husks, in which the flowers flood, three or four roundish black Seeds., having that Thread or Pointel, jlanding fill in the middle of them.

V. The Leffer Buglofs, which Some will have to be Ox-tongue, is much leffer than the former, the Roots are long and creeping in the ground: and the Leaves are very rough, and rougjoer indeed than the former. like the rough Tongue of an Ox or Cow, (whence came the name) the Stalk is about two feet high, more or less, and commonly of a reddish color: at the top of the Branches grow the flowers in rough, Scaly heads, which flowers are composed of many small yellow Leaves, much like those of Dandelion, and fly away in Down like as they do, these flowers are bitter of taste, thence Lobel calls it, Bugloflum Echiodides luteum Hieracio cognatum.

VI. The Places. The firji is only nurfed up in Gardens, fo also is the fecon'i • but this latter is found to grow wild in many places, as between RedriffznA Deptford, by watry Ditch fides, as Gerard lays.

VII. The Times. They flower in May, June, and July, to the end of Summer, and the Seed ripens in the mean Seafon.

VIII. As to their Qualities, Specification, Preparations, Virtues and Uses, they are altogether the same fame with those of Garden Borage, of which we have treated before in Chap. 83. so much, you are to know, that the firji is the Garden Buglofs, and the fecon'i is the Rough Wild Buglofs, which is much more bitter, and therefore are held not to be so convenient for opening Apozems: but the laid Juice being made into a Lohoch or Licking Eleltuary, may be prevalent against the Cough*, Hoarfnefs, and Colds, and to condensate the thin Deflations of Flegm upon the Lungs.

IV. The fecond Kind, ha* a Small long Root: its Leaves are somewhat broad, flort, and rough, S^er than either the former Wild Kind, or the Garden Kind, and S^omking more unevenly dented on the edges: the flowers grow at the Tops, of a blewish purple color, but Smaller than the former, and the Seeds grow three or four together, and blackish also like the ether kinds.

V. The Rough Wild Buglofs, has a Root like the former, but its Leaves are much rougher, and its flowers are much smaller, and the lower ends of the Branches, are more like the flowers of Gahopfis, or twk Dead Nettle, than of any of the other sorts of Buglofs: in some Plants they are of a blewish purple color, and in some they are white, but both colors are never found in one Plant.

VI. The Lancashire Buglofs, has a great Root, blackish on the outside, and divided downwards, in several large Arms or Branches, from whence shoots forth many slender Stalks, a foot and half high, more or less. The lower Leaves whereof next the ground, are much leffer than those of Borage, and of a whiter color, and the upper ones are reddish, and the Joints with them, whoJe Buds before they are blown, are of a reddish color, but when they are open of a blewish purple, somewhat like those of the Wild Buglofs, or between them and Borage Flowers, of a very vaet, or honey like Taste.

VII. The Places. Vastfirtejeconi and third grow Wild in several Countries, and are sometimes found growing Wild in England. The fourth was found by Mr. Uesket growing in one of the Iflands about Lancashire.

VIII. The Times. They all flower in June and July, and their Seed comes to ripeness in a short time after, the Seed growing ripe, even in the time of Flowering.

IX. The Qualities, Specification, Preparations, Virtues and Uses, are mostly the same with those of

CHAP. XCIV.

0/BUGLOSS Wild, or Ox-Tongue.

HE Names. It is called in Greek *y^<*w JL city of - in Latin, Bugloflum in English, Wild or Field Buglofs, or Ox-tongue.

II The Kinds. There are several Species of the Wild buglofs, as 1. Baglcffum Sylvestre majus, for nigro, The Great Wild Buglofs. 2. Bugloflum Sylvestre »nn;n, The Small Wild Buglofs. 3. Buglum Sylvestre minus Afyerum, Rough Wild Buglofs. 4. Bugloflum dulec, ex infulk Lancastm^ Sweer, or Laniajhire Buglofs.

III. The Description. The firji of these differs little from the Garden Buglofs, but in its greatness, this being larger in every part: and in the color of the blowers, which is of a deep purple color, they are accounted a* black.

of *Borage*, but especially with those of *Vipers Buglofs*, of which we treat in Chap. 9?. next following.

CHAP. XCV.

0/BUGLOSS *Vipers*

I. THE Names. It is called in *Greek*, *Ἐχίνου*, *Echium*, *Alcibiadion*, *Alcibion*, iff *Alcibiacum*, (from the first finder of it out, who being bitten by a *Viper*, and gathering this Herb, and chewing it, and swallowing down the Juice, and applying the rest of the Herb to the bitten place, was cured thereby) it is also called *Buglojjum Viperinum*, and *Sylvestre Viperinum*, as *Ibme lay*, from the effects of the Roots in curing the bitings of Serpents; but as others say, from the color of the Stalks which are speckled like a Serpents skin: In *Engliffh Vipers Buglofs*. *Apuleius* faith, that the *Greeks* called it also *emoſ?i(o^ Tberiorrizon, Radix Viperea ^* and *Ehy>or*, from the form of the Seed, which, as *Diofcorides* says, is like the Head of a *Viper ^* whence came the name *Echium*.

II. The Kinds. Authors make twelve several Kinds of *Vipers Buglofs*, of all which, two only are said to grow with us, viz. "z^n awfi* *Echium Vulgare*, Common *Vipers Buglofs*: 2. *iJg_w, *MVKIV, Echium Vulgare flore albo*, White flowered *Vipers Buglofs*.

III. The Description. *The first of theſt has a Root which is ſomewhat large and blackiſh, and grows woody at the approach of Seedtime, perijhing in the Winter: from whence ſprings forth many long, rough Leaves, lying on the ground, and from among which riſe up ſeveral hard, round Stalks, which are very rough, as if thick ſet with prickles or prickly hairs, having many black ſpots on them, not much unlike*

to the ſkin of a Viper upon which grow ſuch like, long, rough, prickly or hairy green leaves, ſome of them narrow, the middle rib being for the moſt part white. The Flowers ſtand at the tops of the Stalks, branched forth into many ſpiked Leaves or Flowers bowing or turning like to the Turnſole, all of them opening generally on the one ſide, which are long and hollow, turning up the brims a little, of a purpliſh violet color, where they are fully blown; but more reddiſh, where they are but yet in the Bud, or not blown open, an alſo when they are upon their decay and withering: but in ſome places they are of a paler purple color, with a long Pointe in the middle, feathered, or pointed at the top. The Flowers being fallen the Seeds grow incloſed in raurid heads, which growing to be ripe, are blackiſh, cornered, and pointed ſomewhat like to a Vipers Head.

IV. The ſecond Kind differs not much in anything from the former, ſave that in ſome places it grows larger, the leaves are of a freſher green color and the Flowers are wholly of a white color.

V. The Places. The first of theſe grows wild almoſt every where, and as *Gerard* ſays, it is found in great abundance, where *Alkanet* grows. The ſecond grows about the the Caſtle Walls of *Lews* in *Suffex*.

VI. The Timſ. They flower in the *Summer Months*, as the other *BugloJes* do, and their Seed comes to ripeneſs in the mean ſeaſon.

VII. The Qualities. They are temperate in reſpect to heat or cold, and dry in the firſt Degree: *Aperitive*, *Abſterſive*, and *Traumatick*, or *Vulnerary*-, *Cephalick*, *Stomatick*, *Cordial* and *Neurotick* -, *M*terative and *Atexipharmick*.

VIII. The Specification. The Experiences of many Ages have proved them to be peculiar againſt the *Poiſon* and *Malignity* of *Serpents*, *Vipers*, and other *Poiſonous* and *Venomous* Creatures.

IX. The Preparations. You may make therefrom, 1. A *liquid Juice*. 2. An *EJence*. 3. A *Syrups*. 4. A *drilled Water*. 5. A *Tinture of the Flowers*. 6. A *Fouder of the Seed*. 7. A *Decoction of the Root*. 8. An *Ointment or Half an.* 9. A *Qataplaim of Roots or Leaves**

The Virtues.

X. The liquid Juice. The Juice of theſe Plants are wonderfully clammy and ſlimy, ſo that it is hard to Expreſs the ſame * for which ſeaſon, after you have well beaten the Herb, you muſt ſet it cloſe cpld in a cold Cellar, or ſome other cold and moiſt place, for two Days and Nights, and then preſs forth the Juice in a Wooden preſs: after which you may clarify it with Whites of Eggs; beaten into Glair, and palld gently thro' a thick *Hippocras Bag*. It is a famous thing againſt the biting of the *Viper*, and of all other *Serpents*, or any other *Venomous* Creature, and *prevails alſo againſt *Poiſon*, and the *Malignity* of *Poiſonous* Herbs. You may give five or fix ſpoonfulls at a time in a Glaſs of *Wine*, and repeat it as you ſee Occaſion.

XI. The EJence. It, has all the Virtues of the *Liquid Juice*, beſides which, it is an excellent thing againſt the *Plague* or *Peffilence*, *Spotted Fever* ^ *Purple*, and all other *Burning* and *Malign* *Fever* S whatſoever. It is a moſt admirable *Traumatick* of *Vulnerary*, ſo that ſcarcely any of the *Vulneraries* or *All-heals* go beyond it. It comforts the *Head*, *Brain* and *Nerves*, ſtrengthens and fortifies the *Stomach*, and cheers the *H^rt* admirably. Doſe, three or four ſpoonfulls or morſe two, three or four times a day, in a glaſs of the *Duelled Water*, or in a glaſs of *Wine*, or iome other proper *Vehicle*.

XII The Syrup. Parkinson makes it thus. 9* of the Clarified Juice four pounds : fine white Sugar three pounds : Infuswn of the flowers one pound: and boill these gently to the confidence of a Sy-mix a which keep for use. It is (fays he) very effe-rup, aral for comforting the Heart, and to expel bad-nefs and Melancholly. Dose two fpoontuls or more.

XIII The Distilled Water. It is drawn from the whole Plant, when it is in its chief est strength, which is, when it is in Flower ^ it Is profitable for all the Difeases aforementioned, being inwardly taken, and outwardly applied -, and is used as a Ve-hicle to convey the other Preparations in.

XIV. The Tinfure of the Flowers. It is highly Cordial, and Alexipharmick, and refits Poisons of all kinds : it defends the Heart from the Malignity of Peffilential Fevers, and of the Plague it self, and fuppreffes Melancholly Vapors : It has the Virtue of the Eflence, and may be given in the Distilled Water to two Drams.

XV. The Powder of the Seed. It is Alexipharmick, comforts the Heart, expels Sadnefs and Melancholly, attemperates the Blood, allays the hot Fits of Agues, encreases Milk in Nudes, and eases pains in the Loins, Back and Kidnies. Dose one dram.

XVI. The Decottion of the Root. It prevails against Poifon, and the Plague, and the biting of Vipers, and other Venomous Creatures, and is a fingular good thing (if made with Wine, or Wine and Wa-ter) to be drank as a Diet Drink by wounded Per-sons, and fuch as have inveterate, filthy, and run-ning Ulcers and Fiftula's, ©V.

XVII. The Ointment or Balsam. They are Vul-nerary, cure admirably both Wounds and Ulcers •, and are of efpecial use to be applied to Wounds made by the bitings of Venomous Creatures, as Vi-pers, Mad Dogs, &c. or made with any Poifoned Weapon, it extractts the Poifon or Venom, and in-duces the healing.

XVIII. The Qataplafm. Applied to the biting of a Viper, Mad Dog, or other Venomous Creature, it extra&s or draws forth the Poifon, and fo fecures the life of the Patient., other Alexipharmicks being given in the mean feafon inwardly.

C R A P. XCVI.

Of BUGLOS S_y Wall and Stone.

L T H E Names, The first of thec is called in

X Kyreek, Awtkl* : In hatin, by Bauhin, hycopfis s and by X)odon <zm, hycopfis Echij alter a Spe-cies : and in English, Wall Buglofs.

II. The other is called in Greek, *(Wa : by Ga-len 'Ofuai otofinu Ofmas Phlonitis: In hatin, Onof 7na • and in English, Stone 'Buglos.

III. The Kinds. Of the Wall Buglofs there are two Kinds, I. hycopfis Echij fijo, That with a Vipers Buglofs leaf. 2. hycopfis Anglica, the Eng-lijh Wall Buglofs, The Stone Buglofs, is a fingular Plant of its Kind.

IV. TheDefcription. The Jirjl kind of Wall %ong-lofs has a Root which *s somewhat woody, Umg, and not much thicker than a finger, with some fibres thereat n, it is of a brownijh red on the out fide, but htile or nothing colors the fingers as the Anchufa's do : yet Diofcoridesy1^x, it was called by feveral Anchufa, and QA^fays, that in his time it was accounted a kind thereof; but it is much like to Fchiutn, and otfer forts of Wild Buglofs.. from this

Root arifes Leaves which fspread upon" the Ground, which are many, long, narrow, rough or rugged, hairy, and of a dark green color, fomewhat like to Echium, or some other Wild Buglofs : These heaves abide mjhis ?nanner, Jbme years, without fending forth of any Stalk, or flowers at all (which some having taken notice of, thought that it never did bear flower or Seed:) But truly though it bears no Stalk for flowers or Seed some years, yet it has been found to bear them infoyne other P, for that divers Plants hereof have been found as well zvith Stalk and f low-ers, as Void, or without: When it bears a Stalky it rises up about two feet high, bearing fuch like heaves as grow below^ but Jet one diftant from ano-ther, without order, and fmailer up to the Top, where the flowers fi and upon their feveral Branches, which are fspread about, as alfo come forth with the heaves at the Joints, like unto the hollow flowers #/Echium, or Wild Biiglofs, with uneven and ga-ping dented brims or edges, of a pale Purple color, with a long Stile or Pointel in the middle, growing out of the flower above the length thereof -, after which follows the Seed, much like to Buglofs, sd, but not altogether fo great or black.

V. The English Wall Buglofs has a Root a little reddijh like the other, but giving as little color: but as to its heaves Stalks, and flowers, it differs very little from the former : the only difference is, that the flowers do^ all grow at the Tops of the Branches, and are of a deeper purple color, with di-vers threads/hooting out of them

VI. Stone Buglofs is said by Diofcorides to have a reddijh Root, but to be without either Stalk, flow-er, or Seed, which thing he fays alfo of Lycopfis, and Cynogloffum, both which are known (in divers of their Plants) to have all the three, and there-fore it may be as probable in this. This Plant in its form has a great resemblance or likenefs to the former Lycopfis, as alfo to Atchufa or Alkanet * but differ-

differing from them in its Virtues. It has many long and narrow smooth leaves lying upon the ground, not above an Inch broad, but about four Inches long, like to those of the lesser Alkanet.

VII. *The Places.* The first two grow upon Stone Walls, and upon dry, stony and barren Grounds: the first has been found about Frontignan near Montpellier in France, as Pena and Lobel lay: The second Lobel observed to grow in the West Country, in the way from Brijlol and Bath to London. The Stone Buglofs grows in Rocky and Stoney Places.

VIII. *The Times.* The Wall Buglofs flower in July, and sometimes in August; and the Seed is ripe in the following Month. The Stone Buglofs is green all the Year * but its times of flowering and feeding (if it does so) has not been as yet observed.

IX. *The Qualities.* Wall Buglofs is temperate, or rather cold and dry in the first Degree, Afringent, Styptick, Traumatick or Vulnerary, Pe&oral, Hepatick and Alterative. Stone Buglofs is hot and dry in the second Degree, Aperitive, Cleanfing, Hyfterick, and Alterative.

X. *The Specification.* The Wall Buglofs are peculiar Vulneraries for healing Green Wounds. And Stone Buglofs is a Specifick for the speedy Delivery of Women in Labor.

XL *The Preparations.* The Wall Buglofs have all the Preparations and Virtues of the Wild Buglofs, to which we refer you: But 1. *The Juice.* 2. *The Effence.* 3. *The Oil,* have some peculiar Virtues. Of the Stone Buglofs you may make also, 1. *A liquid Juice.* 2. *An Effence.* 3. *A Pouder of the Leaves.* 4. *A Decoftion.*

The Virtues.

XI. *The liquid Juice of Wall buglofs.* Taken alone, or mixed with Honey, it stops Catarrhs, falling upon the Fauces and Lungs, and refits Fluxes of the Bowels: and being applied upon Inflammations, as a Phlegmon, Eryipelas, &c. it cools them: inwardly taken, it is a good Traumatick.

XIII. *The Effence of Wall Buglofs.* It is Afringent and Stiptick, stops Catarrhs, and all Fluxes of the Bowels, as also all Fluxes of (harp Humors, to odd running Sores and Ulcers, and so renders them easie of cure. Dose one ounce at a time, Morning and Evening, in any specifick Vehicle, as a mixture of Plantane and Poppy Water, an Infusion of Catechu in fair Water, &c.*

XIV. *The Oil of Wall Buglofs.* It is made by boiling the Leaves and Roots in Oil Olive to Crispness, &c. It admirably heals Green Wounds, abates Inflammations, and cures Burnings, being anointed upon the Part, and also mixed with Barley Flower, and applied: Parkinson says, that this Oil cures *S. Antonies fire*, but usually Oily and Greasie Bodies do mischief in that case: to bathe with the liquid Juice is much better, and to apply over the Eryipelas, Cloths often wet with the same: or a soft Cataplasin of the Juice mixt with Barley Flower.

Virtues of Stone Buglofs.

XV. *The liquid Juice.* It provokes the Terms in Women powerfully, and therefore ought not to be given to Women with Child, lest it causes them to miscarry: a Spoonful or two of it may be given Morning and Evening in a Glafs of White Wine.

XVI. *The Effence.* It has the Virtues of the liquid Juice, and is very equal to cause speedy Delivery to Women in Labor. It cleanses the Womb of all its feculencies, refits Vapors, and

helps against Fits of the Mother. Dole out or two ounces in a Glafs of Wine to Women in Travel.

XVII. *The Pouder of the Reaves.* It is good against Vapors and Fits of the Mother, and taken *adj. dram* in Wine, by Women in Travel, it facilitates and halts the Delivery, for which it is laid to be an excellent thing. It has the Virtues of the Juice and Effence, and therefore ought not to be given to Women with Child.

XVIII. *The Decoction of the Wint.* It has the Virtues of the Effence and Pouder, but not altogether so powerful.

CHAP. XCVII.

O/BUGLOSS Marfi.

THE Names. It is called in Greek, *Anfidivay*, X £ *vives* & *tt* by *Dioscorides*. So called, because it grows *h x ut n* in *prati riguh vel palujiribus*: In Latin, *Limonium*: and in English, *Marfh* or *Sea Buglofs*, and *Sea Lavender*.

II. *The Kinds.* Parkinson makes seven Kinds hereof: Mr. Ray, eleven: but we (because here in this Book we treat chiefly of English Plants) shall only describe three kinds, viz. 1. *Limonium majus vulgatius*, viz. *the Common Marfh* or *Sea Buglofs*. 2. *Limoujji medilm Anglicum*, *The Colchester Marfh Buglofs*, which is the *Limonia Congener Clusifj*, Virginian Marfh Buglofs.

III. There has been some controversy among Authors about this Plant *Limonium*, some will have what we here describe to be the true *Limonium*, which it is: others will have some other Plants to be it: *Mdthiolus* describes two kinds, but made no sensible distinction between them, nor yet told us which was the True, but ignorant of the matter speaks not a word of them: but to cease the

conceit, the cruce *Limonium* is that which has fair Leaves, like those of the Limon or Orange tree, of a dark green color, somewhat fatter, and a little crumpled.

IV. Gerard calls this Plant in English, *Sea Lavender* (and from him Mr. Ray) but without any other ground, than that the color of the Flowers is somewhat near those of *Lavender*, for which reason *Parkin* altered the Title, to a more proper name, and call'd it *Sea* or *Marsh Buglofs*, as being in form and color most like to *Buglofs*.

V. The Description. The first or Greater *Marsh Buglofs* has a Root somewhat thick and long, like unto a small Red Beet Root, whence comes several fair, long, thick, or fat green Leaves, somewhat like unto Small Beet Leaves, (and that is the reason that *Pliny* refers the *Limonium* unto the Beets, and calls it a Wild Beet, though *Galen* will have it, that there is no Wild sort of Beet:) or Leaves of the Limon Tree, from among which spring up several brittle, naked Stalks, without Leaves, near half a yard high, branched at the tops into several parts, whereon fit and many small blewish purple flowers all on one side for the most part, something like unto *Buglofs* flowers, but smaller, after which cometh reddish Seed, inclosed in the husks, which the lowers

M Colchester *Marsh Buglofs*, is like unto the former almost in all respects, the Root being reddish, but much leffer, the Leaves also leffer, and the Stalks lower, being but a little more than a foot high, the flowers also of the same color with the former, but yet leffer, so that the difference between them seems to be only in the magnitude.

VII. The *Virginian Marsh Buglofs* has a long Root, an Inch thick in Diameter, or more, and going almost fit run down into the ground, sending forth from it several Branches, and small fibres: It is a very strange Plant, for from its Root springs forth very fit range Leaves, such as are not to be seen in any other Plant that we know of, being nine, or ten, or more, rising from the head of the Root aforesaid, each by itself being small below and growing great-

er upwards, with a Belly bunching forth, and a bowing back, of a pale whitish yellow color, hollow at the upper end, with a flap, not much unlike the to Flowers of *Aristolochia* or *Birthwort*, and round at the Mouth like a half Circle, full of great dark purplish Veins on the inside. The whole Leaf is of a thick substance, almost like unto Leather, and among these Leaves springs up a Stalk, at the top of which comes forth a flower with four or five Leaves, in a roundish Seed Vessel, with a Tuberos Thrum in the middle.
